Group O8. Temporomandibular Joint.....	979
Group O9. Treatment Of Fractures.....	981
Group O11. Regional Or Field Nerve Blocks.....	983
INDEX.....	984
CATEGORY 5: DIAGNOSTIC IMAGING SERVICES.....	988
SUMMARY OF CHANGES FROM 21/07/2020.....	989
DIAGNOSTIC IMAGING SERVICES NOTES.....	990
Group I1. Ultrasound.....	1022
Subgroup 1. General.....	1022
Subgroup 2. Cardiac.....	1024
Subgroup 3. Vascular.....	1026
Subgroup 4. Urological.....	1029
Subgroup 5. Obstetric And Gynaecological.....	1030
Subgroup 6. Musculoskeletal.....	1035
Group I2. Computed Tomography.....	1041
Subgroup 1. Head.....	1042
Subgroup 2. Neck.....	1043
Subgroup 3. Spine.....	1043
Subgroup 4. Chest and upper abdomen.....	1044
Subgroup 5. Upper abdomen only.....	1045
Subgroup 6. Upper abdomen and pelvis.....	1045
Subgroup 7. Extremities.....	1046
Subgroup 8. Chest, abdomen, pelvis and neck.....	1047
Subgroup 9. Brain, chest and upper abdomen.....	1047
Subgroup 10. Pelvimetry.....	1047
Subgroup 11. Interventional techniques.....	1048
Subgroup 12. Spiral angiography.....	1048
Subgroup 13. Cone beam computed tomography.....	1050
Group I3. Diagnostic Radiology.....	1050
Subgroup 1. Radiographic Examination Of Extremities.....	1050
Subgroup 2. Radiographic Examination Of Shoulder Or Pelvis.....	1051
Subgroup 3. Radiographic Examination Of Head.....	1052
Subgroup 4. Radiographic Examination Of Spine.....	1053
Subgroup 5. Bone Age Study And Skeletal Surveys.....	1054
Subgroup 6. Radiographic Examination Of Thoracic Region.....	1055
Subgroup 7. Radiographic Examination Of Urinary Tract.....	1055
Subgroup 8. Radiographic Examination Of Alimentary Tract And Biliary System.....	1056
Subgroup 9. Radiographic Examination For Localisation Of Foreign Bodies.....	1057
Subgroup 10. Radiographic Examination Of Breasts.....	1057
Subgroup 12. Radiographic Examination With Opaque Or Contrast Media.....	1059
Subgroup 13. Angiography.....	1060
Subgroup 15. Fluoroscopic Examination.....	1063
Subgroup 16. Preparation For Radiological Procedure.....	1063
Subgroup 17. Interventional Techniques.....	1064
Subgroup 18. Miscellaneous.....	1064
Group I4. Nuclear Medicine Imaging.....	1065
Subgroup 1. Nuclear medicine - non PET.....	1065
Subgroup 2. PET.....	1071
Group I5. Magnetic Resonance Imaging.....	1073

Subgroup 1. Scan Of Head - For Specified Conditions	1073
Subgroup 2. Scan Of Head - For Specified Conditions	1074
Subgroup 3. Scan Of Head And Neck Vessels - For Specified Conditions.....	1075
Subgroup 4. Scan Of Head And Cervical Spine - For Specified Conditions	1075
Subgroup 5. Scan Of Head And Cervical Spine - For Specified Conditions	1076
Subgroup 6. Scan Of Spine - One Region Or Two Contiguous Regions - For Infection or Tumour.....	1076
Subgroup 7. Scan Of Spine - One Region Or Two Contiguous Regions - For Other Conditions	1076
Subgroup 8. Scan Of Spine - Three Contiguous Regions Or Two Non-Contiguous Regions - For Infection or Tumour.....	1077
Subgroup 9. Scan Of Spine - Three Contiguous Regions Or Two Non-Contiguous Regions - For Other Conditions.....	1078
Subgroup 10. Scan Of Cervical Spine And Brachial Plexus - For Specified Conditions.....	1079
Subgroup 11. Scan Of Musculoskeletal System - For Tumour, Infection or Osteonecrosis.....	1079
Subgroup 12. Scan Of Musculoskeletal System - For Joint Derangement.....	1080
Subgroup 13. Scan Of Musculoskeletal System - For Gaucher Disease	1080
Subgroup 14. Scan Of Cardiovascular System - For Specified Conditions.....	1081
Subgroup 15. Magnetic Resonance Angiography - Scan Of Cardiovascular System - For Specified Conditions	1082
Subgroup 16. Magnetic Resonance Angiography - For Specified Conditions - Person Under The Age Of 16 Years.....	1082
Subgroup 17. Magnetic Resonance Imaging - Person Under the Age of 16 Years - For Physcal Fusion or Gaucher Disease.....	1082
Subgroup 18. Magnetic Resonance Imaging - Person Under The Age Of 16 Years - For Other Conditions ..	1083
Subgroup 19. Scan Of Body - For Specified Conditions.....	1083
Subgroup 20. Scans Of Pelvis And Upper Abdomen - For Specified Conditions	1086
Subgroup 21. Scan Of Body - For Suspected Hepato-biliary or Pancreatic Pathology	1087
Subgroup 22. Modifying Items.....	1088
Subgroup 32. Magnetic Resonance Imaging - Pip Breast Implant	1089
Subgroup 33. Scan of Body - Person Under the Age of 16 Years - General Practice Requests	1090
Subgroup 34. Scan of Body - Person Over the Age of 16 Years - General Practice Requests	1091
Group I6. Management Of Bulk-Billed Services.....	1092
INDEX	1094
CATEGORY 6: PATHOLOGY SERVICES	1098
SUMMARY OF CHANGES FROM 21/07/2020.....	1099
PATHOLOGY SERVICES NOTES	1100

GUIDE TO SUMMARY OF CHANGES INCLUDED IN THIS EDITION

SUMMARY OF CHANGES FROM 21/07/2020

The 21/07/2020 changes to the MBS are summarised below and are identified in the Schedule pages by one or more of the following words appearing above the item number:

- | | |
|-------------------------|-------|
| (a) new item | New |
| (b) amended description | Amend |
| (c) fee amended | Fee |
| (d) item number changed | Renum |
| (e) EMSN changed | EMSN |

Description Amended

GENERAL EXPLANATORY NOTES

GENERAL EXPLANATORY NOTES

GN.1.1 The Medicare Benefits Schedule - Introduction Schedules of Services

Each professional service contained in the Schedule has been allocated a unique item number. Located with the item number and description for each service is the Schedule fee and Medicare benefit, together with a reference to an explanatory note relating to the item (if applicable).

If the service attracts an anaesthetic, the word (Anaes.) appears following the description. Where an operation qualifies for the payment of benefits for an assistant, the relevant items are identified by the inclusion of the word (Assist.) in the item description. Medicare benefits are not payable for surgical assistance associated with procedures which have not been so identified.

Higher rates of benefits are provided for consultations by a recognised consultant physician where the patient has been referred by another medical practitioner or an approved dental practitioner (oral surgeons).

Differential fees and benefits also apply to services listed in Category 5 (Diagnostic Imaging Services). The conditions relating to these services are set out in Category 5.

Explanatory Notes

Explanatory notes relating to the Medicare benefit arrangements and notes that have general application to services are located at the beginning of the schedule, while notes relating to specific items are located at the beginning of each Category. While there may be a reference following the description of an item to specific notes relating to that item, there may also be general notes relating to each Group of items.

GN.1.2 Medicare - an outline

The Medicare Program ('Medicare') provides access to medical and hospital services for all Australian residents and certain categories of visitors to Australia. The Department of Human Services administers Medicare and the payment of Medicare benefits. The major elements of Medicare are contained in the Health Insurance Act 1973, as amended, and include the following:

- a. Free treatment for public patients in public hospitals.
- b. The payment of 'benefits', or rebates, for professional services listed in the Medicare Benefits Schedule (MBS). In general, the Medicare benefit is 85% of the Schedule fee, otherwise the benefits are
 - i. 100% of the Schedule fee for services provided by a general practitioner to non-referred, non-admitted patients;
 - ii. 100% of the Schedule fee for services provided on behalf of a general practitioner by a practice nurse or Aboriginal and Torres Strait Islander health practitioner;
 - iii. 75% of the Schedule fee for professional services rendered to a patient as part of an episode of hospital treatment (other than public patients);
 - iv. 75% of the Schedule fee for professional services rendered as part of a privately insured episode of hospital-substitute treatment.

Medicare benefits are claimable only for 'clinically relevant' services rendered by an appropriate health practitioner. A 'clinically relevant' service is one which is generally accepted by the relevant profession as necessary for the appropriate treatment of the patient.

When a service is not clinically relevant, the fee and payment arrangements are a private matter between the practitioner and the patient.

Services listed in the MBS must be rendered according to the provisions of the relevant Commonwealth, State and Territory laws. For example, medical practitioners must ensure that the medicines and medical devices they use have been supplied to them in strict accordance with the provisions of the Therapeutic Goods Act 1989.

Where a Medicare benefit has been inappropriately paid, the Department of Human Services may request its return from the practitioner concerned.

GN.1.3 Medicare benefits and billing practices

Key information on Medicare benefits and billing practices

The *Health Insurance Act 1973* stipulates that Medicare benefits are payable for professional services. A professional service is a clinically relevant service which is listed in the MBS. A medical service is clinically relevant if it is generally accepted in the medical profession as necessary for the appropriate treatment of the patient.

Medical practitioners are free to set their fees for their professional service. However, the amount specified in the patient's account must be the amount charged for the service specified. The fee may not include a cost of goods or services which are not part of the MBS service specified on the account.

Billing practices contrary to the Act

A *non-clinically relevant service* must not be included in the charge for a Medicare item. The non-clinically relevant service must be separately listed on the account and not billed to Medicare.

Goods supplied for the patient's home use (such as wheelchairs, oxygen tanks, continence pads) must not be included in the consultation charge. Medicare benefits are limited to services which the medical practitioner provides at the time of the consultation - any other services must be separately listed on the account and must not be billed to Medicare.

Charging part of all of an episode of hospital treatment or a hospital substitute treatment to a non-admitted consultation is prohibited. This would constitute a false or misleading statement on behalf of the medical practitioner and no Medicare benefits would be payable.

An account may not be re-issued to include charges and out-of-pocket expenses excluded in the original account. The account can only be reissued to correct a genuine error.

Potential consequence of improperly issuing an account

The potential consequences for improperly issuing an account are

- (a) No Medicare benefits will be paid for the service;
- (b) The medical practitioner who issued the account, or authorised its issue, may face charges under sections 128A or 128B of the *Health Insurance Act 1973*.
- (c) Medicare benefits paid as a result of a false or misleading statement will be recoverable from the doctor under section 129AC of the *Health Insurance Act 1973*.

Providers should be aware that the Department of Human Services is legally obliged to investigate doctors suspected of making false or misleading statements, and may refer them for prosecution if the evidence indicates fraudulent charging to Medicare. If Medicare benefits have been paid inappropriately or incorrectly, the Department of Human Services will take recovery action.

The Department of Human Services (DHS) has developed a [Health Practitioner Guideline for responding to a request to substantiate that a patient attended a service](#). There is also a [Health Practitioner Guideline for substantiating that a specific treatment was performed](#). These guidelines are located on the DHS website.

GN.2.4 Provider eligibility for Medicare

To be eligible to provide medical service which will attract Medicare benefits, or to provide services for or on behalf of another practitioner, practitioners must meet one of the following criteria:

- (a) be a recognised specialist, consultant physician or general practitioner; or
- (b) be in an approved placement under section 3GA of the *Health Insurance Act 1973*; or
- (c) be a temporary resident doctor with an exemption under section 19AB of the *Health Insurance Act 1973*, and working in accord with that exemption.

Any practitioner who does not satisfy the requirements outlined above may still practice medicine but their services will not be eligible for Medicare benefits.

NOTE: New Zealand citizens entering Australia do so under a special temporary entry visa and are regarded as temporary resident doctors.

NOTE: It is an offence under Section 19CC of the *Health Insurance Act 1973* to provide a service without first informing a patient where a Medicare benefit is not payable for that service (i.e. the service is not listed in the MBS).

Non-medical practitioners

To be eligible to provide services which will attract Medicare benefits under MBS items 10950-10977 and MBS items 80000-88000 and 82100-82140 and 82200-82215, allied health professionals, dentists, and dental specialists, participating midwives and participating nurse practitioners must be

- (a) registered according to State or Territory law or, absent such law, be members of a professional association with uniform national registration requirements; and
- (b) registered with the Department of Human Services to provide these services.

GN.2.5 Provider Numbers

Practitioners eligible to have Medicare benefits payable for their services and/or who for Medicare purposes wish to raise referrals for specialist services and requests for pathology or diagnostic imaging services, may apply *in writing* to the Department of Human Services for a Medicare provider number for the locations where these services/referrals/requests will be provided. The form may be downloaded from [the Department of Human Services website](#).

For Medicare purposes, an account/receipt issued by a practitioner must include the practitioner's name and *either* the provider number for the location where the service was provided *or* the address where the services were provided.

Medicare provider number information is released in accord with the secrecy provisions of the *Health Insurance Act 1973* (section 130) to authorized external organizations including private health insurers, the Department of Veterans' Affairs and the Department of Health.

When a practitioner ceases to practice at a given location they must inform Medicare promptly. Failure to do so can lead to the misdirection of Medicare cheques and Medicare information.

Practitioners at practices participating in the Practice Incentives Program (PIP) should use a provider number linked to that practice. Under PIP, only services rendered by a practitioner whose provider number is linked to the PIP will be considered for PIP payments.

GN.2.6 Locum tenens

Where a locum tenens will be in a practice for more than two weeks *or* in a practice for less than two weeks but on a regular basis, the locum should apply for a provider number for the relevant location. If the locum will be in a practice for less than two weeks and will not be returning there, they should contact the Department of Human Services (provider liaison - 132 150) to discuss their options (for example, use one of the locum's other provider numbers).

A locum must use the provider number allocated to the location if

- (a) they are an approved general practice or specialist trainee with a provider number issued for an approved training placement; or
- (b) they are associated with an approved rural placement under Section 3GA of the *Health Insurance Act 1973*; or
- (c) they have access to Medicare benefits as a result of the issue of an exemption under section 19AB of the *Health Insurance Act 1973* (i.e. they have access to Medicare benefits at specific practice locations); or
- (d) they will be at a practice which is participating in the Practice Incentives Program; or
- (e) they are associated with a placement on the MedicarePlus for Other Medical Practitioners (OMPs) program, the After Hours OMPs program, the Rural OMPs program or Outer Metropolitan OMPs program.

GN.2.7 Overseas trained doctor

Ten year moratorium

Section 19AB of the Health Insurance Act 1973 states that services provided by overseas trained doctors (including New Zealand trained doctors) and former overseas medical students trained in Australia, will not attract Medicare benefits for 10 years from either

- a. their date of registration as a medical practitioner for the purposes of the Health Insurance Act 1973; or
- b. their date of permanent residency (the reference date will vary from case to case).

Exclusions - Practitioners who before 1 January 1997 had

- a. registered with a State or Territory medical board and retained a continuing right to remain in Australia; or
- b. lodged a valid application with the Australian Medical Council (AMC) to undertake examinations whose successful completion would normally entitle the candidate to become a medical practitioner.

The Minister of Health and Ageing may grant an overseas trained doctor (OTD) or occupational trainee (OT) an exemption to the requirements of the ten year moratorium, with or without conditions. When applying for a Medicare provider number, the OTD or OT must

- a. demonstrate that they need a provider number and that their employer supports their request; and
- b. provide the following documentation:
 - i. Australian medical registration papers; and
 - ii. a copy of their personal details in their passport and all Australian visas and entry stamps; and
 - iii. a letter from the employer stating why the person requires a Medicare provider number and/or prescriber number is required; and
 - iv. a copy of the employment contract.

GN.2.8 Contact details for the Department of Human Services Changes to Provider Contact Details

It is important that you contact the Department of Human Services promptly of any changes to your preferred contact details. Your preferred mailing address is used to contact you about Medicare provider matters. We require requests for changes to your preferred contact details to be made by the provider in writing to the Department of Human Services at:

Medicare

GPO Box 9822

in your capital city

or

By email: medicare.prov@medicareaustralia.gov.au

You may also be able to update some provider details through HPOS
<http://www.medicareaustralia.gov.au/hpos/index.jsp>

MBS Interpretations

The day-to-day administration and payment of benefits under the Medicare arrangements is the responsibility of the Department of Human Services. Inquiries concerning matters of interpretation of MBS items should be directed to the Department of Health at Email: askmbs@health.gov.au

or by phone on 132 150

GN.3.9 Patient eligibility for Medicare

An "eligible person" is a person who resides permanently in Australia. This includes New Zealand citizens and holders of permanent residence visas. Applicants for permanent residence may also be eligible persons, depending on circumstances. Eligible persons must enrol with Medicare before they can receive Medicare benefits.

Medicare covers services provided only in Australia. It does not refund treatment or evacuation expenses overseas.

GN.3.10 Medicare cards

The **green** Medicare card is for people permanently in Australia. Cards may be issued for individuals or families.

The **blue** Medicare card bearing the words "INTERIM CARD" is for people who have applied for permanent residence.

Visitors from countries with which Australia has a Reciprocal Health Care Agreement receive a card bearing the words "RECIPROCAL HEALTH CARE"

GN.3.11 Visitors to Australia and temporary residents

Visitors and temporary residents in Australia are not eligible for Medicare and should therefore have adequate private health insurance.

GN.3.12 Reciprocal Health Care Agreements

Australia has Reciprocal Health Care Agreements with New Zealand, Ireland, the United Kingdom, the Netherlands, Sweden, Finland, Norway, Italy, Malta, Belgium and Slovenia.

Visitors from these countries are entitled to medically necessary treatment while they are in Australia, comprising public hospital care (as public patients), Medicare benefits and drugs under the Pharmaceutical Benefits Scheme (PBS). Visitors must enroll with the Department of Human Services to receive benefits. A passport is sufficient for public hospital care and PBS drugs.

Exceptions:

- Visitors from Ireland and New Zealand are entitled to public hospital care and PBS drugs, and should present their passports before treatment as they are not issued with Medicare cards.
- Visitors from Italy and Malta are covered for a period of six months only.

The Agreements do not cover treatment as a private patient in a public or private hospital. People visiting Australia for the purpose of receiving treatment are not covered.

GN.4.13 General Practice

Some MBS items may only be used by general practitioners. For MBS purposes a general practitioner is a medical practitioner who is

- (a) vocationally registered under section 3F of the *Health Insurance Act 1973* (see General Explanatory Note below); or
- (b) a Fellow of the Royal Australian College of General Practitioners (FRACGP), who participates in, and meets the requirements for the RACGP Quality Assurance and Continuing Medical Education Program; or
- (c) a Fellow of the Australian College of Rural and Remote Medicine (FACRRM) who participates in, and meets the requirements for the ACRRM Quality Assurance and Continuing Medical Education Program; or
- (d) is undertaking an approved general practice placement in a training program for *either* the award of FRACGP *or* a training program recognised by the RACGP being of an equivalent standard; or
- (e) is undertaking an approved general practice placement in a training program for *either* the award of FACRRM *or* a training program recognised by ACRRM as being of an equivalent standard.

A medical practitioner seeking recognition as an FRACGP should apply to the Department of Human Services, having completed an application form available from the Department of Human Services's website. A general practice trainee should apply to General Practice Education and Training Limited (GPET) for a general practitioner trainee placement. GPET will advise the Department of Human Services when a placement is approved. General practitioner trainees need to apply for a provider number using the appropriate provider number application form available on the Department of Human Services's website.

Vocational recognition of general practitioners

The only qualifications leading to vocational recognition are FRACGP and FACRRM. The criteria for recognition as a GP are:

- (a) certification by the RACGP that the practitioner
 - is a Fellow of the RACGP; and
 - practice is, or will be within 28 days, predominantly in general practice; and
 - has met the minimum requirements of the RACGP for taking part in continuing medical education and quality assurance programs.
- (b) certification by the General Practice Recognition Eligibility Committee (GPREC) that the practitioner
 - is a Fellow of the RACGP; and
 - practice is, or will be within 28, predominantly in general practice; and
 - has met minimum requirements of the RACGP for taking part in continuing medical education and quality assurance programs.
- (c) certification by ACRRM that the practitioner
 - is a Fellow of ACRRM; and
 - has met the minimum requirements of the ACRRM for taking part in continuing medical education and quality assurance programs.

In assessing whether a practitioner's medical practice is predominantly in general practice, the practitioner must have at least 50% of clinical time and services claimed against Medicare. Regard will also be given as to whether the

practitioner provides a comprehensive primary medical service, including treating a wide range of patients and conditions using a variety of accepted medical skills and techniques, providing services away from the practitioner's surgery on request, for example, home visits and making appropriate provision for the practitioner's patients to have access to after hours medical care.

Further information on eligibility for recognition should be directed to:

QI&CPD Program Administrator, RACGP

Tel: 1800 472 247 Email at: qicpd@racgp.org.au

Secretary, General Practice Recognition Eligibility Committee:

Email at gprec@health.gov.au

Executive Assistant, ACRRM:

Tel: (07) 3105 8200 Email at acrrm@acrrm.org.au

How to apply for vocational recognition

Medical practitioners seeking vocational recognition should apply to the Department of Human Services using the approved Application Form available on the the Department of Human Services website: www.humanservices.gov.au. Applicants should forward their applications, as appropriate, to

The Secretariat

The General Practice Recognition Eligibility Committee

National Registration and Accreditation Scheme Policy Section

MDP 152

Department of Health

GPO Box 9848

CANBERRA ACT 2601

email address: gprec@health.gov.au

The Secretariat

The General Practice Recognition Appeal Committee

National Registration and Accreditation Scheme Policy Section

MDP 152

Department of Health

GPO Box 9848

CANBERRA ACT 2601

email address: gprac@health.gov.au

The relevant body will forward the application together with its certification of eligibility to the Department of Human Services CEO for processing.

Continued vocational recognition is dependent upon:

(a) the practitioner's practice continuing to be predominantly in general practice (for medical practitioners in the Register only); and

(b) the practitioner continuing to meet minimum requirements for participation in continuing professional development programs approved by the RACGP or the ACRRM.

Further information on continuing medical education and quality assurance requirements should be directed to the RACGP or the ACRRM depending on the college through which the practitioner is pursuing, or is intending to pursue, continuing medical education.

Medical practitioners refused certification by the RACGP, the ACRRM or GPREC may appeal in writing to The Secretariat, General Practice Recognition Appeal Committee (GPRAC), National Registration and Accreditation Scheme Policy Section, MDP 152, Department of Health, GPO Box 9848, Canberra, ACT, 2601.

Removal of vocational recognition status

A medical practitioner may at any time request the Department of Human Services to remove their name from the Vocational Register of General Practitioners.

Vocational recognition status can also be revoked if the RACGP, the ACRRM or GPREC certifies to the Department of Human Services that it is no longer satisfied that the practitioner should remain vocationally recognised. Appeals of the decision to revoke vocational recognition may be made in writing to GPRAC, at the above address.

A practitioner whose name has been removed from the register, or whose determination has been revoked for any reason must make a formal application to re-register, or for a new determination.

GN.5.14 Recognition as a Specialist or Consultant Physician

A medical practitioner who:

- is registered as a specialist under State or Territory law; or
- holds a fellowship of a specified specialist College and has obtained, after successfully completing an appropriate course of study, a relevant qualification from a relevant College

and has formally applied and paid the prescribed fee, may be recognised by the Minister as a specialist or consultant physician for the purposes of the *Health Insurance Act 1973*.

A relevant specialist College may also give the Department of Human Services' Chief Executive Officer a written notice stating that a medical practitioner meets the criteria for recognition.

A medical practitioner who is training for a fellowship of a specified specialist College and is undertaking training placements in a private hospital or in general practice, may provide services which attract Medicare rebates. Specialist trainees should consult the information available at the [Department of Human Services' Medicare website](#).

Once the practitioner is recognised as a specialist or consultant physician for the purposes of the *Health Insurance Act 1973*, Medicare benefits will be payable at the appropriate higher rate for services rendered in the relevant speciality, provided the patient has been appropriately referred to them.

Further information about applying for recognition is available at the [Department of Human Services' Medicare website](#).

The Department of Human Services (DHS) has developed an [Health Practitioner Guideline to substantiate that a valid referral existed \(specialist or consultant physician\)](#) which is located on the DHS website.

GN.5.15 Emergency Medicine

A practitioner will be acting as an emergency medicine specialist when treating a patient within 30 minutes of the patient's presentation, and that patient is

- (a) at risk of serious morbidity or mortality requiring urgent assessment and resuscitation; or
- (b) suffering from suspected acute organ or system failure; or
- (c) suffering from an illness or injury where the viability or function of a body part or organ is acutely threatened; or
- (d) suffering from a drug overdose, toxic substance or toxin effect; or
- (e) experiencing severe psychiatric disturbance whereby the health of the patient or other people is at immediate risk; or
- (f) suffering acute severe pain where the viability or function of a body part or organ is suspected to be acutely threatened; or
- (g) suffering acute significant haemorrhage requiring urgent assessment and treatment; and
- (h) treated in, or via, a bona fide emergency department in a hospital.

Benefits are not payable where such services are rendered in the accident and emergency departments or outpatient departments of public hospitals.

GN.5.16 Conjoint Committee for recognising training in Micro Bypass Glaucoma Surgery (MBGS)

The Conjoint Committee comprises representatives from the Australian and New Zealand Glaucoma Society (ANZGS) and the Royal Australian and New Zealand College of Ophthalmologists (RANZCO). For the purposes of MBS item 42504, specialists performing this procedure must have certification and training recognised by the Conjoint Committee for the Recognition of Training in Micro-Bypass Glaucoma Surgery, and the Department of Human Services notified of that recognition.

GN.6.16 Referral Of Patients To Specialists Or Consultant Physicians

For certain services provided by specialists and consultant physicians, the Medicare benefit payable is dependent on acceptable evidence that the service has been provided following referral from another practitioner.

A reference to a referral in this Section does not refer to written requests made for pathology services or diagnostic imaging services. Information about the form of a diagnostic imaging request can be found in **Note IN.0.1** of the Diagnostic Imaging Services Table (Category 5) and information about the form of a pathology request can be found in **Note PN.2.1** of the Pathology Services Table (Category 6).

What is a Referral?

A "referral" is a request to a specialist or a consultant physician for investigation, opinion, treatment and/or management of a condition or problem of a patient or for the performance of a specific examination(s) or test(s).

Subject to the exceptions in the paragraph below, for a valid "referral" to take place

- (i) the referring practitioner must have undertaken a professional attendance with the patient and turned their mind to the patient's need for referral and have communicated relevant information about the patient to the specialist or consultant physician (this need not mean an attendance on the occasion of the referral);
- (ii) the instrument of referral must be in writing as a letter or note to a specialist or to a consultant physician and must be signed and dated by the referring practitioner; and
- (iii) the specialist or consultant physician to whom the patient is referred must have received the instrument of referral on or prior to the occasion of the professional service to which the referral relates.

The exceptions to the requirements in paragraph above are that

(a) sub-paragraphs (i), (ii) and (iii) do not apply to

- a pre-anaesthesia consultation by a specialist anaesthetist (items 16710-17625);

(b) sub-paragraphs (ii) and (iii) do not apply to

- a referral generated during an episode of hospital treatment, for a service provided or arranged by that hospital, where the hospital records provide evidence of a referral (including the referring practitioner's signature); or

- an emergency where the referring practitioner or the specialist or the consultant physician was of the opinion that the service be rendered as quickly as possible; and

(c) sub-paragraph (iii) does not apply to instances where a written referral was completed by a referring practitioner but was lost, stolen or destroyed.

Examination by Specialist Anaesthetists

A referral is not required in the case of pre-anaesthesia consultation items 17610-17625. However, for benefits to be payable at the specialist rate for consultations, other than pre-anaesthesia consultations by specialist anaesthetists (items 17640 -17655) a referral is required.

Who can Refer?

The general practitioner is regarded as the primary source of referrals. Cross-referrals between specialists and/or consultant physicians should usually occur in consultation with the patient's general practitioner.

Referrals by Dentists or Optometrists or Participating Midwives or Participating Nurse Practitioners

For Medicare benefit purposes, a referral may be made to

- (i) a recognised specialist:

- (a) by a registered dental practitioner, where the referral arises from a dental service; or

- (b) by a registered optometrist where the specialist is an ophthalmologist; or

- (c) by a participating midwife where the specialist is an obstetrician or a paediatrician, as clinical needs dictate. A referral given by a participating midwife is valid until 12 months after the first service given in accordance with the referral and for I pregnancy only or

- (d) by a participating nurse practitioner to specialists and consultant physicians. A referral given by a participating nurse practitioner is valid until 12 months after the first service given in accordance with the referral.

(ii) a consultant physician, by an approved dental practitioner (oral surgeon), where the referral arises out of a dental service.

In any other circumstances (i.e. a referral to a consultant physician by a dentist, other than an approved oral surgeon, or an optometrist, or a referral by an optometrist to a specialist other than a specialist ophthalmologist), it is not a valid referral. Any resulting consultant physician or specialist attendances will attract Medicare benefits at unreferred rates.

Registered dentists and registered optometrists may refer themselves to specialists in accordance with the criteria above, and Medicare benefits are payable at the levels which apply to their referred patients.

Billing

Routine Referrals

In addition to providing the usual information required to be shown on accounts, receipts or assignment forms, specialists and consultant physicians must provide the following details (unless there are special circumstances as indicated in paragraph below):-

- name and either practice address or provider number of the referring practitioner;
- date of referral; and
- period of referral (when other than for 12 months) expressed in months, eg "3", "6" or "18" months, or "indefinitely" should be shown.

Special Circumstances

(i) Lost, stolen or destroyed referrals.

If a referral has been made but the letter or note of referral has been lost, stolen or destroyed, benefits will be payable at the referred rate if the account, receipt or the assignment form shows the name of the referring medical practitioner, the practice address or provider number of the referring practitioner (if either of these are known to the consultant physician or specialist) and the words 'Lost referral'. This provision only applies to the initial attendance. For subsequent attendances to attract Medicare benefits at the referred rate a duplicate or replacement letter of referral must be obtained by the specialist or the consultant physician.

(ii) Emergencies

If the referral occurred in an emergency, benefit will be payable at the referred rate if the account, receipt or assignment form is endorsed 'Emergency referral'. This provision only applies to the initial attendance. For subsequent attendances to attract Medicare benefits at the referred rate the specialist/consultant physician must obtain a letter of referral.

(iii) Hospital referrals.

Private Patients - Where a referral is generated during an episode of hospital treatment for a service provided or arranged by that hospital, benefits will be payable at the referred rate if the account, receipt or assignment form is endorsed 'Referral within (name of hospital)' and the patient's hospital records show evidence of the referral (including the referring practitioner's signature). However, in other instances where a medical practitioner within a hospital is involved in referring a patient (e.g. to a specialist or a consultant physician in private rooms) the normal referral arrangements apply, including the requirement for a referral letter or note and its retention by the specialist or the consultant physician billing for the service.

Public Hospital Patients

State and Territory Governments are responsible for the provision of public hospital services to eligible persons in accordance with the National Healthcare Agreement.

Bulk Billing

Bulk billing assignment forms should show the same information as detailed above. However, faster processing of the claim will be facilitated where the provider number (rather than the practice address) of the referring practitioner is shown.

Period for which Referral is Valid

The referral is valid for the period specified in the referral which is taken to commence on the date of the specialist's or consultant physician's first service covered by that referral.

Specialist Referrals

Where a referral originates from a specialist or a consultant physician, the referral is valid for 3 months, except where the referred patient is an admitted patient. For admitted patients, the referral is valid for 3 months or the duration of the admission whichever is the longer.

As it is expected that the patient's general practitioner will be kept informed of the patient's progress, a referral from a specialist or a consultant physician must include the name of the patient's general practitioners and/or practice. Where a patient is unable or unwilling to nominate a general practitioner or practice this must be stated in the referral.

Referrals by other Practitioners

Where the referral originates from a practitioner other than those listed in *Specialist Referrals*, the referral is valid for a period of 12 months, unless the referring practitioner indicates that the referral is for a period more or less than 12 months (eg. 3, 6 or 18 months or valid indefinitely). Referrals for longer than 12 months should only be used where the patient's clinical condition requires continuing care and management of a specialist or a consultant physician for a specific condition or specific conditions.

Definition of a Single Course of Treatment

A single course of treatment involves an initial attendance by a specialist or consultant physician and the continuing management/treatment up to the stage where the patient is referred back to the care of the referring practitioner. It also includes any subsequent review of the patient's condition by the specialist or the consultant physician that may be necessary. Such a review may be initiated by either the referring practitioner or the specialist/consultant physician.

The presentation of an unrelated illness, requiring the referral of the patient to the specialist's or the consultant physician's care would initiate a new course of treatment in which case a new referral would be required.

The receipt by a specialist or consultant physician of a new referral following the expiration of a previous referral for the same condition(s) does not necessarily indicate the commencement of a new course of treatment involving the itemisation of an initial consultation. In the continuing management/treatment situation the new referral is to facilitate the payment of benefits at the specialist or the consultant physician referred rates rather than the unreferred rates.

However, where the referring practitioner:-

- (a) deems it necessary for the patient's condition to be reviewed; and
- (b) the patient is seen by the specialist or the consultant physician outside the currency of the last referral;
and
- (c) the patient was last seen by the specialist or the consultant physician more than 9 months earlier

the attendance following the new referral initiates a new course of treatment for which Medicare benefit would be payable at the initial consultation rates.

Retention of Referral Letters

The prima facie evidence that a valid referral exists is the provision of the referral particulars on the specialist's or the consultant physician's account.

A specialist or a consultant physician is required to retain the instrument of referral (and a hospital is required to retain the patient's hospital records which show evidence of a referral) for 2 years from the date the service was rendered.

A specialist or a consultant physician is required, if requested by the Department of Human Services CEO, to produce to a medical practitioner who is an employee of the Department of Human Services, the instrument of referral within seven days after the request is received. Where the referral originates in an emergency situation or in a hospital, the specialist or consultant physician is required to produce such information as is in his or her possession or control relating to whether the patient was so treated.

Attendance for Issuing of a Referral

Medicare benefit is attracted for an attendance on a patient even where the attendance is solely for the purpose of issuing a referral letter or note. However, if a medical practitioner issues a referral without an attendance on the patient, no benefit is payable for any charge raised for issuing the referral.

Locum-tenens Arrangements

It should be noted that where a non-specialist medical practitioner acts as a locum-tenens for a specialist or consultant physician, or where a specialist acts as a locum-tenens for a consultant physician, Medicare benefit is only payable at the level appropriate for the particular locum-tenens, eg, general practitioner level for a general practitioner locum-tenens and specialist level for a referred service rendered by a specialist locum tenens.

Medicare benefits are not payable where a practitioner is not eligible to provide services attracting Medicare benefits acts as a locum-tenens for any practitioner who is eligible to provide services attracting Medicare benefits.

Fresh referrals are not required for locum-tenens acting according to accepted medical practice for the principal of a practice ie referrals to the latter are accepted as applying to the former and benefit is not payable at the initial attendance rate for an attendance by a locum-tenens if the principal has already performed an initial attendance in respect of the particular instrument of referral.

Self Referral

Medical practitioners may refer themselves to consultant physicians and specialists and Medicare benefits are payable at referred rates.

GN.7.17 Billing procedures

The Department of Human Services website contains information on Medicare billing and claiming options. Please visit the [Department of Human Services](#) website for further information.

Bulk billing

Under the *Health Insurance Act 1973*, a bulk billing facility for professional services is available to all persons in Australia who are eligible for a benefit under the Medicare program. If a practitioner bulk bills for a service the practitioner undertakes to accept the relevant Medicare benefit as full payment for the service. Additional charges for that service cannot be raised. This includes but is not limited to:

- any consumables that would be reasonably necessary to perform the service, including bandages and/or dressings;
- record keeping fees;
- a booking fee to be paid before each service, or;
- an annual administration or registration fee.

Where the patient is bulk billed, an additional charge can **only** be raised against the patient by the practitioner where the patient is provided with a vaccine or vaccines from the practitioner's own supply held on the practitioner's premises. This exemption only applies to general practitioners and other non-specialist practitioners in association with attendance items **3 to 96, 179 to 212, 733 to 789** and **5000 to 5267** (inclusive) and only relates to vaccines that are not available to the patient free of charge through Commonwealth or State funding arrangements or available through the Pharmaceutical Benefits Scheme. The additional charge must only be to cover the supply of the vaccine.

Where a practitioner provides a number of services (excluding operations) on the one occasion, they can choose to bulk bill some or all of those services and privately charge a fee for the other service (or services), in excess of the Medicare rebate. The privately charged fee can only be charged in relation to said service (or services). Where two or more operations are provided on the one occasion, all services must be either bulk billed or privately charged.

It should be noted that, where a service is not bulk billed, a practitioner may privately raise an additional charge against a patient, such as for a consumable. An additional charge can also be raised where a practitioner does not bulk bill a patient but instead charges a fee that is equal to the rebate for the Medicare service. For example, where a general practitioner provides a professional service to which item 23 relates the practitioner could, in place of bulk billing the patient, charge the rebate for the service and then also raise an additional charge (such as for a consumable).

GN.8.18 Provision for review of individual health professionals

The Professional Services Review (PSR) reviews and investigates service provision by health practitioners to determine if they have engaged in inappropriate practice when rendering or initiating Medicare services, or when prescribing or dispensing under the PBS.

Section 82 of the *Health Insurance Act 1973* defines inappropriate practice as conduct that is such that a PSR Committee could reasonably conclude that it would be unacceptable to the general body of the members of the profession in which the practitioner was practicing when they rendered or initiated the services under review. It is also an offence under Section 82 for a person or officer of a body corporate to knowingly, recklessly or negligently cause or permit a practitioner employed by the person to engage in such conduct.

The Department of Human Services monitors health practitioners' claiming patterns. Where the Department of Human Services detects an anomaly, it may request the Director of PSR to review the practitioner's service provision. On receiving the request, the Director must decide whether to conduct a review and in which manner the review will be conducted. The Director is authorized to require that documents and information be provided.

Following a review, the Director must:

decide to take no further action; or

enter into an agreement with the person under review (which must then be ratified by an independent Determining Authority); or

refer the matter to a PSR Committee.

A PSR Committee normally comprises three medically qualified members, two of whom must be members of the same profession as the practitioner under review. However, up to two additional Committee members may be appointed to provide wider range of clinical expertise.

The Committee is authorized to:

investigate any aspect of the provision of the referred services, and without being limited by the reasons given in the review request or by a Director's report following the review;

hold hearings and require the person under review to attend and give evidence;

require the production of documents (including clinical notes).

The methods available to a PSR Committee to investigate and quantify inappropriate practice are specified in legislation:

(a) Patterns of Services - The *Health Insurance (Professional Services Review) Regulations 1999* specify that when a general practitioner or other medical practitioner reaches or exceeds 80 or more attendances on each of 20 or more days in a 12-month period, they are deemed to have practiced inappropriately.

A professional attendance means a service of a kind mentioned in group A1, A2, A5, A6, A7, A9, A11, A13, A14, A15, A16, A17, A18, A19, A20, A21, A22 or A23 of Part 3 of the General Medical Services Table.

If the practitioner can satisfy the PSR Committee that their pattern of service was as a result of exceptional circumstances, the quantum of inappropriate practice is reduced accordingly. Exceptional circumstances include, but are not limited to, those set out in the *Regulations*. These include:

an unusual occurrence;

the absence of other medical services for the practitioner's patients (having regard to the practice location); and

the characteristics of the patients.

(b) Sampling - A PSR Committee may use statistically valid methods to sample the clinical or practice records.

(c) Generic findings - If a PSR Committee cannot use patterns of service or sampling (for example, there are insufficient medical records), it can make a 'generic' finding of inappropriate practice.

Additional Information

A PSR Committee may not make a finding of inappropriate practice unless it has given the person under review notice of its intention to review them, the reasons for its findings, and an opportunity to respond. In reaching their decision, a PSR Committee is required to consider whether or not the practitioner has kept adequate and contemporaneous patient records (See general explanatory note G15.1 for more information on adequate and contemporaneous patient records).

The practitioner under review is permitted to make submissions to the PSR Committee before key decisions or a final report is made.

If a PSR Committee finds that the person under review has engaged in inappropriate practice, the findings will be reported to the Determining Authority to decide what action should be taken:

(i) a reprimand;

(ii) counselling;

(iii) repayment of Medicare benefits; and/or

(iv) complete or partial disqualification from Medicare benefit arrangements for up to three years.

Further information is available from the PSR website - www.psr.gov.au

GN.8.19 Medicare Participation Review Committee

The Medicare Participation Review Committee determines what administrative action should be taken against a practitioner who:

(a) has been successfully prosecuted for relevant criminal offences;

(b) has breached an Approved Pathology Practitioner undertaking;

(c) has engaged in prohibited diagnostic imaging practices; or

(d) has been found to have engaged in inappropriate practice under the Professional Services Review scheme and has received Final Determinations on two (or more) occasions.

The Committee can take no further action, counsel or reprimand the practitioner, or determine that the practitioner be disqualified from Medicare for a particular period or in relation to particular services for up to five years.

Medicare benefits are not payable in respect of services rendered by a practitioner who has been fully disqualified, or partly disqualified in relation to relevant services under the *Health Insurance Act 1973* (Section 19B applies).

GN.8.20 Referral of professional issues to regulatory and other bodies

The *Health Insurance Act 1973* provides for the following referral, to an appropriate regulatory body:

- i. a significant threat to a person's life or health, when caused or is being caused or is likely to be caused by the conduct of the practitioner under review; or
- ii. a statement of concerns of non-compliance by a practitioner with 'professional standards'.

GN.8.21 Comprehensive Management Framework for the MBS

The Government announced the Comprehensive Management Framework for the MBS in the 2011-12 Budget to improve MBS management and governance into the future. As part of this framework, the Medical Services Advisory Committee (MSAC) Terms of Reference and membership have been expanded to provide the Government with independent expert advice on all new proposed services to be funded through the MBS, as well as on all proposed amendments to existing MBS items. Processes developed under the previously funded MBS Quality Framework are now being integrated with MSAC processes under the Comprehensive Management Framework for the MBS.

GN.8.22 Medical Services Advisory Committee

The Medical Services Advisory Committee (MSAC) advises the Minister on the strength of evidence relating to the safety, effectiveness and cost effectiveness of new and emerging medical services and technologies and under what circumstances public funding, including listing on the MBS, should be supported.

MSAC members are appointed by the Minister and include specialist practitioners, general practitioners, health economists, a health consumer representative, health planning and administration experts and epidemiologists.

For more information on the MSAC refer to their website - www.msac.gov.au or email on msac.secretariat@health.gov.au or by phoning the MSAC secretariat on (02) 6289 7550.

GN.8.23 Pathology Services Table Committee

This Pathology Services Table Committee comprises six representatives from the interested professions and six from the Australian Government. Its primary role is to advise the Minister on the need for changes to the structure and content of the Pathology Services Table (except new medical services and technologies) including the level of fees.

GN.9.25 Penalties and Liabilities

Penalties of up to \$10,000 or imprisonment for up to five years, or both, may be imposed on any person who makes a statement (oral or written) or who issues or presents a document that is false or misleading in a material particular and which is capable of being used with a claim for benefits. In addition, any practitioner who is found guilty of such offences by a court shall be subject to examination by a Medicare Participation Review Committee and may be counselled or reprimanded or may have services wholly or partially disqualified from the Medicare benefit arrangements.

A penalty of up to \$1,000 or imprisonment for up to three months, or both, may be imposed on any person who obtains a patient's signature on a direct-billing form without the obligatory details having been entered on the form before the person signs, or who fails to cause a patient to be given a copy of the completed form.

GN.10.26 Schedule fees and Medicare benefits

Medicare benefits are based on fees determined for each medical service. The fee is referred to in these notes as the "Schedule fee". The fee for any item listed in the MBS is that which is regarded as being reasonable on average for that service having regard to usual and reasonable variations in the time involved in performing the service on different occasions and to reasonable ranges of complexity and technical difficulty encountered.

The Schedule fee and Medicare benefit levels for the medical services contained in the MBS are located with the item descriptions. Where appropriate, the calculated benefit has been rounded to the nearest higher 5 cents. However, in no circumstances will the Medicare benefit payable exceed the fee actually charged.

There are presently three levels of Medicare benefit payable:

- a. 75% of the Schedule fee:
 - i. for professional services rendered to a patient as part of an episode of hospital treatment (other than public patients). Medical practitioners must indicate on their accounts if a medical service is rendered in these circumstances by placing an asterisk '*' or the letter 'H' directly after an item number where used; or a description of the professional service and an indication the service was rendered as an episode of hospital treatment (for example, 'in hospital', 'admitted' or 'in patient');
 - ii. for professional services rendered as part of an episode of hospital-substitute treatment, and the patient who receives the treatment chooses to receive a benefit from a private health insurer. Medical practitioners must indicate on their accounts if a medical service is rendered in these circumstances by placing the words 'hospital-substitute treatment' directly after an item number where used; or a description of the professional service, preceded by the words 'hospital-substitute treatment'.
- b. 100% of the Schedule fee for non-referred attendances by general practitioners to non-admitted patients and services provided by a practice nurse or Aboriginal and Torres Strait Islander health practitioner on behalf of a general practitioner.
- c. 85% of the Schedule fee, or the Schedule fee less \$84.70 (indexed annually in November), whichever is the greater, for all other professional services.

Public hospital services are to be provided free of charge to eligible persons who choose to be treated as public patients in accordance with the National Healthcare Agreement.

A medical service rendered to a patient on the day of admission to, or day of discharge from hospital, but prior to admission or subsequent to discharge, will attract benefits at the 85% or 100% level, not 75%. This also applies to a pathology service rendered to a patient prior to admission. Attendances on patients at a hospital (other than patients covered by paragraph (i) above) attract benefits at the 85% level.

The 75% benefit level applies even though a portion of the service (eg. aftercare) may be rendered outside the hospital. With regard to obstetric items, benefits would be attracted at the 75% level where the confinement takes place in hospital.

Pathology tests performed after discharge from hospital on bodily specimens taken during hospitalisation also attract the 75% level of benefits.

It should be noted that private health insurers can cover the "patient gap" (that is, the difference between the Medicare rebate and the Schedule fee) for services attracting benefits at the 75% level. Patients may insure with private health insurers for the gap between the 75% Medicare benefits and the Schedule fee or for amounts in excess of the Schedule fee where the doctor has an arrangement with their health insurer.

GN.10.27 Medicare safety nets

The Medicare Safety Nets provide families and singles with an additional rebate for out-of-hospital Medicare services, once annual thresholds are reached. There are two safety nets: the original Medicare safety net and the extended Medicare safety net.

Original Medicare Safety Net:

Under the original Medicare safety net, the Medicare benefit for out-of-hospital services is increased to 100% of the Schedule Fee (up from 85%) once an annual threshold in gap costs is reached. Gap costs refer to the difference between the Medicare benefit (85%) and the Schedule Fee. The threshold from 1 January 2020 is \$477.90. This threshold applies to all Medicare-eligible singles and families.

Extended Medicare Safety Net:

Under the extended Medicare safety net (EMSN), once an annual threshold in out-of-pocket costs for out-of-hospital Medicare services is reached, Medicare will pay for 80% of any future out-of-pocket costs for out-of-hospital Medicare services for the remainder of the calendar year. However, where the item has an EMSN benefit cap, there is a maximum limit on the EMSN benefit that will be paid for that item. Further explanation about EMSN benefit caps is provided below. Out-of-pocket costs refer to the difference between the Medicare benefit and the fee charged by the practitioner.

In 2020, the threshold for singles and families that hold a Commonwealth concession card, families that received Family Tax Benefit Part (A) (FTB(A)) and families that qualify for notional FTB (A) is \$692.20. The threshold for all other singles and families in 2019 is \$2,169.20.

The thresholds for both safety nets are usually indexed on 1 January each year.

Individuals are automatically registered with the Department of Human Services for the safety nets; however couples and families are required to register in order to be recognised as a family for the purposes on the safety nets. In most cases, registered families have their expenses combined to reach the safety net thresholds. This may help to qualify for safety net benefits more quickly. Registration forms can be obtained from the Department of Human Services offices, or completed online at <http://www.humanservices.gov.au/customer/services/medicare/medicare-safety-net>.

EMSN Benefit Caps:

The EMSN benefit cap is the maximum EMSN benefit payable for that item and is paid in addition to the standard Medicare rebate. Where there is an EMSN benefit cap in place for the item, the amount of the EMSN cap is displayed in the item descriptor.

Once the EMSN threshold is reached, each time the item is claimed the patient is eligible to receive up to the EMSN benefit cap. As with the safety nets, the EMSN benefit cap only applies to out-of-hospital services.

Where the item has an EMSN benefit cap, the EMSN benefit is calculated as 80% of the out-of-pocket cost for the service. If the calculated EMSN benefit is less than the EMSN benefit cap; then calculated EMSN rebate is paid. If the calculated EMSN benefit is greater than the EMSN benefit cap; the EMSN benefit cap is paid.

For example: Item A has a Schedule fee of \$100, the out-of-hospital benefit is \$85 (85% of the Schedule fee). The EMSN benefit cap is \$30. Assuming that the patient has reached the EMSN threshold:

- o If the fee charged by the doctor for Item A is \$125, the standard Medicare rebate is \$85, with an out-of-pocket cost of \$40. The EMSN benefit is calculated as $\$40 \times 80\% = \32 . However, as the EMSN benefit cap is \$30, only \$30 will be paid.
- o If the fee charged by the doctor for Item A is \$110, the standard Medicare rebate is \$85, with an out-of-pocket cost of \$25. The EMSN benefit is calculated as $\$25 \times 80\% = \20 . As this is less than the EMSN benefit cap, the full \$20 is paid.

GN.11.28 Services not listed in the MBS

Benefits are not generally payable for services not listed in the MBS. However, there are some procedural services which are not specifically listed because they are regarded as forming part of a consultation or else attract benefits on an attendance basis. For example, intramuscular injections, aspiration needle biopsy, treatment of sebhorreic

keratoses and less than 10 solar keratoses by ablative techniques and closed reduction of the toe (other than the great toe).

Enquiries about services not listed or on matters of interpretation should be directed to the Department of Human Services on 132 150.

GN.11.29 Ministerial Determinations

Section 3C of the *Health Insurance Act 1973* empowers the Minister to determine an item and Schedule fee (for the purposes of the Medicare benefits arrangements) for a service not included in the health insurance legislation. This provision may be used to facilitate payment of benefits for new developed procedures or techniques where close monitoring is desirable. Services which have received section 3C approval are located in their relevant Groups in the MBS with the notation "**(Ministerial Determination)**".

GN.12.30 Professional services

Professional services which attract Medicare benefits include medical services rendered by or "on behalf of" a medical practitioner. The latter include services where a part of the service is performed by a technician employed by or, in accordance with accepted medical practice, acting under the supervision of the medical practitioner.

The following medical services will attract benefits only if they have been personally performed by a medical practitioner on not more than one patient on the one occasion (i.e. two or more patients cannot be attended simultaneously, although patients may be seen consecutively), unless a group session is involved (i.e. Items 170-172). The requirement of "personal performance" is met whether or not essential assistance is provided, according to accepted medical practice:-

- (a) Category 1 (Professional Attendances) items except 170-172, 342-346, 820-880, 6029-6042, 6064-6075;
- (b) Each of the following items in Group D1 (Miscellaneous Diagnostic):- 11012, 11015, 11018, 11021, 11304, 11600, 11627, 11701, 11712, 11722, 11724, 11728, 11921, 12000, 12003;
- (c) All Group T1 (Miscellaneous Therapeutic) items (except 13020, 13025, 13200-13206, 13212-13221, 13703, 13706, 13709, 13750-13760, 13915-13948, 14050, 14218, 14221 and 14245);
- (d) Item 15600 in Group T2 (Radiation Oncology);
- (e) All Group T3 (Therapeutic Nuclear Medicine) items;
- (f) All Group T4 (Obstetrics) items (except 16400 and 16514);
- (g) All Group T6 (Anaesthetics) items;
- (h) All Group T7 (Regional or Field Nerve Block) items;
- (i) All Group T8 (Operations) items;
- (j) All Group T9 (Assistance at Operations) items;
- (k) All Group T10 (Relative Value Guide for Anaesthetics) items.

For the group psychotherapy and family group therapy services covered by Items 170, 171, 172, 342, 344 and 346, benefits are payable only if the services have been conducted personally by the medical practitioner.

Medicare benefits are not payable for these group items or any of the items listed in (a) - (k) above when the service is rendered by a medical practitioner employed by the proprietor of a hospital (not being a private hospital), except where the practitioner is exercising their right of private practice, or is performing a medical service outside the hospital. For example, benefits are not paid when a hospital intern or registrar performs a service at the request of a staff specialist or visiting medical officer.

Medicare benefits are only payable for items 12306 - 12322 (Bone Densitometry) when the service is performed by a specialist or consultant physician in the practice of the specialist's or consultant physician's specialty where the patient is referred by another medical practitioner.

GN.12.31 Services rendered on behalf of medical practitioners

Medical services in Categories 2 and 3 not included in GN.12.30 and Category 5 (Diagnostic Imaging) services continue to attract Medicare benefits if the service is rendered by:-

- (a) the medical practitioner in whose name the service is being claimed;
- (b) a person, other than a medical practitioner, who is employed by a medical practitioner or, in accordance with accepted medical practice, acts under the supervision of a medical practitioner.

See Category 6 Notes for Guidance for arrangements relating to Pathology services.

So that a service rendered by an employee or under the supervision of a medical practitioner may attract a Medicare rebate, the service must be billed in the name of the practitioner who must accept full responsibility for the service. All practitioners should ensure they maintain adequate and contemporaneous records. All elements of the service must be performed in accordance with accepted medical practice.

Supervision from outside of Australia is not acceptable.

While the supervising medical practitioner need not be present for the entire service, they must have a direct involvement in at least part of the service. Although the supervision requirements will vary according to the service in question, they will, as a general rule, be satisfied where the medical practitioner has:-

- (a) established consistent quality assurance procedures for the data acquisition; and
- (b) personally analysed the data and written the report.

Benefits are not payable for these services when a medical practitioner refers patients to self-employed medical or paramedical personnel, such as radiographers and audiologists, who either bill the patient or the practitioner requesting the service.

GN.12.32 Medicare benefits and vaccinations

Where a medical practitioner administers an injection for immunisation purposes on the medical practitioner's own patient, Medicare benefits for that service would be payable on a consultation basis, that is, for the attendance at which the injection is given. However, the cost of the vaccine itself does not attract a Medicare rebate. The Medicare benefits arrangements cover only the professional component of the medical practitioner's service. There are some circumstances where a Medicare benefit is not payable when a medical practitioner administers an injection for immunisation purposes – please refer to example 3 below for further details.

Example 1

A patient presents to a GP to receive the influenza vaccination. The patient is not in the cohort of patients which is covered for the influenza vaccine under the NIP.

After taking a short patient history, the GP administers the vaccine to the patient. The GP has met the requirements of a level A consultation and claims item 3. The GP can bulk bill the patient for the cost of the MBS service and can charge a separate amount for the cost of the vaccine, which is not covered under the NIP.

If a patient presented to a GP to receive a vaccine and to enquire about a medical condition, the GP may claim the appropriate item (such as item 23).

Example 2

A patient presents to a GP to receive the influenza vaccination. The patient is in the cohort of patients which is covered for the influenza vaccine under the NIP.

After taking a short patient history, the GP administers the vaccine to the patient. The GP has met the requirements of a level A consultation and claims item 3. The GP can bulk bill the patient but does not need to charge a separate amount for the cost of the vaccine, which is covered under the NIP.

If a patient presented to a GP to receive a vaccine and to enquire about a medical condition, the GP may claim the appropriate item (such as item 23).

Example 3

A GP is employed by a State or Territory community health centre to administer vaccines and provides no additional medical services.

A Medicare benefit is not payable as the GP is providing the service under an arrangement with the State or Territory, which is prohibited under subsection 19(2) of the Health Insurance Act 1973. The service is also prohibited on the basis that it is a mass immunisation which is prohibited under subsection 19(4).

A mass immunisation is a program to inoculate people that is funded by the Commonwealth or State Government, or through an international or private organisation.

GN.13.33 Services which do not attract Medicare benefits **Services not attracting benefits**

- (a) telephone consultations;
- (b) issue of repeat prescriptions when the patient does not attend the surgery in person;
- (c) group attendances (unless otherwise specified in the item, such as items 170, 171, 172, 342, 344 and 346);
- (d) non-therapeutic cosmetic surgery;
- (e) euthanasia and any service directly related to the procedure. However, services rendered for counselling/assessment about euthanasia will attract benefits.

Medicare benefits are not payable where the medical expenses for the service

- (a) are paid/payable to a public hospital;
- (b) are for a compensable injury or illness for which the patient's insurer or compensation agency has accepted liability. (Please note that if the medical expenses relate to a compensable injury/illness for which the insurer/compensation agency is disputing liability, then Medicare benefits are payable until the liability is accepted.);
- (c) are for a medical examination for the purposes of life insurance, superannuation, a provident account scheme, or admission to membership of a friendly society;
- (d) are incurred in mass immunisation (see General Explanatory Note 12.3 for further explanation).

Unless the Minister otherwise directs

Medicare benefits are not payable where:

- (a) the service is rendered by or on behalf of, or under an arrangement with the Australian Government, a State or Territory, a local government body or an authority established under Commonwealth, State or Territory law;
- (b) the medical expenses are incurred by the employer of the person to whom the service is rendered;

(c) the person to whom the service is rendered is employed in an industrial undertaking and that service is rendered for the purposes related to the operation of the undertaking; or

(d) the service is a health screening service.

(e) the service is a pre-employment screening service

Current regulations preclude the payment of Medicare benefits for professional services rendered in relation to or in association with:

(a) chelation therapy (that is, the intravenous administration of ethylenediamine tetra-acetic acid or any of its salts) other than for the treatment of heavy-metal poisoning;

(b) the injection of human chorionic gonadotrophin in the management of obesity;

(c) the use of hyperbaric oxygen therapy in the treatment of multiple sclerosis;

(d) the removal of tattoos;

(e) the transplantation of a thoracic or abdominal organ, other than a kidney, or of a part of an organ of that kind; or the transplantation of a kidney in conjunction with the transplantation of a thoracic or other abdominal organ, or part of an organ of that kind;

(f) the removal from a cadaver of kidneys for transplantation;

(g) the administration of microwave (UHF radio wave) cancer therapy, including the intravenous injection of drugs used in the therapy.

Pain pumps for post-operative pain management

The cannulation and/or catheterisation of surgical sites associated with pain pumps for post-operative pain management cannot be billed under any MBS item.

The filling or re-filling of drug reservoirs of ambulatory pain pumps for post-operative pain management cannot be billed under any MBS items.

Non Medicare Services

No MBS item applies to a service mentioned in the item if the service is provided to a patient at the same time as, or in connection with, an injection of blood or a blood product that is autologous.

No MBS item applies to a service mentioned in the item if the service is provided to a patient at the same time as, or in connection with, the harvesting, storage, in vitro processing or injection of non-haematopoietic stem cells.

An item in the range 1 to 10943 does not apply to the service described in that item if the service is provided at the same time as, or in connection with, any of the services specified below:

(a) endoluminal gastroplication, for the treatment of gastro-oesophageal reflux disease;

(b) gamma knife surgery;

(c) intradiscal electro thermal arthroplasty;

(d) intravascular ultrasound (except where used in conjunction with intravascular brachytherapy);

(e) intro-articular viscosupplementation, for the treatment of osteoarthritis of the knee;

(f) low intensity ultrasound treatment, for the acceleration of bone fracture healing, using a bone growth stimulator;

- (g) lung volume reduction surgery, for advanced emphysema;
- (h) photodynamic therapy, for skin and mucosal cancer;
- (i) placement of artificial bowel sphincters, in the management of faecal incontinence;
- (j) selective internal radiation therapy for any condition other than hepatic metastases that are secondary to colorectal cancer;
- (k) specific mass measurement of bone alkaline phosphatase;
- (l) transmyocardial laser revascularisation;
- (m) vertebral axial decompression therapy, for chronic back pain;
- (n) autologous chondrocyte implantation and matrix-induced autologous chondrocyte implantation;
- (o) vertebroplasty;
- (p) extracorporeal magnetic innervation.

Health Screening Services

Unless the Minister otherwise directs Medicare benefits are not payable for health screening services. A health screening service is defined as a medical examination or test that is not reasonably required for the management of the medical condition of the patient. Services covered by this proscription include such items as:

- (a) multiphasic health screening;
- (b) mammography screening (except as provided for in Items 59300/59303);
- (c) testing of fitness to undergo physical training program, vocational activities or weight reduction programs;
- (d) compulsory examinations and tests to obtain a flying, commercial driving or other licence;
- (e) entrance to schools and other educational facilities;
- (f) for the purposes of legal proceedings;
- (g) compulsory examinations for admission to aged persons' accommodation and pathology services associated with clinical ecology.

The Minister has directed that Medicare benefits be paid for the following categories of health screening:

- (a) a medical examination or test on a symptomless patient by that patient's own medical practitioner in the course of normal medical practice, to ensure the patient receives any medical advice or treatment necessary to maintain their state of health. Benefits would be payable for the attendance and tests which are considered reasonably necessary according to patients individual circumstances (such as age, physical condition, past personal and family history). For example, a cervical screening test in a person (see General Explanatory note 12.3 for more information), blood lipid estimation where a person has a family history of lipid disorder. However, such routine check-up should not necessarily be accompanied by an extensive battery of diagnostic investigations;
- (b) a pathology service requested by the National Heart Foundation of Australia, Risk Evaluation Service;
- (c) age or health related medical examinations to obtain or renew a licence to drive a private motor vehicle;
- (d) a medical examination of, and/or blood collection from persons occupationally exposed to sexual transmission of disease, in line with conditions determined by the relevant State or Territory health authority, (one examination or

collection per person per week). Benefits are not paid for pathology tests resulting from the examination or collection;

- (e) a medical examination for a person as a prerequisite of that person becoming eligible to foster a child or children;
- (f) a medical examination being a requisite for Social Security benefits or allowances;
- (g) a medical or optometrical examination provided to a person who is an unemployed person (as defined by the Social Security Act 1991), as the request of a prospective employer.

The National Policy for the National Cervical Screening Program (NCSP) is as follows:

- (a) Cervical screening should be undertaken every five years in asymptomatic persons, using a primary human papillomavirus (HPV) test with partial genotyping and reflex liquid based cytology (LBC) triage;
- (b) Persons who have ever been sexually active should commence cervical screening at 25 years of age;
- (c) Persons aged 25 years or older and less than 70 years will receive invitations and reminders to participate in the program;
- (d) Persons will be invited to exit the program by having a HPV test between 70 years or older and less than 75 years of age and may cease cervical screening if their test result is low risk;
- (e) Persons 75 years of age or older who have either never had a cervical screening test or have not had one in the previous five years, may request a cervical screening test and can be screened;
- (f) All persons, both HPV vaccinated and unvaccinated, are included in the program;
- (g) Self collection of a sample for testing is available for persons who are aged 30 years and over and has never participated in the NCSP; or is overdue for cervical screening by two years or longer.

· Self collection must be facilitated and requested by a healthcare professional who also routinely offers cervical screening services;

· The self collection device and the HPV test, when used together, must meet the requirements of the National Pathology Accreditation Advisory Council (NPAAC) Requirements for Laboratories Reporting Tests for the NCSP; and

- (h) Persons with intermediate and higher risk screening test results should be followed up in accordance with the cervical screening pathway and the NCSP: Guidelines for the management of screen detected abnormalities, screening women in specific populations and investigation of women with abnormal vaginal bleeding (2016 Guidelines) – endorsed by the Royal Australian College of General Practitioners, the Royal Australian and New Zealand College of Obstetricians and Gynaecologists, the Royal College of Pathologists of Australasia, the Australian Society of Gynaecologic Oncologists and the Australian Society for Colposcopy and Cervical Pathology.

Note 1: As separate items exist for routine screening, screening in specific population and investigation of persons with abnormal vaginal bleeding, treating practitioners are asked to clearly identify on the request form, if the sample is collected as part of routine screening or for another purpose (see paragraph PP.16.11 of Pathology Services Explanatory Notes in Category 6).

Note 2: Where reflex cytology is performed following the detection of HPV in routine screening, the HPV test and the LBC test results must be issued as a combined report with the overall risk rating.

Note 3: See items 2501 to 2509, and 2600 to 2616 in Group A18 and A19 of Category 1 - Professional Attendances and the associated explanatory notes for these items in Category 1 - Professional Attendances.

Services rendered to a doctor's dependants, practice partner, or practice partner's dependants

Medicare benefits are not paid for professional services rendered by a medical practitioner to dependants or partners or a partner's dependants.

A 'dependant' person is a spouse or a child. The following provides definitions of these dependant persons:

(a) a spouse, in relation to a dependant person means:

a. a person who is legally married to, and is not living, on a permanent basis, separately and apart from, that person; and

b. a de facto spouse of that person.

(b) a child, in relation to a dependant person means:

a. a child under the age of 16 years who is in the custody, care and control of the person or the spouse of the person; and

b. a person who:

(i) has attained the age of 16 years who is in the custody, care and control of the person or the spouse of the person; or

(ii) is receiving full time education at a school, college or university; and

(iii) is not being paid a disability support pension under the Social Security Act 1991; and

(iv) is wholly or substantially dependent on the person or on the spouse of the person.

GN.14.34 Principles of interpretation of the MBS

Each professional service listed in the MBS is a complete medical service. Where a listed service is also a component of a more comprehensive service covered by another item, the benefit for the latter service will cover the former.

Where a service is rendered partly by one medical practitioner and partly by another, only the one amount of benefit is payable. For example, where a radiographic examination is started by one medical practitioner and finalised by another.

GN.14.35 Services attracting benefits on an attendance basis

Some services are not listed in the MBS because they are regarded as forming part of a consultation or they attract benefits on an attendance basis.

GN.14.36 Consultation and procedures rendered at the one attendance

Where, during a single attendance, a consultation (under Category 1 of the MBS) and another medical service (under any other Category of the Schedule) occur, benefits are payable subject to certain exceptions, for both the consultation and the other service. Benefits are not payable for the consultation in addition to an item rendered on the same occasion where the item is qualified by words such as "each attendance", "attendance at which", "including associated attendances/consultations", and all items in Group T6 and T9. In the case of radiotherapy treatment (Group T2 of Category 3) benefits are payable for both the radiotherapy and an initial referred consultation.

Where the level of benefit for an attendance depends upon the consultation time (for example, in psychiatry), the time spent in carrying out a procedure which is covered by another item in the MBS, may not be included in the consultation time.

A consultation fee may only be charged if a consultation occurs; that is, it is not expected that consultation fee will be charged on every occasion a procedure is performed.

GN.14.37 Aggregate items

The MBS includes a number of items which apply only in conjunction with another specified service listed in the MBS. These items provide for the application of a fixed loading or factor to the fee and benefit for the service with which they are rendered.

When these particular procedures are rendered in conjunction, the legislation provides for the procedures to be regarded as one service and for a single patient gap to apply. The Schedule fee for the service will be ascertained in accordance with the particular rules shown in the relevant items.

GN.14.38 Residential aged care facility

A residential aged care facility is defined in the *Aged Care Act 1997*; the definition includes facilities formerly known as nursing homes and hostels.

GN.15.39 Practitioners should maintain adequate and contemporaneous records

All practitioners who provide, or initiate, a service for which a Medicare benefit is payable, should ensure they maintain **adequate** and **contemporaneous** records.

Note: 'Practitioner' is defined in Section 81 of the *Health Insurance Act 1973* and includes: medical practitioners, dentists, optometrists, chiropractors, physiotherapists, podiatrists and osteopaths.

Since 1 November 1999 PSR Committees determining issues of inappropriate practice have been obliged to consider if the practitioner kept adequate and contemporaneous records. It will be up to the peer judgement of the PSR Committee to decide if a practitioner's records meet the prescribed standards.

The standards which determine if a record is adequate and contemporaneous are prescribed in the *Health Insurance (Professional Services Review) Regulations 1999*.

To be **adequate**, the patient or clinical record needs to:

clearly identify the name of the patient; and

contain a separate entry for each attendance by the patient for a service and the date on which the service was rendered or initiated; and

each entry needs to provide clinical information adequate to explain the type of service rendered or initiated; and

each entry needs to be sufficiently comprehensible that another practitioner, relying on the record, can effectively undertake the patient's ongoing care.

To be **contemporaneous**, the patient or clinical record should be completed at the time that the service was rendered or initiated or as soon as practicable afterwards. Records for hospital patients are usually kept by the hospital and the practitioner could rely on these records to document in-patient care.

The Department of Human Services (DHS) has developed an [Health Practitioner Guideline to substantiate that a specific treatment was performed](#) which is located on the DHS website.

CATEGORY 1: PROFESSIONAL ATTENDANCES

SUMMARY OF CHANGES FROM 21/07/2020

The 21/07/2020 changes to the MBS are summarised below and are identified in the Schedule pages by one or more of the following words appearing above the item number:

(a) new item	New
(b) amended description	Amend
(c) fee amended	Fee
(d) item number changed	Renum
(e) EMSN changed	EMSN

Description Amended

PROFESSIONAL ATTENDANCES NOTES

AN.0.1 Personal Attendance by Practitioner

The personal attendance of the medical practitioner upon the patient is necessary, before a "consultation" may be regarded as a professional attendance. In itemising a consultation covered by an item which refers to a period of time, only that time during which a patient is receiving active attention should be counted. Periods such as when a patient is resting between blood pressure readings, waiting for pupils to dilate after the instillation of a mydriatic, or receiving short wave therapy etc., should not be included in the time of the consultation. Similarly, the time taken by a doctor to travel to a patient's home should not be taken into consideration in the determination of the length of the consultation. While the doctor is free to charge a fee for "travel time" when patients are seen away from the surgery, benefits are payable only in respect of the time a patient is receiving active attention.

AN.0.2 Benefits For Services

All Australian residents and certain categories of visitors to Australia can claim Medicare benefits for services by optometrists. The *Health Insurance Act 1973* contains legislation covering the major elements of the Medicare program.

Responsibility for regulating the Medicare program lies with the Australian Government through the Department of Health. The Department of Human Services is responsible for consideration of applications and for the day to day operation of Medicare and the payment of benefits. Contact details of the Department of Health and the Department of Human Services are located at the end of these Notes.

AN.0.3 Professional Attendances

Professional attendances by medical practitioners cover consultations during which the practitioner: evaluates the patient's health-related issue or issues, using certain health screening services if applicable; formulates a management plan in relation to one or more health-related issues for the patient; provides advice to the patient and/or relatives (if authorised by the patient); provides appropriate preventive health care; and records the clinical detail of the service(s) provided to the patient. (See the General Explanatory Notes for more information on health screening services.)

AN.0.4 Provider Numbers

To ensure that benefits are paid only for services provided by optometrists registered with the Optometry Board of Australia, each optometrist providing services for which a Medicare benefit is payable requires an individual provider number.

Provider numbers will be issued only to registered optometrists. Corporations, other business entities and individuals who are not registered optometrists will not be issued with provider numbers.

Provider numbers are allocated to enable claims for Medicare benefits to be processed. The number may be up to eight characters. The second last character identifies the practice location, the last being a check character.

Optometrists can obtain a provider number from the Department of Human Services. A separate provider number is issued for each location at which an optometrist practises and has current registration. Provider numbers for additional practice locations may also be obtained from the Department of Human Services following confirmation of registration. Optometrists cannot use another optometrist's provider number.

Locum Tenens

An optometrist who has signed an Undertaking and is to provide services at a practice location as a locum for more than two weeks or will return to the practice on a regular basis for short periods should apply for a provider number for that location.

If the locum is to provide services at a practice for less than two weeks, the locum can use their own provider number or can obtain an additional provider number for that location.

Normally, Medicare benefits are payable for services rendered by an optometrist only when the optometrist has completed an Undertaking. However, benefits may be claimed for services provided by an optometrist who has not signed the Undertaking if the optometrist has provided them on behalf of an optometrist who has signed the Undertaking.

To ensure benefits are payable when a locum practises in these circumstances, the locum optometrist should:

- Check that they will be providing optometry services on behalf of a participating optometrist i.e. their employer has a current Undertaking.
- Complete the Schedule which is available on the Department of Human Services' website <http://www.humanservices.gov.au/>, before commencing the locum arrangement of the name and address of the participating optometrist on whose behalf they will be providing services.

Locums can direct Medicare payments to a third party, for example the principal of the practice, by either arranging a pay group link and/or by nominating the principal as the payee provider on bulk-bill stationery.

AN.0.5 Services not Attracting Medicare Benefits

Telephone consultations, letters of advice by medical practitioners, the issue of repeat prescriptions when the patient is not in attendance, post mortem examinations, the issue of death certificates, cremation certificates, counselling of relatives (Note - items 348, 350 and 352 are not counselling services), group attendances (other than group attendances covered by items 170, 171, 172, 342, 344 and 346) such as group counselling, health education, weight reduction or fitness classes do not qualify for benefit.

Although Medicare benefits are not payable for the issue of a death certificate, an attendance on a patient at which it is determined that life is extinct can be claimed under the appropriate attendance item. The outcome of the attendance may be that a death certificate is issued, however, Medicare benefits are only payable for the attendance component of the service.

AN.0.6 Patient Eligibility

An "eligible person" is a person who resides permanently in Australia. This includes New Zealand citizens and holders of permanent residence visas. Applicants for permanent residence may also be eligible persons, depending on circumstances. Eligible persons must enrol with Medicare before they can receive Medicare benefits.

Medicare covers services provided only in Australia. It does not refund treatment or evacuation expenses overseas.

Medicare Cards

The *green* Medicare card is for people permanently in Australia. Cards may be issued for individuals or families.

The *blue* Medicare card bearing the words "INTERIM CARD" is for people who have applied for permanent residence.

Visitors from countries with which Australia has a Reciprocal Health Care Agreement (RHCA) receive a card bearing the words "RECIPROCAL HEALTH CARE".

Visitors to Australia and temporary residents

Visitors and temporary residents in Australia are generally not eligible for Medicare and should therefore have adequate private health insurance.

Reciprocal Health Care Agreements

Australia has RHCA with New Zealand, Ireland, the United Kingdom, the Netherlands, Sweden, Finland, Norway, Italy, Belgium Slovenia and Malta.

Visitors from these countries are entitled to medical treatment while they are in Australia, comprising public hospital care (as public patients), Medicare benefits for out of hospital services and drugs under the Pharmaceutical Benefits Scheme (PBS). Visitors must enrol with the Department of Human Services to receive benefits. A passport is sufficient for public hospital care and PBS drugs.

Exceptions:

- Visitors from Ireland and New Zealand are entitled to public hospital care and PBS drugs only, and should present their passports before treatment as they are not issued with Medicare cards.
- Visitors from Italy and Malta are covered for a period of six months only.

The RHCAs do not cover treatment as a private patient in a public or private hospital. People visiting Australia for the purpose of receiving treatment are not covered. Visitors from New Zealand and the Republic of Ireland are NOT entitled to optometric treatment under a RHCA.

AN.0.7 Multiple Attendances on the Same Day

Payment of benefit may be made for each of several attendances on a patient on the same day by the same medical practitioner provided the subsequent attendances are not a continuation of the initial or earlier attendances.

However, there should be a reasonable lapse of time between such attendances before they can be regarded as separate attendances.

Where two or more attendances are made on the one day by the same medical practitioner the time of each attendance should be stated on the account (eg 10.30 am and 3.15 pm) in order to assist in the assessment of benefits.

In some circumstances a subsequent attendance on the same day does in fact constitute a continuation of an earlier attendance. For example, a preliminary eye examination may be concluded with the instillation of a mydriatic and then an hour or so later eye refraction is undertaken. These sessions are regarded as being one attendance for benefit purposes. Further examples are the case of skin sensitivity testing, and the situation where a patient is issued a prescription for a vaccine and subsequently returns to the surgery for the injection.

AN.0.8 Benefits For Optometrists

What services are covered?

The *Health Insurance Act 1973* stipulates that Medicare benefits are payable for professional services. The professional services coming within the scope of the optometric benefit arrangements are those clinically relevant services ordinarily rendered by the optometrist in relation to a consultation on ocular or vision problems or related procedures. The *Health Insurance Act 1973* defines a 'clinically relevant service' as a service rendered by an optometrist that is generally accepted in the optometrical profession as being necessary for the appropriate treatment of the patient to whom it is rendered.

From 1 January 2015, optometrists will be free to set their own fees for their professional service. However, the amount specified in the patient's account must be the amount charged for the service specified. The fee may not include a cost of goods or services which are not part of the MBS service specified on the account. A non-clinically relevant service must not be included in the charge for a Medicare item. The non-clinically relevant service must be separately listed on the account and not billed to Medicare. Where it is necessary for the optometrist to seek patient information from the Department of Human Services in order to determine appropriate itemisation of accounts, receipts or bulk-billed claims, the optometrist must ensure that:

- (a) the patient is advised of the need to seek the information and the reason the information is required;
- (b) the patient's informed consent to the release of information has been obtained; and
- (c) the patient's records verify the patient's consent to the release of information.

Benefits may only be claimed when:

- (a) a service has been performed and a clinical record of the service has been made;
- (b) a significant consultation or examination procedure has been carried out;
- (c) the service has been performed at premises to which the Undertaking relates;
- (d) the service has involved the personal attendance of both the patient and the optometrist; and
- (e) the service is "clinically relevant" (as defined in the *Health Insurance Act 1973*).

Where Medicare benefits are not payable

Medicare benefits may not be claimed for attendances for:

- (a) delivery, dispensing, adjustment or repairs of visual aids;
- (b) filling of prescriptions written by other practitioners.

Benefits are not payable for optometric services associated with:

- (a) cosmetic surgery;
- (b) refractive surgery;
- (c) tests for fitness to undertake sporting, leisure or vocational activities;
- (d) compulsory examinations or tests to obtain any commercial licence (e.g. flying or driving);
- (e) entrance to schools or other educational facilities;
- (f) compulsory examinations for admissions to aged care facilities;
- (g) vision screening.

Medicare benefits are not payable for services in the following circumstances:

- (a) where the expenses for the service are paid or payable to a recognised (public) hospital;
- (b) an attendance on behalf of teaching institutions on patients of supervised students of optometry;
- (c) where the service is not "clinically relevant" (as defined in the *Health Insurance Act 1973*).

Unless the Minister otherwise directs, a benefit is not payable in respect of an optometric service where:

- (a) the service has been rendered by or on behalf of, or under an arrangement with, the Commonwealth, a State or a local governing body or an authority established by a law of the Commonwealth, a law of a State or a law of an internal Territory; or
- (b) the service was rendered in one or more of the following circumstances -
 - (i) the employer arranges or requests the consultation
 - (ii) the results are provided to the employer by the optometrist
 - (iii) the employer requires that the employee have their eyes examined
 - (iv) the account for the consultation is sent to the employer

(v) the consultation takes place at the patient's workplace or in a mobile consulting room at the patient's workplace.

Services rendered to an optometrist's dependants, employer or practice partner or dependants

A condition of the participating arrangement is that the optometrist agrees not to submit an account or a claim for services rendered to any dependants of the optometrist, to the optometrist's employer or practice partner or any dependants of that employer or partner.

A 'dependant' person is a spouse or a child. The following provides definitions of these dependant persons:

a *spouse*, in relation to a dependant person means:

- (a) a person who is legally married to, and is not living, on a permanent basis, separately and apart from, that person; and
- (b) a de facto spouse of that person.

a *child*, in relation to a dependant person means:

- (a) a child under the age of 16 years who is in the custody, care and control of the person or the spouse of the person; and
- (b) a person who:
 - (i) has attained the age of 16 years who is in the custody, care and control of the person or the spouse of the person; or
 - (ii) is receiving full time education at a school, college or university; and
 - (iii) is not being paid a disability support pension under the *Social Security Act 1991*; and
 - (iv) is wholly or substantially dependent on the person or on the spouse of the person.

AN.0.9 Attendances by General Practitioners (Items 3-4, 23-24, 36-37, 44, 47, 193, 195, 197, 199, 585, 594, 599, 2095, 2144, 2180, 2193, 2497-2559, 5000-5067 and 90020-90051) Attendances by General Practitioners (Items 3-4, 23-24, 36-37, 44, 47, 193, 195, 197, 199, 585, 594, 599, 2497-2559, 5000-5067 and 90020-90051)

Items 3-4, 23-24, 36-37, 44, 47, 193, 195, 197, 199, 585, 594, 599, 2095, 2144, 2180, 2193, 2497-2559, 5000-5067 and 90020-90051 relate to attendances rendered by medical practitioners who are:

- listed on the Vocational Register of General Practitioners maintained by the Department of Human Services; or
- holders of the Fellowship of the Royal Australian College of General Practitioners (FRACGP) who participate in, and meet the requirements of the RACGP for continuing medical education and quality assurance as defined in the RACGP Quality Assurance and Continuing Medical Education program; or
- holders of the Fellowship of the Australian College of Rural and Remote Medicine (FACRRM) who participate in, and meet the requirements of the Australian College of Rural and Remote Medicine (ACRRM) for continuing medical education and quality assurance as defined in ACRRM's Professional Development Program; or
- undertaking an approved placement in general practice as part of a training program for general practice leading to the award of the FRACGP or training recognised by the RACGP as being of an equivalent standard; or

- undertaking an approved placement in general practice as part of a training program for general practice leading to the award of the FACRRM or training recognised by ACRRM as being of an equivalent standard.

To assist general practitioners in selecting the appropriate item number for Medicare benefit purposes the following notes in respect of the various levels are given.

LEVEL A

A Level A item will be used for obvious and straightforward cases and this should be reflected in the practitioner's records. In this context, the practitioner should undertake the necessary examination of the affected part if required, and note the action taken.

LEVEL B

A Level B item will be used for a consultation lasting less than 20 minutes for cases that are not obvious or straightforward in relation to one or more health related issues. The medical practitioner may undertake all or some of the tasks set out in the item descriptor as clinically relevant, and this should be reflected in the practitioner's record. In the item descriptor singular also means plural and vice versa.

LEVEL C

A Level C item will be used for a consultation lasting at least 20 minutes for cases in relation to one or more health related issues. The medical practitioner may undertake all or some of the tasks set out in the item descriptor as clinically relevant, and this should be reflected in the practitioner's record. In the item descriptor singular also means plural and vice versa.

LEVEL D

A Level D item will be used for a consultation lasting at least 40 minutes for cases in relation to one or more health related issues. The medical practitioner may undertake all or some of the tasks set out in the item descriptor as clinically relevant, and this should be reflected in the practitioner's record. In the item descriptor singular also means plural and vice versa.

Creating and Updating a My Health Record

The time spent by a medical practitioner on the following activities may be counted towards the total consultation time:

- Reviewing a patient's clinical history, in the patient's file and/or the My Health Record, and preparing or updating a Shared Health Summary where it involves the exercise of clinical judgement about what aspects of the clinical history are relevant to inform ongoing management of the patient's care by other providers; or

- Preparing an Event Summary for the episode of care.

Preparing or updating a Shared Health Summary and preparing an Event Summary are clinically relevant activities. When either of these activities are undertaken with any form of patient history taking and/or the other clinically relevant activities that can form part of a consultation, the item that can be billed is the one with the time period that matches the total consultation time.

MBS rebates are not available for creating or updating a Shared Health Summary as a stand alone service.

Counselling or Advice to Patients or Relatives

For items 23-24, 36-37, 44, 47 and 5020 to 5067 'implementation of a management plan' includes counselling services.

Items 3-4, 23-24, 36-37, 44, 47, 193, 195, 197, 199, 585, 594, 599, 2497-2559, 5000-5067 and 90020-90051 include advice to patients and/or relatives during the course of an attendance. The advising of relatives at a later time does not extend the time of attendance.

Recording Clinical Notes

In relation to the time taken in recording appropriate details of the service, only clinical details recorded at the time of the attendance count towards the time of consultation. It does not include information added at a later time, such as reports of investigations.

Other Services at the Time of Attendance

Where, during the course of a single attendance by a general practitioner, both a consultation and another medical service are rendered, Medicare benefits are generally payable for both the consultation and the other service. Exceptions are in respect of medical services which form part of the normal consultative process, or services which include a component for the associated consultation (see the General Explanatory Notes for further information on the interpretation of the Schedule).

The Department of Human Services (DHS) has developed an [Health Practitioner Guideline for responding to a request to substantiate that a patient attended a service](#) which is located on the DHS website.

AN.0.11 Professional Attendances at an Institution (Items 4, 24, 37, 47, 58, 59, 60, 65, 5003, 5023, 5043, 5063, 5220, 5223, 5227 and 5228)

For the purposes of these items an "institution" means a place (not being a hospital or residential aged care facility) at which residential accommodation or day care or both such accommodation and such care is made available to:-

- (a) disadvantaged children;
- (b) juvenile offenders;
- (c) aged persons;
- (d) chronically ill psychiatric patients;
- (e) homeless persons;
- (f) unemployed persons;
- (g) persons suffering from alcoholism;
- (h) persons addicted to drugs; or
- (i) physically or intellectually disabled persons.

To facilitate assessment of the correct Medicare rebate in respect of a number of patients attended on the one occasion at one of the above locations, it is important that the total number of patients seen be recorded on each individual account, receipt or assignment form. For example, where ten patients were visited (for a brief consultation) in the one facility on the one occasion, each account, receipt or assignment form would show "Item 4 - 1 of 10 patients" for a general practitioner.

The number of patients seen should not include attendances which do not attract a Medicare rebate (e.g. public in-patients, attendances for normal after-care), or where a Medicare rebate is payable under an item other than these derived fee items (e.g. health assessments, care planning, emergency after-hours attendance - first patient).

AN.0.12 Billing Procedures

There are three ways benefits may be paid for optometric services:

- (a) the claimant may pay the optometrist's account in full and then claim benefits from the Department of Human Services office by submitting the account and the receipt;
- (b) the claimant may submit the unpaid account to the Department of Human Services who will then send a cheque in favour of the optometrist, to the claimant; or
- (c) the optometrist may bill Medicare instead of the patient for the consultation. This is known as bulk billing. If an optometrist direct-bills, they undertake to accept the relevant Medicare benefit as full payment for the consultation. Additional charges for that service (irrespective of the purpose or title of the charge) cannot be raised against the patient.

Claiming of benefits

The patient, upon receipt of an optometrist's account, has two options open for paying the account and receiving benefits.

Paid accounts

If the account has been paid in full a claimant can claim Medicare benefits in a number of ways:

- Electronically if the claimant's doctor offers this service and the claimant has completed and lodged a Bank account details collection form with Medicare.
- Online through Medicare Online Services.
- At the claimant's local Department of Human Services Service Centre.
- By mail by sending a completed Medicare claim form with the original accounts and/or receipts to:

Department of Human Services

GPO Box 9822

In the claimant's capital city

- Over the phone by calling 132 011 and giving the claim details and then sending the accounts and/or receipts to:

Telephone Claiming

Department of Human Services

GPO Box 9847

In the claimant's capital city

Practitioners seeking information regarding registration to allow EFT payments and other E-Business transactions, can do so by viewing the Health Professionals section at the Department of Human Services at www.humanservices.gov.au.

Unpaid accounts

Where the patient has not paid the account in full, the unpaid account may be presented to the Department of Human Services with a completed Medicare claim form. In this case the Department of Human Services will forward to the claimant a benefit cheque made payable to the optometrist.

It is the patient's responsibility to forward the cheque to the optometrist and make arrangements for payment of the balance of the account, if any. "Pay optometrist" cheques involving Medicare benefits must (by law), not be sent direct to optometrists, or to the claimant at an optometrist's address (even if requested by the claimant to do so). "Pay

optometrist" cheques are required to be forwarded to the claimant's last known address as recorded with the Department of Human Services.

When issuing a receipt to a patient for an account that is being paid wholly or in part by a Medicare "pay optometrist" cheque the optometrist should indicate on the receipt that a "Medicare cheque for \$..... was involved in the payment of the account". The receipt should also include any money paid by the claimant or patient.

Itemised accounts

When an optometrist bills a patient for a service, the patient should be issued with a correctly itemised account and receipt to enable the patient to claim Medicare benefits. Where both a consultation and another service, for example computerised perimetry occur, these may be itemised on the same account.

Medicare benefits are only payable in respect of optometric services where it is recorded on the account setting out the fee for the service or on the receipt for the fee in respect of each service to each patient, the following information:

- (a) patient's name;
- (b) date on which the service(s) was rendered;
- (c) a description of the service(s) (e.g. "initial consultation," "subsequent consultation" or "contact lens consultation" and/or "computerised perimetry" in those cases where it is performed);
- (d) Medicare Benefits Schedule item number(s);
- (e) the name and practice address or name and provider number of the optometrist who actually rendered the service(s). Where the optometrist has more than one practice location, the provider number used should be that which is applicable to the practice location where the service(s) was given;
- (f) the fee charged for the service(s); and
- (g) the time each service began if the optometrist attended the patient on more than one occasion on the same day and on each occasion rendered a professional service relating to an optometric item, except where a perimetry item is performed in association with a consultation item, where times do not need to be specified.

The optometrist billing for the service bears responsibility for the accuracy and completeness of the information included on accounts, receipts and assignment of benefits forms even where such information has been recorded by an employee of the optometrist.

Payment of benefits could be delayed or disallowed if the account does not clearly identify the service as one which qualifies for Medicare benefits or that the practitioner is a registered optometrist practising at the address where the service was rendered. It is important to ensure that an appropriate description of the service, the item number and the optometrist's provider number are included on accounts, receipts and assignment of benefit forms.

Details of any charges made other than for services, e.g. a dispensing charge, a charge for a domiciliary visit, should be shown separately either on the same account or on a separate account.

Patients must be eligible to receive Medicare benefits and must also meet the clinical requirements outlined in the relevant item descriptors.

Duplicate accounts

Only one original itemised account per service should be issued, except in circumstances where both a consultation and computerised perimetry occur, in which case these may be itemised on the same original account. Duplicates of accounts or receipts should be clearly marked "duplicate" and should be issued only where the original has been lost. Duplicates should not be issued as a routine system for "accounts rendered".

Assignment of benefit (bulk billed) arrangements

Under the *Health Insurance Act 1973* an Assignment of Benefit (bulk-billing) facility for professional services is available to all persons in Australia who are eligible for benefit under the Medicare program. This facility is NOT confined to pensioners or people in special need.

If an optometrist bulk-bills, they undertake to accept the relevant Medicare benefit as full payment for the service. Additional charges for that service (irrespective of the purpose or title of the charge) cannot be raised against the patient. Under these arrangements:

- the patient's Medicare number must be quoted on all bulk-bill assignment of benefit forms for that patient;
- the assignment of benefit forms provided are loose leaf to enable the patient details to be imprinted from the Medicare Card;
- the forms include information required by Regulations under Section 19(6) of the *Health Insurance Act 1973*; and
- the optometrist must cause the particulars relating to the professional service to be set out on the assignment of benefit form, before the patient signs the form and cause the patient to receive a copy of the form as soon as practicable after the patient signs it.

Where a patient is unable to sign the assignment of benefit form, the signature of the patient's parent, guardian or other responsible person (other than the optometrist, optometrist's staff, hospital proprietor, hospital staff, residential aged care facility proprietor or residential aged care facility staff) is acceptable.

Where the signature space is either left blank or another person signs on the patient's behalf, the form **must** include:

- the notation "Patient unable to sign" and
- in the section headed 'Practitioner's Use', an explanation should be given as to why the patient was unable to sign (e.g. unconscious, injured hand etc.) and this note should be signed or initialled by the optometrist. If in the opinion of the optometrist the reason is of such a "sensitive" nature that revealing it would constitute an unacceptable breach of patient confidentiality or unduly embarrass or distress the recipient of the patient's copy of the assignment of benefits form, a concessional reason "due to medical condition" to signify that such a situation exists may be substituted for the actual reason. However, this should not be used routinely and in most cases it is expected that the reason given will be more specific.

Use of Medicare cards in bulk-billing

Where a patient presents without a Medicare card and indicates that they have been issued with a card but does not know the details, the optometrist may contact the Department of Human Services on 132 150 to obtain the number.

It is important for the optometrist to check the eligibility of their patients for Medicare benefits by reference to the card, as entitlement is limited to the "valid to" date shown on the bottom of the card. Additionally the card will show if a person is enrolled through a Reciprocal Health Care Agreement.

Assignment of benefit forms

Only the approved assignment of benefit forms available from the Department of Human Services website, www.humanservices.gov.au, can be used to bulk-bill patients for optometric services and no other form can be used without its approval.

(a) Form DB2-OP

This form is designed for the use of optical scanning equipment and is used to assign benefits for optometrical services. It is loose leaf to enable imprinting of patient details from the Medicare card and comprises a throw away cover sheet (after imprinting), a Medicare copy, a Practitioner copy and a Patient copy.

(b) **Form DB4**

This is a continuous stationery version of Form DB2 and has been designed for use on most office accounting machines.

The Claim for Assigned Benefits (Form DB1N, DB1H)

Optometrists who accept assigned benefits must claim from the Department of Human Services using either Claim for Assigned Benefits form DB1N or DB1H. The DB1N form should be used where services are rendered to persons for treatment provided out of hospital or day hospital treatment. The DB1H form should be used where services are rendered to persons while hospital treatment is provided in a hospital or day hospital facility (other than public patients). Both forms have been designed to enable benefit for a claim to be directed to an optometrist other than the one who rendered the services. The facility is intended for use in situations such as where a short term locum is acting on behalf of the principal optometrist and setting the locum up with a provider number and pay-group link for the principal optometrist's practice is impractical. Optometrists should note that this facility cannot be used to generate payments to or through a person who does not have a provider number.

Each claim form must be accompanied by the assignment of benefit forms to which the claim relates.

Time limits applicable to lodgement of bulk bill claims for benefits

A time limit of two years applies to the lodgement of claims with the Department of Human Services under the bulk billed (assignment of benefits) arrangements. This means that Medicare benefits are not payable for any service where the service was rendered more than two years earlier than the date the claim was lodged with the Department of Human Services.

Provision exists whereby in certain circumstances (e.g. hardship cases), the Minister may waive the time limits. Special forms for this purpose are available, if required, from the [Department of Human Services website at www.humanservices.gov.au](http://www.humanservices.gov.au) or the processing centre to which bulk-bill claims are directed.

AN.0.13 Attendances at a Hospital (Items 4, 24, 37, 47, 58, 59, 60, 65)

These items refer to attendances on patients admitted to a hospital. Where medical practitioners have made arrangements with a local hospital to routinely use out-patient facilities to see their private patients, items for services provided in consulting rooms would apply.

AN.0.14 Referrals (Read in Connection with the Relevant Paragraphs at O.6)

General

Optometrists are required to refer a patient for medical attention when it becomes apparent to them that the patient's condition is such that it would be more appropriate for treatment to be undertaken by a medical practitioner.

Optometrists may refer patients directly to specialist ophthalmologists with the patient being able to claim benefits for the ophthalmologist's services at the referred specialist rate.

Optometrists may refer patients directly to another optometrist, based on the clinical needs of the patient.

A referral letter or note must have been issued by the optometrist for all such services provided by specialist ophthalmologists or optometrists in order for patients to be eligible for Medicare benefits at the referred rate. Unless such a letter or note has been provided, benefits will be paid at the non-referred attendance rate, which has a lower rebate..

Medicare benefits at the referred rate are not paid for patients referred by optometrists to consultant physicians or to specialists other than ophthalmologists. See relevant paragraph regarding emergency situations.

What is a referral?

For the purposes of the optometric arrangements, a "referral" is a request to a specialist ophthalmologist or another optometrist for investigation, opinion, treatment and/or management of a condition or problem of a patient or for the performance of a specific examination(s) or test(s).

Subject to the exceptions in the paragraph below, for a valid "referral" to take place:

- (a) the referring optometrist must have turned their mind to the patient's need for referral and communicate relevant information about the patient to the specialist ophthalmologist or optometrist to whom the patient is referred (but this does not necessarily mean an attendance on the occasion of the referral);
- (b) the instrument of referral must be in writing by way of a letter or note and must be signed and dated by the referring optometrist; and
- (c) the practitioner to whom the patient is referred must have received the instrument of referral on or prior to the occasion of the professional service to which the referral relates.

The exceptions to the requirements in the above paragraph are that:

- (a) sub-paragraphs (b) and (c) do not apply to an emergency situation where the specialist ophthalmologist was of the opinion that the service be rendered as quickly as possible (see paragraph below on emergency situations); and
- (b) sub-paragraph (c) does not apply to instances where a written referral was completed by a referring optometrist but was lost, stolen or destroyed.

Period for which referral is valid

A referral from an optometrist to an ophthalmologist is valid for twelve months unless the optometrist specifies on the referral that the referral is for a different period (e.g. three, six or eighteen months or valid indefinitely).

The referral applies for the period specified in the referral from the date that the ophthalmologist provides the first service to the patient. If there is no period specified in the referral then the referral is valid for twelve months from the date of the first service provided by the ophthalmologist.

Referrals for longer than twelve months should be made only when the patient's clinical condition requires continuing care and management.

An optometrist may write a new referral when a patient presents with a condition unrelated to the condition for which the previous referral to an ophthalmologist was written. In these circumstances Medicare benefits for the consultation with the ophthalmologist would be payable at initial consultation rates.

A new course of treatment for which Medicare benefits would be payable at the initial consultation rates will also be paid where the referring optometrist:

- (a) deems it necessary for the patient's condition to be reviewed; and
- (b) the patient is seen by the ophthalmologist outside the currency of the previous referral; and
- (c) the patient was last seen by the specialist ophthalmologist more than nine months earlier than the attendance following a new referral.

Self referral

Optometrists may refer themselves to specialist ophthalmologists or other optometrists and Medicare benefits are payable at referred rates.

Lost, stolen or destroyed referrals

If a referral has been made but the letter or note of referral has been lost, stolen or destroyed, benefits will be payable at the referred rate if the account, receipt or the assignment form shows the name of the referring practitioner, the practice address or provider number of the referring practitioner (if either of these are known to the consultant physician or specialist) and the words 'Lost referral'. This provision only applies to the initial attendance. For subsequent attendances to attract Medicare benefits at the referred rate, a duplicate or replacement letter of referral must be obtained by the specialist or the consultant physician.

Emergency situations

Medicare benefits are payable even though there is no written referral in an emergency situation (as defined in the *Health Insurance Regulations 2018*). The specialist or the consultant physician should be of the opinion that the service must be rendered as quickly as possible and endorses the account, receipt or assignment form as an "Emergency referral".

A referral must be obtained from a medical practitioner or, in the case of a specialist ophthalmologist, a medical practitioner or an optometrist if attendances subsequent to the emergency attendance are to attract Medicare benefits at the referred rate.

AN.0.15 Residential Aged Care Facility Attendances (Items 5010, 5028, 5049, 5067, 5260, 5263, 5265, 5267)

These items refer to attendances on patients in residential aged care facilities.

Where a medical practitioner attends a patient in a self-contained unit, within a residential aged care facility complex, the attendance attracts benefits under the appropriate home visit item.

Where a patient living in a self-contained unit attends a medical practitioner at consulting rooms situated within the precincts of the residential aged care facility, or at free standing consulting rooms within the residential aged care facility complex, the appropriate surgery consultation item applies.

If a patient who is accommodated in the residential aged care facility visits a medical practitioner at consulting rooms situated within the residential aged care facility complex, whether free standing or situated within the residential aged care facility precincts, benefits would be attracted under the appropriate residential aged care facility attendance item.

To facilitate assessment of the correct Medicare rebate in respect of a number of patients attended on the one occasion at one of the above locations, it is important that the total number of patients seen be recorded on each individual account, receipt or assignment form. For example, where two patients were visited (for a brief consultation) in the one facility on the one occasion, each account, receipt or assignment form would show "Item 5010 - 1 of 2 patients" for a general practitioner.

The number of patients seen should not include attendances which do not attract a Medicare rebate (e.g. public in-patients, attendances for normal after-care), or where a Medicare rebate is payable under an item other than these derived fee items (e.g. health assessments, care planning, emergency after-hours attendance - first patient).

AN.0.16 Provision for Review of the Schedule Optometric Benefits Consultative Committee (OBCC)

The OBCC is an advisory committee established in 1990 by arrangement between the Minister and Optometry Australia.

The OBCC's functions are:

- (a) to discuss the appropriateness of existing Medicare Benefits Schedule items for the purposes of considering whether an approach to the Medical Services Advisory Committee may be needed;

- (b) to undertake reviews of particular services and to report on the appropriateness of the existing structure of the Schedule, having regard to current optometric practice;
- (c) to consider and advise on the appropriateness of the participating optometrists' arrangements and the Common Form of Undertaking (as specified in the *Health Insurance Act 1973* and related legislation) and the administrative rules and interpretations which determine the payment of benefits for optometric services or the level of benefits;
- (d) to investigate specific matters associated with the participating optometrists' arrangements and to advise on desirable changes.

The OBCC comprises two representatives from the Department of Health, two representatives from the Department of Human Services, and three representatives from Optometry Australia.

AN.0.18 Provision for Review of Practitioner Behaviour Professional Services Review (PSR) Scheme

The Professional Services Review (PSR) Scheme is a scheme for reviewing and investigating the provision of services by a health practitioner to determine whether the practitioner has engaged in inappropriate practice in the rendering or initiating of Medicare services or in prescribing under the Pharmaceutical Benefits Scheme (PBS). 'Practitioner' is defined in Section 81 of the *Health Insurance Act 1973* and includes: medical practitioners, dentists, optometrists, chiropractors, midwives, nurse practitioners, physiotherapists, podiatrists and osteopaths.

Section 82 of the *Health Insurance Act 1973* defines inappropriate practice as conduct that is such that a PSR Committee could reasonably conclude that it would be unacceptable to the general body of the members of the profession in which the practitioner was practising when they rendered or initiated the services. It is also an offence under Section 82 for a person who is an officer of a body corporate to knowingly, recklessly or negligently cause or permit a practitioner employed by the person to engage in such conduct.

The Department of Human Services monitors health practitioners' claiming patterns. Where an anomaly is detected, for which a satisfactory explanation cannot be provided, the Department of Human Services can request that the Director of PSR review the provision of services by the practitioner. On receiving the request, the Director must decide whether to conduct a review and in which manner the review will be conducted. The Director is authorised to require that documents and information be provided.

Following a review, the Director must:

- (a) decide to take no further action; or
- (b) enter into an agreement with the person under review (which must then be ratified by an independent Determining Authority); or
- (c) refer the matter to a PSR Committee.

A PSR Committee consists of the Chairperson and two other panel members who must be members of the same profession as the practitioner under review. However, up to two additional Committee members may be appointed to provide a wider range of clinical expertise.

The Committee is authorised to:

- (a) investigate any aspect of the provision of the referred services, and without being limited by the reasons given in the review request or by a Director's report following the review;
- (b) hold hearings and require the person under review to attend and give evidence; and
- (c) require the production of documents (including clinical notes).

A PSR Committee may not make a finding of inappropriate practice unless it has given the person under review notice of its intention to review them, the reasons for its findings, and an opportunity to respond. In reaching their decision, a PSR Committee is required to consider whether or not the practitioner has kept adequate and contemporaneous patient records. It will be up to the peer judgement of the PSR Committee to decide if a practitioner's records meet the prescribed standards.

The standards which determine if a record is adequate and contemporaneous are prescribed in the *Health Insurance (Professional Services Review) Regulations 1999*.

To be *adequate*, the patient or clinical record needs to:

- clearly identify the name of the patient; and
- contain a separate entry for each attendance by the patient for a service and the date on which the service was rendered or initiated; and
- each entry needs to provide clinical information adequate to explain the type of service rendered or initiated; and
- each entry needs to be sufficiently comprehensible that another practitioner, relying on the record, can effectively undertake the patient's ongoing care.

To be *contemporaneous*, the patient or clinical record should be completed at the time that the service was rendered or initiated or as soon as practicable afterwards. Records for hospital patients are usually kept by the hospital and the practitioner could rely on these records to document in-patient care.

The practitioner under review is permitted to make submissions to the PSR Committee before key decisions or a final report is made.

If a PSR Committee finds that the person under review has engaged in inappropriate practice, the findings will be reported to the Determining Authority to decide what action should be taken:

- (i) a reprimand;
- (ii) counselling;
- (iii) repayment of Medicare benefits; and/or
- (iv) complete or partial disqualification from Medicare benefit arrangements for up to three years.

Further information on the Professional Services Review is available at www.psr.gov.au and information on Medicare compliance is available at http://www.humanservices.gov.au/health-professionals/subjects/compliance?utm_id=9.

Penalties

Penalties of up to \$10,000 or imprisonment for up to five years, or both may be imposed on any person who makes a statement (either orally or in writing) or who issues or presents a document that is false or misleading in a material particular and which is capable of being used with a claim for benefits. In addition, any practitioner who is found guilty of such offences shall be subject to examination by a Medicare Participation Review Committee (MPRC) and may be counselled or reprimanded or may have services wholly or partially disqualified from the Medicare benefit arrangements.

A penalty of up to \$1,000 or imprisonment for up to three months, or both, may be imposed on any person who obtains a patient's signature on an assignment of benefit form without necessary details having been entered on the form before the patient signs or who fails to cause a patient to be given a copy of the completed form.

Medicare Participation Review Committee (MPRC)

The Medicare Participation Review Committee determines what administrative action should be taken against a practitioner who:

- (a) has been successfully prosecuted for relevant criminal offences; or
- (b) has been found to have engaged in inappropriate practice under the Professional Services Review scheme.

The Committee can take no further action, counsel or reprimand the practitioner, or determine that the practitioner be disqualified from Medicare for a particular period or in relation to particular services for up to five years.

Medicare benefits are not payable in respect of services rendered by a practitioner who has been fully disqualified, or partly disqualified in relation to relevant services under the *Health Insurance Act 1973* (Section 19B applies).

AN.0.19 After-Hours Attendances (Items 585, 588, 591, 594, 599, 600, 5000, 5003, 5010, 5020, 5023, 5028, 5040, 5043, 5049, 5060, 5063, 5067, 5200, 5203, 5207, 5208, 5220, 5223, 5227, 5228, 5260, 5263, 5265 and 5267)

After-Hours Attendances (Items 585, 588, 591, 594, 599, 600, 5000, 5003, 5010, 5020, 5023, 5028, 5040, 5043, 5049, 5060, 5063, 5067, 5200, 5203, 5207, 5208, 5220, 5223, 5227, 5228, 5260, 5263, 5265 and 5267)

Guidelines for the [After Hours Other Medical Practitioners \(AHOMPs\) Program](#) are available on the Department of Health's website.

After-hours attendance items may be claimed as follows:

Items 585, 588, 591, 594, 599, 600 apply only to a professional attendance that is provided:

- on a public holiday;
- on a Sunday;
- before 8am, or after 12 noon on a Saturday;
- before 8am, or after 6pm on any day other than a Saturday, Sunday or public holiday.

Items 5000, 5020, 5040, 5060, 5200, 5203, 5207 and 5208 apply only to a professional attendance that is provided:

- on a public holiday;
- on a Sunday;
- before 8am, or after 1 pm on a Saturday;
- before 8am, or after 8pm on any day other than a Saturday, Sunday or public holiday.

Items 5003, 5010, 5023, 5028, 5043, 5049, 5063, 5067, 5220, 5223, 5227, 5228, 5260, 5263, 5265 and 5267 apply to a professional attendance that is provided:

- on a public holiday;
- on a Sunday;
- before 8am, or after 12 noon on a Saturday;
- before 8am, or after 6pm on any day other than a Saturday, Sunday or public holiday.

Urgent After-Hours Attendances (Items 585 - 600)

Items 585, 588, 591, 594, 599 and 600 can be used for urgent after-hours services.

Urgent After-Hours Attendances (Items 585, 588, 591, and 594) allow for urgent attendances (other than an attendance between 11pm and 7am) in an after-hours period.

Urgent After-Hours Attendances during Unsociable Hours (Items 599 and 600) allow for urgent attendances between 11pm and 7am in an after-hours period.

The attendance for all these items must be requested by the patient or a responsible person during the same unbroken urgent after-hours period in which the medical service is provided. The medical practitioner must first determine that the patient requires urgent medical assessment.

In considering the need for an urgent assessment of a patient's condition, the practitioner may rely on information conveyed by the patient or patient's carer, other health professionals or emergency services personnel. A record of the assessment must be completed and included in the patient's medical record.

The MBS urgent after-hours items may be used when, on the information available to the medical practitioner, the patient's condition requires urgent medical assessment during the after-hours period to prevent deterioration or potential deterioration in their health. Specifically the patient's assessment:

- cannot be delayed until the next in-hours period; and
- the medical practitioner must attend the patient at the patient's location or reopen the practice rooms.

Appendix B of the Approved Medical Deputising Service (AMDS) Program Guidelines offers a useful protocol to determine whether prospective after-hours patients should be seen by a deputising medical practitioner or see their regular medical practitioner. The AMDS Program Guidelines are available at <http://www.health.gov.au/internet/main/publishing.nsf/Content/approved-medical-deputising-service>

If the attendance is undertaken at consulting rooms, it is necessary for the practitioner to return to and specially open the consulting rooms for the attendance.

MBS Item 585 is available to medical practitioners who are:

- listed on the Vocational Register of General Practitioners maintained by the Department of Human Services or;
- holders of the Fellowship of the Royal Australian College of General Practitioners (FRACGP) who participate in, and meet the requirements of the RACGP for continuing medical education and quality assurance as defined in the RACGP Quality Assurance and Continuing Medical Education Program; or
- holders of the Fellowship of the Australian College of Rural and Remote Medicine (FACRRM) who participate in, and meet the requirements of the Australian College of Rural and Remote Medicine (ACRRM) for continuing medical education and quality assurance as defined in ACRRM's Professional Development Program; or
- undertaking an approved placement in general practice as part of a training program for general practice leading to the award of the FRACGP or training recognised by the RACGP as being of an equivalent standard; or
- undertaking an approved placement in general practice as part of a training program for general practice leading to the award of the FACRRM or training recognised by ACRRM as being of an equivalent standard.

NOTE: MBS incentives continue to be available through the After-Hours Other Medical Practitioners (AHOMPs) Program to non-vocationally recognised medical practitioners who perform after-hours attendances. MBS item 585 will be available to AHOMPs Program participants if they perform an urgent after-hours attendance as part of their employment with a full-time general practice.

AHOMPs will not extend access to item 585 to non-vocationally recognised medical practitioners who work with an after-hours only practice or a medical deputising service (including an AMDS).

MBS Item 588 is available to non-vocationally recognised medical practitioners who are providing services (as a contractor, employee, member or otherwise) for a general practice or clinic or as part of medical deputising arrangements in Modified Monash Model Areas 2 to 7.

A locator map to identify a medical practice's Modified Monash Model Area location is available at the DoctorConnect website at <http://www.doctorconnect.gov.au/internet/otd/publishing.nsf/Content/locator>

MBS item 591 is available to non-vocationally recognised medical practitioners who perform attendances for after-hours clinics or as part of deputising arrangements in Modified Monash Model Area 1.

If more than one patient is seen on the same occasion (that is, the second and any further services are consequential to the first service) using either MBS items 585, 588 or 591, **MBS item 594** must be used in respect of the second and subsequent services to patients attended on the same occasion.

Medical practitioners who routinely provide services to patients in the after-hours periods at consulting rooms, or who provide the services (as a contractor, employee, member or otherwise) for a general practice or clinic that routinely provides services to patients in after-hours periods at consulting rooms, will not be able to bill urgent after-hours items 585, 588, 591, 594, 599 and 600.

A *routine service* means a regular or habitual provision of services to patients. This does not include *ad hoc* services provided after-hours in consulting rooms by a medical practitioner (excluding consultant physicians and specialists) working in a general practice or a clinic while participating in an on-call roster.

There is no change to the types of providers who can render services under the *Urgent After-Hours Attendances during Unsociable Hours items* (MBS items 599 and 600). Attendances using these items must be booked during the same unbroken urgent after-hours period.

MBS item 599 continues to be available to medical practitioners who are:

- listed on the Vocational Register of General Practitioners maintained by the Department of Human Services or;
- holders of the Fellowship of the Royal Australian College of General Practitioners (FRACGP) who participate in, and meet the requirements of the RACGP for continuing medical education and quality assurance as defined in the RACGP Quality Assurance and Continuing Medical Education Program; or
- holders of the Fellowship of the Australian College of Rural and Remote Medicine (FACRRM) who participate in, and meet the requirements of the Australian College of Rural and Remote Medicine (ACRRM) for continuing medical education and quality assurance as defined in ACRRM's Professional Development Program; or
- undertaking an approved placement in general practice as part of a training program for general practice leading to the award of the FRACGP or training recognised by the RACGP as being of an equivalent standard; or
- undertaking an approved placement in general practice as part of a training program for general practice leading to the award of the FACRRM or training recognised by ACRRM as being of an equivalent standard non-vocationally recognised medical practitioners through the AHOMPs Program; or
- non-vocationally recognised medical practitioners participating in the AHOMPs Program.

MBS item 600 continues to be available to non-vocationally recognised medical practitioners.

Non-Urgent After-Hours Attendances (5000 - 5067 and 5200 - 5267)

Non-Urgent After-Hours Attendances in Consulting Rooms (Items 5000, 5020, 5040, 5060, 5200, 5203, 5207 and 5208) are to be used for non-urgent consultations at consulting rooms initiated either on a public holiday, on a Sunday, or before 8am and after 1pm on a Saturday, or before 8am and after 8pm on any other day.

Non-Urgent After-Hours Attendances at a Place Other than Consulting Rooms (Other than a Hospital or Residential Aged Care Facility) (items 5003, 5023, 5043, 5063, 5220, 5223, 5227 and 5228) and *Non-Urgent After-Hours Attendances in a Residential Aged Care Facility* (Items 5010, 5028, 5049, 5067, 5260, 5263, 5265 and 5267) are to be used for non-urgent attendances on 1 or more patients on 1 occasion on a public holiday, on a Sunday, or before 8am and after 12 noon on a Saturday, or before 8am and after 6pm on any other day.

Attendance Period	Applicable Time			Items
	Monday to Friday	Saturday*	Sunday and/or public holiday	
Urgent after-hours attendance	Between 7am - 8am and 6pm - 11pm	Between 7am - 8am and 12 noon - 11pm	Between 7am - 11pm	585, 588, 591, 594
Urgent after-hours in unsociable hours	Between 11pm - 7am	Between 11pm - 7am	Between 11pm - 7am	599, 600
Non-urgent After hours In consulting rooms	Before 8am or after 8pm	Before 8am or after 1pm	24 hours	5000, 5020, 5040, 5060 5200, 5203, 5207, 5208
Non-urgent after-hours at a place other than consulting rooms (other than a hospital or Residential Aged Care Facility)	Before 8am or after 6pm	Before 8am or after 12 noon	24 hours	5003, 5023, 5043, 5063, 5220, 5223, 5227, 5228
Non-urgent after-hours in a Residential Aged Care Facility	Before 8am or after 6pm	Before 8am or after 12 noon	24 hours	5010, 5028, 5049, 5067 5260, 5263, 5265, 5267

*with the exception of public holidays which fall on a Saturday

AN.0.20 Visiting Optometrists Scheme (VOS)

Special arrangements exist under the provisions of Section 129A of the Health Insurance Act 1973 to ensure that people in rural and remote locations have access to optometry services. Optometrists are encouraged to provide outreach services to national priority locations, particularly remote and very remote locations, Aboriginal and Torres Strait Islander communities and rural locations with an identified need for optometry services.

Under these arrangements, financial assistance may be provided to cover costs associated with delivering outreach services, including travel, accommodation and meals and facility fees.

Funding agreements are currently in place with optometrists for the delivery of services until 30 June 2015. Enquiries can be directed to vos@health.gov.au.

AN.0.21 Minor Attendance by a Consultant Physician (Items 119, 120, 131)

A minor consultation is regarded as being a consultation in which the assessment of the patient does not require the physical examination of the patient and does not involve a substantial alteration to the patient's treatment. Examples of consultations which could be regarded as being 'minor consultations' are listed below (this is by no means an exhaustive list) :-

- hospital visits where a physical examination does not result, or where only a limited examination is performed;
- hospital visits where a significant alteration to the therapy or overall management plan does not ensue;

- brief consultations or hospital visits not involving subsequent discussions regarding patient's progress with a specialist colleague or the referring practitioner.

AN.0.22 Telehealth Patient-end Support Services by Optometrists

These notes provide information on the telehealth MBS attendance items for optometrists to provide clinical support to their patients, when clinically relevant, during video consultations with ophthalmologists under items 10945, 10946, 10947 and 10948 in Group A10.

Telehealth patient-end support services can only be claimed where:

- a Medicare eligible specialist service is claimed;
- the service is rendered in Australia; and
- this is necessary for the provision of the specialist service.

A video consultation will involve a single optometrist attending to the patient, with the possible participation of another medical practitioner, a participating nurse practitioner, a participating midwife, practice nurse, Aboriginal and Torres Strait Islander health practitioner or Aboriginal health worker at the patient end. The above time-tiered items provide for patient-end support services in various settings, including consulting rooms, other than consulting rooms, eligible residential aged care services and Aboriginal Medical Services.

Clinical indications

The ophthalmologist must be satisfied that it is clinically appropriate to provide a video consultation to a patient. The decision to provide clinically relevant support to the patient is the responsibility of the ophthalmologist.

Telehealth specialist services can be provided to patients when there is no patient-end support service provided.

Collaborative Consultation

The optometrist who provides assistance to the patient where this is necessary for the provision of the specialist service, may seek assistance from a health professional (e.g. a medical practitioner, practice nurse, Aboriginal or Torres Strait Islander health practitioner or Aboriginal health worker) but only one item is billable for the patient-end support service. The optometrist must be present during part or all of the consultation in order to bill an appropriate time-tiered MBS item. Any time spent by another health professional called to assist with the consultation may not be counted against the overall time taken to complete the video consultation.

Restrictions

The MBS telehealth attendance items are not payable for services to an admitted hospital patient (this includes Hospital in the Home patients). Benefits are not payable for telephone or email consultations. In order to fulfil the item descriptor there must be a visual and audio link between the patient and the ophthalmologist. If the ophthalmologist is unable to establish both a video and audio link with the patient, a MBS rebate for a telehealth attendance is not payable.

Eligible Geographical Areas

Geographic eligibility for telehealth services funded under Medicare are determined according to the Australian Standard Geographical Classification Remoteness Area (ASGC-RA) classifications. Telehealth Eligible Areas are areas that are outside a Major City (RA1) according to ASGC-RA (RA2 - 5). Patients and providers are able to check their eligibility by following the links on the MBS Online website (www.mbsonline.gov.au/telehealth).

There is a requirement for the patient and specialist to be located a minimum of 15km apart at the time of the consultation. Minimum distance between specialist and patient video consultations are measured by the most direct (ie least distance) route by road. The patient or the specialist is not permitted to travel to an area outside the minimum 15 km distance in order to claim a video conference. This rule will not apply to specialist video

consultations with patients who are a care recipient in an eligible residential care service; or at an eligible Aboriginal Medical Service or Aboriginal Community Controlled Health Service for which a direction, made under subsection 19(2) of the *Health Insurance Act 1973*, as these patients are able to receive telehealth services anywhere in Australia.

Telehealth Eligible Service Areas are defined at:

<http://www.mbsonline.gov.au/internet/mbsonline/publishing.nsf/Content/connectinghealthservices-eligible-geo>.

Record Keeping

Telehealth optometrists must keep contemporaneous notes of the consultation including documenting that the service was performed by video conference, the date, time and the people who participated.

Only clinical details recorded at the time of the attendance count towards the time of the consultation. It does not include information added at a later time, such as reports of investigations.

Multiple attendances on the same day

In some situations a patient may receive a telehealth consultation and a face-to-face consultation by the same or different practitioner on the same day.

Medicare benefits may be paid for more than one video consultation on a patient on the same day by the same practitioner, provided the second (and any following) video consultations are not a continuation of the initial or earlier video consultations. Practitioners will need to provide the times of each consultation on the patient's account or bulk billing voucher.

Also, if a patient has an initial consultation via telehealth, they cannot also claim an initial face-to-face consultation as part of the same course of treatment.

Aftercare Rule

Video consultations are subject to the same aftercare rules as face-to-face consultations.

Referrals

The referral procedure for a video consultation is the same as for conventional face-to-face consultations.

Technical requirements

In order to fulfil the item descriptor there must be a visual and audio link between the patient and the ophthalmologist. If the ophthalmologist is unable to establish both a video and audio link with the patient, a MBS rebate for a specialist video consultation is not payable.

Individual clinicians must be confident that the technology used is able to satisfy the item descriptor and that software and hardware used to deliver a videoconference meets the applicable laws for security and privacy.

Duration of attendance

The optometrist attending at the patient end of the video consultation does not need to be present for the entire consultation, only as long as is clinically relevant - this can be established in consultation with the ophthalmologist. The MBS fee payable for the supporting optometrist will be determined by the total time spent assisting the patient. This time does not need to be continuous.

AN.0.23 Referred Patient Consultant Physician Treatment and Management Plan (Items 132 and 133)

Patients with at least two morbidities which can include complex congenital, development and behavioural disorders are eligible for these services when referred by their referring practitioner.

Item 132 should include the development of options for discussion with the patient, and family members, if present, including the exploration of treatment modalities and the development of a comprehensive consultant physician treatment and management plan, with discussion of recommendations for services by other health providers as appropriate.

Item 133 is available in instances where a review of the consultant physician treatment and management plan provided under item 132 is required, up to a maximum of two claims for this item in a 12 month period. Should further reviews of the consultant physician treatment and management plan be required, the appropriate item for such service/s is 116.

Where a patient with a GP health assessment, GP management plan (GPMP) or Team Care Arrangements (TCA's) is referred to a consultant physician for further assessment, it is intended that the consultant physician treatment and management plan should augment the GPMP or TCA's for that patient.

Preparation of the consultant physician treatment and management plan should be in consultation with the patient. If appropriate, a written copy of the consultant physician treatment and management plan should be provided to the patient. A written copy of the consultant physician treatment and management plan should be provided to the referring medical practitioner, usually within two weeks of the consultant physician consultation. In more serious cases, more prompt provision of the plan and verbal communication with the referring medical practitioner may be appropriate. A guide to the content of such consultant physician treatment and management plans which are to be provided under this item is included within this Schedule.

(Note: This information is provided as a guide only and each case should be addressed according to a patient's individual needs.)

REFERRED PATIENT CONSULTANT PHYSICIAN TREATMENT AND MANAGEMENT PLAN

- The following content outline is indicative of what would normally be sent back to the referring practitioner.
- The consultant physician treatment and management plan should address the specific questions and issues raised by the referring practitioner.

History

The consultant physician treatment and management plan should encompass a comprehensive patient history which addresses all aspects of the patient's health, including psychosocial history, past clinically relevant medical history, any relevant pathology results if performed and a review of medication and interactions. There should be a particular focus on the presenting symptoms and current difficulties, including precipitating and ongoing conditions. The results of relevant assessments by other health professionals, including GPs and/or specialists, including relevant care plans or health assessments performed by GPs under the Enhanced Primary Care and Chronic Disease Management should also be noted.

Examination

A comprehensive medical examination means a full multi-system or detailed single organ system assessment. The clinically relevant findings of the examination should be recorded in the management plan.

Diagnosis

This should be based on information obtained from the history and medical examination of the patient. The list of diagnoses and/or problems should form the basis of any actions to be taken as a result of the comprehensive assessment. In some cases, the diagnosis may differ from that stated by the referring practitioner, and an explanation of why the diagnosis differs should be included. The report should also provide a risk assessment, management options and decisions.

Management plan

Treatment options/Treatment plan

The consultant physician treatment and management plan should include a planned follow-up of issues and/or conditions, including an outline of the recommended intervention activities and treatment options. Consideration should also be given to recommendations for allied health professional services, where appropriate.

Medication recommendations

Provide recommendations for immediate management, including the alternatives or options. This should include doses, expected response times, adverse effects and interactions, and a warning of any contra-indicated therapies.

Social measures

Identify issues which may have triggered or are contributing to the problem in the family, workplace or other social environment which need to be addressed, including suggestions for addressing them.

Other non medication measures

This may include other options such as life style changes including exercise and diet, any rehabilitation recommendations and discussion of any relevant referrals to other health providers.

Indications for review

It is anticipated that the majority of patients will be able to be managed effectively by the referring practitioner using the consultant physician treatment and management plan. If there are particular concerns about the indications or possible need for further review, these should be noted in the consultant physician treatment and management plan.

Longer term management

Provide a longer term consultant physician treatment and management plan, listing alternative measures that might be taken in the future if the clinical situation changes. This might be articulated as anticipated response times, adverse effects and interactions with the consultant physician treatment and management plan options recommended under the consultant physician treatment and management plan.

The Department of Human Services (DHS) has developed an [Health Practitioner Guideline to substantiate that a valid referral existed \(specialist or consultant physician\)](#) which is located on the DHS website.

AN.0.24 Referred patient assessment, diagnosis and treatment and management plan for autism or any other pervasive developmental disorder (items 135 and 289)

These items are for consultant paediatricians (item 135) or psychiatrists (item 289), on referral from a medical practitioner, to provide early diagnosis and treatment of autism or any other pervasive development disorder (PDD) for children aged under 13 years. The items are for assessment, diagnosis and the creation of a treatment and management plan, and are claimable only once per patient per lifetime.

When item 135 or item 289 is in place, a consultant paediatrician or psychiatrist can refer a child with autism or other PDD to eligible allied health professionals for treatment services.

A child can access either the allied health services for autism/other PDD (using item 135 or 289) or for disability (using item 137 or 139), but not both.

If a child sees a consultant paediatrician or psychiatrist other than the one who put the treatment and management plan in place, the consultant paediatrician or psychiatrist who is seen subsequently can refer the child for any remaining allied health treatment services that are available to the child.

Children with an existing treatment and management plan created under item 135 or 289 can be reviewed under attendance items for consultant psychiatrists and paediatricians.

Where the patient presents with another morbidity in addition to autism or other PDD, item 132 can also be used for development of a treatment and management plan. However, the use of this item will not provide access to Medicare rebateable allied health services for treatment of autism or any other PDD.

Items 135 or 289 also provide a referral pathway for access to services provided through Childhood Autism Advisors by the Department of Families, Housing, Community Services and Indigenous Affairs (FaHCSIA). For further information on assistance available through FaHCSIA, phone 1800 778 581 or email ASD.Support@fahcsia.gov.au. TTY users - phone 1800 555 677 then ask for the 1800 toll-free number you wish to contact.

Referral requirements

Items 135 (paediatrician) or 289 (psychiatrist) are for diagnosis and treatment of autism or any other PDD where clinically appropriate, including referral to allied health treatment services.

A course of treatment for the allied health treatment services consists of the number of allied health services stated on the child's referral, up to a maximum of 10 services. This enables the referring practitioner to consider a report from the allied health professional(s) about the services provided to the child, and the need for further treatment.

Within the maximum service allocation of twenty treatment services, the allied health professional(s) can provide one or more courses of treatment. Patients will require a separate referral for each allied health professional they are referred to and they will also need new referrals for each new course of treatment.

In addition to referrals to allied health treatment services, a consultant paediatrician or psychiatrist can refer a child to an eligible allied health provider to assist with diagnosis of the child or for the purpose of contributing to the child's pervasive developmental disorder (PDD). Referrals for these allied health assessment services can be made by a consultant paediatrician or psychiatrist as an outcome of the service provided under one of items 110-131 or 296-370 inclusive.

Referrals are only valid when prerequisite MBS services have been provided. If the referring service has not yet been claimed, the Department of Human Services (DHS) will not be aware of the child's eligibility and Medicare benefits cannot be paid. Providers can call DHS on 132 150 to confirm whether a relevant MBS service has been claimed and/or the number of allied health services already claimed by the child.

Referring medical practitioners are not required to use a specific form to refer patients for the allied health services that are available through the *Helping Children with Autism* program. The referral may be a letter or note to an eligible allied health professional signed and dated by the referring practitioner.

Allied health assistance with diagnosis/assessment and treatment

Helping Children with Autism Program - Allied Health Items

<i>MBS items for allied health assessment and treatment of autism/PDD</i>	<i>Allied health provider</i>
<i>Assistance with diagnosis / contribution to a treatment plan*</i>	
82000	Psychologist
82005	Speech pathologist
82010	Occupational therapist
82030	Audiologist, optometrist, orthoptist, physiotherapist
<i>Treatment services**</i>	
82015	Psychologist
82020	Speech pathologist

82025	Occupational therapist
82035	Audiologist, optometrist, orthoptist, physiotherapist

* Prerequisite MBS items: 110-131 (paediatrician) or items 296-370 (psychiatrist).

** Prerequisite MBS items: 135 (paediatrician) or 289 (psychiatrist).

Assessment services

Assessment services are available for an allied health provider to assist the referring practitioner with diagnosis or for contributing to a child's treatment and management plan. These services can be accessed by children aged under 13 years.

Medicare rebates are available for up to four allied health services in total per eligible child.

An allied health professional can provide these services when:

- the child has previously been provided with any MBS service covering items 110-131 inclusive by a consultant paediatrician; or
- the child has previously been provided with any MBS service covering items 296-370 (excluding item 359) inclusive by a consultant psychiatrist.

The four allied health assessment services may consist of any combination of items 82000, 82005, 82010 and 82030.

It is the responsibility of the referring practitioner to allocate these services in keeping with the child's individual treatment needs and to refer the child to appropriate allied health professional(s) accordingly.

Treatment services

Treatment services can be accessed when a child with autism or other PDD is aged under 15 years and has had a treatment and management plan put in place for them before their 13th birthday.

Medicare rebates are available for up to twenty allied health treatment services in total per eligible child.

An eligible allied health professional can provide these services when:

- the child has previously been provided with a treatment plan (item 135) by a consultant paediatrician; or
- the child has previously been provided with a treatment plan (item 289) by a consultant psychiatrist.

The twenty treatment services may consist of any combination of items 82015, 82020, 82025 or 82035.

It is the responsibility of the referring practitioner to allocate these services in keeping with the child's individual treatment needs and to refer the child to appropriate allied health professional(s) accordingly.

Existing patients or patients with an existing diagnosis

Where a specific plan has not been created previously for the treatment and management of autism or any other PDD, a new plan can be developed by the treating practitioner under item 135 or 289 where it is clinically appropriate to treat the patient under such a plan.

Children with an existing treatment and management plan created under item 135 or 289 can be reviewed under attendance items for consultant psychiatrists and paediatricians.

AN.0.25 Patient Assessment, Diagnosis and Treatment and Management Plan for a Child with Disability (Items 137 and 139)

Items 137 and 139 are for specialists and consultant physicians (137) or for general practitioners (139) to provide early diagnosis and treatment of children with any of the following conditions:

(a) sight impairment that results in vision of less than or equal to 6/18 vision or equivalent field loss in the better eye, with

correction.

(b) hearing impairment that results in:

(i) a hearing loss of 40 decibels or greater in the better ear, across 4 frequencies; or

(ii) permanent conductive hearing loss and auditory neuropathy.

(c) deafblindness

(d) cerebral palsy

(e) Down syndrome

(f) Fragile X syndrome

(g) Prader-Willi syndrome

(h) Williams syndrome

(i) Angelman syndrome

(j) Kabuki syndrome

(k) Smith-Magenis syndrome

(l) CHARGE syndrome

(m) Cri du Chat syndrome

(n) Cornelia de Lange syndrome

(o) microcephaly if a child has:

(i) a head circumference less than the third percentile for age and sex; and

(ii) a functional level at or below 2 standard deviations below the mean for age on a standard developmental test, or an IQ score of less than 70 on a standardised test of intelligence.

(p) Rett's disorder

"Standard developmental test" refers to the Bayley Scales of Infant Development or the Griffiths Mental Development Scales; "standardised test of intelligence" refers to the Wechsler Intelligence Scale for Children (WISC) or the Wechsler Preschool and Primary Scale of Intelligence (WPPSI). It is up to the clinical judgement of the diagnosing practitioner if other tests are appropriate to be used.

Items 137 and 139 are for assessment, diagnosis and the creation of a treatment and management plan, and are claimable only once per patient per lifetime.

AN.0.26 Geriatrician Referred Patient Assessment and Management Plan (Items 141-147)

Items 141 -147 apply only to services provided by a consultant physician or specialist in the specialty of Geriatric Medicine who has completed the additional requirements of the Royal Australasian College of Physicians for recognition in the subspecialty of geriatric medicine.

Referral for Items 141-147 should be through the general practitioner for the comprehensive assessment and management of frail older patients, older than 65, with complex, often interacting medical, physical and psychosocial problems who are at significant risk of poor health outcomes. In the event that a specialist of another discipline wishes to refer a patient for this item, the referral should take place through the GP.

A comprehensive assessment of an older person should as a minimum cover:

- current active medical problems
- past medical history;
- medication review;
- immunisation status;
- advance care planning arrangements;
- current and previous physical function including personal, domestic and community activities of daily living;
- psychological function including cognition and mood; and
- social function including living arrangements, financial arrangements, community services, social support and carer issues.

Note: Guidance on all aspects of conducting a comprehensive assessment on an older person is available on the Australian and New Zealand Society for Geriatric Medicine website at www.anzsgm.org.

Some of the information collection component of the assessment may be rendered by a nurse or other assistant in accordance with accepted medical practice, acting under the supervision of the geriatrician. The remaining components of the assessment and development of the management plan must include a personal attendance by the geriatrician.

A prioritised list of diagnoses/problems should be developed based on information provided by the history and examination, and any additional information provided by other means, including an interview of a person other than the patient.

The management plan should be explained and if necessary provided in written form to the patient or where appropriate, their family or carer(s).

A written report of the assessment including the management plan should be provided to the general practitioner within a maximum of 2 weeks of the assessment. More prompt verbal communication may be appropriate.

The Patient Assessment and Management plans must be kept for 2 years after the date of service.

Items 143 and 147 are available in instances where the GP initiates a review of the management plan provided under items 141 and 145, usually where the current plan is not achieving the anticipated outcome. It is expected that when a management plan is reviewed, any modification necessary will be made.

Items 143 and 147 can be claimed once in a 12 month period. However, if there has been a significant change in the patient's clinical condition or care circumstances necessitating another review, an additional item 143 or 147 can be claimed. In these circumstances, the patient's invoice or Medicare voucher should be annotated to briefly indicate the reason why the additional review was required (e.g. annotated as clinically indicated, exceptional circumstances, significant change etc).

AN.0.27 Prolonged Attendance in Treatment of a Critical Condition (Items 160 164)

The conditions to be met before services covered by items 160-164 attract benefits are:-

- (i) the patient must be in imminent danger of death;
- (ii) if the personal attendance is not continuous, the occasion on which the service is provided is taken to be the total time of the attendance; and
- (iii) if personal attendance on a single patient is provided by 1 or more general practitioners, specialists or consultant physicians concurrently, each general practitioner, specialist or consultant physician may claim an attendance fee.

AN.0.28 Family Group Therapy (Items 170, 171, 172)

These items refer to family group therapy supervised by general practitioner, specialist or consultant physician (other than consultant psychiatrists). To be used, these items require that a formal intervention with a specific therapeutic outcome, such as improved family function and/or communication, is undertaken. Other types of group attendances do not attract benefits. It should be noted that only one fee applies in respect of each group of patients.

AN.0.29 Acupuncture (Item 173, 193, 195, 197 and 199)

The service of "acupuncture" must be performed by a medical practitioner and itemised under item 173, 193, 195, 197 or 199 to attract benefits. These items cover not only the performance of the acupuncture but include any consultation on the same occasion and any other attendance on the same day for the condition for which acupuncture was given.

Items 193, 195, 197 and 199 may only be performed by a general practitioner, (see Note 4 of 'Medicare Benefit Arrangements' for a definition) if the Medicare Australia CEO has received a written notice from the Royal Australian College of General Practitioners (RACGP) stating that the person meets the skills requirements for providing services to which the items apply.

Other items in Category 1 of the Schedule should not be itemised for professional attendances when the service "acupuncture" is provided.

For the purpose of payment of Medicare benefits "acupuncture" is interpreted as including treatment by means other than the use of acupuncture needles where the same effect is achieved without puncture, eg by application of ultrasound, laser beams, pressure or moxibustion, etc.

For more information on the content-based item structure used in this Group, see A.5 in the explanatory notes.

AN.0.30 Consultant Psychiatrist - Initial consultations for NEW PATIENTS (Items 296 to 299 and 361) Referred Patient Assessment and Management Plan (Items 291, 293 and 359) and referral to Allied Mental Health Professionals

Referral for items 291, 293 and 359 should be through the general practitioner or participating nurse practitioner for the management of patients with mental illness. In the event that a specialist of another discipline wishes to refer a patient for this item the referral should take place through the GP or participating nurse practitioner.

In order to facilitate ongoing patient focussed management, an outcome tool will be utilised during the assessment and review stage of treatment, where clinically appropriate. The choice of outcome tools to be used is at the clinical discretion of the practitioner, however the following outcome tools are recommended:

- Kessler Psychological Distress Scale (K10)
- Short Form Health Survey (SF12)
- Health of the Nation Outcome Scales (HoNOS)

Preparation of the management plan should be in consultation with the patient. If appropriate, a written copy of the management plan should be provided to the patient. A written copy of the management plan should be provided to the general practitioner within a maximum of two weeks of the assessment. It should be noted that two weeks is the outer limit and in more serious cases more prompt provision of the plan and verbal communication with the GP or participating nurse practitioner may be appropriate. A guide to the content of the report which should be provided to the GP or participating nurse practitioner under this item is included within this Schedule.

It is expected that item 291 will be a single attendance. However, there may be particular circumstances where a patient has been referred by a GP or participating nurse practitioner for an assessment and management plan, but it is not possible for the consultant psychiatrist to determine in the initial consultation whether the patient is suitable for management under such a plan. In these cases, where clinically appropriate, items 296, 297, 299 or 361 (for a new patient) or 300-308 (for continuing patients) may be used, and item 291 may be used subsequently, in those circumstances where the consultant psychiatrist undertakes a consultation (in accordance with the item requirements) prior to the consultation for providing the referring practitioner with an assessment and management plan. It is not intended that items 296, 297, 299, 361 or 300-308 will generally or routinely be used in conjunction with, or prior to, item 291.

Items 293 and 359 are available in instances where the GP or participating nurse practitioner initiates a review of the plan provided under item 291, usually where the current plan is not achieving the anticipated outcome. It is expected that when a plan is reviewed, any modifications necessary will be made.

The Royal Australian and New Zealand College of Psychiatrists (RANZCP) Referred Patient Assessment and Management Plan Guidelines

Note: This information is provided as a guide only and each case should be addressed according to a patient's individual needs. An electronic version of the Guidelines is available on the RANZCP website at www.ranzcp.org

REFERRED PATIENT ASSESSMENT AND MANAGEMENT PLAN

Preliminary

- The following content outline is indicative of what would usually be sent back to GPs or participating nurse practitioner.
- The Management plan should address the specific questions and issues raised by the GP or participating nurse practitioner
- In most cases the patient is usually well known by the GP or participating nurse practitioner

History and Examination

This should focus on the presenting symptoms and current difficulties, including precipitating and ongoing stresses; and only briefly mention any relevant aspects of the patient's family history, developmental history, personality features, past psychiatric history and past medical history.

It should contain a comprehensive relevant Mental Status Examination and any relevant pathology results if performed.

It should summarise any psychological tests that were performed as part of the assessment.

Diagnosis

A diagnosis should be made either using ICD 10 or DSM IV classification. In some cases the diagnosis may differ from that stated by the GP or participating nurse practitioner, and an explanation of why the diagnosis differs should be included.

Psychiatric formulation

A brief integrated psychiatric formulation focussing on the biological, psychological and physical factors. Any precipitant and maintaining factors should be identified including relevant personality factors. Protective factors should also be noted. Issues of risk to the patient or others should be highlighted.

Management plan

1. **Education** - Include a list of any handout material available to help people understand the nature of the problem. This includes recommending the relevant RANZCP consumer and carer clinical practice guidelines.
2. **Medication recommendations** - Give recommendations for immediate management including the alternatives or options. This should include doses, expected response times, adverse effects and interactions, and a warning of any contra-indicated therapies.
3. **Psychotherapy** - Recommendations should be given on the most appropriate mode of psychotherapy required, such as supportive psychotherapy, cognitive and behavioural psychotherapy, family or relationship therapy or intensive explorative psychotherapy. This should include recommendations on who should provide this therapy.
4. **Social measures** - Identify issues which may have triggered or are contributing to the maintenance of the problem in the family, workplace or other social environment which need to be addressed, including suggestions for addressing them.
5. **Other non medication measures** - This may include other options such as life style changes including exercise and diet, any rehabilitation recommendations, discussion of any complementary medicines, reading recommendations, relationship with other support services or agencies etc.
6. **Indications for re-referral** - It is anticipated that the majority of patients will be able to be managed effectively by the GP or participating nurse practitioner using the plan. If there are particular concerns about the possible need for further review, these should be noted.
7. **Longer term management** - Provide a longer term management plan listing alternative measures that might be taken in the future if the clinical situation changes. This might be articulated as a relapse signature and relapse drill, and should include drug doses and other indicated interventions, expected response times, adverse effects and interactions.

Initial Consultation for a NEW PATIENT (item 296 in rooms, item 297 at hospital, item 299 for home visits and 361 for telepsychiatry)

The rationale for items 296 - 299 and 361 is to improve access to psychiatric services by encouraging an increase in the number of new patients seen by each psychiatrist, while acknowledging that ongoing care of patients with severe mental illness is integral to the role of the psychiatrist. Referral for items 296 - 299 and 361 may be from a participating nurse practitioner, medical practitioner practising in general practice, a specialist or another consultant physician.

It is intended that either item 296, 297, 299 or 361 will apply once only for each new patient on the first occasion that the patient is seen by a consultant psychiatrist, **unless** the patient is referred by a medical practitioner practising in general practice or participating nurse practitioner for an assessment and management plan, in which case the consultant psychiatrist, if they agree that the patient is suitable for management in a general practice setting, will use item 291 where an assessment and management plan is provided to the referring practitioner.

There may be particular circumstances where a patient has been referred by a GP or participating nurse practitioner to a consultant psychiatrist for an assessment and management plan, but it is not possible for the consultant psychiatrist to determine in the initial consultation whether the patient is suitable for management under such a plan. In these cases, where clinically appropriate, item 296, 297, 299 or 361 (for a new patient) or 300-308 (for continuing patients) may be used and item 291 may be used subsequently, in those circumstances where the consultant psychiatrist undertakes a consultation (in accordance with the item requirements) and provides the referring practitioner with an assessment and management plan. It is not generally intended that item 296, 297, 299 or 361 will be used in conjunction with, or prior to, item 291.

Use of items 296 - 299 and 361 by one consultant psychiatrist does not preclude them being used by another consultant psychiatrist for the same patient. The use of items 296-299 and 361 are identical except for the location of where the service is rendered. That is item 296 is only available for consultations rendered in consulting rooms, item 297 is only available for consultations rendered at a hospital, item 299 is only available for consultations rendered at a place other than consulting rooms or a hospital (such as in a patient's home) and item 361 is for consultation rendered by telepsychiatry when a patient is located in a regional, rural or remote area.

Items 300 - 308 are available for consultations in consulting rooms other than those provided under item 296, and items 291, 293 and 359. Similarly time tiered items remain available for hospital, home visits and telepsychiatry. These would cover a new course of treatment for patients who have already been seen by the consultant psychiatrist in the preceding 24 months as well as subsequent consultations for all patients.

Referral to Allied Mental Health Professionals (for new and continuing patients)

To increase the clinical treatment options available to psychiatrists and paediatricians for which a Medicare benefit is payable, patients with an assessed mental disorder (dementia, delirium, tobacco use disorder and mental retardation are not regarded as mental disorders for the purposes of these items) may be referred, to an allied mental health professional for a total of ten individual allied mental health services in a calendar year. The ten services may consist of: psychological therapy services (items 80000 to 80015) - provided by eligible clinical psychologists; and/or focussed psychological strategies - allied mental health services (items 80100 to 80115; 80125 to 80140; 80150 to 80165) - provided by eligible psychologists, occupational therapists and social workers.

Referrals from psychiatrists and paediatricians to an allied mental health professional must be made from eligible Medicare services. For specialist psychiatrists and paediatricians these services include any of the specialist attendance items 104 through 109. For consultant physician psychiatrists the relevant eligible Medicare services cover any of the consultant psychiatrist items 293 through 370; while for consultant physician paediatricians the eligible services are consultant physician attendance items 110 through 133.

Within the maximum service allocation of ten services, the allied mental health professional can provide one or more courses of treatment. For the purposes of these services, a course of treatment will consist of the number of services stated in the patient's referral (up to a maximum of six in any one referral). These services should be provided, as required, for an initial course of treatment (a maximum of six services but may be less depending on the referral and patient need) to a maximum of ten services per calendar year.

While such referrals are likely to occur for new patients seen under items 296 - 299 and 361, they are also available for patients at any point in treatment (from items 293 to 370), as clinically required, under the same arrangements and limitations as outlined above. The referral may be in the form of a letter or note to an eligible allied health professional signed and dated by the referring practitioner.

Patients will also be eligible to claim up to ten services within a calendar year for group therapy services involving 6-10 patients to which items 80020 (psychological therapy - clinical psychologist), 80120 (focussed psychological strategies - psychologist), 80145 (focussed psychological strategies - occupational therapist) and 80170 (focussed psychological strategies - social worker) apply. These group services are separate from the individual services and do not count towards the ten individual services per calendar year maximum associated with those items.

AN.0.31 Psychiatric Attendances (Item 319)

Medicare benefits are attracted under Item 319 only where patients are diagnosed as suffering from:

- severe personality disorder (predominantly from cluster B groupings), or in persons under 18 years of age a severe disruption of personality development; or
- anorexia nervosa; or
- bulimia nervosa; or
- dysthymic disorder; or

- substance-related disorder; or
- somatoform disorder; or
- a pervasive developmental disorder (including autism and Asperger's disorder)

according to the relevant criteria set out in the Diagnostic and Statistical Manual of the American Psychiatric Association - Fourth Edition (DSM-IV).

It is not sufficient for the patient's illness to fall within the diagnostic criteria. It must be evident that a significant level of impairment exists which interferes with the patient's quality of life. For persons 18 years and over, the level of impairment must be within the range 1 to 50 of the Global Assessment of Functioning (GAF) Scale contained in the DSM-IV (ie the patient is displaying at least "serious" symptoms). The GAF score, incorporating the parameters which have led to the score, should be recorded at the time of commencement of the current course of treatment. Once a patient is identified as meeting the criteria of item 319, he/she continues to be eligible under that item for the duration of the current course of treatment (provided that attendances under **items 300 to 308 and 319** do not exceed 160 in a calendar year). Where a patient commences a new course of treatment, the GAF score in relation to item 319 is the patient's score as assessed during the new course of treatment.

In addition to the above diagnostic criteria and level of functional impairment, it is also expected that other appropriate psychiatric treatment has been used for a suitable period and the patient has shown little or no response to such treatment. It is expected that such treatment would include, but not be limited to: shorter term psychotherapy; less frequent but long term psychotherapy; pharmacological therapy; cognitive behaviour therapy.

It is the responsibility of the psychiatrist to ensure that the patient meets these criteria. the Department of Human Services will be closely monitoring the use of item 319.

When a patient who meets the criteria defined in item 319 attends a psychiatrist on more than 160 occasions in a calendar year, such attendances would be covered by items 310 to 318.

The Royal Australian and New Zealand College of Psychiatrists (RANZCP) has undertaken to establish an appropriate mechanism to enable use of item 319 by suitably trained psychiatrists. In the interim it is expected that psychiatrists whose usual practice includes long term intensive treatment of patients whose diagnoses meet the criteria defined in the item will be using item 319.

On the basis of advice from the RANZCP it is expected that it would be generally inappropriate in normal clinical practice for psychiatric treatment performed out of hospital to extend beyond 220 sessions in a calendar year. In this regard, the Department of Human Services will be monitoring providers' practice patterns with a view to the referral of possible cases of inappropriate practice to the Director of Professional Services Review.

AN.0.32 Interview of Person other than a Patient by Consultant Psychiatrist (Items 348, 350, 352)

Items 348 and 350 refer to investigative interviews of a patient's relatives or close associates to determine whether the particular problem with which the patient presented was focused in the patient or in the interaction between the patient and the person being interviewed. These items do not cover counselling of family or friends of the patient. The term "in the course of initial diagnostic evaluation of the patient" should normally be interpreted as extending for up to one month from the date of the initial consultation. There is no strict limit to the number of interviews or persons interviewed in that period. These items should not be used for interviews concerned with the continuing management of the patient.

Item 352 refers to investigative interviews of a patient's relatives or close associates to focus on a particular clinically relevant problem arising in the continuing management of the patient. This item does not cover counselling of family or friends of the patient. The payment of Medicare benefits under this item is limited to four in any twelve month period.

Benefits are payable for Item 348, 350 or 352 and for a consultation with a patient (items 300 - 328) on the same day provided that separate attendances are involved.

For Medicare benefit purposes, charges relating to services covered by items 348, 350 and 352 should be raised against the patient rather than against the person interviewed.

AN.0.33 Consultant Occupational Physician Attendances (Items 385 to 388)

Attendances by consultant occupational physicians will attract Medicare benefits only where the attendance relates to one or more of the following:

- (i) evaluation and assessment of a patient's rehabilitation requirements where the patient presents with an accepted medical condition(s) which may be affected by the consultant occupational physician's working environment or employability; or
- (ii) management of accepted medical condition(s) which may affect a patient's capacity for continued employment or return to employment following a non-compensable accident, injury or ill-health; or
- (iii) evaluation and opinion and/or management of a patient's medical condition(s) where causation may be related to acute or chronic exposures from scientifically accepted environmental hazards or toxins.

AN.0.34 Contact Lenses (Items 10801-10809)

Benefits are paid for consultations concerned with the prescription and fitting of contact lenses only if patients fall into specified categories (ie patients with certain conditions). The classes of patients eligible for benefits for contact lens consultations are described in items 10801 to 10809.

Benefits are not payable for item 10809 in circumstances where patients want contact lenses only for:

- (a) reasons of appearance (because they do not want to wear spectacles);
- (b) sporting purposes;
- (c) work purposes; or
- (d) psychological reasons (because they cannot cope with spectacles).

Benefits are payable for an initial referred consultation rendered in association with the fitting and prescribing of the lenses. Subsequent follow-up attendances attract benefits on a consultation basis.

AN.0.35 Refitting of Contact Lenses (Item 10816)

This item covers the refitting of contact lenses where this becomes necessary within the thirty-six month time limit where the patient requires a change in contact lens material or basic lens parameters, other than simple power change, because of a structure or functional change in the eye or an allergic response.

AN.0.36 Health Assessments (Items 701, 703, 705, 707)

There are four time-based health assessment items, consisting of brief, standard, long and prolonged consultations.

Brief Health Assessment (MBS Item 701)

A brief health assessment is used to undertake simple health assessments. The health assessment should take no more than 30 minutes to complete.

Standard Health Assessment (MBS Item 703)

A standard health assessment is used for straightforward assessments where the patient does not present with complex health issues but may require more attention than can be provided in a brief assessment. The assessment lasts more than 30 minutes but takes less than 45 minutes.

Long Health Assessment (MBS Item 705)

A long health assessment is used for an extensive assessment, where the patient has a range of health issues that require more in-depth consideration, and longer-term strategies for managing the patient's health may be necessary. The assessment lasts at least 45 minutes but less than 60 minutes.

Prolonged Health Assessment (MBS Item 707)

A prolonged health assessment is used for a complex assessment of a patient with significant, long-term health needs that need to be managed through a comprehensive preventive health care plan. The assessment takes 60 minutes or more to complete.

General practitioners may select one of the MBS health assessment items to provide a health assessment service to a member of any of the target groups listed in the table below. The health assessment item that is selected will depend on the time taken to complete the health assessment service. This is determined by the complexity of the patient's presentation and the specific requirements that have been established for each target group eligible for health assessments.

MBS Items 701, 703, 705 and 707 may be used to undertake a health assessment for the following target groups:

Target Group	Frequency of Service
A type 2 diabetes risk evaluation for people aged 40-49 years (inclusive) with a high risk of developing type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool	Once every three years to an eligible patient
A health assessment for people aged 45-49 years (inclusive) who are at risk of developing chronic disease	Once only to an eligible patient
A health assessment for people aged 75 years and older	Provided annually to an eligible patient
A comprehensive medical assessment for permanent residents of residential aged care facilities	Provided annually to an eligible patient
A health assessment for people with an intellectual disability	Provided annually to an eligible patient
A health assessment for refugees and other humanitarian entrants	Once only to an eligible patient
A health assessment for former serving members of the Australian Defence Force	Once only to an eligible patient

A health assessment means the assessment of a patient's health and physical, psychological and social function and consideration of whether preventive health care and education should be offered to the patient, to improve that patient's health and physical, psychological and social function.

Health assessments are not available to people who are in-patients of a hospital or care recipients in a residential aged care facility (with the exception of a comprehensive medical assessment provided to a permanent resident of a residential aged care facility).

Before a health assessment is commenced, the patient (and/or the patient's parent(s), carer or representative, as appropriate) must be given an explanation of the health assessment process and its likely benefits. The patient must be asked whether they consent to the health assessment being performed. In cases where the patient is not capable of giving consent, consent must be given by the patient's parent(s), carer or representative. Consent to the health assessment must be noted in the patient's records.

A health assessment must include the following elements:

- a. information collection, including taking a patient history and undertaking or arranging examinations and investigations as required;
- b. making an overall assessment of the patient;

- c. recommending appropriate interventions;
- d. providing advice and information to the patient;
- e. keeping a record of the health assessment, and offering the patient a written report about the health assessment, with recommendations about matters covered by the health assessment; and
- f. offering the patient's carer (if any, and if the general practitioner considers it appropriate and the patient agrees) a copy of the report or extracts of the report relevant to the carer.

A health assessment may only be claimed by a general practitioner.

A health assessment should generally be undertaken by the patient's 'usual doctor'. For the purpose of the health assessment items, 'usual doctor' means the general practitioner, or a general practitioner working in the medical practice, which has provided the majority of primary health care to the patient over the previous twelve months and/or will be providing the majority of care to the patient over the next twelve months.

A health assessment should not take the form of a health screening service.

A copy of the Health Assessment must be retained for a period of 2 years after the date of service.

MBS health assessment items 701, 703, 705, 707 must be provided by a general practitioner personally attending upon a patient. Suitably qualified health professionals, such as practice nurses or Aboriginal and Torres Strait Islander health practitioners, employed and/or otherwise engaged by a general practice or health service, may assist general practitioners in performing health assessments. Such assistance must be provided in accordance with accepted medical practice and under the supervision of the general practitioner. This may include activities associated with:

- information collection; and
- providing patients with information about recommended interventions at the direction of the general practitioner.

The general practitioner should be satisfied that the assisting health professional has the necessary skills, expertise and training to collect the information required for the health assessment.

General practitioners should not conduct a separate consultation for another health-related issue in conjunction with a health assessment unless it is clinically necessary (ie. the patient has an acute problem that needs to be managed separately from the assessment). The only exception is the comprehensive medical assessment, where, if this health assessment is undertaken during the course of a consultation for another purpose, the health assessment item and the relevant item for the other consultation may both be claimed.

Items 701, 703, 705 and 707 do not apply for services that are provided by any other Commonwealth or State funded services. However, where an exemption under subsection 19(2) of the *Health Insurance Act 1973* has been granted to an Aboriginal Community Controlled Health Service or State/Territory Government health clinic, items 701, 703, 705 and 707 can be claimed for services provided by general practitioners salaried by or contracted to, the Service or health clinic. All other requirements of the items must be met.

Item 10990 or 10991 (bulk billing incentives) can be claimed in conjunction with any health assessment, provided the conditions of item 10990 and 10991 are satisfied.

AN.0.37 Health Assessment provided as a type 2 diabetes risk evaluation for people aged 40-49 years with a high risk of developing type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool

Items 701, 703, 705 and 707 may be used to undertake a type 2 diabetes risk evaluation for people aged 40-49 years (inclusive) with a high risk of developing type 2 diabetes, as determined by the Australian Type 2 Diabetes Risk Assessment Tool.

The aim of this health assessment is to review the factors underlying the 'high risk' score identified by the Australian Type 2 Diabetes Risk Assessment Tool to instigate early interventions, such as lifestyle modification programs, to assist with the prevention of type 2 diabetes.

The Australian Type 2 Diabetes Risk Assessment Tool has been developed to provide a basis for both health professionals and health consumers to assess the risk of type 2 diabetes. It consists of a short list of questions which, when completed, provides a guide to a patient's current level of risk of developing type 2 diabetes. The item scores and risk rating calculations in the tool have been developed using demographic, lifestyle, anthropometric and biomedical data from the 2000 Australian Diabetes, Obesity and Lifestyle baseline survey and the AusDiab 2005 follow-up study.

The Australian Type 2 Diabetes Risk Assessment Tool can be obtained from [the Department's prevention of diabetes web page](#).

Clinical risk factors that the general practitioner must consider when providing this health assessment include:

- (a) lifestyle, such as smoking, physical inactivity and poor nutrition;
- (b) biomedical risk factors, such as high blood pressure, impaired glucose metabolism and excess weight;
- (c) any relevant recent diagnostic test results; and
- (d) a family history of chronic disease.

The health assessment must include the following:

- (a) evaluating a patient's high risk score, as determined by the Australian Type 2 Diabetes Risk Assessment Tool which has been completed by the patient within a period of 3 months prior to undertaking the health assessment;
- (b) updating the patient's history and undertaking physical examinations and clinical investigations in accordance with relevant guidelines;
- (c) making an overall assessment of the patient's risk factors and of the results of relevant examinations and investigations;
- (d) initiating interventions, if appropriate, including referral to a lifestyle modification program and follow-up relating to the management of any risk factors identified (further information is available at [the Department's prevention of diabetes web page](#)); and
- (e) providing the patient with advice and information (such as the Lifescript resources produced by the Department of Health), including strategies to achieve lifestyle and behaviour changes if appropriate (further information is available at [the Department's Lifescript web page](#)).

The completion of the Australian Type 2 Diabetes Risk Assessment Tool is mandatory for patient access to this health assessment. The tool can be completed either by the patient or with the assistance of a health professional or practice staff. Patients with a 'high' score result are eligible for the health assessment, and subsequent referral to the subsidised lifestyle modification programs if appropriate (further information is available at [the Department's prevention of diabetes web page](#)).

A health assessment for a type 2 diabetes risk evaluation for people aged 40-49 years with a high risk of developing type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool may only be claimed once every three years by an eligible patient.

AN.0.38 Health Assessment provided for people aged 45-49 years who are at risk of developing chronic disease

Items 701, 703, 705 and 707 may be used to undertake a health assessment for people aged 45-49 years (inclusive) who are at risk of developing chronic disease.

For the purposes of this health assessment, a patient is at risk of developing a chronic disease if, in the clinical judgement of the attending general practitioner, a specific risk factor for chronic disease is identified.

Risk factors that the general practitioner can consider include, but are not limited to:

- (a) lifestyle risk factors, such as smoking, physical inactivity, poor nutrition or alcohol use;
- (b) biomedical risk factors, such as high cholesterol, high blood pressure, impaired glucose metabolism or excess weight; or
- (c) family history of a chronic disease.

A chronic disease or condition is one that has been or is likely to be present for at least six months, including but not limited to asthma, cancer, cardiovascular illness, diabetes mellitus, mental health conditions, arthritis and musculoskeletal conditions.

If, after receiving this health assessment, a patient is identified as having a high risk of type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool, the general practitioner may refer that person to a subsidised lifestyle modification program, along with other possible strategies to improve the health status of the patient (further information is available at <http://www.health.gov.au/preventionoftype2diabetes>).

The Australian Type 2 Diabetes Risk Assessment Tool can be obtained from <http://www.health.gov.au/preventionoftype2diabetes>

A health assessment for people aged 45-49 years who are at risk of developing chronic disease may only be claimed once by an eligible patient.

AN.0.39 Health Assessment provided for people aged 75 years and older

Items 701, 703, 705 and 707 may be used to undertake a health assessment for people aged 75 years and older.

A health assessment for people aged 75 years and older is an assessment of a patient's health and physical, psychological and social function for the purpose of initiating preventive health care and/or medical interventions as appropriate.

This health assessment must include:

- (a) measurement of the patient's blood pressure, pulse rate and rhythm;
 - (b) an assessment of the patient's medication;
 - (c) an assessment of the patient's continence;
 - (d) an assessment of the patient's immunisation status for influenza, tetanus and pneumococcus;
 - (e) an assessment of the patient's physical function, including the patient's activities of daily living, and whether or not the patient has had a fall in the last 3 months;
 - (f) an assessment of the patient's psychological function, including the patient's cognition and mood; and
 - (g) an assessment of the patient's social function, including the availability and adequacy of paid and unpaid help, and whether the patient is responsible for caring for another person.
- (h) A health assessment for people aged 75 years and older may be claimed once every twelve months by an eligible patient.

AN.0.40 Health Assessment provided as a comprehensive medical assessment for residents of residential aged care facilities

Items 701, 703, 705 and 707 may be used to undertake a comprehensive medical assessment of a resident of a residential aged care facility

This health assessment requires assessment of the resident's health and physical and psychological function, and must include:

- (a) making a written summary of the comprehensive medical assessment;
- (b) developing a list of diagnoses and medical problems based on the medical history and examination;
- (c) providing a copy of the summary to the residential aged care facility; and
- (d) offering the resident a copy of the summary.

A residential aged care facility is a facility in which residential care services, as defined in the *Aged Care Act 1997*, are provided. This includes facilities that were formerly known as nursing homes and hostels. A person is a resident of a residential aged care facility if the person has been admitted as a permanent resident of that facility.

This health assessment is available to new residents on admission into a residential aged care facility. It is recommended that new residents should receive the health assessment as soon as possible after admission, preferably within six weeks following admission into a residential aged care facility.

A health assessment for the purpose of a comprehensive medical assessment of a resident of a residential aged care facility may be claimed by an eligible patient:

- (a) on admission to a residential aged care facility, provided that a comprehensive medical assessment has not already been provided in another residential aged care facility within the previous 12 months; and
- (b) at 12 month intervals thereafter.

AN.0.41 Health Assessment provided for people with an intellectual disability

Items 701, 703, 705 and 707 may be used to undertake a health assessment for people with an intellectual disability.

A person is considered to have an intellectual disability if they have significantly sub-average general intellectual functioning (two standard deviations below the average intelligence quotient [IQ]) and would benefit from assistance with daily living activities. Where general practitioners wish to confirm intellectual disability and a patient's need for assistance with activities of daily living, they may seek verification from a paediatrician registered to practice in Australia or from a government-provided or funded disability service that has assessed the patient's intellectual function.

The health assessment provides a structured clinical framework for general practitioners to comprehensively assess the physical, psychological and social function of patients with an intellectual disability and to identify any medical intervention and preventive health care required. The health assessment must include the following items as relevant to the patient or the patient's representative:

- (a) Check dental health (including dentition);
 - (b) Conduct aural examination (arrange formal audiometry if audiometry has not been conducted within 5 years);
 - (c) Assess ocular health (arrange review by an ophthalmologist or optometrist if a comprehensive eye examination has not been conducted within 5 years);
 - (d) Assess nutritional status (including weight and height measurements) and a review of growth and development;
 - (e) Assess bowel and bladder function (particularly for incontinence or chronic constipation);
 - (f) Assess medications (including non-prescription medicines taken by the patient, prescriptions from other doctors, medications prescribed but not taken, interactions, side effects and review of indications);
- Advise carers of the common side effects and interactions.

- Consider the need for a formal medication review.

(g) Check immunisation status, including influenza, tetanus, hepatitis A and B, Measles, Mumps and Rubella (MMR) and pneumococcal vaccinations;

(h) Check exercise opportunities (with the aim of moderate exercise for at least 30 minutes per day);

(i) Check whether the support provided for activities of daily living adequately and appropriately meets the patient's needs, and consider formal review if required;

(j) Consider the need for breast examination, mammography, cervical screening, testicular examination, lipid measurement and prostate assessment as for the general population;

(k) Check for dysphagia and gastro-oesophageal disease (especially for patients with cerebral palsy), and arrange for investigation or treatment as required;

(l) Assess risk factors for osteoporosis (including diet, exercise, Vitamin D deficiency, hormonal status, family history, medication fracture history) and arrange for investigation or treatment as required;

(m) For patients diagnosed with epilepsy, review of seizure control (including anticonvulsant drugs) and consider referral to a neurologist at appropriate intervals;

(n) Check for thyroid disease at least every two years (or yearly for patients with Down syndrome);

(o) For patients without a definitive aetiological diagnosis, consider referral to a genetic clinic every 5 years;

(p) Assess or review treatment for co-morbid mental health issues;

(q) Consider timing of puberty and management of sexual development, sexual activity and reproductive health; and

(r) Consider whether there are any signs of physical, psychological or sexual abuse.

A health assessment for people with an intellectual disability may be claimed once every twelve months by an eligible patient.

AN.0.42 Health Assessment provided for refugees and other humanitarian entrants

Items 701, 703, 705 and 707 may be used to undertake a health assessment for refugees and other humanitarian entrants.

The purpose of this health assessment is to introduce new refugees and other humanitarian entrants to the Australian primary health care system, as soon as possible after their arrival in Australia (within twelve months of arrival).

The health assessment applies to humanitarian entrants who are resident in Australia with access to Medicare services. This includes Refugees, Special Humanitarian Program and Protection Program entrants with the following visas:

Offshore Refugee Category including:

(a) 200 Refugee

(b) 201 In Country Special Humanitarian

(c) 203 Emergency rescue

(d) 204 Women at Risk

(e) Offshore - Special Humanitarian Program

(f) 202 Global Special Humanitarian

Offshore - Temporary Humanitarian Visas (THV) including:

(g) Subclass 695 (Return Pending)

(h) Subclass 070 (Removal Pending Bridging)

Onshore Protection Program including:

(i) 866 Permanent Protection Visa (PPV)

(j) 785 Temporary Protection Visa (TPV)

Patients should be asked to provide proof of their visa status and date of arrival in Australia. Alternatively, general practitioners may telephone the Department of Human Services on 132011, with the patient present, to check eligibility.

The general practitioner and patient can use the service of a translator by accessing the Commonwealth Government's Translating and Interpreting Service (TIS) and the Doctors Priority Line. To be eligible for the fee-free TIS and Doctors Priority Line, the medical examiner must be in a private practice and provide a Medicare service to patients who do not speak English and are permanent residents.

A health assessment for refugees and other humanitarian entrants may only be claimed once by an eligible patient.

AN.0.43 Health Assessment for Aboriginal and Torres Strait Islander People (MBS Item 715)

This health assessment is available to all people of Aboriginal and Torres Strait Islander descent and should be used for health assessments for the following age categories:

- An Aboriginal or Torres Strait Islander child who is less than 15 years.
- An Aboriginal or Torres Strait Islander person who is aged between 15 years and 54 years.
- An Aboriginal or Torres Strait Islander older person who is aged 55 years and over.

A health assessment means the assessment of a patient's health and physical, psychological and social function and consideration of whether preventive health care and education should be offered to the patient, to improve that patient's health and physical, psychological and social function.

MBS item 715 must include the following elements:

- (a) information collection, including taking a patient history and undertaking examinations and investigations as required;
- (b) making an overall assessment of the patient;
- (c) recommending appropriate interventions;
- (d) providing advice and information to the patient; and
- (e) keeping a record of the health assessment, and offering the patient, and/or patient's carer, a written report about the health assessment with recommendations about matters covered by the health assessment; and
- (f) offering the patient's carer (if any, and if the general practitioner considers it appropriate and the patient agrees) a copy of the report or extracts of the report relevant to the carer.

If, after receiving this health assessment, a patient who is aged fifteen years and over but under the age of 55 years, is identified as having a high risk of developing type 2 diabetes as determined by the Australian Type 2 Diabetes

Risk Assessment Tool, the general practitioner may refer that person to a subsidised lifestyle modification program, along with other possible strategies to improve the health status of the patient.

The Australian Type 2 Diabetes Risk Assessment Tool can be obtained from <http://www.health.gov.au/preventionoftype2diabetes>

A health assessment may only be claimed by a general practitioner.

A health assessment should generally be undertaken by the patient's 'usual doctor'. For the purpose of the health assessment, "usual doctor" means the general practitioner, or a general practitioner working in the medical practice, which has provided the majority of primary health care to the patient over the previous twelve months and/or will be providing the majority of care to the patient over the next twelve months.

The Health Assessment for Aboriginal and Torres Strait Islander People is not available to people who are in-patients of a hospital or care recipients in a residential aged care facility.

A health assessment should not take the form of a health screening service (see General Explanatory Notes G.13.1).

MBS health assessment item 715 must be provided by a general practitioner personally attending upon a patient. Suitably qualified health professionals, such as practice nurses, Aboriginal health workers or Aboriginal and Torres Strait Islander health practitioners employed and/or otherwise engaged by a general practice or health service, may assist general practitioners in performing this health assessment. Such assistance must be provided in accordance with accepted medical practice and under the supervision of the general practitioner. This may include activities associated with:

- information collection; and
- providing patients with information about recommended interventions at the direction of the general practitioner.

The general practitioner should be satisfied that the assisting health professional has the necessary skills, expertise and training to collect the information required for the health assessment.

General practitioners should not conduct a separate consultation in conjunction with a health assessment unless it is clinically necessary (ie. the patient has an acute problem that needs to be managed separately from the assessment).

Item 715 does not apply for services that are provided by any other Commonwealth or State funded services. However, where an exemption under subsection 19(2) of the *Health Insurance Act 1973* has been granted to an Aboriginal Community Controlled Health Service or State/Territory Government health clinic, item 715 can be claimed for services provided by general practitioners salaried by or contracted to, the Service or health clinic. All requirements of the item must be met.

Item 10990 or 10991 (bulk billing incentives) can be claimed in conjunction with any health assessment provided to an Aboriginal and Torres Strait Islander person, provided the conditions of item 10990 and 10991 are satisfied.

The Health Assessment for Aboriginal and Torres Strait Islander People may be provided once every 9 months.

AN.0.44 A Health Assessment for an Aboriginal and Torres Strait Islander child (less than 15 years of age)

An Aboriginal and Torres Strait Islander child health assessment must include:

- a. a personal attendance by a general practitioner;
- b. taking the patient's medical history, including the following:
 - i. mother's pregnancy history;
 - ii. birth and neo-natal history;
 - iii. breastfeeding history;
 - iv. weaning, food access and dietary history;
 - v. physical activity;

- vi. previous presentations, hospital admissions and medication usage;
 - vii. relevant family medical history;
 - viii. immunisation status;
 - ix. vision and hearing (including neonatal hearing screening);
 - x. development (including achievement of age appropriate milestones);
 - xi. family relationships, social circumstances and whether the person is cared for by another person;
 - xii. exposure to environmental factors (including tobacco smoke);
 - xiii. environmental and living conditions;
 - xiv. educational progress;
 - xv. stressful life events;
 - xvi. mood (including incidence of depression and risk of self-harm);
 - xvii. substance use;
 - xviii. sexual and reproductive health; and
 - xix. dental hygiene (including access to dental services).
- c. examination of the patient, including the following:
- i. measurement of height and weight to calculate body mass index and position on the growth curve;
 - ii. newborn baby check (if not previously completed);
 - iii. vision (including red reflex in a newborn);
 - iv. ear examination (including otoscopy);
 - v. oral examination (including gums and dentition);
 - vi. trachoma check, if indicated;
 - vii. skin examination, if indicated;
 - viii. respiratory examination, if indicated;
 - ix. cardiac auscultation, if indicated;
 - x. development assessment, if indicated, to determine whether age appropriate milestones have been achieved;
 - xi. assessment of parent and child interaction, if indicated; and
 - xii. other examinations in accordance with national or regional guidelines or specific regional needs, or as indicated by a previous child health assessment.
- d. undertaking or arranging any required investigation, considering the need for the following tests, in particular:
- i. haemoglobin testing for those at a high risk of anaemia; and
 - ii. audiometry, if required, especially for those of school age
- e. assessing the patient using the information gained in the child health check; and
- f. making or arranging any necessary interventions and referrals, and documenting a simple strategy for the good health of the patient.

AN.0.45 A health assessment for an Aboriginal and Torres Strait Islander adult (aged between 15 years and 54 years)

An Aboriginal and Torres Strait Islander adult health assessment must include:

- a. a personal attendance by a general practitioner;
- b. taking the patient's medical history, including the following:
 - i. current health problems and risk factors;
 - ii. relevant family medical history;
 - iii. medication usage (including medication obtained without prescription or from other doctors);
 - iv. immunisation status, by reference to the appropriate current age and sex immunisation schedule;
 - v. sexual and reproductive health;
 - vi. physical activity, nutrition and alcohol, tobacco or other substance use;
 - vii. hearing loss;
 - viii. mood (including incidence of depression and risk of self-harm); and
 - ix. family relationships and whether the patient is a carer, or is cared for by another person;
 - x. vision
- c. examination of the patient, including the following:
 - i. measurement of the patient's blood pressure, pulse rate and rhythm;

- ii. measurement of height and weight to calculate body mass index and, if indicated, measurement of waist circumference for central obesity;
 - iii. oral examination (including gums and dentition);
 - iv. ear and hearing examination (including otoscopy and, if indicated, a whisper test); and
 - v. urinalysis (by dipstick) for proteinuria;
 - vi. eye examination; and
- d. undertaking or arranging any required investigation, considering the need for the following tests, in particular, (in accordance with national or regional guidelines or specific regional needs):
- i. fasting blood sugar and lipids (by laboratory based test on venous sample) or, if necessary, random blood glucose levels;
 - ii. cervical screening;
 - iii. examination for sexually transmitted infection (by urine or endocervical swab for chlamydia and gonorrhoea, especially for those aged from 15 to 35years); and
 - iv. mammography, if eligible (by scheduling appointments with visiting services or facilitating direct referral).
- e. assessing the patient using the information gained in the adult health assessment; and
- f. making or arranging any necessary interventions and referrals, and documenting a simple strategy for the good health of the patient.

An Aboriginal and Torres Strait Islander Older Person's health assessment must also include:

- a. keeping a record of the health assessment; and
- b. offering the patient a written report on the health assessment, with recommendations on matters covered by the health assessment;

AN.0.46 A health assessment for an Aboriginal and Torres Strait Islander older person (aged 55 years and over)

An Aboriginal and Torres Strait Islander Older Person's health assessment must include:

- a. a personal attendance by the general practitioner;
- b. measurement of the patient's blood pressure, pulse rate and rhythm;
- c. an assessment of the patient's medication;
- d. an assessment of the patient's continence;
- e. an assessment of the patient's immunisation status for influenza, tetanus and pneumococcus;
- f. an assessment of the patient's physical functions, including the patient's activities of daily living and whether or not the patient has had a fall in the last 3months;
- g. an assessment of the patient's psychological function, including the patient's cognition and mood;
- h. an assessment of the patient's social function, including:
 - i. the availability and adequacy of paid, and unpaid, help;
 - ii. whether the patient is responsible for caring for another person;
- i. an eye examination

An Aboriginal and Torres Strait Islander Older Person's health assessment must also include:

- a. keeping a record of the health assessment; and
- b. offering the patient a written report on the health assessment, with
- c. recommendations on matters covered by the health assessment; and
- d. offering the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees) a copy of the report or extracts of the report relevant to the carer.

AN.0.47 Chronic Disease Management Items (Items 721 to 732)

<i>Description</i>	<i>Item No</i>	<i>Minimum claiming period*</i>
Preparation of a GP Management Plan (GPMP)	721	12 months

Coordination of Team Care Arrangements (TCAs)	723	12 months
Contribution to a Multidisciplinary Care Plan, or to a Review of a Multidisciplinary Care Plan, for a patient who is not a care recipient in a residential aged care facility	729	3 months
Contribution to a Multidisciplinary Care Plan, or to a review of a multidisciplinary care plan, for a resident in an aged care facility	731	3 months
Review of a GP Management Plan or Coordination of a Review of Team Care Arrangements	732	3 months

* CDM services may be provided more frequently in the exceptional circumstances defined below.

Exceptional circumstances exist for a patient if there has been a significant change in the patient's clinical condition or care requirements that necessitates the performance of the service for the patient.

Regulatory requirements

Items 721, 723, 729, 731 and 732 provide rebates to manage chronic or terminal medical conditions by preparing, coordinating, reviewing or contributing to chronic disease management (CDM) plans. They apply for a patient who suffers from at least one medical condition that has been present (or is likely to be present) for at least six months or is terminal.

Restriction of Co-claiming of Chronic Disease and General Consultation Items

Co-claiming of consultation items 3, 4, 23, 24, 36, 37, 44, 47, 52, 53, 54, 57, 58, 59, 60, 65, 585, 588, 591, 594, 599, 600, 5000, 5003, 5020, 5023, 5040, 5043, 5060, 5063, 5200, 5203, 5207, 5208, 5220, 5223, 5227 and 5228 with chronic disease management items 721, 723, or 732 is not permitted for the same patient, on the same day.

Patient eligibility

In addition to the eligibility requirements listed in the individual CDM item descriptors, the General Medical Services Table (GMST) mandates the following eligibility criteria:

CDM items 721, 723 and 732

These are:

- available to:
 - i. patients in the community; and
 - ii. private in-patients of a hospital (including private in-patients who are residents of aged care facilities) being discharged from hospital.
- not available to:
 - i. public in-patients of a hospital; or
 - ii. care recipients in a residential aged care facility.

CDM item 729

This is:

- available to:
 - i. patients in the community;
 - ii. both private and public in-patients being discharged from hospital.
- not available to care recipients in a residential aged care facility.

CDM item 731

This item is available to care recipients in a residential aged care facility only.

Item 721

A comprehensive written plan must be prepared describing:

- a. the patient's health care needs, health problems and relevant conditions;
- b. management goals with which the patient agrees;
- c. actions to be taken by the patient;
- d. treatment and services the patient is likely to need;
- e. arrangements for providing this treatment and these services; and
- f. arrangements to review the plan by a date specified in the plan.

In preparing the plan, the provider must:

- a. explain to the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees) the steps involved in preparing the plan; and
- b. record the plan; and
- c. record the patient's agreement to the preparation of the plan; and
- d. offer a copy of the plan to the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees); and
- e. add a copy of the plan to the patient's medical records.

A copy of the written plan must be retained for 2 years.

Item 723

When coordinating the development of Team Care Arrangements (TCAs), the general practitioner must:

- a. consult with at least two collaborating providers, each of whom will provide a different kind of treatment or service to the patient, and one of whom may be another medical practitioner, when making arrangements for the multidisciplinary care of the patient; and
- b. prepare a document that describes:
 - i. treatment and service goals for the patient;
 - ii. treatment and services that collaborating providers will provide to the patient; and
 - iii. actions to be taken by the patient;
 - iv. arrangements to review (i), (ii) and (iii) by a date specified in the document; and
- c. explain the steps involved in the development of the arrangements to the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees);
- d. discuss with the patient the collaborating providers who will contribute to the development of the TCAs and provide treatment and services to the patient under those arrangements; and
- e. record the patient's agreement to the development of TCAs;
- f. give copies of the relevant parts of the document to the collaborating providers;
- g. offer a copy of the document to the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees); and
- h. add a copy of the document to the patient's medical records.

The document described above must be retained for 2 years.

One of the minimum two service providers collaborating with the GP can be another medical practitioner. The patient's informal or family carer can be included in the collaborative process but does not count towards the minimum of three collaborating providers.

Item 729

A multidisciplinary care plan means a written plan that:

- a. is prepared for a patient by:
 - i. a general practitioner in consultation with two other collaborating providers, each of whom provides a different kind of treatment or service to the patient, and one of whom may be another medical practitioner; or
 - ii. a collaborating provider (other than a general practitioner) in consultation with at least two other collaborating providers, each of whom provides a different kind of treatment or services to the patient; and
- b. describes, at least, treatment and services to be provided to the patient by the collaborating providers.

When contributing to a multidisciplinary care plan or to a review of the care plan, the general practitioner must:

- a. prepare part of the plan or amendments to the plan and add a copy to the patient's medical records; or
- b. give advice to a person who prepares or reviews the plan and record in writing, on the patient's medical records, any advice provided to such a person.

A copy of the written plan must be retained for 2 years.

Item 731

A multidisciplinary care plan in a Residential Aged Care Facility (RACF) means a written plan that:

- a. is prepared for a patient by a collaborating provider (other than a general practitioner, e.g. a RACF), in consultation with at least two other collaborating providers, each of whom provides a different kind of treatment or services to the patient; and
- b. describes, at least, treatment and services to be provided to the patient by the collaborating providers.

When contributing to a multidisciplinary care plan or to a review of the care plan, the general practitioner must:

- a. prepare part of the plan or amendments to the plan and add a copy to the patient's medical records; or
- b. give advice to a person who prepares or reviews the plan and record in writing, on the patient's medical records, any advice provided to such a person.

Item 731 can also be used for contribution to a multidisciplinary care plan prepared for a resident by another provider before the resident is discharged from a hospital or an approved day-hospital facility, or to a review of such a plan prepared by another provider (not being a service associated with a service to which items 735 to 758 apply).

Item 732

An "associated general practitioner" is a general practitioner who, if not engaged in the same general practice as the general practitioner mentioned in that item, performs the service mentioned in the item at the request of the patient (or the patient's guardian).

When reviewing a GP Management Plan, the general practitioner must:

- a. explain to the patient and the patient's carer (if any, and if the general practitioner considers it appropriate and the patient agrees) the steps involved in the review;
- b. record the patient's agreement to the review of the plan;
- c. review all the matters set out in the relevant plan;
- d. make any required amendments to the patient's plan;
- e. offer a copy of the amended document to the patient and the patient's carer (if any, and if the general practitioner considers it appropriate and the patient agrees);
- f. add a copy of the amended document to the patient's records; and
- g. provide for further review of the amended plan by a date specified in the plan.

When coordinating a review of Team Care Arrangements, a multidisciplinary community care plan or a multidisciplinary discharge care plan, the general practitioner must:

- a. explain the steps involved in the review to the patient and the patient's carer (if any, and if the general practitioner considers it appropriate and the patient agrees);
- b. record the patient's agreement to the review of the TCAs or plan;
- c. consult with at least two health or care providers (each of whom provides a service or treatment to the patient that is different from each other and different from the service or treatment provided by the general practitioner who is coordinating the TCAs or plan) to review all the matters set out in the relevant plan;
- d. make any required amendments to the patient's plan;
- e. offer a copy of the amended document to the patient and the patient's carer (if any, and if the general practitioner considers it appropriate and the patient agrees);
- f. provide for further review of the amended plan by a date specified in the plan;
- g. give copies of the relevant parts of the amended plan to the collaborating providers; and
- h. add a copy of the amended document to the patient's records.

A copy of the amended plan must be retained for 2 years.

Item 732 can also be used to COORDINATE A REVIEW OF a Multidisciplinary Community Care Plan (former item 720) or to COORDINATE REVIEW OF A Discharge Care Plan (former item 722), where these services were coordinated or prepared by that general practitioner (or an associated general practitioner), and not being a service associated with a service to which items 735-758 apply.

Claiming of benefits

Each service to which item 732 applies (i.e. Review of a GP Management Plan and Review of Team Care Arrangements) may be claimed once in a three-month period, except where there are exceptional circumstances arising from a significant change in the patient's clinical condition or care circumstances that necessitates earlier performance of the service for the patient.

Where a service is provided in exceptional circumstances, the patient's invoice or Medicare voucher should be annotated to indicate the reason why the service was required earlier than the minimum time interval for the relevant item. Payment can then be made.

Item 732 can be claimed twice on the same day providing an item 732 for reviewing a GP Management Plan and another 732 for reviewing Team Care Arrangements (TCAs) are both delivered on the same day as per the MBS item descriptors and explanatory notes.

Medicare requirements when item 732 is claimed twice on the same day

If a GPMP and TCAs are both reviewed on the same date and item 732 is to be claimed twice on the same day, both electronic claims and manual claims need to indicate they were rendered at different times:

· Non electronic Medicare claiming of items 732 on the same date

The time that each item 732 commenced should be indicated next to each item

· Electronic Medicare claiming of item 732 on the same date

Medicare Easyclaim: use the 'ItemOverrideCde' set to 'AP', which flags the item as *not duplicate services*

Medicare Online/ECLIPSE: set the 'DuplicateServiceOverrideIND' to 'Y', which flags the item as *not duplicate*

Items 721, 723 and 732

The GP Management Plan items (721 and 732) and the Team Care Arrangement items (723 and 732) can not be claimed by general practitioners when they are a recognised specialist in the specialty of palliative medicine and treating a referred palliative care patient under items 3005-3093. The referring practitioner is able to provide the CDM services.

Additional information

Advice on the items and further guidance are available at: www.health.gov.au/mbsprimarycareitems

Items 721-732 should generally be undertaken by the patient's **usual general practitioner**. The patient's "usual GP" means the GP, or a GP working in the medical practice, who has provided the majority of care to the patient over the previous twelve months and/or will be providing the majority of GP services to the patient over the next twelve months. The term "usual GP" would not generally apply to a practice that provides only one specific CDM service.

A **practice nurse, Aboriginal and Torres Strait Islander health practitioner, Aboriginal health worker or other health professional** may assist a GP with items 721, 723, and 732 (e.g. in patient assessment, identification of patient needs and making arrangements for services). However, the GP must meet all regulatory requirements, review and confirm all assessments and see the patient.

Patients being managed under the chronic disease management items may be eligible for:

- individual allied health services (items 10950 to 10970); and/or
- group allied health services (items 81100 to 81125).

More information on eligibility requirements can be found in the explanatory note for individual allied health services and group allied health services.

Further information is also available for providers from the Department of Human Services provider inquiry line on 132 150.

The Department of Human Services (DHS) has developed two guidelines, the [Health Practitioner Guideline to substantiate the preparation of a valid GP Management Plan \(for medical practitioners\)](#) and the [Health Practitioner Guideline to substantiate the coordination of the development of Team Care Arrangements \(for medical practitioners\)](#) which are both located on the DHS website.

AN.0.48 Medicare Dental Items For Patients With Chronic Conditions And Complex Care Needs - Services Provided By A Dental Practitioner On Referral From A GP [Items 85011-87777] Closure of Medicare Dental Items 85011-87777

The Medicare Chronic Disease Dental Scheme closed on 30 November 2012. No Medicare benefits will be payable for any dental services provided under Medicare dental items 85011-87777 provided after this date. The cost of any future dental services will need to be met by the patient.

Further details regarding the closure are available at www.health.gov.au/dental.

AN.0.49 Multidisciplinary Case Conferences by General Practitioners - (Items 735 to 758)

Items 735 to 758 provide rebates for general practitioners to organise and coordinate, or participate in, multidisciplinary case conferences for patients in the community or patients being discharged into the community from hospital or people living in residential aged care facilities.

REGULATORY REQUIREMENTS

To organise and coordinate case conference items **735, 739 and 743**, the provider must:

- (a) explain to the patient the nature of a multidisciplinary case conference, and ask the patient for their agreement to the conference taking place; and
- (b) record the patient's agreement to the conference; and
- (c) record the day on which the conference was held, and the times at which the conference started and ended; and
- (d) record the names of the participants; and

(e) offer the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees) a summary of the conference and provide this summary to other team members; and

(f) discuss the outcomes of the conference with the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees); and

(g) record all matters discussed and identified by the case conferencing team and put a copy of that record in the patient's medical records.

To participate in multidisciplinary case conference items **747, 750 and 758**, the provider must:

(a) explain to the patient the nature of a multidisciplinary case conference, and ask the patient whether they agree to the general practitioner's participation in the conference; and

(b) record the patient's agreement to the general practitioner's participation; and

(c) record the day on which the conference was held, and the times at which the conference started and ended; and

(d) record the names of the participants; and

(e) record all matters discussed and identified by the case conferencing team and put a copy of that record in the patient's medical records.

ADDITIONAL INFORMATION

Usual general practitioner

Items 735-758 should generally be undertaken by the patient's usual general practitioner. This is a general practitioner, or a general practitioner working in the medical practice, that has provided the majority of services to the patient over the previous 12 months and/or will be providing the majority of services to the patient over the coming 12 months.

Multidisciplinary case conference team members

Examples of persons who, for the purposes of care planning and case conferencing may be included in a multidisciplinary care team are allied health professionals such as, but not limited to: Aboriginal health care workers; asthma educators; audiologists; dental therapists; dentists; diabetes educators; dietitians; mental health workers; occupational therapists; optometrists; orthoptists; orthotists or prosthetists; pharmacists; physiotherapists; podiatrists; psychologists; registered nurses; social workers; speech pathologists.

A team may also include home and community service providers, or care organisers, such as: education providers; "meals on wheels" providers; personal care workers (workers who are paid to provide care services); probation officers.

The patient's informal or family carer may be included as a formal member of the team in addition to the minimum of three health or care providers. The patient and the informal or family carer do not count towards the minimum of three.

Discharge case conference

Organisation and coordination of a multidisciplinary discharge case conference (items 735, 739 and 743) may be provided for private in-patients being discharged into the community from hospital.

Further sources of information

Advice on the items and further guidance are available at: www.health.gov.au/mbsprimarycareitems

Further information is also available for providers from the Department of Human Services provider inquiry line on 132 150.

AN.0.50 Public Health Medicine - (Items 410 to 417)

Attendances by public health physicians will attract Medicare benefits under the new items only where the attendance relates to one or more of the following: -

- (i) management of a patient's vaccination requirements for accepted immunisation programs; or
- (ii) prevention or management of sexually transmitted disease; or
- (iii) prevention or management of disease due to environmental hazards or poisons; or
- (iv) prevention or management of exotic diseases; or
- (v) prevention or management of infection during outbreaks of infectious disease.

For more information on the content-based item structure used in this Group, see A.5 in the explanatory notes.

AN.0.51 Case Conferences by Consultant Physician - (Items 820 to 838, 6029 to 6034 and 6064 to 6075)

Items 820, 822, 823, 825, 826, 828, 6029, 6031, 6032, 6034, 6064, 6065, 6067, 6068, 6035, 6037, 6038, 6042, 6071, 6072, 6074 and 6075 apply to a community case conference (including a case conference conducted in a residential aged care facility) organised to discuss one patient in detail and applies only to a service in relation to a patient who suffers from at least one medical condition that has been (or is likely to be) present for at least 6 months, or that is terminal, and has complex needs requiring care from a multidisciplinary team. Community case conference items ie 820, 822, 823, 825, 826 and 828 do not apply to an in-patient of a hospital.

For items 830, 832, 834, 835, 837 and 838, a discharge case conference is a case conference carried out in relation to a patient before the patient is discharged from a hospital. Items 830, 832, 834, 835, 837 and 838 are payable not more than once for each hospital admission.

The purpose of a case conference is to establish and coordinate the management of the care needs of the patient.

A case conference is a process by which a multidisciplinary team carries out the following activities:

- discusses a patient's history;
- identifies the patient's multidisciplinary care needs;
- identifies outcomes to be achieved by members of the case conference team giving care and service to the patient;
- identifies tasks that need to be undertaken to achieve these outcomes, and allocating those tasks to members of the case conference team; and
- assesses whether previously identified outcomes (if any) have been achieved.

For the purposes of items 820, 822, 823, 830, 832, 834, 6029, 6031, 6032, 6034, 6064, 6065, 6067 and 6068 (that is, where a consultant physician organises a case conference) a multidisciplinary team requires the involvement of a minimum of four formal care providers from different disciplines. The consultant physician is counted toward the minimum of four. Although they may attend the case conference, neither the patient nor their informal carer, or any other medical practitioner (except where the medical practitioner is the patient's usual General Practitioner) can be counted toward the minimum of four.

For the purposes of items 825, 826, 828, 835, 837, 838, 6035, 6037, 6038, 6042, 6071, 6072, 6074 and 6075 (that is, where a consultant physician participates in a case conference) a multidisciplinary team requires the involvement of

a minimum of three formal care providers from different disciplines. The consultant physician is counted toward the minimum of three. Although they may attend the case conference, neither the patient nor their informal carer, or any other medical practitioner (except where the medical practitioner is the patient's usual General Practitioner) can be counted toward the minimum of three.

For the purposes of items 820, 822, 823, 830, 832, 834, 6029, 6031, 6032, 6034, 6064, 6065, 6067 and 6068 (that is, where a consultant physician organises a case conference), and items 825, 826, 828, 835, 837, 838, 6035, 6037, 6038, 6042, 6071, 6072, 6074 and 6075 (that is, where a consultant physician participates in a case conference) "formal care providers" includes:

-the patient's usual General Practitioner;

-allied health professionals, being: registered nurse, physiotherapist, occupational therapist, podiatrist, speech pathologist, pharmacist; dietician; psychologist; orthoptist; orthotist and prosthetist, optometrist; audiologist, social worker, Aboriginal and Torres Strait Islander health practitioner, Aboriginal health worker, mental health worker, asthma educator, diabetes educator, dental therapist, dentist; and

-community service providers being: personal care worker, home and community care service provider, meals on wheels provider, education provider and probation officer.

Organisation of a case conference

For items 820, 822, 823, 830, 832, 834, 6029, 6031, 6032, 6034, 6064, 6065, 6067 and 6068, organise and coordinate a community case conference means undertaking the following activities in relation to a case conference:

(a) explaining to the patient or the patient's agent the nature of a case conference, and asking the patient or the patient's agent whether they agree to the case conference taking place; and

(b) recording the patient's or agent's agreement to the case conference; and

(c) recording the day on which the conference was held, and the times at which the conference started and ended; and

(d) recording the names of the participants; and

(e) putting a copy of that record in the patient's medical records; and

(f) giving the patient or the patient's agent, and each other member of the team a summary of the conference; and

(h) giving a copy of the summary of the conference to the patient's usual general practitioner; and

(i) discussing the outcomes of the patient or the patient's agent.

Organisation of a discharge case conference (items 830, 832 and 834), may be provided for private in-patients only, and must be organised by the medical practitioner who is providing in-patient care.

Participation in a case conference

For items 825, 826, 828, 835, 837, 838, 6035, 6037, 6038, 6042, 6071, 6072, 6074, 6075. participation in a case conference must be at the request of the person who organises and coordinates the case conference and includes undertaking the following activities when participating in a case conference:

(a) recording the day on which the conference was held, and the times at which the conference started and ended; and

(b) recording the matters mentioned in **Organisation of a case conference** in so far as they relate to the medical practitioner's participation in the case conference, and putting a copy of that record in the patient's medical records.

See Health Insurance (General Medical Services Table) Regulation, Division 2.21.

General requirements

The case conference must be arranged in advance, within a time frame that allows for all the participants to attend. The minimum of three care providers for participating in a case conference or four care providers for organising a case conference must be present for the whole of the case conference. All participants must be in communication with each other throughout the conference, either face to face, by telephone or by video link, or a combination of these.

A record of the case conference which contains: a list of the participants; the times the conference commenced and concluded; a description of the problems, goals and strategies; and a summary of the outcomes must be kept in the patient's record. The notes and summary of outcomes must be provided to all participants and to the patient's usual general practitioner.

Prior informed consent must be obtained from the patient, or the patient's agent. In obtaining informed consent the consultant physician should:

- Inform the patient that their medical history, diagnosis and care preferences will be discussed with other case conference participants;
- Provide an opportunity for the patient to specify what medical and personal information they want to be conveyed to, or withheld from, the other care providers;
- Inform the patient that they will incur a charge for the service for which a Medicare rebate will be payable.

Medicare benefits are only payable in respect of the service provided by the coordinating consultant physician or the participating consultant physician. Benefits are not payable for another medical practitioner organising a case conference or for participation by other medical practitioners at a case conference, except where a medical practitioner organises or participates in a case conference in accordance with Items 734 to 779.

The benefit is not claimable (and an account should not be rendered) until all components of these items have been provided. See point G.7.1 of the General Explanatory Notes for further details on billing procedures.

It is expected that a patient would not normally require more than 5 case conferences in a 12 month period.

This item does not preclude the claiming of a consultation on the same day if other clinically relevant services are provided.

AN.0.52 Medication Management Reviews - (Items 900 and 903)

Item 900 - Domiciliary Medication Management Review

A Domiciliary Medication Management Review (DMMR) (Item 900), also known as Home Medicines Review, is intended to maximise an individual patient's benefit from their medication regimen, and prevent medication-related problems through a team approach, involving the patient's GP and preferred community pharmacy or accredited pharmacist.

Patient eligibility

The item is available to people living in the community who meet the criteria for a DMMR.

The item is not available for in-patients of a hospital, or care recipients in residential aged care facilities.

DMMRs are targeted at patients who are likely to benefit from such a review: patients for whom quality use of medicines may be an issue or; patients who are at risk of medication misadventure because of factors such as their co-morbidities, age or social circumstances, the characteristics of their medicines, the complexity of their medication treatment regimen, or a lack of knowledge and skills to use medicines to their best effect.

DMMR's are targeted at patients who are:

- currently taking five or more regular medications;
- taking more than 12 doses of medication per day;
- have had significant changes made to medication treatment regimen in the last three months;
- taking medication with a narrow therapeutic index or medications requiring therapeutic monitoring;
- experiencing symptoms suggestive of an adverse drug reaction;
- displaying sub-optimal response to treatment with medicines;
- suspected of non-compliance or inability to manage medication related therapeutic devices;
- having difficulty managing their own medicines because of literacy or language difficulties, dexterity problems or impaired sight, confusion/dementia or other cognitive difficulties;
- attending a number of different doctors, both general practitioners and specialists; and/or
- recently discharged from a facility / hospital (in the last four weeks).

In referring a patient for a DMMR, general practitioners should note that only patients meeting the following criteria will have the pharmacist portion funded through a Community Pharmacy Agreement program:

- Is a Medicare and/or Department of Veterans' Affairs (DVA) cardholder or a person who is eligible for a Medicare card;
- Is subject to a chronic condition and/or complex medication regimen; and
- Is failing to respond to treatment in the expected manner.

If the patient does not meet these criteria, the general practitioner can still issue a referral under this item. However, the remainder of the service will be on a "user pays" basis as determined by the accredited pharmacist.

REGULATORY REQUIREMENTS

In conducting a DMMR, a general practitioner must, with the patient's consent:

- (a) assess a patient is subject to a chronic medical condition and/or complex medication regimen but their therapeutic goals are not being met; and
- (b) following that assessment, refer the patient to a community pharmacy or an accredited pharmacist for a DMMR and provide the relevant clinical information required for the review; and
- (c) discuss with the reviewing pharmacist the result of that review including suggested medication management strategies; and
- (d) develop a written medication management plan following discussion with the patient; and
- (e) provide the written medication management plan to a community pharmacy chosen by the patient.

For any particular patient - applicable not more than once in each 12 month period, except if there has been a significant change in the patient's condition or medication regimen requiring a new DMMR.

Claiming

A DMMR includes all DMMR-related services provided by the general practitioner from the time the patient is identified as potentially needing a medication management review to the preparation of a draft medication management plan, and discussion and agreement with the patient.

The benefit is not claimable until all the components of the item have been rendered.

Benefits for a DMMR service under item 900 are payable only once in each 12 month period, except where there has been a significant change in the patient's condition or medication regimen requiring a new DMMR (e.g. diagnosis of a new condition or recent discharge from hospital involving significant changes in medication). In such cases the patient's invoice or Medicare voucher should be annotated to indicate that the DMMR service was required to be provided within 12 months of another DMMR service.

Provision of a subsequent DMMR must not be made solely by reaching an anniversary date, and the service is not intended to be undertaken on an ongoing review cycle.

If the DMMR is initiated during the course of a consultation undertaken for another purpose, this consultation may also be claimed separately.

If the consultation at which the medication management review is initiated is only for the purposes of initiating the review, only item 900 may be claimed.

If the general practitioner determines that a DMMR is not necessary, item 900 does not apply. In this case, normal consultation items should be used.

Where a DMMR cannot be completed due to circumstances beyond the control of the general practitioner (e.g. because the patient decides to not proceed further with the DMMR, or because of a change in the circumstances of the patient), the relevant MBS attendance items should be used.

FURTHER GUIDANCE

A DMMR should generally be undertaken by the patient's usual general practitioner. This is the general practitioner, or a general practitioner working in the medical practice, that has provided the majority of services to the patient over the previous 12 months and/or will be providing the majority of services to the patient over the coming 12 months.

The potential need for a DMMR may be identified either by the general practitioner in the process of a consultation or by receipt of advice from the patient, a carer or another health professional including a pharmacist.

The process of **referral to a community pharmacy or an accredited pharmacist** includes:

- Obtaining consent from the patient, consistent with normal clinical practice, for a pharmacist to undertake the medication management review and for a charge to be incurred for the service for which a Medicare rebate is payable. The patient must be clearly informed of the purpose and possible outcomes of the DMMR, the process involved (including that the pharmacist will visit the patient at home, unless exceptional circumstances apply or they are an Aboriginal or Torres Strait Islander patient), what information will be provided to the pharmacist as part of the DMMR, and any additional costs that may be incurred; and
- Provision to the patient's preferred community pharmacy or accredited pharmacist, of relevant clinical information, by the general practitioner for each individual patient, covering the patient's diagnosis, relevant test results and medication history, and current prescribed medications.
- A DMMR referral form is available for this purpose. If this form is not used, the general practitioner must provide patient details and relevant clinical information to the patient's preferred community pharmacy or accredited pharmacist.

The discussion of the review findings and report including suggested medication management strategies with the reviewing pharmacist includes:

- Receiving a written report from the reviewing pharmacist; and
- Discussing the relevant findings and suggested management strategies with the pharmacist (either by phone or face to face); and
- Developing a summary of the relevant review findings as part of the draft medication management plan.

Development of a **written medication management plan following discussion with the patient** includes:

- Developing a draft medication management plan and discussing this with the patient; and
- Once agreed, offering a copy of the written medication management plan to the patient and providing a copy to the community pharmacy or accredited pharmacist.

The agreed plan should identify the medication management goals and the proposed medication regimen for the patient.

Item 903 - Residential Medication Management Review

A Residential Medication Management Review (RMMR) is a collaborative service available to permanent residents of a Residential Aged Care facility (RACF) who are likely to benefit from such a review. This includes residents for whom quality use of medicines may be an issue or residents who are at risk of medication misadventure because of a significant change in their condition or medication regimen.

Patient eligibility

RMMRs are available to:

new residents on admission into a RACF; and

existing residents on an 'as required' basis, where in the opinion of the resident's general practitioner, it is required because of a significant change in medical condition or medication regimen.

RMMRs are not available to people receiving respite care in a RACF. Domiciliary Medicines Reviews are available to these people when they are living in the community setting.

REGULATORY REQUIREMENTS

When conducting a RMMR, a GP must:

- (a) discuss the proposed review with the resident and seek the resident's consent to the review; and
- (b) collaborate with the reviewing pharmacist about the pharmacist's involvement in the review; and
- (c) provide input from the resident's most recent comprehensive medical assessment or, if such an assessment has not been undertaken, provide relevant clinical information for the review and for the resident's records; and
- (d) If recommended changes to the resident's medication management arise out of the review, participate in a post-review discussion (either face-to-face or by telephone) with the pharmacist to discuss the outcomes of the review including:
 - (i) the findings; and
 - (ii) medication management strategies; and
 - (iii) means to ensure that the strategies are implemented and reviewed, including any issues for implementation and follow-up; and

(iv) develop or revise the resident's medication management plan after discussion with the reviewing pharmacist; and

(v) finalise the plan after discussion with the resident.

A general practitioner's involvement in a residential medication management review also includes:

(a) offering a copy of the medication management plan to the resident (or the resident's carer or representative if appropriate); and

(b) providing copies of the plan for the resident's records and for the nursing staff of the residential aged care facility; and

(c) discussing the plan with nursing staff if necessary.

A post-review discussion is not required if:

(a) there are no recommended changes to the resident's medication management arising out of the review; or

(b) any changes are minor in nature and do not require immediate discussion; or

(c) the pharmacist and general practitioner agree that issues arising out of the review should be considered in a case conference.

A RMMR comprises all activities to be undertaken by the general practitioner from the time the resident is identified as potentially needing a medication management review up to the development of a written medication management plan for the resident.

Claiming

A maximum of one RMMR rebate is payable for each resident in any 12 month period, except where there has been a significant change in the resident's medical condition or medication regimen requiring a new RMMR.

Benefits are payable when all the activities of a RMMR have been completed. A RMMR service covers the consultation at which the results of the medication management review are discussed and the medication management plan agreed with the resident:

- any immediate action required to be done at the time of completing the RMMR, based on and as a direct result of information gathered in the RMMR, should be treated as part of the RMMR item;
- any subsequent follow up should be treated as a separate consultation item;
- an additional consultation in conjunction with completing the RMMR should not be undertaken unless it is clinically indicated that a problem must be treated immediately.

In some cases a RMMR may not be able to be completed due to circumstances beyond the control of the general practitioner (e.g. because the resident decides not to proceed with the RMMR or because of a change in the circumstances of the resident). In these cases the relevant MBS attendance item should be used in relation to any consultation undertaken with the resident.

If the consultation at which the RMMR is initiated, including discussion with resident and obtaining consent for the RMMR, is only for the purposes of initiating the review, only the RMMR item should be claimed.

If the RMMR is initiated during the course of a consultation undertaken for another purpose, the other consultation may be claimed as a separate service and the RMMR service would also apply.

If the general practitioner determines that an RMMR is not necessary, the RMMR item does not apply. In this case, relevant consultation items should be used.

FURTHER GUIDANCE

A RMMR should generally be undertaken by the resident's 'usual GP'. This is the general practitioner, or a general practitioner working in the medical practice, that has provided the majority of care to the resident over the previous 12 months and/or will be providing the majority of care to the resident over the next 12 months.

GPs who provide services on a facility-wide contract basis, and/or who are registered to provide services to RACFs as part of aged care panel arrangements, may also undertake RMMRs for residents as part of their services.

Generally, new residents should receive an RMMR as soon as possible after admission. Where a resident has a Comprehensive Medical Assessment (CMA), the RMMR should be undertaken preferably after the results of the CMA are available to inform the RMMR.

A RMMR service should be completed within a reasonable time-frame. As a general guide, it is expected that most RMMR services would be completed within four weeks of being initiated.

The resident's general practitioner may identify the potential need for an 'as required' RMMR for existing residents, including in the course of a consultation for another purpose. The potential need for an RMMR may also be identified by the reviewing pharmacist, supply pharmacist, Residential Aged Care Facility staff, the resident, the resident's carer or other members of the resident's health care team.

The general practitioner should assess the clinical need for an RMMR from a quality use of medicines perspective with the resident as the focus, and initiate an RMMR if appropriate, in collaboration with the reviewing pharmacist.

The general practitioner and reviewing pharmacist should agree on a preferred means for communicating issues and information relating to the provision of an RMMR service. This should include the method(s) of initiating the RMMR, exceptions to the post review discussion, and the preferred method of communication. This can be done on a facility basis rather than on a case-by-case basis.

Where the provision of RMMR services involves consultation with a resident it should be read as including consultation with the resident and/or their carer or representative where appropriate.

RMMRs do not count for the purposes of derived fee arrangements that apply to other consultations in a Residential Aged Care Facility.

Related Items: **900 903**

AN.0.53 Taking a Cervical Screen from a Person who is Unscreened or Significantly Under-screened - (Items 2497 - 2509 and 2598 - 2616)

The item numbers 2497, 2501, 2503, 2504, 2506, 2507, 2509, 2598, 2600, 2603, 2606, 2610, 2613 and 2616 should be used in place of the usual attendance item where as part of a consultation, a sample for cervical screening is collected from a person between the ages of 24 years and 9 months and 74 years inclusive who has not had a cervical smear in the last four years. Cervical Screening in accordance with the National Cervical Screening Policy at P.16.11.

Self collection of a sample for screening is only available for women between the ages of 30 and 74 years of age who are overdue for screening by two or more years (i.e. being 4 years since their last Pap test). Self collection should only be offered to an eligible person who refuses to have a sample collected by their requesting practitioner.

When providing this service, the doctor must satisfy themselves that the person has not had a cervical screening test in the last four years by:

- (a) asking the person if they can remember having a cervical screening test in the last four years;
- (b) checking their own practice's medical records; and
- (c) checking the National Cancer Screening Register.

A person from the following groups are more likely than the general population to be unscreened or significantly underscreened - low socioeconomic status, culturally and linguistically diverse backgrounds, Indigenous communities, rural and remote areas and older people.

Vault smears are not eligible for items 2497 - 2509 and 2598 - 2616.

In addition to attracting a Medicare rebate, the use of these items will initiate a Cervical Screening SIP through the PIP.

A PIP Cervical Screening SIP is available for taking a cervical screen from a person who has not been screened in the last for four years. The SIP will be paid to the medical practitioner who provided the service if the service was provided in a general practice participating in the PIP Cervical Screening Incentive. A further PIP Cervical Screening Incentive payment is paid to practices which reach target levels of cervical screening for their patients aged 24 years and 9 months of age to 74 years inclusive. More detailed information on the PIP Cervical Screening Incentive is available from the Department of Human Services PIP enquiry line on 1800 222 032 or from the [Department of Human Services website](#).

AN.0.54 Completion of the Annual Diabetes Cycle of Care for Patients with Established Diabetes Mellitus - (Items 2517 - 2526 and 2620 - 2635)

The item numbers 2517, 2518, 2521, 2522, 2525, 2526, and 2620, 2622, 2624, 2631, 2633, 2635, should be used in place of the usual attendance item when a consultation completes the minimum requirements of the annual Diabetes Cycle of Care for a patient with established diabetes mellitus.

The annual Diabetes Cycle of Care must be completed over a period of 11 months and up to 13 months, and at a minimum must include:

Assess diabetes control by measuring HbA1c	At least once every year
Ensure that a comprehensive eye examination is carried out*	At least once every two years
Measure weight and height and calculate BMI**	At least twice every cycle of care
Measure blood pressure	At least twice every cycle of care
Examine feet***	At least twice every cycle of care
Measure total cholesterol, triglycerides and HDL cholesterol	At least once every year
Test for microalbuminuria	At least once every year
Test for estimated Glomerular Filtration Rate (eGFR)	At least once every year
Provide self-care education	Patient education regarding diabetes management
Review diet	Reinforce information about appropriate dietary choices
Review levels of physical activity	Reinforce information about appropriate levels of physical activity
Check smoking status	Encourage cessation of smoking (if relevant)
Review of Medication	Medication review

* Not required if the patient is blind or does not have both eyes.

** Initial visit: measure height and weight and calculate BMI as part of the initial assessment.

Subsequent visits: measure weight.

*** Not required if the patient does not have both feet.

These requirements are generally based on the current general practice guidelines produced by Diabetes Australia and the Royal Australian College of General Practitioners (Diabetes Management in General Practice). Doctors

using these items should familiarise themselves with these guidelines and with subsequent editions of these guidelines as they become available.

Use of these items certifies that the minimum requirements of the Diabetes Cycle of Care have been completed for a patient with established diabetes mellitus in accordance with the guidelines above.

These items should only be used once per cycle per patient of either A18 Subgroup 2 or A19 Subgroup 2. For example, if item 2517 is claimed for a patient then no other diabetes item in groups A18 or A19 can be used for this patient in the same cycle.

The requirements for claiming these items are the minimum needed to provide good care for a patient with diabetes. Additional levels of care will be needed by insulin-dependent patients and those with abnormal review findings, complications and/or co-morbidities.

In addition to attracting a Medicare rebate, recording a completion of a Diabetes Cycle of Care through the use of these items will initiate a Diabetes Service Incentive Payment (SIP) through the Practice Incentives Program (PIP).

All visits should be billed under the normal attendance items with the exception of the visit that completes all of the minimum requirements of the Diabetes Cycle of Care.

A PIP Diabetes SIP is available for completing the minimum requirements of the Diabetes Cycle of Care for individual patients as specified above. The Diabetes SIP is only paid once every 11-13 month period per patient. The SIP will be paid to the medical practitioner who provided the service if the service was provided in a general practice participating in the PIP Diabetes Incentive. A further PIP Diabetes Incentive payment is paid to practices which reach target levels of care for their patients with diabetes mellitus. More detailed information on the PIP Diabetes Incentive is available from the Department of Human Services PIP enquiry line on 1800 222 032 or [the Department of Human Services website](#).

AN.0.55 Completion of the Asthma Cycle of Care - (Items 2546 - 2559 and 2664 - 2677)

The item numbers 2546, 2547, 2552, 2553, 2558, 2559 and 2664, 2666, 2668, 2673, 2675 and 2677 should be used in place of the usual attendance item when a consultation completes the minimum requirements of the Asthma Cycle of Care. The Practice Incentives Program (PIP) Asthma Incentive is for patients with moderate to severe asthma who in the opinion of the doctor could benefit from review, eg those whose asthma management could be improved.

At a minimum the Asthma Cycle of Care must include:

- At least 2 asthma related consultations within 12 months for a patient with moderate to severe asthma (at least 1 of which (the review consultation) is a consultation that was planned at a previous consultation),
- Documented diagnosis and assessment of level of asthma control and severity of asthma,
- Review of the patient's use of and access to asthma-related medication and devices,
- Provision to the patient of a written asthma action plan (if the patient is unable to use a written asthma action plan - discussion with the patient about an alternative method of providing an asthma action plan, and documentation of the discussion in the patient's medical records),
- Provision of asthma self-management education to the patient, and
- Review of the written or documented asthma action plan.

The Asthma Cycle of Care should be provided to a patient by one GP or in exceptional circumstances by another GP within the same practice. In most cases, this will be the patient's usual medical practitioner. Completion of the Asthma Cycle of Care does not preclude referral to a specialist, but a specialist consultation cannot be counted as one of the two visits.

The patient's medical record should include documentation of each of these requirements and the clinical content of the patient-held written asthma action plan.

These items will only be payable for the completion of one Asthma Cycle of Care for each eligible patient per 12 month period, unless a further Asthma Cycle of Care is clinically indicated by exceptional circumstances.

If a subsequent Asthma Cycle of Care is indicated and the incentive item is to be claimed more than once per 12 month period for a patient, then the patient's invoice or Medicare voucher should be annotated to indicate that the Asthma Cycle of Care was required to be provided within 12 months of another Asthma Cycle of Care.

The minimum requirements of the Asthma Cycle of Care may be carried out in two (2) visits or if necessary as many visits as clinically required. The National Asthma Council's website provides a guide for completion of the Asthma Cycle of Care.

The visit that completes the Asthma Cycle of Care should be billed using the appropriate item listed in Group A18 Subgroup 3 and Group A19 Subgroup 3.

In addition to attracting a Medicare rebate, recording a completion of an Asthma Cycle of Care through the use of these items, will initiate an Asthma Service Incentive Payment (SIP) through the PIP.

All visits should be billed under the normal attendance items with the exception of the visit that completes all of the minimum requirements of the Asthma Cycle of Care.

A PIP Asthma SIP is available for completing the minimum requirements of the Asthma Cycle of Care for individual patients as specified above. The SIP will be paid to the medical practitioner who provided the service if the service was provided in a general practice participating in the PIP Asthma Incentive. More detailed information on the PIP Asthma Incentive is available from the Department of Human Services PIP enquiry line on 1800222032 or from the [Department of Human Services website](#).

For more detailed information regarding asthma diagnosis, assessment and best practice management refer to the [National Asthma Council's website](#).

Assessment of Severity

Generally, patients who meet the following criteria can be assumed to have been assessed as having moderate to severe asthma:

- Symptoms on most days, OR
- Use of preventer medication, OR
- Bronchodilator use at least 3 times per week, OR
- Hospital attendance or admission following an acute exacerbation of asthma.

Where the general rule does not apply to a particular patient, the classification of severity described by the current edition of the National Asthma Council's *Asthma Management Handbook* can be used. Visit the [National Asthma Council's website](#) for more details.

AN.0.56 GP Mental Health Treatment Items - (Items 2700 to 2717)

This note provides information on the GP Mental Health Treatment items 2700, 2701, 2712, 2713, 2715 and 2717. It includes an overview of the items, patient and provider eligibility, what activities are involved in providing services rebated by these items, links to other Medicare items and additional claiming information.

Overview

The GP Mental Health Treatment items define services for which Medicare rebates are payable where GPs undertake early intervention, assessment and management of patients with mental disorders. They include referral pathways for treatment by psychiatrists, clinical psychologists and other allied mental health workers. These items complement the mental health items for psychiatrists (items 296 - 299), clinical psychologists (items 80000 - 80021) and allied mental health providers (items 80100 - 80171).

The GP Mental Health Treatment items incorporate a model for best practice primary health treatment of patients with mental disorders, including patients with both chronic or non-chronic disorders, that comprises:

- assess and plan;
- provide and/or refer for appropriate treatment and services;
- review and ongoing management as required.

Who can provide

The GP Mental Health Treatment Plan, Review and Consultation items are available for use in general practice by general practitioner. The term 'GP' is used in these notes as a generic reference to general practitioners able to claim these items.

Training Requirements (item 2715 and 2717)

GPs providing Mental Health Treatment Plans, and who have undertaken mental health skills training recognised through the General Practice Mental Health Standards Collaboration, have access to items 2715 and 2717. For GPs who have not undertaken training, items 2700 and 2701 are available. Items 2715 provides for a Mental Health Treatment Plan lasting at least 20 minutes and item 2717 provides for a Mental Health Treatment Plan lasting at least 40 minutes. It is strongly recommended that GPs providing mental health treatment have appropriate mental health training. GP organisations support the value of appropriate mental health training for GPs using these items.

What patients are eligible - Mental Disorder

These items are for patients with a mental disorder who would benefit from a structured approach to the management of their treatment needs. Mental disorder is a term used to describe a range of clinically diagnosable disorders that significantly interfere with an individual's cognitive, emotional or social abilities (Refer to the World Health Organisation, 1996, Diagnostic and Management Guidelines for Mental Disorders in Primary Care: ICD-10 Chapter V Primary Care Version). Dementia, delirium, tobacco use disorder and mental retardation are not regarded as mental disorders for the purposes of the GP Mental Health Treatment items.

These GP services are available to eligible patients in the community. GP Mental Health Treatment Plan and Review services can also be provided to private in-patients (including private in-patients who are residents of aged care facilities) being discharged from hospital. Where the GP who provides the GP Mental Health Treatment item is providing in-patient treatment the item is claimed as an in-hospital service (at 75% MBS rebate). GPs are able to contribute to care plans for patients using item 729, Contribution to a Multidisciplinary Care Plan, and to care plans for residents of aged care facilities using item 731.

PREPARING A GP MENTAL HEALTH TREATMENT PLAN - (Item 2700, 2701, 2715 or 2717)

What is involved - Assess and Plan

A rebate can be claimed once the GP has undertaken an assessment and prepared a GP Mental Health Treatment Plan by completing the steps from Assessment to the point where patients do not require a new plan after their initial plan has been prepared, and meeting the relevant requirements listed under 'Additional Claiming Information'. This item covers both the assessment and preparation of the GP Mental Health Treatment Plan. Where the patient has a carer, the general practitioner may find it useful to consider having the carer present for the assessment and preparation of the GP Mental Health Treatment Plan or components thereof (subject to patient agreement).

Assessment

An assessment of a patient must include:

- recording the patient's agreement for the GP Mental Health Treatment Plan service;
- taking relevant history (biological, psychological, social) including the presenting complaint;
- conducting a mental state examination;
- assessing associated risk and any co-morbidity;
- making a diagnosis and/or formulation; and
- administering an outcome measurement tool, except where it is considered clinically inappropriate.

The assessment can be part of the same consultation in which the GP Mental Health Treatment Plan is developed, or can be undertaken in different visits. Where separate visits are undertaken for the purpose of assessing the patient and developing the GP Mental Health Treatment Plan, they are part of the GP Mental Health Treatment Plan service and are included in item 2700, 2701, 2715 or 2717.

In order to facilitate ongoing patient focussed management, an outcome measurement tool should be utilised during the assessment and the review of the GP Mental Health Treatment Plan, except where it is considered clinically inappropriate. The choice of outcome measurement tools to be used is at the clinical discretion of the practitioner. GPs using such tools should be familiar with their appropriate clinical use, and if not, should seek appropriate education and training.

Preparation of a GP Mental Health Treatment Plan

In addition to assessment of the patient, preparation of a GP Mental Health Treatment Plan must include:

- discussing the assessment with the patient, including the mental health formulation and diagnosis or provisional diagnosis;
- identifying and discussing referral and treatment options with the patient, including appropriate support services;
- agreeing goals with the patient - what should be achieved by the treatment - and any actions the patient will take;
- provision of psycho-education;
- a plan for crisis intervention and/or for relapse prevention, if appropriate at this stage;
- making arrangements for required referrals, treatment, appropriate support services, review and follow-up; and
- documenting this (results of assessment, patient needs, goals and actions, referrals and required treatment/services, and review date) in the patient's GP Mental Health Treatment Plan.

Treatment options can include referral to a psychiatrist; referral to a clinical psychologist for psychological therapies, or to an appropriately trained GP or allied mental health professional for provision of focussed psychological strategy services; pharmacological treatments; and coordination with community support and rehabilitation agencies, mental health services and other health professionals.

Once a GP Mental Health Treatment Plan has been completed and claimed on Medicare either through item 2700, 2701, 2715 or 2717 a patient is eligible to be referred for up to 10 Medicare rebateable allied mental health services per calendar year for psychological therapy or focussed psychological strategy services. Patients will also be eligible to claim up to 10 separate services for the provision of group therapy (either as part of psychological therapy or focussed psychological strategies).

When referring patients GPs should provide similar information as per normal GP referral arrangements. This could include providing a copy of the patient's GP Mental Health Treatment Plan, where appropriate and with the patient's

agreement. The necessary referrals should be made after the steps above have been addressed and the patient's GP Mental Health Treatment Plan has been completed. It should be noted that the patient's mental health treatment plan should be treated as a living document for updating as required. In particular, the plan can be updated at any time to incorporate relevant information, such as feedback or advice from other health professionals on the diagnosis or treatment of the patient.

On completion of a course of treatment provided through Medicare rebateable services, the service provider must provide a written report on the course of treatment to the GP. For the purposes of the Medicare rebateable allied mental health items, a course of treatment will consist of the number of services stated on the patient's referral (up to a maximum of six in any one referral). There may be two or more courses of treatment within a patient's entitlement of up to 10 services per calendar year. The number of services that the patient is being referred for is at the discretion of the referring practitioner (eg. GP).

Many patients will not require a new plan after their initial plan has been prepared. A new plan should not be prepared unless clinically required, and generally not within 12 months of a previous plan. Ongoing management can be provided through the GP Mental Health Treatment Consultation and standard consultation items, as required, and reviews of progress through the GP Mental Health Treatment Plan Review item. A rebate for preparation of a GP Mental Health Treatment Plan will not be paid within 12 months of a previous claim for the patient for the same or another Mental Health Treatment Plan item or within three months following a claim for a GP Mental Health Treatment Review (item 2712 or former item 2719).

REVIEWING A GP MENTAL HEALTH TREATMENT PLAN - (Item 2712)

The review item is a key component for assessing and managing the patient's progress once a GP Mental Health Treatment Plan has been prepared, along with ongoing management through the GP Mental Health Treatment Consultation item and/or standard consultation items. A patient's GP Mental Health Treatment Plan should be reviewed at least once.

A rebate can be claimed once the GP who prepared the patient's GP Mental Health Treatment Plan (or another GP in the same practice or in another practice where the patient has changed practices) has undertaken a systematic review of the patient's progress against the GP Mental Health Treatment Plan by completing the activities that must be included in a review and meeting the relevant requirements listed under 'Additional Claiming Information'. The review item can also be used where a psychiatrist has prepared a referred assessment and management plan (item 291), as if that patient had a GP Mental Health Treatment Plan. The review service must include a personal attendance by the GP with the patient.

The review must include:

- recording the patient's agreement for this service;
- a review of the patient's progress against the goals outlined in the GP Mental Health Treatment Plan;
- modification of the documented GP Mental Health Treatment Plan if required;
- checking, reinforcing and expanding education;
- a plan for crisis intervention and/or for relapse prevention, if appropriate and if not previously provided; and
- re-administration of the outcome measurement tool used in the assessment stage, except where considered clinically inappropriate.

Note: This review is a formal review point only and it is expected that in most cases there will be other consultations between the patient and the GP as part of ongoing management.

The recommended frequency for the review service, allowing for variation in patients' needs, is:

- an initial review, which should occur between four weeks to six months after the completion of a GP Mental Health Treatment Plan; and

- if required, a further review can occur three months after the first review.

In general, most patients should not require more than two reviews in a 12 month period, with ongoing management through the GP Mental Health Treatment Consultation and standard consultation items, as required.

A rebate will not be paid within three months of a previous claim for the same item/s or within four weeks following a claim for a GP Mental Health Treatment Plan item.

GP MENTAL HEALTH TREATMENT CONSULTATION - (Item 2713)

The GP Mental Health Treatment Consultation item is for an extended consultation with a patient where the primary treating problem is related to a mental disorder, including for a patient being managed under a GP Mental Health Treatment Plan. This item may be used for ongoing management of a patient with a mental disorder. This item should not be used for the development of a GP Mental Health Treatment Plan.

A GP Mental Health Treatment Consultation must include:

- taking relevant history and identifying the patient's presenting problem(s) (if not previously documented);
- providing treatment, advice and/or referral for other services or treatment; and
- documenting the outcomes of the consultation in the patient's medical records and other relevant mental health plan (where applicable).

A patient may be referred from a GP Mental Health Treatment Consultation for other treatment and services as per normal GP referral arrangements. This does not include referral for Medicare rebateable services for focussed psychological strategy services, clinical psychology or other allied mental health services, unless the patient is being managed by the GP under a GP Mental Health Treatment Plan or under a referred psychiatrist assessment and management plan (item 291).

Consultations associated with this item must be at least 20 minutes duration.

REFERRAL

Once a GP Mental Health Treatment Plan has been completed and claimed on Medicare, or a GP is managing a patient under a referred psychiatrist assessment and management plan (item 291), a patient is eligible for up to 10 Medicare rebateable allied mental health services per calendar year for services by:

- clinical psychologists providing psychological therapies; or
- appropriately trained GPs or allied mental health professionals providing focussed psychological strategy (FPS) services.

In addition to the above services, patients will also be eligible to claim up to 10 separate services for the provision of group therapy.

When referring patients, GPs should provide similar information as per normal GP referral arrangements, and specifically consider including both a statement identifying that a GP Mental Health Treatment Plan has been completed for the patient (including, where appropriate and with the patient's agreement, attaching a copy of the patient's GP Mental Health Treatment Plan) and clearly identifying the specific number of sessions the patient is being referred for. Referrals for patients with either a GP Mental Health Treatment Plan or referred psychiatrist assessment and management plan (item 291) should be provided, as required, for an initial course of treatment (a maximum of six services in any one referral but may be less depending on the referral and the patient's clinical need). There may be two or more courses of treatment within a patient's entitlement of up to 10 services per calendar year. The GP should consider the patient's clinical need for further sessions after the initial referral. This can be done using a GP Mental Health Treatment Plan Review, a GP Mental Health Treatment Consultation or a standard consultation item.

In the instance where a patient has received the 10 psychological therapy services (items 80000 to 80021), focussed psychological services-allied mental health services (items 80100 to 80171) or GP focussed psychological strategies services (items 2721 to 2727) available under the Better Access to Psychiatrists, Psychologists and General Practitioners through the Medicare Benefits Schedule initiative per calendar year and is considered to clinically benefit from some additional services, the patient may be eligible for Primary Health Networks (PHNs) funded psychological therapies if they meet relevant eligibility criteria for the PHN commissioned services. It is recommended that providers refer to their PHN for further guidance.

ADDITIONAL CLAIMING INFORMATION

Before proceeding with any GP Mental Health Treatment Plan or Review service the GP must ensure that:

- (a) the steps involved in providing the service are explained to the patient and (if appropriate and with the patient's permission) to the patient's carer; and
- (b) the patient's agreement to proceed is recorded.

Before completing any GP Mental Health Treatment Plan or Review service and claiming a benefit for that service, the GP must offer the patient a copy of the treatment plan or reviewed treatment plan and add the document to the patient's records. This should include, subject to the patient's agreement, offering a copy to their carer, where appropriate. The GP may, with the permission of the patient, provide a copy of the GP Mental Health Treatment Plan, or relevant parts of the plan, to other providers involved in the patient's treatment.

The GP Mental Health Treatment Plan, Review and Consultation items cover the consultations at which the relevant items are undertaken, noting that:

- if a GP Mental Health Treatment item is undertaken or initiated during the course of a consultation for another purpose, the GP Mental Health Treatment Plan, Review or Consultation item and the relevant item for the other consultation may both be claimed;
- if a GP Mental Health Treatment Plan is developed over more than one consultation, and those consultations are for the purposes of developing the plan, only the GP Mental Health Treatment Plan item should be claimed; and
- if a consultation is for the purpose of a GP Mental Health Treatment Plan, Review or Consultation item, a separate and additional consultation should not be undertaken in conjunction with the mental health consultation, unless it is clinically indicated that a separate problem must be treated immediately.

Where separate consultations are undertaken in conjunction with mental health consultations, the patient's invoice or Medicare voucher (assignment of benefit form) for the separate consultation should be annotated (e.g. separate consultation clinically required/indicated).

A benefit is not claimable and an account should not be rendered until all components of the relevant item have been provided.

All consultations conducted as part of the GP Mental Health Treatment items must be rendered by the GP and include a personal attendance with the patient. A specialist mental health nurse, other allied health practitioner, Aboriginal and Torres Strait Islander health practitioner or Aboriginal Health Worker with appropriate mental health qualifications and training may provide general assistance to GPs in provision of mental health care.

Links to other Medicare Services

It is preferable that wherever possible patients have only one plan for primary care management of their mental disorder. As a general principle the creation of multiple plans should be avoided, unless the patient clearly requires an additional plan for the management of a separate medical condition.

The Chronic Disease Management (CDM) care plan items (items 721, 723, 729, 731 and 732) continue to be available for patients with chronic medical conditions, including patients with complex needs.

- Where a patient has a mental health condition only, it is anticipated that they will be managed under the new GP Mental Health Treatment items.
- Where a patient has a separate chronic medical condition, it may be appropriate to manage the patient's medical condition through a GP Management Plan, and to manage their mental health condition through a GP Mental Health Treatment Plan. In this case, both items can be used.
- Where a patient has a mental health condition as well as significant co-morbidities and complex needs requiring team-based care, the GP is able to use both the CDM items (for team-based care) and the GP Mental Health Treatment items.

The Department of Human Services (DHS) has developed a **Health Practitioner Guideline to substantiate the preparation of a valid GP Mental Health treatment Plan** which is located on the DHS website.

AN.0.57 Provision of Focussed Psychological Strategies - (Items 2721 to 2731)

Focussed psychological strategies are specific mental health care management strategies, derived from evidence based psychological therapies that have been shown to integrate the best research evidence of clinical effectiveness with general practice clinical expertise. The decision to recommend Focussed Psychological Strategies to a patient must be made either in the context of a GP Mental Health Treatment Plan, shared care plan or a psychiatrist assessment and management plan.

Minimum Requirements

All consultations providing Focussed Psychological Strategies must be rendered by a medical practitioner (including a general practitioner, but not including a specialist or consultant physician).

To ensure appropriate standards for the provision of Focussed Psychological Strategies, payment of Medicare rebates for these items will be limited to medical practitioners who are registered with the Department of Human Services as having satisfied the requirements for higher level mental health skills for provision of the service, as determined by the General Practice Mental Health Standards Collaboration.

Continued access to item numbers 2721 - 2731 will be dependent on the practitioner meeting the ongoing mental health education requirements as determined by the General Practice Mental Health Standards Collaboration.

Patients will be permitted to claim Medicare rebates for up to 10 allied mental health services under these item numbers per calendar year. The 10 services may consist of: GP focussed psychological strategies services (items 2721 to 2731 or non-specialist medical practitioner items 283 to 287, 371 and 372); and/or psychological therapy services (items 80000 to 80015); and/or focussed psychological strategies – allied mental health services (items 80100 to 80115; 80125 to 80140; 80150 to 80165).

Out-of-Surgery Consultation

It is expected that this service would be provided only for patients who are unable to attend the practice.

Telehealth Consultation

A **telehealth eligible area** means an area that is a Modified Monash 4 area, Modified Monash 5 area, Modified Monash 6 area or Modified Monash 7 area.

Specific Modified Monash locations can be looked up at [DoctorConnect](#)

Specific Focussed Psychological Strategies

A range of acceptable strategies has been approved for use by medical practitioners in this context. These are:

- 1. Psycho-education**
(including motivational interviewing)

2. **Cognitive-behavioural therapy including:**
 - **Behavioural interventions**
 - Behaviour modification
 - Exposure techniques
 - Activity scheduling
 - **Cognitive interventions**
 - Cognitive therapy
3. **Relaxation strategies**
 - Progressive muscle relaxation
 - Controlled breathing
4. **Skills training**
 - Problem solving skills and training
 - Anger management
 - Social skills training
 - Communication training
 - Stress management
 - Parent management training
5. **Interpersonal therapy**
6. **Eye-Movement Desensitisation Reprocessing (EMDR)**

Mental Disorder

A mental disorder may be defined as a significant impairment of an individual's cognitive, affective and/or relational abilities which may require intervention and may be a recognised, medically diagnosable illness or disorder – this definition is informed by the World Health Organisation, 1996, Diagnostic and Management Guidelines for Mental Disorders in Primary Care:ICD - 10 Chapter V Primary Health Care Version.

Dementia, delirium, tobacco use disorder and mental retardation are not regarded as mental disorders for the purposes of these items.

AN.0.58 Pain and Palliative Medicine (Items 2801 to 3093)

Attendance by a recognised specialist or consultant physician in the specialty of pain medicine (2801, 2806, 2814, 2824, 2832, 2840) and Case conference by a recognised specialist or consultant physician in the specialty of pain medicine (2946, 2949, 2954, 2958, 2972, 2974, 2978, 2984, 2988, 2992, 2996, 3000).

Items 2801, 2806, 2814, 2824, 2832, 2840, 2946, 2949, 2954, 2958, 2972, 2974, 2978, 2984, 2988, 2992, 2996, 3000, apply only to a service provided by a recognised specialist or consultant physician in the specialty of pain medicine, in relation to a pain patient referred from another practitioner (see Paragraph 6 of the General Explanatory notes).

The conditions that apply to the Case Conferences items (2946, 2949, 2954, 2958, 2972, 2974, 2978, 2984, 2988, 2992, 2996, 3000) are the same as those for the Case Conferences by consultant physicians (Items 820 to 838). See explanatory note AN.0.51 for details of these conditions.

Where the service provided to a referred patient is by a medical practitioner who is a recognised specialist or consultant physician in the specialty of pain medicine and that service is pain medicine, then the relevant items from the pain specialist group (2801, 2806, 2814, 2824, 2832, 2840, 2946, 2949, 2954, 2958, 2972, 2974, 2978, 2984, 2988, 2992, 2996, 3000) must be claimed. Services to patients who are not receiving pain medicine services should be claimed using the relevant attendance or case conferencing items.

Attendance by a recognised specialist or consultant physician in the specialty of palliative medicine (3005, 3010, 3014, 3018, 3023, 3028) and Case conference by a recognised specialist or consultant physician in the specialty of palliative medicine (3032, 3040, 3044, 3051, 3055, 3062, 3069, 3074, 3078, 3083, 3088, 3093).

Items 3005, 3010, 3014, 3018, 3023, 3028, 3032, 3040, 3044, 3051, 3055, 3062, 3069, 3074, 3078, 3083, 3088, 3093, apply only to a service provided by a recognised specialist or consultant physician in the specialty of palliative medicine, in relation to a palliative patient referred from another practitioner (see Paragraph 6 of the General Explanatory notes).

General Practitioners who are recognised specialist in the specialty of palliative medicine and are treating a referred palliative patient and claiming items 3005, 3010, 3014, 3018, 3023, 3028, 3032, 3040, 3044, 3051, 3055, 3062, 3069, 3074, 3078, 3083, 3088, 3093 cannot access the GP Management Plan items (721 and 732) or Team Care Arrangement items (723 and 732) for that patient. The referring practitioner is able to provide these services.

The conditions that apply to the Case Conferences items (3032, 3040, 3044, 3051, 3055, 3062, 3069, 3074, 3078, 3083, 3088, 3093) are the same as those for the Case Conferences by consultant physicians (Items 820 to 838). See explanatory note AN.0.51 for details of these conditions.

Where the service provided to a referred patient is by a medical practitioner who is a recognised specialist or consultant physician in the specialty of palliative medicine and that service is a palliative medicine service, then the relevant items from the palliative specialist group (3005, 3010, 3014, 3018, 3023, 3028, 3032, 3040, 3044, 3051, 3055, 3062, 3069, 3074, 3078, 3083, 3088, 3093) must be claimed. Services to patients who are not receiving palliative care services should be claimed using the relevant attendance or case conferencing items.

AN.0.59 Telepsychiatry - (Items 353 to 370)

Telepsychiatry is defined as electronic transmission of psychiatric consultations, advice or services in digital form from one location to another using a data communication link provided by a third party carrier, or carriers. It requires the providers to comply with the International Telecommunications Union Standards which cover all types of videoconferencing from massive bandwidth to internet use. If X-rays are required for a psychiatric consultation then the consultant psychiatrist must comply with the DICOM Standards.

Support and Resourcing

The Royal Australian and New Zealand College of Psychiatrists encourages best practice in telepsychiatry and to this end has developed a Telepsychiatry Position Statement. To obtain a copy of this document and/or further information, assistance and support, practitioners are able to contact the College by email cpd@ranzcp.org or by visiting www.ranzcp.org.

Duration of Telepsychiatry Consultation

For items 353 to 358 the **time** provides a range of options equal to those provided in items 300 to 308 to allow for the appropriate treatment depending on the requirements of the treatment plan.

Number of Consultations in a Calendar Year

Items 353 to 358 may only be claimed for up to a maximum of 12 consultations in aggregate for each patient in a calendar year. Items 364 to 370 are to be claimed where face-to-face consultations are clinically indicated. Items 364 to 370 must be used to ensure that Medicare payments continue for further telepsychiatry consultations.

If the number of attendances in aggregate to which items 296 to 299, 300 to 308, 353 to 358 and 361 to 370 apply exceeds 50 for a single patient in any calendar year, any further attendances on that patient in that calendar year would be covered by items 310 to 318.

Documenting the Telepsychiatry Session

For items 353 to 370 the psychiatrist must keep a record of the treatment provided during an episode of care via telepsychiatry sessions or face-to-face consultations and must convey this in writing to the referring practitioner after the first session and then, at a minimum, after every six consultations.

Geographical

Telepsychiatry items 353 to 361 are available for use when a referred patient is located in a regional, rural or remote area. A regional, rural or remote area is classified as a RRMA 3-7 area under the Rural Remote Metropolitan Areas classification system.

Referred Patient Assessment and Management Plan review (Item 359)

Referral for item 359 should be through the GP or participating nurse practitioner for the management of patients with mental illness. In the event that a specialist of another discipline wishes to refer a patient for this item the referral should take place through the GP or participating nurse practitioner. Item 359 is available in instances where the GP or participating nurse practitioner initiates a review of the management plan provided under item 291, usually where the current plan is not achieving the anticipated outcome. It is expected that when a plan is reviewed, any modifications necessary will be made.

The Royal Australian and New Zealand College of Psychiatrists (RANZCP) Referred Patient Assessment and Management Plan Guidelines` (Note: An electronic version of the Guidelines is available on the RANZCP website at www.ranzcp.org)

Initial Consultations for NEW PATIENTS (Item 361)

The rationale for item 361 is to improve access to psychiatric services by encouraging an increase in the number of new patients seen by each psychiatrist, while acknowledging that ongoing care of patients with severe mental illness is integral to the role of the psychiatrist. Referral for item 361 may be from a participating nurse practitioner, medical practitioner practising in general practice, a specialist or another consultant physician. It is intended that item 361 will apply once only for each new patient on the first occasion that the patient is seen by a consultant psychiatrist. It is not generally intended that item 361 will be used in conjunction with, or prior to, item 291.

The use of items 361 and 296-299 by one consultant psychiatrist does not preclude them being used by another consultant psychiatrist for the same patient.

AN.0.60 Attendances by Medical Practitioners who are Emergency Physicians - (Items 501 to 536)

Items 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017 and 5019 under Group A21 relate specifically to attendances rendered by medical practitioners who are holders of the Fellowship of the Australasian College for Emergency Medicine (FACEM) and who participate in, and meet the requirements for, quality assurance and maintenance of professional standards by the Australasian College for Emergency Medicine (ACEM).

Other than for point-of-care ultrasound (see below), only modifying add-on therapeutic and procedural items under Subgroup 14 in Group T1 may be claimed in conjunction with attendance items 5001 to 5019.

Items relating to point-of-care ultrasound services are not separately payable from emergency attendance items 5001 to 5019 where performed for a reason that represents routine use as standard of care in an Emergency Department attendance. For example, the following four (non-exhaustive) reasons:

- a. To identify nerves for the purposes of administering nerve blocks.
- b. To identify vessels, including abdominal aortic aneurysms.
- c. As part of a focused assessment with sonography for trauma (FAST) scan.

Where the “standard of care” principle does not apply, items relating to point-of-care ultrasound services are payable in addition to emergency attendance items 5001 to 5019, where the following three criteria are met:

- a. A formal report is provided and is stored in a manner that reasonably facilitates future retrieval / access.
- b. The images are stored in a manner that reasonably facilitates future retrieval / access.
- c. The provider is appropriately credentialed to provide the particular service, by a recognised body for the credentialing of ultrasound services.

For the sake of clarity, hospitals do not constitute recognised bodies for the credentialing of ultrasound services. The ACEM has published policy on the appropriate credentialing for Emergency Medicine ultrasonography, such as the “Policy on Credentialing for Emergency Medicine Ultrasonography”. As noted by ACEM, examples of appropriate

credentials include the Diploma in Diagnostic Ultrasound (DDU) and the Certificate in Clinician Performed Ultrasound (CCPU) offered by the Australasian Society for Ultrasound in Medicine (ASUM).

Emergency Attendance Categories

Items 5001 to 5019 cover three categories of attendance to reflect the differing categories of professional involvement required during emergency attendances undertaken in a recognised emergency medicine department of a private hospital, based on the number of differential diagnoses and comorbidities that require consideration rather than simply on the time spent with the patient. The emergency department must be part of a private hospital and this department must be licensed as a “recognised emergency department” by the appropriate State or Territory government authority.

Mirror emergency attendance items (items 5021 to 5036) are provided for medical practitioners who are not emergency physicians to ensure a consistent framework for all emergency attendances, regardless of provider type (see notes below under 'Emergency Medicine Attendances by Medical Practitioners who are not Emergency Physicians').

A new subgroup of therapeutic and procedural add-on items is provided under Subgroup 14 in Group T1 of the MBS for services most commonly performed in emergency medicine (for example, fractures and resuscitation). These items are to be claimed in conjunction with attendances on patients by emergency physicians (items 5001 to 5019) or medical practitioners (5021 to 5036). Explanatory notes for Group T1, Subgroup 14 items are provided in TN.1.22.

The following notes in respect of the three categories are provided to assist emergency physicians and medical practitioners in selecting the appropriate attendance item number for Medicare benefit purposes. The essential difference between the three attendance categories relate not to time but to complexity.

It is recognised that change of shift handovers are common occurrences within the emergency care setting. Emergency physicians and medical practitioners assuming responsibility of care for patients from the first practitioner may bill the attendance items based on the level of complexity and engagement appropriate to the patient's care.

The attendances for items 5001 to 5019 (and non-emergency physician items 5021 to 5036) are divided into three categories relating to the level of complexity involved in medical decision-making, namely:

- a. Ordinary complexity
- b. Complexity that is more than ordinary but not high
- c. High complexity

Age modifiers have been applied to each category of attendance to reflect the level of additional complexity and professional involvement, namely:

- a. Aged 4 years or over but under 75 years
- b. Aged under 4 years
- c. Aged 75 years or over

Ordinary Complexity

These items are for the consultation, investigation (if required) and management of a single system issue in a patient with no relevant comorbidities where the differential diagnosis is limited.

Includes targeted history and examination, interpretation of relevant investigations (if required), development and initiation of a management plan, relevant GP and specialist communication and associated documentation. These patients would typically be discharged home from the Emergency Department. A period of observation is not required for these patients.

Complexity More than Ordinary but Not High

These items are for the assessment, investigation and management of an undifferentiated presentation or a presentation with a clear diagnosis that needs risk stratification and complication exclusion. Where the diagnosis is clear from the outset, this item should be used when management is time consuming or more than one strategy is required. The attendance may include referral or consultation with alternate specialist(s). These patients may or may not be admitted.

Includes a period of observation in response to initial treatment and / or requiring results of investigations to inform an ongoing management plan, and includes any routine point-of-care procedures (such as ECGs, in-dwelling urinary catheterisation, venous and arterial blood gas sampling, ultrasound in conjunction with procedures such as vascular access or nerve block).

For patients requiring a prolonged period of observation, admission to an emergency department short stay unit may be required.

High Complexity

These items are for the assessment, investigation and management of an undifferentiated ED patient with one or more comorbidities and more than one differential diagnosis.

These items may include time consulting with alternate specialists, liaising with community services and arrangement of admission, pharmacy reconciliation, communication with family, carers and general practitioners; and any routine point-of-care procedures (such as ECGs, in-dwelling urinary catheterisation, venous and arterial blood gas sampling, ultrasound in conjunction with procedures such as vascular access or nerve block).

For patients requiring a prolonged period of observation, admission to an emergency department short stay unit may be required.

Related Items: 5001 5004 5011 5012 5013 5014 5016 5017 5019

Emergency Medicine Attendances by Medical Practitioners who are not Emergency Physicians (Items 5021 to 5036)

Mirror items (5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 and 5036) are provided for emergency medicine attendance services performed by medical practitioners who are not emergency physicians to ensure a consistent framework for all emergency attendances, regardless of provider type.

The mirror items reflect the emergency physician items and are divided into three categories relating to the level of complexity with age modifiers applied to each attendance category.

Related Items: 5021 5022 5027 5030 5031 5032 5033 5035 5036

AN.0.61 Emergency Medicine Attendances for the provision of Goals of Care (Items 5039, 5041, 5042 and 5044)

Items 5039 and 5041 are for goals of care services, performed by emergency physicians to support gravely ill patients to make informed decisions regarding treatment of their medical condition.

Mirror items (5042 and 5044) are for the provision of goals of care by medical practitioners who are not emergency physicians.

Items 5039 for emergency physicians and 5042 for medical practitioners are for goals of care services to be performed in conjunction with, or after, the new emergency medicine attendance services (items 5001 to 5036). It is expected the doctor would have performed the emergency attendance service on the patient and would be familiar with the patient's medical issues and circumstances.

Items 5041 for emergency physicians and 5044 for medical practitioners are for goals of care services that are not performed in conjunction with, or after, the new emergency medicine attendance services (items 5001 to 5036).

These items are for situations where the doctor would not be familiar with the patient's medical issues and circumstances and the attendance is for at least 60 minutes.

Notes:

The conditions to be met before services covered by items 5039, 5041, 5042 and 5044 attract benefits are provided under the following definitions of "gravely ill patient lacking goals of care" and "preparation of goals of care" in the GMST.

"gravely ill patient lacking current goals of care" means a patient to whom all of the following apply:

- (a) the patient either:
 - (i) is suffering a life-threatening acute illness or injury; or
 - (ii) is suffering acute illness or injury and, apart from the illness or injury, has a high risk of dying within 12 months;
- (b) one or more alternatives to management of the illness or injury are clinically appropriate for the patient;
- (c) either:
 - (i) there is not a record of goals of care for the patient that can readily be retrieved by providers of health care for the patient and that identifies interventions that should, or should not, be made in care of the patient; or
 - (ii) there is such a record but it is reasonable to expect that, due to changes in the patient's condition, the goals recorded will change substantially.

"preparation of goals of care" for a patient, by a medical practitioner, means the carrying out of all of the following activities by the practitioner:

- (a) comprehensively evaluating the patient's medical, physical, psychological and social issues;
- (b) identifying major issues that require goals of care for the patient to be set;
- (c) assessing the patient's capacity to make decisions about goals of care for the patient;
- (d) discussing care of the patient with the patient, or a person (the surrogate) who can make decisions on the patient's behalf about care for the patient, and as appropriate with any of the following:
 - (i) members of the patient's family;
 - (ii) other persons who provide care for the patient;
 - (iii) other health practitioners;
- (e) offering in that discussion reasonable options for care of the patient, including alternatives to intensive or escalated care;
- (f) agreeing with the patient or the surrogate on goals of care for the patient that address all major issues identified;
- (g) recording the agreed goals so that:
 - (i) the record can be readily retrieved by other providers of health care for the patient; and
 - (ii) interventions that should, or should not, be made in care of the patient are identified.

Patients could be assessed for “a life-threatening acute illness or injury” (and suspicion that alternatives to active management may be an appropriate clinical choice) through the use of tools that assist in predicting end-of-life, such as the Supportive and Palliative Care Indicators Tool (SPICTTM).

“offering reasonable options for care” means that the patient must be provided with reasonable alternatives to continued intensive/active treatment or escalation of care, including where the patient has not directly asked for such information (in recognition that patients may not ask if they are not aware of such alternatives).

“recording the agreed goals” should be undertaken using standard forms (where available) appropriate to the facility in which a patient is receiving care.

Patients with existing goals of care plans are eligible if such records cannot be readily retrieved by the medical practitioners; or if their condition has changed to the point the record does not reflect the patient’s current medical condition and it is reasonable for new goals of care to be developed.

Providers of goals of care services should be appropriately trained to provide end-of-life care options and goals of care discussions.

Items 5039, 5041, 5042 and 5044 should not be claimed where the goals of care are defined only in relation to a subset of the patient’s major issues.

Related Items: 5039 5041 5042 5044

AN.0.62 Case Conferences by Consultant Psychiatrists - (Items 855 to 866)

A range of new items has been introduced for case conferences by consultant psychiatrists in community settings and for discharge planning for hospital in-patients. These items are introduced to improve the effectiveness of psychiatric case conferences and make it easier for psychiatrists to work with general practitioners and allied health professionals, thereby ensuring better coordinated care for patients. Three new items (855, 857 and 858) cover the organisation of a community case conference and a further three (861, 864 and 866) cover the organisation of a discharge case conference. Where a consultant psychiatrist organises a case conference a multidisciplinary team requires the involvement of a minimum of three formal care providers from different disciplines. The consultant psychiatrist and one other medical practitioner (other than a specialist or a consultant physician) are counted towards the minimum of three.

Items 855, 857, and 858 apply to a community case conference (including a case conference conducted in a residential aged care facility) organised to discuss one patient in detail and applies only to a service in relation to a patient who suffers from at least one medical condition that has been (or is likely to be) present for at least 6 months, or that is terminal. Items 855, 857, and 858 do not apply to an in-patient of a hospital.

For items 861, 864 and 866 a discharge case conference is a case conference carried out in relation to a patient before the patient is discharged from a hospital. Items 861, 864 or 866 are payable not more than once for each hospital admission.

The purpose of a case conference is to establish and coordinate the management of the care needs of the patient.

A case conference is a process by which a multidisciplinary team carries out the following activities:

- discusses a patient's history;
- identifies the patient's multidisciplinary care needs;
- identifies outcomes to be achieved by members of the case conference team giving care and service to the patient;

- identifies tasks that need to be undertaken to achieve these outcomes, and allocates those tasks to members of the case conference team; and assesses whether previously identified outcomes (if any) have been achieved.

For the purposes of items 855 to 866, a multidisciplinary team requires the involvement of a minimum of three formal care providers from different disciplines, each of whom provides a different kind of care or service to the patient, and one of whom must be the patient's usual medical practitioner. The consultant psychiatrist and the medical practitioner are counted toward the minimum of three.

The patient's carer may be included as a member of the team (See A.49.8 below), in addition to the minimum of three health or care providers but do not count towards the minimum of three for Medicare purposes.

For the purposes of items 855 to 866 a consultant psychiatrist should generally be the consultant psychiatrist that has provided the majority of services to the patient over the previous 12 months and/or will provide the majority of services to the patient over the coming 12 months.

For the purposes of A.49.5, "formal care provider" includes in addition to the consultant psychiatrist and a medical practitioner (other than a specialist or consultant physician):

- allied health professionals such as, but not limited to: Aboriginal health care workers; asthma educators; audiologists; dental therapists; dentists; diabetes educators; dietitians; mental health workers; occupational therapists; optometrists; orthoptists; orthotists or prosthetists; pharmacists; physiotherapists; podiatrists; psychologists; registered nurses; social workers; speech pathologists.
- home and community service providers, or care organisers, such as: education providers; "meals on wheels" providers; personal care workers (workers who are paid to provide care services); probation officers.

The involvement of a patient's carer, such as a friend or family member, in a multidisciplinary case conference team can provide significant benefits in terms of coordination of care for the patient. Where the patient has a carer, the consultant psychiatrist should consider inviting the carer to be an additional member of the multidisciplinary case conference team, with the patient's agreement and where the carer's input is likely to be relevant to the subject matter of the case conference. The involvement of the patient's carer is not counted towards the minimum of three members.

Where the patient's carer is not a member of the multidisciplinary team, the practitioner should involve the carer and provide information to the carer where appropriate and with the patient's agreement. However, the practitioner should take account of the impact of the tasks identified in the case conference on the capacity of the carer to provide support to the patient. Additional responsibilities should not be assigned to the patient's carer without the carer's agreement.

Organisation of a case conference

Organise and coordinate a case conference means undertaking the following activities in relation to a case conference:

- explaining to the patient the nature of a case conference, and asking the patient whether the patient agrees to the case conference taking place; and
- recording the patient's agreement to the case conference; and
- recording the day on which the conference was held, and the times at which the conference started and ended; and
- recording the names of the participants; and
- recording the matters mentioned in A.49.4 and putting a copy of that record in the patient's medical records; and

- offering the patient (and the patient's carer, if appropriate and with the patient's agreement), and giving each other member of the team a summary of the conference; and
- discussing the outcomes of the case conference with the patient.

General requirements

In circumstances where the patient's usual medical practitioner, is not available to be a member of the case conference team, another medical practitioner known to the patient may be substituted.

It is expected that a patient would not normally require more than 5 case conferences in a 12-month period.

The case conference must be arranged in advance within a time frame that allows for all the participants to attend. The minimum three care providers must be present for the whole of the case conference. All participants must be in communication with each other throughout the conference, either face to face, by telephone or by video link, or a combination of these.

In explaining to the patient the nature of a case conference and asking the patient whether he or she agrees to the case conference taking place, the medical practitioner should:

- Inform the patient that their medical history, diagnosis and care preferences will be discussed with other care providers;
- Provide an opportunity for the patient to specify what medical and personal information they want to be conveyed to or withheld from the other case conference team members; and
- Inform the patient that they will incur a charge for the service provided by the practitioner for which a Medicare rebate will be payable.
- Inform the patient of any additional costs they will incur. The benefit is not claimable (and an account should not be rendered) until all components of these items have been provided. (See General Notes 7.6)

AN.0.63 Case Conference by Consultant Physicians in Geriatric/Rehabilitation Medicine - (Item 880)

Item 880 applies only to a service provided by a consultant physician or a specialist in the specialty of Geriatric or Rehabilitation Medicine who has completed the additional requirements of the Royal Australasian College of Physicians for recognition in the subspecialty of geriatric medicine or rehabilitation medicine. The service must be in relation to an admitted patient in a hospital (not including a patient in a residential aged care facility) who is receiving one of the following types of specialist care:

- geriatric evaluation and management (GEM), in which the clinical intent is to maximise health status and/or optimise the living arrangements for a patient with multidimensional medical conditions with disabilities and psychosocial problems, who is usually (but not always) an older patient; or
- rehabilitation care, in which the clinical intent is to improve the functional status of a patient with an impairment or disability.

Both types of care are evidenced by multi-disciplinary management and regular assessments against a plan with negotiated goals and indicative time-frames. A case conference is usually held on each patient once a week throughout the patient's admission, usually as part of a regular scheduled team meeting, at which all the inpatients under the consultant physician's care are discussed in sequence.

The specific responsibilities of the coordinating consultant physician or specialist are defined as:

- coordinating and facilitating the multidisciplinary team meeting;
- resolving any disagreement or conflict so that management consensus can be achieved;
- clarifying responsibilities; and

- ensuring that the input of participants and the outcome of the case conference is appropriately recorded.

The multidisciplinary team participating in the case conference must include a minimum of three formal inpatient care providers from different disciplines, including at least two providers from different allied health disciplines (listed at dot point 2 of A24.7). The consultant physician or specialist is counted toward the minimum of three. Although they may attend the case conference, neither the patient nor their informal carer, or any other medical practitioner can be counted toward the minimum of three.

The case conference must be arranged in advance, within a time frame that allows for all the participants to attend. The minimum of three formal inpatient care providers must be present for the whole of the case conference.

Prior informed consent must be obtained from the patient, or the patient's agent including informing the patient that they will incur a charge for the service for which a Medicare rebate will be payable.

Item 880 is not payable more than once a week or on the same day as a claim for any of the physician discharge case conferencing items 830, 832, 834, 835, 837 and 838, in respect of a particular patient.

AN.0.64 Neurosurgery Specialist Referred Consultation - (Items 6007 to 6015)

Referred consultations provided by specialist neurosurgeons will be covered under items 6007 to 6015. These new items replace the use of specialist items 104 and 105 for referred consultations by neurosurgeons.

The neurosurgical consultation structure comprises an initial consultation (item 6007) and four categories of subsequent consultations (items 6009-6015). These categories relate to the time AND level of complexity of the attendance i.e

- (i) Level 1 - 6009
- (ii) Level 2 - 6011
- (iii) Level 3 - 6013
- (iv) Level 4 - 6015

The following provides further guidance for neurosurgeons in utilising the appropriate items in common clinical situations:

- (i) Initial consultation item 6007 will replace item 104.
- (ii) Subsequent consultation items 6009-6015 will replace item 105

Item 6009 (subsequent consultation on a patient for 15 mins or less) covers a minor subsequent attendance which is straightforward in nature. Some examples of a minor attendance would include consulting with the patient for the purpose of issuing a repeat script for anticonvulsant medications or the routine review of a patient with a ventriculo-peritoneal shunt.

Item 6011 (subsequent consultation on a patient for a duration of between 16 to 30 mins) would involve an detailed and comprehensive examination of the patient which is greater in complexity than would be provided under item 6009, arranging or evaluating any necessary investigations and include detailed relevant patient notes. Where a management plan is formulated it is expected that this plan is discussed in detail with the patient and a written record included in the patient notes. Some examples of a detailed neurosurgical attendance would include:

- the reviewing of neuroimaging for the monitoring of a tumour or lesion and discussion of the results with the patient (e.g. meningioma, spinal cord tumour);
- consultation on a patient to review imaging for spinal cord/cauda equina/ nerve root compression from a disc prolapse and discussion of results; or

- consultation on a patient prior to insertion of a ventriculo-peritoneal shunt)

Item 6013 (subsequent consultation on a patient with complex neurological conditions for the duration of between 31 to 45 mins) should involve a extensive and comprehensive examination of the patient greater in complexity than under item 6011, arranging or evaluating any necessary investigations and include detailed relevant patient notes. Item 6013 would be expected to cover complications, adverse outcomes, or review of chronic conditions. Where a management plan is formulated it is expected that this plan is discussed in detail with the patient and a written record be included in the patient notes. Some examples of an extensive neurosurgical attendance would include:

- an attendance on a patient prior to a craniotomy for cerebral tumour;
- surgery for spinal tumour;
- revision of spinal surgery;
- epilepsy surgery; or
- for the treatment of cerebral aneurysm.

Examination of such patients would include full cranial nerve examination or examination of upper and lower limb nervous system.

Item 6015 (subsequent consultation on a patient with complex neurological conditions for a duration of more than 45 mins) should involve an exhaustive examination of the patient that is more comprehensive than 6013 and any ordering or evaluation of investigations and include detailed relevant patient notes. It would be expected to cover complications, adverse outcomes, or review of chronic conditions. Where a management plan is formulated it is expected that this plan is thoroughly discussed with the patient and a written record be included in the patient notes. An exhaustive neurosurgical consultation includes:

- managing adverse neurological outcomes;
- detailed discussion when multiple modalities are available for treatment (e.g. clipping versus coiling for management of a cerebral aneurysm, surgical resection versus radiosurgery for cerebral tumour); or
- discussion where surgical intervention is likely to result in a neurological deficit but surgery is critical to patient's life or to stop progressive neurologic decline (e.g. cranial nerve dysfunction, motor dysfunction secondary to a cerebral or spinal cord lesion).

Examination of such patients would include exhaustive neurosurgical examination including full neurological examination (cranial nerves and limbs) or detailed 'focused examination' (e.g.: brachial plexus examination)

Complex neurosurgical problems referred to in items 6013 and 6015 include:

- deterioration in neurologic function following cranial or spinal surgery;
- presentation with new neurologic signs/symptoms; multifocal spinal and cranial disease (e.g. neurofibromatosis); or
- chronic pain states following spinal surgery (including discussion of other treatment options and referral to pain management)

NOTE: It is expected that informed financial consent be obtained from the patient where possible.

AN.0.65 Cancer Care Case Conference - (Items 871 and 872)

For the purposes of these items:

- private patients in public or private hospitals or the community with a malignancy of a solid organ or tissue or a systemic cancer such as a leukaemia or lymphoma are covered, with the exception of patients whose only cancer is a non-melanoma skin cancer;
- the billing general practitioner, specialist or consultant physician may be from any area of medical practice and must be a treating doctor of the patient discussed at the case conference. A treating doctor should generally have treated or provided a formal diagnosis of the patient's cancer in the past 12 months or expect to do so within the next 12 months. Attending non-treating clinicians, allied health providers or support staff are not eligible to bill the item.
- only one practitioner is eligible to claim item 871 for each patient case conference. This should be the doctor who assumes responsibility for leading and coordinating the case conference, ensures that records are kept and that the patient is informed of the outcome of the case conference. In most cases this will be the lead treating doctor.
- each billing practitioner must ensure that their patient is informed that a charge will be incurred for the case conference for which a Medicare rebate will be payable;
- participants must be in communication with each other throughout the case conference, either face-to-face, or by telephone or video link;
- suitable allied health practitioners would generally be from one of the following disciplines: aboriginal health care worker; asthma educator; audiologist; dental therapist; dentist; diabetes educator; dietician; mental health worker; occupational therapist; optometrist; orthoptist; orthotist or prosthetist; pharmacist; physiotherapist; podiatrist; psychologist; registered nurse; social worker; or, speech pathologist;
- in general, it is expected that no more than two case conferences per patient per year will be billed by a practitioner; and
- cancer care case conferences are for the purpose of developing a cancer treatment plan in a multidisciplinary team meeting and should not be billed against case conference items for other purposes eg community or discharge case conferences.

AN.0.66 Non-directive Pregnancy Support Counselling Service - (Item 4001)

Overview

The Pregnancy Support Counselling initiative provides for Medicare benefits to be paid for non-directive pregnancy support counselling services provided to a person who is:

- pregnant; or
- who has been pregnant in the 12 months preceding the first service to which this item, item 792 or item 81000, 81005 or 81010 applies in relation to that pregnancy.

There are five MBS items for the provision of non-directive pregnancy support counselling services:

Item 4001 - services provided by an eligible GP. The term 'GP' is used hereafter as a generic reference to general practitioners;

Item 792 – services provided by an eligible medical practitioner (not including a specialist or consultant physician)

Item 81000 - services provided by an eligible psychologist;

Item 81005 - services provided by an eligible social worker; and

Item 81010 - services provided by an eligible mental health nurse.

This notes relate to provision of a non-directive pregnancy support counselling service by an eligible GP.

Non-directive counselling is a form of counselling based on the understanding that, in many situations, people can resolve their own problems without being provided with a solution by the counsellor. The counsellor's role is to encourage the person to express their feelings but not suggest what decision the person should make. By listening and reflecting back what the person reveals to them, the counsellor helps them to explore and understand their feelings. With this understanding, the person is able to make the decision which is best for them.

The service involves the GP undertaking a safe, confidential process that helps the patient explore concerns they have about a current pregnancy or a pregnancy that occurred in the preceding 12 months. This includes providing, on request, unbiased, evidence-based information about all options and services available to the patient.

The service may be used to address any pregnancy related issues for which non-directive counselling is appropriate.

Patient eligibility

Medicare rebates for non-directive pregnancy support counselling services provided using item 4001 are available to a person who is:

- pregnant; or
- who has been pregnant in the 12 months preceding the first service to which this item, item 792 or item 81000, 81005 or 81010 applies in relation to that pregnancy.

Partners of eligible patients may attend each or any counselling session, however, only one fee applies to each service provided.

Medicare benefits

Medicare benefits are payable for up to three non-directive pregnancy support counselling services per patient, per pregnancy, from any of the following items - 792, 4001, 81000, 81005 and 81010.

Where the patient is unsure of the number of Medicare rebated non-directive pregnancy support counselling services they have already accessed, the patient may check with the Department of Human Services on 132 011. Alternatively, the GP may check with the Department of Human Services (although the patient must be present to give permission).

Item 10990 or item 10991 can also be claimed in conjunction with item 4001 provided the conditions of the relevant item, 10990 or 10991, are satisfied.

Minimum Requirements

This service may only be provided by a GP who has completed appropriate non-directive pregnancy counselling training.

AN.0.67 Telehealth Patient-end Support Services by Health Professionals

These notes provide information on the telehealth MBS attendance items for general practitioners, specialists and consultant physicians to provide clinical support to their patients, when clinically relevant, during video consultations with specialists or consultant physicians under items 2100, 2122, 2125, 2126, 2137, 2138, 2143, 2147, 2179, 2195, 2199 and 2220 in Group A30.

Telehealth patient-end support services can only be claimed where:

- a Medicare eligible specialist service is claimed;
- the service is rendered in Australia; and
- where this is necessary for the provision of the specialist service.

A video consultation will involve a single specialist or consultant physician attending to the patient, with the participation of another general practitioner, specialist or consultant physician, at the patient end. The above time-

tiered items provide for patient-end support services in various settings including, consulting rooms, other than consulting rooms, eligible residential aged care services and Aboriginal Medical Services.

Clinical indications

The specialist or consultant physician must be satisfied that it is clinically appropriate to provide a video consultation to a patient. The decision to provide clinically relevant support to the patient is the responsibility of the specialist or physician.

Telehealth specialist services can be provided to patients when there is no patient-end support service provided.

Collaborative Consultation

The practitioner, who provides assistance to the patient where this is necessary for the provision of the specialist service, may seek assistance from a health professional (e.g. a practice nurse, Aboriginal or Torres Strait Islander health practitioner or Aboriginal health worker) but only one item is billable for the patient-end support service. The practitioner must be present during part or all of the consultation in order to bill an appropriate time-tiered MBS item. Any time spent by another health professional called to assist with the consultation may not be counted against the overall time taken to complete the video consultation.

Restrictions

The MBS telehealth attendance items are not payable for services to an admitted hospital patient (this includes Hospital in the Home patients). Benefits are not payable for telephone or email consultations. In order to fulfill the item descriptor there must be a visual and audio link between the patient and the remote practitioner. If the remote practitioner is unable to establish both a video and audio link with the patient, a MBS rebate for a telehealth attendance is not payable.

Eligible Geographical Areas

Geographic eligibility for telehealth services funded under Medicare are determined according to the Australian Standard Geographical Classification Remoteness Area (ASGC-RA) classifications. Telehealth Eligible Areas are those areas that are outside a Major City (RA1) according to ASGC-RA (RA2-5). Patients and providers are able to check their eligibility by following the links on the MBS Online website (www.mbsonline.gov.au/telehealth).

There is a requirement for the patient and specialist to be located a minimum of 15km apart at the time of the consultation. Minimum distance between specialist and patient video consultations are measured by the most direct (ie least distance) route by road. The patient or the specialist is not permitted to travel to an area outside the minimum 15 km distance in order to claim a video conference.

This rule will not apply to specialist video consultation with patients who are a care recipient in an eligible residential care service; or at an eligible Aboriginal Medical Service or Aboriginal Community Controlled Health Service for which a direction, made under subsection 19(2) of the Health Insurance Act 1973, as these patients are able to receive telehealth services anywhere in Australia.

Telehealth Eligible Service Areas are defined at www.mbsonline.gov.au/telehealth-eligible-areas

Record Keeping

Participating telehealth practitioners must keep contemporaneous notes of the consultation including documenting that the service was performed by video conference, the date, time and the people who participated.

Only clinical details recorded at the time of the attendance count towards the time of the consultation. It does not include information added at a later time, such as reports of investigations.

Multiple attendances on the same day

In some situations a patient may receive a telehealth consultation and a face to face consultation by the same or different practitioner on the same day.

Medicare benefits may be paid for more than one video consultation on a patient on the same day by the same practitioner, provided the second (and any following) video consultations are not a continuation of the initial or earlier video consultations. Practitioners will need to provide the times of each consultation on the patient's account or bulk billing voucher.

Extended Medicare Safety Net (EMSN)

Items which provide for telehealth patient-end support services are subject to EMSN caps equal to 300% of the schedule fee (to a maximum of \$500). This is consistent with Government policy relating to capping EMSN for MBS consultation services.

Aftercare Rule

Video consultations are subject to the same aftercare rules as face to face consultations.

Referrals

The referral procedure for a video consultation is the same as for conventional face-to-face consultations.

Technical requirements

In order to fulfill the item descriptor there must be a visual and audio link between the patient and the remote practitioner. If the remote practitioner is unable to establish both a video and audio link with the patient, a MBS rebate for a specialist video consultation is not payable.

Individual clinicians must be confident that the technology used is able to satisfy the item descriptor and that software and hardware used to deliver a videoconference meets the applicable laws for security and privacy.

Bulk billing

Bulk bill incentive items 10990 or 10991 may be billed in conjunction with the telehealth items 2100, 2122, 2125, 2126, 2137, 2138, 2143, 2147, 2179, 2195, 2199 and 2220.

Duration of attendance

The practitioner attending at the patient end of the video consultation does not need to be present for the entire consultation, only as long as is clinically relevant - this can be established in consultation with the specialist. The MBS fee payable for the supporting practitioner will be determined by the total time spent assisting the patient. This time does not need to be continuous.

AN.0.68 Telehealth Specialist Services

These notes provide information on the telehealth MBS video consultation items by specialists, consultant physicians and psychiatrists. A video consultation involves a single specialist, consultant physician or psychiatrist attending a patient, with the possible support of another medical practitioner, a participating optometrist, a participating nurse practitioner, a participating midwife, practice nurse, Aboriginal and Torres Strait Islander health practitioner or Aboriginal health worker at the patient end of the video conference. The decision as to whether the patient requires clinical support at the patient end of the specialist service is based on whether the support is necessary for the provision of the specialist service. Telehealth specialist services can be provided to patients when there is no patient-end support service provided.

MBS items numbers 99, 112, 149, 288, 389, 2820, 3015, 6016, 13210, 16399 and 17609 allow a range of existing MBS attendance items to be provided via video conferencing. These items have a derived fee which is equal to 50% of the schedule fee for the consultation item claimed (e.g. 50% of the schedule fee for item 104) when billed with one of the associated consultation items (such as 104). A patient rebate of 85% for the derived fee is payable.

Six MBS item numbers (113, 114, 384, 2799, 3003 and 6004) provide for an initial attendance via videoconferencing by a specialist, consultant physician, consultant occupational physician, pain medicine specialist/consultant physician, palliative medicine specialist/consultant physician or neurosurgeon where the service is 10 minutes or less. The items are stand-alone items and do not have a derived fee.

Where an attendance is more than 10 minutes, practitioners should use the existing item numbers consistent with the current arrangements. Normal restrictions which apply for initial consultations will also apply for these items. For example, if a patient has an initial consultation via telehealth, they cannot also claim an initial face-to-face consultation as part of the same course of treatment.

Clinical indications

The specialist, consultant physician or psychiatrist must be satisfied that it is clinically appropriate to provide a video consultation to a patient. The decision to provide clinically relevant support to the patient is the responsibility of the specialist, consultant physician or psychiatrist.

Telehealth specialist services can be provided to patients when there is no patient-end support service provided.

Restrictions

The MBS telehealth attendance items are not payable for services to an admitted hospital patient (this includes hospital in the home patients). Benefits are not payable for telephone or email consultations. In order to fulfill the item descriptor there must be a visual and audio link between the patient and the remote practitioner. If the remote practitioner is unable to establish both a video and audio link with the patient, a MBS rebate for a telehealth attendance is not payable.

Billing Requirements

All video consultations provided by specialists, consultant physicians or psychiatrists must be **separately billed**. That is, only the relevant telehealth MBS consultation item and the associated derived item are to be itemised on the account/bill/voucher. Any other service/item billed should be itemised on a separate account/bill/voucher. This will ensure the claim is accurately assessed as being a video consultation and paid accordingly.

Practitioners should not use the notation 'telehealth', 'verbal consent' or 'Patient unable to sign' to overcome administrative difficulties to obtaining a patient signature for bulk billed claims (for further information see mbsonline.gov.au/telehealth).

Eligible Geographical Areas

Geographic eligibility for telehealth services funded under Medicare are determined according to the Australian Standard Geographical Classification Remoteness Area (ASGC-RA) classifications. Telehealth Eligible Areas are those areas that are outside a Major City (RA1) according to ASGC-RA (RA2-5). Patients and providers are able to check their eligibility by following the links on the MBS Online website (www.mbsonline.gov.au/telehealth).

There is a requirement for the patient and specialist to be located a minimum of 15km apart at the time of the consultation. Minimum distance between specialist and patient video consultations are measured by the most direct (ie least distance) route by road. The patient or the specialist is not permitted to travel to an area outside the minimum 15 km distance in order to claim a video conference.

This rule will not apply to specialist video consultation with patients who are a care recipient in a residential care service; or at an Aboriginal Medical Service or an Aboriginal Community Controlled Health Service for which a direction made under subsection 19(2) of the *Health Insurance Act 1973* as these patients are able to receive telehealth services anywhere in Australia.

Telehealth Eligible Service Areas are defined at www.mbsonline.gov.au/telehealth-eligible-areas

Record Keeping

Participating telehealth practitioners must keep contemporaneous notes of the consultation including documenting that the service was performed by video conference, the date, time and the people who participated.

Only clinical details recorded at the time of the attendance count towards the time of the consultation. It does not include information added at a later time, such as reports of investigations.

Extended Medicare Safety Net (EMSN)

All telehealth consultations (with the exception of the participating optometrist telehealth items) are subject to EMSN caps. The EMSN caps for ART and Obstetric telehealth items 13210 and 16399 were set in reference to the EMSN caps applying to the base ART and Obstetric consultation items.

The EMSN caps for all other telehealth consultation items are equal to 300% of the schedule fee (to a maximum of \$500). The maximum EMSN benefit for a telehealth consultation is equal to the sum of the EMSN cap for the base item and the EMSN cap for the telehealth items.

Aftercare Rule

Video consultations are subject to the same aftercare rules as practitioners providing face-to-face consultations.

Multiple attendances on the same day

In some situations a patient may receive a telehealth consultation and a face to face consultation by the same or different practitioner on the same day.

Medicare benefits may be paid for more than one video consultation on a patient on the same day by the same practitioner, provided the second (and any following) video consultations are not a continuation of the initial or earlier video consultations. Practitioners will need to provide the times of each consultation on the patient's account or bulk billing voucher.

Referrals

The referral procedure for a video consultation is the same as for conventional face-to-face consultations.

Technical requirements

In order to fulfill the item descriptor there must be a visual and audio link between the patient and the remote practitioner. If the remote practitioner is unable to establish both a video and audio link with the patient, a MBS rebate for a telehealth attendance is not payable.

Individual clinicians must be confident that the technology used is able to satisfy the item descriptor and that software and hardware used to deliver a videoconference meets the applicable laws for security and privacy.

AN.0.69 One-Off Veterans' Health Check

Items 701, 703, 705 and 707 may be used to undertake a health assessment for a former serving member of the Australian Defence Force, including a former member of permanent and reserve forces.

A health assessment for a former serving member of the Australian Defence Force is an assessment of:

- a. a patient's physical and psychological health and social function; and
- b. whether health care, education and other assistance should be offered to the patient to improve their physical, psychological health or social function.

This health assessment must include:

- a. a personal attendance by a general practitioner; and
- b. taking the patient's history, including the following:

- i. the patient's service with the Australian Defence Force, including service type, years of service, field of work, number of deployments and reason for discharge;
- ii. the patient's social history, including relationship status, number of children (if any) and current occupation;
- iii. the patient's current medical conditions;
- iv. whether the patient suffers from hearing loss or tinnitus;
- v. the patient's use of medication, including medication prescribed by another doctor and medication obtained without a prescription;
- vi. the patient's smoking, if applicable;
- vii. the patient's alcohol use, if applicable;
- viii. the patient's substance use, if applicable;
- ix. the patient's level of physical activity;
- x. whether the patient has bodily pain;
- xi. whether the patient has difficulty getting to sleep or staying asleep;
- xii. whether the patient has psychological distress;
- xiii. whether the patient has posttraumatic stress disorder;
- xiv. whether the patient is at risk of harm to self or others;
- xv. whether the patient has anger problems;
- xvi. the patient's sexual health;
- xvii. any other health concerns the patient has.

The assessment must also include the following:

- i. measuring the patient's height;
- ii. weighing the patient and ascertaining, or asking the patient, whether the patient's weight has changed in the last 12 months;
- iii. measuring the patient's waist circumference;
- iv. taking the patient's blood pressure;
- v. using information gained in the course of taking the patient's history to assess whether any further assessment of the patient's health is necessary;
- vi. either making the further assessment or referring the patient to another medical practitioner who can make the further assessment;
- vii. documenting a strategy for improving the patient's health;
- viii. offering to give the patient a written report of the assessment that makes recommendations for treating the patient including preventive health measures;
- ix. keeping a record of the assessment.

A general practitioner may use the 'ADF Post-discharge GP Health Assessment Tool' as a screening tool for the health assessment. This assessment tool can be viewed on the At Ease portal of the Department of Veterans' Affairs' website at: <http://at-ease.dva.gov.au>. Other assessment tools mentioned in the Department of Veteran's Affairs Mental Health Advice Book may be relevant and can also be viewed on the At Ease portal.

This health assessment may only be claimed once by an eligible patient.

The health assessment must not be performed in conjunction with a separate consultation in relation to the patient unless the consultation is clinically necessary.

The health assessment must be performed by the patient's usual doctor.

AN.0.70 Limitation of items—certain attendances by specialists and consultant physicians

Medicare benefits are not payable for items 105, 116, 119, 386, 2806, 2814, 3010, 3014, 6019, 6052 and 16404 when claimed in association with an item in group T8 with a schedule fee of \$309.35 or more.

The restriction applies when the procedure is performed by the same practitioner, on the same patient, on the same day.

AN.0.71 General practitioner attendances and Aftercare

Vocationally and non-vocationally registered general practitioners providing post-operative treatment to a patient during an aftercare period are eligible for Medicare benefits. This rule applies only in the circumstance whereby the vocationally or non-vocationally registered general practitioner did not perform the initial procedure requiring post-operative treatment.

Normal aftercare rules still apply when it is the vocationally or non-vocationally registered general practitioner who rendered the initial procedure requiring post-operative treatment.

AN.1.1 Patients Usual Medical Practitioner

From 20 July 2020 it will be a legislative requirement under the Health Insurance (Section 3C General Medical Services - COVID-19 Telehealth and Telephone Attendances) Determination 2020 that GPs and other medical practitioners working in general practice must only perform a telehealth or telephone service where they have an existing relationship with the patient.

An existing relationship is defined as:

- the medical practitioner who performs the service has provided a face-to-face service to the patient in the last 12 months; or
- the medical practitioner who performs the service is located at a medical practice, and the patient has a face-to-face service arranged by that practice in the last 12 months. This can be a service performed by another doctor located at the practice, or a service performed by another health professional located at the practice (such as a practice nurse or Aboriginal and Torres Strait Islander health worker); or
- the medical practitioner who performs the service is a participant in the Approved Medical Deputising Service (AMDS) program, and the Approved Medical Deputising Service provider (AMDS provider) that employs the medical practitioner has a formal agreement with a medical practice that has provided at least one face-to-face service to the patient in the last 12 months.

This requirement does not apply to a person who is under the age of 12 months, a person who is experiencing homelessness, a person who is in a COVID-19 impacted area, a person receiving an urgent after-hours service (in unsociable hours), or a person who receives the service from a medical practitioner located at an Aboriginal Medical Service or an Aboriginal Community Controlled Health Service.

person who is experiencing homelessness means when a person does not have suitable accommodation alternatives they are considered homeless if their current living arrangement:

- (a) is in a dwelling that is inadequate; or
- (b) has no tenure, or if their initial tenure is short and not extendable; or
- (c) does not allow them to have control of, and access to space for social relations.

person who is in a COVID-19 impacted area means a patient who, at the time of accessing the telehealth service, has their movement restricted within the State or Territory, by a State or Territory public health requirement applying to the patient's location.

AN.2.1 Limitation of items - certain attendances by specialist radiologists

Medicare benefits are not payable for items 52, 53, 54, 57, 104 and 105 when claimed by a specialist radiologist in association with any of the following diagnostic imaging items:

- (a) an item in Subgroup 6 of Group I1;
- (b) an item in any of Subgroups 1 to 7 of Group I3;
- (c) items 58900 and 58903 in Subgroup 8 of Group I3; and
- (d) item 59103 in Subgroup 9 of Group I3.

The restriction applies when these services are performed by the same practitioner, on the same patient, on the same day.

AN.3.1 Subsequent attendance items

The current regulations prohibit the payment of Medicare benefits for subsequent attendance items 105, 116, 119, 386, 2806, 2814, 3010, 3014, 6019, 6052, and 16404 if a claim is made for any Group T8 item (30001-50952) with a schedule fee of equal to or greater than \$309.35 on the same day. Non-compliance with the regulations can result in a referral to an appropriate regulatory body – such as the Professional Services Review.

Subsequent attendance items (111, 117, and 120) can only be claimed on the same day as Group T8 items with schedule fees of equal to or greater than \$309.35, if the procedure is urgent and not able to be predicted prior to the commencement of the attendance. It is therefore expected that these items would be claimed only in exceptional circumstances.

Subsequent attendance item 115 can only be claimed, if the nature of the attendance was not able to be predicted prior to the procedure.

Item 115 should not be claimed if the consultation relates to the booked Group T8 procedure. Any consultation component related to the booked Group T8 procedure is considered to be covered under the fee for that procedure, if the Schedule fee is \$309.35 or more.

Should a component of the consultation be unrelated to the booked T8 procedure and it is considered by the medical practitioner that it would be a clinical risk to defer this consultation then item could be claimable.

It would not be appropriate to claim item 115 if a patient attends for the booked operation, and prior to surgery an examination is conducted relevant to performing that procedure; together with a discussion of the outcomes and aftercare. If the consultation extends beyond this; including the development of a management plan involving a broader diagnosis, prognosis, associated treatments and follow-up; then it could be appropriate to claim item 115.

In claiming item 115, the specialist or consultant physician must be satisfied that it would be a clinical risk to defer the consultation for the patient at this time.

Where item 115 is claimed, the records for the consultation should clearly identify why the consultation is considered necessary for the patient including the clinical risk to defer the consultation.

AN.7.1 Attendances by Medical Practitioners

Items 179-181, 185-187, 189-197, 203-206, 215-287, 371, 372, 733-789, 792, 812-892, 90092-93, 90095-96, 90183, 90188, 90202, and 90212 relate to attendances rendered by a medical practitioner who is not a general practitioner, specialist or consultant physician, and who:

(a) is registered under section 3GA of the Act, to the extent that the person is practising during the period in respect of which, and in the location in respect of which, they are registered, and insofar as the circumstances specified for paragraph 19AA(3)(b) of the Act apply; or

(b) is covered by an exemption under subsection 19AB(3) of the Act; or

(c) first became a medical practitioner before 1 November 1996.

AN.7.2 Medical Practitioner Attendances To Which No Other Item Applies Eligibility

Items 179 to 212 are available to medical practitioners providing services in eligible areas.

Eligible area means an area that is a Modified Monash 2 area, Modified Monash 3 area, Modified Monash 4 area, Modified Monash 5 area, Modified Monash 6 area or Modified Monash 7 area.

Medical practitioners providing services in a Modified Monash 1 area should use the items in Group A2.

A locator map to identify a medical practice's Modified Monash Model Area location is available at the DoctorConnect website at <http://www.doctorconnect.gov.au/internet/otd/publishing.nsf/Content/locator>

Guidance Notes

To assist medical practitioners in selecting the appropriate item number for Medicare benefit purposes the following notes in respect of the various levels are given.

Professional consultation of not more than 5 minutes duration

The item will be used for obvious and straightforward cases and this should be reflected in the practitioner's records. In this context, the practitioner should undertake the necessary examination of the affected part if required, and note the action taken.

Professional consultation of more than 5 minutes but not more than 25 minutes

The item will be used for a consultation lasting more than 5 minutes but less than 25 minutes for cases that are not obvious or straightforward in relation to one or more health related issues. This should be reflected in the practitioner's record. In the item descriptor singular also means plural and vice versa.

Professional consultation of more than 25 minutes but not more than 45 minutes

The item will be used for a consultation lasting more than 25 minutes but less than 45 minutes for cases in relation to one or more complex health related issues. This should be reflected in the practitioner's record. In the item descriptor singular also means plural and vice versa.

Professional consultation of more than 45 minutes

The item will be used for a consultation lasting at least 40 minutes for cases in relation to one or more very complex health related issues. This should be reflected in the practitioner's record. In the item descriptor singular also means plural and vice versa.

Creating and Updating a My Health Record

The time spent by a medical practitioner on the following activities may be counted towards the total consultation time:

- Reviewing a patient's clinical history, in the patient's file and/or the My Health Record, and preparing or updating a Shared Health Summary where it involves the exercise of clinical judgement about what aspects of the clinical history are relevant to inform ongoing management of the patient's care by other providers; or
- Preparing an Event Summary for the episode of care.

Preparing or updating a Shared Health Summary and preparing an Event Summary are clinically relevant activities. When either of these activities are undertaken with any form of patient history taking and/or the other clinically relevant activities that can form part of a consultation, the item that can be billed is the one with the time period that matches the total consultation time.

MBS rebates are not available for creating or updating a Shared Health Summary as a stand-alone service.

Recording Clinical Notes

In relation to the time taken in recording appropriate details of the service, only clinical details recorded at the time of the attendance count towards the time of consultation. It does not include information added at a later time, such as reports of investigations.

Other Services at the Time of Attendance

Where, during the course of a single attendance by a medical practitioner, both a consultation and another medical service are rendered, Medicare benefits are generally payable for both the consultation and the other service. Exceptions are in respect of medical services which form part of the normal consultative process, or services which include a component for the associated consultation (see the General Explanatory Notes for further information on the interpretation of the Schedule).

AN.7.3 Medical Practitioner Prolonged Attendance in Treatment of a Critical Condition (Items 214 to 220)

The conditions to be met before services covered by items 214-220 attract benefits are:-

- (i) the patient must be in imminent danger of death;
- (ii) if the personal attendance is not continuous, the occasion on which the service is provided is taken to be the total time of the attendance; and
- (iii) if personal attendance on a single patient is provided by 1 or more medical practitioners concurrently, each practitioner may claim an attendance fee.

Note: Medicare benefits are not payable for the issue of a death certificate, although an attendance on a patient at which it is determined that life is extinct can be claimed under the appropriate attendance item. The outcome of the attendance may be that a death certificate is issued, however, Medicare benefits are only payable for the attendance component of the service.

AN.7.4 Medical Practitioner Family Group Therapy (Items 221, 222 and 223)

These items refer to family group therapy supervised by medical practitioners other than consultant psychiatrists. To be used, these items require that a formal intervention with a specific therapeutic outcome, such as improved family function and/or communication, is undertaken. Other types of group attendances do not attract benefits. It should be noted that only one fee applies in respect of each group of patients.

Telephone consultations, letters of advice by medical practitioners, the issue of repeat prescriptions when the patient is not in attendance, post mortem examinations, the issue of death certificates, cremation certificates, counselling of relatives (note - items 348, 350 and 352 are not counselling services), group attendances (other than group attendances covered by items 170, 171, 172, 221, 222, 223, 342, 344 and 346) such as group counselling, health education, weight reduction or fitness classes do not qualify for benefit.

Although Medicare benefits are not payable for the issue of a death certificate, an attendance on a patient at which it is determined that life is extinct can be claimed under the appropriate attendance item. The outcome of the attendance may be that a death certificate is issued, however, Medicare benefits are only payable for the attendance component of the service.

AN.7.5 Medical Practitioner Health Assessments (Items 224 to 227)

There are four time-based health assessment items, consisting of brief, standard, long and prolonged consultations.

Brief Health Assessment (MBS Item 224)

A brief health assessment is used to undertake simple health assessments. The health assessment should take no more than 30 minutes to complete.

Standard Health Assessment (MBS Item 225)

A standard health assessment is used for straightforward assessments where the patient does not present with complex health issues but may require more attention than can be provided in a brief assessment. The assessment lasts more than 30 minutes but takes less than 45 minutes.

Long Health Assessment (MBS Item 226)

A long health assessment is used for an extensive assessment, where the patient has a range of health issues that require more in-depth consideration, and longer-term strategies for managing the patient's health may be necessary. The assessment lasts at least 45 minutes but less than 60 minutes.

Prolonged Health Assessment (MBS Item 227)

A prolonged health assessment is used for a complex assessment of a patient with significant, long-term health needs that need to be managed through a comprehensive preventive health care plan. The assessment takes 60 minutes or more to complete.

Medical practitioners may select one of the MBS health assessment items to provide a health assessment service to a member of any of the target groups listed in the table below. The health assessment item that is selected will depend on the time taken to complete the health assessment service. This is determined by the complexity of the patient's presentation and the specific requirements that have been established for each target group eligible for health assessments.

MBS Items 224, 225, 226 and 227 may be used to undertake a health assessment for the following target groups:

Target Group	Frequency of Service
A type 2 diabetes risk evaluation for people aged 40-49 years (inclusive) with a high risk of developing type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool	Once every three years to an eligible patient
A health assessment for people aged 45-49 years (inclusive) who are at risk of developing chronic disease	Once only to an eligible patient
A health assessment for people aged 75 years and older	Provided annually to an eligible patient
A comprehensive medical assessment for permanent residents of residential aged care facilities	Provided annually to an eligible patient

A health assessment for people with an intellectual disability	Provided annually to an eligible patient
A health assessment for refugees and other humanitarian entrants	Once only to an eligible patient
A health assessment for former serving members of the Australian Defence Force	Once only to an eligible patient

Frequency of service

The frequency with which patients in different population groups may receive a health assessment is described in the table above. Patients may not have more services than they are eligible for under the frequency provisions that apply to specific types of health assessment.

Important Note: patients may receive services using MBS items 224 to 227 and 701 to 707. However, once a patient has received a service using an MBS item from **either** group of MBS health assessment items, the patient may not receive another MBS health assessment until the appropriate time period has expired. In the case of health assessment services that are provided only once in a patient's lifetime, the patient would not be eligible for another health assessment.

The only exception is patients who are eligible for more than one type of health assessment (that is, the patient belongs to more than one eligible patient category). However, the frequency of service restrictions also apply to these services.

If a medical practitioner is not sure if a patient is eligible for an MBS health assessment service, they may telephone the Department of Human Services on 132011, with the patient present, to check eligibility.

Guidance Notes

A health assessment means the assessment of a patient's health and physical, psychological and social function and consideration of whether preventive health care and education should be offered to the patient, to improve that patient's health and physical, psychological and social function.

Health assessments are not available to people who are in-patients of a hospital or care recipients in a residential aged care facility (with the exception of a comprehensive medical assessment provided to a permanent resident of a residential aged care facility).

Before a health assessment is commenced, the patient (and/or the patient's parent(s), carer or representative, as appropriate) must be given an explanation of the health assessment process and its likely benefits. The patient must be asked whether he or she consents to the health assessment being performed. In cases where the patient is not capable of giving consent, consent must be given by the patient's parent(s), carer or representative. Consent to the health assessment must be noted in the patient's records.

A health assessment must include the following elements:

- a. information collection, including taking a patient history and undertaking or arranging examinations and investigations as required;
- b. making an overall assessment of the patient;
- c. recommending appropriate interventions;
- d. providing advice and information to the patient;
- e. keeping a record of the health assessment, and offering the patient a written report about the health assessment, with recommendations about matters covered by the health assessment; and

f. offering the patient's carer (if any, and if the medical practitioner considers it appropriate and the patient agrees) a copy of the report or extracts of the report relevant to the carer.

Restrictions on billing the health assessment items

A health assessment may only be billed by a medical practitioner (not including a specialist or consultant physician).

A health assessment should generally be undertaken by the patient's 'usual doctor'. For the purpose of the health assessment items, 'usual doctor' means the medical practitioner, or a medical practitioner working in the same medical practice, which has provided the majority of primary health care to the patient over the previous twelve months and/or will be providing the majority of care to the patient over the next twelve months.

A health assessment should not take the form of a health screening service.

MBS health assessment items 224, 225, 226 and 227 must be provided by a medical practitioner personally attending upon a patient. Suitably qualified health professionals, such as practice nurses or Aboriginal and Torres Strait Islander health practitioners, employed and/or otherwise engaged by a medical practice or health service, may assist medical practitioners in performing health assessments. Such assistance must be provided in accordance with accepted medical practice and under the supervision of the medical practitioner. This may include activities associated with:

- information collection; and
- providing patients with information about recommended interventions at the direction of the medical practitioner.

The medical practitioner should be satisfied that the assisting health professional has the necessary skills, expertise and training to collect the information required for the health assessment.

Medical practitioners should not conduct a separate consultation for another health-related issue in conjunction with a health assessment unless it is clinically necessary (ie. the patient has an acute problem that needs to be managed separately from the assessment). The only exception is the comprehensive medical assessment, where, if this health assessment is undertaken during the course of a consultation for another purpose, the health assessment item and the relevant item for the other consultation may both be claimed.

Items 224, 225, 226 and 227 do not apply for services that are provided by any other Commonwealth or State funded services. However, where an exemption under subsection 19(2) of the Health Insurance Act 1973 has been granted to an Aboriginal Community Controlled Health Service or State/Territory Government health clinic, items 224, 225, 226 and 227 can be claimed for services provided by medical practitioners salaried by or contracted to, the Service or health clinic. All other requirements of the items must be met.

Item 10990 or 10991 (bulk billing incentives) can be claimed in conjunction with any health assessment, provided the conditions of item 10990 and 10991 are satisfied.

AN.7.6 Medical Practitioner Health Assessment Provided as a Type 2 Diabetes Risk Evaluation for People Aged 40-49 Years with a High Risk of Developing Type 2 Diabetes as Determined by the Australian Type 2 Diabetes Risk Assessment Tool

Items 224, 225, 226 and 227 may be used to undertake a type 2 diabetes risk evaluation for people aged 40-49 years (inclusive) with a high risk of developing type 2 diabetes, as determined by the Australian Type 2 Diabetes Risk Assessment Tool.

The aim of this health assessment is to review the factors underlying the 'high risk' score identified by the Australian Type 2 Diabetes Risk Assessment Tool to instigate early interventions, such as lifestyle modification programs, to assist with the prevention of type 2 diabetes.

The Australian Type 2 Diabetes Risk Assessment Tool has been developed to provide a basis for both health professionals and health consumers to assess the risk of type 2 diabetes. It consists of a short list of questions which,

when completed, provides a guide to a patient's current level of risk of developing type 2 diabetes. The item scores and risk rating calculations in the tool have been developed using demographic, lifestyle, anthropometric and biomedical data from the 2000 Australian Diabetes, Obesity and Lifestyle baseline survey and the AusDiab 2005 follow-up study.

The Australian Type 2 Diabetes Risk Assessment Tool can be obtained from [the Department's prevention of diabetes web page](#).

Clinical risk factors that the medical practitioner must consider when providing this health assessment include:

- (a) lifestyle, such as smoking, physical inactivity and poor nutrition;
- (b) biomedical risk factors, such as high blood pressure, impaired glucose metabolism and excess weight;
- (c) any relevant recent diagnostic test results; and
- (d) a family history of chronic disease.

The health assessment must include the following:

- (a) evaluating a patient's high risk score, as determined by the Australian Type 2 Diabetes Risk Assessment Tool which has been completed by the patient within a period of 3 months prior to undertaking the health assessment;
- (b) updating the patient's history and undertaking physical examinations and clinical investigations in accordance with relevant guidelines;
- (c) making an overall assessment of the patient's risk factors and of the results of relevant examinations and investigations; and
- (d) initiating interventions, if appropriate, including referral to a lifestyle modification program and follow-up relating to the management of any risk factors identified (further information is available at [the Department's prevention of diabetes web page](#)).

The completion of the Australian Type 2 Diabetes Risk Assessment Tool is mandatory for patient access to this health assessment. The tool can be completed either by the patient or with the assistance of a health professional or practice staff. Patients with a 'high' score result are eligible for the health assessment, and subsequent referral to the subsidised lifestyle modification programs if appropriate (further information is available at [the Department's prevention of diabetes web page](#)).

A health assessment for a type 2 diabetes risk evaluation for people aged 40-49 years with a high risk of developing type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool may only be claimed once every three years by an eligible patient.

AN.7.7 Medical Practitioner Health Assessment Provided for People Aged 45-49 Years Who are at Risk of Developing Chronic Disease

Items 224, 225, 226 and 227 may be used to undertake a health assessment for people aged 45-49 years (inclusive) who are at risk of developing chronic disease.

For the purposes of this health assessment, a patient is at risk of developing a chronic disease if, in the clinical judgement of the attending medical practitioner, a specific risk factor for chronic disease is identified.

Risk factors that the medical practitioner can consider include, but are not limited to:

- (a) lifestyle risk factors, such as smoking, physical inactivity, poor nutrition or alcohol use;
- (b) biomedical risk factors, such as high cholesterol, high blood pressure, impaired glucose metabolism or excess weight; or

(c) family history of a chronic disease.

A chronic disease or condition is one that has been or is likely to be present for at least six months, including but not limited to asthma, cancer, cardiovascular illness, diabetes mellitus, mental health conditions, arthritis and musculoskeletal conditions.

If, after receiving this health assessment, a patient is identified as having a high risk of type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool, the medical practitioner may refer that person to a subsidised lifestyle modification program, along with other possible strategies to improve the health status of the patient (further information is available at <http://www.health.gov.au/preventionoftype2diabetes>).

The Australian Type 2 Diabetes Risk Assessment Tool can be obtained from <http://www.health.gov.au/preventionoftype2diabetes>.

A health assessment for people aged 45-49 years who are at risk of developing chronic disease may only be claimed once by an eligible patient.

AN.7.8 Medical Practitioner Health Assessment Provided for People Aged 75 Years and Older

Items 224, 225, 226 and 227 may be used to undertake a health assessment for people aged 75 years and older.

A health assessment for people aged 75 years and older is an assessment of a patient's health and physical, psychological and social function for the purpose of initiating preventive health care and/or medical interventions as appropriate.

This health assessment must include:

- (a) measurement of the patient's blood pressure, pulse rate and rhythm;
 - (b) an assessment of the patient's medication;
 - (c) an assessment of the patient's continence;
 - (d) an assessment of the patient's immunisation status for influenza, tetanus and pneumococcus;
 - (e) an assessment of the patient's physical function, including the patient's activities of daily living, and whether or not the patient has had a fall in the last 3 months;
 - (f) an assessment of the patient's psychological function, including the patient's cognition and mood; and
 - (g) an assessment of the patient's social function, including the availability and adequacy of paid and unpaid help, and whether the patient is responsible for caring for another person.
- (h) A health assessment for people aged 75 years and older may be claimed once every twelve months by an eligible patient.

AN.7.9 Medical Practitioner Health Assessment Provided as a Comprehensive Medical Assessment for Residents of Residential Aged Care Facilities

Items 224, 225, 226 and 227 may be used to undertake a comprehensive medical assessment of a resident of a residential aged care facility

This health assessment requires assessment of the resident's health and physical and psychological function, and must include:

- (a) making a written summary of the comprehensive medical assessment;
- (b) developing a list of diagnoses and medical problems based on the medical history and examination;

- (c) providing a copy of the summary to the residential aged care facility; and
- (d) offering the resident a copy of the summary.

A residential aged care facility is a facility in which residential care services, as defined in the Aged Care Act 1997, are provided. This includes facilities that were formerly known as nursing homes and hostels. A person is a resident of a residential aged care facility if the person has been admitted as a permanent resident of that facility.

This health assessment is available to new residents on admission into a residential aged care facility. It is recommended that new residents should receive the health assessment as soon as possible after admission, preferably within six weeks following admission into a residential aged care facility.

A health assessment for the purpose of a comprehensive medical assessment of a resident of a residential aged care facility may be claimed by an eligible patient:

- (a) on admission to a residential aged care facility, provided that a comprehensive medical assessment has not already been provided in another residential aged care facility within the previous 12 months; and
- (b) at 12 month intervals thereafter.

AN.7.10 Medical Practitioner Health Assessment Provided for People with an Intellectual Disability

Items 224, 225, 226 and 227 may be used to undertake a health assessment for people with an intellectual disability.

A person is considered to have an intellectual disability if they have significantly sub-average general intellectual functioning (two standard deviations below the average intelligence quotient [IQ]) and would benefit from assistance with daily living activities. Where medical practitioners wish to confirm intellectual disability and a patient's need for assistance with activities of daily living, they may seek verification from a paediatrician registered to practice in Australia (if the patient is a child) or from a government-provided or funded disability service that has assessed the patient's intellectual function.

The health assessment provides a structured clinical framework for medical practitioners to comprehensively assess the physical, psychological and social function of patients with an intellectual disability and to identify any medical intervention and preventive health care required. The health assessment must include the following items as relevant to the patient or the patient's representative:

- (a) Check dental health (including dentition);
- (b) Conduct aural examination (arrange formal audiometry if audiometry has not been conducted within 5 years);
- (c) Assess ocular health (arrange review by an ophthalmologist or optometrist if a comprehensive eye examination has not been conducted within 5 years);
- (d) Assess nutritional status (including weight and height measurements) and a review of growth and development;
- (e) Assess bowel and bladder function (particularly for incontinence or chronic constipation);
- (f) Assess medications (including non-prescription medicines taken by the patient, prescriptions from other doctors, medications prescribed but not taken, interactions, side effects and review of indications);
 - Advise carers of the common side effects and interactions.
 - Consider the need for a formal medication review.
- (g) Check immunisation status, including influenza, tetanus, hepatitis A and B, Measles, Mumps and Rubella (MMR) and pneumococcal vaccinations;
- (h) Check exercise opportunities (with the aim of moderate exercise for at least 30 minutes per day);

- (i) Check whether the support provided for activities of daily living adequately and appropriately meets the patient's needs, and consider formal review if required;
- (j) Consider the need for breast examination, mammography, cervical screening, testicular examination, lipid measurement and prostate assessment as for the general population;
- (k) Check for dysphagia and gastro-oesophageal disease (especially for patients with cerebral palsy), and arrange for investigation or treatment as required;
- (l) Assess risk factors for osteoporosis (including diet, exercise, Vitamin D deficiency, hormonal status, family history, medication fracture history) and arrange for investigation or treatment as required;
- (m) For patients diagnosed with epilepsy, review of seizure control (including anticonvulsant drugs) and consider referral to a neurologist at appropriate intervals;
- (n) Check for thyroid disease at least every two years (or yearly for patients with Down syndrome);
- (o) For patients without a definitive aetiological diagnosis, consider referral to a genetic clinic every 5 years;
- (p) Assess or review treatment for co-morbid mental health issues;
- (q) Consider timing of puberty and management of sexual development, sexual activity and reproductive health; and
- (r) Consider whether there are any signs of physical, psychological or sexual abuse.

A health assessment for people with an intellectual disability may be claimed once every twelve months by an eligible patient.

AN.7.11 Medical Practitioner Health Assessment Provided for Refugees and Other Humanitarian Entrants

Items 224, 225, 226 and 227 may be used to undertake a health assessment for refugees and other humanitarian entrants.

The purpose of this health assessment is to introduce new refugees and other humanitarian entrants to the Australian primary health care system, as soon as possible after their arrival in Australia (within twelve months of arrival).

The health assessment applies to humanitarian entrants who are resident in Australia with access to Medicare services. This includes Refugees, Special Humanitarian Program and Protection Program entrants with the following visas:

Offshore Refugee Category including:

- (a) 200 Refugee
- (b) 201 In Country Special Humanitarian
- (c) 203 Emergency rescue
- (d) 204 Women at Risk
- (e) Offshore - Special Humanitarian Program
- (f) 202 Global Special Humanitarian

Offshore - Temporary Humanitarian Visas (THV) including:

- (g) Subclass 695 (Return Pending)

(h) Subclass 070 (Removal Pending Bridging)

Onshore Protection Program including:

(i) 866 Permanent Protection Visa (PPV)

(j) 785 Temporary Protection Visa (TPV)

Patients should be asked to provide proof of their visa status and date of arrival in Australia. Alternatively, medical practitioners may telephone the Department of Human Services on 132011, with the patient present, to check eligibility.

The medical practitioner and patient can use the service of a translator by accessing the Commonwealth Government's Translating and Interpreting Service (TIS) and the Doctors Priority Line. To be eligible for the fee-free TIS and Doctors Priority Line, the medical examiner must be in a private practice and provide a Medicare service to patients who do not speak English and are permanent residents.

A health assessment for refugees and other humanitarian entrants may only be claimed once by an eligible patient.

AN.7.12 Medical Practitioner One-Off Veterans' Health Check

Items 224, 225, 226 and 227 may be used to undertake a health assessment for a former serving member of the Australian Defence Force, including a former member of permanent and reserve forces.

A health assessment for a former serving member of the Australian Defence Force is an assessment of:

- a patient's physical and psychological health and social function; and
- whether health care, education and other assistance should be offered to the patient to improve their physical, psychological health or social function.

This health assessment must include:

1. a personal attendance by a medical practitioner; and
2. taking the patient's history, including the following:
 - i the patient's service with the Australian Defence Force, including service type, years of service, field of work, number of deployments and reason for discharge;
 - ii the patient's social history, including relationship status, number of children (if any) and current occupation;
 - iii the patient's current medical conditions;
 - iv whether the patient suffers from hearing loss or tinnitus;
 - v the patient's use of medication, including medication prescribed by another doctor and medication obtained without a prescription;
 - vi the patient's smoking, if applicable;
 - vii the patient's alcohol use, if applicable;
 - viii the patient's substance use, if applicable;
 - ix the patient's level of physical activity;
 - x whether the patient has bodily pain;
 - xi whether the patient has difficulty getting to sleep or staying asleep;

- xii whether the patient has psychological distress;
- xiii whether the patient has posttraumatic stress disorder;
- xiv whether the patient is at risk of harm to self or others;
- xv whether the patient has anger problems;
- xvi the patient's sexual health;
- xvii any other health concerns the patient has.

The assessment must also include the following:

1. measuring the patient's height;
2. weighing the patient and ascertaining, or asking the patient, whether the patient's weight has changed in the last 12 months;
3. measuring the patient's waist circumference;
4. taking the patient's blood pressure;
5. using information gained in the course of taking the patient's history to assess whether any further assessment of the patient's health is necessary;
6. either making the further assessment or referring the patient to another medical practitioner who can make the further assessment;
7. documenting a strategy for improving the patient's health;
8. offering to give the patient a written report of the assessment that makes recommendations for treating the patient including preventive health measures;
9. keeping a record of the assessment.

A medical practitioner may use the 'ADF Post-discharge GP Health Assessment Tool' as a screening tool for the health assessment. This assessment tool can be viewed on the At Ease portal of the Department of Veterans' Affairs' website at: <http://at-ease.dva.gov.au>. Other assessment tools mentioned in the Department of Veteran's Affairs Mental Health Advice Book may be relevant and can also be viewed on the At Ease portal.

This health assessment may only be claimed once by an eligible patient.

The health assessment must not be performed in conjunction with a separate consultation in relation to the patient unless the consultation is clinically necessary.

The health assessment must be performed by the patient's usual doctor.

AN.7.13 Medical Practitioner Health Assessment for an Aboriginal and Torres Strait Islander People (Item 228)

This health assessment is available to all people of Aboriginal and Torres Strait Islander descent and should be used for health assessments for the following age categories:

- An Aboriginal or Torres Strait Islander child who is less than 15 years.
- An Aboriginal or Torres Strait Islander person who is aged between 15 years and 54 years.
- An Aboriginal or Torres Strait Islander older person who is aged 55 years and over.

A health assessment means the assessment of a patient's health and physical, psychological and social function and consideration of whether preventive health care and education should be offered to the patient, to improve that patient's health and physical, psychological and social function.

MBS item 228 must include the following elements:

- (a) information collection, including taking a patient history and undertaking examinations and investigations as required;
- (b) making an overall assessment of the patient;
- (c) recommending appropriate interventions;
- (d) providing advice and information to the patient; and
- (e) keeping a record of the health assessment, and offering the patient, and/or patient's carer, a written report about the health assessment with recommendations about matters covered by the health assessment; and
- (f) offering the patient's carer (if any, and if the medical practitioner considers it appropriate and the patient agrees) a copy of the report or extracts of the report relevant to the carer.

If, after receiving this health assessment, a patient who is aged fifteen years and over but under the age of 55 years, is identified as having a high risk of developing type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool, the medical practitioner may refer that person to a subsidised lifestyle modification program, along with other possible strategies to improve the health status of the patient.

The Australian Type 2 Diabetes Risk Assessment Tool can be obtained from <http://www.health.gov.au/preventionoftype2diabetes>

A health assessment may only be claimed by a medical practitioner (not including a specialist or consultant physician).

A health assessment should generally be undertaken by the patient's 'usual doctor'. For the purpose of the health assessment, "usual doctor" means the medical practitioner, or a medical practitioner working in the same medical practice, which has provided the majority of primary health care to the patient over the previous twelve months and/or will be providing the majority of care to the patient over the next twelve months.

The health assessment for Aboriginal and Torres Strait Islander People is not available to people who are in-patients of a hospital or care recipients in a residential aged care facility.

A health assessment should not take the form of a health screening service (see General Explanatory Notes G.13.1).

MBS health assessment item 228 must be provided by a medical practitioner personally attending upon a patient. Suitably qualified health professionals, such as practice nurses, Aboriginal health workers or Aboriginal and Torres Strait Islander health practitioners employed and/or otherwise engaged by a general practice or health service, may assist medical practitioners in performing this health assessment. Such assistance must be provided in accordance with accepted medical practice and under the supervision of the medical practitioner. This may include activities associated with:

- information collection; and
- providing patients with information about recommended interventions at the direction of the medical practitioner.

The medical practitioner should be satisfied that the assisting health professional has the necessary skills, expertise and training to collect the information required for the health assessment.

Medical practitioners should not conduct a separate consultation in conjunction with a health assessment unless it is clinically necessary (ie. the patient has an acute problem that needs to be managed separately from the assessment).

Item 228 does not apply for services that are provided by any other Commonwealth or State funded services. However, where an exemption under subsection 19(2) of the Health Insurance Act 1973 has been granted to an Aboriginal Community Controlled Health Service or State/Territory Government health clinic, item 228 can be claimed for services provided by medical practitioners salaried by or contracted to, the Service or health clinic. All requirements of the item must be met.

Item 10990 or 10991 (bulk billing incentives) can be claimed in conjunction with any health assessment provided to an Aboriginal and Torres Strait Islander person, provided the conditions of item 10990 and 10991 are satisfied.

An eligible patient may only receive the Health Assessment for Aboriginal and Torres Strait Islander People using either item 228 or item 715 once in a 9 month period.

AN.7.14 Medical Practitioner Health Assessment for an Aboriginal and Torres Strait Islander Child less than 15 years of age (Item 228)

An Aboriginal and Torres Strait Islander child health assessment must include:

- a. a personal attendance by a medical practitioner;
- b. taking the patient's medical history, including the following:
 - i. mother's pregnancy history;
 - ii. birth and neo-natal history;
 - iii. breastfeeding history;
 - iv. weaning, food access and dietary history;
 - v. physical activity;
 - vi. previous presentations, hospital admissions and medication usage;
 - vii. relevant family medical history;
 - viii. immunisation status;
 - ix. vision and hearing (including neonatal hearing screening);
 - x. development (including achievement of age appropriate milestones);
 - xi. family relationships, social circumstances and whether the person is cared for by another person;
 - xii. exposure to environmental factors (including tobacco smoke);
 - xiii. environmental and living conditions;
 - xiv. educational progress;
 - xv. stressful life events;
 - xvi. mood (including incidence of depression and risk of self-harm);
 - xvii. substance use;
 - xviii. sexual and reproductive health; and
 - xix. dental hygiene (including access to dental services).

- c. examination of the patient, including the following:
 - i. measurement of height and weight to calculate body mass index and position on the growth curve;
 - ii. newborn baby check (if not previously completed);
 - iii. vision (including red reflex in a newborn);
 - iv. ear examination (including otoscopy);
 - v. oral examination (including gums and dentition);
 - vi. trachoma check, if indicated;
 - vii. skin examination, if indicated;
 - viii. respiratory examination, if indicated;
 - ix. cardiac auscultation, if indicated;
 - x. development assessment, if indicated, to determine whether age appropriate milestones have been achieved;
 - xi. assessment of parent and child interaction, if indicated; and
 - xii. other examinations in accordance with national or regional guidelines or specific regional needs, or as indicated by a previous child health assessment.
- d. undertaking or arranging any required investigation, considering the need for the following tests, in particular:
 - i. haemoglobin testing for those at a high risk of anaemia; and
 - ii. audiometry, if required, especially for those of school age
- e. assessing the patient using the information gained in the child health check; and
- f. making or arranging any necessary interventions and referrals, and documenting a simple strategy for the good health of the patient.

AN.7.15 Medical Practitioner Health Assessment for an Aboriginal and Torres Strait Islander Adult Aged 15 Years to 54 Years (Item 228)

An Aboriginal and Torres Strait Islander adult health assessment must include:

- a. a personal attendance by a medical practitioner;
- b. taking the patient's medical history, including the following:
 - i. current health problems and risk factors;
 - ii. relevant family medical history;
 - iii. medication usage (including medication obtained without prescription or from other doctors);
 - iv. immunisation status, by reference to the appropriate current age and sex immunisation schedule;
 - v. sexual and reproductive health;
 - vi. physical activity, nutrition and alcohol, tobacco or other substance use;

- vii. hearing loss;
- viii. mood(including incidence of depression and risk of self-harm);
- ix. family relationships and whether the patient is a carer, or is cared for by another person; and
- x. vision
- c. examination of the patient, including the following:
 - i. measurement of the patient's blood pressure, pulse rate and rhythm;
 - ii. measurement of height and weight to calculate body mass index and, if indicated, measurement of waist circumference for central obesity;
 - iii. oral examination (including gums and dentition);
 - iv. ear and hearing examination (including otoscopy and, if indicated, a whisper test); and
 - v. urinalysis (by dipstick) for proteinuria;
 - vi. eye examination;
- d. undertaking or arranging any required investigation, considering the need for the following tests, in particular, (in accordance with national or regional guidelines or specific regional needs):
 - i. fasting blood sugar and lipids (by laboratory based test on venous sample) or, if necessary, random blood glucose levels;
 - ii. cervical screening;
 - iii. examination for sexually transmitted infection (by urine or endocervical swab for chlamydia and gonorrhoea, especially for those aged from 15 to 35years); and
 - iv. mammography, if eligible (by scheduling appointments with visiting services or facilitating direct referral).
- e. assessing the patient using the information gained in the adult health assessment; and
- f. making or arranging any necessary interventions and referrals, and documenting a simple strategy for the good health of the patient.

An Aboriginal and Torres Strait Islander Older Person's health assessment must also include:

- a. keeping a record of the health assessment; and
- b. offering the patient a written report on the health assessment, with recommendations on matters covered by the health assessment.

AN.7.16 Medical Practitioner Health Assessment for an Aboriginal and Torres Strait Islander Older Person Aged 55 Years and Over (Item 228)

An Aboriginal and Torres Strait Islander Older Person's health assessment must include:

- a. a personal attendance by the medical practitioner;
- b. measurement of the patient's blood pressure, pulse rate and rhythm;
- c. an assessment of the patient's medication;

- d. an assessment of the patient's continence;
- e. an assessment of the patient's immunisation status for influenza, tetanus and pneumococcus;
- f. an assessment of the patient's physical function, including the patient's activities of daily living and whether or not the patient has had a fall in the last 3months;
- g. an assessment of the patient's psychological function, including the patient's cognition and mood;
- h. an assessment of the patient's social function, including:
 - i. the availability and adequacy of paid, and unpaid, help;
 - ii. whether the patient is responsible for caring for another person;
- i. an eye examination

An Aboriginal and Torres Strait Islander Older Person's health assessment must also include:

- a. keeping a record of the health assessment; and
- b. offering the patient a written report on the health assessment, with
- c. recommendations on matters covered by the health assessment; and
- d. offering the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees) a copy of the report or extracts of the report relevant to the carer.

AN.7.17 Medical Practitioner Chronic Disease Management (Items 229 to 233)

Description	Item No	Minimum claiming period*
Preparation of a GP Management Plan (GPMP)	229	12 months
Coordination of Team Care Arrangements (TCAs)	230	12 months
Contribution to a Multidisciplinary Care Plan, or to a Review of a Multidisciplinary Care Plan, for a patient who is not a care recipient in a residential aged care facility	231	3 months
Contribution to a Multidisciplinary Care Plan, or to a review of a multidisciplinary care plan, for a resident in an aged care facility	232	3 months
Review of a GP Management Plan or Coordination of a Review of Team Care Arrangements	233	3 months

* CDM services may be provided more frequently in the exceptional circumstances defined below.

Exceptional circumstances exist for a patient if there has been a significant change in the patient's clinical condition or care requirements that necessitates the performance of the service for the patient.

Regulatory requirements

Items 229, 230, 231, 232 and 233 provide rebates for medical practitioners to manage chronic or terminal medical conditions by preparing, coordinating, reviewing or contributing to chronic disease management (CDM) plans. They apply for a patient who suffers from at least one medical condition that has been present (or is likely to be present) for at least six months or is terminal.

Restrictions on claiming multiple Chronic Disease Management Items

Patients may receive chronic disease management services using MBS items 229 to 233 and 721 to 732. However, once a patient has received a service using an MBS item from **either** group of MBS chronic disease management items, the patient may not receive another MBS chronic disease management service until the minimum claiming period has expired. The only exception is where there are exceptional circumstances necessitating an earlier performance of the service (see **Claiming of benefits** below).

If a medical practitioner is not sure if a patient is eligible for an MBS chronic disease management service, they may telephone the Department of Human Services on 132011, with the patient present, to check eligibility.

Restriction of Co-claiming of Chronic Disease and General Consultation Items

Co-claiming of MBS general consultation items 3, 4, 23, 24, 36, 37, 44, 47, 52, 53, 54, 57, 58, 59, 60, 65, 179, 181, 185, 187, 189, 191, 203, 206, 585, 588, 591, 594, 599, 600, 733, 737, 741, 745, 761, 763, 766, 769, 5000, 5003, 5020, 5023, 5040, 5043, 5060, 5063, 5200, 5203, 5207, 5208, 5220, 5223, 5227, 5228 with chronic disease management items 229, 230 and 233 is not permitted for the same patient, on the same day.

Patient eligibility

CDM items 229, 230 and 233 are available to:

- i patients in the community; and
- ii private in-patients of a hospital (including private in-patients who are residents of aged care facilities) being discharged from hospital.

CDM items 229, 230 and 233 are not available to:

- i public in-patients of a hospital; or
- ii care recipients in a residential aged care facility.

CDM item 231 is available to:

- i patients in the community;
- ii both private and public in-patients being discharged from hospital.

CDM item 231 is not available to:

- i care recipients in a residential aged care facility.

CDM item 232 is available to care recipients in a residential aged care facility only.

Components of service

Item 229

A comprehensive written plan must be prepared describing:

- a. the patient's health care needs, health problems and relevant conditions;
- b. management goals with which the patient agrees;
- c. actions to be taken by the patient;
- d. treatment and services the patient is likely to need;
- e. arrangements for providing this treatment and these services; and

- f. arrangements to review the plan by a date specified in the plan.

In preparing the plan, the medical practitioner must:

- a. explain to the patient and the patient's carer (if any, and if the medical practitioner considers it appropriate and the patient agrees) the steps involved in preparing the plan; and
- b. record the plan; and
- c. record the patient's agreement to the preparation of the plan; and
- d. offer a copy of the plan to the patient and the patient's carer (if any, and if the medical practitioner considers it appropriate and the patient agrees); and
- e. add a copy of the plan to the patient's medical records.

Item 230

When coordinating the development of Team Care Arrangements (TCAs), the medical practitioner must:

- a. consult with at least two collaborating providers, each of whom will provide a different kind of treatment or service to the patient, and one of whom may be another medical practitioner, when making arrangements for the multidisciplinary care of the patient; and
- b. prepare a document that describes:
 - i. treatment and service goals for the patient;
 - ii. treatment and services that collaborating providers will provide to the patient; and
 - iii. actions to be taken by the patient;
 - iv. arrangements to review (i), (ii) and (iii) by a date specified in the document; and
- c. explain the steps involved in the development of the arrangements to the patient and the patient's carer (if any, and if the medical practitioner considers it appropriate and the patient agrees);
- d. discuss with the patient the collaborating providers who will contribute to the development of the TCAs and provide treatment and services to the patient under those arrangements; and
- e. record the patient's agreement to the development of TCAs;
- f. give copies of the relevant parts of the document to the collaborating providers;
- g. offer a copy of the document to the patient and the patient's carer (if any, and if the medical practitioner considers it appropriate and the patient agrees); and
- h. add a copy of the document to the patient's medical records.

One of the minimum two service providers collaborating with the medical practitioner can be another medical practitioner. The patient's informal or family carer can be included in the collaborative process but does not count towards the minimum of three collaborating providers.

Item 231

A multidisciplinary care plan means a written plan that:

- a. is prepared for a patient by:

- i a medical practitioner in consultation with two other collaborating providers, each of whom provides a different kind of treatment or service to the patient, and one of whom may be another medical practitioner; or
 - ii a collaborating provider (other than a medical practitioner) in consultation with at least two other collaborating providers, each of whom provides a different kind of treatment or services to the patient; and
- b. describes, at least, treatment and services to be provided to the patient by the collaborating providers.

When contributing to a multidisciplinary care plan or to a review of the care plan, the medical practitioner must:

- i. prepare part of the plan or amendments to the plan and add a copy to the patient's medical records; or
- j. give advice to a person who prepares or reviews the plan and record in writing, on the patient's medical records, any advice provided to such a person.

Item 232

A multidisciplinary care plan in a Residential Aged Care Facility (RACF) means a written plan that:

- a. is prepared for a patient by a collaborating provider (other than a medical practitioner, e.g. a RACF), in consultation with at least two other collaborating providers, each of whom provides a different kind of treatment or services to the patient; and
- b. describes, at least, treatment and services to be provided to the patient by the collaborating providers.

When contributing to a multidisciplinary care plan or to a review of the care plan, the medical practitioner must:

- a. prepare part of the plan or amendments to the plan and add a copy to the patient's medical records; or
- b. give advice to a person who prepares or reviews the plan and record in writing, on the patient's medical records, any advice provided to such a person.

Item 232 can also be used for contribution to a multidisciplinary care plan prepared for a resident by another provider before the resident is discharged from a hospital or an approved day-hospital facility, or to a review of such a plan prepared by another provider (not being a service associated with a service to which items 235 to 240 apply).

Item 233

An "associated medical practitioner" is a medical practitioner who, if not engaged in the same general practice as the medical practitioner mentioned in that item, performs the service mentioned in the item at the request of the patient (or the patient's guardian).

When reviewing a GP Management Plan, the medical practitioner must:

- a. explain to the patient and the patient's carer (if any, and if the medical practitioner considers it appropriate and the patient agrees) the steps involved in the review;
- b. record the patient's agreement to the review of the plan;
- c. review all the matters set out in the relevant plan;
- d. make any required amendments to the patient's plan;
- e. offer a copy of the amended document to the patient and the patient's carer (if any, and if the medical practitioner considers it appropriate and the patient agrees);
- f. add a copy of the amended document to the patient's records; and
- g. provide for further review of the amended plan by a date specified in the plan.

When coordinating a review of Team Care Arrangements, a multidisciplinary community care plan or a multidisciplinary discharge care plan, the medical practitioner must:

- a. explain the steps involved in the review to the patient and the patient's carer (if any, and if the medical practitioner considers it appropriate and the patient agrees);
- b. record the patient's agreement to the review of the TCAs or plan;
- c. consult with at least two health or care providers (each of whom provides a service or treatment to the patient that is different from each other and different from the service or treatment provided by the medical practitioner who is coordinating the TCAs or plan) to review all the matters set out in the relevant plan;
- d. make any required amendments to the patient's plan;
- e. offer a copy of the amended document to the patient and the patient's carer (if any, and if the medical practitioner considers it appropriate and the patient agrees);
- f. provide for further review of the amended plan by a date specified in the plan;
- g. give copies of the relevant parts of the amended plan to the collaborating providers; and
- h. add a copy of the amended document to the patient's records.

Item 233 can also be used to COORDINATE A REVIEW OF a Multidisciplinary Community Care Plan or to COORDINATE REVIEW OF A Discharge Care, where these services were coordinated or prepared by that medical practitioner (or an associated medical practitioner), and not being a service associated with a service to which items 235 to 240 apply.

Claiming of benefits

Each service to which item 233 applies (i.e. Review of a GP Management Plan and Review of Team Care Arrangements) may be claimed once in a three-month period, except where there are exceptional circumstances arising from a significant change in the patient's clinical condition or care circumstances that necessitates earlier performance of the service for the patient.

Where a service is provided in exceptional circumstances, the patient's invoice or Medicare voucher should be annotated to indicate the reason why the service was required earlier than the minimum time interval for the relevant item. Payment can then be made.

Item 233 can be claimed twice on the same day providing an item 233 for reviewing a GP Management Plan and another 233 for reviewing Team Care Arrangements (TCAs) are both delivered on the same day as per the MBS item descriptors and explanatory notes.

Medicare requirements when item 233 is claimed twice on the same day

If a GPMP and TCAs are both reviewed on the same date and item 233 is to be claimed twice on the same day, both electronic claims and manual claims need to indicate they were rendered at different times:

Non electronic Medicare claiming of items 233 on the same date

The time that each item 233 commenced should be indicated next to each item

Electronic Medicare claiming of item 233 on the same date

Medicare Easyclaim: use the 'ItemOverrideCde' set to 'AP', which flags the item as not duplicate services
Medicare Online/ECLIPSE: set the 'DuplicateServiceOverrideIND' to 'Y', which flags the item as not duplicate

Items 229, 230 233

The GP Management Plan items (229 and 233) and the Team Care Arrangement items (230 and 233) cannot be claimed by medical practitioners when they are a recognised specialist in the specialty of palliative medicine and treating a referred palliative care patient under items 3005-3093. The referring practitioner is able to provide the CDM services.

Additional information

Advice on the items and further guidance are available at <http://www.health.gov.au/mbsprimarycareitems>

Items 229-233 should generally be undertaken by the patient's usual medical practitioner. This means the medical practitioner, or a medical practitioner working in the same medical practice, who has provided the majority of care to the patient over the previous twelve months and/or will be providing the majority of medical services to the patient over the next twelve months. The term "usual medical practitioner" would not generally apply to a practice that provides only one specific CDM service.

A practice nurse, Aboriginal and Torres Strait Islander health practitioner, Aboriginal health worker or other health professional may assist with items 229, 230 and 233 (e.g. in patient assessment, identification of patient needs and making arrangements for services). However, the medical practitioner must meet all regulatory requirements, review and confirm all assessments and see the patient.

Patients being managed under the chronic disease management items may be eligible for:

- individual allied health services (items 10950 to 10970); and/or
- group allied health services (items 81100 to 81125).

More information on eligibility requirements can be found in the explanatory note for individual allied health services and group allied health services.

Further information is also available for providers from the Department of Human Services provider inquiry line on 132 150.

AN.7.18 Medical Practitioner Medication Management Reviews (Items 245 and 249)

Item 245 - Domiciliary Medication Management Review

A Domiciliary Medication Management Review (DMMR) (Item 245), also known as Home Medicines Review, is intended to maximise an individual patient's benefit from their medication regimen, and prevent medication-related problems through a team approach, involving the patient's medical practitioner and preferred community pharmacy or accredited pharmacist.

Patient eligibility

The item is available to people living in the community who meet the criteria for a DMMR.

The item is not available for in-patients of a hospital, or care recipients in residential aged care facilities.

DMMRs are targeted at patients who are likely to benefit from such a review:

- patients for whom quality use of medicines may be an issue or;
- patients who are at risk of medication misadventure because of factors such as their co-morbidities, age or social circumstances, the characteristics of their medicines, the complexity of their medication treatment regimen, or a lack of knowledge and skills to use medicines to their best effect.

DMMR's are targeted at patients who are:

- currently taking five or more regular medications;
- taking more than 12 doses of medication per day;

- have had significant changes made to medication treatment regimen in the last three months;
- taking medication with a narrow therapeutic index or medications requiring therapeutic monitoring;
- experiencing symptoms suggestive of an adverse drug reaction;
- displaying sub-optimal response to treatment with medicines;
- suspected of non-compliance or inability to manage medication related therapeutic devices;
- having difficulty managing their own medicines because of literacy or language difficulties, dexterity problems or impaired sight, confusion/dementia or other cognitive difficulties;
- attending a number of different doctors, both medical practitioners and specialists; and/or
- recently discharged from a facility / hospital (in the last four weeks).

In referring a patient for a DMMR, medical practitioners should note that only patients meeting the following criteria will have the pharmacist portion funded through a Community Pharmacy Agreement program:

- Is a Medicare and/or Department of Veterans' Affairs (DVA) cardholder or a person who is eligible for a Medicare card;
- Is subject to a chronic condition and/or complex medication regimen; and
- Is failing to respond to treatment in the expected manner.

If the patient does not meet these criteria, the medical practitioner can still issue a referral under this item. However, the remainder of the service will be on a "user pays" basis as determined by the accredited pharmacist.

REGULATORY REQUIREMENTS

In conducting a DMMR, a medical practitioner must, with the patient's consent:

- assess a patient is subject to a chronic medical condition and/or complex medication regimen but their therapeutic goals are not being met; and
- following that assessment, refer the patient to a community pharmacy or an accredited pharmacist for a DMMR and provide the relevant clinical information required for the review; and
- discuss with the reviewing pharmacist the result of that review including suggested medication management strategies; and
- develop a written medication management plan following discussion with the patient; and
- provide the written medication management plan to a community pharmacy chosen by the patient.

For any particular patient - applicable not more than once in each 12 month period, except if there has been a significant change in the patient's condition or medication regimen requiring a new DMMR.

Claiming

A DMMR includes all DMMR-related services provided by the medical practitioner from the time the patient is identified as potentially needing a medication management review to the preparation of a draft medication management plan, and discussion and agreement with the patient.

The benefit is not claimable until all the components of the item have been rendered.

Benefits for a DMMR service under item 245 are payable only once in each 12 month period, except where there has been a significant change in the patient's condition or medication regimen requiring a new DMMR (e.g. diagnosis of a new condition or recent discharge from hospital involving significant changes in medication). In such cases the patient's invoice or Medicare voucher should be annotated to indicate that the DMMR service was required to be provided within 12 months of another DMMR service.

Provision of a subsequent DMMR must not be made solely by reaching an anniversary date, and the service is not intended to be undertaken on an ongoing review cycle.

If the DMMR is initiated during the course of a consultation undertaken for another purpose, this consultation may also be claimed separately.

If the consultation at which the medication management review is initiated is only for the purposes of initiating the review, only item 245 may be claimed.

If the medical practitioner determines that a DMMR is not necessary, item 245 does not apply. In this case, normal consultation items should be used.

Where a DMMR cannot be completed due to circumstances beyond the control of the medical practitioner (e.g. because the patient decides to not proceed further with the DMMR, or because of a change in the circumstances of the patient), the relevant MBS attendance items should be used.

FURTHER GUIDANCE

A DMMR should generally be undertaken by the patient's usual medical practitioner. This is the medical practitioner, or a medical practitioner working in the same medical practice, that has provided the majority of services to the patient over the previous 12 months and/or will be providing the majority of services to the patient over the coming 12 months.

The potential need for a DMMR may be identified either by the medical practitioner in the process of a consultation or by receipt of advice from the patient, a carer or another health professional including a pharmacist.

The process of referral to a community pharmacy or an accredited pharmacist includes:

- Obtaining consent from the patient, consistent with normal clinical practice, for a pharmacist to undertake the medication management review and for a charge to be incurred for the service for which a Medicare rebate is payable. The patient must be clearly informed of the purpose and possible outcomes of the DMMR, the process involved (including that the pharmacist will visit the patient at home, unless exceptional circumstances apply or they are an Aboriginal or Torres Strait Islander patient), what information will be provided to the pharmacist as part of the DMMR, and any additional costs that may be incurred; and
- Provision to the patient's preferred community pharmacy or accredited pharmacist, of relevant clinical information, by the medical practitioner for each individual patient, covering the patient's diagnosis, relevant test results and medication history, and current prescribed medications.

A DMMR referral form is available for this purpose. If this form is not used, the medical practitioner must provide patient details and relevant clinical information to the patient's preferred community pharmacy or accredited pharmacist.

The discussion of the review findings and report including suggested medication management strategies with the reviewing pharmacist includes:

- Receiving a written report from the reviewing pharmacist; and
- Discussing the relevant findings and suggested management strategies with the pharmacist (either by phone or face to face); and
- Developing a summary of the relevant review findings as part of the draft medication management plan.

Development of a written medication management plan following discussion with the patient includes:

- Developing a draft medication management plan and discussing this with the patient; and
- Once agreed, offering a copy of the written medication management plan to the patient and providing a copy to the community pharmacy or accredited pharmacist.

The agreed plan should identify the medication management goals and the proposed medication regimen for the patient.

Item 249 - Residential Medication Management Review

A Residential Medication Management Review (RMMR) is a collaborative service available to permanent residents of a Residential Aged Care facility (RACF) who are likely to benefit from such a review. This includes residents for whom quality use of medicines may be an issue or residents who are at risk of medication misadventure because of a significant change in their condition or medication regimen.

Patient eligibility

RMMRs are available to:

- new residents on admission into a RACF; and
- existing residents on an 'as required' basis, where in the opinion of the resident's medical practitioner, it is required because of a significant change in medical condition or medication regimen.

RMMRs are not available to people receiving respite care in a RACF. Domiciliary Medicines Reviews are available to these people when they are living in the community setting.

REGULATORY REQUIREMENTS

When conducting a RMMR, a medical practitioner must:

- (a) discuss the proposed review with the resident and seek the resident's consent to the review; and
- (b) collaborate with the reviewing pharmacist about the pharmacist's involvement in the review; and
- (c) provide input from the resident's most recent comprehensive medical assessment or, if such an assessment has not been undertaken, provide relevant clinical information for the review and for the resident's records; and
- (d) If recommended changes to the resident's medication management arise out of the review, participate in a post-review discussion (either face-to-face or by telephone) with the pharmacist to discuss the outcomes of the review including:
 - (i) the findings; and
 - (ii) medication management strategies; and
 - (iii) means to ensure that the strategies are implemented and reviewed, including any issues for implementation and follow-up; and
 - (iv) develop or revise the resident's medication management plan after discussion with the reviewing pharmacist; and
 - (v) finalise the plan after discussion with the resident.

A medical practitioner's involvement in a residential medication management review also includes:

- (a) offering a copy of the medication management plan to the resident (or the resident's carer or representative if appropriate); and
- (b) providing copies of the plan for the resident's records and for the nursing staff of the residential aged care facility; and
- (c) discussing the plan with nursing staff if necessary.

A post-review discussion is not required if:

- (a) there are no recommended changes to the resident's medication management arising out of the review; or

- (b) any changes are minor in nature and do not require immediate discussion; or
- (c) the pharmacist and medical practitioner agree that issues arising out of the review should be considered in a case conference.

A RMMR comprises all activities to be undertaken by the medical practitioner from the time the resident is identified as potentially needing a medication management review up to the development of a written medication management plan for the resident.

Claiming

A maximum of one RMMR rebate is payable for each resident in any 12 month period, except where there has been a significant change in the resident's medical condition or medication regimen requiring a new RMMR.

Benefits are payable when all the activities of a RMMR have been completed. A RMMR service covers the consultation at which the results of the medication management review are discussed and the medication management plan agreed with the resident:

- any immediate action required to be done at the time of completing the RMMR, based on and as a direct result of information gathered in the RMMR, should be treated as part of the RMMR item;
- any subsequent follow up should be treated as a separate consultation item;
- an additional consultation in conjunction with completing the RMMR should not be undertaken unless it is clinically indicated that a problem must be treated immediately.

In some cases a RMMR may not be able to be completed due to circumstances beyond the control of the medical practitioner (e.g. because the resident decides not to proceed with the RMMR or because of a change in the circumstances of the resident). In these cases the relevant MBS attendance item should be used in relation to any consultation undertaken with the resident.

If the consultation at which the RMMR is initiated, including discussion with resident and obtaining consent for the RMMR, is only for the purposes of initiating the review, only the RMMR item should be claimed.

If the RMMR is initiated during the course of a consultation undertaken for another purpose, the other consultation may be claimed as a separate service and the RMMR service would also apply.

If the medical practitioner determines that an RMMR is not necessary, the RMMR item does not apply. In this case, relevant consultation items should be used.

FURTHER GUIDANCE

A RMMR should generally be undertaken by the resident's 'usual medical practitioner'. This is the medical practitioner, or a medical practitioner working in the same medical practice, that has provided the majority of care to the resident over the previous 12 months and/or will be providing the majority of care to the resident over the next 12 months.

Medical practitioners who provide services on a facility-wide contract basis, and/or who are registered to provide services to RACFs as part of aged care panel arrangements, may also undertake RMMRs for residents as part of their services.

Generally, new residents should receive an RMMR as soon as possible after admission. Where a resident has a Comprehensive Medical Assessment (CMA), the RMMR should be undertaken preferably after the results of the CMA are available to inform the RMMR.

A RMMR service should be completed within a reasonable time-frame. As a general guide, it is expected that most RMMR services would be completed within four weeks of being initiated.

The resident's medical practitioner may identify the potential need for an 'as required' RMMR for existing residents, including in the course of a consultation for another purpose. The potential need for an RMMR may also be identified by the reviewing pharmacist, supply pharmacist, Residential Aged Care Facility staff, the resident, the resident's carer or other members of the resident's health care team.

The medical practitioner should assess the clinical need for an RMMR from a quality use of medicines perspective with the resident as the focus, and initiate an RMMR if appropriate, in collaboration with the reviewing pharmacist.

The medical practitioner and reviewing pharmacist should agree on a preferred means for communicating issues and information relating to the provision of an RMMR service. This should include the method(s) of initiating the RMMR, exceptions to the post review discussion, and the preferred method of communication. This can be done on a facility basis rather than on a case-by-case basis.

Where the provision of RMMR services involves consultation with a resident it should be read as including consultation with the resident and/or their carer or representative where appropriate.

RMMRs do not count for the purposes of derived fee arrangements that apply to other consultations in a Residential Aged Care Facility.

AN.7.19 Medical Practitioner Cervical Screen from a Person Who is Unscreened or Significantly Under-Screened (Items 251 to 257)

Eligibility

Items 251 to 257 are available to medical practitioners providing services in eligible areas.

Eligible area means an area that is a Modified Monash 2 area, Modified Monash 3 area, Modified Monash 4 area, Modified Monash 5 area, Modified Monash 6 area or Modified Monash 7 area.

Medical practitioners providing services in a Modified Monash 1 area should use the items in Group A19, Subgroup 1.

A locator map to identify a medical practice's Modified Monash Model Area location is available at the DoctorConnect website at <http://www.doctorconnect.gov.au/internet/otd/publishing.nsf/Content/locator>

Guidance Notes

Item numbers 251, 252, 253, 254, 255, 256 and 257 should be used in place of the usual attendance item where as part of a consultation, a sample for cervical screening is collected from a person between the ages of 24 years and 9 months and 74 years inclusive who has not had a cervical smear in the last four years. Cervical Screening in accordance with the National Cervical Screening Policy at P.16.11.

Self-collection of a sample for screening is only available for women between the ages of 30 and 74 years of age who are overdue for screening by two or more years (i.e. being 4 years since their last Pap test). Self-collection should only be offered to an eligible person who refuses to have a sample collected by their requesting practitioner.

When providing this service, the medical practitioner must satisfy themselves that the person has not had a cervical screening test in the last four years by:

- (a) asking the person if they can remember having a cervical screening test in the last four years;
- (b) checking their own practice's medical records; and
- (c) checking the National Cancer Screening Register.

A person from the following groups are more likely than the general population to be unscreened or significantly under screened - low socio-economic status, culturally and linguistically diverse backgrounds, Indigenous communities, rural and remote areas and older people.

Vault smears are not eligible for items 251 to 257.

In addition to attracting a Medicare rebate, the use of these items will initiate a Cervical Screening SIP through the PIP.

A PIP Cervical Screening SIP is available for taking a cervical screen from a person who has not been screened in the last for four years. The SIP will be paid to the medical practitioner who provided the service if the service was provided in a medical practice participating in the PIP Cervical Screening Incentive. A further PIP Cervical Screening Incentive payment is paid to medical practices which reach target levels of cervical screening for their patients aged 24 years and 9 months of age to 74 years inclusive. More detailed information on the PIP Cervical Screening Incentive is available from the Department of Human Services PIP enquiry line on 1800 222 032 or from the Department of Human Services [website](#).

AN.7.20 Medical Practitioner Completion of the Annual Diabetes Cycle of Care for Patients with Established Diabetes Mellitus (Items 259 to 264)

Eligibility

Items 259 to 264 are available to medical practitioners providing services in eligible areas.

Eligible area means an area that is a Modified Monash 2 area, Modified Monash 3 area, Modified Monash 4 area, Modified Monash 5 area, Modified Monash 6 area or Modified Monash 7 area.

Medical practitioners providing services in a Modified Monash 1 area should use the items in Group A19, Subgroup 2.

A locator map to identify a medical practice's Modified Monash Model Area location is available at the DoctorConnect website at <http://www.doctorconnect.gov.au/internet/otd/publishing.nsf/Content/locator>

Guidance Notes

Item numbers 259, 260, 261, 262, 263 and 264 should be used in place of the usual attendance item when a consultation completes the minimum requirements of the annual Diabetes Cycle of Care for a patient with established diabetes mellitus.

The annual Diabetes Cycle of Care must be completed over a period of 11 months and up to 13 months, and at a minimum must include:

Assess diabetes control by measuring HbA1c	At least once every year
Ensure that a comprehensive eye examination is carried out*	At least once every two years
Measure weight and height and calculate BMI**	At least twice every cycle of care
Measure blood pressure	At least twice every cycle of care
Examine feet***	At least twice every cycle of care
Measure total cholesterol, triglycerides and HDL cholesterol	At least once every year
Test for microalbuminuria	At least once every year
Test for estimated Glomerular Filtration Rate (eGFR)	At least once every year
Provide self-care education	Patient education regarding diabetes management
Review diet	Reinforce information about appropriate dietary choices
Review levels of physical activity	Reinforce information about appropriate levels of physical activity
Check smoking status	Encourage cessation of smoking (if relevant)
Review of Medication	Medication review

*Not required if the patient is blind or does not have both eyes.

**Initial visit: measure height and weight and calculate BMI as part of the initial assessment.

Subsequent visits: measure weight.

***Not required if the patient does not have both feet.

These requirements are generally based on the current guidelines produced by Diabetes Australia and the Royal Australian College of General Practitioners (Diabetes Management in General Practice). Medical practitioners using these items should familiarise themselves with these guidelines and with subsequent editions of these guidelines as they become available.

Use of these items certifies that the minimum requirements of the Diabetes Cycle of Care have been completed for a patient with established diabetes mellitus in accordance with the guidelines above.

These items should only be used once per cycle per patient: A7 Subgroup 8, A18 Subgroup 2 or A19 Subgroup 2. For example, if item 259 is claimed for a patient then no other diabetes item in groups A18 or A19 can be used for this patient in the same cycle.

The requirements for claiming these items are the minimum needed to provide good care for a patient with diabetes. Additional levels of care will be needed by insulin-dependent patients and those with abnormal review findings, complications and/or co-morbidities.

In addition to attracting a Medicare rebate, recording a completion of a Diabetes Cycle of Care through the use of these items will initiate a Diabetes Service Incentive Payment (SIP) through the Practice Incentives Program (PIP).

All visits should be billed under the normal attendance items with the exception of the visit that completes all of the minimum requirements of the Diabetes Cycle of Care.

A PIP Diabetes SIP is available for completing the minimum requirements of the Diabetes Cycle of Care for individual patients as specified above. The Diabetes SIP is only paid once every 11-13 month period per patient. The SIP will be paid to the medical practitioner who provided the service if the service was provided in a medical practice participating in the PIP Diabetes Incentive. A further PIP Diabetes Incentive payment is paid to medical practices which reach target levels of care for their patients with diabetes mellitus. More detailed information on the PIP Diabetes Incentive is available from the Department of Human Services PIP enquiry line on 1800 222 032 or the Department of Human Services [website](#).

AN.7.21 Medical Practitioner Completion of the Asthma Cycle of Care (Items 265 to 271)

Eligibility

Items 265 to 271 are available to medical practitioners providing services in eligible areas.

Eligible area means an area that is a Modified Monash 2 area, Modified Monash 3 area, Modified Monash 4 area, Modified Monash 5 area, Modified Monash 6 area or Modified Monash 7 area.

Medical practitioners providing services in a Modified Monash 1 area should use the items in Group A19, Subgroup 3.

A locator map to identify a medical practice's Modified Monash Model Area location is available at the DoctorConnect website at <http://www.doctorconnect.gov.au/internet/otd/publishing.nsf/Content/locator>

Guidance Notes

Item numbers 265, 266, 268, 269, 270 and 271 should be used in place of the usual attendance item when a consultation completes the minimum requirements of the Asthma Cycle of Care. The Practice Incentives Program

(PIP) Asthma Incentive is for patients with moderate to severe asthma who in the opinion of the medical practitioner could benefit from review, eg those whose asthma management could be improved.

At a minimum the Asthma Cycle of Care must include:

- At least 2 asthma related consultations within 12 months for a patient with moderate to severe asthma (at least 1 of which (the review consultation) is a consultation that was planned at a previous consultation);
- Documented diagnosis and assessment of level of asthma control and severity of asthma;
- Review of the patient's use of and access to asthma-related medication and devices;
- Provision to the patient of a written asthma action plan (if the patient is unable to use a written asthma action plan - discussion with the patient about an alternative method of providing an asthma action plan, and documentation of the discussion in the patient's medical records);
- Provision of asthma self-management education to the patient, and
- Review of the written or documented asthma action plan.

The Asthma Cycle of Care should be provided to a patient by one medical practitioner or in exceptional circumstances by another medical practitioner within the same practice. In most cases, this will be the patient's usual medical practitioner. Completion of the Asthma Cycle of Care does not preclude referral to a specialist, but a specialist consultation cannot be counted as one of the two visits.

The patient's medical record should include documentation of each of these requirements and the clinical content of the patient-held written asthma action plan.

These items will only be payable for the completion of one Asthma Cycle of Care for each eligible patient per 12 month period, unless a further Asthma Cycle of Care is clinically indicated by exceptional circumstances.

If a subsequent Asthma Cycle of Care is indicated and the incentive item is to be claimed more than once per 12 month period for a patient, then the patient's invoice or Medicare voucher should be annotated to indicate that the Asthma Cycle of Care was required to be provided within 12 months of another Asthma Cycle of Care.

The minimum requirements of the Asthma Cycle of Care may be carried out in two (2) visits or if necessary as many visits as clinically required. The National Asthma Council's website provides a guide for completion of the Asthma Cycle of Care.

The visit that completes the Asthma Cycle of Care should be billed using the appropriate item listed in Group A7 Subgroup 8.

All visits should be billed under the normal attendance items with the exception of the visit that completes all of the minimum requirements of the Asthma Cycle of Care.

In addition to attracting a Medicare rebate, recording a completion of an Asthma Cycle of Care through the use of these items, will initiate an Asthma Service Incentive Payment (SIP) through the PIP.

A PIP Asthma SIP is available for completing the minimum requirements of the Asthma Cycle of Care for individual patients as specified above. The SIP will be paid to the medical practitioner who provided the service if the service was provided in a medical practice participating in the PIP Asthma Incentive. More detailed information on the PIP Asthma Incentive is available from the Department of Human Services PIP enquiry line on 1800222032 or from the Department of Human Services [website](#).

For more detailed information regarding asthma diagnosis, assessment and best practice management refer to the National Asthma Council's [website](#).

Assessment of Severity

Generally, patients who meet the following criteria can be assumed to have been assessed as having moderate to severe asthma:

- Symptoms on most days, OR
- Use of preventer medication, OR
- Bronchodilator use at least 3 times per week, OR
- Hospital attendance or admission following an acute exacerbation of asthma.

Where the general rule does not apply to a particular patient, the classification of severity described by the current edition of the National Asthma Council's Asthma Management Handbook can be used. Visit the National Asthma Council's [website](#) for more details.

AN.7.22 Medical Practitioner Mental Health Treatment (Items 272 to 282)

This note provides information on the Mental Health Treatment items 272, 276, 277, 279, 281 and 282. It includes an overview of the items, patient and provider eligibility, what activities are involved in providing services rebated by these items, links to other Medicare items and additional claiming information.

Overview

The Mental Health Treatment items define services for which Medicare rebates are payable where medical practitioners undertake early intervention, assessment and management of patients with mental disorders. They include referral pathways for treatment by psychiatrists, clinical psychologists and other allied mental health workers. These items complement the mental health items for psychiatrists (items 296 - 299), clinical psychologists (items 80000 - 80021) and allied mental health providers (items 80100 - 80171).

The Mental Health Treatment items incorporate a model for best practice primary health treatment of patients with mental disorders, including patients with both chronic or non-chronic disorders, that comprises:

- assess and plan;
- provide and/or refer for appropriate treatment and services; and
- review and ongoing management as required.

Who can provide

The GP Mental Health Treatment Plan, Review and Consultation items are available for use in general practice by medical practitioners, but excluding specialists or consultant physicians.

Training Requirements (item 281 and 282)

Medical practitioner providing GP Mental Health Treatment Plans, and who have undertaken mental health skills training recognised through the General Practice Mental Health Standards Collaboration, have access to items 281 and 282. For medical practitioners who have not undertaken training, items 272 and 276 are available. Item 272 provides for a GP Mental Health Treatment Plan lasting at least 20 minutes and item 276 provides for a GP Mental Health Treatment Plan lasting at least 40 minutes. It is strongly recommended that medical practitioners providing mental health treatment have appropriate mental health training. Medical professional organisations support the value of appropriate mental health training for medical practitioners using these items.

Which patients are eligible - Mental Disorder

These items are for patients with a mental disorder who would benefit from a structured approach to the management of their treatment needs. Mental disorder is a term used to describe a range of clinically diagnosable disorders that significantly interfere with an individual's cognitive, emotional or social abilities (Refer to the World Health Organisation, 1996, Diagnostic and Management Guidelines for Mental Disorders in Primary Care: ICD-10

Chapter V Primary Care Version). Dementia, delirium, tobacco use disorder and mental retardation are not regarded as mental disorders for the purposes of the Mental Health Treatment items.

These services are available to eligible patients in the community. Mental Health Treatment Plan and Review services can also be provided to private in-patients (including private in-patients who are residents of aged care facilities) being discharged from hospital. Where the medical practitioner who provides the Mental Health Treatment item is providing in-patient treatment the item is claimed as an in-hospital service (at 75% MBS rebate). Medical practitioners are able to contribute to care plans for patients using item 231, Contribution to a Multidisciplinary Care Plan, and to care plans for residents of aged care facilities using item 232.

PREPARING A GP MENTAL HEALTH TREATMENT PLAN (Item 272, 276, 281 or 282)

What is involved - Assess and Plan

A rebate can be claimed once the medical practitioner has undertaken an assessment and prepared a GP Mental Health Treatment Plan by completing the steps from Assessment to the point where patients do not require a new plan after their initial plan has been prepared, and meeting the relevant requirements listed under 'Additional Claiming Information'. This item covers both the assessment and preparation of the GP Mental Health Treatment Plan. Where the patient has a carer, the practitioner may find it useful to consider having the carer present for the assessment and preparation of the GP Mental Health Treatment Plan or components thereof (subject to patient agreement).

Assessment

An assessment of a patient must include:

- recording the patient's agreement for the GP Mental Health Treatment Plan service;
- taking relevant history (biological, psychological, social) including the presenting complaint;
- conducting a mental state examination;
- assessing associated risk and any co-morbidity;
- making a diagnosis and/or formulation; and
- administering an outcome measurement tool, except where it is considered clinically inappropriate.

The assessment can be part of the same consultation in which the GP Mental Health Treatment Plan is developed, or can be undertaken in different visits. Where separate visits are undertaken for the purpose of assessing the patient and developing the GP Mental Health Treatment Plan, they are part of the GP Mental Health Treatment Plan service and are included in item 272, 276, 281 or 282.

In order to facilitate ongoing patient focussed management, an outcome measurement tool should be utilised during the assessment and the review of the GP Mental Health Treatment Plan, except where it is considered clinically inappropriate. The choice of outcome measurement tools to be used is at the clinical discretion of the practitioner. Medical practitioners using such tools should be familiar with their appropriate clinical use, and if not, should seek appropriate education and training.

Preparation of a GP Mental Health Treatment Plan

In addition to assessment of the patient, preparation of a GP Mental Health Treatment Plan must include:

- discussing the assessment with the patient, including the mental health formulation and diagnosis or provisional diagnosis;
- identifying and discussing referral and treatment options with the patient, including appropriate support services;

- agreeing goals with the patient - what should be achieved by the treatment - and any actions the patient will take;
- provision of psycho-education;
- a plan for crisis intervention and/or for relapse prevention, if appropriate at this stage;
- making arrangements for required referrals, treatment, appropriate support services, review and follow-up; and
- documenting this (results of assessment, patient needs, goals and actions, referrals and required treatment/services, and review date) in the patient's GP Mental Health Treatment Plan.

Treatment options can include referral to a psychiatrist; referral to a clinical psychologist for psychological therapies, or to an appropriately trained medical practitioner or allied mental health professional for provision of focussed psychological strategy services; pharmacological treatments; and coordination with community support and rehabilitation agencies, mental health services and other health professionals.

Once a GP Mental Health Treatment Plan has been completed and claimed on Medicare either through items 272, 276, 281 or 282 or through GP items 2700, 2701, 2715 or 2717, a patient is eligible to be referred for up to 10 Medicare rebateable allied mental health services per calendar year for psychological therapy or focussed psychological strategy services. Patients will also be eligible to claim up to 10 separate services for the provision of group therapy (either as part of psychological therapy or focussed psychological strategies).

When referring patients medical practitioners should provide similar information as per normal referral arrangements. This could include providing a copy of the patient's GP Mental Health Treatment Plan, where appropriate and with the patient's agreement. The necessary referrals should be made after the steps above have been addressed and the patient's GP Mental Health Treatment Plan has been completed. It should be noted that the patient's mental health treatment plan should be treated as a living document for updating as required. In particular, the plan can be updated at any time to incorporate relevant information, such as feedback or advice from other health professionals on the diagnosis or treatment of the patient.

On completion of a course of treatment provided through Medicare rebateable services, the service provider must provide a written report on the course of treatment to the medical practitioner. For the purposes of the Medicare rebateable allied mental health items, a course of treatment will consist of the number of services stated on the patient's referral (up to a maximum of six in any one referral). There may be two or more courses of treatment within a patient's entitlement of up to 10 services per calendar year. The number of services that the patient is being referred for is at the discretion of the referring medical practitioner.

Many patients will not require a new plan after their initial plan has been prepared. A new plan should not be prepared unless clinically required, and generally not within 12 months of a previous plan. Ongoing management can be provided through the GP Mental Health Treatment Consultation and standard consultation items, as required, and reviews of progress through the GP Mental Health Treatment Plan Review item. A rebate for preparation of a GP Mental Health Treatment Plan will not be paid within 12 months of a previous claim for the patient for the same or another Mental Health Treatment Plan item or within three months following a claim for a GP Mental Health Treatment Review (item 277 or GP item 2712).

REVIEWING A GP MENTAL HEALTH TREATMENT PLAN (Item 277)

The review item is a key component for assessing and managing the patient's progress once a GP Mental Health Treatment Plan has been prepared, along with ongoing management through the GP Mental Health Treatment Consultation item and/or standard consultation items. A patient's GP Mental Health Treatment Plan should be reviewed at least once.

A rebate can be claimed once the medical practitioner who prepared the patient's GP Mental Health Treatment Plan (or another medical practitioner in the same practice or in another practice where the patient has changed practices) has undertaken a systematic review of the patient's progress against the GP Mental Health Treatment Plan by

completing the activities that must be included in a review and meeting the relevant requirements listed under 'Additional Claiming Information'. The review item can also be used where a psychiatrist has prepared a referred assessment and management plan (item 291), as if that patient had a GP Mental Health Treatment Plan. The review service must include a personal attendance by the medical practitioner with the patient.

The review must include:

- recording the patient's agreement for this service;
- a review of the patient's progress against the goals outlined in the GP Mental Health Treatment Plan;
- modification of the documented GP Mental Health Treatment Plan if required;
- checking, reinforcing and expanding education;
- a plan for crisis intervention and/or for relapse prevention, if appropriate and if not previously provided; and
- re-administration of the outcome measurement tool used in the assessment stage, except where considered clinically inappropriate.

Note: This review is a formal review point only and it is expected that in most cases there will be other consultations between the patient and the medical practitioner as part of ongoing management.

The recommended frequency for the review service, allowing for variation in patients' needs, is:

- an initial review, which should occur between four weeks to six months after the completion of a GP Mental Health Treatment Plan; and
- if required, a further review can occur three months after the first review.

In general, most patients should not require more than two reviews in a 12 month period, with ongoing management through the GP Mental Health Treatment Consultation and standard consultation items, as required.

A rebate will not be paid within three months of a previous claim for the same item/s or within four weeks following a claim for a GP Mental Health Treatment Plan item.

GP MENTAL HEALTH TREATMENT CONSULTATION (Item 279)

The GP Mental Health Treatment Consultation item is for an extended consultation with a patient where the primary treating problem is related to a mental disorder, including for a patient being managed under a GP Mental Health Treatment Plan. This item may be used for ongoing management of a patient with a mental disorder. This item should not be used for the development of a GP Mental Health Treatment Plan.

A GP Mental Health Treatment Consultation must include:

- taking relevant history and identifying the patient's presenting problem(s) (if not previously documented);
- providing treatment, advice and/or referral for other services or treatment; and
- documenting the outcomes of the consultation in the patient's medical records and other relevant mental health plan (where applicable).

A patient may be referred from a GP Mental Health Treatment Consultation for other treatment and services as per normal referral arrangements. This does not include referral for Medicare rebateable services for focussed psychological strategy services, clinical psychology or other allied mental health services, unless the patient is being managed by the medical practitioner under a GP Mental Health Treatment Plan or under a referred psychiatrist assessment and management plan (item 291).

Consultations associated with this item must be at least 20 minutes duration.

REFERRAL

Once a GP Mental Health Treatment Plan has been completed and claimed on Medicare, or a medical practitioner is managing a patient under a referred psychiatrist assessment and management plan (item 291), a patient is eligible for up to 10 Medicare rebateable allied mental health services per calendar year for services by:

- clinical psychologists providing psychological therapies; or
- appropriately trained medical practitioners or allied mental health professionals providing focussed psychological strategy (FPS) services.

In addition to the above services, patients will also be eligible to claim up to 10 separate services for the provision of group therapy.

When referring patients, medical practitioners should provide similar information as per normal referral arrangements, and specifically consider including both a statement identifying that a GP Mental Health Treatment Plan has been completed for the patient (including, where appropriate and with the patient's agreement, attaching a copy of the patient's GP Mental Health Treatment Plan) and clearly identifying the specific number of sessions the patient is being referred for. Referrals for patients with either a GP Mental Health Treatment Plan or referred psychiatrist assessment and management plan (item 291) should be provided, as required, for an initial course of treatment (a maximum of six services in any one referral but may be less depending on the referral and the patient's clinical need). There may be two or more courses of treatment within a patient's entitlement of up to 10 services per calendar year. The medical practitioner should consider the patient's clinical need for further sessions after the initial referral. This can be done using a GP Mental Health Treatment Plan Review, a GP Mental Health Treatment Consultation or a standard consultation item.

In the instance where a patient has received the 10 psychological therapy services (items 80000 to 80021), focussed psychological services-allied mental health services (items 80100 to 80171) or GP focussed psychological strategies services (items 283 to 287 or GP items 2721 to 2727) available under the Better Access to Psychiatrists, Psychologists and General Practitioners through the Medicare Benefits Schedule initiative per calendar year and is considered to clinically benefit from some additional services, the patient may be eligible for Primary Health Networks (PHNs) funded psychological therapies if they meet relevant eligibility criteria for the PHN commissioned services. It is recommended that providers refer to their PHN for further guidance.

ADDITIONAL CLAIMING INFORMATION

Before proceeding with any GP Mental Health Treatment Plan or Review service the medical practitioner must ensure that:

- (a) the steps involved in providing the service are explained to the patient and (if appropriate and with the patient's permission) to the patient's carer; and
- (b) the patient's agreement to proceed is recorded.

Before completing any GP Mental Health Treatment Plan or Review service and claiming a benefit for that service, the medical practitioner must offer the patient a copy of the treatment plan or reviewed treatment plan and add the document to the patient's records. This should include, subject to the patient's agreement, offering a copy to their carer, where appropriate. The medical practitioner may, with the permission of the patient, provide a copy of the GP Mental Health Treatment Plan, or relevant parts of the plan, to other providers involved in the patient's treatment.

The GP Mental Health Treatment Plan, Review and Consultation items cover the consultations at which the relevant items are undertaken, noting that:

- if a GP Mental Health Treatment item is undertaken or initiated during the course of a consultation for another purpose, the GP Mental Health Treatment Plan, Review or Consultation item and the relevant item for the other consultation may both be claimed;
- if a GP Mental Health Treatment Plan is developed over more than one consultation, and those consultations are for the purposes of developing the plan, only the GP Mental Health Treatment Plan item should be claimed; and
- if a consultation is for the purpose of a GP Mental Health Treatment Plan, Review or Consultation item, a separate and additional consultation should not be undertaken in conjunction with the mental health consultation, unless it is clinically indicated that a separate problem must be treated immediately.

Where separate consultations are undertaken in conjunction with mental health consultations, the patient's invoice or Medicare voucher (assignment of benefit form) for the separate consultation should be annotated (e.g. separate consultation clinically required/indicated).

A benefit is not claimable and an account should not be rendered until all components of the relevant item have been provided.

All consultations conducted as part of the GP Mental Health Treatment items must be rendered by the medical practitioner and include a personal attendance with the patient. A specialist mental health nurse, other allied health practitioner, Aboriginal and Torres Strait Islander health practitioner or Aboriginal Health Worker with appropriate mental health qualifications and training may provide general assistance to medical practitioners in provision of mental health care.

Links to other Medicare Services

It is preferable that wherever possible patients have only one plan for primary care management of their mental disorder. As a general principle the creation of multiple plans should be avoided, unless the patient clearly requires an additional plan for the management of a separate medical condition.

The Chronic Disease Management (CDM) care plan items (items 229, 230, 231, 232 and 233, and GP items 721, 723, 729, 731 and 732) continue to be available for patients with chronic medical conditions, including patients with complex needs.

- Where a patient has a mental health condition only, it is anticipated that they will be managed under the GP Mental Health Treatment items.
- Where a patient has a separate chronic medical condition, it may be appropriate to manage the patient's medical condition through a GP Management Plan, and to manage their mental health condition through a GP Mental Health Treatment Plan. In this case, both items can be used.
- Where a patient has a mental health condition as well as significant co-morbidities and complex needs requiring team-based care, the medical practitioner is able to use both the CDM items (for team-based care) and the GP Mental Health Treatment items.

AN.7.23 Medical Practitioner Provision of Focussed Psychological Strategies (Items 283 to 287, 371 and 372)

Focussed psychological strategies are specific mental health care management strategies, derived from evidence based psychological therapies that have been shown to integrate the best research evidence of clinical effectiveness with general practice clinical expertise. The decision to recommend Focussed Psychological Strategies to a patient must be made either in the context of a GP Mental Health Treatment Plan, shared care plan or a psychiatrist assessment and management plan.

Minimum Requirements

All consultations providing Focussed Psychological Strategies must be rendered by a medical practitioner (but not including a specialist or consultant physician).

To ensure appropriate standards for the provision of Focussed Psychological Strategies, payment of Medicare rebates for these items will be limited to medical practitioners who are registered with the Department of Human Services as having satisfied the requirements for higher level mental health skills for provision of the service, as determined by the General Practice Mental Health Standards Collaboration.

Continued access to item numbers 283 to 287, 371 and 372 will be dependent on the practitioner meeting the ongoing mental health education requirements as determined by the General Practice Mental Health Standards Collaboration.

Patients will be permitted to claim Medicare rebates for up to 10 allied mental health services under these item numbers per calendar year. The 10 services may consist of: GP focussed psychological strategies services (items 283 to 287, 371 and 372 or GP items 2721 to 2731); and/or psychological therapy services (items 80000 to 80015); and/or focussed psychological strategies – allied mental health services (items 80100 to 80115; 80125 to 80140; 80150 to 80165).

Out-of-Surgery Consultation

It is expected that this service would be provided only for patients who are unable to attend the practice.

Telehealth Consultation

A **telehealth area** means an area that is a Modified Monash 4 area, Modified Monash 5 area, Modified Monash 6 area or Modified Monash 7 area.

Specific Modified Monash locations can be looked up at [DoctorConnect](#)

Specific Focussed Psychological Strategies

A range of acceptable strategies has been approved for use by medical practitioners in this context. These are:

- 1. Psycho-education**
(including motivational interviewing)
- 2. Cognitive-behavioural therapy including:**
 - **Behavioural interventions**
 - Behaviour modification
 - Exposure techniques
 - Activity scheduling
 - **Cognitive interventions**
 - Cognitive therapy
- 3. Relaxation strategies**
 - Progressive muscle relaxation
 - Controlled breathing
- 4. Skills training**
 - Problem solving skills and training
 - Anger management
 - Social skills training
 - Communication training
 - Stress management
 - Parent management training
- 5. Interpersonal therapy**
- 6. Eye-Movement Desensitisation Reprocessing (EMDR)**

Mental Disorder

A mental disorder may be defined as a significant impairment of an individual's cognitive, affective and/or relational abilities which may require intervention and may be a recognised, medically diagnosable illness or disorder – this definition is informed by the World Health Organisation, 1996, Diagnostic and Management Guidelines for Mental Disorders in Primary Care:ICD - 10 Chapter V Primary Health Care Version.

Dementia, delirium, tobacco use disorder and mental retardation are not regarded as mental disorders for the purposes of these items.

AN.7.24 Medical Practitioner After-Hours Attendances To Which No Other Item Applies (Items 733 to 789)

After-hours attendance items may be claimed as follows:

Items **733, 737, 741 and 745** apply only to a professional attendance on 1 patient on 1 occasion that is provided:

- on a public holiday;
- on a Sunday;
- before 8am, or after 1 pm on a Saturday;
- before 8am, or after 8pm on any day other than a Saturday, Sunday or public holiday.

Items **761, 763, 766, 769, 772, 776, 788 and 789** apply to a professional attendance on 1 or more patients on 1 occasion that is provided:

- on a public holiday;
- on a Sunday;
- before 8am, or after 12 noon on a Saturday;
- before 8am, or after 6pm on any day other than a Saturday, Sunday or public holiday.

AN.7.25 Medical Practitioner Non-Directive Pregnancy Support Counselling Service (Item 792)

The Pregnancy Support Counselling initiative provides for Medicare benefits to be paid for non-directive pregnancy support counselling services provided to a person who is pregnant or who has been pregnant in the 12 months preceding the first service to which this item or items 4001, 81000, 81005 or 81010 applies in relation to that pregnancy, by an eligible medical practitioner (not including a specialist or consultant physician) or allied health professional on referral from a medical practitioner.

There are five MBS items for the provision of non-directive pregnancy support counselling services:

- Item 792 – services provided by an eligible medical practitioner;
- Item 4001 - services provided by an eligible GP;
- Item 81000 - services provided by an eligible psychologist;
- Item 81005 - services provided by an eligible social worker; and
- Item 81010 - services provided by an eligible mental health nurse.

This note relates to the provision of a non-directive pregnancy support counselling service by an eligible medical practitioner.

Non-directive counselling is a form of counselling based on the understanding that, in many situations, people can resolve their own problems without being provided with a solution by the counsellor. The counsellor's role is to encourage the person to express their feelings but not suggest what decision the person should make. By listening and reflecting back what the person reveals to them, the counsellor helps them to explore and understand their feelings. With this understanding, the person is able to make the decision which is best for them.

The service involves the medical practitioner undertaking a safe, confidential process that helps the patient explore concerns they have about a current pregnancy or a pregnancy that occurred in the preceding 12 months. This includes providing, on request, unbiased, evidence-based information about all options and services available to the patient.

The service may be used to address any pregnancy related issues for which non-directive counselling is appropriate.

Patient eligibility

Medicare rebates for non-directive pregnancy support counselling services provided using item 792 are available to a person who is pregnant or who has been pregnant in the 12 months preceding the first service to which this item or item 4001, 81000, 81005 or 81010 applies in relation to that pregnancy.

Partners of eligible patients may attend each or any counselling session, however, only one fee applies to each service provided.

Medicare benefits

Medicare benefits are payable for up to three non-directive pregnancy support counselling services per patient, per pregnancy, from any of the following items – 792, 4001, 81000, 81005 and 81010.

Where the patient is unsure of the number of Medicare rebated non-directive pregnancy support counselling services they have already accessed, the patient may check with the Department of Human Services on 132 011. Alternatively, the medical practitioner may check with the Department of Human Services (although the patient must be present to give permission).

Item 10990 or item 10991 can also be claimed in conjunction with item 792 provided the conditions of the relevant item, 10990 or 10991, are satisfied.

Minimum Requirements

This service may only be provided by a medical practitioner who has completed appropriate non-directive pregnancy counselling training.

AN.7.26 Medical Practitioner Telehealth Patient-End Support Services (Items 812 to 892)

This note provides information on the telehealth MBS attendance items for medical practitioners to provide clinical support to their patients, when clinically relevant, during video consultations with specialists or consultant physicians under items 812, 827, 829, 867, 868, 869, 873, 876, 881, 885 and 892.

Telehealth patient-end support services can only be claimed where:

- a Medicare eligible specialist service is claimed;
- the service is rendered in Australia; and
- where this is necessary for the provision of the specialist service.

A video consultation will involve a single specialist or consultant physician attending to the patient, with the possible participation of another medical practitioner, a participating optometrist, a participating nurse practitioner, a participating midwife, practice nurse, Aboriginal and Torres Strait Islander health practitioner or Aboriginal health worker at the patient end. The above time-tiered items provide for patient-end support services by a medical practitioner in various settings including consulting rooms, other than consulting rooms, eligible residential aged care services and Aboriginal Medical Services.

Clinical indications

The specialist or consultant physician must be satisfied that it is clinically appropriate to provide a video consultation to a patient. The decision to provide clinically relevant support to the patient is the responsibility of the specialist or physician.

Telehealth specialist services can be provided to patients when there is no patient-end support service provided.

Collaborative Consultation

The medical practitioner, who provides assistance to the patient where this is necessary for the provision of the specialist service, may seek assistance from a health professional (e.g. a practice nurse, Aboriginal or Torres Strait Islander health practitioner or Aboriginal health worker) but only one item is billable for the patient-end support service. The medical practitioner must be present during part or all of the consultation in order to bill an appropriate time-tiered MBS item. Any time spent by another health professional called to assist with the consultation may not be counted against the overall time taken to complete the video consultation.

Restrictions

The MBS telehealth attendance items are not payable for services to an admitted hospital patient (this includes Hospital in the Home patients). Benefits are not payable for telephone or email consultations. In order to fulfil the item descriptor there must be a visual and audio link between the patient and the remote practitioner. If the remote practitioner is unable to establish both a video and audio link with the patient, a MBS rebate for a telehealth attendance is not payable.

Eligible Geographical Areas

Geographic eligibility for telehealth services funded under Medicare is determined according to the Australian Standard Geographical Classification Remoteness Area (ASGC-RA) classifications. Telehealth Eligible Areas are those areas that are outside a Major City (RA1) according to ASGC-RA (RA2-5). Patients and providers are able to check their eligibility by following the links on the MBS Online website (www.mbsonline.gov.au/telehealth).

There is a requirement for the patient and specialist to be located a minimum of 15km apart at the time of the consultation. Minimum distance between specialist and patient video consultations are measured by the most direct (ie least distance) route by road. The patient or the specialist is not permitted to travel to an area outside the minimum 15 km distance in order to claim a video conference.

This rule will not apply to specialist video consultation with patients who are a care recipient in an eligible residential care service; or at an eligible Aboriginal Medical Service or Aboriginal Community Controlled Health Service for which there is a direction, made under subsection 19(2) of the Health Insurance Act 1973, as these patients are able to receive telehealth services anywhere in Australia.

Telehealth Eligible Service Areas are defined at www.mbsonline.gov.au/telehealtheligibleareas

Record Keeping

Participating telehealth medical practitioners must keep contemporaneous notes of the consultation including documenting that the service was performed by video conference, the date, time and the people who participated.

Only clinical details recorded at the time of the attendance count towards the time of the consultation. It does not include information added at a later time, such as reports of investigations.

Multiple attendances on the same day

In some situations a patient may receive a telehealth consultation and a face to face consultation by the same or different medical practitioner on the same day.

Medicare benefits may be paid for more than one video consultation on a patient on the same day by the same medical practitioner, provided the second (and any following) video consultations are not a continuation of the

initial or earlier video consultations. Medical practitioners will need to provide the times of each consultation on the patient's account or bulk billing voucher.

Extended Medicare Safety Net (EMSN)

Items which provide for telehealth patient-end support services are subject to EMSN caps equal to 300% of the schedule fee (to a maximum of \$500). This is consistent with Government policy relating to capping EMSN for MBS consultation services.

Aftercare Rule

Video consultations are subject to the same aftercare rules as face to face consultations.

Referrals

The referral procedure for a video consultation is the same as for conventional face-to-face consultations.

Technical requirements

In order to fulfil the item descriptor there must be a visual and audio link between the patient and the remote practitioner. If the remote practitioner is unable to establish both a video and audio link with the patient, a MBS rebate for a specialist video consultation is not payable.

Individual clinicians must be confident that the technology used is able to satisfy the item descriptor and that software and hardware used to deliver a videoconference meets the applicable laws for security and privacy.

Bulk billing

Bulk bill incentive items 10990 or 10991 may be billed in conjunction with the telehealth items 812, 827, 829, 867, 868, 869, 873, 876, 881, 885 and 892.

Duration of attendance

The medical practitioner attending at the patient end of the video consultation does not need to be present for the entire consultation, only as long as is clinically relevant - this can be established in consultation with the specialist. The MBS fee payable for the supporting medical practitioner will be determined by the total time spent assisting the patient. This time does not need to be continuous.

AN.7.27 Non-Specialist Practitioner Multidisciplinary Case Conferences (Items 235 to 244)

Items 235 to 244 provide rebates for medical practitioners to organise and coordinate, or participate in, multidisciplinary case conferences for patients in the community or patients being discharged into the community from hospital or people living in residential aged care facilities. This group of items include two items for medical practitioners participating in cancer care case conferences.

REGULATORY REQUIREMENTS

To organise and coordinate case conference items 235, 236 and 237, the medical practitioner must:

- (a) explain to the patient the nature of a multidisciplinary case conference, and ask the patient for their agreement to the conference taking place; and
- (b) record the patient's agreement to the conference; and
- (c) record the day on which the conference was held, and the times at which the conference started and ended; and
- (d) record the names of the participants; and

(e) offer the patient and the patient's carer (if any, and if the medical practitioner considers it appropriate and the patient agrees) a summary of the conference and provide this summary to other team members; and

(f) discuss the outcomes of the conference with the patient and the patient's carer (if any, and if the medical practitioner considers it appropriate and the patient agrees); and

(g) record all matters discussed and identified by the case conferencing team and put a copy of that record in the patient's medical records.

To participate in multidisciplinary case conference items 238, 239 and 240, the medical practitioner must:

(a) explain to the patient the nature of a multidisciplinary case conference, and ask the patient whether they agree to the medical practitioner's participation in the conference; and

(b) record the patient's agreement to the medical practitioner's participation; and

(c) record the day on which the conference was held, and the times at which the conference started and ended; and

(d) record the names of the participants; and

(e) record all matters discussed and identified by the case conferencing team and put a copy of that record in the patient's medical records.

Cancer care case conference items 243 and 244

For the purposes of these items:

- private patients in public or private hospitals or the community with a malignancy of a solid organ or tissue or a systemic cancer such as a leukaemia or lymphoma are covered, with the exception of patients whose only cancer is a non-melanoma skin cancer;
- the billing medical practitioner must be a treating doctor of the patient discussed at the case conference. A treating doctor should generally have treated or provided a formal diagnosis of the patient's cancer in the past 12 months or expect to do so within the next 12 months. Attending non-treating clinicians, allied health providers or support staff are not eligible to bill the item;
- only one medical practitioner is eligible to claim item 243 for each patient case conference. This should be the medical practitioner who assumes responsibility for leading and coordinating the case conference, ensures that records are kept and that the patient is informed of the outcome of the case conference. In most cases this will be the lead treating medical practitioner;
- each billing medical practitioner must ensure that their patient is informed that a charge will be incurred for the case conference for which a Medicare rebate will be payable;
- participants must be in communication with each other throughout the case conference, either face-to-face, or by telephone or video link;
- suitable allied health practitioners would generally be from one of the following disciplines: aboriginal health care worker; asthma educator; audiologist; dental therapist; dentist; diabetes educator; dietitian; mental health worker; occupational therapist; optometrist; orthoptist; orthotist or prosthetist; pharmacist; physiotherapist; podiatrist; psychologist; registered nurse; social worker; or speech pathologist;
- in general, it is expected that no more than two case conferences per patient per year will be billed by a medical practitioner; and
- cancer care case conferences are for the purpose of developing a cancer treatment plan in a multidisciplinary team meeting and should not be billed against case conference items for other purposes (eg. community or discharge case conferences).

ADDITIONAL INFORMATION

Usual medical practitioner

Items 235 to 244 should generally be undertaken by the patient's usual medical practitioner. This is a medical practitioner, or a medical practitioner working in the same medical practice that has provided the majority of services to the patient over the previous 12 months and/or will be providing the majority of services to the patient over the coming 12 months.

Multidisciplinary case conference team members

Examples of persons who, for the purposes of care planning and case conferencing may be included in a multidisciplinary care team are allied health professionals such as, but not limited to: Aboriginal health care workers; asthma educators; audiologists; dental therapists; dentists; diabetes educators; dietitians; mental health workers; occupational therapists; optometrists; orthoptists; orthotists or prosthetists; pharmacists; physiotherapists; podiatrists; psychologists; registered nurses; social workers; speech pathologists.

A team may also include home and community service providers, or care organisers, such as: education providers; "meals on wheels" providers; personal care workers (workers who are paid to provide care services); probation officers.

The patient's informal or family carer may be included as a formal member of the team in addition to the minimum of three health or care providers. The patient and the informal or family carer do not count towards the minimum of three.

Discharge case conference

Organisation and coordination of a multidisciplinary discharge case conference (items 235, 236 and 237) may be provided for private in-patients being discharged into the community from hospital.

Further sources of information

Advice on the items and further guidance are available at: www.health.gov.au/mbsprimarycareitems

Further information is also available for providers from the Department of Human Services provider inquiry line on 132 150.

AN.7.29 Explanatory note

Item 177 will support patients with cardiovascular disease, or patients at risk of developing cardiovascular disease, to access the heart health assessment through a doctor in general practice.

The item will fund a heart health assessment, lasting at least 20 minutes, by a medical practitioner working in general practice (177). The new item will provide patients with a comprehensive assessment of their cardiovascular health, identification of any physical or lifestyle-related risks to their cardiovascular health, and a comprehensive preventive health care plan to improve their cardiovascular health.

The heart health assessment item can be claimed once per patient in a 12 month period. The heart health assessment item cannot be claimed if a patient has had a health assessment service in the previous 12 months.

The intention of this item is to identify cardiovascular disease (CVD) in people not known to have CVD including:

- (a) Aboriginal or Torres Strait Islander persons who are aged 30 years and above;
- (b) Adults aged 45 years and above.

The absolute cardiovascular disease risk must be calculated as per the Australian Absolute Cardiovascular Disease Risk Calculator which can viewed at '<http://www.cvdcheck.org.au/calculator/>'.

A medical practitioner may use the National Vascular Disease Prevention Alliance '[Australian Guidelines for the Management of Absolute Cardiovascular Disease Risk](#)' or the NACCHO/RACGP '[National Guide to a Preventative Assessment for Aboriginal and Torres Strait Islander People](#)' to complete this assessment.

Health assessments are not available to people who are in-patients of a hospital or care recipients in a residential aged care facility (with the exception of a comprehensive medical assessment provided to a permanent resident of a residential aged care facility).

Before a health assessment is commenced, the patient (and/or the patient's parent(s), carer or representative, as appropriate) must be given an explanation of the health assessment process and its likely benefits. The patient must be asked whether they consent to the health assessment being performed. In cases where the patient is not capable of giving consent, consent must be given by the patient's parent(s), carer or representative. Consent to the health assessment must be noted in the patient's records.

A health assessment may only be billed by a medical practitioner (not including a specialist or consultant physician).

A health assessment should generally be undertaken by the patient's 'usual doctor'. For the purpose of the health assessment items, 'usual doctor' means the medical practitioner, or a medical practitioner working in the same medical practice, which has provided the majority of primary health care to the patient over the previous twelve months and/or will be providing the majority of care to the patient over the next twelve months.

A health assessment should not take the form of a health screening service.

MBS health assessment items 177, 224, 225, 226 and 227 must be provided by a medical practitioner personally attending upon a patient. Suitably qualified health professionals, such as practice nurses or Aboriginal and Torres Strait Islander health practitioners, employed and/or otherwise engaged by a medical practice or health service, may assist medical practitioners in performing health assessments. Such assistance must be provided in accordance with accepted medical practice and under the supervision of the medical practitioner. This may include activities associated with:

- information collection; and
- providing patients with information about recommended interventions at the direction of the medical practitioner.

The medical practitioner should be satisfied that the assisting health professional has the necessary skills, expertise and training to collect the information required for the health assessment.

Medical practitioners should not conduct a separate consultation for another health-related issue in conjunction with a health assessment unless it is clinically necessary (ie. the patient has an acute problem that needs to be managed separately from the assessment). The only exception is the comprehensive medical assessment, where, if this health assessment is undertaken during the course of a consultation for another purpose, the health assessment item and the relevant item for the other consultation may both be claimed.

Items 177, 224, 225, 226 and 227 do not apply for services that are provided by any other Commonwealth or State funded services. However, where an exemption under subsection 19(2) of the Health Insurance Act 1973 has been granted to an Aboriginal Community Controlled Health Service or State/Territory Government health clinic, items 177, 224, 225, 226 and 227 can be claimed for services provided by medical practitioners salaried by or contracted to, the Service or health clinic. All other requirements of the items must be met.

Item 10990 or 10991 (bulk billing incentives) can be claimed in conjunction with any health assessment, provided the conditions of item 10990 and 10991 are satisfied.

AN.7.30 MBS Non-Specialist Practitioner mental health and well-being telehealth support for patients

These notes provide information on the MBS mental health and well-being telehealth support items for non-specialist medical practitioners providing services under items 894, 896 and 898 in Group A7, Subgroup 12 for patients whose mental health is adversely affected by bushfire in the 2019-20 financial year

Requirements for eligible patients:

- the patient is identified by a medical practitioner as being affected by bushfire; or
- the patient self-identifies as being affected by bushfire; and
- the attendance is by video conference; and
- the patient is not an admitted patient.

In addition to people who reside in areas directly affected by the bushfires, eligible patients may include people who reside in areas which have not been directly affected by the bushfires.

Minimum Distance

There is no minimum distance for telehealth services provided to patients affected by bushfire.

Record Keeping

Participating medical practitioners must keep contemporaneous notes of the consultation including documenting that the service was performed by video conference, the date and the time.

For telehealth mental health and well-being services provided to patients affected by bushfire, the patient's invoice or Medicare voucher must be annotated to indicate that the patient was identified by the medical practitioner as an eligible patient or the patient self-identified themselves.

Only clinical details recorded at the time of the attendance count towards the time of the consultation. It does not include information added at a later time, such as reports of investigations.

In some situations a patient may receive a telehealth consultation and a face to face consultation by the same or different medical practitioner on the same day.

Medicare benefits may be paid for more than one video consultation on a patient on the same day by the medical practitioner, provided the second (and any following) video consultations are not a continuation of the initial or earlier video consultations. Medical practitioners will need to provide the times of each consultation on the patient's account or bulk billing voucher.

Extended Medicare Safety Net (EMSN)

Items which provide for telehealth patient-end support services are subject to EMSN caps equal to 300% of the schedule fee (to a maximum of \$500). This is consistent with Government policy relating to capping EMSN for MBS consultation services.

Aftercare Rule

Video consultations are subject to the same aftercare rules as face to face consultations.

Technical requirements

In order to fulfil the item descriptor there must be a visual and audio link between the patient and the medical practitioner. If the medical practitioner is unable to establish both a video and audio link with the patient, a MBS rebate for a video consultation is not payable.

Individual medical practitioners must be confident that the technology used is able to satisfy the item descriptor and that software and hardware used to deliver a video conference meets the applicable laws for security and privacy.

AN.10.1 Schedule Fees and Medicare Benefits

Medicare benefits are based on fees determined for each optometrical service. The services provided by participating optometrists which attract benefits are set out in the *Health Insurance (General Medical Services Table) Regulations* (as amended).

If the fee is greater than the Medicare benefit, optometrists participating in the scheme are to inform the patient of the Medicare benefit payable for the item, at the time of the consultation and that the additional fee will not attract benefits.

Medicare benefits are payable at 85% of the Schedule fee for services rendered.

Medicare Safety Nets

The Medicare safety net provides families and singles with an additional rebate for out-of-hospital Medicare services, once annual thresholds are reached. There are two safety nets: the original Medicare safety net and the extended Medicare safety net (EMSN).

Under the original Medicare safety net, the Medicare benefit for out-of-hospital services is increased to 100% of the Schedule Fee (up from 85%) once an annual threshold in gap costs is reached. Gap costs refer to the difference between the Medicare benefit (85%) and the Schedule Fee.

Under the EMSN, once an annual threshold in out-of-pocket costs for out-of-hospital Medicare services is reached, Medicare will pay for 80% of any future out-of-pocket costs for out-of-hospital Medicare services for the remainder of the calendar year. However, where the item has an EMSN benefit cap, there is a maximum limit on the EMSN benefit that will be paid for that item. Further explanation about EMSN benefit caps is provided at www.mbsonline.gov.au.

The thresholds for the Medicare safety nets are indexed on 1 January each year.

Individuals are automatically registered with the Department of Human Services for the safety nets, however couples and families are required to register in order to be recognised as a family for the purposes of the safety nets. In most cases, registered families have their expenses combined to reach the safety net thresholds. This may help to qualify for safety net benefits more quickly. Registration forms can be obtained from the Department of Human Services offices, or completed at www.humanservices.gov.au. If you have already registered it is important to ensure your details are up to date.

Further information on the Medicare safety nets is available at <http://www.humanservices.gov.au/customer/services/medicare/medicare-safety-net>.

Limiting rule for patient claims

Where a fee charged for a service is less than the Medicare benefit, the benefit will be reduced to the amount of the fee actually charged. In no case will the benefit payable exceed the fee charged.

Multiple attendances

Payment of benefit may be made for several attendances on a patient on the same day by the same optometrist provided that the subsequent attendances are not a continuation of the initial or earlier attendances. However, there should be a reasonable lapse of time between the services before they can be regarded as separate attendances.

Where two or more attendances are made on the one day by the same optometrist the time of each attendance should be stated on the account (e.g. 10.30 am and 3.15 pm) in order to assist in the payment of benefits. Times do not need to be specified where a perimetry item is performed in association with a consultation item.

In some circumstances a subsequent consultation on the same day may be judged to be a continuation of an earlier attendance and a second benefit is not payable. For example, a preliminary eye examination may be concluded with the instillation of mydriatic or cycloplegic drops and some time later additional examination procedures are undertaken. These sessions are regarded as being one attendance for benefit purposes.

Release of prescription

Where a spectacle prescription is prepared for the patient, it becomes the property of the patient, who is free to have the spectacles dispensed by any person of the patient's choice. The optometrist will ensure that the patient is made aware that he or she is entitled to a copy of the spectacle prescription.

Contact lens prescriptions are excluded from the above provision, although the prescription remains the property of the patient and should be available to the patient at the completion of the prescription and fitting process.

Reminder notices

The optometrist will ensure that any notice sent to a patient suggesting re-examination is sent solely on the basis of the clinical needs of the patient.

Aftercare period following surgery

Medicare schedule items that apply to surgery include all professional attendances necessary for the post-operative treatment of the patient, other than attendances provided by vocationally or non-vocationally trained general practitioners. The aftercare period includes all post-operative treatment, when provided by a medical specialist, consultant physician or optometrist. The amount and duration of the aftercare may vary but includes all attendances until recovery from the operation. Attendances unrelated to the operation provided by a vocationally or non-vocationally registered general practitioner in the aftercare period can also attract Medicare benefits. Attendances provided by an optometrist in the aftercare period do not attract a Medicare benefit.

The rebate for cataract surgery includes payment for aftercare attendances so payment for aftercare services provided by an optometrist on behalf of a surgeon should be arranged with the surgeon. The optometrist should not charge the patient. In the case of cataract surgery, the first visit following surgery for which the optometrist can charge a rebatable fee is generally the attendance at which a prescription for spectacles or contact lenses is written.

Medicare benefits are not available for refractive surgery, consultations in preparation for the surgery or consultations in the aftercare period. Charges for attendances by optometrists may be made directly to the patient or to the surgeon depending on the arrangements made prior to surgery. Accounts and the receipt issued to the patient should clearly indicate the fee is non-rebatable.

Single Course of Attention

A reference to a single course of attention means:

- (a) In the case of items 10905 to 10918, and old item 10900 - a course of attention by one or more optometrists in relation to a specific episode of optometric care.
- (b) In relation to items 10921 to 10930 - a course of attention, including all associated attendances, by one or more optometrists for the purpose of prescribing and fitting of contact lenses. This includes those after-care visits necessary to ensure the satisfactory performance of the lenses.

Referred comprehensive initial consultations (item 10905) - Read in conjunction with 08 Referrals

For the purposes of item 10905, the referring optometrist, having considered the patient's need for the referred consultation, is required to provide a written referral, dated and signed, and setting out the patient's condition and the reason for the referral.

Benefits will be paid at the level of item 10905 providing the referral is received before the provision of the service, and providing the account, receipt or bulk-billing form contains the name and provider number of the referring optometrist. Referrals from medical practitioners do not attract benefits under item 10905.

The optometrist claiming the item 10905 service is obliged to retain the written referral for a period of twenty-four months.

Referrals must be at "arms length". That is to say, no commercial arrangements or connections should exist between the optometrists.

Second comprehensive initial consultation, within 36 months for a patient who is less than 65 years of age and once every 12 months for a patient who is at least 65 years of age, of a previous comprehensive consultation (item 10907)

A patient can receive a comprehensive initial consultation by another optometrist within 36 months if the patient is less than 65 years of age, and once every 12 months if the patient is at least 65 years of age, if the patient has attended another optometrist for an attendance to which item 10905, 10907, 10910, 10911, 10912, 10913, 10914 or 10915 applies, or old item 10900 applied.

Comprehensive initial consultations (items 10910 and 10911)

There are two new MBS items for comprehensive initial consultation that have been introduced. Item 10910 has been introduced for a professional attendance of more than 15 minutes for a patient who is less than 65 years of age. This item is payable once only within a 36 month period, and if the patient has not received a service in this timeframe to which item 10905, 10907, 10910, 10912, 10913, 10914 or 10915 applies, or old item 10900 applied.

Item 10911 has been introduced for a professional attendance of more than 15 minutes for a patient who is at least 65 years of age. This item is payable once only within a 12 month period, and if the patient has not received a service in this timeframe to which item 10905, 10907, 10910, 10911, 10912, 10913, 10914 or 10915 applies, or old item 10900 applied.

However, a benefit is payable under item 10912, 10913, 10914 or 10915 where the patient has an ocular condition which necessitates a further course of attention being started within 36 months for a patient who is less than 65 years of age (item 10910) and within 12 months for a patient who is at least 65 years of age (item 10911) of the previous initial consultation. The conditions which qualify for a further course of attention are contained in the descriptions of these items.

Where an attendance would have been covered by item 10905, 10907, 10910, 10911, 10912, 10913, 10914, or 10915 but is of 15 minutes duration or less, item 10916 (Short consultation) applies.

Significant change in visual function requiring comprehensive re-evaluation (item 10912)

Significant changes in visual function which justify the charging of item 10912 could include documented changes of:

- vision or visual acuity of 2 lines (0.2 logMAR) or more (corrected or uncorrected)
- visual fields or previously undetected field loss
- binocular vision
- contrast sensitivity or previously undetected contrast sensitivity loss.

New signs or symptoms requiring comprehensive re-evaluation (item 10913)

When charging item 10913 the optometrist should document the new signs or symptoms suffered by the patient on the patient's record card.

Progressive disorder requiring comprehensive re-evaluation (item 10914)

When charging item 10914, the optometrist should document the nature of the progressive disorder suffered by the patient on the patient's record card. Progressive disorders may include conditions such as maculopathy (including age related maculopathy) cataract, corneal dystrophies, glaucoma etc.

Examination of the eyes of a patient with diabetes mellitus (item 10915)

Where an examination of the eyes, with the instillation of a mydriatic, of a patient with diabetes mellitus is being conducted, where possible this item should be billed rather than item 10914 to assist in identifying whether such patients are receiving appropriate eye care.

Second or subsequent consultations (item 10918)

Each consultation, apart from the initial consultation, in a single course of attention, other than a course of attention involving the fitting and prescription of contact lenses, is covered by item 10918.

Contact lens consultations (items 10921 to 10930)

In the case of contact lens consultations, benefit is payable only where the patient is one of the prescribed classes of patient entitled to benefit for contact lens consultations as described in items 10921 to 10929.

For claims under items 10921,10922,10923,10925 and 10930, eligibility is based on the patient's distance spectacle prescription, determining the spherical equivalent by adding to the spherical prescription, half the cylindrical correction.

Medicare benefits are not payable for item 10929 in circumstances where a patient wants contact lenses for:

- (a) reasons of appearance (because they do not want to wear spectacles);
- (b) sporting purposes;
- (c) work purposes; or
- (d) psychological reasons (because they cannot cope with spectacles).

All attendances subsequent to the initial consultation in a course of attention involving the prescription and fitting of contact lenses are collectively regarded as a single service under items 10921 to 10930, as appropriate. The date of service is deemed to be the date on which the contact lenses are delivered to the patient. In some cases, where the patient decides not to proceed with contact lenses, no Medicare fee is payable because the patient has not taken delivery of the lenses. In such instances, the patient may be charged a non-rebatable (private) fee for a 'part' service. Any visits related to the prescribing and fitting of lenses are regarded to be covered by the relevant item in the range 10921 to 10930. The bulk item includes those aftercare visits necessary to ensure the satisfactory performance of the lenses. This interpretation is unaltered by the frequency of aftercare visits associated with various lens types including extended wear lenses.

Consultations during the aftercare period that are unrelated to the prescription and fitting of contact lenses or that are not part of normal aftercare may be billed under other appropriate items (not items 10921 to 10930).

For patients not eligible for Medicare rebates for contact lens care, fees charged for contact lens consultations are a matter between the practitioner and the patient. Any account for consultations involving the fitting and prescription of contact lenses issued to a patient who does not fall into the specified categories should be prepared in such a way that it cannot be used to obtain benefits. No Medicare item should be attached to any service that does not attract benefits and the optometrist should annotate the account with wording such as "Medicare benefits not payable".

Where an optometrist wishes to apportion the total fee to show the appropriate optometric consultation benefit and the balance of the fee, he or she should ensure that the balance is described in such a way (e.g. balance of account) that it cannot be mistaken as being a separate consultation. In particular no Medicare item number should be shown against the balance.

When a patient receives a course of attention involving the prescription and fitting of contact lenses an account should not be issued (or an assignment form completed) until the date on which the patient takes delivery of the lenses.

Benefit under items 10921 to 10929 is payable once only in any period of 36 consecutive months except where circumstances are met under item 10930 within a 36 month period.

Domiciliary visits (items 10931 - 10933)

Where patients are unable to travel to an optometrist's practice for treatment, and where the request for treatment is initiated by the patient, a domiciliary visit may be conducted, which involves the optometrist travelling to the patient's place of residence, and transporting the necessary equipment. Where possible, it is preferable that the patient travel to the practice so that the full range of equipment is available for the examination of the patient.

Benefits are payable under items 10931 - 10933 to provide some financial assistance in the form of a loading to the optometrist, in recompense for travel costs and packing and unpacking of equipment. The loading is in addition to the consultation item. For the purposes of the loading, acceptable places of residence for domiciliary visits are:

- the patient's home;
- a residential aged care facility as defined by the *Aged Care Act 1997*; or
- an institution which means a place (other than a residential aged care facility or hospital) at which residential accommodation and/or day care is made available to any of the following categories: disadvantaged children, juvenile offenders, aged persons, chronically ill psychiatric patients, homeless persons, unemployed persons, persons suffering from alcoholism, persons addicted to drugs, or physically or intellectually disabled persons.

Visits to a hospital at the patient's request are not covered by the loading and instead, an extra fee in addition to the Schedule fee can be charged, providing the service is not bulk-billed. Medicare benefits are not payable in respect of the private charge.

Items 10931 - 10933 may be used whether or not the optometrist chooses to bulk-bill but it is important that if the consultation is bulk-billed the loading is also, and no private charge can then be levied. If the consultation is not bulk-billed, the loading should also not be bulk-billed and a private charge may be levied. The usual requirement that the patient must have requested the domiciliary visit applies.

Domiciliary visit loading items cannot be claimed in conjunction with brief initial consultation item 10916, or with computerised perimetry items 10940 or 10941. The choice of appropriate item in the range 10931 - 10933 depends on how many patients are seen at the one location. Benefits are payable under item 10931 where the optometrist travels to see one patient at a single location. Item 10931 can be billed in addition to the appropriate consultation item (excluding items 10916, 10932, 10933, 10940 or 10941). If the optometrist goes on to see another single patient **at a different location**, that patient can also be billed an item 10931 plus the appropriate consultation. However, if two patients are visited at a single location on the same occasion, each of the two patients should be billed item 10932 as well as the appropriate consultation item applying to each patient. Similarly, if three patients are visited at a single location on the same occasion, each of the three patients should be billed item 10933 as well as the appropriate consultation item applying to each patient.

Where more than three patients are seen at the same location, additional benefits for domiciliary visits are not payable for the fourth, fifth etc patients. On such occasions, the first three patients should be billed item 10933 as well as the appropriate consultation item, and all subsequent patients may only be billed the appropriate consultation item. Where multiple patients are seen at one location on one occasion, there is no provision for patients to be 'grouped' into twos and threes for billing purposes.

Where a private charge is levied for a domiciliary visit, bulk-billing is precluded. Medicare benefits are not payable in respect of the private charge and the patient should be informed of this. Private charges should be shown separately on accounts issued by optometrists and must not be included in the fees for the service.

Computerised Perimetry Services (items 10940 and 10941)

Benefit under items 10940 and 10941 is payable where full quantitative computerised perimetry (automated absolute static threshold but not including multifocal multichannel objective perimetry) has been performed by an optometrist on both eyes (item 10940) or one eye (item 10941) where indicated by the presence of relevant ocular disease or suspected pathology of the visual pathways or brain. Item 10940 for bilateral procedures cannot be claimed for

patients who are totally blind in one eye. In this instance, item 10941 for unilateral procedures should be claimed, where appropriate.

These items can be billed either in association with comprehensive consultation items 10905, 10907, 10910, 10911, 10912, 10913, 10914, or 10915, or independently, but they cannot be billed with items 10916, 10918, 10931, 10932 or 10933. An assessment and report is required and, where referral to an ophthalmologist for further treatment is required, the printed results of the perimetry should be provided to the ophthalmologist to discourage repetition of perimetry unless clinically necessary. If Medicare benefits are to be claimed, a maximum of two perimetry services in any twelve month period may be provided.

Low Vision Assessment (item 10942)

A benefit is payable under item 10942 where one or more of the tests outlined in the item description are carried out on a patient who has already been established during a comprehensive consultation as having low vision, as specifically defined in the item. This item is not intended for patients expected to undergo cataract surgery in the near future who may temporarily meet the criteria for having low vision.

Item 10942 may be claimed on the same day as either a comprehensive initial consultation (items 10905 - 10915) or a subsequent consultation (item 10918), but only where the additional low vision testing has been carried out on an eligible patient. Item 10942 is not intended to be claimed with a brief initial consultation (item 10916), or with any of the contact lens items (items 10921-10930).

Children's vision assessment (item 10943)

Children aged 0 to 2 years, and 15 years and over, are not eligible for item 10943 and may be treated under appropriate attendance items.

A benefit is payable under item 10943 where one or more of the assessment and testing procedures outlined in the item description are carried out on a patient aged 3 - 14 years inclusive, and where a finding of significant binocular or accommodative dysfunction is the outcome of the consultation and assessment/testing. The conditions to be assessed under this item are primarily amblyopia and strabismus, but dysfunctions relating to vergences are also covered, providing well established and evidence based optometry practice is observed.

A benefit is not payable under item 10943 for the assessment of learning difficulties or learning disabilities.

Item 10943 may be claimed on the same day as either a comprehensive consultation (items 10905 - 10915) or a subsequent consultation (item 10918), but only where the additional assessment/testing has been carried out on an eligible child. Item 10943 is not intended to be claimed with a brief initial consultation (item 10916), or with any of the contact lens items (items 10921-10930).

Removal of an embedded corneal foreign body (item 10944)

Item 10944 has been introduced for the complete removal of an embedded corneal foreign body that is sub-epithelial or intra-epithelial and the removal of rust rings from the cornea.

The removal of an embedded foreign body should be performed using a hypodermic needle, foreign body gouge or similar surgical instrument, with magnification provided by a slit lamp biomicroscope, loupe or similar device.

The optometrist should document the nature of the embedded foreign body (sub-epithelial or intra-epithelial), method of removal and the magnification. Similarly, with rust ring removal, the optometrist should document the method of removal and the magnification.

Where complexity of the procedure is beyond the skill of the optometrist, or if other complications are present (e.g. globe perforation, penetration >25%, or patient unable to hold still due to pathological anxiety, nystagmus, or tremor etc, without some form of systemic medication), the patient should be referred to an ophthalmologist.

This item cannot be billed on the same occasion as items 10905, 10907, 10910, 10911, 10912, 10913, 10914, 10915, 10916 or 10918. If the embedded foreign body or rust ring has not been completely removed, benefits are only payable under item 10916.

AN.14.2 Explanatory note.

Item 699 will support patients with cardiovascular disease, or patients at risk of developing cardiovascular disease, to access the heart health assessment through a doctor in general practice.

The item will fund a heart health assessment, lasting at least 20 minutes, by a general practitioner (699). The new item will provide patients with a comprehensive assessment of their cardiovascular health, identification of any physical or lifestyle-related risks to their cardiovascular health, and a comprehensive preventive health care plan to improve their cardiovascular health.

The heart health assessment item can be claimed once per patient in a 12 month period. The heart health assessment items cannot be claimed if a patient has had a health assessment service in the previous 12 months.

The intention of this item is to identify cardiovascular disease (CVD) in people not known to have CVD including:

- (a) Aboriginal or Torres Strait Islander persons who are aged 30 years and above;
- (b) Adults aged 45 years and above.

The absolute cardiovascular disease risk must be calculated as per the Australian Absolute Cardiovascular Disease Risk Calculator which can be viewed at '<http://www.cvdcheck.org.au/calculator/>'.

A general practitioner may use the National Vascular Disease Prevention Alliance '[Australian Guidelines for the Management of Absolute Cardiovascular Disease Risk](#)' or the NACCHO/RACGP '[National Guide to a Preventative Assessment for Aboriginal and Torres Strait Islander People](#)' to complete this assessment.

Health assessments are not available to people who are in-patients of a hospital or care recipients in a residential aged care facility (with the exception of a comprehensive medical assessment provided to a permanent resident of a residential aged care facility).

Before a health assessment is commenced, the patient (and/or the patient's parent(s), carer or representative, as appropriate) must be given an explanation of the health assessment process and its likely benefits. The patient must be asked whether they consent to the health assessment being performed. In cases where the patient is not capable of giving consent, consent must be given by the patient's parent(s), carer or representative. Consent to the health assessment must be noted in the patient's records.

A health assessment may only be claimed by a general practitioner.

A health assessment should generally be undertaken by the patient's 'usual doctor'. For the purpose of the health assessment items, 'usual doctor' means the general practitioner, or a general practitioner working in the medical practice, which has provided the majority of primary health care to the patient over the previous twelve months and/or will be providing the majority of care to the patient over the next twelve months.

A health assessment should not take the form of a health screening service.

A copy of the Health Assessment must be retained for a period of 2 years after the date of service.

MBS health assessment items 699, 701, 703, 705, 707 must be provided by a general practitioner personally attending upon a patient. Suitably qualified health professionals, such as practice nurses or Aboriginal and Torres Strait Islander health practitioners, employed and/or otherwise engaged by a general practice or health service, may assist general practitioners in performing health assessments. Such assistance must be provided in accordance with accepted medical practice and under the supervision of the general practitioner. This may include activities associated with:

- information collection; and
- providing patients with information about recommended interventions at the direction of the general practitioner.

The general practitioner should be satisfied that the assisting health professional has the necessary skills, expertise and training to collect the information required for the health assessment.

General practitioners should not conduct a separate consultation for another health-related issue in conjunction with a health assessment unless it is clinically necessary (ie. the patient has an acute problem that needs to be managed separately from the assessment). The only exception is the comprehensive medical assessment, where, if this health assessment is undertaken during the course of a consultation for another purpose, the health assessment item and the relevant item for the other consultation may both be claimed.

Items 699, 701, 703, 705 and 707 do not apply for services that are provided by any other Commonwealth or State funded services. However, where an exemption under subsection 19(2) of the Health Insurance Act 1973 has been granted to an Aboriginal Community Controlled Health Service or State/Territory Government health clinic, items 699, 701, 703, 705 and 707 can be claimed for services provided by general practitioners salaried by or contracted to, the Service or health clinic. All other requirements of the items must be met.

Item 10990 or 10991 (bulk billing incentives) can be claimed in conjunction with any health assessment, provided the conditions of item.

AN.30.1 MBS GP mental health and well-being telehealth support for patients

These notes provide information on the MBS mental health and well-being telehealth support items for general practitioners (GPs) providing services under items 2121, 2150 and 2196 in Group A30, Subgroup 3 for patients whose mental health is adversely affected by bushfire in the 2019-20 financial year

Requirements for eligible patients:

- the patient is identified by a GP as being affected by bushfire; or
- the patient self-identifies as being affected by bushfire; and
- the attendance is by video conference; and
- the patient is not an admitted patient.

In addition to people who reside in areas directly affected by the bushfires, eligible patients may include people who reside in areas which have not been directly affected by the bushfires.

Minimum Distance

There is no minimum distance for telehealth services provided to patients affected by bushfire.

Record Keeping

Participating GPs must keep contemporaneous notes of the consultation including documenting that the service was performed by video conference, the date and the time.

For telehealth mental health and well-being services provided to patients affected by bushfire, the patient's invoice or Medicare voucher must be annotated to indicate that the patient was identified by the GP as an eligible patient or the patient self-identified themselves.

Only clinical details recorded at the time of the attendance count towards the time of the consultation. It does not include information added at a later time, such as reports of investigations.

In some situations a patient may receive a telehealth consultation and a face to face consultation by the same or different GP on the same day.

Medicare benefits may be paid for more than one video consultation on a patient on the same day by the GP, provided the second (and any following) video consultations are not a continuation of the initial or earlier video consultations. GPs will need to provide the times of each consultation on the patient's account or bulk billing voucher.

Extended Medicare Safety Net (EMSN)

Items which provide for telehealth patient-end support services are subject to EMSN caps equal to 300% of the schedule fee (to a maximum of \$500). This is consistent with Government policy relating to capping EMSN for MBS consultation services.

Aftercare Rule

Video consultations are subject to the same aftercare rules as face to face consultations.

Technical requirements

In order to fulfil the item descriptor there must be a visual and audio link between the patient and the GP. If the GP is unable to establish both a video and audio link with the patient, a MBS rebate for a video consultation is not payable.

Individual GPs must be confident that the technology used is able to satisfy the item descriptor and that software and hardware used to deliver a video conference meets the applicable laws for security and privacy.

AN.30.3 Telehealth (General and Medical Practitioner)

These eight services are available to patients who are unable to attend the practitioners' practice and reside in a Telehealth eligible areas MMM 6 or MMM 7.

Items 2461, 2463, 2464 and 2465, are for services provided by general practitioners and have the same clinical requirements, including time, as the equivalent face-to-face attendance services for general practitioners (items 3, 23, 36 and 44).

Items 2471, 2472, 2475 and 2478, are for services provided by medical practitioners who are not general practitioners and have the same clinical requirements, including time, as the equivalent face-to-face attendance services for medical practitioners who are not general practitioners (items 52, 53, 54 and 57).

The patient will also need to have received at least three face-to-face attendances from the same practitioner providing the video conferencing service in the preceding 12 months. This confirms that the video conferencing attendance services can only be rendered by a practitioner with an existing clinical relationship with the patient.

Eligible Geographical Areas

Geographic eligibility for these telehealth services funded under Medicare are determined according to the Modified Monash Model (MMM) classifications. Patients and providers are able to check their eligibility by following the links on the MBS Online website (www.mbsonline.gov.au/telehealth).

There is a requirement for the patient and practitioner to be located a minimum of 15km apart at the time of the consultation. Minimum distance between practitioner and patient video consultations are measured by the most direct (ie least distance) route by road. The patient or the practitioner is not permitted to travel to an area outside the minimum 15 km distance in order to claim a video conference.

Aftercare Rule

Video consultations are subject to the same aftercare rules as practitioners providing face-to-face consultations.

Multiple attendances on the same day

In some situations a patient may receive a telehealth consultation and a face-to-face consultation by the same or different practitioner on the same day. Medicare benefits may be paid for more than one video consultation on a patient on the same day by the same practitioner, provided the second (and any following) video consultations are not a continuation of the initial or earlier video consultations. Practitioners will need to provide the times of each consultation on the patient's account or bulk billing voucher.

Restrictions

The MBS telehealth attendance items are not payable for services to an admitted hospital patient (this includes hospital in the home patients). Benefits are not payable for telephone or email consultations.

Technical requirements

In order to fulfill the item descriptor there must be a visual and audio link between the patient and the practitioner. If the practitioner is unable to establish both a video and audio link with the patient, a MBS rebate for a telehealth attendance is not payable. Individual practitioners must be confident that the technology used is able to satisfy the item descriptor and that software and hardware used to deliver a videoconference meets the applicable laws for security and privacy.

Record Keeping

Participating telehealth practitioners must keep contemporaneous notes of the consultation including documenting that the service was performed by video conference, the date, time and the people who participated.

AN.30.4 Telehealth (Other Medical Practitioner)

These four services are available to patients who are unable to attend the practitioners' practice and reside in a Telehealth eligible areas MMM 6 or MMM 7.

Items 2480, 2481, 2482 and 2483, are for services provided by other medical practitioners and have the same clinical requirements, including time, as the equivalent face-to-face attendance services for items 179, 185, 189 and 203.

The patient will also need to have received at least three face-to-face attendances from the same practitioner providing the video conferencing service in the preceding 12 months. This confirms that the video conferencing attendance services can only be rendered by a practitioner with an existing clinical relationship with the patient.

Eligible Geographical Areas

Geographic eligibility for these telehealth services funded under Medicare are determined according to the Modified Monash Model (MMM) classifications. Patients and providers are able to check their eligibility by following the links on the MBS Online website (www.mbsonline.gov.au/telehealth).

There is a requirement for the patient and practitioner to be located a minimum of 15km apart at the time of the consultation. Minimum distance between specialist and patient video consultations are measured by the most direct (ie least distance) route by road. The patient or the practitioner is not permitted to travel to an area outside the minimum 15 km distance in order to claim a video conference.

Aftercare Rule

Video consultations are subject to the same aftercare rules as practitioners providing face-to-face consultations.

Multiple attendances on the same day

In some situations a patient may receive a telehealth consultation and a face-to-face consultation by the same or different practitioner on the same day. Medicare benefits may be paid for more than one video consultation on a

patient on the same day by the same practitioner, provided the second (and any following) video consultations are not a continuation of the initial or earlier video consultations. Practitioners will need to provide the times of each consultation on the patient's account or bulk billing voucher.

Restrictions

The MBS telehealth attendance items are not payable for services to an admitted hospital patient (this includes hospital in the home patients). Benefits are not payable for telephone or email consultations.

Technical requirements

In order to fulfill the item descriptor there must be a visual and audio link between the patient and the practitioner. If the practitioner is unable to establish both a video and audio link with the patient, a MBS rebate for a telehealth attendance is not payable. Individual practitioners must be confident that the technology used is able to satisfy the item descriptor and that software and hardware used to deliver a videoconference meets the applicable laws for security and privacy.

Record Keeping

Participating telehealth practitioners must keep contemporaneous notes of the consultation including documenting that the service was performed by video conference, the date, time and the people who participated.

AN.33.1 TAVI CASE CONFERENCE - (ITEMS 6080 AND 6081)

Items 6080 and 6081 apply to a TAVI Case Conference organised to discuss a patient's suitability to receive the service described in Item 38495 for Transcatheter Aortic Valve Implantation (TAVI).

For items 6080 and 6081 a TAVI Case Conference is a process by which:

- (a) there is a team of 3 or more participants, where:
 - (i) the first participant is a cardiothoracic surgeon; and
 - (ii) the second participant is an interventional cardiologist; and
 - (iii) the third participant is a specialist or consultant physician who does not perform a service described in Item 38495 for the patient being assessed; and
 - (iv) either the first or the second participant is also a TAVI Practitioner; and
- (b) the team assesses a patient's risk and technical suitability to receive the service described in Item 38495, taking into account matters such as:
 - (i) the patient's risk and technical suitability for a surgical aortic valve replacement; and
 - (ii) the patient's cognitive function and frailty; and
- (c) the result of the assessment is that the team makes a recommendation about whether or not the patient is suitable to receive the service described in Item 38495; and
- (d) the particulars of the assessment and recommendation are recorded in writing.

TAVI Practitioner

For items 6080 and 6081 a TAVI Practitioner is either a cardiothoracic surgeon or interventional cardiologist who is accredited by Cardiac Accreditation Services Limited.

Accreditation by Cardiac Accreditation Services Limited must be valid prior to the service being undertaken in order for benefits to be payable under item 38495.

The process for accreditation and re-accreditation is outlined in the *Transcatheter Aortic Valve Implantation - Rules for the Accreditation of TAVI Practitioners*, issued by Cardiac Accreditation Services Limited, and is available on the Cardiac Accreditation Services Limited website, www.tavi.org.au.

Cardiac Accreditation Services Limited is a national body comprising representatives from the Australian & New Zealand Society of Cardiac & Thoracic Surgeons (ANZSCTS) and the Cardiac Society of Australia and New Zealand (CSANZ).

Coordination of a TAVI Case Conference

For item 6080, coordination means undertaking all of the following activities in relation to a TAVI Case Conference:

- a. ensuring that the patient is aware of the purpose and nature of the patient's TAVI Case Conference and has consented to their TAVI Case Conference;
- b. recording the day the conference was held, and the times the conference started and ended;
- c. recording the names of the participants of the conference;
- d. provision of expertise to inform the recommendation resulting from the case conference;
- e. recording minutes of the TAVI Case Conference including the recommendation resulting from the conference;
- f. ensuring that the patient is aware of the recommendation.

Attendance at a TAVI Case Conference

For item 6081, attendance means undertaking all of the following activities in relation to a TAVI Case Conference:

- a. retaining a record of the day the conference was held, and the times the conference started and ended;
- b. retaining a record of the names of the participants;
- c. provision of expertise to inform the recommendation resulting from the case conference;
- d. retaining a record of the recommendation resulting from the conference.

General requirements

The TAVI Case Conference must be arranged in advance, within a time frame that allows for all the participants to attend. A TAVI Case Conference is to last at least 10 minutes and a minimum of three suitable participants (as defined under the item requirements), must be present for the whole of the case conference. All participants must be in communication with each other throughout the conference, either face to face, by telephone or by video link, or a combination of these.

A record of the TAVI Case Conference which contains: a list of the participants; the times the conference commenced and concluded; a description of the assessment of suitability; and a summary of the outcomes must be kept in the patient's record. The notes and summary of outcomes must be provided to all participants.

Prior informed consent must be obtained from the patient, or the patient's agent. In obtaining informed consent the TAVI Practitioner coordinating the TAVI Case Conference should ensure the patient has been:

- Informed that their medical history, diagnosis and care preferences will be discussed with other case conference participants;
- Informed that they may incur a charge for the service for which a Medicare rebate will be payable.

Medicare benefits are only payable in respect of the service provided by the coordinating TAVI Practitioner or the attending interventional cardiologist, cardiothoracic surgeon or independent specialist or consultant physician. Benefits are not payable for another medical practitioner organising a case conference or for attendance by other medical practitioners at a TAVI Case Conference.

It is expected that a patient would not normally require more than one TAVI Case Conference in determining suitability for the services described in Item 38495. As such, item 6080 is only payable once per patient in a five year period. Item 6081 is payable only twice per patient in a five year period.

Items 6080 and 6081 do not preclude the claiming of a consultation on the same day if other clinically relevant services are provided.

AN.34.1 HEALTH CARE HOMES

HEALTH CARE HOMES The Health Care Homes Program is administered by the Department of Health. A Health Care Homes trial site means a medical practice participating in the Health Care Homes Program. Commonwealth subsidy for the provision of services under the Health Care Homes Program is paid through bundled payments to the Health Care Home.

Item 6087 has been established so that, when claimed, it will record when a Health Care Home patient incurs an out-of-pocket expense. The out-of-pocket cost will then count toward their or their family's Extended Medicare Safety Net.

Item 6087 should only be claimed in the event that a Health Care Home charges a Health Care Home patient an out-of-pocket cost. Item 6087 must not be used for any other purpose.

Item 6087 cannot be claimed as a bulk-billed service.

AN.35.1 Flag fall amount for residential aged care facility attendance by a general practitioner

Medicare item 90001 provides a call-out fee for the initial attendance by a general practitioner at one RACF, on one occasion, applicable only to the first patient seen on the RACF visit.

The Medicare benefit for the single call-out fee and the associated general consultation (either Level A to D) applies only for patients within a RACF who have a general consultation with a doctor in person.

If doctors do not bill the single call-out fee, the benefit will not be paid.

If a doctor has to return to the RACF facility twice or more on the same day and the attendances are not a continuation of an earlier episode of treatment, another call-out fee would apply per subsequent RACF visit.

When claiming the new attendance items there is no longer a requirement to transmit the number of patients seen. A doctor would claim each attendance item like any other consultation service.

MBS items 90001 is not to be used with existing derived fee services such as for afterhours, urgent afterhours, or telehealth services. The bulk billing incentive only applies to the attendance item, not to the single call-out fee.

AN.35.2 Flag fall amount for residential aged care facility attendance by a medical practitioner

Medicare item 90002 provides a call-out fee for the initial attendance by a medical practitioner at one RACF, on one occasion, applicable only to the first patient seen on the RACF visit.

The Medicare benefit for the single call-out fee and the associated general consultation (either Level A to D) applies only for patients within a RACF who have a general consultation with a doctor in person.

If doctors do not bill the single call-out fee, the benefit will not be paid.

If a doctor has to return to the RACF facility twice or more on the same day and the attendances are not a continuation of an earlier episode of treatment, another call-out fee would apply per subsequent RACF visit.

When claiming the new attendance items there is no longer a requirement to transmit the number of patients seen. A doctor would claim each attendance item like any other consultation service.

MBS items 90002 is not to be used with existing derived fee services such as for afterhours, urgent afterhours, or telehealth services. The bulk billing incentive only applies to the attendance item, not to the single call-out fee.

AN.36.1 Eating Disorders General Explanatory Notes

Eating Disorders General Explanatory Notes (items 90250-90257, 90260-90269 and 90271-90282)

This note provides a general overview of the full range of 1 November 2019 eating disorders Items and supporting information more specifically on the Category 1 – Professional Attendances: Group A36 – Eating Disorders Services (90250-90257, 90260-90269 and 90271-90282).

It includes an overview of the items, model of care, patient eligibility, and links to other guidance and resources.

Overview

All 1 November 2019 Eating Disorders new items:

The Eating Disorders items define services for which Medicare rebates are payable where service providers undertake assessment and management of patients with a diagnosis of anorexia nervosa and patients with other specified eating disorder diagnoses who meet the eligibility criteria (see – patient eligibility). It is expected that there will be a multidisciplinary approach to patient management through these items.

The items mean eligible patients are able to receive a Medicare rebate for development of an eating disorders treatment plan by a medical practitioner in general practice (Group A36, subgroup 1), psychiatry or paediatrics (Group A36, subgroup 2). Patients with an eating disorders treatment and management plan (EDP) will be eligible for comprehensive treatment and management services for a 12 month period, including:

- Up to 20 dietetic services under items 10954, 82350 and 82351.
- Up to 40 eating disorder psychological treatment services (EDPT service).
- Review and ongoing management services to ensure that the patient accesses the appropriate level of intervention (Group A36, subgroup 3).

An EDPT service includes mental health treatment services which are provided by an allied health professional or a medical practitioner in general practice with appropriate mental health training. These treatment services include:

- Medicare mental health treatment services currently provided to patients under the ‘Better Access to Psychiatrists, Psychologists and General Practitioners through the MBS (‘Better Access’) initiative.
 - This includes medical practitioner items 2721, 2723, 2725, 2727, 283, 285, 286, 287, 371, 372; and
 - This includes allied health items in Groups M6 and M7 of Category 8; and
- new items for EDPT services provided by suitably trained medical practitioners in general practice (items 90271, 90272, 90273, 90274, 90275, 90276, 90277, 90278, 90279, 90280, 90281, 90282)
- new items for EDPT services provided by eligible clinical psychologists (items 82352-82359), eligible psychologists (items 82360-82367), eligible occupational therapists (items 82368-82375) and eligible social workers (items 82376-82383)

For the purpose of the 40 EDPT count; eating disorder psychological treatment service includes a service under provided under the following items: 90271, 90272, 90273, 90274, 90275, 90276, 90277, 90278, 90279, 90280, 90281, 90282, 2721, 2723, 2725, 2727, 283, 285, 286, 287, 371, 372 and items in Groups M6, M7 and M16 (excluding items 82350 and 82351).

For any particular patient, an eating disorder treatment and management plan expires at the end of a 12 month period following provision of that service. After that period, a patient will require a new EDP to continue accessing EDPT services.

Patient Eligibility

The eating disorder items are available to eligible patients in the community. These items do not apply to services provided to admitted (in-hospital) patients.

The referring practitioner is responsible for determining that a patient is eligible for an EDP and therefore EDPT and dietetic services.

‘Eligible patient’ defines the group of patients who can access the new eating disorder services. There are two cohorts of eligible patients.

1. Patients with a clinical diagnosis of anorexia nervosa; or
2. Patients who meet the eligibility criteria (below), and have a clinical diagnosis of any of the following conditions:
 - i. bulimia nervosa;
 - ii. binge-eating disorder;
 - iii. other specified feeding or eating disorder.

The eligibility criteria, for a patient, is:

- a. a person who has been assessed as having an Eating Disorder Examination Questionnaire score of 3 or more; and
- b. the condition is characterised by rapid weight loss, or frequent binge eating or inappropriate compensatory behaviour as manifested by 3 or more occurrences per week; and
- c. a person who has at least two of the following indicators:
 - i. clinically underweight with a body weight less than 85% of expected weight where weight loss is directly attributable to the eating disorder;
 - ii. current or high risk of medical complications due to eating disorder behaviours and symptoms;
 - iii. serious comorbid medical or psychological conditions significantly impacting on medical or psychological health status with impacts on function;
 - iv. the person has been admitted to a hospital for an eating disorder in the previous 12 months;
 - v. inadequate treatment response to evidence based eating disorder treatment over the past six months despite active and consistent participation.

Practitioners should have regard to the relevant diagnostic criteria set out in the Diagnostic and Statistical Manual of the American Psychiatric Association – Fifth Edition (DSM-5)

Practitioners can access the Eating Disorder Examination Questionnaire at https://www.credo-oxford.com/pdfs/EDE_17.0D.pdf

The Eating Disorders Items Stepped Model of Care

The eating disorder items incorporate a ‘stepped model’ for best practice care for eligible patients with eating disorders that comprise:

- assessment and treatment planning
- provision of and/or referral for appropriate evidence based eating disorder specific treatment services by allied mental health professionals and provision of services by dietitians
- review and ongoing management items to ensure that the patient accesses the appropriate level of intervention.

The Stepped Model

‘STEP 1’ – PLANNING (trigger eating disorders pathway) 90250-90257 and 90260-90263

An eligible patient receives an eating disorder plan (EDP) developed by a medical practitioner in general practice (items 90250-90257), psychiatry (items 90260-90262) or paediatrics (items 90261-90263).

‘STEP 2’ – COMMENCE INITIAL COURSE OF TREATMENT (psychological & dietetic services)

Once an eligible patient has an EDP in place, the 12 month period commences, and the patient is eligible for an initial course of treatment up to 20 dietetic services and 10 eating disorder psychological treatment (EDPT) services.

A patient will be eligible for an additional 30 EDPT services in the 12 month period, subject to reviews from medical practitioners to determine appropriate intensity of treatment.

‘STEP 3’ – CONTINUE ON INITIAL COURSE OF TREATMENT 90264-90269 (managing practitioner review and progress up to 20 EDPT services)

It is expected that the managing practitioner will be reviewing the patient on a regular, ongoing and as required basis. However, a patient must have a review of the EDP (90264-90269), to assess the patient’s progress against the EDP or update the EDP, before they can access more than 10 EDPT services. This is known as the ‘first review’. The first review should be provided by the patient’s managing practitioner, where possible.

‘STEP 4’ FORMAL SPECIALIST AND PRACTITIONER REVIEW 90266-90269 (continue beyond 20 EDPT services)

A patient must have two additional reviews before they can access more than 20 EDPT services. One review (the ‘second review’) must be performed by a medical practitioner in general practice (who is expected to be the managing practitioner), and the other (the ‘third review’) must be performed by a paediatrician (90267 or 90269) or psychiatrist (90266 or 90268). Should both recommend the patient requires more intensive treatment, the patient would be able to access an additional 10 EDPT services in the 12 month period. These reviews are required to determine that the patient has not responded to treatment at the lower intensity levels.

The patient’s managing practitioner should be provided with a copy of the specialist review.

The specialist review by the psychiatrist or paediatrician can occur at any point before 20 EDPT services. The practitioner should refer the patient for specialist review as early in the treatment process as appropriate. If the practitioner is of the opinion that the patient should receive more than 20 EDPT services, the referral should occur at the first practitioner review (after the first course of treatment) if it has not been initiated earlier.

Practitioners should be aware that the specialist review can be provided via telehealth (90268 and 90269). Where appropriate, provision has been made for practitioner participation on the patient-end of the telehealth consultation.

It is expected that the managing practitioner will be reviewing the patient on a regular, ongoing and as required basis. However, a patient must have a review of the EDP (90264-90269), to assess the patient’s progress against the EDP or update the EDP, before they can access the next course of treatment.

‘STEP 5’ ACCESS TO MAXIMUM INTENSITY OF TREATMENT 90266-90269 (continue beyond 30 EDPT services)

To access more than 30 EDPT treatment services in the 12 month period, patients are required to have an additional review (the ‘fourth review’) to ensure the highest intensity of treatment is appropriate. Subject to this review, a patient could access the maximum of 40 EDPT treatment services in a 12 month period. The fourth review should be provided by the patient’s managing practitioner, where possible.

An Integrated Team Approach

A patient’s family and/or carers should be involved in the treatment planning and discussions where appropriate. The family can be involved in care options throughout the diagnosis and assessment, and are usually the support unit that help to bridge the gap between initial diagnosis and eating disorder specific treatment.

The National Standards for the safe treatment of eating disorders specify a multi-disciplinary treatment approach that provides coordinated psychological, physical, behavioural, nutritional and functional care to address all aspects of eating disorders. People with eating disorders require integrated inter-professional treatment that is able to work within a framework of shared goals, care plans and client and family information. Frequent communication is required between treatment providers to prevent deterioration in physical and mental health (RANZCP Clinical Guidelines: Hay et al., 2014). Consider regular case conferencing to ensure that the contributing team members are able to work within a shared care plan and with client and carers to achieve best outcomes.

Clinical guidelines and other resources

It is expected that the consultants providing services under these items should have the appropriate skills, knowledge and experience to provide eating disorders treatment. However, there are a number of resources which may be of assistance to practitioners in supporting and developing eating disorders treatment plans, these include:

- The [Royal Australian and New Zealand College of Psychiatrists clinical practice guidelines for the treatment of eating disorders](#)
- The [Royal Australian and New Zealand College of Psychiatrists \(RANZCP\) Referred Patient Assessment and Management Plan Guidelines](#)

Note: This information is provided as a guide only and each case should be addressed according to a patient's individual needs. An electronic version of the Guidelines is available on the RANZCP website at www.ranzcp.org

[National Eating Disorders Collaboration Eating Disorders: a professional resources for general practitioners](#) available at www.nedc.com.au

Eating Disorders Training

It is expected that practitioners who are providing services under these items have appropriate training, skills and experience in treatment of patients with eating disorders and meet the national workforce core competencies for the safe and effective identification of and response to eating disorders more information available at National Eating Disorders Collaboration

Training Services

Practitioners should contact their professional organisation to identify education and training which may assist to practitioners to gain the skills and knowledge to provide services under these items.

The following organisations provide training which may assist practitioners to meet the workforce competency standards:

- The Australia and New Zealand Academy of eating disorders (ANZAED) - National
- InsideOut Institute - National
- The Victorian Centre of Excellence in Eating Disorders (CEED) - VIC
- Queensland Eating Disorder Service (QuEDS) - QLD
- Statewide Eating Disorder Service (SEDS) - SA
- WA Eating Disorders Outreach & Consultation Service (WAEDOCS) – WA

This list is not exhaustive, but has been included to provide examples on the types of training available which may assist practitioners to upskill in this area.

AN.36.2 Eating Disorders Treatment and Management Plans Explanatory Notes **Eating Disorders Treatment and Management Plans Explanatory Notes (items 90250-90257 and 90260-90263)**

This note provides information on Eating Disorders Treatment and Management Plan (EDP) items and should be read in conjunction with the Eating Disorders General Explanatory Notes

Eating Disorder Treatment Plan (EDP) items overview

The EDP items define services for which Medicare rebates are payable where practitioners undertake the development of a treatment and management plan for patients with a diagnosis of anorexia nervosa and patients with other specified eating disorder diagnoses who meet the eligibility criteria.

The EDP items trigger eligibility for items which provide delivery of eating disorders psychological treatment (EDPT) services (up to a total of 40 psychological services in a 12 month period) and dietetic services (up to a total of 20 in a 12 Month period).

For any particular patient, an eating disorder treatment and management plan expires at the end of a 12 month period following provision of that service. Eating Disorders treatment services are not available to the patient if the EDP has expired.

Preparation of the EDP must include:

- discussing the patient's medical and psychological health status with the patient and if appropriate their family/carer;
- identifying and discussing referral and treatment options with the patient and their family/carer where appropriate, including identification of appropriate support services;
- agreeing goals with the patient and their family/carer where appropriate - what should be achieved by the treatment - and any actions the patient will take;
- planning for the provision of appropriate patient and family/carer education;
- a plan for crisis intervention and/or for relapse prevention, if appropriate at this stage;
- making arrangements for required referrals, treatment, appropriate support services, review and follow-up;
- documenting the results of assessment, patient needs, goals and actions, referrals and required treatment/services, and review date in the patient's plan;
- Discussing and organising the appropriate reviews throughout the patient's treatment; and
- discussing the need for the patient to be reviewed to access a higher intensity of EDPT services in a 12 month period.

Preparing a Medical practitioner in general practice Eating Disorder Treatment & Management Plan (items 90250-90257)

Who can provide the service

Items in subgroup 1 of Group A36 can be rendered by a medical practitioner in general practice. This includes:

- Medical practitioners who can render a general practitioner service in Group A1 of the MBS (see note AN.0.9 for the types of medical practitioners). These medical practitioners can render a 'general practitioner' service for items in subgroup 1 of Group A36.
- Medical practitioners who are not general practitioners, specialists or consultant physicians. These medical practitioners can render a 'medical practitioner' service for items in subgroup 1 of Group A36.

What is Involved - Assess and Plan

It is expected that the practitioner developing the EDP has either performed or reviewed the assessments and examinations required to make a judgement that the patient meets the eligibility criteria for accessing these items.

Items 90250-90257 provide services for development of the eating disorder treatment and management plan. Where a comprehensive physical examination is performed, either on the same occasion or different occasion, the appropriate item could be claimed provided the time taken performing the assessment is not included in the time for producing the plan, or time producing the EDP is not included in the time for assessment.

It is emphasised that it is best practice for the practitioner to perform a comprehensive physical assessment to facilitate ongoing patient management and monitoring of medical and nutritional status.

Patient Assessment

An assessment of a patient with an eating disorders includes:

- taking relevant history (biological, psychological, social, including family/carer support);

- eating disorder diagnostic assessment;
- medical review including physical examination and relevant tests;
- conducting an assessment of mental state, including identification of comorbid psychiatric conditions;
- an assessment of eating disorder behaviours;
- an assessment of associated risk and any medical co-morbidity, including an assessment on how this impacts on the patient's functioning and activities of daily living;
- an assessment of family and/or carer support and
- administering an outcome measurement tool, except where it is considered clinically inappropriate.

Risk assessment for a patient with an eating disorder should include identification of:

- medical instability and risk of hospitalisation;
- level of psychological distress and suicide risk;
- level of malnourishment;
- identification of psychiatric comorbidity;
- level of disability;
- duration of illness;
- response to earlier evidence-based eating disorders treatment;
- level of family/carer support.

It should be noted that the patient's EDP should be treated as a living document for updating as required. In particular, the plan can be updated at any time to incorporate relevant information, such as feedback or advice from other health professionals on the diagnosis or treatment of the patient.

Preparing a Consultant Psychiatrist or Paediatrician Eating Disorder Treatment & Management Plan (90260-90263)

Who can provide the service

Items in subgroup 2 of Group 36 can be rendered by consultant psychiatrists (items 90260 and 90261) and consultant paediatricians (items 90262 and 90263).

What is Involved – Assess and Plan

Items 90260-90263 provide access to specialist assessment and treatment planning. It is expected that items will be a single attendance. However, there may be particular circumstances where a patient has been referred by a GP for an assessment and management plan, but it is not possible for the consultant to determine in the initial consultation whether the patient is suitable for management under such a plan. In these cases, where clinically appropriate, other appropriate consultation items may be used. In those circumstances where the consultant undertakes a consultation (in accordance with the item requirements) prior to the consultation for providing the referring practitioner with an assessment and management plan. It is expected that such occurrences would be unusual for the purpose of diagnosis under items 90260 & 90262.

EDP Items 90262 and 90263 provide for provision of video conference attendance, consistent with other video conference services listed in the Table (see AN.36.6 Eating Disorders Telehealth – Consultant psychiatrists or paediatricians).

Patient Assessment

In order to facilitate ongoing patient focussed management, an assessment of the patient must include:

- administering an outcome measurement tool during the assessment and review stages of treatment, where clinically appropriate. The choice of outcome tool to be used is at the clinical discretion of the practitioner;
- conducting a mental state examination;

- taking relevant history (biological, psychological, behavioural, nutritional, social);
- assessing associated risk and any co-morbidity; and
- making a psychiatric diagnosis for conditions meeting the eligibility criteria.

Risk assessment for a patient with an eating disorder should include identification of:

- medical instability and risk of hospitalisation;
- level of psychological distress and suicide risk;
- level of malnourishment;
- identification of psychiatric comorbidity;
- level of disability;
- duration of illness;
- response to earlier evidence-based eating disorders treatment;
- level of family/carer support.

Where a consultant psychiatrist provides an EDP service, the service must also include:

- administering an outcome measurement tool, where clinically appropriate. The choice of outcome tool to be used is at the clinical discretion of the practitioner. Practitioners using such tools should be familiar with their appropriate clinical use, and if not, should seek appropriate education and training; and
- conducting a mental state examination.

Consultation with the patient's managing practitioner

A written copy of the EDP should be provided to the patient's managing practitioner, within a maximum of two weeks of the assessment. It should be noted that two weeks is the outer limit and in more serious cases more prompt provision of the plan and verbal communication with the managing practitioner may be appropriate.

Additional Claiming Information (general conditions and limitations)

Patients seeking rebates for items 90250-90257 and 90260-90263 will not be eligible if the patient has had a claim within the last 12 months.

Items 90250-90257 cannot be claimed with Items 2713, 279, 735, 758, 235 and 244. Items 90261 and 90263 cannot be claimed with Items 110, 116, 119, 132, 133.

Consultant psychiatrist and paediatrician EDP items 90260-90263 do not apply if the patient does not have a referral within the period of validity.

Before proceeding with the EDP the medical practitioner must ensure that:

- (a) the steps involved in providing the service are explained to the patient and (if appropriate and with the patient's permission) to the patient's carer; and
- (b) the patient's agreement to proceed is recorded.

The medical practitioner must offer the patient a copy of the EDP and add the document to the patient's records. This should include, subject to the patient's agreement, offering a copy to their carer, where appropriate. The medical practitioner may, with the permission of the patient, provide a copy of the EDP, or relevant parts of the plan, to other providers involved in the patient's treatment.

The medical practitioner EDP cover the service of developing an EDP. A separate consultation item can be performed with the EDP if the patient is treated for an unrelated condition to their eating disorder. Where a separate consultation is performed, it should be annotated separately on the patient's account that a separate consultation was clinically required/indicated.

All consultations conducted as part of the EDP must be rendered by the medical practitioner and include a personal attendance with the patient. A specialist mental health nurse, other allied health practitioner, Aboriginal and Torres Strait Islander health practitioner or Aboriginal Health Worker with appropriate mental health qualifications and training may provide general assistance to the medical practitioner in provision of this care.

Additional Claiming Information (interaction with Chronic Disease Management and Better Access)

It is preferable that wherever possible patients have only one plan for primary care management of their disorder. As a general principle the creation of multiple plans should be avoided, unless the patient clearly requires an additional plan for the management of a separate medical condition.

The Chronic Disease Management (CDM) care plan items (items 721, 723, 729, 731 and 732) continue to be available for patients with chronic medical conditions, including patients with complex needs.

Where a patient has a separate chronic medical condition, it may be appropriate to manage the patient's medical condition through a CDM Plan, and to manage their eating disorder through an EDP. In this case, both items can be used. Where the patient receives dietetic services under the CDM arrangements (item 10954), these services will count towards the patients maximum of 20 dietetic services in a 12 month period.

Where a patient has other psychiatric comorbidities, these conditions should be managed under the EDP. Once a patient has a claim for an EDP, the patient should not be able to have a claim for the development or review of a Mental Health Treatment plan by a GP (items 2700, 2701, 2715 and 2717) or medical practitioner in general practice (items 272, 276, 281 and 282) within 12 months of their EDP unless there are exceptional circumstances.

For the purpose of the 40 EDPT count; eating disorder psychological treatment service includes a service under provided under the following items: 90271, 90272, 90273, 90274, 90275, 90276, 90277, 90278, 90279, 90280, 90281, 90282, 2721, 2723, 2725, 2727, 283, 285, 286, 287, 371, 372 and items in Groups M6, M7 and M16 (excluding items 82350 and 82351).

AN.36.3 Eating Disorders Treatment and Management Plan Reviews

Eating Disorders Treatment and Management Plan Reviews (items 90264-90269)

This note provides information on Eating Disorders Treatment and Management Plan (EDP) review items and should be read in conjunction with the AN.36.1 Eating Disorders General Explanatory Notes and the AN.36.2 Eating Disorders Treatment and Management Plans Explanatory Notes

Eating Disorder Treatment Plan review (EDR) items overview

The EDR items define services for which Medicare rebates are payable where practitioners undertake to review the efficacy of the patient's eating disorder treatment and management plan (EDP). This includes modifying the patient's plan, where appropriate, to improve patient outcomes. The review services can be provided by medical practitioners working in general practice, psychiatry and paediatrics.

An EDR may be provided by the managing practitioner who prepared the patient's initial plan (or another practitioner in the same practice or in another practice where the patient has changed practices) and should include a systematic review of the patient's progress against the initial EDP (whether it was prepared by a GP, psychiatrist or paediatrician) and by completing the activities that must be included in a review (see below).

When to render an EDR review item

It is expected that the managing practitioner will be reviewing the patient on a regular, ongoing and as required basis. However, a patient must have a review of the EDP to assess the patient's progress against the EDP or update the EDP, as the patient is approaching the end of each course of treatment before they can access the next course of treatment.

The eating disorder items incorporate a 'stepped model' for best practice care for eligible patients with eating disorders. Under the Eating Disorders Items Stepped Model of Care a course of treatment is defined as 10 eating disorder psychological treatment (EDPT) services. It is required that a patient must have a review after each course of treatment (see AN.36.1 Eating Disorders General Explanatory Notes).

Reviewing an Eating Disorders Treatment Plan

The EDR must include:

- recording the patient's agreement for this service;
- referral to a psychiatrist or paediatrician for review under items 90266-90269, if this has not been initiated at an earlier stage;
- a review of the patient's progress against the goals outlined in the EDP, including discussion with the patient/and or their family/carer as to whether the EDPT services are meeting their needs;
- modification of the documented EDP if required;
- checking, reinforcing and expanding education;
- a plan for crisis intervention and/or for relapse prevention, if appropriate and if not previously provided; and
- reviewing reports back from the allied mental health professional on the patient's response to treatment and documenting a recommendation on whether patient should continue with another course of EDPT services with that health professional or another health professional.

Where a consultant psychiatrist or paediatrician provides an EDR, the consultant physician must give the referring practitioner a copy of the diagnosis and the revised EDP within 2 weeks after the attendance. Where a consultant psychiatrist provides an EDR service, the review must also include:

- administering an outcome measurement tool, where clinically appropriate. The choice of outcome tool to be used is at the clinical discretion of the practitioner. Practitioners using such tools should be familiar with their appropriate clinical use, and if not, should seek appropriate education and training; and
- conducting a mental state examination.

Note: It is expected there will be other consultations between the patient and the managing practitioner as part of ongoing patient and medical management, including the ordering and reviewing of the required testing for monitoring the patients' medical and nutritional status. All other ongoing patient reviews should be claimed under the appropriate item.

Checking patient eligibility for services

Note: The 12 month period commences from the date of the EDP.

To provide an EDR service in items 90264-90269, the patient must have had an EDP 90250-90257 or 90260-90263 in the previous 12 months.

If the EDP service has not yet been claimed, the Department of Human Services will not be aware of the patient's eligibility. In this case the practitioner should, with the patient's permission, contact the referring practitioner to ensure the relevant service has been provided to the patient.

Support:

If there is any doubt about whether a patient has had a claim for an eating disorder service, health professionals can access the Health Professionals Online System (HPOS). HPOS is a fast and secure way for health professionals and administrators to check if a patient is eligible for a Medicare benefit for a specific item on the date of the proposed service. However, this system will only return advice that the service/item is payable or not payable.

Patients can also access their own claiming history with a My Health Record or by establishing a Medicare online account through myGov or the Express Plus Medicare mobile app.

Alternatively, health professionals can call the Department of Human Services on 132 150 to check this information, while patients can seek clarification by calling 132 011.

Additional Claiming Information (general conditions and limitations)

Items 90264- 90265 cannot be claimed with item 2713 and 279.

Consultant psychiatrist and paediatrician EDP items 90266- 90269 do not apply if the patient does not have a referral within the period of validity.

Before proceeding with the EDR service the medical practitioner must ensure that:

- (a) the steps involved in providing the service are explained to the patient and (if appropriate and with the patient's permission) to the patient's carer; and
- (b) the patient's agreement to proceed is recorded.

The medical practitioner must offer the patient a copy of the reviewed EDP and add the document to the patient's records. This should include, subject to the patient's agreement, offering a copy to their carer, where appropriate. The medical practitioner may, with the permission of the patient, provide a copy of the revised EDP, or relevant parts of the plan, to other providers involved in the patient's treatment.

The medical practitioner EDR items cover the service of reviewing an EDP. A separate consultation item can be performed with the EDP if the patient is treated for an unrelated condition to their eating disorder. Where a separate consultation is performed, it should be annotated separately on the patient's account that a separate consultation was clinically required/indicated.

All consultations conducted as part of the EDP or review must be rendered by the medical practitioner and include a personal attendance with the patient. A specialist mental health nurse, other allied health practitioner, Aboriginal and Torres Strait Islander health practitioner or Aboriginal Health Worker with appropriate mental health qualifications and training may provide general assistance to the medical practitioner in provision of this care.

Additional Claiming Information (interaction with Better Access)

Items 90264-90265 for an EDR, performed by a medical practitioner working in general practice, should not be performed in association with a GP mental health consultation review service (item 2712 and 277).

AN.36.4 Eating Disorders Psychological Treatment (EDPT) Services

Eating Disorders Psychological Treatment (EDPT) services (90271-90282)

This note provides information on the Category 1 – Professional Attendances: Group A36 – Subgroup 4 (90271-90282) and should be read in conjunction the AN.36.1 Eating Disorders General Explanatory Notes

Eating Disorder Psychological Treatment (EDPT) Services Overview

Provision of EDPT by a suitably trained medical practitioner in general practice (90271 – 90282) is for patients with anorexia nervosa and other patients with complex presentations of diagnosed eating disorders who meet the eligibility requirements and would benefit from a structured approach to the management of their treatment needs in the community setting.

Patients seeking rebates for EDPT services must have had an EDP 90250-90257 or 90260-90263 in the previous 12 Months.

An 'eating disorder psychological treatment service' (EDPT) is defined in the AN.36.1 Eating Disorders General Explanatory Note. For any particular patient, an eating disorder treatment and management plan expires at the end of a 12 month period following provision of that service. After that period, a patient will require a new EDP to continue accessing EDPT services.

Rendering an EDPT item

Who can provide the service

Items in subgroup 4 of Group A36 can be rendered by a medical practitioner in general practice with the required mental training. This includes:

- Medical practitioners who can render a general practitioner service in Group A1 of the MBS (see note AN.0.9 for the types of medical practitioners). These medical practitioners can render a 'general practitioner' service for items in subgroup 1 of Group A36. These doctors must have the mental health training requirements as specified below.
- Medical practitioners who are not general practitioners, specialists or consultant physicians. These medical practitioners can render a 'medical practitioner' service for items in subgroup 1 of Group A36. These doctors must have the mental health training requirements as specified below.

Mental health training

Medical practitioner in general practice who meets the training and skills requirements as determined by the General Practice Mental Health Standards Collaboration, and are entered on the Register as being eligible to render a focussed psychological strategy service, can render an eating disorders psychological treatment service.

Note: The General Practice Mental Health Standards Collaboration operates under the auspices of the Royal Australian College of General Practitioners.

What is Involved in an EDPT service

The eating disorder items incorporate a 'stepped model' for best practice care for eligible patients with eating disorders. Under the Eating Disorders Items Stepped Model of Care a course of treatment is defined as 10 eating disorder psychological treatment (EDPT) services. It is required that a patient must have a review (an EDR item in subgroup 3 of A36) after each course of treatment (see AN.36.1 Eating Disorders General Explanatory Notes).

After each course of treatment, the relevant practitioners should provide the medical practitioner who is the managing the patient's EDP (where appropriate) with a written report.

A range of acceptable treatments has been approved for use by practitioners in this context. It is expected that professionals will have the relevant education and training to deliver these services. The approved treatments are:

- Family Based Treatment for Eating Disorders (EDs) (including whole family, Parent Based Therapy, parent only or separated therapy)
- Adolescent Focused Therapy for EDs
- Cognitive Behavioural Therapy (CBT) for EDs (CBT-ED)
- CBT-Anorexia Nervosa (AN) (CBT-AN)
- CBT for Bulimia Nervosa (BN) and Binge-eating Disorder (BED) (CBT-BN and CBT-BED)
- Specialist Supportive Clinical Management (SSCM) for EDs
- Maudsley Model of Anorexia Treatment in Adults (MANTRA)
- Interpersonal Therapy (IPT) for BN, BED
- Dialectical Behavioural Therapy (DBT) for BN, BED
- Focal psychodynamic therapy for EDs

Checking patient eligibility for services

Note: The 12 month period commences from the date of the EDP.

Patients seeking rebates for EDPT 90271-90282 must have had an EDP 90250-90257 or 90260-90263 in the previous 12 months.

If the EDP service has not yet been claimed, the Department of Human Services will not be aware of the patient's eligibility. In this case the practitioner should, with the patient's permission, contact the practitioner who developed the plan to ensure the relevant service has been provided to the patient.

Support:

If there is any doubt about whether a patient has had a claim for an eating disorder service, health professionals can access the Health Professionals Online System (HPOS). HPOS is a fast and secure way for health professionals and administrators to check if a patient is eligible for a Medicare benefit for a specific item on the date of the proposed service. However, this system will only return advice that the service/item is payable or not payable.

Patients can also access their own claiming history with a My Health Record or by establishing a Medicare online account through myGov or the Express Plus Medicare mobile app.

Alternatively, health professionals can call the Department of Human Services on 132 150 to check this information, while patients can seek clarification by calling 132 011.

Additional Claiming Information (general conditions and limitations)

Other than Consultation Room (items 90272, 90274, 90276, 90278)

It is expected that this service would be provided only for patients who are unable to attend the practice.

AN.36.5 Eating Disorders Telehealth – Medical Practitioner in general practice Eating Disorders Telehealth – Medical Practitioner in general practice (90279-90282)

This note provides telehealth supporting information for eating disorders Items provided via telehealth by a medical practitioner in general practice and should be read in conjunction with Eating Disorders General Explanatory Notes.

Eligible Geographical Areas

Geographic eligibility for eating disorders telehealth services funded under Medicare (90279-90282) is determined according to the Modified Monash Model (MMM) classifications. Telehealth Eligible Areas are those areas that are within MMM classifications 4 to 7. Patients and providers are able to check their eligibility using the Modified Monash Model locator on the Department of Health's website at [Health Workforce Locator](#).

There is a requirement for the patient and practitioner to be located a minimum of 15 kilometres apart at the time of the consultation. Minimum distance between practitioner and patient video consultations are measured by the most direct (ie least distance) route by road. The patient or the practitioner is not permitted to travel to an area outside the minimum 15 kilometres distance in order to claim a video consultation.

Record Keeping

Participating telehealth practitioners must keep contemporaneous notes of the consultation including documenting that the service was performed by video conference, the date, time and the people who participated.

Only clinical details recorded at the time of the attendance count towards the time of the consultation. It does not include information added at a later time, such as reports of investigations.

Aftercare Rule

Video consultations are subject to the same aftercare rules as practitioners providing face-to-face consultations.

Multiple Attendances on the Same Day

In some situations a patient may receive a telehealth consultation and a face to face consultation by the same or different practitioner on the same day.

Medicare benefits may be paid for more than one video consultation on a patient on the same day by the same practitioner, provided the second (and any following) video consultations are not a continuation of the initial or earlier video consultations. Practitioners will need to provide the times of each consultation on the patient's account or bulk billing voucher.

AN.36.6 Eating Disorders Telehealth – Consultant psychiatrists or paediatricians

Eating Disorders Telehealth – Consultant psychiatrists or paediatricians (90262-90263 and 90268-90269)

This note provides telehealth supporting information for eating disorders Items provided via telehealth / videoconference by consultant psychiatrists or paediatricians and should be read in conjunction with Eating Disorders General Explanatory Notes.

Eligible Geographical Areas

Geographic eligibility for telehealth services funded under Medicare are determined according to the Australian Standard Geographical Classification Remoteness Area (ASGC-RA) classifications. Telehealth Eligible Areas are those areas that are outside a Major City (RA1) according to ASGC-RA (RA2-5). Patients and providers are able to check their eligibility by following the links on the MBS Online website (www.mbsonline.gov.au/telehealth).

There is a requirement for the patient and specialist to be located a minimum of 15km apart at the time of the consultation. Minimum distance between specialist and patient video consultations are measured by the most direct (ie least distance) route by road. The patient or the specialist is not permitted to travel to an area outside the minimum 15 km distance in order to claim a video conference.

This rule will not apply to specialist video consultation with patients who are a care recipient in a residential care service; or at an Aboriginal Medical Service or an Aboriginal Community Controlled Health Service for which a direction made under subsection 19(2) of the Health Insurance Act 1973 as these patients are able to receive telehealth services anywhere in Australia.

Telehealth Eligible Service Areas are defined at www.mbsonline.gov.au telehealth eligible areas.

Record Keeping

Participating telehealth practitioners must keep contemporaneous notes of the consultation including documenting that the service was performed by video conference, the date, time and the people who participated.

Only clinical details recorded at the time of the attendance count towards the time of the consultation. It does not include information added at a later time, such as reports of investigations.

Aftercare Rule

Video consultations are subject to the same aftercare rules as practitioners providing face-to-face consultations.

Multiple Attendances on the Same Day

In some situations a patient may receive a telehealth consultation and a face to face consultation by the same or different practitioner on the same day.

Medicare benefits may be paid for more than one video consultation on a patient on the same day by the same practitioner, provided the second (and any following) video consultations are not a continuation of the initial or earlier video consultations. Practitioners will need to provide the times of each consultation on the patient's account or bulk billing voucher.

Referrals

The referral procedure for a video consultation is the same as for conventional face-to-face consultations.

AN.40.1 COVID-19 Specialist and Consultant Physician MBS Telehealth and Telephone attendance items

COVID-19 MBS telehealth and telephone attendance items by specialist, consultant physician, consultant psychiatrist, neurosurgery, public health medicine, geriatrician, paediatrician and anaesthetist (ceases on 30 September 2020 unless revoked earlier).

The intent of these temporary items is to allow practitioners to provide certain MBS attendances remotely (by videoconference or telephone), in response to the COVID-19 pandemic. This can only be done where it is safe, in accordance with relevant professional standards and clinically appropriate to do so.

COVID-19 MBS telehealth services by videoconference is the preferred substitution for a face-to-face consultation. However, providers will also be able to offer audio-only services via telephone if video is not available, for which there are separate items.

COVID-19 – TEMPORARY MBS TELEHEALTH ITEMS

SPECIALIST, CONSULTANT PHYSICIAN, PSYCHIATRIST, PAEDIATRICIAN, GERIATRICIAN, PUBLIC HEALTH PHYSICIAN, NEUROSURGEON AND ANAESTHETIST ATTENDANCES

As of 20 April 2020 bulk billing of specialist services is at the discretion of the provider, so long as informed financial consent is obtained prior to the provision of the service.

Service	Existing Items <i>face to face</i>	Telehealth items - <i>video-conference</i>	Telephone items – <i>for when video-conferencing is not available</i>
<i>Specialist Services (from 13 March 2020)</i>

minutes			
Neurosurgeon, subsequent attendance, more than 45 minutes	6015	92614	92621
<i>Anaesthetist attendance (from 22 May 2020)</i>			
Anaesthetist, professional attendance, advanced or complex	17615	92701	92712

Further information related to COVID-19 telehealth and telephone services rendered by specialists, consultant physicians, consultant psychiatrists, paediatricians, geriatricians and anaesthetists can be found in the [Temporary Telehealth Bulk-Billed Items for COVID-19 fact sheets and frequently asked questions](#).

All MBS items for referred attendances require a valid referral. However, if the specialist, consultant physician, consultant psychiatrist, paediatrician or geriatrician has previously seen the patient under a referral that is still valid, there is no need to obtain a specific referral for the purposes of claiming the COVID-19 telehealth and telephone items.

Restrictions (for specialist, consultant physician, consultant psychiatrist, neurosurgery, public health medicine, geriatrician, paediatrician and anaesthetist)

- Telephone attendance items only apply if the practitioner or the patient do not have the capacity to undertake the attendance by telehealth (videoconference).
- The new temporary remote attendance items are to be billed **instead** of the usual face to face MBS items.
- Services do not apply to admitted patients.

Billing Requirements (for specialist, consultant physician, consultant psychiatrist, neurosurgery, public health medicine, geriatrician, paediatrician and anaesthetist)

As of 20 April 2020, bulk billing of COVID-19 specialist (and allied health) services is at the discretion of the provider, so long as informed financial consent is obtained prior to the provision of the service.

Further information on the assignment of benefit for bulk billed temporary COVID-19 MBS telehealth services can be found in the [‘Provider Frequently Asked Questions’ at MBSonline.gov.au](#).

Relevant definitions and requirements (for specialist, consultant physician, consultant psychiatrist, neurosurgery, public health medicine, geriatrician, paediatrician and anaesthetist)

For the purposes of these items, an **admitted patient** means a patient who is receiving a service that is provided:

- as part of an episode of hospital treatment; or
- as part of an episode of hospital substitute treatment in respect of which the person to whom the treatment is provided chooses to receive a benefit from a private health insurer.

Note: “hospital treatment” and “hospital-substitute treatment” have the meaning given by subsection 3(1) of the Health Insurance Act 1973.

Specialist and Consultant Physician services

Eligible providers

Specialist telehealth services (91822, 91823, 91832, and 91833) can be billed by all specialities that can currently bill MBS items 104 and 105 or equivalent MBS items. This also includes sports and exercise medicine and occupational and environmental health medicine specialists.

Consultant physician telehealth services (91824, 91825, 91826, 91834, 91835 and 91836) can be billed by all specialities that can currently bill MBS items 110, 116 and 119 or equivalent MBS items. This also includes pain and palliative medicine, sexual health medicine and addiction medicine.

Consultant physician telehealth services to prepare and review a management plan (92422, 92423, 92431 and 92432) can be billed by all physicians that can currently bill MBS items 132 and 133 or equivalent MBS items. This also includes sexual health medicine, addiction medicine and paediatricians.

Specialists and consultant physician services for early intervention for children with pervasive developmental disorder (92141 and 92144), can be billed by specialists and consultant physicians that are able to bill MBS item 137.

Single course of treatment

The same conditions for a single course of treatment apply across all modalities (ie face to face, telehealth or telephone). Once an initial consultation is billed, all subsequent services related to the same condition are considered to be part of a single course of treatment. For example, if a patient has seen a specialist in a face to face consultation (where MBS item 104 has been billed), MBS items 91823 (telehealth) or 91833 (telephone) should be billed if the patient sees the specialist remotely for the same condition.

Anaesthetist services

The Anaesthetist telehealth services (92701, 92712) can be billed by practitioners that can currently bill MBS item 17615.

Consultant Psychiatrist services

Videoconference services are the preferred approach for substituting a face-to-face consultation. However, in response to the COVID-19 pandemic, providers will also be able to offer audio-only services via telephone if video is not available. There are separate items available for audio-only services.

Single course of treatment

The same conditions for a single course of treatment apply across all modalities (ie face to face, telehealth or telephone). Once an initial consultation has been billed, all subsequent services related to the same condition are considered as part of the same single course of treatment. For example if a patient has seen a psychiatrist in a face to face consultation (where MBS item 296 has been billed) then MBS item 91827-91831 (telehealth) or 91837 – 91841 (telephone) should be billed if the patient sees the psychiatrist remotely for the same condition.

Service limits

The service limits that apply to standard psychiatry services generally do not currently apply to the COVID-19 remote attendance items for psychiatry (except for items 92460 and 92500). Patients who have received more than 50 attendances under existing items are eligible to receive services under the telehealth and telephone psychiatry items, provided they meet the item descriptor requirements.

In addition, patients who have received more than 50 attendances under MBS item 319 are eligible to receive services under the COVID-19 telehealth and telephone psychiatry items, provided they meet the item descriptor requirements.

Interview items (92460 and 92500)

These items provide for an interview with a person other than the patient. A maximum of 4 services in a calendar year can be billed under item 92460 or 92500, or the equivalent face to face item (item 352), in the continuing management of a patient. That is, a consultant psychiatrist can bill for a service under item 92460 or 92500 once more in the calendar year if a patient has received three MBS services under any of items 352, 92460 or 92500 in the same calendar year.

Management Plan items (92435, 92436, 92475, and 92476)

The new MBS remote attendance preparation and review of GP management plan items have the same diagnosis, assessment and record-keeping requirements as the existing face-to-face MBS items (291 and 293). Please refer to MBS Explanatory Note AN.0.30 for further information.

Group psychotherapy items (92455, 92456, 92457, 92495, 92496 and 92497)

The new MBS remote attendance group psychotherapy items have the same requirements as the existing face-to-face MBS items (342, 344 and 346). It is the responsibility of the practitioner rendering the service to maintain privacy and confidentiality for all participants throughout the service. Practitioners should refer to the relevant professional practice standards and guidelines for technology-based consultations.

Technical Requirements (for specialist, consultant physician, consultant psychiatrist, neurosurgery, public health medicine, geriatrician, paediatrician and anaesthetist)

The services can be provided by telehealth, or in circumstances when video conferencing is unavailable, by phone. It is the responsibility of the practitioner rendering the service to maintain privacy and confidentiality for all participants throughout the service.

Telehealth attendance means a professional attendance by video conference where the general practitioner:

- a. has the capacity to provide the full service through this means safely and in accordance with relevant professional standards; and
- b. is satisfied that it is clinically appropriate to provide the service to the patient; and
- c. maintains a visual and audio link with the patient; and
- d. is satisfied that the software and hardware used to deliver the service meets the applicable laws for security and privacy.

Note –only the time where a visual and audio link is maintained between the patient and the provider can be counted in meeting the relevant item descriptor.

No specific equipment is required to provide Medicare-compliant telehealth services. Practitioners must ensure that their chosen telecommunications solution meets their clinical requirements and satisfies privacy laws. Information on how to select a web conferencing solution is available on the [Australian Cyber Security Centre website](#).

Phone attendance means a professional attendance by telephone where the health practitioner:

- a. has the capacity to provide the full service through this means safely and in accordance with professional standards; and
- b. is satisfied that it is clinically appropriate to provide the service to the patient; and
- c. maintains an audio link with the patient.

Note: A phone attendance can only be performed in instances where the attendance could not be performed by telehealth (i.e. videoconference).

There are no geographic restrictions on the COVID-19 telehealth and telephone services provided by specialists, consultant physicians, consultant psychiatrists, paediatricians, geriatricians and anaesthetists.

Recording Clinical Notes (for specialist, consultant physician, consultant psychiatrist, neurosurgery, public health medicine, geriatrician, paediatrician and anaesthetist)

In relation to the time taken in recording appropriate details of the service, only clinical details recorded at the time of the attendance count towards the time of consultation. It does not include information added later, such as reports of investigations, or when either the visual or audio link between the patient and the practitioner is lost.

Clinicians should record the date, time and duration of the consultation, and retain these records.

Creating and Updating a My Health Record

The time spent by a medical practitioner on the following activities may be counted towards the total consultation time:

- Reviewing a patient's clinical history, in the patient's file and/or the My Health Record, and preparing or updating a Shared Health Summary where it involves the exercise of clinical judgement about what aspects of the clinical history are relevant to inform ongoing management of the patient's care by other providers; or
- Preparing an Event Summary for the episode of care.

Preparing or updating a Shared Health Summary and preparing an Event Summary are clinically relevant activities. When either of these activities are undertaken with any form of patient history taking and/or the other clinically relevant activities that can form part of a consultation, the item that can be billed is the one with the time period that matches the total consultation time.

MBS rebates are not available for creating or updating a Shared Health Summary as a standalone service.

Information on the Ready Reckoners can be found on the MBS Online downloads page at

PROFESSIONAL ATTENDANCES ITEMS

A1. GENERAL PRACTITIONER ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	
	Group A1. General Practitioner Attendances To Which No Other Item Applies
	LEVEL A
	Professional attendance for an obvious problem characterised by the straightforward nature of the task that requires a short patient history and, if required, limited examination and management.
3	Professional attendance at consulting rooms (other than a service to which another item applies) by a general practitioner for an obvious problem characterised by the straightforward nature of the task that requires a short patient history and, if required, limited examination and management—each attendance (See para AN.0.9 of explanatory notes to this Category) Fee: \$17.75 Benefit: 100% = \$17.75 Extended Medicare Safety Net Cap: \$53.25
4	Professional attendance by a general practitioner (other than attendance at consulting rooms or a residential aged care facility or a service to which another item in the table applies) that requires a short patient history and, if necessary, limited examination and management—an attendance on one or more patients at one place on one occasion—each patient (See para AN.0.11, AN.0.13, AN.0.9 of explanatory notes to this Category) Derived Fee: The fee for item 3, plus \$27.15 divided by the number of patients seen, up to a maximum of six patients. For seven or more patients - the fee for item 3 plus \$2.15 per patient. Extended Medicare Safety Net Cap: 300% of the Derived fee for this item, or \$500.00, whichever is the lesser amount
	LEVEL B
	Professional attendance by a general practitioner (not being a service to which any other item in this table applies) lasting less than 20 minutes, including any of the following that are clinically relevant: a) taking a patient history; b) performing a clinical examination; c) arranging any necessary investigation; d) implementing a management plan; e) providing appropriate preventive health care; in relation to 1 or more health-related issues, with appropriate documentation.

A1. GENERAL PRACTITIONER ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	
23	<p>Professional attendance by a general practitioner at consulting rooms (other than a service to which another item in the table applies), lasting less than 20 minutes and including any of the following that are clinically relevant:</p> <ul style="list-style-type: none"> (a) taking a patient history; (b) performing a clinical examination; (c) arranging any necessary investigation; (d) implementing a management plan; (e) providing appropriate preventive health care; <p>for one or more health-related issues, with appropriate documentation-each attendance</p> <p>(See para AN.0.9 of explanatory notes to this Category) Fee: \$38.75 Benefit: 100% = \$38.75 Extended Medicare Safety Net Cap: \$116.25</p>
24	<p>Professional attendance by a general practitioner (other than attendance at consulting rooms or a residential aged care facility or a service to which another item in the table applies), lasting less than 20 minutes and including any of the following that are clinically relevant:</p> <ul style="list-style-type: none"> (a) taking a patient history; (b) performing a clinical examination; (c) arranging any necessary investigation; (d) implementing a management plan; (e) providing appropriate preventive health care; <p>for one or more health-related issues, with appropriate documentation-an attendance on one or more patients at one place on one occasion-each patient</p> <p>(See para AN.0.11, AN.0.13, AN.0.9 of explanatory notes to this Category) Derived Fee: The fee for item 23, plus \$27.15 divided by the number of patients seen, up to a maximum of six patients. For seven or more patients - the fee for item 23 plus \$2.15 per patient. Extended Medicare Safety Net Cap: 300% of the Derived fee for this item, or \$500.00, whichever is the lesser amount</p>
	LEVEL C
36	<p>Professional attendance by a general practitioner (not being a service to which any other item in this table applies) lasting at least 20 minutes, including any of the following that are clinically relevant:</p> <ul style="list-style-type: none"> a) taking a detailed patient history; b) performing a clinical examination; c) arranging any necessary investigation; d) implementing a management plan; e) providing appropriate preventive health care; <p>in relation to 1 or more health-related issues, with appropriate documentation.</p>

A1. GENERAL PRACTITIONER ATTENDANCES TO WHICH NO OTHER ITEM APPLIES

37	<p>Professional attendance by a general practitioner (other than attendance at consulting rooms or a residential aged care facility or a service to which another item in the table applies), lasting at least 20 minutes and including any of the following that are clinically relevant:</p> <ul style="list-style-type: none"> (a) taking a detailed patient history; (b) performing a clinical examination; (c) arranging any necessary investigation; (d) implementing a management plan; (e) providing appropriate preventive health care; <p>for one or more health-related issues, with appropriate documentation-an attendance on one or more patients at one place on one occasion-each patient</p> <p>(See para AN.0.11, AN.0.13, AN.0.9 of explanatory notes to this Category) Derived Fee: The fee for item 36, plus \$27.15 divided by the number of patients seen, up to a maximum of six patients. For seven or more patients - the fee for item 36 plus \$2.15 per patient. Extended Medicare Safety Net Cap: 300% of the Derived fee for this item, or \$500.00, whichever is the lesser amount</p>
	LEVEL D
	<p>Professional attendance by a general practitioner (not being a service to which any other item in this table applies) lasting at least 40 minutes, including any of the following that are clinically relevant:</p> <ul style="list-style-type: none"> a) taking an extensive patient history; b) performing a clinical examination; c) arranging any necessary investigation; d) implementing a management plan; e) providing appropriate preventive health care; <p>in relation to 1 or more health-related issues, with appropriate documentation.</p>
44	<p>Professional attendance by a general practitioner at consulting rooms (other than a service to which another item in the table applies), lasting at least 40 minutes and including any of the following that are clinically relevant:</p> <ul style="list-style-type: none"> (a) taking an extensive patient history; (b) performing a clinical examination;

A1. GENERAL PRACTITIONER ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	
	<p>(c) arranging any necessary investigation;</p> <p>(d) implementing a management plan;</p> <p>(e) providing appropriate preventive health care;</p> <p>for one or more health-related issues, with appropriate documentation-each attendance</p> <p>(See para AN.0.9 of explanatory notes to this Category) Fee: \$110.50 Benefit: 100% = \$110.50 Extended Medicare Safety Net Cap: \$331.50</p>
47	<p>Professional attendance by a general practitioner (other than attendance at consulting rooms or a residential aged care facility or a service to which another item in the table applies), lasting at least 40 minutes and including any of the following that are clinically relevant:</p> <p>(a) taking an extensive patient history;</p> <p>(b) performing a clinical examination;</p> <p>(c) arranging any necessary investigation;</p> <p>(d) implementing a management plan;</p> <p>(e) providing appropriate preventive health care;</p> <p>for one or more health-related issues, with appropriate documentation-an attendance on one or more patients at one place on one occasion-each patient</p> <p>(See para AN.0.11, AN.0.13, AN.0.9 of explanatory notes to this Category) Derived Fee: The fee for item 44, plus \$27.15 divided by the number of patients seen, up to a maximum of six patients. For seven or more patients - the fee for item 44 plus \$2.15 per patient. Extended Medicare Safety Net Cap: 300% of the Derived fee for this item, or \$500.00, whichever is the lesser amount</p>
A2. OTHER NON-REFERRED ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	1. OTHER MEDICAL PRACTITIONER ATTENDANCES
	Group A2. Other Non-Referred Attendances To Which No Other Item Applies
	Subgroup 1. Other Medical Practitioner Attendances
	CONSULTATION AT CONSULTING ROOMS Professional attendance at consulting rooms
52	<p>Professional attendance at consulting rooms of not more than 5 minutes in duration (other than a service to which any other item applies)-each attendance, by:</p> <p>(a) a medical practitioner (who is not a general practitioner); or</p> <p>(b) a Group A1 disqualified general practitioner, as defined in the dictionary of the General Medical Services Table (GMST).</p> <p>(See para AN.2.1 of explanatory notes to this Category) Fee: \$11.00 Benefit: 100% = \$11.00 Extended Medicare Safety Net Cap: \$33.00</p>
53	Professional attendance at consulting rooms of more than 5 minutes in duration but not more than 25

A2. OTHER NON-REFERRED ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	1. OTHER MEDICAL PRACTITIONER ATTENDANCES
	<p>minutes (other than a service to which any other item applies)-each attendance, by:</p> <p>(a) a medical practitioner (who is not a general practitioner); or</p> <p>(b) a Group A1 disqualified general practitioner, as defined in the dictionary of the General Medical Services Table (GMST).</p> <p>(See para AN.2.1 of explanatory notes to this Category) Fee: \$21.00 Benefit: 100% = \$21.00 Extended Medicare Safety Net Cap: \$63.00</p>
54	<p>Professional attendance at consulting rooms of more than 25 minutes in duration but not more than 45 minutes (other than a service to which any other item applies)-each attendance, by:</p> <p>(a) a medical practitioner (who is not a general practitioner); or</p> <p>(b) a Group A1 disqualified general practitioner, as defined in the dictionary of the General Medical Services Table (GMST).</p> <p>(See para AN.2.1 of explanatory notes to this Category) Fee: \$38.00 Benefit: 100% = \$38.00 Extended Medicare Safety Net Cap: \$114.00</p>
57	<p>Professional attendance at consulting rooms of more than 45 minutes in duration (other than a service to which any other item applies)-each attendance, by:</p> <p>(a) a medical practitioner (who is not a general practitioner); or</p> <p>(b) a Group A1 disqualified general practitioner, as defined in the dictionary of the General Medical Services Table (GMST).</p> <p>(See para AN.2.1 of explanatory notes to this Category) Fee: \$61.00 Benefit: 100% = \$61.00 Extended Medicare Safety Net Cap: \$183.00</p>
	<p style="text-align: center;">CONSULTATION AT A PLACE OTHER THAN CONSULTING ROOMS OR A RESIDENTIAL AGED CARE FACILITY</p> <p>Professional attendance by a medical practitioner (other than a general practitioner) on 1 or more patients on 1 occasion at a place other than consulting rooms or a residential aged care facility.</p>
58	<p>Professional attendance (other than an attendance at consulting rooms or a residential aged care facility or a service to which any other item in the table applies), not more than 5 minutes in duration-an attendance on one or more patients at one place on one occasion-each patient, by:</p> <p>(a) a medical practitioner (who is not a general practitioner); or</p> <p>(b) a Group A1 disqualified general practitioner, as defined in the dictionary of the General Medical Services Table (GMST).</p> <p>Derived Fee: An amount equal to \$8.50, plus \$15.50 divided by the number of patients seen, up to a maximum of six patients. For seven or more patients - an amount equal to \$8.50 plus \$.70 per patient Extended Medicare Safety Net Cap: 300% of the Derived fee for this item, or \$500.00, whichever is the lesser amount</p>
59	<p>Professional attendance (other than an attendance at consulting rooms or a residential aged care facility or a service to which any other item in the table applies) of more than 5 minutes in duration but not more than 25 minutes-an attendance on one or more patients at one place on one occasion-each patient, by:</p> <p>(a) a medical practitioner (who is not a general practitioner); or</p>

A2. OTHER NON-REFERRED ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	1. OTHER MEDICAL PRACTITIONER ATTENDANCES
	<p>(b) a Group A1 disqualified general practitioner, as defined in the dictionary of the General Medical Services Table (GMST).</p> <p>Derived Fee: An amount equal to \$16.00, plus \$17.50 divided by the number of patients seen, up to a maximum of six patients. For seven or more patients - an amount equal to \$16.00 plus \$.70 per patient</p> <p>Extended Medicare Safety Net Cap: 300% of the Derived fee for this item, or \$500.00, whichever is the lesser amount</p>
60	<p>Professional attendance (other than an attendance at consulting rooms or a residential aged care facility or a service to which any other item in the table applies) of more than 25 minutes in duration but not more than 45 minutes-an attendance on one or more patients at one place on one occasion-each patient, by:</p> <p>(a) a medical practitioner (who is not a general practitioner); or</p> <p>(b) a Group A1 disqualified general practitioner, as defined in the dictionary of the General Medical Services Table (GMST).</p> <p>Derived Fee: An amount equal to \$35.50, plus \$15.50 divided by the number of patients seen, up to a maximum of six patients. For seven or more patients - an amount equal to \$35.50 plus \$.70 per patient</p> <p>Extended Medicare Safety Net Cap: 300% of the Derived fee for this item, or \$500.00, whichever is the lesser amount</p>
65	<p>Professional attendance (other than an attendance at consulting rooms or a residential aged care facility or a service to which any other item in the table applies) of more than 45 minutes in duration-an attendance on one or more patients at one place on one occasion-each patient, by:</p> <p>(a) a medical practitioner (who is not a general practitioner); or</p> <p>(b) a Group A1 disqualified general practitioner, as defined in the dictionary of the General Medical Services Table (GMST).</p> <p>Derived Fee: An amount equal to \$57.50, plus \$15.50 divided by the number of patients seen, up to a maximum of six patients. For seven or more patients - an amount equal to \$57.50 plus \$.70 per patient</p> <p>Extended Medicare Safety Net Cap: 300% of the Derived fee for this item, or \$500.00, whichever is the lesser amount</p>
A3. SPECIALIST ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	
Group A3. Specialist Attendances To Which No Other Item Applies	
99	<p>Professional attendance on a patient by a specialist practising in the specialist's specialty if:</p> <p>(a) the attendance is by video conference; and</p> <p>(b) the attendance is for a service:</p> <p style="padding-left: 40px;">(i) provided with item 104 lasting more than 10 minutes; or</p> <p style="padding-left: 40px;">(ii) provided with item 105; and</p> <p>(c) the patient is not an admitted patient; and</p> <p>(d) the patient:</p> <p style="padding-left: 40px;">(i) is located both:</p> <p style="padding-left: 80px;">(A) within a telehealth eligible area; and</p>

A3. SPECIALIST ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	
	<p>(B) at the time of the attendance-at least 15 kms by road from the specialist; or</p> <p>(ii) is a care recipient in a residential care service; or</p> <p>(iii) is a patient of:</p> <p>(A) an Aboriginal Medical Service; or</p> <p>(B) an Aboriginal Community Controlled Health Service;</p> <p>for which a direction made under subsection 19(2) of the Act applies</p> <p>(See para AN.0.68 of explanatory notes to this Category) Derived Fee: 50% of the fee for item 104 or 105. Benefit: 85% of the derived fee Extended Medicare Safety Net Cap: 300% of the Derived fee for this item, or \$500.00, whichever is the lesser amount</p>
104	<p>Professional attendance at consulting rooms or hospital by a specialist in the practice of the specialist's specialty after referral of the patient to the specialist-each attendance, other than a second or subsequent attendance, in a single course of treatment, other than a service to which item 106, 109 or 16401 applies</p> <p>(See para TN.1.4, AN.2.1, AN.40.1 of explanatory notes to this Category) Fee: \$89.55 Benefit: 75% = \$67.20 85% = \$76.15 Extended Medicare Safety Net Cap: \$268.65</p>
105	<p>Professional attendance by a specialist in the practice of the specialist's specialty following referral of the patient to the specialist-an attendance after the first in a single course of treatment, if that attendance is at consulting rooms or hospital, other than a service to which item 16404 applies</p> <p>(See para TN.1.4, AN.0.70, AN.2.1, AN.40.1 of explanatory notes to this Category) Fee: \$45.00 Benefit: 75% = \$33.75 85% = \$38.25 Extended Medicare Safety Net Cap: \$135.00</p>
106	<p>Professional attendance by a specialist in the practice of the specialist's specialty of ophthalmology and following referral of the patient to the specialist-an attendance (other than a second or subsequent attendance in a single course of treatment) at which the only service provided is refraction testing for the issue of a prescription for spectacles or contact lenses, if that attendance is at consulting rooms or hospital (other than a service to which any of items 104, 109 and 10801 to 10816 applies)</p> <p>Fee: \$74.30 Benefit: 75% = \$55.75 85% = \$63.20 Extended Medicare Safety Net Cap: \$222.90</p>
107	<p>Professional attendance by a specialist in the practice of the specialist's specialty following referral of the patient to the specialist-an attendance (other than a second or subsequent attendance in a single course of treatment), if that attendance is at a place other than consulting rooms or hospital</p> <p>Fee: \$131.40 Benefit: 75% = \$98.55 85% = \$111.70 Extended Medicare Safety Net Cap: \$394.20</p>
108	<p>Professional attendance by a specialist in the practice of the specialist's specialty following referral of the patient to the specialist-each attendance after the first in a single course of treatment, if that attendance is at a place other than consulting rooms or hospital</p> <p>Fee: \$83.20 Benefit: 75% = \$62.40 85% = \$70.75 Extended Medicare Safety Net Cap: \$249.60</p>
109	<p>Professional attendance by a specialist in the practice of the specialist's specialty of ophthalmology following referral of the patient to the specialist-an attendance (other than a second or subsequent attendance in a single course of treatment) at which a comprehensive eye examination, including pupil dilation, is performed on:</p>

A3. SPECIALIST ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	
	<p>(a) a patient aged 9 years or younger; or</p> <p>(b) a patient aged 14 years or younger with developmental delay;</p> <p>(other than a service to which any of items 104, 106 and 10801 to 10816 applies)</p> <p>Fee: \$201.85 Benefit: 75% = \$151.40 85% = \$171.60 Extended Medicare Safety Net Cap: \$500.00</p>
111	<p>Professional attendance at consulting rooms or in hospital by a specialist in the practice of the specialist's specialty following referral of the patient to the specialist by a referring practitioner-an attendance after the first attendance in a single course of treatment, if:</p> <p>(a) during the attendance, the specialist determines the need to perform an operation on the patient that had not otherwise been scheduled; and</p> <p>(b) the specialist subsequently performs the operation on the patient, on the same day; and</p> <p>(c) the operation is a service to which an item in Group T8 applies; and</p> <p>(d) the amount specified in the item in Group T8 as the fee for a service to which that item applies is \$309.35 or more</p> <p>For any particular patient, once only on the same day</p> <p>Fee: \$45.00 Benefit: 75% = \$33.75 85% = \$38.25 Extended Medicare Safety Net Cap: \$135.00</p>
113	<p>Initial professional attendance of 10 minutes or less in duration on a patient by a specialist in the practice of the specialist's speciality if:</p> <p>(a) the attendance is by video conference; and</p> <p>(b) the patient is not an admitted patient; and</p> <p>(c) the patient:</p> <p style="padding-left: 20px;">(i) is located both:</p> <p style="padding-left: 40px;">(A) within a telehealth eligible area; and</p> <p style="padding-left: 40px;">(B) at the time of the attendance-at least 15 kms by road from the specialist; or</p> <p style="padding-left: 20px;">(ii) is a care recipient in a residential care service; or</p> <p style="padding-left: 20px;">(iii) is a patient of:</p> <p style="padding-left: 40px;">(A) an Aboriginal Medical Service; or</p> <p style="padding-left: 40px;">(B) an Aboriginal Community Controlled Health Service; for which a direction made under subsection 19(2) of the Act applies; and</p> <p>(d) no other initial consultation has taken place for a single course of treatment</p> <p>(See para AN.0.68 of explanatory notes to this Category)</p> <p>Fee: \$67.20 Benefit: 85% = \$57.15 Extended Medicare Safety Net Cap: \$201.60</p>
115	<p>Professional attendance at consulting rooms or in hospital on a day by a medical practitioner (the</p>

A3. SPECIALIST ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	
	<p>attending practitioner) who is a specialist or consultant physician in the practice of the attending practitioner's specialty after referral of the patient to the attending practitioner by a referring practitioner—an attendance after the initial attendance in a single course of treatment, if:</p> <p>(a) the attending practitioner performs a scheduled operation on the patient on the same day; and</p> <p>(b) the operation is a service to which an item in Group T8 applies; and</p> <p>(c) the amount specified in the item in Group T8 as the fee for a service to which that item applies is \$309.35 or more; and</p> <p>(d) the attendance is unrelated to the scheduled operation; and</p> <p>(e) it is considered a clinical risk to defer the attendance to a later day</p> <p>For any particular patient, once only on the same day</p> <p>(See para AN.3.1 of explanatory notes to this Category) Fee: \$45.00 Benefit: 75% = \$33.75 85% = \$38.25 Extended Medicare Safety Net Cap: \$135.00</p>
A4. CONSULTANT PHYSICIAN ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	
	Group A4. Consultant Physician Attendances To Which No Other Item Applies
110	<p>Professional attendance at consulting rooms or hospital, by a consultant physician in the practice of the consultant physician's specialty (other than psychiatry) following referral of the patient to the consultant physician by a referring practitioner-initial attendance in a single course of treatment</p> <p>(See para AN.40.1 of explanatory notes to this Category) Fee: \$157.95 Benefit: 75% = \$118.50 85% = \$134.30 Extended Medicare Safety Net Cap: \$473.85</p>
112	<p>Professional attendance on a patient by a consultant physician practising in the consultant physician's specialty if:</p> <p>(a) the attendance is by video conference; and</p> <p>(b) the attendance is for a service:</p> <p>(i) provided with item 110 lasting more than 10 minutes; or</p> <p>(ii) provided with item 116, 119, 132 or 133; and</p> <p>(c) the patient is not an admitted patient; and</p> <p>(d) the patient:</p> <p>(i) is located both:</p> <p>(A) within a telehealth eligible area; and</p> <p>(B) at the time of the attendance-at least 15 kms by road from the physician; or</p> <p>(ii) is a care recipient in a residential care service; or</p>

A4. CONSULTANT PHYSICIAN ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	
	<p>(iii) is a patient of:</p> <p>(A) an Aboriginal Medical Service; or</p> <p>(B) an Aboriginal Community Controlled Health Service;</p> <p>for which a direction made under subsection 19(2) of the Act applies</p> <p>(See para AN.0.68 of explanatory notes to this Category) Derived Fee: 50% of the fee for the associated item. Benefit: 85% of derived fee. Extended Medicare Safety Net Cap: 300% of the Derived fee for this item, or \$500.00, whichever is the lesser amount</p>
114	<p>Initial professional attendance of 10 minutes or less in duration on a patient by a consultant physician practising in the consultant physician's specialty if:</p> <p>(a) the attendance is by video conference; and</p> <p>(b) the patient is not an admitted patient; and</p> <p>(c) the patient:</p> <p>(i) is located both:</p> <p>(A) within a telehealth eligible area; and</p> <p>(B) at the time of the attendance-at least 15 kms by road from the physician; or</p> <p>(ii) is a care recipient in a residential care service; or</p> <p>(iii) is a patient of:</p> <p>(A) an Aboriginal Medical Service; or</p> <p>(B) an Aboriginal Community Controlled Health Service;</p> <p>for which a direction made under subsection 19(2) of the Act applies; and</p> <p>(d) no other initial consultation has taken place for a single course of treatment</p> <p>(See para AN.0.68 of explanatory notes to this Category) Fee: \$118.50 Benefit: 85% = \$100.75 Extended Medicare Safety Net Cap: \$355.50</p>
116	<p>Professional attendance at consulting rooms or hospital, by a consultant physician in the practice of the consultant physician's specialty (other than psychiatry) following referral of the patient to the consultant physician by a referring practitioner-each attendance (other than a service to which item 119 applies) after the first in a single course of treatment</p> <p>(See para AN.0.70, AN.40.1 of explanatory notes to this Category) Fee: \$79.05 Benefit: 75% = \$59.30 85% = \$67.20 Extended Medicare Safety Net Cap: \$237.15</p>
117	<p>Professional attendance at consulting rooms or in hospital, by a consultant physician in the practice of the consultant physician's specialty (other than psychiatry) following referral of the patient to the consultant physician by a referring practitioner-an attendance after the first attendance in a single course</p>

A4. CONSULTANT PHYSICIAN ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	
	<p>of treatment, if:</p> <p>(a) the attendance is not a minor attendance; and</p> <p>(b) during the attendance, the consultant physician determines the need to perform an operation on the patient that had not otherwise been scheduled; and</p> <p>(c) the consultant physician subsequently performs the operation on the patient, on the same day; and</p> <p>(d) the operation is a service to which an item in Group T8 applies; and</p> <p>(e) the amount specified in the item in Group T8 as the fee for a service to which that item applies is \$309.35 or more</p> <p>For any particular patient, once only on the same day</p> <p>Fee: \$79.05 Benefit: 75% = \$59.30 85% = \$67.20 Extended Medicare Safety Net Cap: \$237.15</p>

	<p>(a) that attendance and another attendance to which any of items 353 to 358 and 361 applies have not exceeded 12 attendances in a calendar year for the patient; and</p> <p>(b) that attendance and another attendance to which any of items 296 to 308, 353 to 358 and 361 to 370 applies have not exceeded 50 attendances in a calendar year for the patient</p> <p>(See para AN.0.59 of explanatory notes to this Category) Fee: \$119.75 Benefit: 75% = \$89.85 85% = \$101.80 Extended Medicare Safety Net Cap: \$359.25</p>
356	<p>Professional attendance by a consultant physician in the practice of the consultant physician's specialty of psychiatry following referral of the patient to the consultant physician by a referring practitioner-a telepsychiatry consultation of more than 30 minutes, but not more than 45 minutes, in duration, if:</p> <p>(a) that attendance and another attendance to which any of items 353 to 358 and 361 applies have not exceeded 12 attendances in a calendar year for the patient; and</p> <p>(b) that attendance and another attendance to which any of items 296 to 308, 353 to 358 and 361 to 370 applies have not exceeded 50 attendances in a calendar year for the patient</p> <p>(See para AN.0.59 of explanatory notes to this Category) Fee: \$175.60 Benefit: 75% = \$131.70 85% = \$149.30 Extended Medicare Safety Net Cap: \$500.00</p>
357	<p>Professional attendance by a consultant physician in the practice of the consultant physician's specialty of psychiatry following referral of the patient to the consultant physician by a referring practitioner-a telepsychiatry consultation of more than 45 minutes, but not more than 75 minutes, in duration, if:</p> <p>(a) that attendance and another attendance to which any of items 353 to 358 and 361 applies have not exceeded 12 attendances in a calendar year for the patient; and</p> <p>(b) that attendance and another attendance to which any of items 296 to 308, 353 to 358 and 361 to 370 applies have not exceeded 50 attendances in a calendar year for the patient</p> <p>(See para AN.0.59 of explanatory notes to this Category) Fee: \$242.25 Benefit: 75% = \$181.70 85% = \$205.95 Extended Medicare Safety Net Cap: \$500.00</p>
358	<p>Professional attendance by a consultant physician in the practice of the consultant physician's specialty of psychiatry following referral of the patient to the consultant physician by a referring practitioner-a telepsychiatry consultation of more than 75 minutes in duration, if:</p> <p>(a) that attendance and another attendance to which any of items 353 to 358 and 361 applies have not exceeded 12 attendances in a calendar year for the patient; and</p> <p>(b) that attendance and another attendance to which any of items 296 to 308, 353 to 358 and 361 to 370 applies have not exceeded 50 attendances in a calendar year for the patient</p> <p>(See para AN.0.59 of explanatory notes to this Category) Fee: \$295.20 Benefit: 75% = \$221.40 85% = \$250.95 Extended Medicare Safety Net Cap: \$500.00</p>
359	<p>Professional attendance by a consultant physician in the practice of the consultant physician's specialty of psychiatry-a telepsychiatry consultation of more than 30 minutes but not more than 45 minutes in duration, if:</p> <p>(a) the patient is being managed by a medical practitioner or a participating nurse practitioner in accordance with a management plan prepared by the consultant physician in accordance with item 291;</p>

**A8. CONSULTANT PSYCHIATRIST
ATTENDANCES TO WHICH NO OTHER ITEM
APPLIES**

	<p>and</p> <p>(b) the attendance follows referral of the patient to the consultant physician for review of the management plan by the referring practitioner managing the patient; and</p> <p>(c) during the attendance, the consultant physician:</p> <ul style="list-style-type: none"> (i) uses an outcome tool (if clinically appropriate); and (ii) carries out a mental state examination; and (iii) makes a psychiatric diagnosis; and (iv) reviews the management plan; and <p>(d) within 2 weeks after the attendance, the consultant physician:</p> <ul style="list-style-type: none"> (i) prepares a written diagnosis of the patient; and (ii) revises the management plan; and (iii) gives the referring practitioner a copy of the diagnosis and the revised management plan; and (iv) if clinically appropriate, explains the diagnosis and the revised management plan, and gives a copy, to: <ul style="list-style-type: none"> (A) the patient; and (B) the patient's carer (if any), if the patient agrees; and <p>(e) the patient is located in a regional, rural or remote area; and</p> <p>(f) in the preceding 12 months, a service to which item 291 applies has been performed; and</p> <p>(g) in the preceding 12 months, a service to which this item or item 293 applies has not been performed</p> <p>(See para AN.0.59, AN.0.30 of explanatory notes to this Category) Fee: \$340.60 Benefit: 75% = \$255.45 85% = \$289.55 Extended Medicare Safety Net Cap: \$500.00</p>
361	<p>Professional attendance by a consultant physician in the practice of the consultant physician's specialty of psychiatry following referral of the patient to the consultant physician by a referring practitioner-a telepsychiatry consultation of more than 45 minutes in duration, if the patient:</p> <p>(a) either:</p> <ul style="list-style-type: none"> (i) is a new patient for this consultant physician; or (ii) has not received a professional attendance from this consultant physician in the preceding 24 months; and <p>(b) is located in a regional, rural or remote area;</p> <p>other than attendance on a patient in relation to whom this item, item 296, 297 or 299, or any of items 300 to 346 and 353 to 370, has applied in the preceding 24 month period</p> <p>(See para AN.0.59, AN.0.30 of explanatory notes to this Category)</p>

A8. CONSULTANT PSYCHIATRIST ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	
	Fee: \$313.30 Benefit: 75% = \$235.00 85% = \$266.35 Extended Medicare Safety Net Cap: \$500.00
364	Professional attendance by a consultant physician in the practice of the consultant physician's specialty of psychiatry following referral of the patient to the consultant physician by a referring practitioner-a face-to-face consultation of not more than 15 minutes in duration, if: (a) the patient has had a telepsychiatry consultation to which any of items 353 to 358 and 361 applies before that attendance; and (b) that attendance and another attendance to which any of items 296 to 308, 353 to 358 and 361 to 370 applies have not exceeded 50 attendances in a calendar year for the patient (See para AN.0.59 of explanatory notes to this Category) Fee: \$45.35 Benefit: 75% = \$34.05 85% = \$38.55 Extended Medicare Safety Net Cap: \$136.05
366	Professional attendance by a consultant physician in the practice of the consultant physician's specialty of psychiatry following referral of the patient to the consultant physician by a referring practitioner-a face-to-face consultation of more than 15 minutes, but not more than 30 minutes, in duration, if: (a) the patient has had a telepsychiatry consultation to which any of items 353 to 358 and 361 applies before that attendance; and (b) that attendance and another attendance to which any of items 296 to 308, 353 to 358 and 361 to 370 applies have not exceeded 50 attendances in a calendar year for the patient (See para AN.0.59 of explanatory notes to this Category) Fee: \$90.50 Benefit: 75% = \$67.90 85% = \$76.95 Extended Medicare Safety Net Cap: \$271.50
367	Professional attendance by a consultant physician in the practice of the consultant physician's specialty of psychiatry following referral of the patient to the consultant physician by a referring practitioner-a face-to-face consultation of more than 30 minutes, but not more than 45 minutes, in duration, if: (a) the patient has had a telepsychiatry consultation to which any of items 353 to 358 and 361 applies before that attendance; and (b) that attendance and another attendance to which any of items 296 to 308, 353 to 358 and 361 to 370 applies have not exceeded 50 attendances in a calendar year for the patient (See para AN.0.59 of explanatory notes to this Category) Fee: \$139.30 Benefit: 75% = \$104.50 85% = \$118.45 Extended Medicare Safety Net Cap: \$417.90
369	Professional attendance by a consultant physician in the practice of the consultant physician's specialty of psychiatry following referral of the patient to the consultant physician by a referring practitioner-a face-to-face consultation of more than 45 minutes, but not more than 75 minutes, in duration, if: (a) the patient has had a telepsychiatry consultation to which any of items 353 to 358 and 361 applies before that attendance; and (b) that attendance and another attendance to which any of items 296 to 308, 353 to 358 and 361 to 370 applies have not exceeded 50 attendances in a calendar year for the patient (See para AN.0.59 of explanatory notes to this Category) Fee: \$192.40 Benefit: 75% = \$144.30 85% = \$163.55 Extended Medicare Safety Net Cap: \$500.00

A8. CONSULTANT PSYCHIATRIST ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	
370	<p>Professional attendance by a consultant physician in the practice of the consultant physician's specialty of psychiatry following referral of the patient to the consultant physician by a referring practitioner-a face-to-face consultation of more than 75 minutes in duration, if:</p> <p>(a) the patient has had a telepsychiatry consultation to which any of items 353 to 358 and 361 applies before that attendance; and</p> <p>(b) that attendance and another attendance to which any of items 296 to 308, 353 to 358 and 361 to 370 applies have not exceeded 50 attendances in a calendar year for the patient</p> <p>(See para AN.0.59 of explanatory notes to this Category) Fee: \$223.10 Benefit: 75% = \$167.35 85% = \$189.65 Extended Medicare Safety Net Cap: \$500.00</p>
A9. CONTACT LENSES - ATTENDANCES	
	Group A9. Contact Lenses - Attendances
10801	<p>Attendance for the investigation and evaluation of a patient for the fitting of contact lenses, with keratometry and testing with trial lenses and the issue of a prescription-one service in any period of 36 months-patient with myopia of 5.0 dioptres or greater (spherical equivalent) in one eye</p> <p>(See para AN.0.34 of explanatory notes to this Category) Fee: \$127.35 Benefit: 75% = \$95.55 85% = \$108.25 Extended Medicare Safety Net Cap: \$382.05</p>
10802	<p>Attendance for the investigation and evaluation of a patient for the fitting of contact lenses, with keratometry and testing with trial lenses and the issue of a prescription-one service in any period of 36 months-patient with manifest hyperopia of 5.0 dioptres or greater (spherical equivalent) in one eye</p> <p>(See para AN.0.34 of explanatory notes to this Category) Fee: \$127.35 Benefit: 75% = \$95.55 85% = \$108.25 Extended Medicare Safety Net Cap: \$382.05</p>
10803	<p>Attendance for the investigation and evaluation of a patient for the fitting of contact lenses, with keratometry and testing with trial lenses and the issue of a prescription-one service in any period of 36 months-patient with astigmatism of 3.0 dioptres or greater in one eye</p> <p>(See para AN.0.34 of explanatory notes to this Category) Fee: \$127.35 Benefit: 75% = \$95.55 85% = \$108.25 Extended Medicare Safety Net Cap: \$382.05</p>
10804	<p>Attendance for the investigation and evaluation of a patient for the fitting of contact lenses, with keratometry and testing with trial lenses and the issue of a prescription-one service in any period of 36 months-patient with irregular astigmatism in either eye, being a condition the existence of which has been confirmed by keratometric observation, if the maximum visual acuity obtainable with spectacle correction is worse than 0.3 logMAR (6/12) and if that corrected acuity would be improved by an additional 0.1 logMAR by the use of a contact lens</p> <p>(See para AN.0.34 of explanatory notes to this Category) Fee: \$127.35 Benefit: 75% = \$95.55 85% = \$108.25 Extended Medicare Safety Net Cap: \$382.05</p>
10805	<p>Attendance for the investigation and evaluation of a patient for the fitting of contact lenses, with keratometry and testing with trial lenses and the issue of a prescription-one service in any period of 36 months-patient with anisometropia of 3.0 dioptres or greater (difference between spherical equivalents)</p> <p>(See para AN.0.34 of explanatory notes to this Category) Fee: \$127.35 Benefit: 75% = \$95.55 85% = \$108.25 Extended Medicare Safety Net Cap: \$382.05</p>

A9. CONTACT LENSES - ATTENDANCES	
10806	<p>Attendance for the investigation and evaluation of a patient for the fitting of contact lenses, with keratometry and testing with trial lenses and the issue of a prescription-one service in any period of 36 months-patient with corrected visual acuity of 0.7 logMAR (6/30) or worse in both eyes and for whom a contact lens is prescribed as part of a telescopic system</p> <p>(See para AN.0.34 of explanatory notes to this Category) Fee: \$127.35 Benefit: 75% = \$95.55 85% = \$108.25 Extended Medicare Safety Net Cap: \$382.05</p>
10807	<p>Attendance for the investigation and evaluation of a patient for the fitting of contact lenses, with keratometry and testing with trial lenses and the issue of a prescription-one service in any period of 36 months-patient for whom a wholly or segmentally opaque contact lens is prescribed for the alleviation of dazzle, distortion or diplopia caused by pathological mydriasis, aniridia, coloboma of the iris, pupillary malformation or distortion, significant ocular deformity or corneal opacity-whether congenital, traumatic or surgical in origin</p> <p>(See para AN.0.34 of explanatory notes to this Category) Fee: \$127.35 Benefit: 75% = \$95.55 85% = \$108.25 Extended Medicare Safety Net Cap: \$382.05</p>
10808	<p>Attendance for the investigation and evaluation of a patient for the fitting of contact lenses, with keratometry and testing with trial lenses and the issue of a prescription-one service in any period of 36 months-patient who, because of physical deformity, are unable to wear spectacles</p> <p>(See para AN.0.34 of explanatory notes to this Category) Fee: \$127.35 Benefit: 75% = \$95.55 85% = \$108.25 Extended Medicare Safety Net Cap: \$382.05</p>
10809	<p>Attendance for the investigation and evaluation of a patient for the fitting of contact lenses, with keratometry and testing with trial lenses and the issue of a prescription-one service in any period of 36 months-patient with a medical or optical condition (other than myopia, hyperopia, astigmatism, anisometropia or a condition to which item 10806, 10807 or 10808 applies) requiring the use of a contact lens for correction, if the condition is specified on the patient's account</p> <p>(See para AN.0.34 of explanatory notes to this Category) Fee: \$127.35 Benefit: 75% = \$95.55 85% = \$108.25 Extended Medicare Safety Net Cap: \$382.05</p>
10816	<p>Attendance for the refitting of contact lenses with keratometry and testing with trial lenses and the issue of a prescription, if the patient requires a change in contact lens material or basic lens parameters, other than simple power change, because of a structural or functional change in the eye or an allergic response within 36 months after the fitting of a contact lens to which items 10801 to 10809 apply</p> <p>(See para AN.0.35 of explanatory notes to this Category) Fee: \$127.35 Benefit: 75% = \$95.55 85% = \$108.25 Extended Medicare Safety Net Cap: \$382.05</p>
A10. OPTOMETRICAL SERVICES	
1. GENERAL	
	Group A10. Optometrical Services
	Subgroup 1. General
	REFERRED COMPREHENSIVE INITIAL CONSULTATION
10905	<p>Professional attendance of more than 15 minutes duration, being the first in a course of attention, where the patient has been <u>referred</u> by another optometrist who is not associated with the optometrist to whom the patient is referred</p> <p>(See para AN.10.1 of explanatory notes to this Category)</p>

A10. OPTOMETRICAL SERVICES		1. GENERAL
	Fee: \$68.85 Benefit: 85% = \$58.55	
	COMPREHENSIVE INITIAL CONSULTATION BY ANOTHER PRACTITIONER	
	Professional attendance of more than 15 minutes in duration, being the first in a course of attention if the patient has attended another optometrist for an attendance to which this item or item 10905, 10910, 10911, 10912, 10913, 10914 or 10915 applies, or to which old item 10900 applied:	
	(a) for a patient who is less than 65 years of age-within the previous 36 months; or	
	(b) for a patient who is at least 65 years or age-within the previous 12 months	
	(See para AN.10.1 of explanatory notes to this Category)	
10907	Fee: \$34.50 Benefit: 85% = \$29.35	
	COMPREHENSIVE INITIAL CONSULTATION - PATIENT IS LESS THAN 65 YEARS OF AGE	
	Professional attendance of more than 15 minutes in duration, being the first in a course of attention, if:	
	(a) the patient is less than 65 years of age; and	
	(b) the patient has not, within the previous 36 months, received a service to which:	
	(i) this item or item 10905, 10907, 10912, 10913, 10914 or 10915 applies; or	
	(ii) old item 10900 applied	
	(See para AN.10.1 of explanatory notes to this Category)	
10910	Fee: \$68.85 Benefit: 85% = \$58.55	
	COMPREHENSIVE INITIAL CONSULTATION - PATIENT IS AT LEAST 65 YEARS OF AGE	
	Professional attendance of more than 15 minutes in duration, being the first in a course of attention, if:	
	(a) the patient is at least 65 years of age; and	
	(b) the patient has not, within the previous 12 months, received a service to which:	
	(i) this item, or item 10905, 10907, 10910, 10912, 10913, 10914 or 10915 applies; or	
	(ii) old item 10900 applied	
	(See para AN.10.1 of explanatory notes to this Category)	
10911	Fee: \$68.85 Benefit: 85% = \$58.55	
	OTHER COMPREHENSIVE CONSULTATIONS	
	Professional attendance of more than 15 minutes in duration, being the first in a course of attention, if the patient has suffered a significant change of visual function requiring comprehensive reassessment:	
	(a) for a patient who is less than 65 years of age-within 36 months of an initial consultation to which:	
	(i) this item, or item 10905, 10907, 10910, 10913, 10914 or 10915 at the same practice applies; or	
10912		

A10. OPTOMETRICAL SERVICES **1. GENERAL**

	<p>(ii) old item 10900 at the same practice applied; or</p> <p>(b) for a patient who is at least 65 years of age-within 12 months of an initial consultation to which:</p> <p>(i) this item, or item 10905, 10907, 10910, 10911, 10913, 10914 or 10915 at the same practice applies; or</p> <p>(ii) old item 10900 at the same practice applied</p> <p>(See para AN.10.1 of explanatory notes to this Category) Fee: \$68.85 Benefit: 85% = \$58.55</p>
10913	<p>Professional attendance of more than 15 minutes in duration, being the first in a course of attention, if the patient has new signs or symptoms, unrelated to the earlier course of attention, requiring comprehensive reassessment:</p> <p>(a) for a patient who is less than 65 years of age-within 36 months of an initial consultation to which:</p> <p>(i) this item, or item 10905, 10907, 10910, 10912, 10914 or 10915 at the same practice applies; or</p> <p>(ii) old item 10900 at the same practice applied; or</p> <p>(b) for a patient who is at least 65 years of age-within 12 months of an initial consultation to which:</p> <p>(i) this item, or item 10905, 10907, 10910, 10911, 10912, 10914 or 10915 at the same practice applies; or</p> <p>(ii) old item 10900 at the same practice applied</p> <p>(See para AN.10.1 of explanatory notes to this Category) Fee: \$68.85 Benefit: 85% = \$58.55</p>
10914	<p>Professional attendance of more than 15 minutes in duration, being the first in a course of attention, if the patient has a progressive disorder (excluding presbyopia) requiring comprehensive reassessment:</p> <p>(a) for a patient who is less than 65 years of age-within 36 months of an initial consultation to which:</p> <p>(i) this item, or item 10905, 10907, 10910, 10912, 10913 or 10915 applies; or</p> <p>(ii) old item 10900 applied; or</p> <p>(b) for a patient who is at least 65 years of age-within 12 months of an initial consultation to which:</p> <p>(i) this item, or item 10905, 10907, 10910, 10911, 10912, 10913 or 10915 applies; or</p> <p>(ii) old item 10900 applied</p> <p>(See para AN.10.1 of explanatory notes to this Category) Fee: \$68.85 Benefit: 85% = \$58.55</p>
10915	<p>Professional attendance of more than 15 minutes duration, being the first in a course of attention involving the examination of the eyes, with the instillation of a mydriatic, of a patient with diabetes mellitus requiring comprehensive reassessment.</p> <p>(See para AN.10.1 of explanatory notes to this Category) Fee: \$68.85 Benefit: 85% = \$58.55</p>
10916	<p>BRIEF INITIAL CONSULTATION</p>

A10. OPTOMETRICAL SERVICES		1. GENERAL
	<p>Professional attendance, being the first in a course of attention, of not more than 15 minutes duration, not being a service associated with a service to which item 10931, 10932, 10933, 10940, 10941, 10942 or 10943 applies</p> <p>(See para AN.10.1 of explanatory notes to this Category) Fee: \$34.50 Benefit: 85% = \$29.35</p>	
10918	<p>SUBSEQUENT CONSULTATION</p> <p>Professional attendance being the second or subsequent in a course of attention not related to the prescription and fitting of contact lenses, not being a service associated with a service to which item 10940 or 10941 applies</p> <p>(See para AN.10.1 of explanatory notes to this Category) Fee: \$34.50 Benefit: 85% = \$29.35</p>

CATEGORY 2: DIAGNOSTIC PROCEDURES AND INVESTIGATIONS

SUMMARY OF CHANGES FROM 21/07/2020

The 21/07/2020 changes to the MBS are summarised below and are identified in the Schedule pages by one or more of the following words appearing above the item number:

- | | |
|-------------------------|-------|
| (a) new item | New |
| (b) amended description | Amend |
| (c) fee amended | Fee |
| (d) item number changed | Renum |
| (e) EMSN changed | EMSN |

There are no changes to this Category for 21/07/2020

DIAGNOSTIC PROCEDURES AND INVESTIGATIONS NOTES

DN.1.1 Electroencephalography (EEG), Prolonged Recording - (item 11003)

Item 11003 covers an extended EEG recording of at least 3 hours duration, other than ambulatory or video recording.

DN.1.2 Electroencephalography (EEG), Ambulatory or Video - (Items 11004 and 11005)

Items 11004 and 11005 cover prolonged ambulatory or video EEG, recording of at least 3 hours duration for:

- Diagnosing the basis of episodic neurological dysfunction;
- Characterising the nature of a patient's epileptic seizures;
- Localising seizures in patients with uncontrolled epilepsy, with a view to surgery; or
- Assessing treatment response where subclinical seizures are suspected.

DN.1.3 Neuromuscular Diagnosis - (Item 11012)

Based on advice from the Australian Association of Neurologists, Medicare benefits are not payable under Item 11012 for quantitative sensory nerve testing using "Neurometer CPT" diagnostic devices. The advice indicated that the device was still in the evaluation and research stage and did not have widespread clinical application.

DN.1.4 Investigation of Central Nervous System Evoked Responses - (Items 11024 and 11027)

In the context of these items a study refers to one or more averaged samples of electrical activity recorded from one or more sites in the central nervous system in response to the same stimulus.

Second or subsequent studies refer to either stimulating the point of stimulation (e.g. right eye or left median nerve) with a different stimulus or stimulating another point of stimulation (e.g. left eye or right median nerve).

NOTE: Items 11024 and 11027 are not intended to cover bio-feedback techniques.

DN.1.5 Electroretinography - (Items 11204, 11205, 11210 and 11211)

Current professional guidelines and standards for electroretinography, electroculography and pattern retinography are produced by the International Society for Clinical Electrophysiology of Vision (ISCEV).

DN.1.6 Computerised Perimetry Printed Results - (Items 11221 and 11224)

Computerised perimetry performed by optometrists is covered by MBS items 10940 and 10941. Items 11221 and 11224 should not be used to repeat perimetry unless clinically necessary - such as where the results of the perimetry have been provided by the optometrist referring the patient to an ophthalmologist.

DN.1.7 Computerised Perimetry - (Items 11221 and 11224)

Item 11221 for bilateral procedures cannot be claimed for patients who are totally blind in one eye. In this instance, item 11224 for unilateral procedures should be claimed, where appropriate.

DN.1.8 Orbital Contents - (Items 11240, 11241, 11242 and 11243)

Items 11240 and 11241 may only be utilised once per patient per practitioner. Where an additional service is necessary items 11242 and 11243 should be utilised.

Partial coherence interferometry may also be referred to as optical (or ocular) coherence biometry or laser Doppler interferometry.

DN.1.9 Brain Stem Evoked Response Audiometry - (Item 11300)

Item 11300 can be claimed for the programming of a cochlear speech processor.

DN.1.10 Electrocochleography - (Item 11304)

Item 11304 refers to electrocochleography with insertion of electrodes through the tympanic membrane.

DN.1.11 Non-determinate Audiometry - (Item 11306)

This refers to screening audiometry covering those services, one or more, referred to in Items 11309-11318 when not performed under the conditions set out in paragraph D1.12.

DN.1.12 Audiology Services - (Items 11309 to 11318)

A medical service specified in Items 11309 to 11318 shall be taken to be a medical service for the purposes of payment of benefits if, and only if, it is rendered:

- (a) in conditions that allow the establishment of determinate thresholds;
- (b) in a sound attenuated environment with background noise conditions that comply with Australian Standard AS/NZS 1269.3-2005; and
- (c) using calibrated equipment that complies with Australian Standard AS IEC 60645.1-22002, AS IEC 60645.2-2002 and AS IEC 60645.3-2002.

DN.1.13 Oto-Acoustic Emission Audiometry - (Item 11332)

Medicare benefits are not payable under Item 11332 for routine screening of infants. The equipment used to provide this service must be capable of displaying the recorded emission and not just a pass/fail indicator.

DN.1.14 Respiratory Function Tests - (Item 11503)

Fractional exhaled nitric oxide (FeNO) testing cannot be claimed under item 11503.

When laboratory based spirometry (item 11512) is performed on the same day as a test approved under item 11503, then only 11503 must be claimed. When spirometry is the only laboratory test performed then 11512 must be claimed.

Maximum inspiratory and expiratory flow-volume loop testing for the purpose of diagnosing central airways obstruction is to be performed under item 11512 not 11503. Item 11503 is not for the purpose of investigation of sleep disorders. Polygraphic data obtained as part of a sleep study item in the range 12203 to 12250 cannot be used for the purpose of claiming item 11503.

DN.1.15 Capsule Endoscopy - (Item 11820 and 11823)

Capsule endoscopy is primarily used to view the small bowel, which cannot be viewed by upper gastrointestinal endoscopy and colonoscopy.

Capsule endoscopy imaging must be kept in a manner that facilitates retrieval on the basis of the patient's name and date of service. Records must be retained for a period of 2 years commencing on the day on which the service was rendered.

Conjoint committee

The Conjoint Committee comprises representatives from the Gastroenterological Society of Australia (GESA), the Royal Australasian College of Physicians (RACP) and the Royal Australasian College of Surgeons (RACS). For the purposes of Items 11820 and 11823, specialists or consultant physicians performing this procedure must have endoscopic training recognised by The Conjoint Committee for the Recognition of Training in Gastrointestinal Endoscopy, and the Department of Human Services notified of that recognition.

DN.1.16 Administration of Thyrotropin Alfa-rch for the Detection of Recurrent Well-differentiated Thyroid Cancer - (Item 12201)

Thyrotropin alfa-rch is a diagnostic agent that allows patients to remain on thyroid hormone therapy while being assessed for recurrent cancer. This item was introduced following an assessment by the Medical Services Advisory Committee (MSAC) of the available evidence relating to the safety, effectiveness and cost-effectiveness of thyrotropin alfa-rch. MSAC found that the use of thyrotropin alfa-rch is associated with a lower diagnostic accuracy than when the patient has withdrawn from thyroid hormone therapy. Accordingly, benefits are payable under the item only for patients in whom thyroid hormone therapy withdrawal is medically contraindicated and where concurrent whole body study using radioactive iodine and serum thyroglobulin are undertaken. Services provided to patients who do not demonstrate the indications set out in item 12201 do not attract benefits under the item.

"**Severe psychiatric illness**" is defined as patients with a severe pre-existing psychiatric illness who are currently under specialist psychiatric care.

The item includes the cost of supplying thyrotropin alfa-rch and the equivalent of a subsequent specialist attendance. "Administration" means an attendance by the specialist or consultant physician (the administering practitioner) that includes:

- an assessment that the patient meets the criteria prescribed by the item;
the supply of thyrotropin alfa-rch;
- ensuring that thyrotropin alfa-rch is injected (either by the administering practitioner or by another practitioner) in two doses at 24 hour intervals, with the second dose being administered 72 hours prior to whole body study with radioactive iodine and serum thyroglobulin test; and
- arranging the whole body radioactive iodine study and the serum thyroglobulin test.

Where thyrotropin alfa-rch is injected by the administering practitioner, benefits are not payable for an attendance on the day the second dose is administered. Where thyrotropin alfa-rch is injected by: a general practitioner - benefits are payable under a Level A consultation (item 3); other practitioners - benefits are payable under item 52.

DN.1.17 Investigations for sleep disorders (Items 12203 to 12250)

Items 12203 and 12250 are applicable for patients who require a diagnostic sleep study. They enable direct GP referral to testing without personal assessment by a sleep or respiratory physician, when validated screening questionnaires suggest a high pre-test probability for diagnosis of symptomatic, moderate to severe obstructive sleep apnoea (OSA). The screening questionnaires should be administered by the referring practitioner. Alternatively, the need for testing can be determined by a sleep or respiratory physician following direct clinical assessment (either face-to-face or by video conference).

Screening Questionnaires

For the purpose of items 12203 or 12250, a high probability for symptomatic, moderate to severe OSA would be indicated by one of the following clinical screening tool outcomes:

- STOP-Bang score of 4 or more AND an Epworth Sleepiness Scale score of 8 or more;

OR

- OSA50 score of 5 or more AND an Epworth Sleepiness Scale score of 8 or more;

OR

- high risk score on the Berlin Questionnaire AND an Epworth Sleepiness Scale score of 8 or more.

The STOP-Bang, OSA50, Berlin questionnaires and Epworth Sleepiness Scale can be accessed at Douglas et al, Guidelines for sleep studies in adults - a position statement of the Australasian Sleep Association. *Sleep Med.* 2017 Aug; 36 Suppl 1:S2-S22 (www.sleep.org.au/documents/item/2980) or on the American Thoracic Society website (www.thoracic.org/members/assemblies/assemblies/srn/questionnaires/).

Evidence of the screening tests being administered to the patient in full, including screening test scores must be recorded in the patient's clinical record as this may be subject to audit.

Out-dated or incomplete referrals (Items 12203 and 12250)

Referrals made prior to 1 November 2018 (or after 1 November 2018 but without the screening questionnaires) remain valid for the purposes of a service performed under items 12203 and 12250 from 1 November 2018 – providing:

- The patient is assessed by a qualified sleep medicine practitioner or consultant respiratory physician to determine the necessity for the sleep study; or
- The validated screening questionnaires are administered to the patient by the sleep medicine practitioner, sleep technician or other practice staff. If the screening questionnaires indicate a high pre-test probability for the diagnosis of symptomatic, moderate to severe OSA, the patient can proceed to testing. If there remains any uncertainty about the necessity for the study, a qualified sleep medicine practitioner or consultant respiratory physician should assess the patient.

Referrals for attended (Level 1) diagnostic studies

Where a patient with suspected OSA has been directly referred for a Level 1 sleep study under item 12203, but there is insufficient information to indicate if there are any contraindications for a Level 2 study, the following options are available:

- The patient can be assessed by a qualified sleep medicine practitioner or consultant respiratory physician to determine the most suitable study (i.e. Level 1 or Level 2); or
- The validated screening questionnaires can be administered to the patient by the sleep medicine practitioner, sleep technician or practice staff. If the screening questionnaires indicate a high pre-test probability for the diagnosis of symptomatic, moderate to severe OSA, the sleep provider can either – arrange for the patient to have a Level 2 study (notifying the referring practitioner of this decision); or seek additional information from the referring practitioner on why a Level 1 study is required (e.g. whether the patient has any contraindications for a Level 2 study). If there remains any uncertainty about the type of study which the patient should receive, a qualified sleep medicine practitioner or consultant respiratory physician should assess the patient.

Referrals made without (or incomplete) screening questionnaires (Items 12203 and 12250)

If a patient has been directly referred for testing without the use of the screening questionnaires, they can be administered to the patient by the sleep provider (e.g. by a sleep technician or other practice staff). Where the screening questionnaires have been provided with the referral but they are incomplete, the sleep provider may wish to contact the patient to determine what their responses were to the relevant questions.

Attended versus unattended sleep studies

Determination of the need for testing should conform with Australasian Sleep Association guidelines.

Unattended sleep studies are suitable for many patients with suspected OSA but patients with other sleep disorders should undergo an attended study. Assessment for potential contraindications to an unattended sleep study can be

undertaken by either the referring practitioner, qualified adult sleep medicine practitioner or consultant respiratory physician. Standardised referrals should request sufficient information to enable such assessment.

In accordance with the Australasian Sleep Association's Guidelines for Sleep Studies in Adults, relative contraindications for an unattended sleep study to investigate suspected OSA include but are not limited to:

- (a) intellectual disability or cognitive impairment;
- (b) physical disability with inadequate carer attendance;
- (c) significant co-morbid conditions including neuromuscular disease, heart failure or advanced respiratory disease where more complex disorders are likely;
- (d) suspected respiratory failure where attended measurements are required, including measurement of carbon dioxide partial pressures;
- (e) suspected parasomnia or seizure disorder;
- (f) suspected condition where recording of body position is considered to be essential and would not be recorded as part of an unattended sleep study;
- (g) previously failed or inconclusive unattended sleep study;
- (h) unsuitable home environment including unsafe environments or where patients are homeless; and
- (i) consumer preference based on a high level of anxiety about location of study or where there is unreasonable cost or disruption based on distance to be travelled, or home circumstances.

Patients who have these features may be suitable for either attended (Level 1) or unattended (Level 2) studies.

Treatment options following testing

The results and treatment options following any diagnostic sleep study should be discussed during a professional attendance with a medical practitioner before the initiation of any therapy. If there is uncertainty about the significance of test results or the appropriate management for that individual then referral to a sleep or respiratory medicine specialist is recommended.

Any professional attendance by a qualified adult sleep medicine practitioner or consultant respiratory physician associated with this service may be undertaken face-to-face or by video conference.

Meaning of 'at least 8 hours duration'

The requirement 'for a period of at least 8 hours duration' means the overnight investigation (including patient set-up time and actual period of recording) must be of at least 8 hours duration. Providers must keep evidence of the duration of the overnight investigation (including set-up time and period of recording) as part of their administrative records for MBS sleep studies.

Polygraphic data

Item 11503 is not for the purpose of investigation of sleep disorders. Polygraphic data obtained as part of a sleep study item in the range 12203 to 12250 cannot be used for the purpose of claiming item 11503.

Billing requirements for sleep studies

Items 12203 to 12250 do not support a figurehead billing arrangement. Figurehead or 'headline' billing is where one practitioner's provider number is used to bill patients for the services provided by other practitioners.

While individual components of the sleep study service (e.g. supervision of the investigation and interpretation and preparation of a permanent report) do not need to be performed by the same qualified sleep medicine practitioner, it

is an MBS requirement that the qualified sleep medicine practitioner who prepared the report on the results of the investigation bill the relevant item.

Benefits are not payable for items 12203 to 12250 where the interpretation and preparation of a permanent report is provided by a technician or supervised staff rather than by a qualified adult sleep medicine practitioner.

Where the date of service for a sleep study item is the same as the date of service of any items 11000 to 11005, 11503, 11700 to 11709, 11713 and 12203/12250, for a benefit to be payable, there must be written notification on the account identifying that the service under any of those items was not provided on the same occasion as the sleep study item.

The date of service for the purposes of items 12203 to 12250 is deemed to be the day of the morning the overnight investigation is completed. Billing for the service must only occur once all of the requirements of the item have been fulfilled.

DN.1.18 Bone Densitometry - (Items 12306 to 12322)

Definitions

Low bone mineral density is present when the bone (organ) mineral density falls more than 1.5 standard deviations below the age matched mean or more than 2.5 standard deviations below the young normal mean at the same site and in the same gender.

Item 12321 is intended to allow for bone mineral density measurement following a significant change in therapy - e.g. a change in the class of drugs - rather than for a change in the dosage regimen.

Items 12320 and 12322 enable the payment of a Medicare benefit for a bone densitometry service performed on a patient aged 70 years or over. Patients 70 years and over are eligible for an initial screening study.

Patients assessed as having a normal study or mild osteopenia as measured by a t-score down to -1.5 are eligible for one scan every 5 years (item 12320).

Patients with moderate to marked osteopenia as measured by a T-score of -1.5 to -2.5 are eligible for one scan every two years (item 12322).

An examination under any of these items covers the measurement of 2 or more sites, interpretation and provision of a report; all performed by a specialist or consultant physician in the practice of his or her specialty. Two or more sites must include the measurement of bone density of the lumbar spine and proximal femur. The measurement of bone mineral density at either forearms or both heels or in combination is excluded for the purpose of Medicare benefit, unless necessary for specific clinical indications (see below).

Patients unable to have a lumbar spine or proximal femur measurement taken

The recommended alternative measurement for patients who have been referred for a dual energy x-ray absorptiometry (DEXA) bone densitometry scan who are unable to have a lumbar spine or proximal femur measurement taken is the distal forearm, e.g. patients with spinal fusions or bilateral hip prostheses. Patients unable to have a lumbar spine or proximal femur measurement taken who have been referred for a quantitative computed tomography (QCT) scan are not subject to the two site measurements requirement. For these patients one site for which a QCT measurement can be appropriately referenced is sufficient.

Professional Supervision and Interpretation and Reporting

The interpretation and report for all bone densitometry services must be provided by a specialist or consultant physician.

Items 12306, 12312, 12315, 12321 and Items 12320 and 12322 (when performed using Dual Energy X-ray Absorptiometry) must be performed by a:

- (a) specialist or consultant physician; or
- (b) person who holds a State or Territory radiation license, and who is under the supervision of a specialist or consultant physician.

Items 12320 and 12322 (when performed using Quantitative Computed Tomography) must be performed by a:

- (a) specialist or consultant physician; or
- (b) a radiation licence holder who is registered as a medical radiation practitioner under a law of a State or Territory; and the specialist or consultant physician is available to monitor and influence the conduct and diagnostic quality of the examination and, if necessary, to attend on the patient personally.

Referrals

Bone densitometry services are available on the basis of referral by a medical practitioner to a specialist or consultant physician. However, providers of bone densitometry to whom a patient is referred for management may determine that a bone densitometry service is required in line with the provisions of Items 12306, 12312, 12315, 12320, 12321 and 12322.

For Item 12306 the referral should specify the indication for the test, namely:

- (a) 1 or more fractures occurring after minimal trauma; or
- (b) monitoring of low bone mineral density proven by previous bone densitometry.

For Item 12312 the referral should specify the indication for the test, namely:

- (a) prolonged glucocorticoid therapy;
- (b) conditions associated with excess glucocorticoid secretion;
- (c) male hypogonadism; or
- (d) female hypogonadism lasting more than 6 months before the age of 45.

For Item 12315 the referral should specify the indication for the test, namely:

- (a) primary hyperparathyroidism;
- (b) chronic liver disease;
- (c) chronic renal disease;
- (d) proven malabsorptive disorders;
- (e) rheumatoid arthritis; or
- (f) conditions associated with thyroxine excess.

For Item 12312

- (a) 'Prolonged glucocorticoid therapy' is defined as the commencement of a dosage of inhaled glucocorticoid equivalent to or greater than 800 micrograms beclomethasone dipropionate or budesonide per day; or
- (b) a supraphysiological glucocorticoid dosage equivalent to or greater than 7.5 mg prednisolone in an adult taken orally per day;

for a period anticipated to last for at least 4 months.

Glucocorticoid therapy must be contemporaneous with the current scan. Patients no longer on steroids would not qualify for benefits.

For Item 12312

- (a) Male hypogonadism is defined as serum testosterone levels below the age matched normal range.
- (b) Female hypogonadism is defined as serum oestrogen levels below the age matched normal range.

For Item 12315

A malabsorptive disorder is defined as one or more of the following:

- (a) malabsorption of fat, defined as faecal fat estimated at greater than 18 gm per 72 hours on a normal fat diet; or
- (b) bowel disease with presumptive vitamin D malabsorption as indicated by a sub-normal circulating 25-hydroxyvitamin D level; or
- (c) histologically proven Coeliac disease.

DN.1.19 Retinal Photography with a Non-Mydriatic Retinal Camera

This service is separated into two items, MBS item 12325 and MBS item 12326, in line with NHMRC guidelines' recommended frequency of repeat testing in persons of Aboriginal and Torres Strait Islander descent and the general population.

This item is intended for the provision of retinal photography with a non-mydriatic retinal camera. Mydriasis is permitted if adequate photographs cannot be obtained through an undilated pupil.

Presenting distance vision means unaided distance vision or the vision obtained with the current spectacles or contact lenses, if normally worn for distance vision.

Detection of any diabetic retinopathy should be followed by referral to an optometrist or ophthalmologist in accordance with the NHMRC guidelines.

Where images are inadequate quality for detection of diabetic retinopathy, referral to an optometrist or ophthalmologist for further assessment is indicated.

Any element(s) of the service may be performed by appropriately trained or qualified personnel under the direction of the medical practitioner co-ordinating the patient's care, who retains overall responsibility for claiming of the service.

DN.1.20 Spirometry (Items 11505, 11506 and 11512)

Spirometry services billed to the MBS should meet international quality standards (Eur Respir J 2005; 26: 319–338).

The National Asthma Council's Australian Asthma Handbook (2016) and Lung Foundation Australia's and Thoracic Society of Australia and New Zealand's COPD-X Plan (2016) advise that properly performed spirometry is required to confirm airflow limitation and the diagnosis of asthma and/or COPD. Reversibility testing is the standard required for asthma diagnosis. The diagnosis of COPD is confirmed with post bronchodilator spirometry. Item 11505 should not be repeated when diagnosis has been previously confirmed by properly performed spirometry. To meet quality requirements patients must have three acceptable tests for each testing period (pre/post bronchodilator), and meet repeatability criteria with the best effort recorded. Spirometry should be performed by a person who has undergone training and is qualified to perform it to recommended standards (see Spirometry Handbook, National Asthma Council of Australia (<https://www.nationalasthma.org.au/living-with-asthma/resources/health-professionals/information-paper/spirometry-handbook>) and ATS/ERS Standardisation of spirometry paper (<http://erj.ersjournals.com/content/erj/26/2/319.full.pdf>).

DN.1.21 Fraction of Exhaled Nitric Oxide (Item 11507) and Cardiopulmonary Exercise Testing (Item 11508)

Services billed to item 11507 should meet the following quality standards:

- An Official ATS Clinical Practice Guideline: Interpretation of Exhaled Nitric Oxide Levels (FENO) for Clinical Applications: Am J Respir Crit Care Med Vol 184. pp 602–615, 2011 DOI: 10.1164/rccm.912011ST.
- ATS/ERS Recommendations for Standardized Procedures for the Online and Offline Measurement of Exhaled Lower Respiratory Nitric Oxide and Nasal Nitric Oxide, 2005: Am J Respir Crit Care Med Vol 171. pp 912–930, 2005 DOI: 10.1164/rccm.200406-710ST
Fewer than three traces will be accepted as billable under item 11507 if three reproducible loops are difficult to achieve for clinical reasons. The clinical reason(s) for not achieving three reproducible loops must be documented.

Services billed to item 11508 should meet the following quality standards:

- ATS/ACCP Statement on Cardiopulmonary Exercise Testing: Am J Respir Crit Care Med Vol 167. pp 211–277, 2003 DOI: 10.1164/rccm.167.2.211.

DN.1.22 Skin Prick Testing (items 12000-12005)

Skin prick testing and Intradermal testing should always be performed in a medical setting with the ready availability of medical practitioners competent to treat systemic allergic reactions, and appropriate resuscitation equipment. Because intradermal testing carries a higher risk of anaphylaxis it should only be performed in a hospital setting (or equivalent) by either a specialist or consultant physician with proficiency and experience in all aspects of skin testing for allergy.

Item 12003 should only be used by appropriately trained doctors such as allergist immunologists or equivalently trained medical practitioners. An alternative to Skin Prick Testing (SPT) is serum specific IgE food allergen testing. Serum specific IgE (ssIgE) allergy blood testing to food panels is not recommended.

Item 12004 should only be used by appropriately trained doctors such as allergist immunologists or equivalently trained medical practitioners.

Item 12005 should only be used by appropriately trained doctors such as allergist immunologists, anaesthetists or equivalently trained medical practitioners.

DN.1.23 Multiple sleep latency testing and Maintenance of wakefulness testing

Determination of the need for testing and testing procedures should be performed in accordance with current Australasian Sleep Association guidelines. Not to be used as part of an occupational health service or pre-employment assessment.

The date of service for the purposes of items 12254 to 12272 is deemed to be the day on which the daytime investigation component of the test is completed. Billing for the service must only occur once all of the requirements of the item have been fulfilled.

DIAGNOSTIC PROCEDURES AND INVESTIGATIONS ITEMS

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		1. NEUROLOGY
	Group D1. Miscellaneous Diagnostic Procedures And Investigations	
	Subgroup 1. Neurology	
	ELECTROENCEPHALOGRAPHY, not being a service:	
	(a) associated with a service to which item 11003, 11006 or 11009 applies; or	
	(b) involving quantitative topographic mapping using neurometrics or similar devices (Anaes.)	
11000	Fee: \$126.95 Benefit: 75% = \$95.25 85% = \$107.95	
	ELECTROENCEPHALOGRAPHY, prolonged recording of at least 3 hours duration, not being a service:	
	(a) associated with a service to which item 11000, 11004, 11005, 11006 or 11009 applies; and	
	(b) involving quantitative topographic mapping using neurometrics or similar devices	
	(See para DN.1.1 of explanatory notes to this Category)	
11003	Fee: \$335.85 Benefit: 75% = \$251.90 85% = \$285.50	
	ELECTROENCEPHALOGRAPHY, ambulatory or video, prolonged recording of at least 3 hours duration up to 24 hours duration, recording on the first day, not being a service:	
	(a) associated with a service to which item 11000, 11003, 11005, 11006 or 11009 applies; and	
	(b) involving quantitative topographic mapping using neurometrics or similar devices	
	(See para DN.1.2 of explanatory notes to this Category)	
11004	Fee: \$335.85 Benefit: 75% = \$251.90 85% = \$285.50	
	ELECTROENCEPHALOGRAPHY, ambulatory or video, prolonged recording of at least 3 hours duration up to 24 hours duration, recording on each day subsequent to the first day, not being a service:	
	(a) associated with a service to which item 11000, 11003, 11004, 11006 or 11009 applies; or	
	(b) involving quantitative topographic mapping using neurometrics or similar devices	
	(See para DN.1.2 of explanatory notes to this Category)	
11005	Fee: \$335.85 Benefit: 75% = \$251.90 85% = \$285.50	
	ELECTROENCEPHALOGRAPHY, temporosphenoidal, not being a service involving quantitative topographic mapping using neurometrics or similar devices	
11006	Fee: \$172.20 Benefit: 75% = \$129.15 85% = \$146.40	
	ELECTROCORTICOGRAPHY	
11009	Fee: \$234.85 Benefit: 75% = \$176.15 85% = \$199.65	
	NEUROMUSCULAR ELECTRODIAGNOSIS conduction studies on 1 nerve OR ELECTROMYOGRAPHY of 1 or more muscles using concentric needle electrodes OR both these examinations (not being a service associated with a service to which item 11015 or 11018 applies)	
	(See para DN.1.3 of explanatory notes to this Category)	
11012	Fee: \$115.50 Benefit: 75% = \$86.65 85% = \$98.20	
	NEUROMUSCULAR ELECTRODIAGNOSIS conduction studies on 2 or 3 nerves with or without electromyography (not being a service associated with a service to which item 11012 or 11018 applies)	
11015	Fee: \$154.60 Benefit: 75% = \$115.95 85% = \$131.45	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		1. NEUROLOGY
11018	<p>NEUROMUSCULAR ELECTRODIAGNOSIS conduction studies on 4 or more nerves with or without electromyography OR recordings from single fibres of nerves and muscles OR both of these examinations (not being a service associated with a service to which item 11012 or 11015 applies)</p> <p>Fee: \$230.95 Benefit: 75% = \$173.25 85% = \$196.35</p>	
11021	<p>NEUROMUSCULAR ELECTRODIAGNOSIS repetitive stimulation for study of neuromuscular conduction OR electromyography with quantitative computerised analysis OR both of these examinations</p> <p>Fee: \$154.60 Benefit: 75% = \$115.95 85% = \$131.45</p>	
11024	<p>CENTRAL NERVOUS SYSTEM EVOKED RESPONSES, INVESTIGATION OF, by computerised averaging techniques, not being a service involving quantitative topographic mapping of event-related potentials or multifocal multichannel objective perimetry - 1 or 2 studies</p> <p>(See para DN.1.4 of explanatory notes to this Category)</p> <p>Fee: \$117.40 Benefit: 75% = \$88.05 85% = \$99.80</p>	
11027	<p>CENTRAL NERVOUS SYSTEM EVOKED RESPONSES, INVESTIGATION OF, by computerised averaging techniques, not being a service involving quantitative topographic mapping of event-related potentials or multifocal multichannel objective perimetry - 3 or more studies</p> <p>(See para DN.1.4 of explanatory notes to this Category)</p> <p>Fee: \$174.15 Benefit: 75% = \$130.65 85% = \$148.05</p>	
D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		2. OPHTHALMOLOGY
	Group D1. Miscellaneous Diagnostic Procedures And Investigations	
	Subgroup 2. Ophthalmology	
11200	<p>PROVOCATIVE TEST OR TESTS FOR OPEN ANGLE GLAUCOMA, including water drinking</p> <p>Fee: \$42.05 Benefit: 75% = \$31.55 85% = \$35.75</p>	
11204	<p>ELECTRORETINOGRAPHY of one or both eyes by computerised averaging techniques, including 3 or more studies performed according to current professional guidelines or standards, performed by or on behalf of a specialist or consultant physician in the practice of his or her speciality.</p> <p>(See para DN.1.5 of explanatory notes to this Category)</p> <p>Fee: \$111.65 Benefit: 75% = \$83.75 85% = \$94.95</p>	
11205	<p>ELECTROOCULOGRAPHY of one or both eyes performed according to current professional guidelines or standards, performed by or on behalf of a specialist or consultant physician in the practice of his or her speciality.</p> <p>(See para DN.1.5 of explanatory notes to this Category)</p> <p>Fee: \$111.65 Benefit: 75% = \$83.75 85% = \$94.95</p>	
11210	<p>PATTERN ELECTRORETINOGRAPHY of one or both eyes by computerised averaging techniques, including 3 or more studies performed according to current professional guidelines or standards</p> <p>(See para DN.1.5 of explanatory notes to this Category)</p> <p>Fee: \$111.65 Benefit: 75% = \$83.75 85% = \$94.95</p>	
11211	<p>DARK ADAPTOMETRY of one or both eyes with a quantitative (log cd/m²) estimation of threshold in log lumens at 45 minutes of dark adaptations</p> <p>(See para DN.1.5 of explanatory notes to this Category)</p> <p>Fee: \$111.65 Benefit: 75% = \$83.75 85% = \$94.95</p>	
11215	<p>RETINAL ANGIOGRAPHY, multiple exposures of 1 eye with intravenous dye injection</p> <p>Fee: \$126.80 Benefit: 75% = \$95.10 85% = \$107.80</p>	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		2. OPHTHALMOLOGY
11218	RETINAL ANGIOGRAPHY, multiple exposures of both eyes with intravenous dye injection Fee: \$156.70 Benefit: 75% = \$117.55 85% = \$133.20	
11219	OPTICAL COHERENCE TOMOGRAPHY for diagnosis of ocular conditions for which a medication is listed on the Pharmaceutical Benefits Scheme for intraocular administration Maximum of one service in a 12 month period Fee: \$41.25 Benefit: 75% = \$30.95 85% = \$35.10	
11220	OPTICAL COHERENCE TOMOGRAPHY for the assessment of the need for treatment following provision of pharmaceutical benefits scheme-subsidised ocriplasmin. Maximum of one service per eye per lifetime. Fee: \$41.25 Benefit: 75% = \$30.95 85% = \$35.10	
11221	Full quantitative computerised perimetry (automated absolute static threshold), other than a service involving multifocal multichannel objective perimetry, performed by or on behalf of a specialist in the practice of his or her specialty, if indicated by the presence of relevant ocular disease or suspected pathology of the visual pathways or brain with assessment and report, bilateral—to a maximum of 3 examinations (including examinations to which item 11224 applies) in any 12 month period (See para DN.1.6, DN.1.7 of explanatory notes to this Category) Fee: \$69.90 Benefit: 75% = \$52.45 85% = \$59.45	
11224	Full quantitative computerised perimetry (automated absolute static threshold), other than a service involving multifocal multichannel objective perimetry, performed by or on behalf of a specialist in the practice of his or her specialty, if indicated by the presence of relevant ocular disease or suspected pathology of the visual pathways or brain with assessment and report, unilateral—to a maximum of 3 examinations (including examinations to which item 11221 applies) in any 12 month period (See para DN.1.6, DN.1.7 of explanatory notes to this Category) Fee: \$42.10 Benefit: 75% = \$31.60 85% = \$35.80	
11235	EXAMINATION OF THE EYE BY IMPRESSION CYTOLOGY OF CORNEA for the investigation of ocular surface dysplasia, including the collection of cells, processing and all cytological examinations and preparation of report Fee: \$126.55 Benefit: 75% = \$94.95 85% = \$107.60	
11237	OCULAR CONTENTS, simultaneous ultrasonic echography by both unidimensional and bidimensional techniques, for the diagnosis, monitoring or measurement of choroidal and ciliary body melanomas, retinoblastoma or suspicious naevi or simulating lesions, one eye, not being a service associated with a service to which items in Group II of Category 5 apply Fee: \$84.00 Benefit: 75% = \$63.00 85% = \$71.40	
11240	ORBITAL CONTENTS, unidimensional ultrasonic echography or partial coherence interferometry of, for the measurement of one eye prior to lens surgery on that eye, not being a service associated with a service to which items in Group II of Category 5 apply. (See para DN.1.8 of explanatory notes to this Category) Fee: \$84.00 Benefit: 75% = \$63.00 85% = \$71.40	
11241	ORBITAL CONTENTS, unidimensional ultrasonic echography or partial coherence interferometry of, for bilateral eye measurement prior to lens surgery on both eyes, not being a service associated with a service to which items in Group II apply (See para DN.1.8 of explanatory notes to this Category)	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		2. OPHTHALMOLOGY
	Fee: \$106.90 Benefit: 75% = \$80.20 85% = \$90.90	
	ORBITAL CONTENTS, unidimensional ultrasonic echography or partial coherence interferometry of, for the measurement of an eye previously measured and on which lens surgery has been performed, and where further lens surgery is contemplated in that eye, not being a service associated with a service to which items in Group II apply (See para DN.1.8 of explanatory notes to this Category)	
11242	Fee: \$82.60 Benefit: 75% = \$61.95 85% = \$70.25	
	ORBITAL CONTENTS, unidimensional ultrasonic echography or partial coherence interferometry of, for the measurement of a second eye where surgery for the first eye has resulted in more than 1 dioptre of error or where more than 3 years have elapsed since the surgery for the first eye, not being a service associated with a service to which items in Group II apply (See para DN.1.8 of explanatory notes to this Category)	
11243	Fee: \$82.60 Benefit: 75% = \$61.95 85% = \$70.25	
	Orbital contents, diagnostic B-scan of, by a specialist practising in his or her speciality of ophthalmology, not being a service associated with a service to which an item in Group II of the diagnostic imaging services table applies.	
11244	Fee: \$79.40 Benefit: 75% = \$59.55 85% = \$67.50	
D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		3. OTOLARYNGOLOGY
	Group D1. Miscellaneous Diagnostic Procedures And Investigations	
	Subgroup 3. Otolaryngology	
	BRAIN stem evoked response audiometry (Anaes.) (See para DN.1.9 of explanatory notes to this Category)	
11300	Fee: \$198.50 Benefit: 75% = \$148.90 85% = \$168.75	
	ELECTROCOCHLEOGRAPHY, extratympanic method, 1 or both ears	
11303	Fee: \$198.50 Benefit: 75% = \$148.90 85% = \$168.75	
	ELECTROCOCHLEOGRAPHY, transtympanic membrane insertion technique, 1 or both ears (See para DN.1.10 of explanatory notes to this Category)	
11304	Fee: \$326.85 Benefit: 75% = \$245.15 85% = \$277.85	
	Nondeterminate AUDIOMETRY (See para DN.1.11 of explanatory notes to this Category)	
11306	Fee: \$22.60 Benefit: 75% = \$16.95 85% = \$19.25	
	AUDIOGRAM, air conduction (See para DN.1.12, DN.1.11 of explanatory notes to this Category)	
11309	Fee: \$27.10 Benefit: 75% = \$20.35 85% = \$23.05	
	AUDIOGRAM, air and bone conduction or air conduction and speech discrimination (See para DN.1.12, DN.1.11 of explanatory notes to this Category)	
11312	Fee: \$38.30 Benefit: 75% = \$28.75 85% = \$32.60	
	AUDIOGRAM, air and bone conduction and speech (See para DN.1.12, DN.1.11 of explanatory notes to this Category)	
11315	Fee: \$50.75 Benefit: 75% = \$38.10 85% = \$43.15	
	AUDIOGRAM, air and bone conduction and speech, with other Cochlear tests (See para DN.1.12, DN.1.11 of explanatory notes to this Category)	
11318		

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		3. OTOLARYNGOLOGY
	Fee: \$62.65 Benefit: 75% = \$47.00 85% = \$53.30	
11324	<p>IMPEDANCE AUDIOGRAM involving tympanometry and measurement of static compliance and acoustic reflex performed by, or on behalf of, a specialist in the practice of his or her specialty, where the patient is referred by a medical practitioner - not being a service associated with a service to which item 11309, 11312, 11315 or 11318 applies</p> <p>Fee: \$33.90 Benefit: 75% = \$25.45 85% = \$28.85</p>	
11327	<p>IMPEDANCE AUDIOGRAM involving tympanometry and measurement of static compliance and acoustic reflex performed by, or on behalf of, a specialist in the practice of his or her specialty, where the patient is referred by a medical practitioner - being a service associated with a service to which item 11309, 11312, 11315 or 11318 applies</p> <p>Fee: \$20.35 Benefit: 75% = \$15.30 85% = \$17.30</p>	
11330	<p>IMPEDANCE AUDIOGRAM where the patient is not referred by a medical practitioner - 1 examination in any 4 week period</p> <p>Fee: \$8.15 Benefit: 75% = \$6.15 85% = \$6.95</p>	
11332	<p>OTO-ACOUSTIC EMISSION AUDIOMETRY for the detection of permanent congenital hearing impairment, performed by or on behalf of a specialist or consultant physician, on an infant or child who is at risk due to one or more of the following factors:-</p> <ul style="list-style-type: none"> (i) admission to a neonatal intensive care unit; or (ii) family history of hearing impairment; or (iii) intra-uterine or perinatal infection (either suspected or confirmed); or (iv) birthweight less than 1.5kg; or (v) craniofacial deformity; or (vi) birth asphyxia; or (vii) chromosomal abnormality, including Down's Syndrome; or (viii) exchange transfusion; <p>and where:-</p> <ul style="list-style-type: none"> - the patient is referred by another medical practitioner; and - middle ear pathology has been excluded by specialist opinion <p>(See para DN.1.13 of explanatory notes to this Category)</p> <p>Fee: \$60.40 Benefit: 75% = \$45.30 85% = \$51.35</p>	
11333	<p>CALORIC TEST OF LABYRINTH OR LABYRINTHS</p> <p>Fee: \$46.00 Benefit: 75% = \$34.50 85% = \$39.10</p>	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		3. OTOLARYNGOLOGY
	SIMULTANEOUS BITHERMAL CALORIC TEST OF LABYRINTHS	
11336	Fee: \$46.00 Benefit: 75% = \$34.50 85% = \$39.10	
	ELECTRONYSTAGMOGRAPHY	
11339	Fee: \$46.00 Benefit: 75% = \$34.50 85% = \$39.10	
D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		4. RESPIRATORY
	Group D1. Miscellaneous Diagnostic Procedures And Investigations	
	Subgroup 4. Respiratory	
	<p>Complex measurement of properties of the respiratory system, including the lungs and respiratory muscles, that is performed:</p> <p>(a) in a respiratory laboratory; and</p> <p>(b) under the supervision of a consultant respiratory physician who is responsible for staff training, supervision, quality assurance and the issuing of written reports on tests performed; and</p> <p>(c) using any of the following tests:</p> <p>(i) measurement of absolute lung volumes by any method;</p> <p>(ii) measurement of carbon monoxide diffusing capacity by any method;</p> <p>(iii) measurement of airway or pulmonary resistance by any method;</p> <p>(iv) inhalation provocation testing, including pre-provocation spirometry and the construction of a dose response curve, using a recognised direct or indirect bronchoprovocation agent and post-bronchodilator spirometry;</p> <p>(v) provocation testing involving sequential measurement of lung function at baseline and after exposure to specific sensitising agents, including drugs, or occupational asthma triggers;</p> <p>(vi) spirometry performed before and after simple exercise testing undertaken as a provocation test for the investigation of asthma, in premises equipped with resuscitation equipment and personnel trained in Advanced Life Support;</p> <p>(vii) measurement of the strength of inspiratory and expiratory muscles at multiple lung volumes;</p> <p>(viii) simulated altitude test involving exposure to hypoxic gas mixtures and oxygen saturation at rest and/or during exercise with or without an observation of the effect of supplemental oxygen;</p> <p>(ix) calculation of pulmonary or cardiac shunt by measurement of arterial oxygen partial pressure and haemoglobin concentration following the breathing of an inspired oxygen concentration of 100% for a duration of 15 minutes or greater;</p> <p>(x) if the measurement is for the purpose of determining eligibility for pulmonary arterial hypertension medications subsidised under the Pharmaceutical Benefits Scheme or eligibility for the provision of portable oxygen—functional exercise test by any method (including 6 minute walk test and shuttle walk test);</p> <p>each occasion at which one or more tests are performed</p>	
11503	Not applicable to a service performed in association with a spirometry or sleep study service to which	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS	4. RESPIRATORY
	<p>item 11505, 11506, 11507, 11508, 11512, 12203, 12204, 12205, 12207, 12208, 12210, 12213, 12215, 12217 or 12250 applies</p> <p>Not applicable to a service to which item 11507 applies</p> <p>(See para DN.1.14 of explanatory notes to this Category) Fee: \$142.95 Benefit: 75% = \$107.25 85% = \$121.55</p>
11505	<p>Measurement of spirometry, that:</p> <p>(a) involves a permanently recorded tracing, performed before and after inhalation of a bronchodilator; and</p> <p>(b) is performed to confirm diagnosis of:</p> <p style="padding-left: 40px;">(i) asthma; or</p> <p style="padding-left: 40px;">(ii) chronic obstructive pulmonary disease (COPD); or</p> <p style="padding-left: 40px;">(iii) another cause of airflow limitation;</p> <p>each occasion at which 3 or more recordings are made</p> <p>Applicable only once in any 12 month period</p> <p>(See para DN.1.20 of explanatory notes to this Category) Fee: \$42.40 Benefit: 75% = \$31.80 85% = \$36.05</p>
11506	<p>Measurement of spirometry, that:</p> <p>(a) involves a permanently recorded tracing, performed before and after inhalation of a bronchodilator; and</p> <p>(b) is performed to:</p> <p style="padding-left: 40px;">(i) confirm diagnosis of chronic obstructive pulmonary disease (COPD); or</p> <p style="padding-left: 40px;">(ii) assess acute exacerbations of asthma; or</p> <p style="padding-left: 40px;">(iii) monitor asthma and COPD; or</p> <p style="padding-left: 40px;">(iv) assess other causes of obstructive lung disease or the presence of restrictive lung disease;</p> <p>each occasion at which recordings are made</p> <p>(See para DN.1.20 of explanatory notes to this Category) Fee: \$21.20 Benefit: 75% = \$15.90 85% = \$18.05</p>
11507	<p>Measurement of spirometry:</p> <p>(a) that includes continuous measurement of the relationship between flow and volume during expiration or during expiration and inspiration, performed before and after inhalation of a bronchodilator; and</p> <p>(b) fractional exhaled nitric oxide (FeNO) concentration in exhaled breath;</p> <p>if:</p> <p>(c) the measurement is performed:</p>

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS	4. RESPIRATORY
	<p>(i) under the supervision of a specialist or consultant physician; and</p> <p>(ii) with continuous attendance by a respiratory scientist; and</p> <p>(iii) in a respiratory laboratory equipped to perform complex lung function tests; and</p> <p>(d) a permanently recorded tracing and written report is provided; and</p> <p>(e) 3 or more spirometry recordings are performed unless difficult to achieve for clinical reasons; each occasion at which one or more such tests are performed</p> <p>Not applicable to a service associated with a service to which item 11503 or 11512 applies</p> <p>(See para DN.1.21 of explanatory notes to this Category) Fee: \$103.35 Benefit: 75% = \$77.55 85% = \$87.85</p>
11508	<p>Maximal symptom-limited incremental exercise test using a calibrated cycle ergometer or treadmill, if:</p> <p>(a) the test is performed for the evaluation of:</p> <p>(i) breathlessness of uncertain cause from tests performed at rest; or</p> <p>(ii) breathlessness out of proportion with impairment due to known conditions; or</p> <p>(iii) functional status and prognosis in a patient with significant cardiac or pulmonary disease for whom complex procedures such as organ transplantation are considered; or</p> <p>(iv) anaesthetic and perioperative risks in a patient undergoing major surgery who is assessed as substantially above average risk after standard evaluation; and</p> <p>(b) the test has been requested by a specialist or consultant physician following professional attendance on the patient by the specialist or consultant physician; and</p> <p>(c) a respiratory scientist and a medical practitioner are in constant attendance during the test; and</p> <p>(d) the test is performed in a respiratory laboratory equipped with airway management and defibrillator equipment; and</p> <p>(e) there is continuous measurement of at least the following:</p> <p>(i) work rate;</p> <p>(ii) pulse oximetry;</p> <p>(iii) respired oxygen and carbon dioxide partial pressures and respired volumes;</p> <p>(iv) ECG;</p> <p>(v) heart rate and blood pressure; and</p> <p>(f) interpretation and preparation of a permanent report is provided by a consultant respiratory physician who is also responsible for the supervision of technical staff and quality assurance</p> <p>(See para DN.1.21 of explanatory notes to this Category) Fee: \$299.90 Benefit: 75% = \$224.95 85% = \$254.95</p>
11512	Measurement of spirometry:

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		4. RESPIRATORY
	<p>(a) that includes continuous measurement of the relationship between flow and volume during expiration or during expiration and inspiration, performed before and after inhalation of a bronchodilator; and</p> <p>(b) that is performed with a respiratory scientist in continuous attendance; and</p> <p>(c) that is performed in a respiratory laboratory equipped to perform complex lung function tests; and</p> <p>(d) that is performed under the supervision of a consultant physician practising respiratory medicine who is responsible for staff training, supervision, quality assurance and the issuing of written reports; and</p> <p>(e) for which a permanently recorded tracing and written report is provided; and</p> <p>(f) for which 3 or more spirometry recordings are performed;</p> <p>each occasion at which one or more such tests are performed</p> <p>Not applicable for a service associated with a service to which item 11503 or 11507 applies</p> <p>(See para DN.1.20 of explanatory notes to this Category)</p> <p>Fee: \$63.70 Benefit: 75% = \$47.80 85% = \$54.15</p>	
D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		5. VASCULAR
	Group D1. Miscellaneous Diagnostic Procedures And Investigations	
	Subgroup 5. Vascular	
11600	<p>BLOOD PRESSURE MONITORING (central venous, pulmonary arterial, systemic arterial or cardiac intracavity), by indwelling catheter - once only for each type of pressure on any calendar day up to a maximum of 4 pressures (not being a service to which item 13876 applies and where not performed in association with the administration of general anaesthesia)</p> <p>(See para TN.1.11, TN.1.10 of explanatory notes to this Category)</p> <p>Fee: \$71.45 Benefit: 75% = \$53.60 85% = \$60.75</p>	
11602	<p>Investigation of venous reflux or obstruction in one or more limbs at rest by CW Doppler or pulsed Doppler involving examination at multiple sites along each limb using intermittent limb compression or Valsalva manoeuvres, or both, to detect prograde and retrograde flow, other than a service associated with a service to which item 32500 applies—hard copy trace and written report, the report component of which must be performed by a medical practitioner, maximum of 2 examinations in a 12 month period, not to be used in conjunction with sclerotherapy</p> <p>Fee: \$59.55 Benefit: 75% = \$44.70 85% = \$50.65</p>	
11604	<p>Investigation of chronic venous disease in the upper and lower extremities, one or more limbs, by plethysmography (excluding photoplethysmography)—examination, hard copy trace and written report, not being a service associated with a service to which item 32500 applies</p> <p>Fee: \$78.05 Benefit: 75% = \$58.55 85% = \$66.35</p>	
11605	<p>Investigation of complex chronic lower limb reflux or obstruction, in one or more limbs, by infrared photoplethysmography, during and following exercise to determine surgical intervention or the conservative management of deep venous thrombotic disease—hard copy trace, calculation of 90% recovery time and written report, not being a service associated with a service to which item 32500 applies</p> <p>Fee: \$78.05 Benefit: 75% = \$58.55 85% = \$66.35</p>	
11610	<p>MEASUREMENT OF ANKLE: BRACHIAL INDICES AND ARTERIAL WAVEFORM ANALYSIS, measurement of posterior tibial and dorsalis pedis (or toe) and brachial arterial pressures bilaterally using Doppler or plethysmographic techniques, the calculation of ankle (or toe) brachial systolic</p>	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		5. VASCULAR
	pressure indices and assessment of arterial waveforms for the evaluation of lower extremity arterial disease, examination, hard copy trace and report. Fee: \$65.70 Benefit: 75% = \$49.30 85% = \$55.85	
11611	MEASUREMENT OF WRIST: BRACHIAL INDICES AND ARTERIAL WAVEFORM ANALYSIS, measurement of radial and ulnar (or finger) and brachial arterial pressures bilaterally using Doppler or plethysmographic techniques, the calculation of the wrist (or finger) brachial systolic pressure indices and assessment of arterial waveforms for the evaluation of upper extremity arterial disease, examination, hard copy trace and report. Fee: \$65.70 Benefit: 75% = \$49.30 85% = \$55.85	
11612	EXERCISE STUDY FOR THE EVALUATION OF LOWER EXTREMITY ARTERIAL DISEASE, measurement of posterior tibial and dorsalis pedis (or toe) and brachial arterial pressures bilaterally using Doppler or plethysmographic techniques, the calculation of ankle (or toe) brachial systolic pressure indices for the evaluation of lower extremity arterial disease at rest and following exercise using a treadmill or bicycle ergometer or other such equipment where the exercise workload is quantifiably documented, examination and report. Fee: \$115.90 Benefit: 75% = \$86.95 85% = \$98.55	
11614	TRANSCRANIAL DOPPLER, examination of the intracranial arterial circulation using CW Doppler or pulsed Doppler with hard copy recording of waveforms, examination and report, not associated with a service to which items 55229 or 55280 in Group I1 of Category 5 apply. Fee: \$78.05 Benefit: 75% = \$58.55 85% = \$66.35	
11615	MEASUREMENT OF DIGITAL TEMPERATURE, 1 or more digits, (unilateral or bilateral) and report, with hard copy recording of temperature before and for 10 minutes or more after cold stress testing. Fee: \$78.25 Benefit: 75% = \$58.70 85% = \$66.55	
11627	PULMONARY ARTERY pressure monitoring during open heart surgery, in a person under 12 years of age Fee: \$235.80 Benefit: 75% = \$176.85 85% = \$200.45	
D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		6. CARDIOVASCULAR
	Group D1. Miscellaneous Diagnostic Procedures And Investigations	
	Subgroup 6. Cardiovascular	
11700	TWELVE-LEAD ELECTROCARDIOGRAPHY, tracing and report Fee: \$32.25 Benefit: 75% = \$24.20 85% = \$27.45 Extended Medicare Safety Net Cap: \$25.80	
11701	TWELVE-LEAD ELECTROCARDIOGRAPHY, report only where the tracing has been forwarded to another medical practitioner, not in association with a consultation on the same occasion Fee: \$16.05 Benefit: 75% = \$12.05 85% = \$13.65	
11702	TWELVE-LEAD ELECTROCARDIOGRAPHY, tracing only Fee: \$16.05 Benefit: 75% = \$12.05 85% = \$13.65	
11708	Continuous ECG recording of ambulatory patient for 12 or more hours (including resting ECG and the recording of parameters), not in association with ambulatory blood pressure monitoring, involving microprocessor based analysis equipment, interpretation and report of recordings by a specialist physician or consultant physician.	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS	6. CARDIOVASCULAR
	<p>Not being a service to which item 11709 applies.</p> <p>The changing of a tape or batteries does not constitute a separate service. Where a recording is analysed and reported on and a decision is made to undertake a further period of monitoring, the second episode is regarded as a separate service.</p> <p>Fee: \$131.90 Benefit: 75% = \$98.95 85% = \$112.15</p>
11709	<p>Continuous ECG recording (Holter) of ambulatory patient for 12 or more hours (including resting ECG and the recording of parameters), not in association with ambulatory blood pressure monitoring, utilising a system capable of superimposition and full disclosure printout of at least 12 hours of recorded ECG data, microprocessor based scanning analysis, with interpretation and report by a specialist physician or consultant physician.</p> <p>The changing of a tape or batteries does not constitute a separate service. Where a recording is analysed and reported on and a decision is made to undertake a further period of monitoring, the second episode is regarded as a separate service.</p> <p>Fee: \$172.70 Benefit: 75% = \$129.55 85% = \$146.80</p>
11710	<p>AMBULATORY ECG MONITORING, patient activated, single or multiple event recording, utilising a looping memory recording device which is connected continuously to the patient for 12 hours or more and is capable of recording for at least 20 seconds prior to each activation and for 15 seconds after each activation, including transmission, analysis, interpretation and report - payable once in any 4 week period</p> <p>Fee: \$53.55 Benefit: 75% = \$40.20 85% = \$45.55</p>
11711	<p>AMBULATORY ECG MONITORING for 12 hours or more, patient activated, single or multiple event recording, utilising a memory recording device which is capable of recording for at least 30 seconds after each activation, including transmission, analysis, interpretation and report - payable once in any 4 week period</p> <p>Fee: \$29.20 Benefit: 75% = \$21.90 85% = \$24.85</p>
11712	<p>MULTI CHANNEL ECG MONITORING AND RECORDING during exercise (motorised treadmill or cycle ergometer capable of quantifying external workload in watts) or pharmacological stress, involving the continuous attendance of a medical practitioner for not less than 20 minutes, with resting ECG, and with or without continuous blood pressure monitoring and the recording of other parameters, on premises equipped with mechanical respirator and defibrillator</p> <p>Fee: \$156.90 Benefit: 75% = \$117.70 85% = \$133.40</p>
11713	<p>SIGNAL AVERAGED ECG RECORDING involving not more than 300 beats, using at least 3 leads with data acquisition at not less than 1000Hz of at least 100 QRS complexes, including analysis, interpretation and report of recording by a specialist physician or consultant physician</p> <p>Fee: \$71.90 Benefit: 75% = \$53.95 85% = \$61.15</p>
11715	<p>BLOOD DYE DILUTION INDICATOR TEST</p> <p>Fee: \$124.55 Benefit: 75% = \$93.45 85% = \$105.90</p>
11718	<p>IMPLANTED PACEMAKER TESTING involving electrocardiography, measurement of rate, width and amplitude of stimulus, including reprogramming when required, not being a service associated with a service to which item 11700, 11719, 11720, 11721, 11725 or 11726 applies</p>

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		6. CARDIOVASCULAR
	Fee: \$35.85 Benefit: 75% = \$26.90 85% = \$30.50	
	IMPLANTED PACEMAKER (including cardiac resynchronisation pacemaker) REMOTE MONITORING involving reviews (without patient attendance) or arrhythmias, lead and device parameters, if at least one remote review is provided in a 12 month period. Payable only once in any 12 month period	
11719	Fee: \$68.90 Benefit: 75% = \$51.70 85% = \$58.60	
	IMPLANTED PACEMAKER TESTING, with patient attendance, following detection of abnormality by remote monitoring involving electrocardiography, measurement of rate, width and amplitude of stimulus including reprogramming when required, not being a service associated with a service to which item 11718 or 11721 applies.	
11720	Fee: \$68.90 Benefit: 75% = \$51.70 85% = \$58.60	
	IMPLANTED PACEMAKER TESTING of atrioventricular (AV) sequential, rate responsive, or antitachycardia pacemakers, including reprogramming when required, not being a service associated with a service to which Item 11700, 11718 11719, 11720, 11725 or 11726 applies	
11721	Fee: \$71.90 Benefit: 75% = \$53.95 85% = \$61.15	
	IMPLANTED ECG LOOP RECORDING, for the investigation of recurrent unexplained syncope if: (a) a diagnosis has not been achieved through all other available cardiac investigations; and (b) a neurogenic cause is not suspected; and (c) the patient to whom the service is provided does not have a structural heart defect associated with a high risk of sudden cardiac death; including reprogramming when required, retrieval of stored data, analysis, interpretation and report, not being a service to which item 38285 applies	
11722	Fee: \$35.85 Benefit: 75% = \$26.90 85% = \$30.50	
	UP-RIGHT TILT TABLE TESTING for the investigation of syncope of suspected cardiothoracic origin, including blood pressure monitoring, continuous ECG monitoring and the recording of the parameters, and involving an established intravenous line and the continuous attendance of a specialist or consultant physician - on premises equipped with a mechanical respirator and defibrillator	
11724	Fee: \$174.15 Benefit: 75% = \$130.65 85% = \$148.05	
	IMPLANTED DEFIBRILLATOR (including cardiac resynchronisation defibrillator) REMOTE MONITORING involving reviews (without patient attendance) of arrhythmias, lead and device parameters, if at least 2 remote reviews are provided in a 12 month period. Payable only once in any 12 month period	
11725	Fee: \$195.45 Benefit: 75% = \$146.60 85% = \$166.15	
	IMPLANTED DEFIBRILLATOR TESTING with patient attendance following detection of abnormality by remote monitoring involving electrocardiography, measurement of rate, width and amplitude of stimulus, not being a service associated with a service to which item 11727 applies.	
11726	Fee: \$97.70 Benefit: 75% = \$73.30 85% = \$83.05	
11727	IMPLANTED DEFIBRILLATOR TESTING involving electrocardiography, assessment of pacing and sensing thresholds for pacing and defibrillation electrodes, download and interpretation of stored events and electrograms, including programming when required, not being a service associated with a service	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		6. CARDIOVASCULAR
	to which item 11700, 11718, 11719, 11720, 11721, 11725 or 11726 applies	
	Fee: \$97.70 Benefit: 75% = \$73.30 85% = \$83.05	
	Implanted loop recording for the investigation of atrial fibrillation if the patient to whom the service is provided has been diagnosed as having had an embolic stroke of undetermined source, including reprogramming when required, retrieval of stored data, analysis, interpretation and report, other than a service to which item 38288 applies	
	For any particular patient—applicable not more than 4 times in any 12 months	
11728	Fee: \$35.85 Benefit: 75% = \$26.90 85% = \$30.50	
D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		7. GASTROENTEROLOGY & COLORECTAL
	Group D1. Miscellaneous Diagnostic Procedures And Investigations	
	Subgroup 7. Gastroenterology & Colorectal	
	OESOPHAGEAL MOTILITY TEST, manometric	
11800	Fee: \$179.90 Benefit: 75% = \$134.95 85% = \$152.95	
	CLINICAL ASSESSMENT OF GASTRO-OESOPHAGEAL REFLUX DISEASE that involves 48 hour catheter-free wireless ambulatory oesophageal pH monitoring including administration of the device and associated endoscopy procedure for placement, analysis and interpretation of the data and all attendances for providing the service, if	
	(a) a catheter-based ambulatory oesophageal pH-monitoring:	
	(i) has been attempted on the patient but failed due to clinical complications, or	
	(ii) is not clinically appropriate for the patient due to anatomical reasons (nasopharyngeal anatomy)	
	preventing the use of catheter-based pH monitoring; and	
	(b) the services is performed by a specialist or consultant physician with endoscopic training that is recognised by The Conjoint Committee for the Recognition of Training in Gastrointestinal Endoscopy.	
	Not in association with another item in Category 2, sub-group 7 (Anaes.)	
11801	Fee: \$271.20 Benefit: 75% = \$203.40 85% = \$230.55	
	CLINICAL ASSESSMENT of GASTRO-OESOPHAGEAL REFLUX DISEASE involving 24 hour pH monitoring, including analysis, interpretation and report and including any associated consultation	
11810	Fee: \$179.90 Benefit: 75% = \$134.95 85% = \$152.95	
	Capsule endoscopy to investigate an episode of obscure gastrointestinal bleeding, using a capsule endoscopy device (including administration of the capsule, associated endoscopy procedure if required for placement, imaging, image reading and interpretation, and all attendances for providing the service on the day the capsule is administered) if:	
	(a) the service is provided to a patient who:	
	(i) has overt gastrointestinal bleeding; or	
	(ii) has gastrointestinal bleeding that is recurrent or persistent, and iron deficiency anaemia that is not due to coeliac disease, and, if the patient also has menorrhagia, has had the menorrhagia	
11820		

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS	7. GASTROENTEROLOGY & COLORECTAL
	<p>considered and managed; and</p> <p>(b) an upper gastrointestinal endoscopy and a colonoscopy have been performed on the patient and have not identified the cause of the bleeding; and</p> <p>(c) the service has not been provided to the same patient on more than 2 occasions in the preceding 12 months; and</p> <p>(d) the service is performed by a specialist or consultant physician with endoscopic training that is recognised by the Conjoint Committee for the Recognition of Training in Gastrointestinal Endoscopy; and</p> <p>(e) the service is not associated with a service to which item 30680, 30682, 30684 or 30686 applies</p> <p>(See para DN.1.15 of explanatory notes to this Category) Fee: \$1,267.75 Benefit: 75% = \$950.85 85% = \$1183.05</p>
11823	<p>Capsule endoscopy to conduct small bowel surveillance of a patient diagnosed with Peutz-Jeghers Syndrome, using a capsule endoscopy device approved by the Therapeutic Goods Administration (including administration of the capsule, imaging, image reading and interpretation, and all attendances for providing the service on the day the capsule is administered) if:</p> <p>(a) the service is performed by a specialist or consultant physician with endoscopic training that is recognised by the Conjoint Committee for the Recognition of Training in Gastrointestinal Endoscopy; and</p> <p>(b) the item is performed only once in any 2 year period; and</p> <p>(c) the service is not associated with balloon enteroscopy.</p> <p>(See para DN.1.15 of explanatory notes to this Category) Fee: \$1,267.75 Benefit: 75% = \$950.85 85% = \$1183.05</p>
11830	<p>DIAGNOSIS of ABNORMALITIES of the PELVIC FLOOR involving anal manometry or measurement of anorectal sensation or measurement of the rectosphincteric reflex</p> <p>Fee: \$192.65 Benefit: 75% = \$144.50 85% = \$163.80</p>
11833	<p>DIAGNOSIS of ABNORMALITIES of the PELVIC FLOOR and sphincter muscles involving electromyography or measurement of pudendal and spinal nerve motor latency</p> <p>Fee: \$257.55 Benefit: 75% = \$193.20 85% = \$218.95</p>
D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS	8. GENITO/URINARY PHYSIOLOGICAL INVESTIGATIONS
	Group D1. Miscellaneous Diagnostic Procedures And Investigations
	Subgroup 8. Genito/Urinary Physiological Investigations
11900	<p>URINE FLOW STUDY including peak urine flow measurement, not being a service associated with a service to which item 11919 applies</p>

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		8. GENITO/URINARY PHYSIOLOGICAL INVESTIGATIONS	
	Fee: \$28.40	Benefit: 75% = \$21.30	85% = \$24.15
11903	CYSTOMETROGRAPHY, not being a service associated with a service to which any of items 11012-11027, 11912, 11915, 11919, 11921 and 36800 or any item in Group I3 of Category 5 applies		
	Fee: \$114.60	Benefit: 75% = \$85.95	85% = \$97.45
11906	URETHRAL PRESSURE PROFILOMETRY, not being a service associated with a service to which any of items 11012-11027, 11909, 11919, 11921 and 36800 or any item in Group I3 of Category 5 applies		
	Fee: \$114.60	Benefit: 75% = \$85.95	85% = \$97.45
11909	URETHRAL PRESSURE PROFILOMETRY WITH simultaneous measurement of urethral sphincter electromyography, not being a service associated with a service to which item 11906, 11915, 11919, 36800 or any item in Group I3 of Category 5 applies		
	Fee: \$170.30	Benefit: 75% = \$127.75	85% = \$144.80
11912	CYSTOMETROGRAPHY with simultaneous measurement of rectal pressure, not being a service associated with a service to which any of items 11012-11027, 11903, 11915, 11919, 11921 and 36800 or any item in Group I3 of Category 5 applies (Anaes.)		
	Fee: \$170.30	Benefit: 75% = \$127.75	85% = \$144.80
11915	CYSTOMETROGRAPHY with simultaneous measurement of urethral sphincter electromyography, not being a service associated with a service to which any of items 11012-11027, 11903, 11909, 11912, 11919, 11921 and 36800 or any item in Group I3 of Category 5 applies (Anaes.)		
	Fee: \$170.30	Benefit: 75% = \$127.75	85% = \$144.80
11917	CYSTOMETROGRAPHY IN CONJUNCTION WITH ULTRASOUND OF 1 OR MORE COMPONENTS OF THE URINARY TRACT, with measurement of any 1 or more of urine flow rate, urethral pressure profile, rectal pressure, urethral sphincter electromyography; including all imaging associated with cystometrography, not being a service associated with a service to which items 11012-11027, 11900-11915, 11919, 11921 and 36800 apply. (Anaes.)		
	Fee: \$441.75	Benefit: 75% = \$331.35	85% = \$375.50
11919	CYSTOMETROGRAPHY IN CONJUNCTION WITH CONTRAST MICTURATING CYSTOURETHROGRAPHY, with measurement of any 1 or more of urine flow rate, urethral pressure profile, rectal pressure, urethral sphincter electromyography; including all imaging associated with cystometrography, not being a service associated with a service to which items 11012-11027, 11900-11917, 11921 and 36800 apply (Anaes.)		
	Fee: \$441.75	Benefit: 75% = \$331.35	85% = \$375.50
11921	BLADDER WASHOUT TEST for localisation of urinary infection not including bacterial counts for organisms in specimens		
	Fee: \$77.40	Benefit: 75% = \$58.05	85% = \$65.80
D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		9. ALLERGY TESTING	
	Group D1. Miscellaneous Diagnostic Procedures And Investigations		
	Subgroup 9. Allergy Testing		
12000	Skin prick testing for aeroallergens by a specialist or consultant physician in the practice of the specialist or consultant physician's specialty, including all allergens tested on the same day, not being a service associated with a service to which item 12001, 12002, 12005, 12012, 12017, 12021, 12022 or 12024 applies (See para DN.1.22 of explanatory notes to this Category)		

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		9. ALLERGY TESTING
	Fee: \$40.15 Benefit: 75% = \$30.15 85% = \$34.15	
12001	<p>Skin prick testing for aeroallergens, including all allergens tested on the same day, not being a service associated with a service to which item 12000, 12002, 12005, 12012, 12017, 12021, 12022 or 12024 applies.</p> <p>Applicable only once in any 12 month period</p> <p>(See para DN.1.22 of explanatory notes to this Category)</p> <p>Fee: \$40.15 Benefit: 75% = \$30.15 85% = \$34.15</p>	
12002	<p>Repeat skin prick testing of a patient for aeroallergens, including all allergens tested on the same day, if:</p> <p>(a) further testing for aeroallergens is indicated in the same 12 month period to which item 12001 applies to a service for the patient; and</p> <p>(b) the service is not associated with a service to which item 12000, 12001, 12005, 12012, 12017, 12021, 12022 or 12024 applies</p> <p>Applicable only once in any 12 month period</p> <p>(See para DN.1.22 of explanatory notes to this Category)</p> <p>Fee: \$40.15 Benefit: 75% = \$30.15 85% = \$34.15</p>	
12003	<p>Skin prick testing for food and latex allergens, including all allergens tested on the same day, not being a service associated with a service to which item 12012, 12017, 12021, 12022 or 12024 applies</p> <p>(See para DN.1.22 of explanatory notes to this Category)</p> <p>Fee: \$40.15 Benefit: 75% = \$30.15 85% = \$34.15</p>	
12004	<p>Skin testing for medication allergens (antibiotics or non general anaesthetics agents) and venoms (including prick testing and intradermal testing with a number of dilutions), including all allergens tested on the same day, not being a service associated with a service to which item 12012, 12017, 12021, 12022 or 12024 applies</p> <p>(See para DN.1.22 of explanatory notes to this Category)</p> <p>Fee: \$60.70 Benefit: 75% = \$45.55 85% = \$51.60</p>	
12005	<p>Skin testing:</p> <p>(a) performed by or on behalf of a specialist or consultant physician in the practice of the specialist or consultant physician's specialty; and</p> <p>(b) for agents used in the perioperative period (including prick testing and intradermal testing with a number of dilutions), to investigate anaphylaxis in a patient with a history of prior anaphylactic reaction or cardiovascular collapse associated with the administration of an anaesthetic; and</p> <p>(c) including all allergens tested on the same day; and</p> <p>(d) not being a service associated with a service to which item 12000, 12001, 12002, 12003, 12012, 12017, 12021, 12022 or 12024 applies</p> <p>(See para DN.1.22 of explanatory notes to this Category)</p> <p>Fee: \$81.65 Benefit: 75% = \$61.25 85% = \$69.45</p>	
12012	<p>Epicutaneous patch testing in the investigation of allergic dermatitis using not more than 25 allergens</p> <p>Fee: \$21.45 Benefit: 75% = \$16.10 85% = \$18.25</p>	
12017	<p>Epicutaneous patch testing in the investigation of allergic dermatitis using more than 25 allergens but not more than 50 allergens</p> <p>Fee: \$72.45 Benefit: 75% = \$54.35 85% = \$61.60</p>	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		9. ALLERGY TESTING
12021	Epicutaneous patch testing in the investigation of allergic dermatitis, performed by or on behalf of a specialist, or consultant physician, in the practice of his or her specialty, using more than 50 allergens but not more than 75 allergens Fee: \$119.10 Benefit: 75% = \$89.35 85% = \$101.25	
12022	Epicutaneous patch testing in the investigation of allergic dermatitis, performed by or on behalf of a specialist, or consultant physician, in the practice of his or her specialty, using more than 75 allergens but not more than 100 allergens Fee: \$139.85 Benefit: 75% = \$104.90 85% = \$118.90	
12024	Epicutaneous patch testing in the investigation of allergic dermatitis, performed by or on behalf of a specialist, or consultant physician, in the practice of his or her specialty, using more than 100 allergens Fee: \$159.30 Benefit: 75% = \$119.50 85% = \$135.45	
D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		10. OTHER DIAGNOSTIC PROCEDURES AND INVESTIGATIONS
	Group D1. Miscellaneous Diagnostic Procedures And Investigations	
	Subgroup 10. Other Diagnostic Procedures And Investigations	
12200	COLLECTION OF SPECIMEN OF SWEAT by iontophoresis Fee: \$38.35 Benefit: 75% = \$28.80 85% = \$32.60	
12201	Administration, by a specialist or consultant physician in the practice of the specialist's or consultant physician's specialty, of thyrotropin alfa-rch (recombinant human thyroid-stimulating hormone), and arranging services to which both items 61426 and 66650 apply, for the detection of recurrent well-differentiated thyroid cancer in a patient if: (a) the patient has had a total thyroidectomy and 1 ablative dose of radioactive iodine; and (b) the patient is maintained on thyroid hormone therapy; and (c) the patient is at risk of recurrence; and (d) on at least 1 previous whole body scan or serum thyroglobulin test when withdrawn from thyroid hormone therapy, the patient did not have evidence of well-differentiated thyroid cancer; and (e) either: (i) withdrawal from thyroid hormone therapy resulted in severe psychiatric disturbances when hypothyroid; or (ii) withdrawal is medically contra-indicated because the patient has: (a) unstable coronary artery disease; or (b) hypopituitarism; or (c) a high risk of relapse or exacerbation of a previous severe psychiatric illness applicable once only in a 12 month period (See para DN.1.16 of explanatory notes to this Category) Fee: \$2,467.65 Benefit: 75% = \$1850.75 85% = \$2382.95	
12203	Overnight diagnostic assessment of sleep, for a period of at least 8 hours duration, for a patient aged 18 years or more, to confirm diagnosis of a sleep disorder, if: (a) either: (i) the patient has been referred by a medical practitioner to a qualified sleep medicine practitioner or a consultant respiratory physician who has determined that the patient has a high probability for symptomatic, moderate to severe obstructive sleep apnoea based on a STOP-Bang score of 4 or more, an OSA50 score of 5 or more or a high risk score on the Berlin Questionnaire, and an Epworth Sleepiness Scale score of 8 or more; or (ii) following professional attendance on the patient (either face-to-face or by video conference) by a qualified sleep medicine practitioner or a consultant respiratory physician, the qualified sleep medicine practitioner or consultant respiratory physician determines that assessment is necessary to confirm the diagnosis of a sleep disorder; and	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS

10. OTHER DIAGNOSTIC PROCEDURES AND INVESTIGATIONS

- (b) the overnight diagnostic assessment is performed to investigate:
- (i) suspected obstructive sleep apnoea syndrome where the patient is assessed as not suitable for an unattended sleep study; or
 - (ii) suspected central sleep apnoea syndrome; or
 - (iii) suspected sleep hypoventilation syndrome; or
 - (iv) suspected sleep-related breathing disorders in association with non-respiratory co-morbid conditions including heart failure, significant cardiac arrhythmias, neurological disease, acromegaly or hypothyroidism; or
 - (v) unexplained hypersomnolence which is not attributed to inadequate sleep hygiene or environmental factors; or
 - (vi) suspected parasomnia or seizure disorder where clinical diagnosis cannot be established on clinical features alone (including associated atypical features, vigilance behaviours or failure to respond to conventional therapy); or
 - (vii) suspected sleep related movement disorder, where the diagnosis of restless legs syndrome is not evident on clinical assessment; and
- (c) a sleep technician is in continuous attendance under the supervision of a qualified sleep medicine practitioner; and
- (d) there is continuous monitoring and recording, performed in accordance with current professional guidelines, of the following measures:
- (i) airflow;
 - (ii) continuous EMG;
 - (iii) anterior tibial EMG;
 - (iv) continuous ECG;
 - (v) continuous EEG;
 - (vi) EOG;
 - (vii) oxygen saturation;
 - (viii) respiratory movement (chest and abdomen);
 - (ix) position; and
- (e) polygraphic records are:
- (i) analysed (for assessment of sleep stage, arousals, respiratory events, cardiac abnormalities and limb movements) with manual scoring, or manual correction of computerised scoring in epochs of not more than 1 minute; and
 - (ii) stored for interpretation and preparation of report; and
- (f) interpretation and preparation of a permanent report is provided by a qualified sleep medicine practitioner with personal direct review of raw data from the original recording of polygraphic data from

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS	10. OTHER DIAGNOSTIC PROCEDURES AND INVESTIGATIONS
	<p>the patient; and</p> <p>(g) the overnight diagnostic assessment is not provided to the patient on the same occasion that a service mentioned in any of items 11000 to 11005, 11503, 11700 to 11709, 11713 or 12250 is provided to the patient</p> <p>Applicable only once in any 12 month period</p> <p>(See para DN.1.17 of explanatory notes to this Category)</p> <p>Fee: \$606.35 Benefit: 75% = \$454.80 85% = \$521.65</p>
12204	<p>Overnight assessment of positive airway pressure, for a period of at least 8 hours duration, for a patient aged 18 years or more, if:</p> <p>(a) the necessity for an intervention sleep study is determined by a qualified sleep medicine practitioner or consultant respiratory physician where a diagnosis of a sleep-related breathing disorder has been made; and</p> <p>(b) the patient has not undergone positive airway pressure therapy in the previous 6 months; and</p> <p>(c) following professional attendance on the patient by a qualified sleep medicine practitioner or a consultant respiratory physician (either face-to-face or by video conference), the qualified sleep medicine practitioner or consultant respiratory physician establishes that the sleep-related breathing disorder is responsible for the patient's symptoms; and</p> <p>(d) a sleep technician is in continuous attendance under the supervision of a qualified sleep medicine practitioner; and</p> <p>(e) there is continuous monitoring and recording, performed in accordance with current professional guidelines, of the following measures:</p> <ul style="list-style-type: none"> (i) airflow; (ii) continuous EMG; (iii) anterior tibial EMG; (iv) continuous ECG; (v) continuous EEG; (vi) EOG; (vii) oxygen saturation; (viii) respiratory movement; (ix) position; and <p>(f) polygraphic records are:</p> <ul style="list-style-type: none"> (i) analysed (for assessment of sleep stage, arousals, respiratory events, cardiac abnormalities and limb movements) with manual scoring, or manual correction of computerised scoring in epochs of not more than 1 minute; and (ii) stored for interpretation and preparation of a report; and

Tilt table testing for investigation of syncope 11724
Transcranial doppler 11614

U

Upright tilt table testing for syncope 11724
Urea breath test 12533
Urine flow study 11900
vessels, examination of 11604-11605, 11610-11612
volume estimation, nuclear 12500
volumes 11503
washout test of 11921
with other procedures 11912, 11915, 11917, 11919

CATEGORY 3: THERAPEUTIC PROCEDURES

SUMMARY OF CHANGES FROM 21/07/2020

The 21/07/2020 changes to the MBS are summarised below and are identified in the Schedule pages by one or more of the following words appearing above the item number:

- | | |
|-------------------------|-------|
| (a) new item | New |
| (b) amended description | Amend |
| (c) fee amended | Fee |
| (d) item number changed | Renum |
| (e) EMSN changed | EMSN |

There are no changes to this Category for 21/07/2020

THERAPEUTIC PROCEDURES NOTES

TN.1.1 Hyperbaric Oxygen Therapy - (Items 13015, 13020, 13025 and 13030)

Hyperbaric Oxygen Therapy not covered by these items would attract benefits on an attendance basis. For the purposes of these items, a comprehensive hyperbaric medicine facility means a separate hospital area that, on a 24 hour basis:

(a) is equipped and staffed so that it is capable of providing to a patient:

(i) hyperbaric oxygen therapy at a treatment pressure of at least 2.8 atmospheric pressure absolute (180 kilopascal gauge pressure); and

(ii) mechanical ventilation and invasive cardiovascular monitoring within a monoplace or multiplace chamber for the duration of the hyperbaric treatment; and

(b) is under the direction of at least 1 medical practitioner who is rostered, and immediately available, to the facility during the facility's ordinary working hours if the practitioner:

(i) is a specialist with training in diving and hyperbaric medicine; or

(ii) holds a Diploma of Diving and Hyperbaric Medicine of the South Pacific Underwater Medicine Society; and

(c) is staffed by:

(i) at least 1 medical practitioner with training in diving and hyperbaric medicine who is present in the facility and immediately available at all times when patients are being treated at the facility; and

(ii) at least 1 registered nurse with specific training in hyperbaric patient care to the published standards of the Hyperbaric Technicians and Nurses Association, who is present during hyperbaric oxygen therapy; and

(d) has admission and discharge policies in operation.

TN.1.2 Haemodialysis - (Items 13100 and 13103)

Item 13100 covers the supervision in hospital by a medical specialist for the management of dialysis, haemofiltration, haemoperfusion or peritoneal dialysis in the patient who is not stabilised where the total attendance time by the supervising medical specialist exceeds 45 minutes.

Item 13103 covers the supervision in hospital by a medical specialist for the management of dialysis, haemofiltration, haemoperfusion or peritoneal dialysis in a stabilised patient, or in the case of an unstabilised patient, where the total attendance time by the supervising medical specialist does not exceed 45 minutes.

TN.1.3 Consultant Physician Supervision of Home Dialysis - (Item 13104)

Item 13104 covers the planning and management of dialysis and the supervision of a patient on home dialysis by a consultant physician in the practice of his or her specialty of renal medicine. Planning and management would cover the consultant physician participating in patient management discussions coordinated by renal centres. Supervision of the patient at home can be undertaken by telephone or other electronic medium, and includes:

- Regular ordering, performance and interpretation of appropriate biochemical and haematological studies (generally monthly);
- Feed-back of results to the home patient and his or her treating general physician;
- Adjustments to medications and dialysis therapies based upon these results;

- Co-ordination of regular investigations required to keep patient on active transplantation lists, where relevant;
- Referral to, and communication with, other specialists involved in the care of the patient; and
- Being available to advise the patient or the patient's agent.

A record of the services provided should be made in the patient's clinical notes.

The schedule fee equates to one hour of time spent undertaking these activities. It is expected that the item will be claimed once per month, to a maximum of 12 claims per year. The patient should be informed that he or she will incur a charge for which a Medicare rebate will be payable.

This item includes dialysis conducted in a residential aged care facility. In remote areas, where a patient's home is an unsuitable environment for home dialysis due to a lack of space, or the absence of telecommunication, electricity and water utilities, the item includes dialysis in a community facility such as the local primary health care clinic.

TN.1.4 Assisted Reproductive Technology ART Services - (Items 13200 to 13221)

Medicare benefits are not payable in respect of ANY other item in the Medicare Benefits Schedule (including Pathology and Diagnostic Imaging) in lieu of or in connection with items 13200 - 13221. Specifically, Medicare benefits are not payable for these items in association with items 104, 105, 14203, 14206, 35637, pathology tests or diagnostic imaging.

A treatment cycle that is a series of treatments for the purposes of ART services is defined as beginning either on the day on which treatment by superovulatory drugs is commenced or on the first day of the patient's menstrual cycle, and ending either; not more than 30 days later, or if a service mentioned in item 13212, 13215 or 13221 is provided in connection with the series of treatments-on the day after the day on which the last of those services is provided.

The date of service in respect of treatment covered by Items 13200, 13201, 13203, 13206, 13209 and 13218 is **DEEMED** to be the **FIRST DAY** of the treatment cycle.

Items 13200, 13201, 13202 and 13203 are linked to the supply of hormones under the Section 100 (National Health Act) arrangements. Providers must notify the Department of Human Services of Medicare card numbers of patients using hormones under this program, and hormones are only supplied for patients claiming one of these four items.

Medicare benefits are not payable for assisted reproductive services rendered in conjunction with surrogacy arrangements where surrogacy is defined as 'an arrangement whereby a woman agrees to become pregnant and to bear a child for another person or persons to whom she will transfer guardianship and custodial rights at or shortly after birth'.

NOTE: Items 14203 and 14206 are not payable for artificial insemination.

TN.1.5 Intracytoplasmic Sperm Injection - (Item 13251)

Item 13251 provides for intracytoplasmic sperm injection for male factor infertility under the following circumstances:

- where fertilisation with standard IVF is highly unlikely to be successful; or
- where in a previous cycle of IVF, the fertilisation rate has failed due to low or no fertilisation.

Item 13251 excludes a service to which item 13218 applies. Sperm retrieval procedures associated with intracytoplasmic sperm injection are covered under items 37605 and 37606.

Items 13251, 37605, 37606 do not include services provided in relation to artificial insemination using the husband's or donated sperm.

TN.1.6 Peripherally Inserted Central Catheters

Peripherally inserted central catheters (PICC) are an alternative to standard percutaneous central venous catheter placement or surgically placed intravenous catheters where long-term venous access is required for ongoing patient therapy.

Medicare benefits for PICC can be claimed under central vein catheterisation items 13318, 13319, 13815 and 22020.

These items are for central vein catheterisation (where the tip of the catheter is positioned in a central vein) and cannot be used for venous catheters where the tip is positioned in a peripheral vein.

TN.1.7 Administration of Blood or Bone Marrow already Collected (Item 13706)

Item 13706 is payable for the transfusion of blood, or platelets or white blood cells or bone marrow or gamma globulins. This item is not payable when gamma globulin is administered intramuscularly.

TN.1.8 Collection of Blood - (Item 13709)

Medicare benefits are payable under Item 13709 for collection of blood for autologous transfusions in respect of an impending operation (whether or not the blood is used), or when homologous blood is required in an emergency situation.

Medicare benefits are not payable under Item 13709 for collection of blood for long-term storage for possible future autologous transfusion, or for other forms of directed blood donation.

TN.1.9 Intensive Care Units - (Items 13870 to 13888)

TN.1.9 Intensive Care Units - (Items 13870 to 13888)

'Intensive Care Unit' means a separate hospital area that:

- (a) is equipped and staffed so as to be capable of providing to a patient:
 - (i) mechanical ventilation for respiratory failure for at least 24 hours; and
 - (ii) invasive cardiovascular monitoring; and
- (b) is supported by:
 - (i) at least one specialist in the specialty of intensive care who is immediately available and exclusively rostered to the ICU during normal working hours; and
 - (ii) a registered medical practitioner who is present in the hospital and immediately available to the unit at all times; and
 - (iii) a registered nurse for at least 18 hours in each day; and
- (c) has defined admission and discharge policies.

"immediately available" means that the intensivist must be predominantly present in the ICU during normal working hours. Reasonable absences from the ICU would be acceptable to attend conferences, meetings and other commitments, which might involve absences of up to 2 hours during the working day, provided suitable cover is available. Outside normal working hours the specialist must be immediately contactable and, if required, available to return to the ICU within a reasonable time.

"exclusively rostered" means that the specialist's sole clinical commitment is to intensive care.

For Neonatal Intensive Care Units an 'Intensive Care Unit' means a separate hospital area that:

- (a) is equipped and staffed so as to be capable of providing to a patient, being a newly-born child:
 - (i) mechanical ventilation for a period of several days; and
 - (ii) invasive cardiovascular monitoring; and
- (b) is supported by:
 - (i) at least one consultant physician in the specialty of paediatric medicine, appointed to manage the unit, and who is immediately available and exclusively rostered to the ICU during normal working hours; and
 - (ii) a registered medical practitioner who is present in the hospital and immediately available to the unit at all times; and
 - (iii) a registered nurse for at least 18 hours in each day; and
- (c) has defined admission and discharge policies.

Medicare benefits are payable under the 'management' items only once per day irrespective of the number of intensivists involved with the patient on that day. However, benefits are also payable for an attendance by another specialist/consultant physician who is not managing the patient but who has been asked to attend the patient. Where appropriate, accounts should be endorsed to the effect that the consultation was not part of the patient's intensive care management in order to identify which consultations should attract benefits in addition to the intensive care items.

In respect of Neonatal Intensive Care Units, as defined above, benefits are payable for admissions of babies who meet the following criteria:-

- (i) all babies weighing less than 1000gms;
- (ii) all babies with an endotracheal tube, and for the 24 hours following endotracheal tube removal;
- (iii) all babies requiring Constant Positive Airway Pressure (CPAP) for acute respiratory instability;
- (iv) all babies requiring more than 40% oxygen for more than 4 hours;
- (v) all babies requiring an arterial line for blood gas or pressure monitoring; or
- (vi) all babies having frequent seizures.

Cases may arise where babies admitted to a Neonatal Intensive Care Unit under the above criteria who, because they no longer satisfy the criteria are ready for discharge, in accordance with accepted discharge policies, but who are physically retained in the Neonatal Intensive Care Unit for other reasons. For benefit purposes such babies must be deemed as being discharged from the Neonatal Intensive Care Unit and not eligible for benefits under items 13870, 13873, 13876, 13881, 13882, 13885 and 13888.

Likewise, Medicare benefits are not payable under items 13870, 13873, 13876, 13881, 13882, 13885 and 13888 in respect of babies not meeting the above criteria, but who, for whatever other reasons, are physically located in a Neonatal Intensive Care Unit.

Medicare benefits are payable for admissions to an Intensive Care Unit following surgery only where clear clinical justification for post-operative intensive care exists.

TN.1.10 Procedures Associated with Intensive Care - (Items 13815, 13818, 13832, 13834, 13835, 13837, 13838, 13840, 13842, 13848, 13851, 13854 and 13857)

TN.1.10 Procedures Associated with Intensive Care - (Items 13815, 13818, 13832, 13834, 13835, 13837, 13838, 13840, 13842, 13848, 13851, 13854 and 13857)

Item 13815 covers the insertion of a central vein catheter, including under ultrasound guidance where clinically appropriate. No separate ultrasound item is payable with item 13815.

Item 13818 covers the insertion of a right heart balloon flotation catheter. Benefits are payable under this item only once per day except where a second discrete operation is performed on that day.

Items 13832, 13834, 13835, 13837, 13838 and 13840

These items cover extracorporeal life support services in an ICU. Benefits are payable only once per calendar day for a patient, irrespective of the number of medical practitioners involved.

Items 13832 and 13840 include the use of ultrasound guidance where clinically appropriate. No separate ultrasound item is payable with these items.

Item 13839

Provides for collection of blood for diagnostic purposes by arterial puncture.

Medicare benefits are not payable for sampling by arterial puncture under item 13839 in addition to item 13870 and 13873 on the same day.

Item 13842

This item provides for intra-arterial cannulation (including ultrasound guidance) for either or both intra-arterial pressure monitoring or blood sampling.

If a service covered by item 13842 is provided outside of an ICU, in association with, for example, an anaesthetic, benefits are payable under item 13842 in addition to item 13870 and 13873 when performed on the same day.

Where this occurs, accounts should be endorsed "performed outside of an Intensive Care Unit" against item 13842.

Item 13848

Item 13848 covers management of counterpulsation by intraaortic balloon on each day and includes initial and subsequent consultations and monitoring of parameters. Insertion of the intraaortic balloon is covered under item 38609.

Items 13851 and 13854

Items 13851 and 13854 cover the management of ventricular assist devices in an ICU. Benefits are payable only once per calendar day per patient, irrespective of the number of medical practitioners involved.

Item 13851 covers management of ventricular assist devices on the first day where the ICU admission relates to the device implantation or complication. Management on each day subsequent to the first is covered under item 13854.

Item 13857

This item covers the establishment of airway access and initiation of ventilation on a patient outside intensive care for the purpose of subsequent ventilatory support in intensive care. Benefits are not payable under item 13857 where airway access and ventilation is initiated in the context of an anaesthetic for surgery even if it is likely that following surgery the patient will be ventilated in an ICU. In such cases the appropriate anaesthetic item/s should be utilised.

TN.1.11 Management and Procedures in Intensive Care Unit - (Items 13870, 13873, 13876, 13888 and 13899)

TN.1.11 Management and Procedures in Intensive Care Unit - (Items 13870, 13873, 13876, 13888 and 13899)

Medicare benefits are only payable for management and procedures in intensive care covered by items 13870, 13873, 13876, 13882, 13885 and 13888 where the service is provided by a specialist or consultant physician who is immediately available and exclusively rostered for intensive care.

Items 13870 and 13873

Medicare Benefits Schedule fees for Items 13870 and 13873 represent global daily fees covering all attendances by the intensive care specialist in the ICU (and attendances provided by support medical personnel) and all electrocardiographic monitoring, arterial sampling and, bladder catheterisation performed on the patient on the one day. If a patient is transferred from one ICU to another it would be necessary for an arrangement to be made between the two ICUs regarding the billing of the patient.

Items 13870 and 13873 should be itemised on accounts according to each calendar day and not per 24 hour period. For periods when patients are in an ICU for very short periods (say less than 2 hours) with minimal ICU management during that time, a fee should not be raised.

Item 13876

Item 13876 covers the monitoring of pressures in an ICU. Benefits are paid only once for each type of pressure, up to a maximum of 4 pressures per patient per calendar day and irrespective of the number of medical practitioners involved in the monitoring of pressures within an ICU.

Item 11600

Item 11600 covers the monitoring of pressures outside the ICU by practitioners not associated with the ICU. Benefits are paid only once for each type of pressure, up to a maximum of 4 pressures per patient per calendar day and irrespective of the number of practitioners involved in monitoring the pressures.

Item 13899

Item 13899 covers the discussion and documentation of goals of care for a gravely ill patient lacking current goals of care by an intensive care specialist outside an Intensive Care Unit. Benefits are paid only once per patient admission (including instances of use of corresponding emergency medicine goals of care items 5039, 5041, 5042 and 5044), unless precipitated by a subsequent ICU referral or Cardiac Arrest/Medical Emergency Team call where the clinical circumstances change substantively with a resultant expectation that the original goals of care require amendment.

Item 13899 cannot be co-claimed with item 13870 or 13873 on the same day.

Notes:

“gravely ill patient lacking current goals of care” and “preparation of goals of care” are defined in the General Medical Services Table.

“gravely ill patient lacking current goals of care” means a patient to whom all of the following apply:

- (a) the patient either:
 - (i) is suffering a life-threatening acute illness or injury; or
 - (ii) is suffering acute illness or injury and, apart from the illness or injury, has a high risk of dying within 12 months;
- (b) one or more alternatives to management of the illness or injury are clinically appropriate for the patient;
- (c) either:
 - (i) there is not a record of goals of care for the patient that can readily be retrieved by providers of health care for the patient and that identifies interventions that should, or should not, be made in care of the patient; or
 - (ii) there is such a record but it is reasonable to expect that, due to changes in the patient’s condition, the goals recorded will change substantially.

“preparation of goals of care” for a patient, by a medical practitioner, means the carrying out of all of the following activities by the practitioner:

- (a) comprehensively evaluating the patient’s medical, physical, psychological and social issues;
- (b) identifying major issues that require goals of care for the patient to be set;
- (c) assessing the patient’s capacity to make decisions about goals of care for the patient;
- (d) discussing care of the patient with the patient, or a person (the surrogate) who can make decisions on the patient’s behalf about care for the patient, and as appropriate with any of the following:
 - (i) members of the patient’s family;
 - (ii) other persons who provide care for the patient;
 - (iii) other health practitioners;
- (e) offering in that discussion reasonable options for care of the patient, including alternatives to intensive or escalated care;
- (f) agreeing with the patient or the surrogate on goals of care for the patient that address all major issues identified;
- (g) recording the agreed goals so that:
 - (i) the record can be readily retrieved by other providers of health care for the patient; and
 - (ii) interventions that should, or should not, be made in care of the patient are identified.

Patients could be assessed for “a life-threatening acute illness or injury” (and suspicion that alternatives to active management may be an appropriate clinical choice) through the use of tools that assist in predicting end-of-life, such as the Supportive and Palliative Care Indicators Tool (SPICTTM).

“offering reasonable options for care” means that the patient must be provided with reasonable alternatives to continued intensive/active treatment or escalation of care, including where the patient has not directly asked for such information (in recognition that patients may not ask if they are not aware of such alternatives).

“recording the agreed goals” should be undertaken using standard forms (where available) appropriate to the facility in which a patient is receiving care.

Patients with existing goals of care plans are eligible if such records cannot be readily retrieved by the medical practitioners; or if their condition has changed to the point the record does not reflect the patient’s current medical condition and it is reasonable for new goals of care to be developed.

Providers of goals of care services should be appropriately trained to provide end-of-life care options and goals of care discussions.

Item 13899 should not be claimed where the goals of care are defined only in relation to a sub-set of the patient’s major issues.

TN.1.12 Cytotoxic Chemotherapy Administration - (Item 13915)

Following a recommendation of a National Health and Medical Research Council review committee in 2005, Medicare benefits are no longer payable for professional services rendered for the purpose of administering microwave (UHF radiowave) cancer therapy, including the intravenous injection of drugs used in the therapy.

TN.1.13 Implanted Pump or Reservoir/Drug Delivery Device - (Items 13939 and 13942)

The schedule fee for Items 13939 and 13942 includes a component to cover accessing of the drug delivery device. Accordingly, benefits are not payable under Item 13945 (Long-term implanted drug delivery device, accessing of) in addition to Items 13939 and 13942.

TN.1.14 PUVA or UVB Therapy - (Item 14050)

A component for any necessary subsequent consultation has been included in the Schedule fee for this item. However, the initial consultation preceding commencement of a course of therapy would attract benefits.

Phototherapy should only be used when:

- Topical therapy has failed or is inappropriate.
- The severity of the condition as assessed by specialist opinion (including symptoms, extent of involvement and quality of life impairment) warrants its use.

Narrow band UVB should be the preferred option for phototherapy unless there is documented evidence of superior efficacy of UVA phototherapy for the condition being treated.

Phototherapy treatment for psoriasis and palmoplantar pustulosis should consider the National Institute of Health and Care Excellence’s Guidelines at <https://pathways.nice.org.uk/pathways/psoriasis>

Involvement by a specialist in the specialty of dermatology at a minimum should include a letter stating the diagnosis, need for phototherapy, estimated time of treatment and review date.

TN.1.15 Laser Photocoagulation - (Items 14100 to 14124)

All laser equipment used for services under items 14100-14124 must be listed on the Australian Register of Therapeutic Goods.

The Australasian College of Dermatologists has advised that the following ranges (applicable to an average 4 year old child and an adult) should be used as a reference to the treatment areas specified in Items 14106 - 14124:

Entire forehead	50 -75 cm ²
Cheek	55 - 85 cm ²
Nose	10 -25 cm ²
Chin	10 - 30 cm ²
Unilateral midline anterior - posterior neck	60 - 220 cm ²
Dorsum of hand	25 - 80 cm ²
Forearm	100 - 250 cm ²
Upper arm	105 - 320 cm ²

TN.1.16 Facial Injections of Poly-L-Lactic Acid - (Items 14201 and 14202)

Poly-L-lactic acid is listed within the standard arrangements on the Pharmaceutical Benefits Scheme (PBS) as an Authority Required listing for initial and maintenance treatments, for facial administration only, of severe facial lipoatrophy caused by therapy for HIV infection.

TN.1.17 Hormone and Living Tissue Implantation - (Items 14203 and 14206)

Items 14203 and 14206 are not payable for artificial insemination.

TN.1.18 Implantable Drug Delivery System for the Treatment of Severe Chronic Spasticity - (Items 14227 to 14242)

Baclofen is provided under Section 100 of the Pharmaceutical Benefits Scheme for the following indications: Severe chronic spasticity, where oral agents have failed or have caused unacceptable side effects, in patients with chronic spasticity:

- (a) of cerebral origin; or
- (b) due to multiple sclerosis; or
- (c) due to spinal cord injury; or
- (d) due to spinal cord disease.

Items 14227 to 14242 should be used in accordance with these restrictions.

TN.1.19 Immunomodulating Agent - (Item 14245)

Item 14245 applies only to a service provided by a medical practitioner who is registered by the Department of Human Services CEO to participate in the arrangements made, under paragraph 100 (1) (b) of the National Health Act 1953, for the purpose of providing an adequate pharmaceutical service for persons requiring treatment with an immunomodulating agent.

These drugs are associated with risk of anaphylaxis which must be treated by a medical practitioner. For this reason a medical practitioner needs to be available at all times during the infusion in case of an emergency.

TN.1.20 Therapeutic procedures may be provided by a specialist trainee (Items 13015 to 51318)

(1) Items 13015 to 51318 (excluding 13209 (T1) 16400 to 16500 (T4), 16590 to 16591 (T4), 17610 to 17690 (T6) and 18350 to 18373 (T11)) apply to a medical service provided by;

- (a) A medical practitioner, or;
- (b) A specialist trainee under the direct supervision of a medical practitioner.

(2) For paragraph (1) (b), a medical service provided by a specialist trainee is taken to have been provided by the supervising medical practitioner.

(3) In this rule: Specialist trainee means a medical practitioner who is undertaking an Australian Medical Council (AMC) accredited Medical College Training Program. Direct Supervision means personal and continuous attendance for the duration of the service.

TN.1.21 Telehealth Specialist Services

These notes provide information on the telehealth MBS video consultation items by specialists, consultant physicians and psychiatrists. A video consultation involves a single specialist, consultant physician or psychiatrist attending a patient, with the possible support of another medical practitioner, a participating optometrist, a participating nurse practitioner, a participating midwife, practice nurse, Aboriginal and Torres Strait Islander health practitioner or Aboriginal health worker at the patient end of the video conference. The decision as to whether the patient requires clinical support at the patient end of the specialist service is based on whether the support is necessary for the provision of the specialist service. Telehealth specialist services can be provided to patients when there is no patient-end support service provided.

MBS items numbers 99, 112, 149, 288, 389, 2820, 3015, 6016, 13210, 16399 and 17609 allow a range of existing MBS attendance items to be provided via video conferencing. These items have a derived fee which is equal to 50% of the schedule fee for the consultation item claimed (e.g. 50% of the schedule fee for item 104) when billed with one of the associated consultation items (such as 104). A patient rebate of 85% for the derived fee is payable.

Six MBS item numbers (113, 114, 384, 2799, 3003 and 6004) provide for an initial attendance via videoconferencing by a specialist, consultant physician, consultant occupational physician, pain medicine specialist/consultant physician, palliative medicine specialist/consultant physician or neurosurgeon where the service is 10 minutes or less. The items are stand-alone items and do not have a derived fee.

Where an attendance is more than 10 minutes, practitioners should use the existing item numbers consistent with the current arrangements. Normal restrictions which apply for initial consultations will also apply for these items. For example, if a patient has an initial consultation via telehealth, they cannot also claim an initial face-to-face consultation as part of the same course of treatment.

Clinical indications

The specialist, consultant physician or psychiatrist must be satisfied that it is clinically appropriate to provide a video consultation to a patient. The decision to provide clinically relevant support to the patient is the responsibility of the specialist, consultant physician or psychiatrist.

Telehealth specialist services can be provided to patients when there is no patient-end support service provided.

Restrictions

The MBS telehealth attendance items are not payable for services to an admitted hospital patient (this includes hospital in the home patients). Benefits are not payable for telephone or email consultations. In order to fulfill the item descriptor there must be a visual and audio link between the patient and the remote practitioner. If the remote practitioner is unable to establish both a video and audio link with the patient, a MBS rebate for a telehealth attendance is not payable.

Billing Requirements

All video consultations provided by specialists, consultant physicians or psychiatrists must be **separately billed**. That is, only the relevant telehealth MBS consultation item and the associated derived item are to be itemised on the account/bill/voucher. Any other service/item billed should be itemised on a separate account/bill/voucher. This will ensure the claim is accurately assessed as being a video consultation and paid accordingly.

Practitioners should not use the notation 'telehealth', 'verbal consent' or 'Patient unable to sign' to overcome administrative difficulties to obtaining a patient signature for bulk billed claims (for further information see mbsonline.gov.au/telehealth).

Eligible Geographical Areas

Geographic eligibility for telehealth services funded under Medicare are determined according to the Australian Standard Geographical Classification Remoteness Area (ASGC-RA) classifications. Telehealth Eligible Areas are areas that are outside a Major City (RA1) according to ASGC-RA (RA2-5). Patients and providers are able to check their eligibility by following the links on the MBS Online website (www.mbsonline.gov.au/telehealth).

There is a requirement for the patient and specialist to be located a minimum of 15km apart at the time of the consultation. Minimum distance between specialist and patient video consultations are measured by the most direct (ie least distance) route by road. The patient or the specialist is not permitted to travel to an area outside the minimum 15 km distance in order to claim a video conference.

This rule will not apply to specialist video consultation with patients who are a care recipient in a residential care service; or at an Aboriginal Medical Service or an Aboriginal Community Controlled Health Service for which a direction made under subsection 19(2) of the *Health Insurance Act 1973* as these patients are able to receive telehealth services anywhere in Australia.

Telehealth Eligible Service Areas are defined at www.mbsonline.gov.au/telehealth-eligible-areas

Record Keeping

Participating telehealth practitioners must keep contemporaneous notes of the consultation including documenting that the service was performed by video conference, the date, time and the people who participated.

Only clinical details recorded at the time of the attendance count towards the time of the consultation. It does not include information added at a later time, such as reports of investigations.

Extended Medicare Safety Net (EMSN)

All telehealth consultations (with the exception of the participating optometrist telehealth items) are subject to EMSN caps. The EMSN caps for ART and Obstetric telehealth items 13210 and 16399 were set in reference to the EMSN caps applying to the base ART and Obstetric consultation items.

The EMSN caps for all other telehealth consultation items are equal to 300% of the schedule fee (to a maximum of \$500). The maximum EMSN benefit for a telehealth consultation is equal to the sum of the EMSN cap for the base item and the EMSN cap for the telehealth items.

Aftercare Rule

Video consultations are subject to the same aftercare rules as practitioners providing face-to-face consultations.

Multiple attendances on the same day

In some situations a patient may receive a telehealth consultation and a face to face consultation by the same or different practitioner on the same day.

Medicare benefits may be paid for more than one video consultation on a patient on the same day by the same practitioner, provided the second (and any following) video consultations are not a continuation of the initial or earlier video consultations. Practitioners will need to provide the times of each consultation on the patient's account or bulk billing voucher.

Referrals

The referral procedure for a video consultation is the same as for conventional face-to-face consultations.

Technical requirements

In order to fulfill the item descriptor there must be a visual and audio link between the patient and the remote practitioner. If the remote practitioner is unable to establish both a video and audio link with the patient, a MBS rebate for a telehealth attendance is not payable.

Individual clinicians must be confident that the technology used is able to satisfy the item descriptor and that software and hardware used to deliver a videoconference meets the applicable laws for security and privacy.

TN.1.22 Cryopreservation of semen (Item 13260)

A semen cycle collection process involves obtaining up to 3 semen samples on alternate days producing up to 50 cryopreserved straws of frozen sperm.

Maximum of two semen collection cycles, one cycle collected prior to a patient undergoing the first cytotoxic/radiation treatment and the second cycle to be collected if the patient has relapsed and requires treatment.

TN.1.23 MBS Item 13105 - Haemodialysis in very remote areas

The purpose of item 13105 is for the management of haemodialysis to a person with end-stage renal disease. The service is provided in very remote areas (defined as Modified Monash 7) by a registered nurse, an Aboriginal health worker or an Aboriginal and Torres Strait Islander health practitioner on behalf of a medical practitioner. The service is supervised by a medical practitioner (either in person or remotely).

As a condition of receiving the Medicare-funded dialysis treatment, the patient's care must be managed by a nephrologist, with the patient being treated or reviewed by the nephrologist every 3 to 6 months (either in person or remotely).

The patient is not an admitted patient of a hospital and the service is provided in a primary care setting.

Item 13104 should not be claimed if item 13105 is claimed.

TN.1.24 Emergency Medicine Therapeutic and Procedural Services (Items 14255 to 14288)

Items 14255, 14256, 14257, 14258, 14259, 14260, 14263, 14264, 14265, 14266, 14270, 14272, 14277, 14278, 14280, 14283, 14285 and 14288 relate to therapeutic and procedural services commonly performed in the emergency medicine setting rendered by medical practitioners who are holders of the Fellowship of the Australasian College for Emergency Medicine (FACEM) and who participate in, and meet the requirements for, quality assurance and maintenance of professional standards by the Australasian College for Emergency Medicine (ACEM).

Mirror emergency medicine therapeutic and procedural items are provided within the structure for medical practitioners who are not emergency physicians to ensure a consistent framework for all emergency services, regardless of provider type.

Group T1, Subgroup 14 items 14255 to 14288 (excluding items 14277 and 14278) must be performed in conjunction with and in addition to an emergency attendance (items 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017, 5019, 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036) by the practitioner under Group A21.

Items 14277 and 14288 (chemical or physical restraints) may be performed as a standalone service or in conjunction with an emergency attendance service in Group A21.

The following notes are provided to assist emergency physicians and medical practitioners in selecting the appropriate therapeutic or procedural item number for Medicare benefit purposes.

Resuscitation (Items 14255, 14256, 14257, 14258 and 14259)

These items include common procedures and processes involved in a resuscitation, which may include ANY of the following - rapid IV access, administration of fluid, vasopressors (via bolus or infusion), adrenaline nebulisers, use of point-of-care ultrasound in conjunction with focused assessment with sonography for trauma (FAST scan), central line access, arterial puncture and or access, ventilation, nasogastric tube insertion and in-dwelling urinary catheter insertion.

Examples of patients requiring resuscitation include: cardiac/respiratory arrest, generalised seizures, undifferentiated shock, severe sepsis +/- shock, anaphylaxis, STEMI, unstable cardiac dysrhythmias, acute stroke, perforated viscus, aortic dissection / ruptured aortic aneurysm, severe electrolyte/endocrine abnormalities (for example, DKA, hyperkalaemia).

Patients requiring resuscitation routinely require a second doctor to assist with access, airway management or other procedures as required. It is the expectation that, in cases where a second doctor is required to provide the resuscitation service, only one Group A21 emergency medicine attendance item may be billed with either the primary or secondary doctor billing a resuscitation item.

Minor Procedure (Items 14263 and 14265) and Procedures (Items 14264 and 14266)

These items account for minor procedures (14263 and 14265) and procedures (14264 and 14266) provided in conjunction with an attendance item under Group A21 and may be claimed for each minor procedure or procedure performed. Where multiple procedures are performed per patient attendance, the relevant procedure item/s may be billed more than once where clinically relevant for the appropriate treatment of the patient.

“minor procedures” could include simple foreign body removal (eg. corneal, intranasal, otic), superficial wound closure (<7cm, not of the face or neck), drainage of small abscess, incision and drainage abscess / cyst / haematoma (including Bartholin’s), pulp space drainage, removal of nail of finger/ thumb/ toe, incision of thrombosed external haemorrhoid, rectal prolapse reduction, bladder aspiration (suprapubic tap), passage of urethral sounds, paraphimosis reduction, sigmoidoscopy, simple wound dressings, burns dressings (<5% BSA)

“procedures” could include removal of foreign body from the ear or subcutaneous tissue (incision / closure), superficial laceration repair of the face / neck (including ear, eyelid, lip, nose) or of >7cm elsewhere on body, management of deep/ contaminated wound requiring debridement under general anaesthetic or field block, femoral nerve block, epistaxis cauterly / packing, suprapubic cystotomy / catheter, cardioversion / defibrillation, thoracic cavity aspiration for diagnostic purposes, intercostal drain insertion, PEG tube replacement, laryngoscopy (including fibreoptic), nasendoscopy, priapism decompression, abdominal paracentesis, complex wound dressings, burns dressings (>5% BSA)

Management of Fractures (Items 14270 and 14272)

Items 14270 and 14272 are for fracture or dislocation diagnosis and management, excluding aftercare and performed in conjunction with an attendance item under Group A21.

All fractures are billed the same EXCEPT for fractures that are managed as soft tissue injuries which are NOT billed (for example, phalangeal tuft fractures, lateral malleolar tip avulsions). More complex fractures (for example, stable spinal fractures and multiple rib fractures) are included as fractures for billing purposes due to the multiple facets required to manage these injuries.

For fracture/dislocations requiring reduction (in addition to cast immobilisation) then a procedure item (14263, 14264, 14265 or 14266) may also be billed.

Where a patient presents with multiple fractures, the relevant fracture item/s may be billed more than once per attendance where clinically relevant for the appropriate treatment of the patient.

Chemical or Physical Restraints (Items 14277 and 14278)

Items 14277 and 14278 are for the application of chemical or physical restraints, where an acute severe behavioural disturbance necessitates involuntary management with a team-based approach and chemical and / or physical restraints (limited) and / or one on one nursing care to ensure the safety of the patient. Chemical or physical restraints may be performed as a standalone service or in conjunction with an emergency attendance item under Group A21.

Anaesthesia (Items 14280 and 14283) and Emergent Intubation (Items 14285 and 14288)

The anaesthesia items (14280 and 14283) account for all services that would otherwise be billed under the anaesthetic items in the MBS, including the pre anaesthetic consultation, the associated procedure, and any loadings / add-ons (such as duration of anaesthesia or the ASA classification of the patient). Anaesthesia items assume an average of 20 minutes anaesthesia, and an average ASA 3 classification, in an emergent and / or after-hours context.

Emergent intubation items (14285 and 14288) include endotracheal intubation, LMA insertion, front-of-neck access, and insertion of adjunctive airway devices (oro/nasopharyngeal airways).

Patients requiring procedural sedation or emergent intubation/airway management routinely require a second doctor to assist with access, airway management or other procedures as required. It is the expectation that, in cases where a second doctor is required to provide the anaesthesia or intubation service, only one Group A21 emergency medicine attendance item may be billed with either the primary or secondary doctor billing the procedural item.

Items under Subgroup 14 with the 'Anaesthesia' notation allow for Medicare benefits to be paid for a second medical practitioner to provide the anaesthesia service. Where the anaesthesia service is provided by an emergency physician or medical practitioner, anaesthesia items 14280 and 14283 would be claimed. Specialist anaesthetists may not claim items 14280 and 14283 but would provide the service under a relative value guide episode in T7 or T10 of the GMST.

TN.2.1 Radiation Oncology - General

The level of benefits for radiotherapy depends on the number of fields irradiated and the number of times treatment is given.

Treatment by rotational therapy (including rotational therapy using volumetric modulated arc therapy or intensity modulated arc therapy) is considered to be equivalent to the irradiation of three fields (i.e., irradiation of one field plus two additional fields). For example, each attendance for orthovoltage rotational therapy at the rate of 3 or more treatments per week would attract benefit under Item 15100 plus twice Item 15103. Similarly, each attendance for arc therapy of the prostate using a dual photon linear accelerator would attract benefits under 15248 plus twice 15263. Benefits are payable once only per attendance for treatment irrespective of whether one or more arcs are involved.

Benefits for consultations rendered on the same day as treatment and/or planning services are only payable where they are clinically relevant. A clinically relevant service is one that is generally accepted by the relevant profession as being necessary for the appropriate treatment of the patient.

From 1 January 2016, separate items were listed for intensity-modulated radiotherapy (IMRT) and image-guided radiotherapy (IGRT). Previously, these services were delivered and billed against the existing MBS three-dimensional radiotherapy items.

Definitions have been inserted into the Health Insurance (General Medical Services Table) Regulation as follows:

In items 15275, 15555, 15565 and 15715:

IMRT means intensity modulated radiation therapy, being a form of external beam radiation therapy that uses high energy megavoltage x rays to allow the radiation dose to conform more closely to the shape of a tumour by changing the intensity of the radiation beam.

In item 15275:

IGRT means image guided radiation therapy, being a process in which frequent 2 and 3 dimensional imaging is captured as close as possible to the time of treatment by using x rays and scans (similar to CT scans) before and during radiotherapy treatment, in order to show the size, shape and position of a cancer as well as the surrounding tissues and bones.

TN.2.2 Brachytherapy of the Prostate - (Item 15338)

One of the requirements of item 15338 is that patients have a Gleason score of less than or equal to 7. However, where the patient has a score of 7, comprising a primary score of 4 and a secondary score of 3 (ie. 4+3=7), it is recommended that low dose rate brachytherapy form part of a combined modality treatment.

Low dose brachytherapy of the prostate should be performed in patients with favourable anatomy allowing adequate access to the prostate without pubic arch interference and who have a life expectancy of at least greater than 10 years.

An 'approved site' for the purposes of this item is one at which radiation oncology services may be performed lawfully under the law of the State or Territory in which the site is located.

TN.2.3 Planning Services - (Items 15500 to 15565 and 15850)

A planning episode involves field setting and dosimetry. One plan only will attract Medicare benefits in a course of treatment. However, benefits are payable for further planning items where planning is undertaken in respect of a different tumour site to that (or those) specified in the original prescription by the radiation oncologist. Benefits are also payable for more than one plan when a plan for brachytherapy and a plan for megavoltage or teletherapy treatment are rendered in the same course of treatment.

Items 15500 to 15533 (inclusive) are for a planning episode for 2D conformal radiotherapy. Items 15550 to 15562 (excluding item 15555) are for a planning episode for 3D conformal radiotherapy. Items 15555 and 15565 are for a planning episode for intensity modulated radiotherapy (IMRT).

It is expected that the 2D simulation items (15500, 15503, and 15506) would be used in association with the 2D planning items (15518, 15521, and 15524) in a planning episode. However there may be instances where it may be appropriate to use the 3D Planning items (15556, 15559, and 15562) in association with the 2D simulation items (15500, 15503, and 15506) in a planning episode. The 3D simulation items (15550 and 15553) can only be billed in association with the 3D planning items (15556, 15559, and 15562) in a planning episode.

The IMRT simulation item (15555) and IMRT dosimetry item (15565) can only be billed in association with each other and only for IMRT (i.e. neither IMRT simulation item 15555, nor IMRT dosimetry item 15565, can be billed in association with any of the 2D or 3D treatment items for an episode of care).

Item 15850 covers radiation source localisation for high dose brachytherapy treatment. Item 15850 applies to brachytherapy provided to any part of the body.

TN.2.4 Treatment Verification - (Items 15700 to 15705, 15710, 15715 and 15800)

In these items, 'treatment verification' means:

A quality assurance procedure designed to facilitate accurate and reproducible delivery of the radiotherapy/brachytherapy to the prescribed site(s) or region(s) of the body as defined in the treatment prescription and/or associated dose plan(s) and which utilises the capture and assessment of appropriate images using:

- (a) x-rays (this includes portal imaging, either megavoltage or kilovoltage, using a linear accelerator)
- (b) computed tomography; or
- (c) ultrasound, where the ultrasound equipment is capable of producing images in at least three dimensions (unidimensional ultrasound is not covered); together with a record of the assessment(s) and any correction(s) of significant treatment delivery inaccuracies detected.

Item 15700 covers the acquisition of images in one plane and incorporates both single or double exposures. The item may be itemised once only per attendance for treatment, irrespective of the number of treatment sites verified at that attendance.

Item 15705 (multiple projections) applies where images in more than one plane are taken, for example orthogonal views to confirm the isocentre. It can be itemised only where verification is undertaken of treatments involving three or more fields. It can be itemised where single projections are acquired for multiple sites, eg multiple metastases for palliative patients. Item 15705 can be itemized only once per attendance for treatment, irrespective of the number of treatment sites verified at that attendance.

15710 applies to volumetric verification imaging using acquisition by computed tomography. It can be itemised only where verification is undertaken of treatments involving three or more fields and only once per attendance for treatment, irrespective of the number of treatment sites verified at that attendance.

Items 15700, 15705, 15710 and 15715:

- may not be claimed together for the same attendance at which treatment is rendered
- must only be itemised when the verification procedure has been prescribed in the treatment plan and the image has been reviewed by a radiation oncologist

Item 15800 - Benefits are payable once only per attendance at which treatment is verified.

TN.3.1 Therapeutic Dose of Yttrium 90 - (Item 16003)

This item cannot be claimed for selective internal radiation therapy (SIRT).

See items 35404, 35406 and 35408 for SIRT using SIR_Spheres (yttrium-90 microspheres).

TN.4.1 Antenatal Service Provided by a Nurse, Midwife or an Aboriginal and Torres Strait Islander health practitioner - (Item 16400)

Item 16400 can only be claimed by a medical practitioner (including a vocationally registered or non-vocationally registered GP, a specialist or a consultant physician) where an antenatal service is provided to a patient by a midwife, nurse or Aboriginal and Torres Strait Islander health practitioner on behalf of the medical practitioner at, or from an eligible practice location in a regional, rural or remote area.

A regional, rural or remote area is classified as a RRMA 3-7 area under the Rural Remote Metropolitan Areas classification system.

Evidence based national or regional guidelines should be used in the delivery of this antenatal service.

An eligible practice location is the place associated with the medical practitioner's Medicare provider number from which the service has been provided. If you are unsure if the location is in an eligible area you can call the Department of Human Services on 132 150.

A midwife means a registered midwife who holds a current practising certificate as a midwife issued by a State or Territory regulatory authority and who is employed by, or whose services are otherwise retained by, the medical practitioner or their practice.

A nurse means a registered or enrolled nurse who holds a current practising certificate as a nurse issued by a State or Territory regulatory authority and who is employed by, or whose services are otherwise retained by, the medical practitioner or their practice. The nurse must have appropriate training and skills to provide an antenatal service.

An Aboriginal and Torres Strait Islander health practitioner means a person who has been registered as an Aboriginal and Torres Strait Islander health practitioner by the Aboriginal and Torres Strait Islander Health Practice Board of Australia and meets the Board's registration standards. The Aboriginal and Torres Strait Islander health practitioner must be employed or retained by a general practice, or by a health service that has an exemption to claim Medicare benefits under subsection 19(2) of the Health Insurance Act 1973.

An Aboriginal and Torres Strait Islander health practitioner may use any of the titles authorised by the Aboriginal and Torres Strait Islander Health Practice Board: Aboriginal health practitioner; Aboriginal and Torres Strait Islander health practitioner; or Torres Strait Islander health practitioner.

The midwife, nurse or Aboriginal and Torres Strait Islander health practitioner must also comply with any relevant legislative or regulatory requirements regarding the provision of the antenatal service.

The medical practitioner under whose supervision the antenatal service is provided retains responsibility for the health, safety and clinical outcomes of the patient. The medical practitioner must be satisfied that the midwife, nurse or Aboriginal and Torres Strait Islander health practitioner is appropriately registered, qualified and trained, and covered by indemnity insurance to undertake antenatal services.

Supervision at a distance is recognised as an acceptable form of supervision. This means that the medical practitioner does not have to be physically present at the time the service is provided. However, the medical practitioner should be able to be contacted if required.

The medical practitioner is not required to see the patient or to be present while the antenatal service is being provided by the midwife, nurse or Aboriginal and Torres Strait Islander health practitioner. It is up to the medical practitioner to decide whether they need to see the patient. Where a consultation with the medical practitioner has taken place prior to or following the antenatal service, the medical practitioner is entitled to claim for their own professional service, but item 16400 cannot be claimed in these circumstances.

Item 16400 cannot be claimed in conjunction with another antenatal attendance item for the same patient, on the same day by the same practitioner.

A bulk billing incentive item (10990, 10991 or 10992) cannot be claimed in conjunction with item 16400. An incentive payment is incorporated into the schedule fee.

Item 16400 can only be claimed 10 times per pregnancy.

Item 16400 cannot be claimed for an admitted patient of a hospital.

TN.4.2 Items for Initial and Subsequent Obstetric Attendances (Items 16401 and 16404)

16401 and 16404 replace items 104 and 105 for any specialist obstetric attendance relating to pregnancy. This includes any initial and subsequent attendance with a specialist obstetrician for discussion of pregnancy or pregnancy related conditions or complications, or any postnatal care provided to the patient subsequent to the

expiration of normal aftercare period. Item 16500 is still claimed for routine antenatal attendances. These items are subject to Extended Medicare Safety Net caps.

TN.4.3 Antenatal Care - (Item 16500)

In addition to routine antenatal attendances covered by Item 16500 the following services, where rendered during the antenatal period, attract benefits:-

- (a) Items 16501, 16502, 16505, 16508, 16509 (but not normally before the 24th week of pregnancy), 16511, 16512, 16514, 16533, 16534 and 16600 to 16627.
- (b) The initial consultation at which pregnancy is diagnosed.
- (c) The first referred consultation by a specialist obstetrician when called in to advise on the pregnancy.
- (d) All other services, excluding those in Category 1 and Group T4 of Category 3 not mentioned above.
- (e) Treatment of an intercurrent condition not directly related to the pregnancy.

Item 16514 relates to antenatal cardiotocography in the management of high risk pregnancy. Benefits for this service are not attracted when performed during the course of the labour and birth.

TN.4.4 External Cephalic Version for Breech Presentation - (Item 16501)

Contraindications for this item are as follows:

- antepartum haemorrhage (APH)
- multiple pregnancy,
- fetal anomaly,
- fetal growth restriction,
- caesarean section scar,
- uterine anomalies,
- obvious cephalopelvic disproportion,
- isoimmunization,
- premature rupture of the membranes.

TN.4.5 Labour and Birth - (Items 16515, 16518, 16519, 16530 and 16531)

Benefits for management of labour and birth covered by Items 16515, 16518, 16519, 16530 and 16531 includes the following (where indicated):-

- surgical and/or intravenous infusion induction of labour;
- forceps or vacuum extraction;
- evacuation of products of conception by manual removal (not being an independent procedure);

- episiotomy or repair of tears.

Item 16519 covers birth by any means including Caesarean section. If, however, a patient is referred, or her care is transferred to another medical practitioner for the specific purpose of birth by Caesarean section, whether because of an emergency situation or otherwise, then Item 16520 would be the appropriate item.

In some instances the obstetrician may not be able to be present at all stages of confinement. In these circumstances, Medicare benefits are payable under Item 16519 provided that the doctor attends the patient as soon as possible during the confinement and assumes full responsibility for the mother and baby.

Two items in Group T9 provide benefits for assistance by a medical practitioner at a Caesarean section. Item 51306 relates to those instances where the Caesarean section is the only procedure performed, while Item 51309 applies when other operative procedures are performed at the same time.

Where, during labour, a medical practitioner hands the patient over to another medical practitioner, benefits are payable under Item 16518 for the referring practitioner's services. The second practitioner's services would attract benefits under Item 16515 (i.e., management of vaginal birth) or Item 16520 (Caesarean section). If another medical practitioner is called in for the management of the labour and birth, benefits for the referring practitioner's services should be assessed under Item 16500 for the routine antenatal attendances and on a consultation basis for the postnatal attendances, if performed.

At a high risk birth benefits will be payable for the attendance of any medical practitioner (called in by the doctor in charge of the birth) for the purposes of resuscitation and subsequent supervision of the neonate. Examples of high risk births include cases of difficult vaginal birth, Caesarean section or the birth of babies with Rh problems and babies of toxæmic mothers.

TN.4.6 Caesarean Section - (Item 16520)

Benefits under this item are attracted only where the patient has been specifically referred to another medical practitioner for the management of the birth by Caesarean section and the practitioner carrying out the procedure has not rendered any antenatal care. Caesarean sections performed in any other circumstances attract benefits under Item 16519.

TN.4.7 Complicated Confinement - (Item 16522)

A record of the clinical indication/s that constitute billing under item 16522 should be retained on the patient's medical record.

TN.4.8 Labour and Birth Where Care is Transferred by a Participating Midwife - (Items 16527 to 16528)

Where the intrapartum care of a patient is transferred to a medical practitioner by a participating midwife for the management of birth, item 16527 or 16528 would apply depending on the service provided.

Where care is transferred by a participating midwife prior to the commencement of labour, items 16519 or 16522 would apply.

TN.4.9 Items for Planning and Management of a Pregnancy (Item 16590 and 16591)

Item 16590 is intended to provide for the planning and management of pregnancy that has progressed beyond 28 weeks, where the medical practitioner is intending to undertake the birth for a privately admitted patient.

Item 16591 is for the planning and management of a pregnancy that has progressed beyond 28 weeks and the medical practitioner is providing shared antenatal care and is not intending to undertake the birth.

Items 16590 and 16591 are to include the provision of a mental health assessment of the patient. Both items are subject to Extended Medicare Safety Net caps and should only be claimed by a patient once per pregnancy.

TN.4.10 Post-Partum Care - (Items 16515 to 16520 and 16564 to 16573)

The Schedule fees and benefits payable for Items 16519 and 16520 cover all postnatal attendances on the mother and the baby, except in the following circumstances:-

- (i) where the medical services rendered are outside those covered by a consultation, e.g., blood transfusion;
- (ii) where the condition of the mother and/or baby is such as to require the services of another practitioner (e.g., paediatrician, gynaecologist, etc);
- (iii) where the patient is transferred, at arms length, to another medical practitioner for routine post-partum, care (eg mother and/or baby returning from a larger centre to a country town or transferring between hospitals following confinement). In such cases routine postnatal attendances attract benefits on an attendance basis. The transfer of a patient within a group practice would not qualify for benefits under this arrangement except in the case of Items 16515 and 16518. These items cover those occasions when a patient is handed over while in labour from the practitioner who under normal circumstances would have delivered the baby, but because of compelling circumstances decides to transfer the patient to another practitioner for the birth;
- (iv) where during the postnatal period a condition occurs which requires treatment outside the scope of normal postnatal care;
- (v) in the management of premature babies (i.e. babies born prior to the end of the 37th week of pregnancy or where the birth weight of the baby is less than 2500 grams) during the period that close supervision is necessary.

Normal postnatal care by a medical practitioner would include:-

- (i) uncomplicated care and check of
 - lochia
 - fundus
 - perineum and vulva/episiotomy site
 - temperature
 - bladder/urination
 - bowels
- (ii) advice and support for establishment of breast feeding
- (iii) psychological assessment and support
- (iv) Rhesus status
- (v) Rubella status and immunisation
- (vi) contraception advice/management

Examinations of apparently normal newborn infants by consultant or specialist paediatricians do not attract benefits

Items 16564 to 16573 relate to postnatal complications and should not be itemised in respect of a normal birth. To qualify for benefits under these items, the patient is required to be transferred to theatre, or be administered general anaesthesia or epidural injection for the performance of the procedure. Utilisation of the items will be closely monitored to ensure appropriate usage.

TN.4.11 Interventional Techniques - (Items 16600 to 16627, 35518 and 35674)

For Items 16600 to 16627, 35518 and 35674 there is no component in the Schedule fee for the associated ultrasound. Benefits are attracted for the ultrasound under the appropriate items in Group II of the Diagnostic Imaging Services Table. If diagnostic ultrasound is performed on a separate occasion to the procedure, benefits would be payable under the appropriate ultrasound item.

Item 51312 provides a benefit for assistance by a medical practitioner at interventional techniques covered by Items 16606, 16609, 16612, 16615, and 16627.

TN.4.12 Telehealth Specialist Services

These notes provide information on the telehealth MBS video consultation items by specialists, consultant physicians and psychiatrists. A video consultation involves a single specialist, consultant physician or psychiatrist attending a patient, with the possible support of another medical practitioner, a participating optometrist, a participating nurse practitioner, a participating midwife, practice nurse, Aboriginal and Torres Strait Islander health practitioner or Aboriginal health worker at the patient end of the video conference. The decision as to whether the patient requires clinical support at the patient end of the specialist service is based on whether the support is necessary for the provision of the specialist service. Telehealth specialist services can be provided to patients when there is no patient-end support service provided.

MBS items numbers 99, 112, 149, 288, 389, 2820, 3015, 6016, 13210, 16399 and 17609 allow a range of existing MBS attendance items to be provided via video conferencing. These items have a derived fee which is equal to 50% of the schedule fee for the consultation item claimed (e.g. 50% of the schedule fee for item 104) when billed with one of the associated consultation items (such as 104). A patient rebate of 85% for the derived fee is payable.

Six MBS item numbers (113, 114, 384, 2799, 3003 and 6004) provide for an initial attendance via videoconferencing by a specialist, consultant physician, consultant occupational physician, pain medicine specialist/consultant physician, palliative medicine specialist/consultant physician or neurosurgeon where the service is 10 minutes or less. The items are stand alone items and do not have a derived fee.

Where an attendance is more than 10 minutes, practitioners should use the existing item numbers consistent with the current arrangements. Normal restrictions which apply for initial consultations will also apply for these items. For example, if a patient has an initial consultation via telehealth, they cannot also claim an initial face-to-face consultation as part of the same course of treatment.

Clinical indications

The specialist, consultant physician or psychiatrist must be satisfied that it is clinically appropriate to provide a video consultation to a patient. The decision to provide clinically relevant support to the patient is the responsibility of the specialist, consultant physician or psychiatrist.

Telehealth specialist services can be provided to patients when there is no patient-end support service provided.

Restrictions

The MBS telehealth attendance items are not payable for services to an admitted hospital patient (this includes hospital in the home patients). Benefits are not payable for telephone or email consultations. In order to fulfill the item descriptor there must be a visual and audio link between the patient and the remote practitioner. If the remote practitioner is unable to establish both a video and audio link with the patient, a MBS rebate for a telehealth attendance is not payable.

Billing Requirements

All video consultations provided by specialists, consultant physicians or psychiatrists must be **separately billed**. That is, only the relevant telehealth MBS consultation item and the associated derived item are to be itemised on the

account/bill/voucher. Any other service/item billed should be itemised on a separate account/bill/voucher. This will ensure the claim is accurately assessed as being a video consultation and paid accordingly.

Practitioners should not use the notation 'telehealth', 'verbal consent' or 'Patient unable to sign' to overcome administrative difficulties to obtaining a patient signature for bulk billed claims (for further information see mbsonline.gov.au/telehealth).

Eligible Geographical Areas

Geographic eligibility for telehealth services funded under Medicare are determined according to the Australian Standard Geographical Classification Remoteness Area (ASGC-RA) classifications. Telehealth Eligible Areas are areas that are outside a Major City (RA1) according to ASGC-RA (RA2-5). Patients and providers are able to check their eligibility by following the links on the MBS Online website (www.mbsonline.gov.au/telehealth).

There is a requirement for the patient and specialist to be located a minimum of 15km apart at the time of the consultation. Minimum distance between specialist and patient video consultations are measured by the most direct (ie least distance) route by road. The patient or the specialist is not permitted to travel to an area outside the minimum 15 km distance in order to claim a video conference.

This rule will not apply to specialist video consultation with patients who are a care recipient in a residential care service; or at an Aboriginal Medical Service or an Aboriginal Community Controlled Health Service for which a direction made under subsection 19(2) of the *Health Insurance Act 197*, as these patients are able to receive telehealth services anywhere in Australia.

Telehealth Eligible Service Areas are defined at www.mbsonline.gov.au/telehealth_eligible_areas

Record Keeping

Participating telehealth practitioners must keep contemporaneous notes of the consultation including documenting that the service was performed by video conference, the date, time and the people who participated.

Only clinical details recorded at the time of the attendance count towards the time of the consultation. It does not include information added at a later time, such as reports of investigations.

Extended Medicare Safety Net (EMSN)

All telehealth consultations (with the exceptions of the participating optometrist telehealth items) are subject to EMSN caps. The EMSN caps for ART and Obstetric telehealth items 13210 and 16399 were set in reference to the EMSN caps applying to the base ART and Obstetric consultation items.

The EMSN caps for all other telehealth consultation items are equal to 300% of the schedule fee (to a maximum of \$500). The maximum EMSN benefit for a telehealth consultation is equal to the sum of the EMSN cap for the base item and the EMSN cap for the telehealth items.

Aftercare Rule

Video consultations are subject to the same aftercare rules as practitioners providing face-to-face consultations.

Multiple attendances on the same day

In some situations a patient may receive a telehealth consultation and a face to face consultation by the same or different practitioner on the same day.

Medicare benefits may be paid for more than one video consultation on a patient on the same day by the same practitioner, provided the second (and any following) video consultations are not a continuation of the initial or earlier video consultations. Practitioners will need to provide the times of each consultation on the patient's account or bulk billing voucher.

Referrals

The referral procedure for a video consultation is the same as for conventional face-to-face consultations.

Technical requirements

In order to fulfill the item descriptor there must be a visual and audio link between the patient and the remote practitioner. If the remote practitioner is unable to establish both a video and audio link with the patient, a MBS rebate for a telehealth attendance is not payable.

Individual clinicians must be confident that the technology used is able to satisfy the item descriptor and that software and hardware used to deliver a videoconference meets the applicable laws for security and privacy.

TN.4.13 Mental Health Assessments for Obstetric Patients (Items 16590, 16591, 16407)

Items for the planning and management of pregnancy (16590 and 16591) and for a postnatal attendance between 4 and 8 weeks after birth (16407), include a mental health assessment of the patient, including screening for drug and alcohol use and domestic violence, to be performed by the clinician or another suitably qualified health professional on behalf of the clinician. A mental health assessment must be offered to each patient, however, if the patient chooses not to undertake the assessment, this does not preclude a rebate being payable for these items.

It is recommended that mental health assessments associated with items 16590, 16591, and 16407 be conducted in accordance with the National Health and Medical Research Council (NHMRC) endorsed guideline: *Mental Health Care in the Perinatal Period: Australian Clinical Practice Guideline* – October 2017, Centre for Perinatal Excellence.

Results of the mental health assessment must be recorded in the patient's medical record. A record of a patient's decision not to undergo a mental health assessment must be recorded in the patient's clinical notes.

TN.4.14 Extended Medicare Safety Net (EMSN) for Obstetric Services (Items 16531, 16533 and 16534)

The Extended Medicare Safety Net (EMSN) benefit is capped at 65% of the schedule fee for obstetric items 16531, 16533, and 16534. However, as these items are for in-hospital services only, the EMSN does not apply

TN.4.15 COVID-19 Obstetric MBS Telehealth and Telephone attendance items

COVID-19 MBS telehealth and phone attendance items by obstetricians, general practitioners, midwives, nurse and Aboriginal and Torres Strait Islander health practitioners (ceases on 30 September 2020 unless revoked earlier).

The intent of these temporary items is to allow practitioners to provide certain MBS attendances remotely (by videoconference or telephone), in response to COVID-19 pandemic. This can only be done where it is safe, in accordance with relevant professional standards and clinically appropriate to do so.

COVID-19 MBS telehealth services by videoconference is the preferred approach for substituting a face-to-face consultation. However, providers will also be able to offer audio-only services via telephone if video is not available, for which there are separate items.

COVID-19 – TEMPORARY MBS TELEHEALTH ITEMS

OBSTETRICIANS, GPs, MIDWIVES, NURSES OR ABORIGINAL AND TORRES STRAIT ISLANDER HEALTH PRACTITIONERS ATTENDANCES (from 13 March 2020)

As of 20 April 2020 bulk billing of specialist services is at the discretion of the provider, so long as informed financial consent is obtained prior to the provision of the service.

Service	Existing Items <i>face to face</i>	Telehealth Items - <i>video conference</i>	Telephone items - <i>for when video conferencing is not available</i>
Antenatal Service provided by a Nurse, Midwife or an Aboriginal and Torres Strait Islander health practitioner on behalf of, and under the supervision of, a medical practitioner	16400	91850	91855
Postnatal attendance by an obstetrician or GP	16407	91851	91856
Postnatal attendance by: (i) a midwife (on behalf of and under the supervision of the medical practitioner who attended the birth); or (ii) an obstetrician; or (iii) a general practitioner	16408	91852	91857
Antenatal attendance	16500	91853	91858

Further information related to services rendered by an obstetrician/general practitioner/midwife/nurse or Aboriginal and Torres Strait Islander health practitioner can be found in the [Temporary Telehealth Bulk-Billed Items for COVID-19 fact sheets](#).

All MBS items for referred attendances require a valid referral. However, if the obstetrician has previously seen the patient under a referral that is still valid, there is no need to obtain a specific referral for the purposes of claiming the COVID-19 items.

Restrictions

- Phone attendance items only apply if either the practitioner or the patient do not have the capacity to undertake the attendance by telehealth (videoconference).
- The new remote attendance items are to be billed **instead** of the usual face to face MBS items.
- Services do not apply to admitted patients.

Billing Requirements

As of 20 April 2020 bulk billing of specialist services is at the discretion of the provider, so long as informed financial consent is obtained prior to the provision of the service.

Further information on the assignment of benefit for bulk billed temporary COVID-19 MBS telehealth services can be found in the [‘Provider Frequently Asked Questions’ at MBSonline.gov.au](#).

Relevant definitions and requirements

For the purposes of these items, **admitted patient** means a patient who is receiving a service that is provided:

- a. as part of an episode of hospital treatment; or
- b. as part of an episode of hospital substitute treatment in respect of which the person to whom the treatment is provided chooses to receive a benefit from a private health insurer.

Note: “hospital treatment” and “hospital-substitute treatment” have the meaning given by subsection 3(1) of the *Health Insurance Act 1973*.

Mental Health Assessments for Obstetric Patients (Items 91851 and 91856)

The COVID-19 items for a postnatal attendance between 4 and 8 weeks after birth (91851 and 91856) include a mental health assessment of the patient, including screening for drug and alcohol use and domestic violence. A mental health assessment must be offered to each patient, however, if the patient chooses not to undertake the assessment, this does not preclude a rebate being payable for these items.

It is recommended that mental health assessments associated with items 91851 and 91856 be conducted in accordance with the National Health and Medical Research Council (NHMRC) endorsed guideline: Mental Health Care in the Perinatal Period: Australian Clinical Practice Guideline – October 2017, Centre for Perinatal Excellence.

It is expected that the results of the mental health assessment be recorded in the patient’s medical record. A record of a patient’s decision not to undergo a mental health assessment should also be recorded in the patient’s clinical notes

Technical Requirements

The services can be provided by telehealth, or in circumstances when video conferencing is unavailable, by phone.

Telehealth attendance means a professional attendance by video conference where the health practitioner:

- a. has the capacity to provide the full service through this means safely and in accordance with relevant professional standards; and
- b. is satisfied that it is clinically appropriate to provide the service to the patient; and
- c. maintains a visual and audio link with the patient; and
- d. is satisfied that the software and hardware used to deliver the service meets the applicable laws for security and privacy.

Note –only the time where both a visual and audio link is maintained between the patient and the provider can be counted in meeting the relevant item descriptor for telehealth items.

No specific equipment is required to provide Medicare-compliant telehealth services. Practitioners must ensure that their chosen telecommunications solution meets their clinical requirements and satisfies privacy laws. Information on how to select a web conferencing solution is available on the [Australian Cyber Security Centre website](#).

Phone attendance means a professional attendance by telephone where the health practitioner:

- a. has the capacity to provide the full service through this means safely and in accordance with professional standards; and
- b. is satisfied that it is clinically appropriate to provide the service to the patient; and
- c. maintains an audio link with the patient.

Note: A telephone attendance can only be performed in instances where the attendance could not be performed by telehealth (i.e. videoconference).

There are no geographic restrictions on telehealth and telephone services using items 91851, 91852, 91853, 91856, 91857, 91858. In addition, the patient and the practitioner are not required to be a minimum distance apart by road (usually 15 kilometres) when the service is provided.

Where there are restrictions on the number of services for the face to face items that are mirrored, these restrictions will also apply to the new COVID-19 items.

Recording Clinical Notes

In relation to the time taken in recording appropriate details of the service, only clinical details recorded at the time of the attendance count towards the time of consultation. It does not include information added later, such as reports of investigations.

Clinicians should retain for their records the date, time and duration of the consultation.

Creating and Updating a My Health Record

The time spent by a medical practitioner on the following activities may be counted towards the total consultation time:

- Reviewing a patient's clinical history, in the patient's file and/or the My Health Record, and preparing or updating a Shared Health Summary where it involves the exercise of clinical judgement about what aspects of the clinical history are relevant to inform ongoing management of the patient's care by other providers; or
- Preparing an Event Summary for the episode of care.

Preparing or updating a Shared Health Summary and preparing an Event Summary are clinically relevant activities. When either of these activities are undertaken with any form of patient history taking and/or the other clinically relevant activities that can form part of a consultation, the item that can be billed is the one with the time period that matches the total consultation time.

MBS rebates are not available for creating or updating a Shared Health Summary as a standalone service.

Antenatal Care - (Items 91853 and 91858)

In addition to routine antenatal attendances covered by items 91853 and 91858, the following services, where rendered during the antenatal period, attract benefits:

- a. Items 16501, 16502, 16505, 16508, 16509 (but not normally before the 24th week of pregnancy), 16511, 16512, 16514, 16533, 16534 and 16600 to 16627.
- b. The initial consultation at which pregnancy is diagnosed.
- c. The first referred consultation by a specialist obstetrician when called in to advise on the pregnancy.
- d. All other services, excluding those in Category 1 and Group T4 of Category 3 not mentioned above.
- e. Treatment of an intercurrent condition not directly related to the pregnancy.

Item 16514 relates to antenatal cardiotocography in the management of high risk pregnancy. Benefits for this service are not attracted when performed during the course of the labour and birth.

Antenatal Service Provided by a Nurse, Midwife or an Aboriginal and Torres Strait Islander health practitioner - (Items 91850 and 91855)

Items 91850 and 91855 can only be claimed by a medical practitioner (including a vocationally registered or non-vocationally registered GP, a specialist or a consultant physician) where an antenatal service is provided to a patient by a midwife, nurse or Aboriginal and Torres Strait Islander health practitioner on behalf of the medical practitioner.

Evidence based national or regional guidelines should be used in the delivery of this antenatal service.

A midwife means a registered midwife who holds a current practising certificate as a midwife issued by a State or Territory regulatory authority and who is employed by, or whose services are otherwise retained by, the medical practitioner or a practice operated by a medical practitioner.

A nurse means a registered or enrolled nurse who holds a current practising certificate as a nurse issued by a State or Territory regulatory authority and who is employed by, or whose services are otherwise retained by, the medical practitioner or their practice. The nurse must have appropriate training and skills to provide an antenatal service.

An Aboriginal and Torres Strait Islander health practitioner means a person who has been registered as an Aboriginal and Torres Strait Islander health practitioner by the Aboriginal and Torres Strait Islander Health Practice Board of Australia and meets the Board's registration standards. The Aboriginal and Torres Strait Islander health practitioner must be employed or retained by a general practice, or by a health service that has an exemption to claim Medicare benefits under subsection 19(2) of the Health Insurance Act 1973.

An Aboriginal and Torres Strait Islander health practitioner may use any of the titles authorised by the Aboriginal and Torres Strait Islander Health Practice Board: Aboriginal health practitioner; Aboriginal and Torres Strait Islander health practitioner; or Torres Strait Islander health practitioner. The midwife, nurse or Aboriginal and Torres Strait Islander health practitioner must also comply with any relevant legislative or regulatory requirements regarding the provision of the antenatal service. The medical practitioner under whose supervision the antenatal service is provided retains responsibility for the health, safety and clinical outcomes of the patient. The medical practitioner must be satisfied that the midwife, nurse or Aboriginal and Torres Strait Islander health practitioner is appropriately registered, qualified and trained, and covered by indemnity insurance to undertake antenatal services.

Supervision at a distance is recognised as an acceptable form of supervision. This means that the medical practitioner does not have to be physically present at the time the service is provided. However, the medical practitioner should be able to be contacted if required.

The medical practitioner is not required to see the patient or to be present while the antenatal service is being provided by the midwife, nurse or Aboriginal and Torres Strait Islander health practitioner. It is up to the medical practitioner to decide whether they need to consult with the patient. Where a consultation with the medical practitioner has taken place prior to or following the antenatal service, the medical practitioner is entitled to claim for their own professional service, but items 91850 and 91855 cannot be claimed in these circumstances.

Items 91850 and 91855 cannot be claimed in conjunction with another antenatal attendance item for the same patient, on the same day by the same practitioner.

A bulk billing incentive item (10990, 10991 or 10992) cannot be claimed in conjunction with items 91850 and 91855. An incentive payment is incorporated into the schedule fee.

Items 91850 and 91855 can only be claimed 10 times per pregnancy in total, including services claimed under item 16400.

None of the items, including 91850 and 91855, can be claimed for an admitted patient of a hospital.

TN.6.1 Pre-anaesthesia Consultations by an Anaesthetist - (Items 17610 to 17625)

Pre-anaesthesia consultations are covered by items in the range 17610 - 17625.

Pre-anaesthesia consultations comprise 4 time-based items utilising 15 minute increments up to and exceeding 45 minutes, in conjunction with content-based descriptors. A pre-anaesthesia consultation will attract benefits under the appropriate items based on **BOTH** the duration of the consultation **AND** the complexity of the consultation in accordance with the requirements outlined in the content-based item descriptions.

Whether or not the proposed procedure proceeds, the pre-anaesthetic attendance will attract benefits under the appropriate consultation item in the range 17610 - 17625, as determined by the duration and content of the consultation.

The following provides further guidance on utilisation of the appropriate items in common clinical situations:

(i) Item 17610 (15 mins or less) - a pre-anaesthesia consultation of a straightforward nature occurring prior to investigative procedures and other routine surgery. This item covers routine pre-anaesthesia consultation services including the taking of a brief history, a limited examination of the patient including the cardio-respiratory system and brief discussion of an anaesthesia plan with the patient.

(ii) Item 17615 (16-30 mins) - a pre-anaesthesia consultation of between 16 to 30 minutes duration AND of significantly greater complexity than that required under item 17610. To qualify for benefits patients will be undergoing advanced surgery or will have complex medical problems. The consultation will involve a more extensive examination of the patient, for example: the cardio-respiratory system, the upper airway, anatomy relevant to regional anaesthesia and invasive monitoring. An anaesthesia plan of management should be formulated, of which there should be a written record included in the patient notes.

(iii) Item 17620 (31-45 mins) - a pre-anaesthesia consultation of high complexity involving all of the requirements of item 17615 and of between 31 to 45 minutes duration. The pre-anaesthesia consultation will also involve evaluation of relevant patient investigations and the formulation of an anaesthesia plan of management of which there should be a written record in the patient notes.

(iv) Item 17625 (more than 45 mins) - a pre-anaesthesia consultation of high complexity involving all of the requirements of item 17615 and item 17620 and of more than 45 minutes duration. The pre-anaesthesia consultation will also involve evaluation of relevant patient investigations as well as discussion of the patient's medical condition and/or anaesthesia plan of management with other relevant healthcare professionals. An anaesthesia plan of management should be formulated, of which there should be a written record included in the patient notes.

Some examples of advanced surgery that may require a longer consultation under items 17615-17625 would include:

- Bowel resection
- Caesarean section
- Neonatal surgery
- Major laparotomies
- Radical cancer resection
- Major reconstructive surgery eg free flap transfers, breast reconstruction
- major joint arthroplasty
- joint reconstruction
- Thoracotomy
- Craniotomy
- Spinal surgery eg spinal fusion, discectomy
- Major vascular surgery eg aortic aneurysm repair, arterial bypass surgery, carotid artery endarterectomy

Some examples of complex medical problems in relation to items 17615-17625 would include:

- Major cardiac problems - e.g cardiomyopathy, unstable ischaemic heart disease, heart failure
- Major respiratory disease - e.g COPD, respiratory failure, acute lung conditions eg. infection and asthma,
- Major neurological conditions - CVA, intra/extra cerebral haemorrhage, cerebral palsy and/or major intellectual disability, degenerative conditions of the CNS
- Major metabolic conditions - e.g unstable diabetes, uncontrolled hyperthyroidism, renal failure, liver failure, immune deficiency
- Anaesthetic problems - eg past history of awareness, known or anticipated difficulty with securing the airway, malignant hyperpyrexia, drug allergy,
- Other conditions -
 - patients with history of stroke/TIA's presenting for vascular surgery
 - patients on anti-platelet agents presenting for major surgery requiring management of anticoagulant status
 - patients with poor respiratory/cardiac function presenting for major surgery requiring management of perioperative medications, analgesia and monitoring

NOTE I:

It is important to note that:

- patients undergoing the types of advanced surgery listed above but who are otherwise of reasonable health and who, therefore, do not require a longer pre-anaesthesia consultation as provided for under items 17615-17625, would qualify for benefits under item 17610; and
- not all patients with complex medical problems will qualify for a longer consultation under items 17615-17625. For example, patients who have reasonably stable diabetes may only require a short consultation, covered under item 17610. Similarly, patients with reasonably well controlled emphysema (COPD) undergoing minor surgery may only require a short pre-anaesthesia consultation (item 17610), whereas the same patient scheduled for an upper abdominal laparotomy and with recent onset angina with the possible need for ICU postoperatively may require a longer consultation.

NOTE II:

- Consultation services covered by pain specialists items in the range 2801-3000 cannot be claimed in conjunction with items 17610-17625
- The consultation time under items 17610 - 17625 only applies to the period of active attendance on the patient and does not include time spent in discussion with other health care practitioners.
- The requirement of a written patient management plan in items 17615-17625 or the discussion of the management plan with other health care professions, where this occurs, does not relate to and cannot be claimed in conjunction GP Management Plans, Team Care Arrangements, Multidisciplinary Care Plans or Case Conference items in Group A15 of the MBS.

TN.6.2 Referred Anaesthesia Consultations - (Items 17640 to 17655)

Referred anaesthesia consultations (other than pre-anaesthesia attendances) where the patient is referred will be covered by new items in the range 17640 - 17655. These new items replace the use of specialist referred items 104 and 105. Items 104 and 105 will no longer apply to referred anaesthesia consultations provided by specialist anaesthetists.

Referred anaesthesia consultations comprise 4 time-based items utilising 15 minute increments up to and exceeding 45 minutes, in conjunction with content-based descriptors. Services covered by these specialist referred items include consultations in association with the following:

(i) Acute pain management

- Postoperative, utilising specialised techniques eg Patient Controlled Analgesia System (PCAS)
- as an independent service eg pain control following fractured ribs requiring nerve blocks
- obstetric pain management

(ii) Perioperative management of patients

- postoperative management of cardiac, respiratory and fluid balance problems following major surgery
- vascular access procedures (other than intra-operative peripheral vascular access procedures)

Items 17645 - 17655 will involve the examination of multiple systems and the formulation of a written management plan. Items 17650 and 17655 would also entail the ordering and/or evaluation of relevant patient investigations.

NOTE :

- It should be noted that the consultation time under items 17640 - 17655 only applies to the period of active attendance on the patient and does not include time spent in discussion with other health care practitioners.
- Consultation services covered by pain medicine specialist items in the range 2801-3000 cannot be claimed in conjunction with items 17640 - 17655.
- The requirement of a written patient management plan in items 17645-17655 or the discussion of the management plan with other health care professions, where this occurs, does not relate to and cannot be claimed in conjunction GP Management Plans, Team Care Arrangements, Multidisciplinary Care Plans or Case Conference items in Group A15 of the MBS.

It would be expected that in the vast majority of cases, the insertion of a peripheral venous cannula (other than in association with anaesthesia) where the patient is referred, would attract benefit under item 17640. However, in exceptional clinical circumstances, where the procedure is considerably more difficult and exceeds 15 minutes, such as for patients with chronic disease undergoing long term intravenous therapy, paediatric patients or patients having chemotherapy, item 17645 would apply.

TN.6.3 Anaesthetist Consultations - Other - (Items 17680, 17690)

A consultation occurring immediately before the institution of major regional blockade for a patient in labour is covered by item 17680.

Item 17690 can only be claimed where all of the conditions set out in (a) to (d) of item 17690 have been met.

Item 17690 can only be claimed in conjunction with a service covered by items 17615, 17620, or 17625.

Item 17690 cannot be claimed where the pre-anaesthesia consultation covered by items 17615, 17620 or 17625 is provided on the same day as admission to hospital for the subsequent episode of care involving anaesthesia services.

NOTE: Consultation services covered by pain medicine specialist items in the range 2801-3000 cannot be claimed in conjunction with anaesthesia consultation items 17610 - 17690.

TN.6.4 Telehealth Specialist Services

These notes provide information on the telehealth MBS video consultation items by specialists, consultant physicians and psychiatrists. A video consultation involves a single specialist, consultant physician or psychiatrist attending a patient, with the possible support of another medical practitioner, a participating optometrist, a participating nurse practitioner, a participating midwife, practice nurse or Aboriginal health worker at the patient end of the video conference. The decision as to whether the patient requires clinical support at the patient end of the specialist service is based on whether the support is necessary for the provision of the specialist service. Telehealth specialist services can be provided to patients when there is no patient-end support service provided.

MBS items numbers 99, 112, 149, 288, 389, 2820, 3015, 6016, 13210, 16399 and 17609 allow a range of existing MBS attendance items to be provided via video conferencing. These items have a derived fee which is equal to 50% of the schedule fee for the consultation item claimed (e.g. 50% of the schedule fee for item 104) when billed with one of the associated consultation items (such as 104). A patient rebate of 85% for the derived fee is payable.

Six MBS item numbers (113, 114, 384, 2799, 3003 and 6004) provide for an initial attendance via videoconferencing by a specialist, consultant physician, consultant occupational physician, pain medicine specialist/consultant physician, palliative medicine specialist/consultant physician or neurosurgeon where the service is 10 minutes or less. The items are stand-alone items and do not have a derived fee.

Where an attendance is more than 10 minutes, practitioners should use the existing item numbers consistent with the current arrangements. Normal restrictions which apply for initial consultations will also apply for these items. For example, if a patient has an initial consultation via telehealth, they cannot also claim an initial face-to-face consultation as part of the same course of treatment.

Clinical indications

The specialist, consultant physician or psychiatrist must be satisfied that it is clinically appropriate to provide a video consultation to a patient. The decision to provide clinically relevant support to the patient is the responsibility of the specialist, consultant physician or psychiatrist.

Telehealth specialist services can be provided to patients when there is no patient-end support service provided.

Restrictions

The MBS telehealth attendance items are not payable for services to an admitted hospital patient (this includes hospital in the home patients). Benefits are not payable for telephone or email consultations. In order to fulfill the item descriptor there must be a visual and audio link between the patient and the remote practitioner. If the remote practitioner is unable to establish both a video and audio link with the patient, a MBS rebate for a telehealth attendance is not payable.

Billing Requirements

All video consultations provided by specialists, consultant physicians or psychiatrists must be **separately billed**. That is, only the relevant telehealth MBS consultation item and the associated derived item are to be itemised on the account/bill/voucher. Any other service/item billed should be itemised on a separate account/bill/voucher. This will ensure the claim is accurately assessed as being a video consultation and paid accordingly.

Practitioners should not use the notation 'telehealth', 'verbal consent' or 'Patient unable to sign' to overcome administrative difficulties to obtaining a patient signature for bulk billed claims (for further information see mbsonline.gov.au/telehealth).

Eligible Geographical Areas

Geographic eligibility for telehealth services funded under Medicare are determined according to the Australian Standard Geographical Classification Remoteness Area (ASGC-RA) classifications. Telehealth Eligible Areas are areas that are outside a Major City (RA1) according to ASGC-RA (RA2-5). Patients and providers are able to check their eligibility by following the links on the MBS Online website (www.mbsonline.gov.au/telehealth).

There is a requirement for the patient and specialist to be located a minimum of 15km apart at the time of the consultation. Minimum distance between specialist and patient video consultations are measured by the most direct (ie least distance) route by road. The patient or the specialist is not permitted to travel to an area outside the minimum 15 km distance in order to claim a video conference.

This rule will not apply to specialist video consultation with patients who are a care recipient in a residential care service; or at an Aboriginal Medical Service or an Aboriginal Community Controlled Health Service for which a direction made under subsection 19(2) of the *Health Insurance Act 1973* as these patients are able to receive telehealth services anywhere in Australia.

Telehealth Eligible Service Areas are defined at www.mbsonline.gov.au/telehealth_eligible_areas

Record Keeping

Participating telehealth practitioners must keep contemporaneous notes of the consultation including documenting that the service was performed by video conference, the date, time and the people who participated.

Only clinical details recorded at the time of the attendance count towards the time of the consultation. It does not include information added at a later time, such as reports of investigations.

Extended Medicare Safety Net (EMSN)

All telehealth consultations (with the exceptions of the participating optometrist telehealth items) are subject to EMSN caps. The EMSN caps for ART and Obstetric telehealth items 13210 and 16399 were set in reference to the EMSN caps applying to the base ART and Obstetric consultation items.

The EMSN caps for all other telehealth consultation items are equal to 300% of the schedule fee (to a maximum of \$500). The maximum EMSN benefit for a telehealth consultation is equal to the sum of the EMSN cap for the base item and the EMSN cap for the telehealth items.

Aftercare Rule

Video consultations are subject to the same aftercare rules as practitioners providing face-to-face consultations.

Multiple attendances on the same day

In some situations a patient may receive a telehealth consultation and a face to face consultation by the same or different practitioner on the same day.

Medicare benefits may be paid for more than one video consultation on a patient on the same day by the same practitioner, provided the second (and any following) video consultations are not a continuation of the initial or earlier video consultations. Practitioners will need to provide the times of each consultation on the patient's account or bulk billing voucher.

Referrals

The referral procedure for a video consultation is the same as for conventional face-to-face consultations.

Technical requirements

In order to fulfill the item descriptor there must be a visual and audio link between the patient and the remote practitioner. If the remote practitioner is unable to establish both a video and audio link with the patient, a MBS rebate for a telehealth attendance is not payable.

Individual clinicians must be confident that the technology used is able to satisfy the item descriptor and that software and hardware used to deliver a videoconference meets the applicable laws for security and privacy.

TN.7.1 Regional or Field Nerve Blocks - General

A nerve block is interpreted as the anaesthetising of a substantial segment of the body innervated by a large nerve or an area supplied by a smaller nerve where the technique demands expert anatomical knowledge and a high degree of precision.

Where anaesthesia combines a regional nerve block with general anaesthesia for an operative procedure, benefit will be paid only under the relevant anaesthesia item as set out in Group T10.

Where a regional or field nerve block is administered by a medical practitioner other than the practitioner carrying out the operation, the block attracts benefits under the Group T10 anaesthesia item and not the block item in Group T7.

Where a regional or field nerve block which is covered by an item in Group T7 is administered by a medical practitioner in the course of a surgical procedure undertaken by that practitioner, then such a block will attract benefit under the appropriate Group T7 item.

When a block is carried out in cases not associated with an operation, such as for intractable pain or during labour, the service falls under Group T7.

Digital ring analgesia, local infiltration into tissue surrounding a lesion or paracervical (uterine) analgesia are not eligible for the payment of Medicare benefits under items within Group T7. Where procedures are carried out with local infiltration or digital block as the means of anaesthesia, that anaesthesia is considered to be part of the procedure.

TN.7.2 Maintenance of Regional or Field Nerve Block - (Items 18222 and 18225)

Medicare benefit is attracted under these items only when the service is performed other than by the operating surgeon. This does not preclude benefits for an obstetrician performing an epidural block during labour.

When the service is performed by the operating surgeon during the post-operative period of an operation it is considered to be part of the normal aftercare. In these circumstances a Medicare benefit is not attracted.

TN.7.3 Intrathecal or Epidural Injection - (Item 18232)

This item covers caudal infusion/injection.

TN.7.4 Intrathecal or Epidural Infusion - (Items 18226 and 18227)

Items 18226 and 18227 apply where intrathecal or epidural analgesia is required for obstetric patients in the after hours period. For these items, the after hours period is defined as the period from 8pm to 8am on any weekday, or any time on a Saturday, Sunday or a public holiday.

Medicare benefits are only payable under item 18227 where more than 50% of the service is provided in the after hours period, otherwise benefits would be payable under item 18219.

TN.7.5 Regional or Field Nerve Blocks - (Items 18234 to 18298)

Items in the range 18234 - 18298 are intended to cover the injection of anaesthetic into the nerve or nerve sheath and not for the treatment of carpal tunnel or similar compression syndromes.

Paravertebral nerve block items 18274 and 18276 cover the provision of regional anaesthesia for surgical and related procedures for the management acute pain or of chronic pain related to radiculopathy. Infiltration of the soft tissue of the paravertebral area for the treatment of other pain symptoms does not attract benefit under these items. Additionally, items 18274 and 18276 do not cover facet joint blocks/injections. This procedure is covered under item 39013.

Item 18292 may not be claimed for the injection of botulinum toxin, but may be claimed where a neurolytic agent (such as phenol) is used to treat the obturator nerve in patients receiving botulinum toxin injections under item 18354 for a dynamic foot deformity.

TN.8.1 Surgical Operations

Many items in Group T8 of the Schedule are qualified by one of the following phrases:

- "as an independent procedure";
- "not being a service associated with a service to which another item in this Group applies"; or
- "not being a service to which another item in this Group applies"

An explanation of each of these phrases is as follows.

As an Independent Procedure

The inclusion of this phrase in the description of an item precludes payment of benefits when:-

- (i) a procedure so qualified is associated with another procedure that is performed through the same incision, e.g. nephrostomy (Item 36552) in the course of an open operation on the kidney for another purpose;
- (ii) such procedure is combined with another in the same body area, e.g. direct examination of larynx (Item 41846) with another operation on the larynx or trachea;
- (iii) the procedure is an integral part of the performance of another procedure, e.g. removal of foreign body (Item 30067/30068) in conjunction with debridement of deep or extensive contaminated wound of soft tissue, including suturing of that wound when performed under general anaesthetic (Item 30023).

Not Being a Service Associated with a Service to which another Item in this Group Applies

"Not being a service associated with a service to which another item in this Group applies" means that benefit is not payable for any other item in that Group when it is performed on the same occasion as this item. eg item 30106.

"Not being a service associated with a service to which Item applies" means that when this item is performed on the same occasion as the reference item no benefit is payable. eg item 39330.

Not Being a Service to which another Item in this Group Applies

"Not being a service to which another item in this Group applies" means that this item may be itemised if there is no specific item relating to the service performed, e.g. Item 30387 (Laparotomy involving operation on abdominal viscera (including pelvic viscera), not being a service to which another item in this Group applies). Benefits may be attracted for an item with this qualification as well as benefits for another service during the course of the same operation.

TN.8.2 Multiple Operation Rule

The fees for two or more operations, listed in Group T8 (other than Subgroup 12 of that Group), performed on a patient on the one occasion (except as provided in paragraph T8.2.3) are calculated by the following rule:-

- 100% for the item with the greatest Schedule fee

plus 50% for the item with the next greatest Schedule fee

plus 25% for each other item.

Note:

(a) Fees so calculated which result in a sum which is not a multiple of 5 cents are to be taken to the next higher multiple of 5 cents.

(b) Where two or more operations performed on the one occasion have Schedule fees which are equal, one of these amounts shall be treated as being greater than the other or others of those amounts.

(c) The Schedule fee for benefits purposes is the aggregate of the fees calculated in accordance with the above formula.

(d) For these purposes the term "operation" only refers to all items in Group T8 (other than Subgroup 12 of that Group).

This rule does not apply to an operation which is one of two or more operations performed under the one anaesthetic on the same patient if the medical practitioner who performed the operation did not also perform or assist at the other operation or any of the other operations, or administer the anaesthetic. In such cases the fees specified in the Schedule apply.

Where two medical practitioners operate independently and either performs more than one operation, the method of assessment outlined above would apply in respect of the services performed by each medical practitioner.

If the operation comprises a combination of procedures which are commonly performed together and for which a specific combined item is provided in the Schedule, it is regarded as the one item and service in applying the multiple operation rule.

There are a number of items in the Schedule where the description indicates that the item applies only when rendered in association with another procedure. The Schedule fees for such items have therefore been determined on the basis that they would always be subject to the "multiple operation rule".

Where the need arises for the patient to be returned to the operating theatre on the same day as the original procedure for further surgery due to post-operative complications, which would not be considered as normal aftercare - see paragraph T8.2, such procedures would generally not be subject to the "multiple operation rule". Accounts should be endorsed to the effect that they are separate procedures so that a separate benefit may be paid.

Extended Medicare Safety Net Cap

The Extended Medicare Safety Net (EMSN) benefit cap for items subject to the multiple operations rule, where all items in that claim are subject to a cap are calculated from the abated (reduced) schedule fee.

For example, if an item has a Schedule fee of \$100 and an EMSN benefit cap equal to 80 per cent of the schedule fee, the calculated EMSN benefit cap would be \$80. However, if the schedule fee for the item is reduced by 50 per cent in accordance with the multiple operations rule provisions, and all items in that claim carry a cap, the calculated EMSN benefit cap for the item is \$40 (50% of \$100*80%).

TN.8.3 Procedure Performed with Local Infiltration or Digital Block

It is to be noted that where a procedure is carried out with local infiltration or digital block as the means of anaesthesia, that anaesthesia is considered to be part of the procedure and an additional benefit is therefore not payable.

TN.8.4 Aftercare (Post-operative Treatment)

Definition

Section 3(5) of the Health Insurance Act 1973 states that services included in the Schedule (other than attendances) include all professional attendances necessary for the purposes of post-operative treatment of the patient. For the purposes of this book, post-operative treatment is generally referred to as "aftercare".

Aftercare is deemed to include all post-operative treatment rendered by medical specialists and consultant physicians, and includes all attendances until recovery from the operation, the final check or examination, regardless of whether the attendances are at the hospital, private rooms, or the patient's home. Aftercare need not necessarily be limited to treatment given by the surgeon or to treatment given by any one medical practitioner.

If the initial procedure is performed by a general practitioner, normal aftercare rules apply to any post-operative service provided by the same practitioner.

The medical practitioner determines each individual aftercare period depending on the needs of the patient as the amount and duration of aftercare following an operation may vary between patients for the same operation, as well as between different operations.

Private Patients

Medicare will not normally pay for any consultations during an aftercare period as the Schedule fee for most operations, procedures, fractures and dislocations listed in the MBS item includes a component of aftercare.

There are some instances where the aftercare component has been excluded from the MBS item and this is clearly indicated in the item description.

There are also some minor operations that are merely stages in the treatment of a particular condition. As such, attendances subsequent to these services should not be regarded as aftercare but rather as a continuation of the treatment of the original condition and attract benefits. Likewise, there are a number of services which may be performed during the aftercare period for pain relief which would also attract benefits. This includes all items in Groups T6 and T7, and items 39013, 39100, 39115, 39118, 39121, 39127, 39130, 39133, 39136, 39324 and 39327.

Where there may be doubt as to whether an item actually does include the aftercare, the item description includes the words "including aftercare".

If a service is provided during the aftercare phase for a condition not related to the operation, then this can be claimed, provided the account identifies the service as 'Not normal aftercare', with a brief explanation of the reason for the additional services.

If a patient was admitted as a private patient in a public hospital, then unless the MBS item does not include aftercare, no Medicare benefits are payable for aftercare.

Medicare benefits are not payable for surgical procedures performed primarily for cosmetic reasons. However, benefits are payable for certain procedures when performed for specific medical reasons, such as breast reconstruction following mastectomy. Surgical procedures not listed on the MBS do not attract a Medicare benefit.

Where an initial or subsequent consultation relates to the assessment and discussion of options for treatment and, a cosmetic or other non-rebatable service are discussed, this would be considered a rebatable service under Medicare. Where a consultation relates entirely to a cosmetic or other non-Medicare rebatable service (either before or after that service has taken place), then that consultation is not rebatable under Medicare. Any aftercare associated with a cosmetic or non-Medicare rebatable service is also not rebatable under Medicare.

Public Patients

All care directly related to a public in-patient's care should be provided free of charge. Where a patient has received in-patient treatment in a hospital as a public patient (as defined in Section 3(1) of the Health Insurance Act 1973), routine and non-routine aftercare directly related to that episode of admitted care will be provided free of charge as part of the public hospital service, regardless of where it is provided, on behalf of the state or territory as required by the National Healthcare Agreement. In this case no Medicare benefit is payable.

Notwithstanding this, where a public patient independently chooses to consult a private medical practitioner for aftercare, then the clinically relevant service provided during this professional attendance will attract Medicare benefits.

Where a public patient independently chooses to consult a private medical practitioner for aftercare following treatment from a public hospital emergency department, then the clinically relevant service provided during this professional attendance will attract Medicare benefits.

Fractures

Where the aftercare for fractures is delegated to a doctor at a place other than where the initial reduction was carried out, then Medicare benefits may be apportioned on a 50:50 basis rather than on the 75:25 basis for surgical operations.

Where the reduction of a fracture is carried out by hospital staff in the out-patient or emergency department of a public hospital, and the patient is then referred to a private practitioner for aftercare, Medicare benefits are payable for the aftercare on an attendance basis.

The following table shows the period which has been adopted as reasonable for the after-care of fractures:-

Treatment of fracture of	After-care Period
Terminal phalanx of finger or thumb	6 weeks
Proximal phalanx of finger or thumb	6 weeks
Middle phalanx of finger	6 weeks
One or more metacarpals not involving base of first carpometacarpal joint	6 weeks
First metacarpal involving carpometacarpal joint (Bennett's fracture)	8 weeks
Carpus (excluding navicular)	6 weeks
Navicular or carpal scaphoid	3 months
Colles'/Smith/Barton's fracture of wrist	3 months
Distal end of radius or ulna, involving wrist	8 weeks
Radius	8 weeks
Ulna	8 weeks
Both shafts of forearm or humerus	3 months
Clavicle or sternum	4 weeks
Scapula	6 weeks
Pelvis (excluding symphysis pubis) or sacrum	4 months
Symphysis pubis	4 months
Femur	6 months
Fibula or tarsus (excepting os calcis or os talus)	8 weeks
Tibia or patella	4 months

Both shafts of leg, ankle (Potts fracture) with or without dislocation, os calcis (calcaneus) or os talus	4 months
Metatarsals - one or more	6 weeks
Phalanx of toe (other than great toe)	6 weeks
More than one phalanx of toe (other than great toe)	6 weeks
Distal phalanx of great toe	8 weeks
Proximal phalanx of great toe	8 weeks
Nasal bones, requiring reduction	4 weeks
Nasal bones, requiring reduction and involving osteotomies	4 weeks
Maxilla or mandible, unilateral or bilateral, not requiring splinting	6 weeks
Maxilla or mandible, requiring splinting or wiring of teeth	3 months
Maxilla or mandible, circumosseous fixation of	3 months
Maxilla or mandible, external skeletal fixation of	3 months
Zygoma	6 weeks
Spine (excluding sacrum), transverse process or bone other than vertebral body requiring immobilisation in plaster or traction by skull calipers	3 months
Spine (excluding sacrum), vertebral body, without involvement of cord, requiring immobilisation in plaster or traction by skull calipers	6 months
Spine (excluding sacrum), vertebral body, with involvement of cord	6 months

Note: This list is a guide only and each case should be judged on individual merits.

TN.8.5 Abandoned surgery - (Item 30001)

Item 30001 applies when a procedure has commenced, but is then discontinued for medical reasons, or for other reasons which are beyond the surgeon's control (eg equipment failure).

An operative procedure commences when:

- a) The patient is in the procedure room or on the bed or operation table where the procedure is to be performed; and
- b) The patient is anaesthetised or operative site is sufficiently anaesthetised for the procedure to commence; and
- c) The patient is positioned or the operative site which is prepared with antiseptic or draping.

Where an abandoned procedure eligible for a benefit under item 30001 attracts an assistant under the provisions of the items listed in Group T9 (Assistance at Operations), the fee for the surgical assistant is calculated as 50% of the assistance fee that would have applied under the relevant item from Group T9.

Practitioners claiming an assistant fee for abandoned surgery should itemise their accounts with the relevant item from group T9. Such claims should include an account endorsement "assistance at abandoned surgery" or similar.

Under the Health Insurance Act 1973 the Chief Executive Medicare does not require claims for this item to be accompanied by details of the proposed surgery and the reasons why the operation was discontinued. However, practitioners must maintain a clinical record of this information, which may be subject to audit.

TN.8.6 Repair of Wound - (Items 30023 to 30049)

The repair of wound referred to in these items must be undertaken by suture, tissue adhesive resin (such as methyl methacrylate) or clips. These items do not cover repair of wound at time of surgery.

Item 30023 covers debridement of traumatic, "deep or extensively contaminated" wound. Benefits are not payable under this item for debridement which would be expected to be encountered as part of an operative approach to the treatment of fractures.

For the purpose of items 30026 to 30049 the term 'superficial' means affecting skin and subcutaneous tissue including fat and the term 'deeper tissue' means all tissues deep to but not including subcutaneous tissue such as fascia and muscle.

TN.8.7 Biopsy for Diagnostic Purposes - (Items 30071 to 30096)

Needle aspiration biopsy attracts benefits on an attendance basis and not under item 30078.

Item 30071 (diagnostic biopsy of the skin) or 30072 (diagnostic biopsy of mucous membrane) should be used when a biopsy (including shave) of a lesion is required to confirm a diagnosis and would facilitate the appropriate management of that lesion. If the shave biopsy results in a definitive excision of the lesion, only 30071 or 30072 can be claimed.

Items 30071-30096 require that the specimen be sent for pathological examination.

The aftercare period for item 30071 or 30072 is 2 days rather than the standard aftercare period for skin excision of 10 days.

TN.8.8 Lipectomy - (Items 30165 to 30179)

Lipectomy is not intended as a primary bariatric procedure to correct obesity. MBS benefits are not available for surgery performed for cosmetic purposes.

For the purpose of informing patient eligibility for lipectomy items (30165-30172, 30177, 30179) that are for the management of significant weight loss (SWL), SWL is defined as a weight loss equivalent of at least five BMI units. Weight must be stable for at least six months following significant weight loss prior to lipectomy. For significant weight loss that has occurred following pregnancy, the products of conception must not be included in the calculation of baseline weight to measure weight loss against.

Multiple lipectomies of redundant non-abdominal skin and fat as a direct consequence of mass weight loss (for example on both buttocks and both thighs), attracts a Medicare benefit only once against the relevant item (30171 or 30172). The schedule fee for multiple lipectomies for excision of redundant non-abdominal skin and fat following massive weight loss is the same regardless of the number of excisions.

The lipectomy items cannot be claimed in association with items 45564, 45565 or 45530. Where the abdomen requires surgical closure with reconstruction of the umbilicus following free tissue transfer (45564, 45565) or breast reconstruction (45530), item 45569 is to be claimed.

TN.8.9 Treatment of Keratoses, Warts etc (Items 30187, 30189, 30192 and 36815)

Treatment of seborrheic keratoses by any means, attracts benefits on an attendance basis only.

Treatment of fewer than 10 solar keratoses by ablative techniques such as cryotherapy attracts benefits on an attendance basis only. Where 10 or more solar keratoses are treated by ablative techniques, benefits are payable under item 30192.

Warts and molluscum contagiosum where treated by any means attract benefits on an attendance basis except where:

- (a) admission for treatment in an operating theatre of an accredited day surgery facility or hospital is required. In this circumstance, benefits are paid under item 30189 where a definitive removal of the wart or molluscum contagiosum is to be undertaken.
- (b) benefits have been paid under item 30189, and recurrence occurs.
- (c) palmar and plantar warts are treated by laser and require treatment in an operating theatre of an accredited day surgery facility or hospital. In this circumstance, benefits are paid under item 30187.

TN.8.10 Cryotherapy and Serial Curettage Excision - (Items 30196 and 30202)

In item 30196, serial curettage excision, as opposed to simple curettage, refers to the technique where the margin having been defined, the lesion is carefully excised by a skin curette using a series of dissections and cauterisations so that all extensions and infiltrations of the lesion are removed.

For the purposes of items 30196 and 30202, the requirement for histopathological proof of malignancy is satisfied where multiple lesions are to be removed from the one anatomical region if a single lesion from that region is histologically tested and proven for malignancy.

For the purposes of items 30196 and 30202, an anatomical region is defined as: hand, forearm, upper arm, shoulder, upper trunk or chest (anterior and posterior), lower trunk (anterior or posterior) or abdomen (anterior lower trunk), buttock, genital area/perineum, upper leg, lower leg and foot, neck, face (six sections: left/right lower, left/right mid and left/right upper third) and scalp.

For Medicare benefits to be payable for item 30196, the provider performing the service must also retain documented evidence that malignancy has been proven by histopathology.

For Medicare benefits to be payable for item 30202, the provider performing the service must also retain documented evidence that malignancy has either been proven by histopathology or confirmed by opinion of a specialist in the specialty of dermatology.

The Department of Human Services (DHS) has developed a [Health Practitioner Guideline to substantiate proof of malignancy where required for MBS items](#) which is located on the DHS website.

TN.8.12 Sentinel Node Biopsy for Breast Cancer - (Items 30299 to 30303)

The Medical Services Advisory Committee (MSAC) evaluated the available evidence and found that sentinel lymph node biopsy is safe and effective in identifying sentinel lymph nodes, but that the long term outcomes of sentinel lymph node biopsy compared to lymph node clearance are uncertain. As a result, interim Medicare funding is available for these items pending the outcome of clinical trials and further consideration by the MSAC.

For items 30299 and 30300, both lymphoscintigraphy and lymphotropic dye injection must be used, unless the patient has an allergy to the lymphotropic dye.

For the purposes of these items, the axillary lymph node levels referred to are as follows:

- **Level I** - axillary lymph nodes up to the inferior border of pectoralis minor.

- **Level II** -axillary lymph nodes up to the superior border of pectoralis minor.
- **Level III** - axillary lymph nodes extending above the superior border of pectoralis minor.

TN.8.13 Dissection of Axillary Lymph Nodes - (Items 30335 and 30336)

For the purposes of Items 30335 and 30336, the definitions of lymph node levels referred to are set out below.

Anatomically, the dissection extends from below upwards as follows:

- **Level I** - dissection of axillary lymph nodes up to the inferior border of pectoralis minor.
- **Level II** - dissection of axillary lymph nodes up to the superior border of pectoralis minor.
- **Level III** - dissection of axillary lymph nodes extending above the superior border of pectoralis minor.

TN.8.14 Laparotomy and Other Procedures on the Abdominal Viscera - (Items 30375 and 30622)

Procedures on the abdominal viscera may be performed by laparotomy or laparoscopically. Both items 30375 and 30622 cover several operations on abdominal viscera. Where more than one of the procedures referred to in these items are performed during the one operation, each procedure may be itemised according to the multiple operation formula.

TN.8.15 Diagnostic Laparoscopy - (Items 30390 and 30627)

If a diagnostic laparoscopy procedure is performed at a different time on the same day to another laparoscopic service, the procedures are considered to be un-associated services. The claim for benefits should be annotated to indicate that the two services were performed on separate occasions, otherwise the claims will be considered to be a single service.

TN.8.16 Major Abdominal Incision - (Item 30396)

A major abdominal incision is one that gives access through an open wound to all compartments of the abdominal cavity. Item 30396 is intended for open surgical incisions only and not those performed laparoscopically.

TN.8.17 Gastrointestinal Endoscopic Procedures - (Items 30473 to 30481, 30484, 30485, 30490 to 30494, 30680 to 32023, 32084 to 32095, 32103, 32104, 32106 and 32222 to 32229)

The following are guidelines for appropriate minimum standards for the performance of GI endoscopy in relation to (a) cleaning, disinfection and sterilisation procedures, and (b) anaesthetic and resuscitation equipment.

These guidelines are based on the advice of the Gastroenterological Society of Australia, the Sections of HPB and Upper GI and of Colon and Rectal Surgery of the Royal Australasian College of Surgeons, and the Colorectal Surgical Society of Australia.

Cleaning, disinfection and sterilisation procedures

Endoscopic procedures should be performed in facilities where endoscope and accessory reprocessing protocols follow procedures outlined in:

- i. Infection Control in Endoscopy, Gastroenterological Society of Australia and Gastroenterological Nurses College of Australia, 2011;
- ii. Australian Guidelines for the Prevention and Control of Infection in Healthcare (NHMRC, 2010);
- iii. Australian Standard AS 4187-2014 (and Amendments), Standards Association of Australia.

Anaesthetic and resuscitation equipment

Where the patient is anaesthetised, anaesthetic equipment, administration and monitoring, and post-operative and resuscitation facilities should conform to the standards outlined in 'Guidelines on Sedation and/or Analgesia for Diagnostic and Interventional Medical, Dental or Surgical Procedures' (PS09), Australian & New Zealand College of Anaesthetists, Gastroenterological Society of Australia and Royal Australasian College of Surgeons.

Conjoint Committee

For the purposes of Item 32023, the procedure is to be performed by a colorectal surgeon or gastroenterologist with endoscopic training who is recognised by the Conjoint Committee for the Recognition of Training in Gastrointestinal Endoscopy.

TN.8.18 Gastrectomy, Sub-total Radical - (Item 30523)

The item differs from total radical Gastrectomy (Item 30524) in that a small part of the stomach is left behind. It involves resection of the greater omentum and posterior abdominal wall lymph nodes with or without splenectomy.

TN.8.19 Anti reflux Operations - (Items 30527 to 30533, 31464 and 31466)

These items cover various operations for reflux oesophagitis. Where the only procedure performed is the simple closure of a diaphragmatic hiatus benefit would be attracted under Item 30387 (Laparotomy involving operation on abdominal viscera, including pelvic viscera, not being a service to which another item in this Group applies).

TN.8.20 Radiofrequency ablation of mucosal metaplasia for the treatment of Barrett's Oesophagus (Item 30687)

The diagnosis of high grade dysplasia is recommended to be confirmed by two expert pathologists with experience in upper gastrointestinal pathology.

A multidisciplinary team should review treatment options for patients with high grade dysplasia and would typically include upper gastrointestinal surgeons and/or interventional gastroenterologists.

TN.8.21 Endoscopic or Endobronchial Ultrasound +/- Fine Needle Aspiration - (Items 30688 - 30710)

For the purposes of these items the following definitions apply:

Biopsy means the removal of solid tissue by core sampling or forceps

FNA means aspiration of cellular material from solid tissue via a small gauge needle.

The provider should make a record of the findings of the ultrasound imaging in the patient's notes for any service claimed against items 30688 to 30710.

Endoscopic ultrasound is an appropriate investigation for patients in whom there is a strong clinical suspicion of pancreatic neoplasia with negative imaging (such as CT scanning). Scenarios include, but are not restricted to:

- A middle aged or elderly patient with a first attack of otherwise unexplained (eg negative abdominal CT) first episode of acute pancreatitis; or
- A patient with biochemical evidence of a neuroendocrine tumour.

The procedure is not claimable for periodic surveillance of patients at increased risk of pancreatic cancer, such as chronic pancreatitis. However, EUS would be appropriate for a patient with chronic pancreatitis in whom there was a clinical suspicion of pancreatic cancer (eg: a pancreatic mass occurring on a background of chronic pancreatitis).

TN.8.22 Removal of Skin Lesions - (Items 31356 to 31376)

The excision of warts and seborrheic keratoses attracts benefits on an attendance basis with the exceptions outlined in TN.8.9 of the explanatory notes to this category. Excision of pre-malignant lesions including solar keratoses where clinically indicated are covered by items 31357, 31360, 31362, 31364, 31366, 31368 and 31370.

The excision of suspicious pigmented lesions for diagnostic purposes attract benefits under items 31357, 31360, 31362, 31364, 31366, 31368 and 31370.

Malignant tumours are covered by items 31356, 31358, 31359, 31361, 31363, 31365, 31367, 31369 and 31371 to 31376.

Items 31357, 31360, 31362, 31364, 31366, 31368, 31370 *require* that the specimen be sent for histological examination. Items 31356, 31358, 31359, 31361, 31363, 31365, 31367, 31369, 31371-31376 also *require* that a specimen has been sent for histological confirmation of malignancy, and any subsequent specimens are sent for histological examination. Confirmation of malignancy *must* be received before itemisation of accounts for Medicare benefits purposes.

Where histological results are available at the time of issuing accounts, the histological diagnosis will decide the appropriate itemisation. If the histological report shows the lesion to be benign, items 31357, 31360, 31362, 31364, 31366, 31368 or 31370 should be used.

It will be necessary for practitioners to retain copies of histological reports.

TN.8.23 Removal of Skin Lesion From Face - (Items 31245, 31361 to 31364, 31372 and 31373)

For the purposes of these items, the face is defined as that portion of the head anterior to the hairline and above the jawline.

TN.8.24 Dissection of Lymph Nodes of Neck - (Items 30618, 31423 to 31438)

For the purposes of these items, the lymph node levels referred to are as follows:

Level I	Submandibular and submental lymph nodes
Level II	Lymph nodes of the upper aspect of the neck including the jugulodigastric node, upper jugular chain nodes and upper spinal accessory nodes
Level III	Lymph nodes deep to the middle third of the sternomastoid muscle consisting of mid jugular chain nodes, the lower most of which is the jugulo-omohyoid node, lying at the level where the omohyoid muscle crosses the internal jugular vein
Level IV	Lower jugular chain nodes, including those nodes overlying the scalenus anterior muscle
Level V	Posterior triangle nodes, which are usually distributed along the spinal accessory nerve in the posterior triangle

Comprehensive dissection involves all 5 neck levels while *selective* dissection involves the removal of only certain lymph node groups, for example:-

Item 31426 (removal of 3 lymph node levels) - e.g. supraomohyoid neck dissection (levels I-III) or lateral neck dissection (levels II-IV).

Item 31429 (removal of 4 lymph node levels) - e.g. posterolateral neck dissection (levels II-V) or anterolateral neck dissection (levels I-IV)

Other combinations of node levels may be removed according to clinical circumstances.

TN.8.25 Excision of Breast Lesions, Abnormalities or Tumours - Malignant or Benign - (Items 31500 to 31515)

Therapeutic biopsy or excision of breast lesions, abnormalities or tumours under Items: 31500, 31503, 31506, 31509, 31512, 31515 either singularly or in combination should not be claimed when using the Advanced Breast Biopsy Instrumentation (ABBI) procedure, or any other large core breast biopsy device.

TN.8.26 Breast Biopsy Items – items 31533 (Fine Needle Aspiration) and 31548 (Mechanical Device Biopsy)

Breast abnormalities requiring biopsy should be assessed by core biopsy or vacuum-assisted core biopsy. If a service has access to high-quality cytology with immediate reporting, then fine needle aspiration (FNA) may be used in addition to mechanical device biopsy, but not instead of it. In exceptional cases, based on a clinician's judgement, FNA may be used alone if mechanical device biopsy is not possible.

In relation to item 31533 (FNA) an impalpable lesion includes those lesions that clinically require definition by ultrasound or mammography for accurate or safe sampling, eg. lesions in association with breast prostheses or in areas of breast thickening.

TN.8.27 Diagnostic Biopsy of Breast using Advanced Breast Biopsy Instrumentation - (Items 31539 and 31545)

For the purposes of Items 31539 and 31545, surgeons performing this procedure should have evidence of appropriate training via a course approved by the Breast Section of the Royal Australasian College of Surgeons, have experience in the procedure, and the Department of Human Services notified of their eligibility to perform this procedure.

The ABBI procedure is contraindicated and should not be performed on the following subset of patients:

- Patients with mass, asymmetry or clustered microcalcifications that cannot be targeted using digital imaging equipment;
- Patients unable to lie prone and still for 30 to 60 minutes;
- Breasts less than 20mm in thickness when compressed;
- Women on anticoagulants;
- Lesions that are too close to the chest wall to allow cannula access;
- Patients weighing more than 135kg;
- Women with prosthetic breast implants.

TN.8.28 Preoperative Localisation of Breast Lesion Prior to the Use of Advanced Breast Biopsy Instrumentation - (Item 31542)

For the purposes of item 31542, radiologists eligible to perform the procedure must have been identified by the Royal Australian and New Zealand College of Radiologists as having sufficient training and experience in this procedure, and the Department of Human Services notified of their eligibility to perform this procedure.

TN.8.29 Bariatric Procedures - (Items 31569 to 31581, anaesthesia item 20791)

Items 31569 to 31581 and item 20791 provide for surgical treatment of clinically severe obesity and the accompanying anaesthesia service (or similar). The term clinically severe obesity generally refers to a patient with a Body Mass Index (BMI) of 40kg/m^2 or more, or a patient with a BMI of 35kg/m^2 or more with other major medical co-morbidities (such as diabetes, cardiovascular disease, cancer). The BMI values in different population groups may vary due, in part, to different body proportions which affect the percentage of body fat and body fat distribution. Consequently, different ethnic groups may experience major health risks at a BMI that is below the $35\text{-}40\text{ kg/m}^2$ provided for in the definition. The decision to undertake obesity surgery remains a matter for the clinical judgment of the surgeon.

If crural repair taking 45 minutes or less is performed in association with the bariatric procedure, additional hernia repair items cannot be claimed for the same service.

TN.8.30 Reversal of a Bariatric Procedure (item 31584)

If a revisional procedure requires the reversal of the existing bariatric procedure, item 31584 can be claimed with items 31569 to 31581 for the new procedure for the same patient on the same occasion. For example, item 31584 could be claimed for the reversal of a gastric band, and 31572 for conversion to gastric bypass or 31575 for conversion to sleeve gastrectomy.

TN.8.31 Per Anal Excision of Rectal Tumour using Rectoscopy - (Items 32103, 32104 and 32106)

Surgeons performing these procedures should be colorectal surgeons and have undergone appropriate training which is recognised by the Colorectal Surgical Society of Australasia.

Items 32103, 32104 and 32106 cannot be claimed in conjunction with each other or with anterior resection items 32024 or 32025 for the same patient, on the same day, by any practitioner.

TN.8.32 Varicose veins (Items 32500 to 32517) and Peripheral Arterial or Venous Embolisation (Item 35321)

Under the *Health Insurance (General Medical Services Table) Regulations*, items 32500 to 32517 and 35321 do not apply to services mentioned in those items if the services are delivered by:

- a. endovenous laser treatment (ELT); or
- b. radiofrequency diathermy; or
- c. radiofrequency ablation for varicose veins.

It is recommended that a practitioner who intends to bill ELT, radiofrequency diathermy or radiofrequency ablation for varicose veins on the same occasion as providing items 32500 to 32517 or 35321 contact the Department of Human Services' provider information line on 132 150 to confirm requirements for correct itemisation of services on a single invoice.

The Department of Health monitors billing practices associated with MBS items. Services for ELT, radiofrequency diathermy or radiofrequency ablation for varicose veins provided on the same occasion as items 32500 to 32517 or 35321 must be itemised separately on the invoice, showing the full fees for each service separately to the fees billed against these MBS items.

TN.8.33 Cyanoacrylate Embolisation (Items 32528 and 32529), Endovenous Laser Therapy (Items 32520 and 32522) and Radiofrequency Ablation (Items 32523 and 32526)

It is recommended that the medical practitioner performing cyanoacrylate embolisation (CAE), endovenous laser therapy (ELT) or radiofrequency ablation (RFA) has successfully completed a substantial course of study and training in the management of venous disease, which has been endorsed by their relevant professional organisation.

Medicare-funded CAE, ELT and RFA can only be performed in cases where it is documented by duplex ultrasound that the great or small saphenous vein (and major tributaries of saphenous veins as necessary) demonstrates reflux of 0.5 seconds or longer.

TN.8.34 Uterine Artery Embolisation - (Item 35410)

This item was introduced on an interim basis in November 2006 following a recommendation of the Medical Services Advisory Committee (MSAC), pending the outcome of clinical trials and further consideration by the MSAC. The requirement for specialist referral by a gynaecologist for uterine artery embolisation was a MSAC recommendation. Providers should retain the instrument of specialist referral for each patient from the date of the procedure, as this may be subject to audit by the Department of Human Services.

TN.8.35 Endovascular Coiling of Intracranial Aneurysms - (Item 35412)

This service includes balloon angioplasty and insertion of stents (assisted coiling) associated with intracranial aneurysm coiling. The use of liquid embolics alone is not covered by this item. Digital Subtraction Angiography (DSA) done to diagnose the aneurysm (items 60009 and either 60072, 60075 or 60078) is claimable, however this must be clearly noted on the claim and in the clinical notes as separate from the intra-operative DSA done with the coiling procedure.

TN.8.36 Arterial and Venous Patches - (Items 33545 to 33551 and 34815)

Vascular surgery items have been constructed on the basis that arteriotomy and venotomy wounds are closed by simple suture without the use of a patch.

Where a patch angioplasty is used to enlarge a narrowed vein, artery or arteriovenous fistula, the correct item would be 34815 or 34518. If the vein is harvested for the patch through a separate incision, Item 33551 would also apply, in accordance with the multiple operation rule.

If a patch graft is involved in conjunction with an operative procedure included in Items 33500 - 33542, 33803, 33806, 33815, 33833 or 34142, the patch graft would attract benefits under Item 33545 or 33548 in addition to the item for the primary operation (under the multiple operation rule). Where vein is harvested for the patch through a separate incision Item 33551 would also apply.

TN.8.37 Carotid Disease - (Item 32700, 32703, 32760, 33500, 33545, 33548, 33551, 33554, 35303, 35307)

Interventional procedures for the management of carotid disease should be performed in accordance with the NHMRC endorsed *Clinical Guidelines for Stroke Management 2010*.

Carotid Percutaneous Transluminal Angioplasty with Stenting (CPTAS), under item 35307 is only funded under the MBS for patients who meet the criteria for carotid endarterectomy but are unfit for open surgery.

TN.8.38 Peripheral Arterial or Venous Catheterisation - (Item 35317)

Item 35317 is restricted to the regional delivery of thrombolytic, vasoactive or chemotherapeutic oncologic agents in association with a radiological service. This item is not intended for infusions with systemic effect.

TN.8.40 Selective Internal Radiation Therapy (SIRT) using SIR-Spheres - (Items 35404, 35406 and 35408)

These items were introduced into the Schedule on an interim basis in May 2006 following a recommendation of the Medical Services Advisory Committee (MSAC) pending the outcome of clinical trials and further consideration by the MSAC. SIRT should not be performed in an outpatient or day patient setting to ensure patient and radiation safety requirements are met.

TN.8.41 Percutaneous Transluminal Coronary Angioplasty - (Items 38309, 38312, 38315 and 38318)

A coronary artery lesion is considered to be complex when the lesion is a chronic total occlusion, located at an ostial site, angulated, tortuous or greater than 1cm in length. Percutaneous transluminal coronary rotational atherectomy is suitable for revascularisation of complex and heavily calcified coronary artery stenoses in patients for whom coronary artery bypass graft surgery is contraindicated.

Each of the items 38309, 38312, 38315 and 38318 describes an episode of service. As such, only one item in this range can be claimed in a single episode.

TN.8.42 Colposcopic Examination - (Item 35614)

It should be noted that colposcopic examination (screening) of a person during the course of a consultation does not attract Medicare benefits under Item 35614 except in the following circumstances:

- (a) where the patient has had an abnormal cervical screen result;
- (b) where there is a history of ingestion of oestrogen by the patient's mother during their pregnancy; or
- (c) where the patient has been referred by another medical practitioner because of suspicious signs of genital cancer.

TN.8.43 Hysteroscopy - (Item 35626)

Hysteroscopy undertaken in the office/consulting rooms can be claimed under this item where the conditions set out in the description of the item are met.

TN.8.44 Curettage of Uterus under GA or Major Nerve Block - (Items 35639 and 35640)

Uterine scraping or biopsy using small curettes (e.g. Sharman's or Zeppelin's) and requiring minimal dilatation of the cervix, not necessitating a general anaesthesia, does not attract benefits under these items but would be paid under Item 35620 where malignancy is suspected, or otherwise on an attendance basis.

TN.8.45 Neoplastic Changes of the Cervix - (Items 35644-35648)

The term "previously confirmed intraepithelial neoplastic changes of the cervix" in these items refers to diagnosis made by either cytologic, colposcopic or histologic methods. This may also include persistent human papilloma virus (HPV) changes of the cervix.

TN.8.46 Sterilisation of Minors - Legal Requirements - (Items 35657, 35687, 35688, 35691, 37622 and 37623)

- (i) It is unlawful throughout Australia to conduct a sterilisation procedure on a minor which is not a by-product of surgery appropriately carried out to treat malfunction or disease (eg malignancies of the reproductive tract) unless legal authorisation has been obtained.

(ii) Practitioners are liable to be subject to criminal and civil action if such a sterilisation procedure is performed on a minor (a person under 18 years of age) which is not authorised by the Family Court of Australia or another court or tribunal with jurisdiction to give such authorisation.

(iii) Parents/guardians have no legal authority to consent on behalf of minors to such sterilisation procedures. Medicare Benefits are only payable for sterilisation procedures that are clinically relevant professional services as defined in Section 3 (1) of the *Health Insurance Act 1973*.

TN.8.47 Debulking of Uterus - (Item 35658)

Benefits are payable under Item 35658, using the multiple operation rule, in addition to vaginal hysterectomy.

TN.8.48 Nephrectomy - (Items 36526 and 36527)

Items 36526 and 36527 are only claimable where the practitioner has a high index of suspicion of malignancy which cannot be confirmed by biopsy prior to surgery being performed, due to the biopsy being either clinically inappropriate, or the specimen provided showing an inconclusive diagnosis.

TN.8.50 Sacral Nerve Stimulation (items 36663-36668)

A two-stage process of testing and treatment is required to ensure suitability for Sacral Nerve Stimulation for detrusor overactivity or non obstructive urinary retention where urethral obstruction has been urodynamically excluded. The testing phase involves acute and sub-chronic testing. The first stage includes peripheral nerve evaluation and patients who achieve greater than 50% improvement in urinary incontinence or retention episodes during testing will be eligible to receive permanent SNS treatment.

TN.8.51 Ureteroscopy - (Item 36803)

Item 36803 refers to ureteroscopy of one ureter when performed for the purpose of inspection alone. It may not be used when one of the other ureteroscopy numbers (Items 36806 or 36809) or pyeloscopy numbers (Items 36652, 36654 or 36656) is used for a ureteroscopic procedure performed in the same ureter or collecting system. It may be used when inspection alone is carried out in one ureter independently from a ureteroscopic or pyeloscopy procedure in another ureter or collecting system. If Item number 36803 is used with one of the other above 5 numbers, it must be specified that item number 36803 refers to ureteroscopy performed in another ureter eg 36654 (Right side) and 36803 (Left side). 36803 may also be used in this way if there is a partial or complete duplex collecting system eg 36809 (Lower pole moiety ureter, Left side) and 36803 (Upper pole moiety ureter, Left side).

Item numbers 36806 and 36809 may only be used together when 2 independent ureteroscopic procedures are performed in separate ureters. These separate ureters may be components of a complete or partial duplex system. If both these numbers are used together, the Regulations require qualification of these item numbers by the site, as is necessary with 36803 eg 36806 (Right side) and 36809 (Left side).

TN.8.52 Selective Coronary Angiography - (Items 38215 to 38246)

Each item in the range 38215-38240 describes an episode of service. As such, only one item in this range can be claimed in a single episode.

Item 38243 may be billed once only immediately prior to any coronary interventional procedure, including situations where a second operator performs any coronary interventional procedure after diagnostic angiography by the first operator.

Item 38246 may be billed when the same operator performs diagnostic coronary angiography and then proceeds directly with any coronary interventional procedure during the same occasion of service. Consequently, it may not be billed in conjunction with items 38215, 38218, 38220, 38222, 38225, 38228, 38231, 38234, 38237, 38240 or 38243. In the event that the same operator performed any coronary interventional procedure immediately after the

diagnostic procedure described by item 38231, 38237 or 38240, that item may be billed as an alternative to item 38246.

Items in the range 38215 - 38246 cannot be claimed for any intravascular ultrasound (IVUS) procedure therefore Medicare Benefits are not payable for IVUS.

TN.8.53 Transurethral Needle Ablation (TUNA) of the Prostate - (Items 37201 and 37202)

Moderate to severe lower urinary tract symptoms are defined using the American Urological Association (AUA) Symptom Score or the International Prostate Symptom Score (IPSS).

Patients not medically fit for transurethral resection of the prostate (TURP) can be defined as:

- (i) Those patients who have a high risk of developing a serious complication from the surgery. Retrograde ejaculation is **not** considered to be a serious complication of TURP.
- (ii) Those patients with a co-morbidity which may substantially increase the risk of TURP or the risk of the anaesthetic necessary for TURP.

TN.8.54 Gold Fiducial Markers into the Prostate - (item 37217)

Item 37217 is for the insertion of gold fiducial markers into the prostate or prostate surgical bed as markers for radiotherapy. The service can not be claimed under item 37218 or any other surgical item.

This item is introduced into the Schedule on an interim basis pending the outcome of an evaluation being undertaken by the Medical Services Advisory Committee (MSAC).

Further information on the review of this service is available from the MSAC Secretariat.

TN.8.55 Brachytherapy of the Prostate - (Item 37220)

One of the requirements of item 37220 is that patients have a Gleason score of less than or equal to 7. However, where the patient has a score of 7, comprising a primary score of 4 and a secondary score of 3 (ie. 4+3=7), it is recommended that low dose rate brachytherapy form part of a combined modality treatment.

Low dose rate brachytherapy of the prostate should be performed in patients, with favourable anatomy allowing adequate access to the prostate without pubic arch interference, and who have a life expectancy of greater than 10 years.

An 'approved site' for the purposes of this item is one at which radiation oncology services may be performed lawfully under the law of the State or Territory in which the site is located.

TN.8.56 High Dose Rate Brachytherapy - (Item 37227)

Item 37227 covers the service undertaken by an urologist or radiation oncologist as part of the High Dose Rate Brachytherapy procedure, in association with a radiation oncologist. If the service is undertaken by an urologist, a radiation oncologist must be present in person at the time of the service. The removal of the catheters following completion of the Brachytherapy is also covered under this item.

TN.8.57 Radical or Debulking Operation for Ovarian Tumour - (Item 35720)

This item refers to the operation for carcinoma of the ovary where the bulk of the tumour and the omentum are removed. Where this procedure is undertaken in association with hysterectomy benefits are payable under both item numbers with the application of the multiple operation formula.

TN.8.58 Transcutaneous Sperm Retrieval - (Item 37605)

Item 37605 covers transcutaneous sperm retrieval for the purposes of intracytoplasmic sperm injection (item 13251) for male factor infertility, in association with assisted reproductive technologies.

Item 37605 provides for the procedure to be performed unilaterally. Where it is clinically necessary to perform the service bilaterally, the multiple operation rule would apply, in accordance with point T8.5 of these Explanatory Notes.

Where the procedure is carried out under local infiltration as the means of anaesthesia, additional benefit is not payable for the anaesthesia component as this is considered to be part of the procedure.

TN.8.59 Surgical Sperm Retrieval, by Open Approach - (Item 37606)

Item 37606 covers open sperm retrieval for the purposes of intracytoplasmic sperm injection (item 13251) for male factor infertility, in association with assisted reproductive technologies. Item 37606 provides for the procedure to be performed unilaterally. Where it is clinically necessary to perform the service bilaterally, the multiple operation rule would apply.

Benefits for item 37606 may be claimed in conjunction with a service or services provided under item 37605, where an open approach is clinically necessary following an unsuccessful percutaneous approach. Likewise, such services would be subject to the multiple operation rule.

Benefit is not payable for item 37606 in conjunction with item 37604.

TN.8.60 Cardiac Pacemaker Insertion - (Items 38209, 38212, 38350, 38353 and 38356)

The fees for the insertion of a pacemaker (Items 38350, 38353 and 38356) cover the testing of cardiac conduction or conduction threshold, etc related to the pacemaker and pacemaker function.

Accordingly, additional benefits are not payable for such routine testing under Item 38209 or 38212 (Cardiac electrophysiological studies).

TN.8.61 Implantable ECG Loop Recorder - (Item 38285)

The fee for implantation of the loop recorder (item 38285) covers the initial programming and testing of the device for satisfactory rhythm capture. Benefits are payable only once per day.

The term "recurrent" refers to more than one episode of syncope, where events occur at intervals of 1 week or longer. The term "other available cardiac investigations" includes the following:

- a complete history and physical examination that excludes a primary neurological cause of syncope and does not exclude a cardiac cause;
- *electrocardiography (ECG) (items 1170-11702);*
- *echocardiography (items 55113-55115);*

- *continuous ECG recording or ambulatory ECG monitoring (items 11708-11711);*
- *up-right tilt table test (item 11724); and*
- cardiac electrophysiological study, unless there is reasonable medical reason to waive this requirement (item 38209).

TN.8.62 Transluminal Insertion of Stent or Stents - (Item 38306)

Item 38306 should only be billed once per occlusion site. It is not appropriate to bill item 38306 multiple times for the insertion of more than one stent at the same occlusion site in the same artery. However, it would be appropriate to claim this item multiple times for insertion of stents into the same artery at different occlusion sites or into another artery or occlusion site. It is expected that the practitioner will note the details of the artery or site into which the stents were placed, in order for the Department of Human Services to process the claims.

TN.8.63 Permanent Cardiac Synchronisation Device (Items 38365, 38368 and 38654)

Items 38365, 38368 and 38654 apply only to patients who meet the criteria listed in the item descriptor, and to patients who do not meet the criteria listed in the descriptor but have previously had a CRT device and transvenous left ventricular electrode inserted and who prior to its insertion met the criteria and now need the device replaced.

TN.8.64 Intravascular Extraction of Permanent Pacing Leads - (Item 38358)

For the purposes of Item 38358 specialists or consultant physicians claiming this item must have training recognised by the Lead Extraction Advisory Committee of the Cardiac Society of Australia and New Zealand, and the Department of Human Services notified of that recognition. The procedure should only be undertaken in a hospital capable of providing cardiac surgery.

TN.8.65 Cardiac Resynchronisation Therapy - (Item 38371)

Item 38371 applies only to patients who meet the criteria listed in the item descriptor, and to patients who do not meet the criteria listed in the descriptor but have previously had an CRT device capable of defibrillation inserted and who prior to its insertion met the criteria and now need the device replaced.

TN.8.66 Implantable Cardioverter Defibrillator - (Items 38384 and 38387)

Items 38384 and 38387 apply only to patients who meet the criteria listed in the item descriptor, and to patients who do not meet the criteria listed in the descriptor but have previously had an ICD device inserted and who prior to its insertion met the criteria and now need the device replaced.

TN.8.67 Cardiac and Thoracic Surgical Items - (Items 38470 to 38766)

Items 38470 to 38766 must be performed using open exposure or minimally invasive surgery which excludes percutaneous and transcatheter techniques unless otherwise stated in the item.

TN.8.68 Coronary Artery Bypass - (Items 38497 to 38504)

The fees for Items 38497 and 38498 include the harvesting of vein graft material. Harvesting of internal mammary artery and/or vein graft material is covered in the fees for Items 38500, 38501, 38503 and 38504. Where harvesting of an artery other than the internal mammary artery is undertaken, benefits are payable under Item 38496 on the multiple operation basis. The procedure of coronary artery bypass grafting using arterial graft is covered by Item 38500, 38501, 38503 or 38504 irrespective of the origin of the arterial graft.

Items 38498, 38501 and 38504 require that either a clinical or medical perfusionist are present in the operating theatre throughout the procedure in case it is necessary to convert to an on-pump procedure and cardiopulmonary bypass is required.

If it is necessary to provide cardiopulmonary bypass items 38498, 38501 and 38504 cannot be claimed. The procedure should be claimed under items 38497, 38500 or 38503 as appropriate in conjunction with the relevant cardiopulmonary bypass procedures.

TN.8.69 Re-operation via Median Sternotomy - (Item 38640)

Medicare benefits are payable for Item 38640 plus the item/s covering the major surgical procedure/s performed at the time of the re-operation, using the multiple operation formula. Benefits are not payable for Item 38640 in association with Item 38656, 38643 or 38647.

TN.8.70 Skull Base Surgery - (Items 39640 to 39662)

The surgical management of lesions involving the skull base (base of anterior, middle and posterior fossae) often requires the skills of several surgeons or a number of surgeons from different surgical specialties working together or in tandem during the operative session. These operations are usually not staged because of the need for definitive closure of the dura, subcutaneous tissues, and skin to avoid serious infections such as osteomyelitis and/or meningitis.

Items 39640 to 39662 cover the removal of the tumour, which would normally be performed by a neurosurgeon. Other items are available to cover procedures performed as a part of skull base surgery by practitioners in other specialities, such as ENT and plastic and reconstructive surgery.

TN.8.71 Intradiscal Injection of Chymopapain - (Item 40336)

The fee for this item includes routine post-operative care. Associated radiological services attract benefits under the appropriate item in Group I3.

TN.8.72 Removal of Ventilating Tube from Ear - (Item 41500)

Benefits are not payable under Item 41500 for removal of ventilating tube. This service attracts benefits on an attendance basis.

TN.8.73 Meatoplasty - (Item 41515)

When this procedure is associated with Item 41530, 41548, 41557, 41560 or 41563 the multiple operation rule applies.

TN.8.74 Reconstruction of Auditory Canal - (Item 41524)

When associated with Item 41557, 41560 or 41563 the multiple operation rule applies.

TN.8.75 Removal of Nasal Polyp or Polypi - (Items 41662 and 41668)

Where such polyps are removed in association with another intranasal procedure, Medicare benefit is paid under Item 41662. However where the associated procedure is of lesser value than Item 41668, benefit for removal of polypi would be paid under Item 41668.

Services performed under item 41668 require admission to hospital.

TN.8.76 Larynx, Direct Examination - (Item 41501)

Benefit is not attracted under this item when an anaesthetist examines the larynx during the course of administration of a general anaesthetic.

TN.8.77 Microlaryngoscopy - (Item 41858)

This item covers the removal of "juvenile papillomata" by mechanical means, e.g. cup forceps. Item 41861 refers to the removal by laser surgery.

TN.8.78 Imbedded Foreign Body - (Item 42644)

For the purpose of item 42644, an imbedded foreign body is one that is sub-epithelial or intra-epithelial and is completely removed using a hypodermic needle, foreign body gouge or similar surgical instrument with magnification provided by a slit lamp biomicroscope, loupe or similar device.

Item 42644 also provides for the removal of rust rings from the cornea, which requires the use of a dental burr, foreign body gouge or similar instrument with magnification by a slit lamp biomicroscope.

Where the imbedded foreign body is not completely removed, benefits are payable under the relevant attendance item.

TN.8.79 Corneal Incisions - (Item 42672)

The description of this item refers to two sets of calculations, one performed some time prior to the operation, the other during the course of the operation. Both of these measurements are included in the Schedule fee and benefit for Item 42672.

TN.8.80 Cataract surgery (Items 42698 and 42701)

Items 42698 and 42701 provide for intraocular lens extraction and replacement as a separate procedure to be used in instances when lens removal and replacements are contraindicated at the same operation, such as in patients presenting with proliferative diabetic retinopathy or recurrent uveitis.

TN.8.81 Posterior Juxtasclear Depot injection - (Item 42741)

For the purpose of item 42741, the therapeutic substance must be registered with the Therapeutic Goods Administration (or listed on the Pharmaceutical Benefits Schedule, if so listed) as being suitable for injection for the treatment of predominantly (greater than or equal to 50%) classic, subfoveal choroidal neovascularisation due to age-related macular degeneration, as diagnosed by fluorescein angiography, in a patient with a baseline visual acuity equal to or better than 6/60.

TN.8.82 Cyclodestructive Procedures - (Items 42770)

Item 42770 is restricted to a maximum of 2 treatments in a 2 year period.

TN.8.83 Insertion of drainage device for glaucoma (Item 42752)

Item 42752 provides for the insertion of a drainage device for the treatment of glaucoma patients who are at high risk of failure of trabeculectomy (such as patients who have aggressive neovascular glaucoma or extensive conjunctival scarring); have iridocorneal endothelial syndrome; inflammatory (uveitic) glaucoma; or aphakic glaucoma.

TN.8.84 Laser Trabeculoplasty - (Item 42782)

Item 42782 is restricted to a maximum of 4 treatments in a 2 year period.

TN.8.85 Laser Iridotomy - (Item 42785)

Item 42785 is restricted to a maximum of 3 treatments in a 2 year period.

TN.8.86 Laser Capsulotomy - (Items 42788)

Item 42788 is restricted to a maximum of 2 treatments in a 2 year period.

TN.8.87 Laser Vitreolysis or Corticolysis of Lens Material or Fibrinolysis - (Item 42791)

Item 42791 is restricted to a maximum of 3 treatments in a 2 year period.

TN.8.88 Division of Suture by Laser - (Item 42794)

Benefits under this item are restricted to a maximum of 2 treatments in a 2 year period. There is no provision for additional treatments in that period.

TN.8.89 Ophthalmic Sutures - (Item 42845)

This item refers to the occasion when readjustment has to be made to the sutures to vary the angle of deviation of the eye. It does not cover the mere tightening of the loosely tied sutures without repositioning, or adjustment performed prior to the patient leaving the operating theatre.

TN.8.91 Abrasive Therapy/Resurfacing - (Items 45021 to 45026)

For the purposes of the above items, one aesthetic area is any of the following of the whole face (considered to be divided into six segments):- forehead; right cheek; left cheek; nose; upper lip; and chin.

Items 45021 and 45024 cover abrasive therapy only. For the purposes of these items, abrasive therapy requires the removal of the epidermis and into the deeper papillary dermis. Services performed using a laser are not eligible for benefits under these items.

Items 45025 and 45026 do not cover the use of fractional (Fraxel[®]) laser therapy.

TN.8.92 Escharotomy - (Item 45054)

Benefits are payable once only under Item 45054 for each limb (or chest) regardless of the number of incisions to each of these areas.

TN.8.93 Local Skin Flap - Definition

Medicare benefits for flaps are only payable when clinically appropriate. Clinically appropriate in this instance means that the flap or graft is required to close the defect because the defect cannot be closed directly, or because the flap is required to adapt scar position optimally with regard to skin creases or landmarks, maintain contour on the face or neck, or prevent distortion of adjacent structures or apertures.

A local skin flap is an area of skin and subcutaneous tissue designed to be elevated from the skin adjoining a defect requiring closure. The flap remains partially attached by its pedicle and is moved into the defect by rotation, advancement or transposition, or a combination of these manoeuvres. A benefit is only payable when the flap is required for adequate wound closure. A secondary defect will be created which may be closed by direct suture, skin grafting or sometimes a further local skin flap. This later procedure will also attract benefit if closed by graft or flap repair but not when closed by direct suture.

By definition, direct wound closure (e.g. by suture) does not constitute skin flap repair. Similarly, angled, curved or trapdoor incisions which are used for exposure and which are sutured back in the same position relative to the adjacent tissues are not skin flap repairs. Undermining of the edges of a wound prior to suturing is considered a normal part of wound closure and is not considered a skin flap repair.

A "Z" plasty is a particular type of transposition flap repair. Although 2 flaps are created, benefit will be paid on the basis of Item 45201, claimable once per defect. Additional flaps are to be claimed under Item 45202, if clinically indicated.

Note: refer to TN.8.126 for MBS item 45202 for circumstances where other services might involve flap repair.

TN.8.94 Free Grafting to Burns - (Items 45406 to 45418)

Items 45406 to 45418 cover split skin grafting using autografts, homografts or xenografts.

TN.8.95 Revision of Scar - (Items 45506 to 45518)

For the purposes of items 45506 to 45518, revision of scar refers to modification of existing scars (traumatic, surgical or pathological) that is designed to decrease scar width, adapt scar position with regard to skin creases and landmarks, release scars from adhering to underlying structures, improve scar contour in keeping with undamaged skin or restore the shape of facial aperture.

Items 45506 to 45518 are only claimable when performed by a specialist in the practice of his or her specialty or where undertaken in the operating theatre of a hospital.

Only items 45506 and 45512, for the face and neck, can be claimed in association with items providing for graft or flap services.

For excision of scar services which do not meet the requirements of the revision of scar items as defined, the appropriate item in the range 31206 to 31225 should be claimed.

TN.8.96 Augmentation Mammoplasty - (Items 45524, 45527 and 45528)

A Medicare benefit is generally not attracted under item 45524 unless the asymmetry in breast size is greater than 10%. Augmentation of a second breast sometime after an initial augmentation of one side would not attract benefits. Benefits are not payable for augmentation mammoplasty services performed using fat transfer to the breast.

Item 45528 applies where bilateral mammoplasty is indicated because of malformation of breast tissue, disease or trauma of the breast, (but not as a result of previous cosmetic surgery) other than covered under item 45524 or 45527.

Volumetric measurement of the breasts should be performed using a technique which has been reported in a published study.

TN.8.97 Breast Reconstruction, Myocutaneous Flap - (Item 45530)

When a prosthesis is inserted in conjunction with this operation, benefit would be attracted under Item 45527, the multiple operation rule applying. Benefits would also be payable for nipple reconstruction (Item 45545) when performed.

When claiming item 45530 for a rectus abdominis flap; item 45569 should be claimed for closure of the abdomen and reconstruction of the umbilicus, and item 45570 may be claimed if repair of the musculoaponeurotic layer is required. When claiming item 45530 for a latissimus dorsi flap, no item for the closure of the musculoaponeurotic layer should be claimed as it is expected that repair will be by direct suture. In the small number of cases, when a latissimus dorsi flap is used, and repair by means other than direct suture is required, use of item 45203 would be appropriate.

Items 30165-30179 (lipectomy items) should not be claimed in association with item 45530 as stated in the Health Insurance (General Medical Services Table) Regulations.

TN.8.98 Breast Prosthesis, Removal and Replacement of - (Items 45553 and 45554)

It is generally expected that the replacement prosthesis will be the same size as the prosthesis that is removed. Medicare benefits are not payable for services under items 45553-45554 where the procedure is performed solely to increase breast size.

Where the original implant was not inserted in the context of breast cancer or developmental abnormality, intra-operative photographs need to demonstrate significant evidence of substantial skin laxity to justify replacement of the prosthesis.

In the context of eligibility for item 45553 and 45554, an unacceptable deformity would not include asymmetry caused as a result of implant removal.

Where a rupture has been established through imaging and reported, items 45553 and 45554 will still apply even if intra-operatively the implant is found to be structurally intact.

Full clinical details must be documented in patient notes, including pre-operative photographic and / or diagnostic imaging evidence demonstrating the clinical need for the service as this may be subject to audit.

TN.8.99 Breast Ptosis - (Items 45556 and 45558)

For the purposes of item 45556, Medicare benefit is only payable for the correction of breast ptosis when performed unilaterally, in the context of breast cancer or developmental breast abnormality to match the position of the contralateral breast. This item is payable only once per patient. Additional benefit is not payable if this procedure is also performed on the contralateral breast.

Item 45558 applies where correction of breast ptosis is indicated because at least two-thirds of the breast tissue, including the nipple, lies inferior to the infra-mammary fold where the nipple is located at the most dependent, inferior part of the breast contour.

Full clinical details must be documented in patient notes, including pre-operative photographic evidence (including anterior, left lateral and right lateral views) as specified in the item descriptor which demonstrates the clinical need for the service, as this may be subject to audit.

TN.8.100 Nipple and/or Areola Reconstruction - (Items 45545 and 45546)

Item 45545 involves the taking of tissue from, for example, the other breast, the ear lobe and the inside of the upper thigh with or without local flap.

Item 45546 covers the non-surgical creation of nipple or areola by intradermal colouration.

TN.8.101 Liposuction - (Items 45584 and 45585)

Medicare benefits for liposuction are generally attracted under item 45584, that is for the treatment of post-traumatic pseudolipoma. Such trauma must be significant and result in large haematoma and localised swelling. Only on very rare occasions would benefits be payable for bilateral liposuction.

Where liposuction is indicated for the treatment of Barraquer-Simons Syndrome, lymphoedema or macrodystrophia lipomatosa, or the reduction of buffalo hump, item 45585 applies. One regional area is defined as one limb or trunk. If liposuction is required on more than one limb, item 45585 can be claimed once per limb.

Full clinical details must be documented in patient notes, including pre-operative photographic and / or diagnostic imaging evidence demonstrating the clinical need for the service as this may be subject to audit.

TN.8.102 Meloplasty for Correction of Facial Asymmetry - (Items 45587 and 45588)

Benefits are payable under items 45587 and 45588 for face lift operations performed in hospital to correct soft tissue abnormalities of the face due to causes other than the ageing process, including trauma, a congenital condition or disease.

Where bilateral meloplasty is indicated because of congenital malformation for conditions such as drooling from the angles of the mouth and deep pitting of the skin resulting from severe acne scarring, disease or trauma (but not as a result of previous cosmetic surgery), item 45588 applies.

Full clinical details must be documented in patient notes, including pre-operative photographic and/or diagnostic imaging evidence demonstrating the clinical need for the service as this may be subject to audit.

TN.8.103 Reduction of Eyelids - (Items 45617 and 45620)

Where a reduction is performed for a medical condition of one eyelid, it may be necessary to undertake a similar compensating procedure on the other eyelid to restore symmetry. The latter operation would also attract benefits.

Medicare benefits are not payable for non-therapeutic cosmetic services. Full clinical details must be documented in patient notes, including clear photographic evidence of the loss of visual field, evidenced by eyelid skin prolapsing over the lashes in a relaxed straight-ahead gaze. The clinical need for the service must be demonstrated as this may be subject to audit.

TN.8.104 Rhinoplasty - (Items 45632 to 45644, and 45650)

Benefits are payable for septoplasty (item 41671) where performed in conjunction with rhinoplasty.

A Medicare benefit for items 45632 – 45644 and 45650 is payable where the indication for surgery is for:

- (i) airway obstruction and the patient has a self-reported NOSE Scale score of greater than 45; or
- (ii) significant acquired, congenital or developmental deformity.

The NOSE Scale refers to the Nasal Obstruction Symptom Evaluation Scale, developed by Stewart et al, as published in the Otolaryngology-Head and Neck Surgery, 130: 2.

The NOSE Scale can be accessed here: <https://www.entnet.org//content/facial-plasticsrhinology-outcome-tool-nose-scale>

Full clinical details must be documented in patient notes, including pre-operative photographic and / or NOSE Scale evidence demonstrating the clinical need for the service as this may be subject to audit.

TN.8.105 Contour Restoration - (Item 45647)

For the purpose of item 45647, a region in relation to the face is defined as either being upper left or right, mid left or right or lower left or right. Accounts should be annotated with region/s to which the service applies.

TN.8.106 Vermilionectomy - (Item 45669)

Item 45669 covers treatment of the entire lip.

TN.8.107 Osteotomy of Jaw - (Items 45720 to 45752)

The fee and benefit for these items include the various forms of internal or dental fixation, jaw immobilisation, the transposition of nerves and vessels and bone grafts taken from the same site. Bone grafts taken from a separate site, eg iliac crest, would attract additional benefit under Item 47726 or 47729 for the harvesting, plus Item 48239 or 48242 for the grafting.

For the purposes of these items, a reference to maxilla includes the zygoma.

Item 75621 for the provision of fitting of surgical templates may be claimed in association with the appropriate orthognathic surgical items in the range of 45720 to 45754 for prescribed dental patients registered under the Cleft Lip and Cleft Palate Scheme.

TN.8.108 Genioplasty - (Item 45761)

Genioplasty attracts benefit once only although a section is made on both sides of the symphysis of the mandible.

TN.8.109 Tumour, Cyst, Ulcer or Scar - (Items 45801 to 45813)

It is recognised that odontogenic keratocysts, although not neoplastic, often require the same surgical management as benign tumours.

TN.8.110 Fracture of Mandible or Maxilla - (Items 45975 to 45996)

There are two maxillae in the skull and for the purpose of these items the mandible is regarded as comprising two bones.

TN.8.111 Reduction of Dislocation or Fracture

Closed reduction means treatment of a dislocation or fracture by non-operative reduction, and includes the use of percutaneous fixation or external splintage by cast or splints.

Open reduction means treatment of a dislocation or fracture by either operative exposure including the use of any internal or external fixation; or non-operative (closed reduction) where intra-medullary or external fixation is used.

Where the treatment of a fracture requires reduction on more than one occasion to achieve an adequate alignment, benefits are payable for each separate occasion at which reduction is performed under the appropriate item covering the fracture being treated.

The treatment of fractures/dislocations not specifically covered by an item in Subgroup 15 (Orthopaedic) attracts benefits on an attendance basis.

TN.8.112 Removal of Multiple Exostoses (Items 47933 and 47936)

Items 47933 and 47936 provide for removal of multiple exostoses when undertaken via the same incision.

TN.8.116 Wrist Surgery - (Items 49200 to 49227)

For the purposes of these items, the wrist includes both the radiocarpal joint and the midcarpal joint.

TN.8.117 Diagnostic Arthroscopy and Arthroscopic Surgery of the Knee (Items 49557 and 49563)

The Medical Services Advisory Committee (MSAC) evaluated the available evidence and did not support public funding for matrix-induced autologous chondrocyte implantation (MACI) or autologous chondrocyte implantation (ACI) for the treatment of chondral defects in the knee and other joints, due to the increased cost compared to existing procedures and the lack of evidence showing short term or long-term improvements in clinical outcomes. Medicare benefits are not payable in association with this technology.

TN.8.118 Paediatric Patients - (Items 50450 to 50658)

For the purpose of Medicare benefits a paediatric patient is considered to be a patient under the age of eighteen years, except in those instances where an item provides further specifications (i.e. fracture items for paediatric patients which state "with open growth plates").

TN.8.119 Treatment of Fractures in Paediatric Patients - (Items 50500 to 50588)

Items 50552 and 50560 apply to fractures that may arise during delivery and at an age when anaesthesia poses a significant risk and thus reduction is usually performed in the neonatal unit or nursery.

Item 50576 provides for closed reduction in the skeletally immature patient and will require application of a hip spica cast and related aftercare.

Medicare benefits are payable for services that specify reduction with or without internal fixation by open or percutaneous means, where reduction is carried out on the growth plate or joint surface or both.

TN.8.120 Unresectable primary malignant tumour of the liver destruction of by open or laparoscopic radiofrequency ablation or microwave tissue ablation- (Item 50952)

A multi-disciplinary team for the purposes of item 50952 would include a hepatobiliary surgeon, interventional radiologist and a gastroenterologist or oncologist.

TN.8.121 Paracentesis of anterior chamber or vitreous cavity and/or intravitreal injection - (Items 42738 to 42740)

Items 42738 and 42739 provide for paracentesis for the injection of therapeutic substances and/or the removal of aqueous or vitreous, when undertaken as an independent procedure. That is, not in conjunction with other intraocular surgery.

Item 42739 should be claimed for patients requiring anaesthetic services for the procedure. Advice from the Royal Australian and New Zealand College of Ophthalmologists is that independent injections require only topical anaesthesia, with or without subconjunctival anaesthesia, except in specific circumstances as outlined below where additional anaesthetic services may be indicated:

- nystagmus or eye movement disorder;
- cognitive impairment precluding safe intravitreal injection without sedation;
- a patient under the age of 18 years;
- a patient unable to tolerate intravitreal injection under local anaesthetic without sedation; or
- endophthalmitis or other inflammation requiring more extensive anaesthesia (eg peribulbar).

Practitioners billing item 42739 must keep clinical notes outlining the basis for the use of anaesthetic.

Item 42740 provides for intravitreal injection of therapeutic substances and/or the removal of vitreous for diagnostic purposes when performed in conjunction with other intraocular surgery including with a service to which Item 42809 (retinal photocoagulation) applies.

TN.8.122 Bone Graft (Items 48200-48242 and 48642-48651)

Bone graft substitute materials can be used for the purpose of bone graft for items 48200-48242 and 48642-48651.

TN.8.123 Vulvoplasty and Labioplasty - (Items 35533 and 35534)

Item 35533 is intended to cover the surgical repair of female genital mutilation or a major congenital anomaly of the uro-gynaecological tract which is not covered by existing MBS items. For example, this item would apply where a patient who has previously received treatment for cloacal extrophy, bladder exstrophy or congenital adrenal hyperplasia requires additional or follow-up treatment.

Item 35534 is intended to cover services for a structural abnormality causing significant functional impairment and is restricted to patients aged 18 years and over.

A detailed clinical history outlining the structural abnormality and the medical need for surgery of the vulva and/or labia must be included in patient notes, as this may be subject to audit.

Medicare benefits are not payable for non-therapeutic cosmetic services.

TN.8.124 Treatment of Wrist and Finger Fractures - (Items 47301 to 47319, and 47361 to 47373)

- For the purposes of these items, fixation includes internal and external.
- Regarding item 47362, major regional anaesthesia includes bier block.

TN.8.125 Removal of Skin Lesions - Necessary Excision Diameter - (Items 31356 to 31376)

The necessary excision diameter (or defect size) refers to the lesion size plus a clinically appropriate margin of healthy tissue required with the intent of complete surgical excision. Measurements should be taken prior to excision. Margin size should be determined in line with NHMRC guidelines:

Clinical practice guide - Basal cell carcinoma, squamous cell carcinoma (and related lesions)-a guide to clinical management in Australia. November 2008. Cancer Council Australia and; Clinical Practice Guidelines for the Management of Melanoma in Australia and New Zealand (2008).

For the purpose of Items 31356 to 31376 the defect size is calculated by the average of the width and the length of the skin lesion and an appropriate margin. The necessary excision diameter is calculated as shown in the Factsheet at this link: [Determining lesion size for MBS item selection](#).

Practitioners must retain copies of histological reports and any other supporting evidence (patient notes, photographs etc). Photographs should include scale.

An episode of care includes both the excision and closure for the same defect, even when excision and closure occur at separate attendances.

Definitive surgical excision for items 31371 to 31376 means surgical removal with adequate margins as part of the curative management of the malignancies specified in these items.

An incomplete surgical excision of a malignant skin lesion with curative intent should be billed as a malignant skin lesion excision item even when further surgery is needed. Wide excision of the primary tumour bed following local excision of a primary melanoma, appendageal carcinoma, malignant connective tissue or merkel cell carcinoma of the skin may be claimed using item 31371, 31372, 31373, 31374, 31375 or 31376, depending on the location of the malignancy and the size of the excision diameter.

For Items 31356 to 31370, a malignant skin lesion is defined as a basal cell carcinoma; a squamous cell carcinoma (including keratoacanthoma); a cutaneous deposit of lymphoma; or a cutaneous metastasis from an internal malignancy.

TN.8.126 Flap Repair - (Item 45202)

Practitioners must only perform a muscle or skin flap repair where clinical need can be clearly evidenced (i.e. where a patient has severe pre-existing scarring, severe skin atrophy, sclerodermoid changes or where the defect is contiguous with a free margin).

Clinical evidence may be supported by patient notes, photographs of the affected area and pathology reports.

TN.8.127 Interpretation of femoroacetabular impingement (FAI) restriction (items 48424, 49303, 49366)

Patients presenting with hip dysplasia, Perthes Disease and Slipped Upper Femoral Epiphysis (SUFE) are eligible for treatment under items 49366, 49303 and 48424.

TN.8.132 Transcatheter occlusion of left atrial appendage for stroke prevention (item 38276)

Explanatory Note

A contraindication to lifelong anticoagulation is defined as:

i) a previous major bleeding complication experienced whilst undergoing treatment with oral anticoagulation therapy,

ii) a blood dyscrasia, or

iii) a vascular abnormality predisposing to potentially life threatening haemorrhage

The procedure is performed as a hospital service.

TN.8.133 Endoscopic upper gastrointestinal strictures (item 30475)

Endoscopic upper GI stricture services 41819 and 41820 have been consolidated under item 30475. This consolidated item will allow any endoscopic technique to be performed for oesophageal through to gastroduodenal procedures and will include imaging intensification if done. The fee is the same as item 41819 which higher than item 30475 but lower than 41820.

TN.8.134 Application of items 32084 and 32087

If a service to which item 32084 or 32087 applies is provided by a practitioner to a patient on more than one occasion on a day, the second service is taken to be a separate service for the purposes of the item if the second service is provided under a second episode of anaesthesia or other sedation.

TN.8.135 Transcatheter Aortic Valve Implantation (Item 38495)

Item 38495 applies only to a service for Transcatheter Aortic Valve Implantation (TAVI) for the treatment of symptomatic severe aortic stenosis, that is to be provided in a TAVI Hospital by a TAVI Practitioner on a TAVI patient.

TAVI Hospital

For item 38495 a TAVI Hospital means a hospital, as defined by subsection 121-5(5) of the Private Health Insurance Act 2007, that is clinically accepted as being a suitable hospital in which the service described in Item 38495 may be performed.

The Transcatheter Aortic Valve Implantation - Rules for the Accreditation of TAVI Practitioners developed by Cardiac Accreditation Services Limited provides guidance on what are considered by the sector as minimum requirements that must be met in order to be a clinically acceptable facility that is suitable for TAVI procedures to be performed at.

Transcatheter Aortic Valve Implantation - Rules for the Accreditation of TAVI Practitioners can be accessed via www.tavi.org.au.

TAVI Practitioner

For item 38495 a TAVI Practitioner is either a cardiothoracic surgeon or interventional cardiologist who is accredited by Cardiac Accreditation Services Limited.

Accreditation by Cardiac Accreditation Services Limited must be valid prior to the service being undertaken in order for benefits to be payable under item 38495.

The process for accreditation and re-accreditation is outlined in the *Transcatheter Aortic Valve Implantation - Rules for the Accreditation of TAVI Practitioners*, issued by Cardiac Accreditation Services Limited, and is available on the Cardiac Accreditation Services Limited website, www.tavi.org.au.

Cardiac Accreditation Services Limited is a national body comprising representatives from the Australian & New Zealand Society of Cardiac & Thoracic Surgeons (ANZSCTS) and the Cardiac Society of Australia and New Zealand (CSANZ).

TAVI Patient

A TAVI Patient means a patient who, as a result of a TAVI Case Conference, has been assessed as having an unacceptably high risk for surgical aortic valve replacement and is recommended as being suitable to receive the service described in item 38495.

A TAVI Case Conference is a process by which:

- (a) there is a team of 3 or more participants, where:
 - (i) the first participant is a cardiothoracic surgeon; and
 - (ii) the second participant is an interventional cardiologist; and
 - (iii) the third participant is a specialist or consultant physician who does not perform a service described in Item 38495 for the patient being assessed; and
 - (iv) either the first or the second participant is also a TAVI Practitioner; and
- (b) the team assesses a patient's risk and technical suitability to receive the service described in Item 38495, taking into account matters such as:
 - (i) the patient's risk and technical suitability for a surgical aortic valve replacement; and
 - (ii) the patient's cognitive function and frailty; and
- (c) the result of the assessment is that the team makes a recommendation about whether or not the patient is suitable to receive the service described in Item 38495; and
- (d) the particulars of the assessment and recommendation are recorded in writing.

While benefits are payable for an eligible TAVI Case Conference under Items 6080 and 6081, a claim for these services does not have to be made in order for a benefit to be paid under Item 38495. Item 38495 is only payable once per patient in a five year period.

TN.8.136 Corneal Collagen Cross Linking (Item 42652)

Evidence of progression in patients over the age of twenty five is determined by the patient history including an objective change in tomography or refraction over time. Evidence of progression in patients aged twenty five years or younger is determined by patient history including an objective change in tomography or refraction over time and/or posterior elevation data and objective documented progression at a subclinical level.

TN.8.137 Thyroidectomy and hemithyroidectomy procedures (items 30296, 30306, and 30310)

Total thyroidectomy or total hemithyroidectomy are the most appropriate procedures in the majority of circumstances when a thyroidectomy is required. The preferred procedure for thyrotoxicosis is total thyroidectomy (item 30296). Item 30310 is to be used only in uncommon circumstances where a subtotal or partial thyroidectomy is indicated and includes a subtotal lobectomy, nodulectomy, or isthmusectomy or equivalent partial thyroidectomy.

TN.8.138 Re-exploratory thyroid surgery (item 30297)

Item 30297 is for re-exploratory thyroid surgery where prior thyroid surgery and associated scar tissue increases the complexity of surgery. For completion hemithyroidectomy on the contralateral side to a previous hemithyroidectomy for thyroid cancer, item 30306 is the appropriate item.

TN.8.139 Personal performance of a Synacthen Stimulation Test (item 30097)

A 0900h serum cortisol (0830-0930) less than 100 nmol/L indicates adrenal deficiency and a Synacthen Test is not required.

A 0900h serum cortisol (0830-0930) greater than 400 nmol/L indicates adrenal sufficiency and a Synacthen Test is not required. An exception to this is when testing women on oral contraception where cortisol levels may be higher due to increases in cortisol-binding globulin and this threshold may not exclude women with adrenal insufficiency.

TN.8.140 Excision of graft material - Items 35581 and 35582

For items 35581 and 35582 the size of the excised graft material must be histologically tested and confirmed.

TN.8.141 Application of items 51011 to 51171 (Sub-group 17)

Spinal surgery items 51011 to 51171 cannot be performed in conjunction with any other item (outside of subgroup 17) in Group T8 of the MBS (surgical operation items 30001 to 50952), when that surgical item is related to spinal surgery. Items 50600 to 50644 - spine surgery for scoliosis and kyphosis in paediatric patients - are excepted from this rule when claimed in conjunction with items 51113 and 51114.

Meaning of Motion Segment

Motion segment is defined as including all anatomical structures (including traversing and exiting nerve roots) between and including the top of the pedicle above to the bottom of the pedicle below.

Combined Anterior and Posterior Surgery

Combined anterior/ posterior surgery items 51061, 51062, 51063, 51064, 51065 and 51066 cannot be claimed with any item between 51020 and 51045 (i.e. items for spinal instrumentation, posterior bone graft and/or anterior column fusion).

Interpretation of Spinal Fusion

Lumbar spinal fusion may not be claimed for chronic low back pain for which a diagnosis has not been made.

TN.8.142 Spinal Decompression - Items 51011 to 51015

Items 51011 to 51015 are for services which include discectomy, decompression of central spinal canal by laminectomy or partial corpectomy (vertebral spurs and osteophytes; less than 50% of the vertebral body), and decompression of the subfacetal recess, the exit foramen and far lateral (intertransverse) space.

For decompression procedures, only one item is selected from 51011 to 51015.

For posterolateral spinal fusion without instrumentation, if a decompression procedure is combined with the fusion, two items numbers can be selected: one from 51011 to 51015 and one from 51031 to 51036.

For posterolateral spinal fusion with instrumentation, two item numbers can be selected: one from 51020 to 51026 and one from 51031 to 51036. If decompression is also performed, three items can be selected: one from 51011 to 51015, one from 51020 to 51026 and one from 51031 to 51036.

For instrumented spinal fusion with interbody and posterolateral bone graft (with or without cages) and decompression, four item numbers can be selected: one from one from 51011 to 51015, one from 51020 to 51026, one from 51031 to 51036 and one from 51041 to 51045.

If more than 50% of a vertebral body is resected (piecemeal vertebrectomy) an item from 51051 to 51059 can be selected in addition to an item from 51011 to 51015.

Items 51011 to 51015 can be used when the purpose of the laminectomy is exposure or posterior spinal release.

TN.8.143 Spinal Instrumentation (cervical, thoracic and lumbar) - Items 51020 to 51026

Items 51020 to 51026 are intended for spinal instrumentation at any level. The appropriate item is determined by the number of motion segments instrumented, barring item 51020 which applies to one vertebra.

For posterolateral spinal fusion with instrumentation, two item numbers are selected: one from 51020 to 51026 and one from 51031 to 51036. If decompression is also performed, three items are selected: one from 51011 to 51015, one from 51020 to 51026 and one from 51031 to 51036.

For instrumented spinal fusion with interbody and posterolateral bone graft (with or without cages) and decompression, four item numbers are selected: one from one from 51011 to 51015, one from 51020 to 51026, one from 51031 to 51036 and one from 51041 to 51045.

TN.8.144 Posterior and/or Posterolateral (intertransverse or facet joint) bone graft (cervical, thoracic and lumbar) - Items 51031 to 51036

Items 51031 to 51036 are for services which include local morcellized, artificial or harvested bone graft with or without bone morphogenic protein (BMP).

For posterolateral spinal fusion without instrumentation, if a decompression is combined with the fusion, two items numbers are selected: one from 51011 to 51015 and one from 51031 to 51036.

For posterolateral spinal fusion with instrumentation, two item numbers are selected: one from 51020 to 51026 and one from 51031 to 51036. If decompression is also performed, three items are selected: one from 51011 to 51015, one from 51020 to 51026 and one from 51031 to 51036.

For instrumental spinal fusion with interbody and posterolateral bone graft (with or without cages) and decompression, four item numbers are selected: one from one from 51011 to 51015, one from 51020 to 51026, one from 51031 to 51036 and one from 51041 to 51045.

TN.8.145 Anterior column fusion, with or without implant, or limited vertebrectomy (less than 50%) and anterior fusion (cervical, thoracic and lumbar) - Items 51041 to 51045

Items 51041 to 51045 are for services which include placement of local morcellized, artificial, harvested bone graft, bone morphogenic protein (BMP) and prosthetic devices into the intervertebral space. Artificial bone grafting materials must be used in accordance with the manufacturer's instructions.

Items 51041 to 51045 are to be selected irrespective of surgical approach (anterior, direct lateral or posterior via open or minimally invasive techniques).

For instrumented spinal fusion with interbody and posterolateral bone graft (with or without cages) and decompression, four item numbers are selected: one from one from 51011 to 51015, one from 51020 to 51026, one from 51031 to 51036 and one from 51041 to 51045.

For and instrumented anterior cervical decompression and fusion, (with or without cage) three items are selected: one from 51011 to 51015, one from 51020 to 51026, and one from 51041 to 51045.

Items 51041 to 51045 cannot be claimed with any item between 51051 and 51059 if performed at the same motion segment.

If an assisting surgeon is used at any time during the procedure, then 51160 or 51165 should be used in isolation by the assisting surgeon. If the assisting surgeon needs to perform complex non-spinal surgery, they may use a more appropriate item from outside the spinal surgery schedule.

TN.8.146 Spinal Osteotomy and/or vertebrectomy - Items 51051 to 51059

Items 51051 to 51059 are intended for spinal osteotomy and/or vertebrectomy at any level.

For the purpose of items 51054, 51055 and 51056, the definition of piecemeal or subtotal excision is the removal of at least 50% of the vertebral body.

Items 51051 to 51059 cannot be claimed with any item between 51041 and 51045 if performed at the same motion segment.

TN.8.147 Anterior and Posterior (combined) Spinal fusion under one anaesthetic via separate incisions - Items 51061 to 51066

Only one of these items should be billed for any appropriate combined anterior and posterior surgeries which are completed under one anaesthetic. The appropriate item is determined by the number of motion segments to which grafting and fusion occur.

These items cannot be claimed with any item between 51020 to 51026, 51031 to 51036 and 51041 to 51045.

If a laminectomy is included, an item from 51011 to 51015 can also be used appropriate to the level of decompression.

If spinal osteotomy or vertebrectomy (>50%) is performed as part of the combined anterior/posterior approach, it is appropriate to claim one item between 51051 to 51056 in addition to an item between 51061 to 51066.

TN.8.148 Odontoid Screw fixation – Item 51103

This item is not for use when another item is claimed for the management of the odontoid fracture.

TN.8.149 Application of items 51160 and 51166

If the spine surgeon performs their own exposure to the thoracic or lumbar spine then 51160 or 51165 can be added to the claim for the overall surgery. If an assisting surgeon is used at any time during the procedure, then 51160 or 51165 should be used in isolation by the assisting surgeon. If the assisting surgeon needs to perform complex non-spinal surgery, they may use a more appropriate item but not in combination with 51160 or 51165. If an exposure surgeon claims a number from any section of the MBS schedule, the spinal surgeon cannot claim 51160 or 51165.

TN.8.150 Correction of Developmental Breast Abnormality - (Items 45060 to 45062)

Full clinical details must be documented in patient notes, including pre-operative photographic and / or diagnostic imaging evidence as specified in the item descriptor which demonstrates the clinical need for the service, as this may be subject to audit.

Volumetric measurement of the breasts should be performed using a technique which has been reported in a published study.

TN.8.151 Mohs surgery service caseload

Services under items 31000, 31001 and 31002 should make up at least 90% of a Mohs surgeon's caseload of items 31000-31005 annually.

TN.8.152 Colonoscopy Items (items 32222-32229)

Colonoscopy items (items 32222-32229)

It is expected that clinicians using the MBS items for colonoscopy also refer to national guidelines such as the National Health and Medical Research Council (NHMRC) Clinical Practice Guidelines for Surveillance Colonoscopy (NHMRC guidelines). For more information on clinical practice guidelines for surveillance colonoscopy see the colorectal cancer pages on the [Cancer Council Australia website](#).

Surveillance colonoscopy should be planned based on high-quality endoscopy in a well-prepared colon using most recent and previous procedure information when histology is known. Clinicians should use their best clinical judgement to determine the interval between testing and the item that best suits the condition of the patient.

The NHMRC guidelines do not support the use of colonoscopy for patients at average or slightly above average risk of colorectal cancer who do not have symptoms or a positive faecal occult blood test (FOBT).

Items 32222-32228 specify that there is endoscopic examination to the caecum. The 'to the caecum' requirements for colonoscopy examinations do not apply to patients who have no caecum following right hemi colectomy. For these patients the examination should be to the anastomosis. Item 32084 should be billed if preparation is inadequate to allow visualisation to the caecum.

General practitioners should ensure colonoscopy referral practices align with applicable national guidelines, including the Royal Australian College of General Practitioners' guidelines for preventive activities in general practice ([the red book](#)). In addition, general practitioners are urged to recommend biennial FOBT screening to age-appropriate patients.

Colonoscopy where a polyp/polyps are removed

Items 32222-32226 and 32228 provide for diagnostic colonoscopy when claimed alone. Where a polyp or polyps are removed during the colonoscopy, item 32229 should also be claimed in association with the appropriate colonoscopy item.

Definition of previous history (items 32222-32225)

For items 32223-32225 the most appropriate item to be billed is determined by the previous history of the patient. The previous history for the purpose of these items is defined by number, size and type of adenomas removed during any previous colonoscopy.

Although with a patient with a previous history of 1-2 low risk adenomas (<10mm with no high-risk histological features) is eligible for a colonoscopy every five years under item 32223, clinical guidelines indicate that colonoscopy every 10 years is sufficient.

Definition of moderate risk of colorectal cancer due to family history (item 32223)

For item 32223 a patient is considered at moderate risk of colorectal cancer if there is moderate risk family history of colorectal cancer – defined as:

- 1 first degree relative less than 55 years of age at diagnosis; OR
- 2 first degree relatives with a history of colorectal cancer; OR
- 1 first degree relative and 2 second degree relatives with a history of colorectal cancer.

The national clinical practice guidelines support the use of FOBT as a first line test for patients with a low risk family history of colorectal cancer.

Exception item (item 32228)

Timing of colonoscopy following polypectomy should conform to the recommended surveillance intervals set out in clinical guidelines, taking into account individualised risk assessment. In the absence of reliable clinical history, clinicians should use their best clinical judgement to determine the interval between testing and the item that best suits the condition of the patient. Where the clinician is unable to access sufficient patient information to enable a colonoscopy to be performed under items 32222-32226, but in their opinion there is a clinical need for a colonoscopy, then item 32228 should be used. This item is available once per patient per lifetime.

Time intervals

Items 32223, 32224, 32225 and 32226 have time intervals for repeat colonoscopy which are consistent with guidelines. These services are payable under Medicare only when provided in accordance with the approved intervals.

Patients may fit several categories and the most appropriate fit is a matter for clinician judgement with the highest risk indicating what subsequent colonoscopy intervals are appropriate. The examples provided below show that the result of the histopathology will not lengthen the surveillance intervals (in the case of patient with familial adenomatous polyposis (FAP) or Lynch syndrome) and may actually shorten the surveillance intervals.

Example 1

A patient at high risk of colorectal cancer with FAP or Lynch syndrome has a number of polyps removed at a surveillance colonoscopy. Item 32226 and 32229 are the appropriate items to bill. If the histology result returns 1-2 adenomas for patients at low to moderate risk then the next surveillance colonoscopy is recommended in 5 years. However, the patient's familial condition means that a shorter interval (12 months) is recommended and payable.

Example 2

A patient at moderate risk of colorectal cancer because of family history has a number of polyps removed at a surveillance colonoscopy. Item 32223 and 32229 are the appropriate items to bill based on the patient's family history. If the histology testing returns showing an adenoma with high-risk histological features then the next surveillance colonoscopy is recommended in 3 years instead of 5 years.

How to use the items with new patients who have undergone previous colonoscopy

Patients whose care continues within one practice should have the relevant history readily available to guide decision making. For new patients, practitioners should make reasonable efforts to establish a patient's previous colonoscopy history. This includes seeking information from My Health Record, the records department of the hospital where the previous procedure occurred, the GP or the patient. The patients' MBS claims history for colonoscopy services will also assist with this.

For audit purposes it is important to record the most appropriate item. In accordance with good practice, clinicians are required to maintain records that include pathology results which must be made available to the patient or other practitioners as required.

The Australian Commission on Safety and Quality in Health Care's [Colonoscopy Clinical Care Standard](#) states all facilities and clinicians delivering colonoscopy services must provide a timely copy of the colonoscopy report and histology result to the patient and their GPs. Compliance with the Colonoscopy Clinical Care Standard is mandatory under the Australian Health Service Safety and Quality Accreditation Scheme.

Patient eligibility for colonoscopy services

The Department of Human Services (DHS) will be able to confirm whether a colonoscopy service has been claimed by an individual patient and the date of service. It will also be able to confirm any restriction on the frequency of the item claimed which would prevent a rebate from being paid if the service was provided again within the restricted period. Patients can seek clarification from the DHS by calling 132 011.

Patients can also access their own claiming history with a My Health Record or by establishing a Medicare online account through [myGov](#) or the Express Plus Medicare mobile app.

Further information about these services can be found on the [Department of Human Services website](#).

Practitioners providing colonoscopy services can call Medicare on **132 150** to check the patient's claiming history. The patient's Medicare card number will be required together with the range of item numbers to be checked. For example, the new item numbers for colonoscopy services are in the range 32222-32229. The operator will interrogate the patient's claiming history and provide advice on any claims paid for a colonoscopy service within the range of items specified and the date of the service.

Providers can also check a patient's eligibility via [Health Professional Online Services](#) (HPOS). HPOS will be able to return advice on whether a service is payable or not payable.

All patients who require a colonoscopy will be eligible for a service. However, MBS rebates will not be payable for services which do not meet the clinical indications and the item requirements for a colonoscopy or a repeat colonoscopy where the interval is specified in the item. Practitioners should ensure that their practice conforms to the approved clinical guidelines.

The DHS enquiry lines for providers and for patients is available 24 hours a day, seven days a week. Further information about these services can be found on the Department of Human Services website.

TN.9.1 Assistance at Operations - (Items 51300 to 51318)

Items covering operations which are eligible for benefits for surgical assistance have been identified by the inclusion of the word "Assist." in the item description. Medicare benefits are not payable for surgical assistance associated with procedures which have not been so identified.

The assistance must be rendered by a medical practitioner other than the surgeon, the anaesthetist or the assistant anaesthetist.

Where more than one practitioner provides assistance to a surgeon no additional benefits are payable. The assistance benefit payable is the same irrespective of the number of practitioners providing surgical assistance.

NOTE: The Benefit in respect of assistance at an operation is not payable unless the assistance is rendered by a medical practitioner other than the anaesthetist or assistant anaesthetist. The amount specified is the amount payable whether the assistance is rendered by one or more medical practitioners.

Assistance at Multiple Operations

Where surgical assistance is provided at two or more operations performed on a patient on the one occasion the multiple operation formula is applied to all the operations to determine the surgeon's fee for Medicare benefits purposes. The multiple-operation formula is then applied to those items at which assistance was rendered and for which Medicare benefits for surgical assistance is payable to determine the abated fee level for assistance. The abated fee is used to determine the appropriate Schedule item covering the surgical assistance (ie either Item 51300 or 51303).

Multiple Operation Rule - Surgeon	Multiple Operation Rule - Assistant
Item A - \$300@100%	Item A (Assist.) - \$300@100%
Item B - \$250@50%	Item B (No Assist.)
Item C - \$200@25%	Item C (Assist.) - \$200@50%
Item D - \$150@25%	Item D (Assist.) - \$150@25%

The derived fee applicable to Item 51303 is calculated on the basis of one-fifth of the abated Schedule fee for the surgery which attracts an assistance rebate.

Surgeons Operating Independently

Where two surgeons operate independently (ie neither assists the other or administers the anaesthetic) the procedures they perform are considered as two separate operations, and therefore, where a surgical assistant is engaged by each, or one of the surgeons, benefits for surgical assistance are payable in the same manner as if the surgeons were operating separately.

TN.9.2 Benefits Payable under Item 51300

Medicare benefits are payable under item 51300 for assistance rendered at any operation identified by the word "Assist." for which the fee does not exceed the fee threshold specified in the item descriptor, or at a series or combination of operations identified by the word "Assist." for which the aggregate Schedule fee threshold specified in the item descriptor has not been exceeded.

TN.9.3 Benefits Payable Under Item 51303

Medicare benefits are payable under item 51303 for assistance rendered at any operation identified by the word "Assist." for which the fee exceeds the fee threshold specified in the item descriptor or at a series or combination of operations identified by the word "Assist." for which the aggregate Schedule fee exceeds the threshold specified in the item descriptor.

TN.9.4 Benefits Payable Under Item 51309

Medicare benefits are payable under item 51309 for assistance rendered at any operation identified by the word "Assist." or a series or combination of operations identified by the word "Assist." and assistance at a birth involving Caesarean section.

Where assistance is provided at a Caesarean section birth and at a procedure or procedures which have not been identified by the word "Assist.", benefits are payable under item 51306.

TN.9.5 Assistance at Cataract and Intraocular Lens Surgery - (Item 51318)

The reference to "previous significant surgical complication" covers vitreous loss, rupture of posterior capsule, loss of nuclear material into the vitreous, intraocular haemorrhage, intraocular infection (endophthalmitis), cystoid macular oedema, corneal decompensation or retinal detachment.

TN.10.1 Relative Value Guide For Anaesthetics - (Group T10)

Overview of the RVG

The RVG groups anaesthesia services within anatomical regions. These items are listed in the MBS under Group T10, Subgroups 1-16 Anaesthesia for radiological and other therapeutic and diagnostic services are grouped separately under Subgroup 17. Also included in the RVG format are certain additional monitoring and therapeutic services, such as blood pressure monitoring (item 22012) and central vein catheterisation (item 22020) when performed in association with the administration of anaesthesia. These services are listed at subgroup 19. The RVG also provides for assistance at anaesthesia under certain circumstances. These items are listed at subgroup 26.

Details of the billing requirements for the RVG are available from the Department of Human Services website.

The RVG is based on an anaesthesia unit system reflecting the complexity of the service and the total time taken for the service. Each unit has been assigned a dollar value.

Under the RVG, the MBS fee for anaesthesia in connection with a procedure is comprised of up to three components:

1. The basic units allocated to each anaesthetic procedure, reflecting the complexity of the procedure (an item in the range 20100-21997);
2. The time unit allocation reflecting the total time of the anaesthesia (an item in the range 23010-24136); and
3. Where appropriate, modifying units recognising certain added complexities in anaesthesia (an item/s in the range 25000-25020).

Assistance at anaesthesia

To establish the fee for the assistant service items 25200 and 25205, both services have been allocated a number of base units. The total time that the assistant anaesthetist was in active attendance on the patient is then added, along with modifiers as appropriate to determine the MBS fee.

Whole body perfusion

Where whole body perfusion is performed, the MBS fee is determined by adding together the following:

1. The base units allocated to the service (item 22060);
2. The time unit allocation reflecting the total time of the perfusion (an item in the range 23010 - 24136); and
3. Where appropriate, modifying units recognising certain added complexities in perfusion (an item/s in the range 25000 – 25020).

TN.10.2 Eligible Services

Generally, a Medicare benefit is only payable for anaesthesia which is performed in connection with an "eligible" service. An "eligible" service is defined as a clinically relevant professional service which is listed in the Schedule and which has been identified as attracting an anaesthetic fee.

TN.10.3 RVG Unit Values

Basic Units

The RVG basic unit allocation represents the complexity of the anaesthetic procedure relative to the anatomical site and physiological impact of the surgery.

Time Units

The number of time units is calculated from the total time of the anaesthesia service, the assistant at anaesthesia service or the whole body perfusion service:

- *for anaesthesia*, time is considered to begin when the anaesthetist commences exclusive and continuous care of the patient for anaesthesia. Time ends when the anaesthetist is no longer in professional attendance, that is, when the patient is safely placed under the supervision of other personnel;
- *for assistance at anaesthesia*, time is taken to be the period that the assistant anaesthetist is in active attendance on the patient during anaesthesia; and
- *for perfusion*, perfusion time begins with the commencement of anaesthesia and finishes with the closure of the chest.

For up to and including the first - 2 hours of time, each 15 minutes (or part thereof) constitutes 1 time unit. For time beyond 2 hours, each time unit equates to 10 minutes (or part thereof).

Modifying Units (25000 - 25050)

Modifying units have been included in the RVG to recognise added complexities in anaesthesia or perfusion, associated with the patient's age, physical status or the requirement for emergency surgery. These cover the following clinical situations:

ASA physical status indicator 3 - A patient with severe systemic disease that significantly limits activity (item 25000). This would include: severely limiting heart disease; severe diabetes with vascular complications or moderate to severe degrees of pulmonary insufficiency.

Some examples of clinical situations to which ASA 3 would apply are:

- a patient with ischaemic heart disease such that they encounter angina frequently on exertion thus significantly limiting activities;
- a patient with chronic airflow limitation who gets short of breath such that the patient cannot complete one flight of stairs without pausing;
- a patient who has suffered a stroke and is left with a residual neurological deficit to the extent that is significantly limits normal activity, such as hemiparesis; or
- a patient who has renal failure requiring regular dialysis.

ASA physical status indicator 4 - A patient with severe systemic disease which is a constant threat to life (item 25005). This covers patients with severe systemic disorders that are already life-threatening, not always correctable by an operation. This would include: patients with heart disease showing marked signs of cardiac failure; persistent angina or advanced degrees of pulmonary, hepatic, renal or endocrine insufficiency.

ASA physical status indicator 4 would be characterised by the following clinical examples:

- a person with coronary disease such that they get angina daily on minimum exertion thus severely curtailing their normal activities;
- a person with end stage emphysema who is breathless on minimum exertion such as brushing their hair or walking less than 20 metres; or
- a person with severe diabetes which affects multiple organ systems where they may have one or more of the following examples:
- severe visual impairment or significant peripheral vascular disease such that they may get intermittent claudication on walking less than 20 metres; or
- severe coronary artery disease such that they suffer from cardiac failure and/or angina whereby they are limited to minimal activity.

ASA physical status indicator 5 - a moribund patient who is not expected to survive for 24 hours with or without the operation (item 25010). This would include: a burst abdominal aneurysm with profound shock; major cerebral trauma with rapidly increasing intracranial pressure or massive pulmonary embolus.

The following are some examples that would equate to ASA physical status indicator 5

- a burst abdominal aneurysm with profound shock;
- major cerebral trauma with increasing intracranial pressure; or
- massive pulmonary embolus.

NOTE: It should be noted that the Medicare Benefits Schedule does NOT include modifying units for patients assessed as ASA physical status indicator 2. Some examples of ASA 2 would include:

- A patient with controlled hypertension which has no affect on the patient's normal lifestyle;
- A patient with coronary artery disease that results in angina occurring on substantial exertion but not limiting normal activity; or

- A patient with insulin dependant diabetes which is well controlled and has minimal effect on normal lifestyle.
- Where the patient is aged under 4 years old or at least 75 years (item 25013 or 25014).
- For anaesthesia, assistance at anaesthesia or a perfusion service in association with an *emergency procedure (item 25020).
- For anaesthesia or assistance at anaesthesia in association with an *after hours emergency procedure (items 25025 and 25030).
- For a perfusion service in association with *after hours emergency surgery (item 25050).

*** NOTE:** It should be noted that the emergency modifier and the after hours emergency modifiers cannot both be claimed in the one anaesthesia assistance at anaesthesia or perfusion episode.

It should also be noted that modifiers are not stand alone services and can only be claimed in association with anaesthesia, assistance at anaesthesia or with a perfusion service covered by item 22060.

Definition of Emergency

For the purposes of both the emergency modifier and the after hours emergency modifiers, emergency is defined as existing where the patient requires immediate treatment without which there would be significant threat to life or body part.

Definition of After Hours

For the purposes of the after hours emergency modifier items, the after hours period is defined as being the period from 8pm to 8am on any weekday or at any time on a Saturday, a Sunday or a public holiday. Benefit for the After Hours Emergency Modifiers is only payable where more than 50% of the time for the emergency anaesthesia, the assistance at emergency anaesthesia or the perfusion service is provided in the after hours period. In situations where less than the 50% of the time for the service falls in the after hours period, the emergency modifier rather than the after hours emergency modifier applies. For information about deriving the fee for the service where the after hours emergency modifier applies.

TN.10.4 Deriving the Schedule Fee under the RVG

The Schedule fee for each component of anaesthesia (base items, time items and modifier items) in the RVG Schedule is derived by applying the unit value to the total number of anaesthesia units for each component. For example:

ITEM	DESCRIPTION	UNITS	SCHEDULE FEE (Units x \$20.10)
20840	Anaesthesia for resection of perforated bowel	6	\$120.60
23200	Time - 4 hours 40 minutes	24	\$482.40
25000	Modifier - Physical status	1	\$20.10
22012	Central Venous Pressure Monitoring	3	\$60.30
	TOTAL	34	\$683.40

After Hours Emergency Services

When deriving the fee for the after hours emergency modifier for anaesthesia or assistance at anaesthesia, the 50% loading applies to the anaesthesia or assistance service from Group T10 and to any additional clinically relevant therapeutic or diagnostic service from Group T10, Subgroup 18, provided during the anaesthesia episode. For example:

ITEM	DESCRIPTION	UNITS	SCHEDULE FEE (Units x \$20.10)
------	-------------	-------	--------------------------------

20840	Anaesthesia for resection of perforated bowel	6	\$120.60
23200	Time - 4 hours 40 minutes	24	\$482.40
25000	Modifier - Physical status	1	\$20.10
22012	Central Venous Pressure Monitoring	3	\$60.30
	TOTAL	34	Schedule fee = \$683.40
25025	Anaesthesia After Hours Emergency Modifier		Schedule Fee \$683.40 x 50% = \$341.70

Definition of Radical Surgery for the RVG

Where the term radical appears in an item description, it refers to an extensive surgical procedure, performed for the treatment of malignancy. It usually denotes extensive block dissection not only of the malignant tissue, but also of the surrounding tissue, particularly fat and lymphatic drainage systems. See notes T10.18 and T10.22 which clarify the definitions of the words "extensive" and "radical" used in items 20192 and 20474.

Multiple Anaesthesia Services

Where anaesthesia is provided for services covered by multiple items in the RVG, Medicare benefit is only payable for the RVG item with the highest basic unit value. However, the time component should include the total anaesthesia time taken for all services. For example:

ITEM	DESCRIPTION	UNITS	SCHEDULE FEE
20790	Anaesthesia for open Cholecystectomy	8	\$160.80
20752	Incisional Hernia	6	(lower value than 20790 = 20752 schedule fee not payable) \$120.60
23111	Time - 2hrs 30mins	11	\$221.10
25014	Physical Status - 75 or over	1	\$20.10
	TOTAL	20	\$402.00

Prolonged Anaesthesia

Under the RVG, the previous rules that related to prolonged anaesthesia no longer apply. Where anaesthesia is prolonged beyond that which an anaesthetist would normally encounter for a particular service, the RVG provides for the anaesthetist to claim the total anaesthesia time for the procedure/s.

TN.10.5 Minimum Requirements for Claiming Benefits under Items in the RVG (including sedation)

Medicare benefits for RVG services (including sedation) are only payable where both the staffing and the facility in which the service was rendered meets the following minimum guidelines. These guidelines are based on protocols established by the Australian and New Zealand College of Anaesthetists.

Staffing

- Techniques intended to produce loss of consciousness must not be used unless an anaesthetist is present to care exclusively for the patient;
- Where the patient is a young child, is elderly or has any serious medical condition (such as significant cardio-respiratory disease or danger of airway compromise), an anaesthetist should be present to administer sedation and monitor the patient;
- In all other cases, an appropriately trained medical practitioner, other than the proceduralist, is required to be in exclusive attendance on the patient during the procedure, to administer sedation and to monitor the patient; and
- There must be sufficient equipment (including oxygen, suction and appropriate medication), to enable resuscitation should it become necessary.

Facilities

The procedure must be performed in a location which is adequate in size and staffed and equipped to deal with a cardiopulmonary emergency. This must include:

- An operating table, trolley or chair which can be readily tilted;
- Adequate uncluttered floor space to perform resuscitation, should this become necessary;
- Adequate suction and room lighting;
- A supply of oxygen and suitable devices for the administration of oxygen to a spontaneously breathing patient;
- A self inflating bag suitable for artificial ventilation together with a range of equipment for advance airway management;
- Appropriate drugs for cardiopulmonary resuscitation;
- A pulse oximeter; and
- Ready access to a defibrillator.

These requirements apply equally to dental anaesthesia or sedation services provided under items in Group T10, Subgroup 20 of the RVG.

TN.10.6 Account Requirements

Before a benefit will be paid for the administration of anaesthesia, or for the services of an assistant anaesthetist, a number of details additional to those set out in the General Explanatory Notes of the Medicare Benefits Schedule are required on the anaesthetist's account:

- **the anaesthetist's account** must show the name/s of the medical practitioner/s who performed the associated operation/s. In addition, where the after hours emergency modifier applies to the anaesthesia service, the account must include the start time, the end time and total time of the anaesthetic.
- **the assistant anaesthetist's account** must show the names/s of the medical practitioners who performed the associated operation/s, as well as the name of the principal anaesthetist. In addition, where the after hours emergency modifier applies, the assistant anaesthetist's account must record the start time, the end time and the total time for which he or she was providing professional attention to the patient during the anaesthetic.
- **the perfusionist's account** must record the start time, end time and total time of the perfusion service where the after hours emergency modifier is claimed.

TN.10.7 General Information

The Health Insurance Act provides that where anaesthesia is administered to a patient, the premedication of the patient in preparation for anaesthesia is deemed to form part of the administration of anaesthesia. The administration of anaesthesia also includes the pre-anaesthesia consultation with the patient in preparation for that administration, except where such consultation entails a separate attendance carried out at a place other than an operating theatre or an anaesthesia induction room. The pre-anaesthesia consultation for a patient should be performed in association with a clinically relevant service.

Except in special circumstances, benefit is not payable for the administration of anaesthesia listed in Subgroups 1-18, unless the anaesthesia is administered by a medical practitioner other than the medical practitioner who renders the medical service in connection with which anaesthesia is administered.

Fees and benefits for anaesthesia services under the RVG cover all essential components in the administration of the anaesthesia service. Separate benefit may be attracted, however, for complementary services such as central venous pressure and direct arterial pressure monitoring (see note T10.8).

It should be noted that additional benefit is not payable for intravenous infusion or electrocardiographic monitoring, provision for which has been made in the value determined for the anaesthetic units.

The Medicare benefit derived under the RVG for the administration of anaesthesia is the benefit payable for that service irrespective of whether one or more than one medical practitioner administers it. However, benefit is provided under Subgroup 26 for the services of one assistant anaesthetist (who must not be either the surgeon or assistant surgeon (see Note 10.9)

Where a regional nerve block or field nerve block is administered by a medical practitioner other than the practitioner carrying out the operation, the block is assessed as an anaesthesia item according to the advice in paragraph TN.7.1. When a block is carried out in cases not associated with an operation, such as for intractable pain or during labour, the service falls under Group T7.

When a regional nerve block or field nerve block covered by an item in Group T7 of the Schedule is administered by a medical practitioner in the course of a surgical procedure undertaken by the same medical practitioner, then such a block will attract benefit under the appropriate item in Group T7.

It should be noted that where a procedure is carried out with local infiltration or digital block as the means of anaesthesia, that anaesthesia is considered to be part of the procedure and an additional benefit is therefore not payable.

It may happen that the professional service for which the anaesthesia is administered does not itself attract a benefit because it is part of the after-care of an operation. This does not, however, affect the benefit payable for the anaesthesia service. Benefit is payable for anaesthesia administered in connection with such a professional service (or combination of services) even though no benefit is payable for the associated professional service.

The administration of epidural anaesthesia during labour is covered by items 18216 or 18219 (18226 and 18227 for after hours) in Group T7 of the Schedule whether administered by the medical practitioner undertaking the confinement or by another medical practitioner. Subsequent "top-ups" are covered by Item 18222 or 18225.

For the purposes of items 18216 and 18226, one attendance means that the medical practitioner cannot claim either of these items if the additional attendance is to optimise the initial treatment. Optimise means extension or improvement in analgesic quality of an existing block, without the insertion of a new block as a separate procedure.

TN.10.8 Additional Services Performed in Connection with Anaesthesia - Subgroup 19

Included in the RVG format are a number of additional or complementary services which may be provided in connection with anaesthesia such as blood pressure monitoring (item 22012) and intra-arterial cannulation (item 22025).

These items (with the exception of peri-operative nerve blocks (22031-22042)) and perfusion services (22055-22075) have also been retained in the MBS in the non-RVG format, for use by practitioners who provide these services other than in association with anaesthesia.

Where an anaesthetist provides an additional (clinically relevant) service during anaesthesia that is not one listed in Subgroup 19 (excluding intravenous infusion or electrocardiographic monitoring) the relevant non-RVG item should be claimed.

Items 22012 and 22014

Benefits are payable under items 22012 and 22014 only once for each type of pressure, up to a maximum of 4 pressures per patient per calendar day, and irrespective of the number of practitioners involved in monitoring the pressures.

Items 22012, 22014 and 22025

A patient who is categorised as having a high risk of complications is one where clinical indications allow for the following items to be claimed (in conjunction with items 22012, 22014 and 22025) with item 25000, item 25005 or

item 25010 modifiers, and/or item 25013, and/or item 25014, and/or items 25020, 25025 and/or when the basic surgical item value is 10 or more units, and/or is conjunction with items in group T10 Subgroup 13 (Shoulder and Axilla), or with items 23170 – 24136 (for procedures of greater than four hours duration) noting this is not an exhaustive list.

Item 22042

This item can be co-claimed with item 20142 (anaesthesia for lens surgery), when anaesthesia or sedation was also provided by the same anaesthetist.

Item 22042 cannot be co-claimed with item 20142, 20144, 20145 and 20147 when a general anaesthetic is the primary anaesthetic approach.

TN.10.9 Assistance in the Administration of Anaesthesia

The RVG provides for a separate benefit to be paid for the services of an assistant anaesthetist in connection with an operation or series of operations in specified circumstances, as outlined below. This benefit is payable only in respect of one assistant anaesthetist who must not be the surgeon or assistant surgeon.

Therapeutic and Diagnostic services covered by Subgroup 19 items (such as blood transfusion, pressure monitoring, insertion of CVC, etc) are payable only once per patient per anaesthetic episode. Where these services are provided by the assistant anaesthetist these services are eligible for Medicare benefits only where the same service is not also claimed by the primary anaesthetist.

Assistance at anaesthesia in connection with emergency treatment (Item 25200)

Item 25200 provides for assistance at anaesthesia where the patient is in imminent danger of death. Situations where imminent danger of death requiring an assistant anaesthetist might arise include: complex airway problems, anaphylaxis or allergic reactions, malignant hyperpyrexia, neonatal and complicated paediatric anaesthesia, massive blood loss and subsequent resuscitation, intra-operative cardiac arrest, critically ill patients from intensive care units or inability to wean critically ill patients from pulmonary bypass.

Assistance in the administration of elective anaesthesia (Item 25205)

A separate benefit is payable under Item 25205 for the services of an assistant anaesthetist in connection with elective anaesthesia in the circumstances outlined in the item descriptor. This benefit is only payable in respect of one assistant anaesthetist who must not be the surgeon or assistant surgeon.

For the purposes of Item 25205, a 'complex paediatric case' involves one or more of the following:

- the need for invasive monitoring (intravascular or transoesophageal); or
- organ transplantation; or
- craniofacial surgery; or
- major tumour resection; or
- separation of conjoint twins.

TN.10.10 Perfusion Services - (Items 22055 to 22075)

Perfusion services covered by items 22055-22075 have been included in the RVG format.

As with anaesthesia, where whole body perfusion is performed, the Schedule fee is determined on the base units allocated to the service (item 22060), the total time for the perfusion, and modifying units, as appropriate, i.e.

(a) the basic units allocated to whole body perfusion under item 22060:

22060	WHOLE BODY PERFUSION, CARDIAC BYPASS , where the heart-lung machine or equivalent is continuously operated by a medical perfusionist, other than a service associated with anaesthesia to which an item in Subgroup 21 applies. (20 basic units) (See para TN.10.10 of explanatory notes to this Category)
-------	--

(b) plus, the time unit allocation reflecting the total time of the perfusion (an item in the range 23010 - 24136), for example:

23170	4:01 HOURS TO 4:10 HOURS (21 basic units)
-------	---

plus, where appropriate

(c) modifying units recognising certain added complexities in perfusion (an item/s in the range 25000 - 25020), for example:

25014	Anaesthesia, perfusion or assistance in the management of anaesthesia, if the patient is aged 75 years or more (1 basic unit)
-------	---

The time component for item 22060 is defined as beginning with the commencement of anaesthesia and finishing with the closure of the chest.

Item 22065 may only be used in association with item 22060.

Medicare benefits are not payable for perfusion unless the perfusion is performed by a medical practitioner other than the medical practitioner who renders the associated service in Group T8 or the medical practitioner who administers the anaesthesia listed in the RVG in Group T10.

The medical practitioner providing the service must comply with the training requirements in the Australian and New Zealand College of Anaesthetists *Guidelines for Major Extracorporeal Perfusion* (PS27).

Benefits are not payable if another person primarily and/or continuously operates the Heart Lung Machine.

TN.10.12 Discontinued Procedure - (Item 21990)

Item 21990 applies when a patient has been anaesthetised but the proposed procedure has been abandoned prior to surgery commencing.

Claims should include notation of the surgery or procedure which had been proposed.

Under the Health Insurance Act 1973 the Chief Executive Medicare does not require claims for this item to be accompanied by details of the proposed surgery and the reasons why the operation was discontinued. However, practitioners must maintain a clinical record of this information, which may be subject to audit.

TN.10.13 Anaesthesia in Connection with a Procedure not Identified as Attracting a Medicare Benefit for Anaesthesia - (Item 21997)

Payment of benefit for Item 21997 is not restricted to the service being performed in connection with a surgical service in Group T8. Item 21997 may be performed with any item in the Medicare Benefits Schedule that has not been identified as attracting a Medicare benefit for anaesthesia (including attendances) in circumstances where anaesthesia is considered clinically necessary.

TN.10.14 Anaesthesia in Connection with a Dental Service - (Items 22900 and 22905)

Items 22900 and 22905 cover the administration of anaesthesia in connection with a dental service that is not a service covered by an item in the Medicare Benefits Schedule i.e removal of teeth and restorative dental work. Therefore, the requirement that anaesthesia be performed in association with an 'eligible' service (as defined in point T10.2) does not apply to dental anaesthesia items 22900 and 22905.

TN.10.15 Anaesthesia in Connection with Cleft Lip and Cleft Palate Repair - (Items 20102 and 20172)

Anaesthesia associated with cleft lip and cleft palate repair is covered in Subgroup 1 of the RVG Schedule, under items 20102 and 20172.

TN.10.16 Anaesthesia in Connection with an Oral and Maxillofacial Service - (Category 4 of the Medicare Benefits Schedule)

Benefit for anaesthesia provided by a medical practitioner in association with an Oral and Maxillofacial service (Category 4 of the Medicare Benefits Schedule) is derived using the RVG. Benefit for anaesthesia for oral and maxillofacial services should be claimed under the appropriate RVG item from Subgroup 1 or 2.

TN.10.17 Nerve or Plexus Blocks for Post Operative Pain - (Items 22031 to 22041) Items 22031 to 22041

Benefits are only payable for intra-operative nerve or plexus blocks performed for the management of post-operative pain that are specifically catered for under items 22031 to 22041.

Items 22031 and 22036

For items 22031 and 22036, postoperative pain management means that the injected therapeutic substance is expected to prolong the analgesic effect of the epidural or intrathecal technique.

Item 22031 (initial intrathecal or epidural injection)

Benefits are payable under item 22031 for the initial intrathecal or epidural injection of a therapeutic substance/s, in association with anaesthesia and surgery, for the control of post-operative pain. Benefit is not payable for subsequent intra-operative intrathecal and epidural injection (item 22036) in the same anaesthetic episode. Where subsequent infusion is provided post operatively, to maintain analgesia, benefit would be payable under items 18222 or 18225.

Item 22036 (subsequent intrathecal or epidural injection)

Benefits are payable under item 22036 for subsequent intrathecal or epidural injection of a therapeutic substance/s, in association with anaesthesia and surgery, performed intra-operatively, for postoperative pain management, where the catheter is already in-situ. Benefits are not payable under this item where the initial injection was performed intra-operatively, under item 22031, in the same anaesthetic episode.

Item 22041 (plexus or nerve block)

Benefits are payable under item 22041 in addition to the general anaesthesia for the related procedure.

TN.10.18 Anaesthesia in Connection with Extensive Surgery on Facial Bones - (Item 20192)

The term 'extensive' in relation to this item is defined as major facial bone surgery or reconstruction including major resection or osteotomies or osteectomies of mandibles and/or maxillae, surgery for prognathism or surgery for Le Fort II or III fractures.

TN.10.22 Anaesthesia for Radical Procedures on the Chest Wall - (Item 20474)

Radical procedures on the chest wall referred to in item 20474 would include procedures such as pectus excavatum.

TN.10.23 Anaesthesia for Extensive Spine or Spinal Cord Procedures - (Item 20670)

This item covers major spinal surgery involving multiple levels of the spinal cord and spinal fusion where performed. Procedures covered under this item would include the Harrington Rod technique. Surgery on individual spinal levels would be covered under items 20600, 20620 and 20630.

TN.10.24 Anaesthesia for Femoral Artery Embolectomy - (Item 21274)

Item 21274 covers anaesthesia for femoral artery embolectomy. Grafts involving intra-abdominal vessels would be covered under item 20880.

TN.10.25 Anaesthesia for Cardiac Catheterisation - (Item 21941)

Item 21941 does not include either central vein catheterisation or insertion of right heart balloon catheter. Anaesthesia for these procedures is covered under item 21943.

TN.10.26 Anaesthesia for 2 Dimensional Real Time Transoesophageal Echocardiography - (Item 21936)

Benefits are payable for anaesthesia in connection with 2 dimensional real time transoesophageal echocardiography, (including intra-operative echocardiography) which includes doppler techniques, real time colour flow mapping and recording onto video tape or digital medium.

TN.10.27 Anaesthesia for Services on the Upper and Lower Abdomen - (Subgroups 6 and 7)

Establishing whether an RVG anaesthetic item pertains to the upper or lower abdomen, depends on whether the majority of the associated surgery was performed in the region above or below the umbilicus.

Some examples of upper abdomen would be:

- laparoscopy on upper abdominal viscera;
- laparoscopy with operative focus superior to the umbilical port;
- surgery to the liver, gallbladder and ducts, stomach, pancreas, small bowel to DJ flexure;
- the kidneys in their normal location (as opposed to pelvic kidney); or
- spleen or bowel (where it involves a diaphragmatic hernia or adhesions to gallbladder bed).

Some examples of lower abdomen would be:

- abdominal wall below the umbilicus;
- laparoscopy on lower abdominal viscera;
- laparoscopy with operative focus inferior to the umbilical port;
- surgery on the jejunum, ileum, or colon;
- surgery on the appendix; or
- surgery associated with the female reproductive system.

TN.10.28 Anaesthesia for Microvascular Free Tissue Flap Surgery - (Items 20230, 20355, 20475, 20704, 20804, 20905, 21155, 21275, 21455, 21535, 21685, 21785 and 21865)

Benefits are only payable where complete free tissue flap surgery is undertaken involving microsurgical arterial and venous anastomoses. Benefits do not apply for microsurgical rotation flaps or for re-implementation of digits or either the hand or the foot.

TN.10.29 Anaesthesia for Endoscopic Ureteric Surgery - Including Laser Procedure - (Item 20911)

Benefits are not payable under item 20911 for diagnostic ureteroscopy.

TN.10.30 Credentialing for peri-operative cardiac ultrasound services (22051)

Item 22051 should be performed by a provider who is appropriately credentialed to provide the particular service, by a recognised body for the credentialing of peri-operative cardiac ultrasound services. Credentialing must be based on criteria consistent with those recommended by the Australian and New Zealand College of Anaesthetists in the current version of their Professional Document PS46 "Guidelines on Training and Practice of Perioperative Cardiac Ultrasound in Adults.

TN.11.1 Botulinum Toxin - (Items 18350 to 18379)

The Therapeutic Goods Administration (TGA) assesses each indication for the therapeutic use of botulinum toxin on an individual basis. There are currently three botulinum toxin agents with TGA registration (Botox®, Dysport® and Xeomin®). Each has undergone a separate evaluation of its safety and efficacy by the TGA as they are neither bioequivalent, nor dose equivalent. When claiming under an item for the injection of botulinum toxin, only the botulinum toxin agent specified in the item can be used. Benefits are not payable where an agent other than that specified in the item is used.

The TGA assesses each indication for the therapeutic use of botulinum toxin by assessment of clinical evidence for its use in paediatric or adult patients. Where an indication has been assessed for adult use, data has generally been assessed using patients over 12 years of age. Paediatric indications have been assessed using data from patients under 18 years of age. Botulinum toxin should only be administered to patients under the age of 18 where an item is for a paediatric indication, and patients over 12 years of age where the item is for an adult indication, unless otherwise specified.

Items for the administration of botulinum toxin can only be claimed by a medical practitioner who is recognised as an eligible medical practitioner for the relevant indication under the arrangements under Section 100 of the *National Health Act 1953* (the Act) relating to the use and supply of botulinum toxin. The specialist qualifications required to administer botulinum toxin vary across the indications for which the medicine is listed on the PBS, and are detailed within the relevant PBS restrictions available at: www.pbs.gov.au/browse/section100-mf

Item 18354 for the treatment of equinus, equinovarus or equinovalgus is limited to a maximum of 4 injections per patient on any day (2 per limb). Accounts should be annotated with the limb which has been treated. Item 18292 may not be claimed for the injection of botulinum toxin, but may be claimed where a neurolytic agent (such as phenol) is used, in addition to botulinum toxin injection(s), to treat the obturator nerve in patients with a dynamic foot deformity.

Treatment under item 18375 or 18379 can only continue if the patient achieves at least a 50% reduction in urinary incontinence episodes from baseline from the start of week 6 through to the end of week 12 after the first treatment. The term 'continue' means the patient can be retreated under item 18375 or 18379 at some point after the 12 week period (for example; 6 to 12 months after the first treatment). This requirement is in line with the PBS listing for the supply of the medicine for this indication under Section 100 of the *Act*.

Item 18362 for the treatment of severe primary axillary hyperhidrosis allows for a maximum number of 3 treatments per patient in a 12 month period, with no less than 4 months to elapse between treatments.

Botulinum toxin which is not supplied and administered in accordance with the arrangements under Section 100 of the *Act* is not required to be provided free of charge to patients. Where a charge is made for the botulinum toxin administered, it must be separately listed on the account and not billed to Medicare. Since 1 September 2015, PBS patient co-payments have applied to botulinum toxin supplied and administered in accordance with the arrangements under Section 100 of the *Act*.

The Department of Human Services (DHS) has developed a [Health Practitioner Guideline to substantiate that a patient had a pre-existing condition at the time of the service](#) which is located on the DHS website.

TR.8.1 Mechanical thrombectomy - (Item 35414)

For the purposes of this item, *eligible stroke centre* means a facility that:

- (a) has a designated stroke unit;
- (b) is equipped and has staff available or on call so that it is capable of providing the following to a patient on a 24-hour basis:
 - (i) the services of a specialist or consultant physician who has the training required under paragraph (b) of item 35414;
 - (ii) diagnostic imaging services using advanced imaging techniques, which must include computed tomography, computed tomography angiography, digital subtraction angiography, magnetic resonance imaging, and magnetic resonance angiography; and
 - (iii) care from a team of health practitioners which includes a stroke physician, a neurologist, a neurosurgeon, a radiologist, an anaesthetist, an intensive care unit specialist, a medical imaging technologist, and a nurse;
- (c) has dedicated endovascular angiography facilities; and
- (d) has written procedures for assessing and treating patients who have, or may have, experienced a stroke.

Note: A health practitioner may fulfil the role of more than one of the types of health practitioner specified in paragraph (b)(iii). For example, a neurologist may also be a stroke physician.

Conjoint Committee for Recognition of Training in Interventional Neuroradiology (CCINR)

CCINR comprises representatives from the Australian and New Zealand Society of Neuroradiology (ANZSNR), the Neurosurgical Society of Australasia (NSA) and the Australian and New Zealand Association of Neurologists (ANZAN). For the purposes of this item, specialists or consultant physicians performing this procedure must have training recognised by CCINR, and the Department of Human Services notified of that recognition.

THERAPEUTIC PROCEDURES ITEMS

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		1. HYPERBARIC OXYGEN THERAPY
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 1. Hyperbaric Oxygen Therapy	
13015	<p>HYPERBARIC, OXYGEN THERAPY, for treatment of localised non-neurological soft tissue radiation injuries excluding radiation-induced soft tissue lymphoedema of the arm after treatment for breast cancer, performed in a comprehensive hyperbaric medicine facility, under the supervision of a medical practitioner qualified in hyperbaric medicine, for a period in the hyperbaric chamber of between 1 hour 30 minutes and 3 hours, including any associated attendance.</p> <p>(See para TN.1.1 of explanatory notes to this Category) Fee: \$262.75 Benefit: 75% = \$197.10 85% = \$223.35</p>	
13020	<p>HYPERBARIC OXYGEN THERAPY, for treatment of decompression illness, gas gangrene, air or gas embolism; diabetic wounds including diabetic gangrene and diabetic foot ulcers; necrotising soft tissue infections including necrotising fasciitis or Fournier's gangrene; or for the prevention and treatment of osteoradionecrosis, performed in a comprehensive hyperbaric medicine facility, under the supervision of a medical practitioner qualified in hyperbaric medicine, for a period in the hyperbaric chamber of between 1 hour 30 minutes and 3 hours, including any associated attendance</p> <p>(See para TN.1.1 of explanatory notes to this Category) Fee: \$266.95 Benefit: 75% = \$200.25 85% = \$226.95</p>	
13025	<p>HYPERBARIC OXYGEN THERAPY for treatment of decompression illness, air or gas embolism, performed in a comprehensive hyperbaric medicine facility, under the supervision of a medical practitioner qualified in hyperbaric medicine, for a period in the hyperbaric chamber greater than 3 hours, including any associated attendance - per hour (or part of an hour)</p> <p>(See para TN.1.1 of explanatory notes to this Category) Fee: \$119.30 Benefit: 75% = \$89.50 85% = \$101.45</p>	
13030	<p>HYPERBARIC OXYGEN THERAPY performed in a comprehensive hyperbaric medicine facility where the medical practitioner is pressurised in the hyperbaric chamber for the purpose of providing continuous life saving emergency treatment, including any associated attendance - per hour (or part of an hour)</p> <p>(See para TN.1.1 of explanatory notes to this Category) Fee: \$168.55 Benefit: 75% = \$126.45 85% = \$143.30</p>	
T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		2. DIALYSIS
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 2. Dialysis	
13100	<p>SUPERVISION IN HOSPITAL by a medical specialist of haemodialysis, haemofiltration, haemoperfusion or peritoneal dialysis, including all professional attendances, where the total attendance time on the patient by the supervising medical specialist exceeds 45 minutes in 1 day</p> <p>(See para TN.1.2 of explanatory notes to this Category) Fee: \$140.95 Benefit: 75% = \$105.75 85% = \$119.85</p>	
13103	<p>SUPERVISION IN HOSPITAL by a medical specialist of haemodialysis, haemofiltration, haemoperfusion or peritoneal dialysis, including all professional attendances, where the total attendance</p>	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		2. DIALYSIS
	time on the patient by the supervising medical specialist does not exceed 45 minutes in 1 day (See para TN.1.2 of explanatory notes to this Category) Fee: \$73.45 Benefit: 75% = \$55.10 85% = \$62.45	
13104	Planning and management of home dialysis (either haemodialysis or peritoneal dialysis), by a consultant physician in the practice of his or her specialty of renal medicine, for a patient with end-stage renal disease, and supervision of that patient on self-administered dialysis, to a maximum of 12 claims per year (See para TN.1.3, TN.1.23 of explanatory notes to this Category) Fee: \$152.55 Benefit: 85% = \$129.70	
13105	Haemodialysis for a patient with end-stage renal disease if: (a) the service is provided by a registered nurse, an Aboriginal health worker or an Aboriginal and Torres Strait Islander health practitioner on behalf of a medical practitioner; and (b) the service is supervised by the medical practitioner (either in person or remotely); and (c) the patient's care is managed by a nephrologist; and (d) the patient is treated or reviewed by the nephrologist every 3 to 6 months (either in person or remotely); and (e) the patient is not an admitted patient of a hospital; and (f) the service is provided in a Modified Monash 7 area Fee: \$610.45 Benefit: 100% = \$610.45	
13106	DECLOTTING OF AN ARTERIOVENOUS SHUNT Fee: \$125.15 Benefit: 75% = \$93.90 85% = \$106.40	
13109	INDWELLING PERITONEAL CATHETER (Tenckhoff or similar) FOR DIALYSIS INSERTION AND FIXATION OF (Anaes.) Fee: \$234.85 Benefit: 75% = \$176.15 85% = \$199.65	
13110	INDWELLING PERITONEAL CATHETER (Tenckhoff or similar) FOR DIALYSIS , removal of (including catheter cuffs) (Anaes.) Fee: \$235.65 Benefit: 75% = \$176.75 85% = \$200.35	
T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		3. ASSISTED REPRODUCTIVE SERVICES
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 3. Assisted Reproductive Services	
13200	ASSISTED REPRODUCTIVE TECHNOLOGIES SUPEROVULATED TREATMENT CYCLE PROCEEDING TO OOCYTE RETRIEVAL, involving the use of drugs to induce superovulation, and including quantitative estimation of hormones, semen preparation, ultrasound examinations, all treatment counselling and embryology laboratory services but excluding artificial insemination or transfer of frozen embryos or donated embryos or ova or a service to which item 13201, 13202, 13203, 13206, 13218 applies - being services rendered during 1 treatment cycle - INITIAL cycle in a single

3. ASSISTED REPRODUCTIVE SERVICES

	<p>calendar year</p> <p>(See para TN.1.4 of explanatory notes to this Category) Fee: \$3,207.90 Benefit: 75% = \$2405.95 85% = \$3123.20 Extended Medicare Safety Net Cap: \$1,702.30</p>
13201	<p>ASSISTED REPRODUCTIVE TECHNOLOGIES SUPEROVULATED TREATMENT CYCLE PROCEEDING TO OOCYTE RETRIEVAL, involving the use of drugs to induce superovulation, and including quantitative estimation of hormones, semen preparation, ultrasound examinations, all treatment counselling and embryology laboratory services but excluding artificial insemination or transfer of frozen embryos or donated embryos or ova or a service to which item 13200, 13202, 13203, 13206, 13218 applies - being services rendered during 1 treatment cycle - each cycle SUBSEQUENT to the first in a single calendar year</p> <p>(See para TN.1.4 of explanatory notes to this Category) Fee: \$3,000.65 Benefit: 75% = \$2250.50 85% = \$2915.95 Extended Medicare Safety Net Cap: \$2,471.05</p>
13202	<p>ASSISTED REPRODUCTIVE TECHNOLOGIES SUPEROVULATED TREATMENT CYCLE THAT IS CANCELLED BEFORE OOCYTE RETRIEVAL, involving the use of drugs to induce superovulation and including quantitative estimation of hormones, semen preparation, ultrasound examinations, but excluding artificial insemination or transfer of frozen embryos or donated embryos or ova or a service to which Item 13200, 13201, 13203, 13206, 13218, applies being services rendered during 1 treatment cycle</p> <p>(See para TN.1.4 of explanatory notes to this Category) Fee: \$480.10 Benefit: 75% = \$360.10 85% = \$408.10 Extended Medicare Safety Net Cap: \$66.00</p>
13203	<p>OVULATION MONITORING SERVICES, for artificial insemination - including quantitative estimation of hormones and ultrasound examinations, being services rendered during 1 treatment cycle but excluding a service to which Item 13200, 13201, 13202, 13206, 13212, 13215, 13218, applies</p> <p>(See para TN.1.4 of explanatory notes to this Category) Fee: \$501.95 Benefit: 75% = \$376.50 85% = \$426.70 Extended Medicare Safety Net Cap: \$109.90</p>
13206	<p>ASSISTED REPRODUCTIVE TECHNOLOGIES TREATMENT CYCLE using either the natural cycle or oral medication only to induce oocyte growth and development, and including quantitative estimation of hormones, semen preparation, ultrasound examinations, all treatment counselling and embryology laboratory services but excluding artificial insemination, frozen embryo transfer or donated embryos or ova or treatment involving the use of injectable drugs to induce superovulation being services rendered during 1 treatment cycle but only if rendered in conjunction with a service to which item 13212 applies</p> <p>(See para TN.1.4 of explanatory notes to this Category) Fee: \$480.10 Benefit: 75% = \$360.10 85% = \$408.10 Extended Medicare Safety Net Cap: \$66.00</p>
13209	<p>PLANNING and MANAGEMENT of a referred patient by a specialist for the purpose of treatment by assisted reproductive technologies or for artificial insemination payable once only during 1 treatment cycle</p> <p>(See para TN.1.4 of explanatory notes to this Category) Fee: \$87.35 Benefit: 75% = \$65.55 85% = \$74.25 Extended Medicare Safety Net Cap: \$11.05</p>
13210	<p>Professional attendance on a patient by a specialist practising in his or her specialty if:</p>

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES

3. ASSISTED REPRODUCTIVE SERVICES

	<p>(a) the attendance is by video conference; and</p> <p>(b) item 13209 applies to the attendance; and</p> <p>(c) the patient is not an admitted patient; and</p> <p>(d) the patient:</p> <p style="padding-left: 40px;">(i) is located both:</p> <p style="padding-left: 80px;">(A) within a telehealth eligible area; and</p> <p style="padding-left: 80px;">(B) at the time of the attendance-at least 15 kms by road from the specialist; or</p> <p style="padding-left: 40px;">(ii) is a care recipient in a residential care service; or</p> <p style="padding-left: 40px;">(iii) is a patient of:</p> <p style="padding-left: 80px;">(A) an Aboriginal Medical Service; or</p> <p style="padding-left: 80px;">(B) an Aboriginal Community Controlled Health Service for which a direction made under subsection 19 (2) of the Act applies</p> <p>(See para TN.1.21 of explanatory notes to this Category)</p> <p>Derived Fee: 50% of the fee for item 13209. Benefit: 85% of the derived fee</p> <p>Extended Medicare Safety Net Cap: \$5.40</p>
13212	<p>Oocyte retrieval for the purpose of assisted reproductive technologies-only if rendered in connection with a service to which item 13200, 13201 or 13206 applies (Anaes.)</p> <p>(See para TN.1.4 of explanatory notes to this Category)</p> <p>Fee: \$365.50 Benefit: 75% = \$274.15 85% = \$310.70</p> <p>Extended Medicare Safety Net Cap: \$71.50</p>
13215	<p>Transfer of embryos or both ova and sperm to the uterus or fallopian tubes, excluding artificial insemination-only if rendered in connection with a service to which item 13200, 13201, 13206 or 13218 applies, being services rendered in one treatment cycle (Anaes.)</p> <p>(See para TN.1.4 of explanatory notes to this Category)</p> <p>Fee: \$114.60 Benefit: 75% = \$85.95 85% = \$97.45</p> <p>Extended Medicare Safety Net Cap: \$49.50</p>
13218	<p>PREPARATION of frozen or donated embryos or donated oocytes for transfer to the uterus or fallopian tubes, by any means and including quantitative estimation of hormones and all treatment counselling but excluding artificial insemination services rendered in 1 treatment cycle and excluding a service to which item 13200, 13201, 13202, 13203, 13206, 13212 applies (Anaes.)</p> <p>(See para TN.1.4, TN.1.5 of explanatory notes to this Category)</p> <p>Fee: \$818.35 Benefit: 75% = \$613.80 85% = \$733.65</p> <p>Extended Medicare Safety Net Cap: \$713.90</p>
13221	<p>Preparation of semen for the purpose of artificial insemination-only if rendered in connection with a service to which item 13203 applies</p> <p>(See para TN.1.4 of explanatory notes to this Category)</p> <p>Fee: \$52.35 Benefit: 75% = \$39.30 85% = \$44.50</p> <p>Extended Medicare Safety Net Cap: \$22.05</p>

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		3. ASSISTED REPRODUCTIVE SERVICES
13251	<p>INTRACYTOPLASMIC SPERM INJECTION for the purposes of assisted reproductive technologies, for male factor infertility, excluding a service to which Item 13203 or 13218 applies</p> <p>(See para TN.1.5 of explanatory notes to this Category) Fee: \$431.00 Benefit: 75% = \$323.25 85% = \$366.35 Extended Medicare Safety Net Cap: \$109.90</p>	
13260	<p>Processing and cryopreservation of semen for fertility preservation treatment before or after completion of gonadotoxic treatment for malignant or non-malignant conditions, in a post-pubertal male in Tanner stages II-V, up to 60 years old, if the patient is referred by a specialist or consultant physician, initial cryopreservation of semen (not including storage) - one of a maximum of two semen collection cycles per patient in a lifetime.</p> <p>(See para TN.1.22 of explanatory notes to this Category) Fee: \$427.95 Benefit: 75% = \$321.00 85% = \$363.80 Extended Medicare Safety Net Cap: \$278.20</p>	
13290	<p>SEMEN, collection of, from a patient with spinal injuries or medically induced impotence, for the purposes of analysis, storage or assisted reproduction, by a medical practitioner using a vibrator or electro-ejaculation device including catheterisation and drainage of bladder where required</p> <p>Fee: \$210.60 Benefit: 75% = \$157.95 85% = \$179.05</p>	
13292	<p>SEMEN, collection of, from a patient with spinal injuries or medically induced impotence, for the purposes of analysis, storage or assisted reproduction, by a medical practitioner using a vibrator or electro-ejaculation device including catheterisation and drainage of bladder where required, under general anaesthetic, in a hospital (Anaes.)</p> <p>Fee: \$421.50 Benefit: 75% = \$316.15 85% = \$358.30</p>	
T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		4. PAEDIATRIC & NEONATAL
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 4. Paediatric & Neonatal	
13300	<p>UMBILICAL OR SCALP VEIN CATHETERISATION in a NEONATE with or without infusion; or cannulation of a vein in a neonate</p> <p>Fee: \$58.70 Benefit: 75% = \$44.05 85% = \$49.90</p>	
13303	<p>UMBILICAL ARTERY CATHETERISATION with or without infusion</p> <p>Fee: \$87.05 Benefit: 75% = \$65.30 85% = \$74.00</p>	
13306	<p>BLOOD TRANSFUSION with venesection and complete replacement of blood, including collection from donor</p> <p>Fee: \$344.55 Benefit: 75% = \$258.45 85% = \$292.90</p>	
13309	<p>BLOOD TRANSFUSION with venesection and complete replacement of blood, using blood already collected</p> <p>Fee: \$293.75 Benefit: 75% = \$220.35 85% = \$249.70</p>	
13312	<p>BLOOD for pathology test, collection of, BY FEMORAL OR EXTERNAL JUGULAR VEIN PUNCTURE IN INFANTS</p>	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		4. PAEDIATRIC & NEONATAL
	Fee: \$29.35 Benefit: 75% = \$22.05 85% = \$24.95	
13318	CENTRAL VEIN CATHETERISATION - by open exposure in a person under 12 years of age (Anaes.) (See para TN.1.6 of explanatory notes to this Category) Fee: \$234.55 Benefit: 75% = \$175.95 85% = \$199.40	
13319	CENTRAL VEIN CATHETERISATION in a neonate via peripheral vein (Anaes.) Fee: \$234.55 Benefit: 75% = \$175.95 85% = \$199.40	
T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		5. CARDIOVASCULAR
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 5. Cardiovascular	
13400	RESTORATION OF CARDIAC RHYTHM by electrical stimulation (cardioversion), other than in the course of cardiac surgery (Anaes.) Fee: \$99.85 Benefit: 75% = \$74.90 85% = \$84.90	
T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		6. GASTROENTEROLOGY
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 6. Gastroenterology	
13506	GASTRO-OESOPHAGEAL balloon intubation, for control of bleeding from gastric oesophageal varices Fee: \$190.25 Benefit: 75% = \$142.70 85% = \$161.75	
T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		8. HAEMATOLOGY
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 8. Haematology	
13700	HARVESTING OF HOMOLOGOUS (including allogeneic) or AUTOLOGOUS bone marrow for the purpose of transplantation (Anaes.) Fee: \$343.70 Benefit: 75% = \$257.80 85% = \$292.15	
13703	TRANSFUSION OF BLOOD, including collection from donor Fee: \$123.20 Benefit: 75% = \$92.40 85% = \$104.75	
13706	TRANSFUSION OF BLOOD or bone marrow already collected (See para TN.1.7 of explanatory notes to this Category) Fee: \$85.95 Benefit: 75% = \$64.50 85% = \$73.10	
13709	COLLECTION OF BLOOD for autologous transfusion or when homologous blood is required for immediate transfusion in emergency situation (See para TN.1.8 of explanatory notes to this Category)	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		8. HAEMATOLOGY
	Fee: \$50.00 Benefit: 75% = \$37.50 85% = \$42.50	
13750	<p>THERAPEUTIC HAEMAPHERESIS for the removal of plasma or cellular (or both) elements of blood, utilising continuous or intermittent flow techniques; including morphological tests for cell counts and viability studies, if performed; continuous monitoring of vital signs, fluid balance, blood volume and other parameters with continuous registered nurse attendance under the supervision of a consultant physician, not being a service associated with a service to which item 13755 applies -payable once per day</p> <p>Fee: \$140.95 Benefit: 75% = \$105.75 85% = \$119.85</p>	
13755	<p>DONOR HAEMAPHERESIS for the collection of blood products for transfusion, utilising continuous or intermittent flow techniques; including morphological tests for cell counts and viability studies; continuous monitoring of vital signs, fluid balance, blood volume and other parameters; with continuous registered nurse attendance under the supervision of a consultant physician; not being a service associated with a service to which item 13750 applies - payable once per day</p> <p>Fee: \$140.95 Benefit: 75% = \$105.75 85% = \$119.85</p>	
13757	<p>THERAPEUTIC VENESECTION for the management of haemochromatosis, polycythemia vera or porphyria cutanea tarda</p> <p>Fee: \$75.20 Benefit: 75% = \$56.40 85% = \$63.95</p>	
13760	<p>IN VITRO PROCESSING (and cryopreservation) of bone marrow or peripheral blood for autologous stem cell transplantation as an adjunct to high dose chemotherapy for:</p> <ul style="list-style-type: none"> . chemosensitive intermediate or high grade non-Hodgkin's lymphoma at high risk of relapse following first line chemotherapy; or . Hodgkin's disease which has relapsed following, or is refractory to, chemotherapy; or . acute myelogenous leukaemia in first remission, where suitable genotypically matched sibling donor is not available for allogeneic bone marrow transplant; or . multiple myeloma in remission (complete or partial) following standard dose chemotherapy; or . small round cell sarcomas; or . primitive neuroectodermal tumour; or . germ cell tumours which have relapsed following, or are refractory to, chemotherapy; . germ cell tumours which have had an incomplete response to first line therapy. <p>- performed under the supervision of a consultant physician - each day.</p> <p>Fee: \$786.40 Benefit: 75% = \$589.80 85% = \$701.70</p>	
T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		9. PROCEDURES ASSOCIATED WITH INTENSIVE CARE AND CARDIOPULMONARY SUPPORT
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 9. Procedures Associated With Intensive Care And Cardiopulmonary Support	
13815	Central vein catheterisation, including under ultrasound guidance where clinically appropriate, by

13840	<p>Peripheral cannulation, including under ultrasound guidance where clinically appropriate, for veno-venous pulmonary extracorporeal life support</p> <p>No separate ultrasound item is payable with this item</p> <p>(See para TN.1.10 of explanatory notes to this Category)</p> <p>Fee: \$609.20 Benefit: 75% = \$456.90 85% = \$524.50</p>
13842	<p>Intra-arterial cannulation, including under ultrasound guidance where clinically appropriate, for the</p>

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		9. PROCEDURES ASSOCIATED WITH INTENSIVE CARE AND CARDIOPULMONARY SUPPORT	
	purpose of intra-arterial pressure monitoring or arterial blood sampling (or both) No separate ultrasound item is payable with this item (See para TN.1.10 of explanatory notes to this Category) Fee: \$96.50 Benefit: 75% = \$72.40 85% = \$82.05		
13848	Counterpulsation by intra-aortic balloon-management including associated consultations and monitoring of parameters by means of full haemodynamic assessment and management on several occasions on a day – each day (See para TN.1.10 of explanatory notes to this Category) Fee: \$161.00 Benefit: 75% = \$120.75 85% = \$136.85		
13851	Ventricular assist device, management of, for a patient admitted to an intensive care unit for implantation of the device or for complications arising from implantation or management of the device - first day (See para TN.1.10 of explanatory notes to this Category) Fee: \$509.05 Benefit: 75% = \$381.80 85% = \$432.70		
13854	Ventricular assist device, management of, for a patient admitted to an intensive care unit, including management of complications arising from implantation or management of the device - each day after the first day (See para TN.1.10 of explanatory notes to this Category) Fee: \$118.45 Benefit: 75% = \$88.85 85% = \$100.70		
13857	AIRWAY ACCESS, ESTABLISHMENT OF AND INITIATION OF MECHANICAL VENTILATION (other than in the context of an anaesthetic for surgery), outside an Intensive Care Unit, for the purpose of subsequent ventilatory support in an Intensive Care Unit (See para TN.1.10 of explanatory notes to this Category) Fee: \$151.00 Benefit: 75% = \$113.25 85% = \$128.35		
T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		10. MANAGEMENT AND PROCEDURES UNDERTAKEN IN AN INTENSIVE CARE UNIT	
	Group T1. Miscellaneous Therapeutic Procedures		
	Subgroup 10. Management And Procedures Undertaken In An Intensive Care Unit		
	<i>(Note: See para T1.8 of Explanatory Notes to this Category for definition of an Intensive Care Unit)</i>		
13870	MANAGEMENT of a patient in an Intensive Care Unit by a specialist or consultant physician who is immediately available and exclusively rostered for intensive care - including initial and subsequent attendances, electrocardiographic monitoring, arterial sampling and bladder catheterisation - management on the first day (H) (See para TN.1.9, TN.1.11, TN.1.10 of explanatory notes to this Category) Fee: \$373.40 Benefit: 75% = \$280.05		

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES	10. MANAGEMENT AND PROCEDURES UNDERTAKEN IN AN INTENSIVE CARE UNIT
13873	<p>MANAGEMENT of a patient in an Intensive Care Unit by a specialist or consultant physician who is immediately available and exclusively rostered for intensive care - including all attendances, electrocardiographic monitoring, arterial sampling and bladder catheterisation - management on each day subsequent to the first day (H)</p> <p>(See para TN.1.9, TN.1.11 of explanatory notes to this Category)</p> <p>Fee: \$277.00 Benefit: 75% = \$207.75</p>
13876	<p>CENTRAL VENOUS PRESSURE, pulmonary arterial pressure, systemic arterial pressure or cardiac intracavity pressure, continuous monitoring by indwelling catheter in an intensive care unit and managed by a specialist or consultant physician who is immediately available and exclusively rostered for intensive care - once only for each type of pressure on any calendar day (up to a maximum of 4 pressures) (H)</p> <p>(See para TN.1.9, TN.1.11, TN.1.10 of explanatory notes to this Category)</p> <p>Fee: \$79.30 Benefit: 75% = \$59.50</p>
13881	<p>AIRWAY ACCESS, ESTABLISHMENT OF AND INITIATION OF MECHANICAL VENTILATION, in an Intensive Care Unit, not in association with any anaesthetic service, by a specialist or consultant physician for the purpose of subsequent ventilatory support (H)</p> <p>(See para TN.1.9 of explanatory notes to this Category)</p> <p>Fee: \$151.00 Benefit: 75% = \$113.25</p>
13882	<p>VENTILATORY SUPPORT in an Intensive Care Unit, management of, by invasive means, or by non-invasive means where the only alternative to non-invasive ventilatory support would be invasive ventilatory support, by a specialist or consultant physician who is immediately available and exclusively rostered for intensive care, each day (H)</p> <p>(See para TN.1.9, TN.1.11 of explanatory notes to this Category)</p> <p>Fee: \$118.85 Benefit: 75% = \$89.15</p>
13885	<p>CONTINUOUS ARTERIO VENOUS OR VENO VENOUS HAEMOFILTRATION, in an intensive care unit, management by a specialist or consultant physician who is immediately available and exclusively rostered for intensive care - on the first day (H)</p> <p>(See para TN.1.9, TN.1.11 of explanatory notes to this Category)</p> <p>Fee: \$158.45 Benefit: 75% = \$118.85</p>
13888	<p>CONTINUOUS ARTERIO VENOUS OR VENO VENOUS HAEMOFILTRATION, in an intensive care unit, management by a specialist or consultant physician who is immediately available and exclusively rostered for intensive care - on each day subsequent to the first day (H)</p> <p>(See para TN.1.9, TN.1.11 of explanatory notes to this Category)</p> <p>Fee: \$79.30 Benefit: 75% = \$59.50</p>
13899	<p>Preparation of Goals of Care is provided outside of an intensive care unit. Refer to explanatory note TN.1.11 for further information about Goals of Care attendance</p> <p>Professional attendance, outside an intensive care unit, for at least 60 minutes spent in preparation of goals of care for a gravely ill patient lacking current goals of care, by a specialist in the specialty of intensive care who takes overall responsibility for the preparation of the goals of care for the patient</p> <p>Item 13899 cannot be co-claimed with item 13870 or item 13873 on the same day</p> <p>(See para TN.1.11 of explanatory notes to this Category)</p> <p>Fee: \$276.25 Benefit: 75% = \$207.20 85% = \$234.85</p>

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		11. CHEMOTHERAPEUTIC PROCEDURES
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 11. Chemotherapeutic Procedures	
	CYTOTOXIC CHEMOTHERAPY, administration of, either by intravenous push technique (directly into a vein, or a butterfly needle, or the side-arm of an infusion) or by intravenous infusion of not more than 1 hours duration - payable once only on the same day, not being a service associated with photodynamic therapy with verteporfin or for the administration of drugs used immediately prior to, or with microwave (UHF radiowave) cancer therapy alone	
13915	(See para TN.1.12 of explanatory notes to this Category) Fee: \$67.10 Benefit: 75% = \$50.35 85% = \$57.05	
	CYTOTOXIC CHEMOTHERAPY, administration of, by intravenous infusion of more than 1 hours duration but not more than 6 hours duration - payable once only on the same day	
13918	Fee: \$101.00 Benefit: 75% = \$75.75 85% = \$85.85	
	CYTOTOXIC CHEMOTHERAPY, administration of, by intravenous infusion of more than 6 hours duration - for the first day of treatment	
13921	Fee: \$114.25 Benefit: 75% = \$85.70 85% = \$97.15	
	CYTOTOXIC CHEMOTHERAPY, administration of, by intravenous infusion of more than 6 hours duration - on each day subsequent to the first in the same continuous treatment episode	
13924	Fee: \$67.30 Benefit: 75% = \$50.50 85% = \$57.25	
	CYTOTOXIC CHEMOTHERAPY, administration of, either by intra-arterial push technique (directly into an artery, a butterfly needle or the side-arm of an infusion) or by intra-arterial infusion of not more than 1 hours duration - payable once only on the same day	
13927	Fee: \$87.05 Benefit: 75% = \$65.30 85% = \$74.00	
	CYTOTOXIC CHEMOTHERAPY, administration of, by intra-arterial infusion of more than 1 hours duration but not more than 6 hours duration - payable once only on the same day	
13930	Fee: \$121.50 Benefit: 75% = \$91.15 85% = \$103.30	
	CYTOTOXIC CHEMOTHERAPY, administration of, by intra-arterial infusion of more than 6 hours duration - for the first day of treatment	
13933	Fee: \$134.80 Benefit: 75% = \$101.10 85% = \$114.60	
	CYTOTOXIC CHEMOTHERAPY, administration of, by intra-arterial infusion of more than 6 hours duration - on each day subsequent to the first in the same continuous treatment episode	
13936	Fee: \$87.80 Benefit: 75% = \$65.85 85% = \$74.65	
	IMPLANTED PUMP OR RESERVOIR, loading of, with a cytotoxic agent or agents, not being a service associated with a service to which item 13915, 13918, 13921, 13924, 13927, 13930, 13933, 13936 or 13945 applies	
13939	(See para TN.1.13 of explanatory notes to this Category) Fee: \$101.00 Benefit: 75% = \$75.75 85% = \$85.85	
	AMBULATORY DRUG DELIVERY DEVICE, loading of, with a cytotoxic agent or agents for the infusion of the agent or agents via the intravenous, intra-arterial or spinal routes, not being a service associated with a service to which item 13915, 13918, 13921, 13924, 13927, 13930, 13933, 13936 or	
13942		

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		11. CHEMOTHERAPEUTIC PROCEDURES
	13945 applies (See para TN.1.13 of explanatory notes to this Category) Fee: \$67.30 Benefit: 75% = \$50.50 85% = \$57.25	
13945	LONG-TERM IMPLANTED DRUG DELIVERY DEVICE FOR CYTOTOXIC CHEMOTHERAPY, accessing of Fee: \$54.15 Benefit: 75% = \$40.65 85% = \$46.05	
13948	CYTOTOXIC AGENT, instillation of, into a body cavity Fee: \$67.30 Benefit: 75% = \$50.50 85% = \$57.25	
T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		12. DERMATOLOGY
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 12. Dermatology	
14050	UVA or UVB phototherapy administered in a whole body cabinet or hand and foot cabinet including associated consultations other than the initial consultation, if treatment is initiated and supervised by a specialist in the specialty of dermatology Applicable not more than 150 times in a 12 month period (See para TN.1.14 of explanatory notes to this Category) Fee: \$54.40 Benefit: 75% = \$40.80 85% = \$46.25	
14100	Laser photocoagulation using laser radiation in the treatment of vascular abnormalities of the head or neck, including any associated consultation, if: (a) the abnormality is visible from 3 metres; and (b) photographic evidence demonstrating the need for this service is documented in the patient notes; to a maximum of 4 sessions (including any sessions to which this item or any of items 14106 to 14118 apply) in any 12 month period (Anaes.) (See para TN.1.15 of explanatory notes to this Category) Fee: \$157.25 Benefit: 75% = \$117.95 85% = \$133.70 Extended Medicare Safety Net Cap: \$125.80	
14106	Laser photocoagulation using laser radiation in the treatment of vascular malformations, infantile haemangiomas, café au lait macules and naevi of Ota, other than melanocytic naevi (common moles), if the abnormality is visible from 3 metres, including any associated consultation, up to a maximum of 6 sessions (including any sessions to which this item or any of items 14100 to 14118 apply) in any 12 month period—area of treatment less than 150 cm ² (Anaes.) (See para TN.1.15 of explanatory notes to this Category) Fee: \$165.15 Benefit: 75% = \$123.90 85% = \$140.40	
14115	Laser photocoagulation using laser radiation in the treatment of vascular malformations, infantile haemangiomas, café au lait macules and naevi of Ota, other than melanocytic naevi (common moles), including any associated consultation, up to a maximum of 6 sessions (including any sessions to which this item or any of items 14100 to 14118 apply) in any 12 month period—area of treatment 150 cm ² to	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		12. DERMATOLOGY
	300 cm ² (Anaes.) (See para TN.1.15 of explanatory notes to this Category) Fee: \$264.50 Benefit: 75% = \$198.40 85% = \$224.85	
14118	Laser photocoagulation using laser radiation in the treatment of vascular malformations, infantile haemangiomas, café au lait macules and naevi of Ota, other than melanocytic naevi (common moles), including any associated consultation, up to a maximum of 6 sessions (including any sessions to which this item or any of items 14100 to 14115 apply) in any 12 month period—area of treatment more than 300 cm ² (Anaes.) (See para TN.1.15 of explanatory notes to this Category) Fee: \$335.90 Benefit: 75% = \$251.95 85% = \$285.55	
14124	Laser photocoagulation using laser radiation in the treatment of vascular malformations, infantile haemangiomas, café-au-lait macules and naevi of Ota, other than melanocytic naevi (common moles), including any associated consultation, if: (a) a seventh or subsequent session (including any sessions to which this item or any of items 14100 to 14118 apply) is indicated in a 12 month period commencing on the day of the first session; and (b) photographic evidence demonstrating the need for this service is documented in the patient notes (Anaes.) (See para TN.1.15 of explanatory notes to this Category) Fee: \$157.25 Benefit: 75% = \$117.95 85% = \$133.70	
T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		13. OTHER THERAPEUTIC PROCEDURES
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 13. Other Therapeutic Procedures	
14201	POLY-L-LACTIC ACID, one or more injections of, for the initial session only, for the treatment of severe facial lipoatrophy caused by antiretroviral therapy, when prescribed in accordance with the National Health Act 1953 - once per patient (See para TN.1.16 of explanatory notes to this Category) Fee: \$244.25 Benefit: 75% = \$183.20 85% = \$207.65 Extended Medicare Safety Net Cap: \$36.65	
14202	POLY-L-LACTIC ACID, one or more injections of (subsequent sessions), for the continuation of treatment of severe facial lipoatrophy caused by antiretroviral therapy, when prescribed in accordance with the National Health Act 1953 (See para TN.1.16 of explanatory notes to this Category) Fee: \$123.65 Benefit: 75% = \$92.75 85% = \$105.15 Extended Medicare Safety Net Cap: \$18.55	
14203	HORMONE OR LIVING TISSUE IMPLANTATION, by direct implantation involving incision and suture (Anaes.) (See para TN.1.4, TN.1.17 of explanatory notes to this Category) Fee: \$52.75 Benefit: 75% = \$39.60 85% = \$44.85	
14206	HORMONE OR LIVING TISSUE IMPLANTATION by cannula	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		13. OTHER THERAPEUTIC PROCEDURES
	(See para TN.1.4, TN.1.17 of explanatory notes to this Category) Fee: \$36.70 Benefit: 75% = \$27.55 85% = \$31.20	
14209	INTRAARTERIAL INFUSION or retrograde intravenous perfusion of a sympatholytic agent Fee: \$91.45 Benefit: 75% = \$68.60 85% = \$77.75	
14212	INTUSSUSCEPTION, management of fluid or gas reduction for (Anaes.) Fee: \$191.05 Benefit: 75% = \$143.30 85% = \$162.40	
14218	IMPLANTED INFUSION PUMP REFILLING OF reservoir, with a therapeutic agent or agents, for infusion to the subarachnoid or epidural space, with or without re-programming of a programmable pump, for the management of chronic intractable pain Fee: \$101.00 Benefit: 75% = \$75.75 85% = \$85.85	
14221	LONG-TERM IMPLANTED DEVICE FOR DELIVERY OF THERAPEUTIC AGENTS, accessing of, not being a service associated with a service to which item 13945 applies Fee: \$54.15 Benefit: 75% = \$40.65 85% = \$46.05	
14224	ELECTROCONVULSIVE THERAPY, with or without the use of stimulus dosing techniques, including any electroencephalographic monitoring and associated consultation (Anaes.) Fee: \$72.55 Benefit: 75% = \$54.45 85% = \$61.70	
14227	IMPLANTED INFUSION PUMP, REFILLING of reservoir, with baclofen, for infusion to the subarachnoid or epidural space, with or without re-programming of a programmable pump, for the management of severe chronic spasticity (See para TN.1.18 of explanatory notes to this Category) Fee: \$101.00 Benefit: 75% = \$75.75 85% = \$85.85	
14230	Intrathecal or epidural SPINAL CATHETER insertion or replacement of, for connection to a subcutaneous implanted infusion pump, for the management of severe chronic spasticity with baclofen (Anaes.) (Assist.) (See para TN.1.18 of explanatory notes to this Category) Fee: \$307.35 Benefit: 75% = \$230.55	
14233	INFUSION PUMP, subcutaneous implantation or replacement of, and connection to intrathecal or epidural catheter, and loading of reservoir with baclofen, with or without programming of the pump, for the management of severe chronic spasticity (Anaes.) (Assist.) (See para TN.1.18 of explanatory notes to this Category) Fee: \$373.20 Benefit: 75% = \$279.90	
14236	INFUSION PUMP, subcutaneous implantation of, AND intrathecal or epidural SPINAL CATHETER insertion, and connection of pump to catheter and loading of reservoir with baclofen, with or without programming of the pump, for the management of severe chronic spasticity (Anaes.) (Assist.) (See para TN.1.18 of explanatory notes to this Category) Fee: \$680.55 Benefit: 75% = \$510.45	
14239	Removal of subcutaneously IMPLANTED INFUSION PUMP, OR removal or repositioning of intrathecal or epidural SPINAL CATHETER, for the management of severe chronic spasticity (Anaes.) (See para TN.1.18 of explanatory notes to this Category) Fee: \$164.40 Benefit: 75% = \$123.30	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		13. OTHER THERAPEUTIC PROCEDURES
14242	SUBCUTANEOUS RESERVOIR AND SPINAL CATHETER, insertion of, for the management of severe chronic spasticity (Anaes.) (See para TN.1.18 of explanatory notes to this Category) Fee: \$488.45 Benefit: 75% = \$366.35	
14245	IMMUNOMODULATING AGENT, administration of, by intravenous infusion for at least 2 hours duration - payable once only on the same day and where the agent is provided under section 100 of the Pharmaceutical Benefits Scheme (See para TN.1.19 of explanatory notes to this Category) Fee: \$101.00 Benefit: 75% = \$75.75 85% = \$85.85	
T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		14. MANAGEMENT AND PROCEDURES UNDERTAKEN IN AN EMERGENCY DEPARTMENT
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 14. Management and Procedures Undertaken in an Emergency Department	
14255	Resuscitation of a patient provided for at least 30 minutes but less than 1 hour, by a specialist in the practice of the specialist's specialty of emergency medicine at a recognised emergency department of a private hospital, in conjunction with an attendance on the patient by the specialist described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017 or 5019 (Anaes.) (See para TN.1.24 of explanatory notes to this Category) Fee: \$153.00 Benefit: 75% = \$114.75 85% = \$130.05	
14256	Resuscitation of a patient provided for at least 1 hour but less than 2 hours, by a specialist in the practice of the specialist's specialty of emergency medicine at a recognised emergency department of a private hospital, in conjunction with an attendance on the patient by the specialist described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017 or 5019 (Anaes.) (See para TN.1.24 of explanatory notes to this Category) Fee: \$294.25 Benefit: 75% = \$220.70 85% = \$250.15	
14257	Resuscitation of a patient provided for at least 2 hours, by a specialist in the practice of the specialist's specialty of emergency medicine at a recognised emergency department of a private hospital, in conjunction with an attendance on the patient by the specialist described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017 or 5019 (Anaes.) (See para TN.1.24 of explanatory notes to this Category) Fee: \$586.00 Benefit: 75% = \$439.50 85% = \$501.30	
14258	Resuscitation of a patient provided for at least 30 minutes but less than 1 hour, by a medical practitioner (except a specialist in the practice of the specialist's specialty of emergency medicine) at a recognised emergency department of a private hospital, in conjunction with an attendance on the patient by the practitioner described in item 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036 (Anaes.) (See para TN.1.24 of explanatory notes to this Category) Fee: \$114.80 Benefit: 75% = \$86.10 85% = \$97.60	
14259	Resuscitation of a patient provided for at least 1 hour but less than 2 hours, by a medical practitioner (except a specialist in the practice of the specialist's specialty of emergency medicine) at a recognised emergency department of a private hospital, in conjunction with an attendance on the patient by the practitioner described in item 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036 (Anaes.)	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES

14. MANAGEMENT AND PROCEDURES UNDERTAKEN IN AN EMERGENCY DEPARTMENT

	(See para TN.1.24 of explanatory notes to this Category) Fee: \$220.70 Benefit: 75% = \$165.55 85% = \$187.60
14260	Resuscitation of a patient provided for at least 2 hours, by a medical practitioner (except a specialist in the practice of the specialist's specialty of emergency medicine) at a recognised emergency department of a private hospital, in conjunction with an attendance on the patient by the practitioner described in item 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036 (Anaes.) (See para TN.1.24 of explanatory notes to this Category) Fee: \$439.50 Benefit: 75% = \$329.65 85% = \$373.60
14263	Minor procedure on a patient by a specialist in the practice of the specialist's specialty of emergency medicine at a recognised emergency department of a private hospital, in conjunction with an attendance on the patient by the specialist described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017 or 5019 (Anaes.) (See para TN.1.24 of explanatory notes to this Category) Fee: \$53.85 Benefit: 75% = \$40.40 85% = \$45.80
14264	Procedure (except a minor procedure) on a patient by a specialist in the practice of the specialist's specialty of emergency medicine at a recognised emergency department of a private hospital, in conjunction with an attendance on the patient by the specialist described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017 or 5019 (Anaes.) (See para TN.1.24 of explanatory notes to this Category) Fee: \$121.25 Benefit: 75% = \$90.95 85% = \$103.10
14265	Minor procedure on a patient by a medical practitioner (except a specialist in the practice of the specialist's specialty of emergency medicine) at a recognised emergency department of a private hospital, in conjunction with an attendance on the patient by the practitioner described in item 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036 (Anaes.) (See para TN.1.24 of explanatory notes to this Category) Fee: \$40.40 Benefit: 75% = \$30.30 85% = \$34.35
14266	Procedure (except a minor procedure) on a patient by a medical practitioner (except a specialist in the practice of the specialist's specialty of emergency medicine) at a recognised emergency department of a private hospital, in conjunction with an attendance on the patient by the practitioner described in item 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036 (Anaes.) (See para TN.1.24 of explanatory notes to this Category) Fee: \$90.95 Benefit: 75% = \$68.25 85% = \$77.35
14270	Management, without aftercare, of all fractures and dislocations suffered by a patient that: (a) is provided by a specialist in the practice of the specialist's specialty of emergency medicine in conjunction with an attendance on the patient by the specialist described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017 or 5019; and (b) occurs at a recognised emergency department of a private hospital (Anaes.) (See para TN.1.24 of explanatory notes to this Category) Fee: \$135.95 Benefit: 75% = \$102.00 85% = \$115.60
14272	Management, without aftercare, of all fractures and dislocations suffered by a patient that: (a) is provided by a medical practitioner (except a specialist in the practice of the specialist's specialty of emergency medicine) in conjunction with an attendance on the patient by the practitioner described in item 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036; and (b) occurs at a recognised emergency department of a private hospital (Anaes.)

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		14. MANAGEMENT AND PROCEDURES UNDERTAKEN IN AN EMERGENCY DEPARTMENT
	(See para TN.1.24 of explanatory notes to this Category) Fee: \$102.00 Benefit: 75% = \$76.50 85% = \$86.70	
14277	Application of chemical or physical restraint of a patient by a specialist in the practice of the specialist's speciality of emergency medicine at a recognised emergency department of a private hospital (See para TN.1.24 of explanatory notes to this Category) Fee: \$153.00 Benefit: 75% = \$114.75 85% = \$130.05	
14278	Application of chemical or physical restraint of a patient by a medical practitioner (except a specialist in the practice of the specialist's speciality of emergency medicine) at a recognised emergency department of a private hospital (See para TN.1.24 of explanatory notes to this Category) Fee: \$114.80 Benefit: 75% = \$86.10 85% = \$97.60	
14280	Anaesthesia (whether general anaesthesia or not) of a patient that: (a) is managed by a specialist in the practice of the specialist's speciality of emergency medicine at a recognised emergency department of a private hospital; and (b) occurs in conjunction with an attendance on the patient that is described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017, 5019, 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036; and (c) is not anaesthesia provided by a specialist anaesthetist to which an item in Group T7 or T10 applies (See para TN.1.24 of explanatory notes to this Category) Fee: \$153.00 Benefit: 75% = \$114.75 85% = \$130.05	
14283	Anaesthesia (whether general anaesthesia or not) of a patient that: (a) is managed by a medical practitioner (except a specialist in the practice of the specialist's speciality of emergency medicine) at a recognised emergency department of a private hospital; and (b) occurs in conjunction with an attendance on the patient that is described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017, 5019, 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036; and (c) is not anaesthesia provided by a specialist anaesthetist to which an item in Group T7 or T10 applies (See para TN.1.24 of explanatory notes to this Category) Fee: \$114.80 Benefit: 75% = \$86.10 85% = \$97.60	
14285	Emergent intubation, airway management or both of a patient that: (a) is managed by a specialist in the practice of the specialist's speciality of emergency medicine at a recognised emergency department of a private hospital; and (b) occurs in conjunction with an attendance on the patient that is described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017, 5019, 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036; and (c) is not anaesthesia provided by a specialist anaesthetist to which an item in Group T7 or T10 applies (See para TN.1.24 of explanatory notes to this Category) Fee: \$153.00 Benefit: 75% = \$114.75 85% = \$130.05	
14288	Emergent intubation, airway management or both of a patient that: (a) is managed by a medical practitioner (except a specialist in the practice of the specialist's speciality of emergency medicine) at a recognised emergency department of a private hospital; and (b) occurs in conjunction with an attendance on the patient that is described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017, 5019, 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036; and (c) is not anaesthesia provided by a specialist anaesthetist to which an item in Group T7 or T10 applies (See para TN.1.24 of explanatory notes to this Category) Fee: \$114.80 Benefit: 75% = \$86.10 85% = \$97.60	
T2. RADIATION ONCOLOGY		1. SUPERFICIAL

T2. RADIATION ONCOLOGY		1. SUPERFICIAL
	Group T2. Radiation Oncology	
	Subgroup 1. Superficial	
	<i>(Benefits for administration of general anaesthetic for radiotherapy are payable under Group T10)</i>	
	RADIOTHERAPY, SUPERFICIAL (including treatment with xrays, radium rays or other radioactive substances), not being a service to which another item in this Group applies each attendance at which fractionated treatment is given - 1 field	
15000	Fee: \$43.90	Benefit: 75% = \$32.95 85% = \$37.35
	Radiotherapy, superficial (including treatment with x-rays, radium rays or other radioactive substances), not being a service to which another item in this Group applies - each attendance at which fractionated treatment is given - 2 or more fields up to a maximum of 5 additional fields	
15003	Derived Fee: The fee for item 15000 plus for each field in excess of 1, an amount of \$17.60	
	RADIOTHERAPY, SUPERFICIAL, attendance at which single dose technique is applied - 1 field	
15006	Fee: \$97.30	Benefit: 75% = \$73.00 85% = \$82.75
	Radiotherapy, superficial attendance at which a single dose technique is applied - 2 or more fields up to a maximum of 5 additional fields	
15009	Derived Fee: The fee for item 15006 plus for each field in excess of 1, an amount of \$19.15	
	RADIOTHERAPY, SUPERFICIAL each attendance at which treatment is given to an eye	
15012	Fee: \$55.10	Benefit: 75% = \$41.35 85% = \$46.85
T2. RADIATION ONCOLOGY		2. ORTHOVOLTAGE
	Group T2. Radiation Oncology	
	Subgroup 2. Orthovoltage	
	RADIOTHERAPY, DEEP OR ORTHOVOLTAGE each attendance at which fractionated treatment is given at 3 or more treatments per week - 1 field (See para TN.2.1 of explanatory notes to this Category)	
15100	Fee: \$49.20	Benefit: 75% = \$36.90 85% = \$41.85
15103	Radiotherapy, deep or orthovoltage each attendance at which fractionated treatment is given at 3 or more treatments per week - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3	

T2. RADIATION ONCOLOGY		2. ORTHOVOLTAGE
	fields)	
	(See para TN.2.1 of explanatory notes to this Category) Derived Fee: The fee for item 15100 plus for each field in excess of 1, an amount of \$19.40	
15106	RADIOTHERAPY, DEEP OR ORTHOVOLTAGE each attendance at which fractionated treatment is given at 2 treatments per week or less frequently - 1 field Fee: \$58.05 Benefit: 75% = \$43.55 85% = \$49.35	
15109	Radiotherapy, deep or orthovoltage each attendance at which fractionated treatment is given at 2 treatments per week or less frequently - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) Derived Fee: The fee for item 15106 plus for each field in excess of 1, an amount of \$23.40	
15112	RADIOTHERAPY, DEEP OR ORTHOVOLTAGE attendance at which single dose technique is applied 1 field Fee: \$124.00 Benefit: 75% = \$93.00 85% = \$105.40	
15115	Radiotherapy, deep or orthovoltage attendance at which a single dose technique is applied - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) Derived Fee: The fee for item 15112 plus for each field in excess of 1, an amount of \$48.75	
T2. RADIATION ONCOLOGY		3. MEGAVOLTAGE
	Group T2. Radiation Oncology	
		Subgroup 3. Megavoltage
15211	RADIATION ONCOLOGY TREATMENT, using cobalt unit or caesium teletherapy unit each attendance at which treatment is given - 1 field Fee: \$56.45 Benefit: 75% = \$42.35 85% = \$48.00	
15214	Radiation oncology treatment, using cobalt unit or caesium teletherapy unit - each attendance at which treatment is given 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) Derived Fee: The fee for item 15211 plus for each field in excess of 1, an amount of \$32.90	
15215	RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to	

T2. RADIATION ONCOLOGY		3. MEGAVOLTAGE
	primary site (lung) Fee: \$61.50 Benefit: 75% = \$46.15 85% = \$52.30	
15218	RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to primary site (prostate) Fee: \$61.50 Benefit: 75% = \$46.15 85% = \$52.30	
15221	RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to primary site (breast) Fee: \$61.50 Benefit: 75% = \$46.15 85% = \$52.30	
15224	RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to primary site for diseases and conditions not covered by items 15215, 15218 and 15221 Fee: \$61.50 Benefit: 75% = \$46.15 85% = \$52.30	
15227	RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to secondary site Fee: \$61.50 Benefit: 75% = \$46.15 85% = \$52.30	
15230	RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site (lung) Derived Fee: The fee for item 15215 plus for each field in excess of 1, an amount of \$39.15	
15233	RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site (prostate) Derived Fee: The fee for item 15218 plus for each field in excess of 1, an amount of \$39.15	
15236	RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site (breast) Derived Fee: The fee for item 15221 plus for each field in excess of 1, an amount of \$39.15	
15239	RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site for diseases and conditions not covered by items 15230, 15233 or 15236 Derived Fee: The fee for item 15224 plus for each field in excess of 1, an amount of \$39.15	
15242	RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to secondary site Derived Fee: The fee for item 15227 plus for each field in excess of 1, an amount of \$39.15	

T2. RADIATION ONCOLOGY		3. MEGAVOLTAGE
15245	RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to primary site (lung) Fee: \$61.50 Benefit: 75% = \$46.15 85% = \$52.30	
15248	RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to primary site (prostate) Fee: \$61.50 Benefit: 75% = \$46.15 85% = \$52.30	
15251	RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to primary site (breast) Fee: \$61.50 Benefit: 75% = \$46.15 85% = \$52.30	
15254	RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to primary site for diseases and conditions not covered by items 15245, 15248 or 15251 Fee: \$61.50 Benefit: 75% = \$46.15 85% = \$52.30	
15257	RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to secondary site Fee: \$61.50 Benefit: 75% = \$46.15 85% = \$52.30	
15260	RADIATION ORADIATION ONCOLOGY treatment, using a dual photon energy linear accelerator with a minimum higher energy of at least 10mv photons, with electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site (lung) Derived Fee: The fee for item 15245 plus for each field in excess of 1, an amount of \$39.15	
15263	RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site (prostate) Derived Fee: The fee for item 15248 plus for each field in excess of 1, an amount of \$39.15	
15266	RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site (breast) Derived Fee: The fee for item 15251 plus for each field in excess of 1, an amount of \$39.15	
15269	RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site for diseases and conditions not covered by items 15260, 15263 or 15266 Derived Fee: The fee for item 15254 plus for each field in excess of 1, an amount of \$39.15	

T2. RADIATION ONCOLOGY		3. MEGAVOLTAGE
15272	<p>RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to secondary site</p> <p>Derived Fee: The fee for item 15257 plus for each field in excess of 1, an amount of \$39.15</p>	
15275	<p>RADIATION ONCOLOGY TREATMENT with IGRT imaging facilities undertaken:</p> <p>(a) to implement an IMRT dosimetry plan prepared in accordance with item 15565; and</p> <p>(b) utilising an intensity modulated treatment delivery mode (delivered by a fixed or dynamic gantry linear accelerator or by a helical non C-arm based linear accelerator), once only at each attendance at which treatment is given.</p> <p>Fee: \$188.65 Benefit: 75% = \$141.50 85% = \$160.40</p>	
T2. RADIATION ONCOLOGY		4. BRACHYTHERAPY
	Group T2. Radiation Oncology	
	Subgroup 4. Brachytherapy	
15303	<p>INTRAUTERINE TREATMENT ALONE using radioactive sealed sources having a half-life greater than 115 days using manual afterloading techniques (Anaes.)</p> <p>Fee: \$368.15 Benefit: 75% = \$276.15 85% = \$312.95</p>	
15304	<p>INTRAUTERINE TREATMENT ALONE using radioactive sealed sources having a half-life greater than 115 days using automatic afterloading techniques (Anaes.)</p> <p>Fee: \$368.15 Benefit: 75% = \$276.15 85% = \$312.95</p>	
15307	<p>INTRAUTERINE TREATMENT ALONE using radioactive sealed sources having a half-life of less than 115 days including iodine, gold, iridium or tantalum using manual afterloading techniques (Anaes.)</p> <p>Fee: \$697.95 Benefit: 75% = \$523.50 85% = \$613.25</p>	
15308	<p>INTRAUTERINE TREATMENT ALONE using radioactive sealed sources having a half-life of less than 115 days including iodine, gold, iridium or tantalum using automatic afterloading techniques (Anaes.)</p> <p>Fee: \$697.95 Benefit: 75% = \$523.50 85% = \$613.25</p>	
15311	<p>INTRAVAGINAL TREATMENT ALONE using radioactive sealed sources having a half-life greater than 115 days using manual afterloading techniques (Anaes.)</p> <p>Fee: \$343.65 Benefit: 75% = \$257.75 85% = \$292.15</p>	
15312	<p>INTRAVAGINAL TREATMENT ALONE using radioactive sealed sources having a half-life greater than 115 days using automatic afterloading techniques (Anaes.)</p> <p>Fee: \$341.15 Benefit: 75% = \$255.90 85% = \$290.00</p>	
15315	<p>INTRAVAGINAL TREATMENT ALONE using radioactive sealed sources having a half-life of less than 115 days including iodine, gold, iridium or tantalum using manual afterloading techniques (Anaes.)</p> <p>Fee: \$674.65 Benefit: 75% = \$506.00 85% = \$589.95</p>	
15316	<p>INTRAVAGINAL TREATMENT ALONE using radioactive sealed sources having a half-life of less than 115 days including iodine, gold, iridium or tantalum using automatic afterloading techniques</p>	

T2. RADIATION ONCOLOGY		4. BRACHYTHERAPY
	(Anaes.) Fee: \$674.65 Benefit: 75% = \$506.00 85% = \$589.95	
15319	COMBINED INTRAUTERINE AND INTRAVAGINAL TREATMENT using radioactive sealed sources having a half-life greater than 115 days using manual afterloading techniques (Anaes.) Fee: \$418.75 Benefit: 75% = \$314.10 85% = \$355.95	
15320	COMBINED INTRAUTERINE AND INTRAVAGINAL TREATMENT using radioactive sealed sources having a half-life greater than 115 days using automatic afterloading techniques (Anaes.) Fee: \$418.75 Benefit: 75% = \$314.10 85% = \$355.95	
15323	COMBINED INTRAUTERINE AND INTRAVAGINAL TREATMENT using radioactive sealed sources having a half-life of less than 115 days including iodine, gold, iridium or tantalum using manual afterloading techniques (Anaes.) Fee: \$744.55 Benefit: 75% = \$558.45 85% = \$659.85	
15324	COMBINED INTRAUTERINE AND INTRAVAGINAL TREATMENT using radioactive sealed sources having a half-life of less than 115 days including iodine, gold, iridium or tantalum using automatic afterloading techniques (Anaes.) Fee: \$744.55 Benefit: 75% = \$558.45 85% = \$659.85	
15327	IMPLANTATION OF A SEALED RADIOACTIVE SOURCE (having a half-life of less than 115 days including iodine, gold, iridium or tantalum) to a region, under general anaesthesia, or epidural or spinal (intrathecal) nerve block, requiring surgical exposure and using manual afterloading techniques (Anaes.) Fee: \$809.95 Benefit: 75% = \$607.50 85% = \$725.25	
15328	IMPLANTATION OF A SEALED RADIOACTIVE SOURCE (having a half-life of less than 115 days including iodine, gold, iridium or tantalum) to a region, under general anaesthesia, or epidural or spinal (intrathecal) nerve block, requiring surgical exposure and using automatic afterloading techniques (Anaes.) Fee: \$809.95 Benefit: 75% = \$607.50 85% = \$725.25	
15331	IMPLANTATION OF A SEALED RADIOACTIVE SOURCE (having a half-life of less than 115 days including iodine, gold, iridium or tantalum) to a site (including the tongue, mouth, salivary gland, axilla, subcutaneous sites), where the volume treated involves multiple planes but does not require surgical exposure and using manual afterloading techniques (Anaes.) Fee: \$769.10 Benefit: 75% = \$576.85 85% = \$684.40	
15332	IMPLANTATION OF A SEALED RADIOACTIVE SOURCE (having a half-life of less than 115 days including iodine, gold, iridium or tantalum) to a site (including the tongue, mouth, salivary gland, axilla, subcutaneous sites), where the volume treated involves multiple planes but does not require surgical exposure and using automatic afterloading techniques (Anaes.) Fee: \$769.10 Benefit: 75% = \$576.85 85% = \$684.40	
15335	IMPLANTATION OF A SEALED RADIOACTIVE SOURCE (having a half-life of less than 115 days including iodine, gold, iridium or tantalum) to a site where the volume treated involves only a single plane but does not require surgical exposure and using manual afterloading techniques (Anaes.) Fee: \$697.95 Benefit: 75% = \$523.50 85% = \$613.25	
15336	IMPLANTATION OF A SEALED RADIOACTIVE SOURCE (having a half-life of less than 115 days including iodine, gold, iridium or tantalum) to a site where the volume treated involves only a single	

T2. RADIATION ONCOLOGY		4. BRACHY THERAPY
	plane but does not require surgical exposure and using automatic afterloading techniques (Anaes.) Fee: \$697.95 Benefit: 75% = \$523.50 85% = \$613.25	
15338	PROSTATE, radioactive seed implantation of, radiation oncology component, using transrectal ultrasound guidance, for localised prostatic malignancy at clinical stages T1 (clinically inapparent tumour not palpable or visible by imaging) or T2 (tumour confined within prostate), with a Gleason score of less than or equal to 7 and a prostate specific antigen (PSA) of less than or equal to 10ng/ml at the time of diagnosis. The procedure must be performed at an approved site in association with a urologist. (See para TN.2.2 of explanatory notes to this Category) Fee: \$964.80 Benefit: 75% = \$723.60 85% = \$880.10	
15339	REMOVAL OF A SEALED RADIOACTIVE SOURCE under general anaesthesia, or under epidural or spinal nerve block (Anaes.) Fee: \$78.55 Benefit: 75% = \$58.95 85% = \$66.80	
15342	CONSTRUCTION AND APPLICATION OF A RADIOACTIVE MOULD using a sealed source having a half-life of greater than 115 days, to treat intracavity, intraoral or intranasal site Fee: \$196.25 Benefit: 75% = \$147.20 85% = \$166.85	
15345	CONSTRUCTION AND APPLICATION OF A RADIOACTIVE MOULD using a sealed source having a half-life of less than 115 days including iodine, gold, iridium or tantalum to treat intracavity, intraoral or intranasal sites Fee: \$523.65 Benefit: 75% = \$392.75 85% = \$445.15	
15348	SUBSEQUENT APPLICATIONS OF RADIOACTIVE MOULD referred to in item 15342 or 15345 each attendance Fee: \$60.25 Benefit: 75% = \$45.20 85% = \$51.25	
15351	CONSTRUCTION WITH OR WITHOUT INITIAL APPLICATION OF RADIOACTIVE MOULD not exceeding 5 cm. diameter to an external surface Fee: \$120.25 Benefit: 75% = \$90.20 85% = \$102.25	
15354	CONSTRUCTION AND INITIAL APPLICATION OF RADIOACTIVE MOULD 5 cm. or more in diameter to an external surface Fee: \$145.90 Benefit: 75% = \$109.45 85% = \$124.05	
15357	"SUBSEQUENT APPLICATIONS OF RADIOACTIVE MOULD, attendance upon a patient to apply a radioactive mould constructed for application to an external surface of the patient other than an attendance which is the first attendance to apply the mould each attendance" Fee: \$41.30 Benefit: 75% = \$31.00 85% = \$35.15

T2. RADIATION ONCOLOGY		7. RADIATION ONCOLOGY TREATMENT VERIFICATION
	Group T2. Radiation Oncology	
	Subgroup 7. Radiation Oncology Treatment Verification	
15700	<p>RADIATION ONCOLOGY TREATMENT VERIFICATION - single projection (with single or double exposures) - when prescribed and reviewed by a radiation oncologist and not associated with item 15705 or 15710 - each attendance at which treatment is verified (ie maximum one per attendance).</p> <p>(See para TN.2.4 of explanatory notes to this Category)</p> <p>Fee: \$47.40 Benefit: 75% = \$35.55 85% = \$40.30</p>	
15705	<p>RADIATION ONCOLOGY TREATMENT VERIFICATION - multiple projection acquisition when prescribed and reviewed by a radiation oncologist and not associated with item 15700 or 15710 - each attendance at which treatment involving three or more fields is verified (ie maximum one per attendance).</p> <p>(See para TN.2.4 of explanatory notes to this Category)</p> <p>Fee: \$79.00 Benefit: 75% = \$59.25 85% = \$67.15</p>	
15710	<p>RADIATION ONCOLOGY TREATMENT VERIFICATION - volumetric acquisition, when prescribed and reviewed by a radiation oncologist and not associated with item 15700 or 15705 - each attendance at which treatment involving three fields or more is verified (ie maximum one per attendance).</p> <p>(see para T2.5 of explanatory notes to this Category)</p> <p>(See para TN.2.4 of explanatory notes to this Category)</p> <p>Fee: \$79.00 Benefit: 75% = \$59.25 85% = \$67.15</p>	
15715	<p>RADIATION ONCOLOGY TREATMENT VERIFICATION of planar or volumetric IGRT for IMRT, involving the use of at least 2 planar image views or projections or 1 volumetric image set to facilitate a 3-dimensional adjustment to radiation treatment field positioning, if:</p> <p>(a) the treatment technique is classified as IMRT; and</p> <p>(b) the margins applied to volumes (clinical target volume or planning target volume) are tailored or reduced to minimise treatment related exposure of healthy or normal tissues; and</p> <p>(c) the decisions made using acquired images are based on action algorithms and are given effect immediately prior to or during treatment delivery by qualified and trained staff considering complex competing factors and using software driven modelling programs; and</p> <p>(d) the radiation treatment field positioning requires accuracy levels of less than 5mm (curative cases) or up to 10mm (palliative cases) to ensure accurate dose delivery to the target; and</p> <p>(e) the image decisions and actions are documented in the patient's record; and</p> <p>(f) the radiation oncologist is responsible for supervising the process, including specifying the type and frequency of imaging, tolerance and action levels to be incorporated in the process, reviewing the trend analysis and any reports and relevant images during the treatment course and specifying action protocols as required; and</p> <p>(g) when treatment adjustments are inadequate to satisfy treatment protocol requirements, replanning is required; and</p> <p>(h) the imaging infrastructure (hardware and software) is linked to the treatment unit and networked to</p>	

T2. RADIATION ONCOLOGY		7. RADIATION ONCOLOGY TREATMENT VERIFICATION
	an image database, enabling both on line and off line reviews. (See para TN.2.4 of explanatory notes to this Category) Fee: \$79.00 Benefit: 75% = \$59.25 85% = \$67.15	
T2. RADIATION ONCOLOGY		8. BRACHYTHERAPY PLANNING AND VERIFICATION
	Group T2. Radiation Oncology	
	Subgroup 8. Brachytherapy Planning And Verification	
15800	BRACHYTHERAPY TREATMENT VERIFICATION - maximum of one only for each attendance. (See para TN.2.4 of explanatory notes to this Category) Fee: \$99.30 Benefit: 75% = \$74.50 85% = \$84.45	
15850	RADIATION SOURCE LOCALISATION using a simulator, x-ray machine, CT or ultrasound of a single area, where views in more than one plane are required, for brachytherapy treatment planning, not being a service to which Item 15513 applies. Fee: \$205.75 Benefit: 75% = \$154.35 85% = \$174.90	
T2. RADIATION ONCOLOGY		10. TARGETED INTRAOPERATIVE RADIOTHERAPY
	Group T2. Radiation Oncology	
	Subgroup 10. Targeted Intraoperative Radiotherapy	
	INTRAOPERATIVE RADIOTHERAPY	
15900	BREAST, MALIGNANT TUMOUR, targeted intraoperative radiotherapy, using an Intrabeam® device, delivered at the time of breast-conserving surgery (partial mastectomy or lumpectomy) for a patient who: a) is 45 years of age or more; and b) has a T1 or small T2 (less than or equal to 3cm in diameter) primary tumour; and c) has an histologic Grade 1 or 2 tumour; and d) has an oestrogen-receptor positive tumour; and e) has a node negative malignancy; and f) is suitable for wide local excision of a primary invasive ductal carcinoma that was diagnosed as unifocal on conventional examination and imaging; and g) has no contra-indications to breast irradiation Fee: \$257.80 Benefit: 75% = \$193.35	
T3. THERAPEUTIC NUCLEAR MEDICINE		
	Group T3. Therapeutic Nuclear Medicine	

T3. THERAPEUTIC NUCLEAR MEDICINE	
16003	<p>INTRACAVITY ADMINISTRATION OF A THERAPEUTIC DOSE OF YTTRIUM 90 not including preliminary paracentesis, not being a service associated with selective internal radiation therapy or to which item 35404, 35406 or 35408 applies (Anaes.)</p> <p>(See para TN.3.1 of explanatory notes to this Category)</p> <p>Fee: \$670.80 Benefit: 75% = \$503.10 85% = \$586.10</p>
16006	<p>ADMINISTRATION OF A THERAPEUTIC DOSE OF IODINE 131 for thyroid cancer by single dose technique</p> <p>Fee: \$515.45 Benefit: 75% = \$386.60 85% = \$438.15</p>
16009	<p>ADMINISTRATION OF A THERAPEUTIC DOSE OF IODINE 131 for thyrotoxicosis by single dose technique</p> <p>Fee: \$351.80 Benefit: 75% = \$263.85 85% = \$299.05</p>
16012	<p>INTRAVENOUS ADMINISTRATION OF A THERAPEUTIC DOSE OF PHOSPHOROUS 32</p> <p>Fee: \$304.35 Benefit: 75% = \$228.30 85% = \$258.70</p>
16015	<p>ADMINISTRATION OF STRONTIUM 89 for painful bony metastases from carcinoma of the prostate where hormone therapy has failed and either:</p> <p>(i) the disease is poorly controlled by conventional radiotherapy; or</p> <p>(ii) conventional radiotherapy is inappropriate, due to the wide distribution of sites of bone pain</p> <p>Fee: \$4,213.30 Benefit: 75% = \$3160.00 85% = \$4128.60</p>
16018	<p>ADMINISTRATION OF ¹⁵³SM-LEXIDRONAM for the relief of bone pain due to skeletal metastases (as indicated by a positive bone scan) where hormonal therapy and/or chemotherapy have failed and either the disease is poorly controlled by conventional radiotherapy or conventional radiotherapy is inappropriate, due to the wide distribution of sites of bone pain.</p> <p>Fee: \$2,518.75 Benefit: 75% = \$1889.10 85% = \$2434.05</p>
T4. OBSTETRICS	
	Group T4. Obstetrics
16399	<p>Professional attendance on a patient by a specialist practising in his or her specialty of obstetrics if:</p> <p>(a) the attendance is by video conference; and</p> <p>(b) item 16401, 16404, 16406, 16500, 16590 or 16591 applies to the attendance; and</p> <p>(c) the patient is not an admitted patient; and</p> <p>(d) the patient:</p> <p>(i) is located both:</p> <p>(A) within a telehealth eligible area; and</p> <p>(B) at the time of the attendance-at least 15 kms by road from the specialist; or</p> <p>(ii) is a care recipient in a residential care service; or</p>

T4. OBSTETRICS	
	<p>(iii) is a patient of:</p> <p>(A) an Aboriginal Medical Service; or</p> <p>(B) an Aboriginal Community Controlled Health Service for which a direction made under subsection 19 (2) of the Act applies</p> <p>(See para TN.4.12 of explanatory notes to this Category) Derived Fee: 50% of the fee for item 16401,16404,16406,16500,16590 or 16591. Benefit: 85% of the derived fee Extended Medicare Safety Net Cap: \$24.50</p>
16400	<p>ANTENATAL CARE Antenatal service provided by a midwife, nurse or an Aboriginal and Torres Strait Islander health practitioner: (a) the service is provided on behalf of, and under the supervision of, a medical practitioner; (b) the service is provided at, or from, a practice location in a regional, rural or remote area; (c) the service is not performed in conjunction with another antenatal attendance item (same patient, same practitioner on the same day); (d) the service is not provided for an admitted patient of a hospital; and to a maximum of 10 service per pregnancy</p> <p>(See para TN.4.1, TN.4.15 of explanatory notes to this Category) Fee: \$28.10 Benefit: 85% = \$23.90 Extended Medicare Safety Net Cap: \$11.25</p>
16401	<p>Professional attendance at consulting rooms or a hospital by a specialist in the practice of his or her specialty of obstetrics, after referral of the patient to him or her - each attendance, other than a second or subsequent attendance in a single course of treatment</p> <p>(See para TN.4.2 of explanatory notes to this Category) Fee: \$88.20 Benefit: 75% = \$66.15 85% = \$75.00 Extended Medicare Safety Net Cap: \$55.80</p>
16404	<p>Professional attendance at consulting rooms or a hospital by a specialist in the practice of his or her specialty of obstetrics after referral of the patient to him or her - each attendance SUBSEQUENT to the first attendance in a single course of treatment.</p> <p>(See para AN.0.70, TN.4.2 of explanatory notes to this Category) Fee: \$44.35 Benefit: 75% = \$33.30 85% = \$37.70 Extended Medicare Safety Net Cap: \$33.50</p>
16406	<p>Antenatal professional attendance, by an obstetrician or general practitioner, as part of a single course of treatment when the patient is referred by a participating midwife. Payable only once for a pregnancy</p> <p>Fee: \$138.15 Benefit: 75% = \$103.65 85% = \$117.45 Extended Medicare Safety Net Cap: \$109.90</p>
16407	<p>Postnatal professional attendance (other than a service to which any other item applies) if the attendance:</p> <p>(a) is by an obstetrician or general practitioner; and</p> <p>(b) is in hospital or at consulting rooms; and</p> <p>(c) is between 4 and 8 weeks after the birth; and</p> <p>(d) lasts at least 20 minutes; and</p> <p>(e) includes a mental health assessment (including screening for drug and alcohol use and domestic violence) of the patient; and</p> <p>(f) is for a pregnancy in relation to which a service to which item 82140 applies is not provided</p>

T4. OBSTETRICS	
	<p>Payable once only for a pregnancy</p> <p>(See para TN.4.13, TN.4.15 of explanatory notes to this Category)</p> <p>Fee: \$73.95 Benefit: 75% = \$55.50 85% = \$62.90</p> <p>Extended Medicare Safety Net Cap: \$48.10</p>
16408	<p>Postnatal attendance (other than attendance at consulting rooms, a hospital or a residential aged care facility or a service to which any other item applies) if the attendance:</p> <p>(a) is by:</p> <p style="padding-left: 40px;">(i) a midwife (on behalf of and under the supervision of the medical practitioner who attended the birth); or</p> <p style="padding-left: 40px;">(ii) an obstetrician; or</p> <p style="padding-left: 40px;">(iii) a general practitioner; and</p> <p>(b) is between 1 week and 4 weeks after the birth; and</p> <p>(c) lasts at least 20 minutes; and</p> <p>(d) is for a patient who was privately admitted for the birth; and</p> <p>(e) is for a pregnancy in relation to which a service to which item 82130, 82135 or 82140 applies is not provided</p> <p>Payable once only for a pregnancy</p> <p>(See para TN.4.15 of explanatory notes to this Category)</p> <p>Fee: \$55.05 Benefit: 85% = \$46.80</p> <p>Extended Medicare Safety Net Cap: \$35.80</p>
16500	<p>ANTENATAL ATTENDANCE</p> <p>(See para TN.4.3, TN.4.15 of explanatory notes to this Category)</p> <p>Fee: \$48.60 Benefit: 75% = \$36.45 85% = \$41.35</p> <p>Extended Medicare Safety Net Cap: \$33.50</p>
16501	<p>EXTERNAL CEPHALIC VERSION for breech presentation, after 36 weeks where no contraindication exists, in a Unit with facilities for Caesarean Section, including pre- and post version CTG, with or without tocolysis, not being a service to which items 55718 to 55728 and 55768 to 55774 apply - chargeable whether or not the version is successful and limited to a maximum of 2 ECV's per pregnancy</p> <p>(See para TN.4.3, TN.4.4 of explanatory notes to this Category)</p> <p>Fee: \$144.95 Benefit: 75% = \$108.75 85% = \$123.25</p> <p>Extended Medicare Safety Net Cap: \$66.95</p>
16502	<p>POLYHYDRAMNIOS, UNSTABLE LIE, MULTIPLE PREGNANCY, PREGNANCY COMPLICATED BY DIABETES OR ANAEMIA, THREATENED PREMATURE LABOUR treated by bed rest only or oral medication, requiring admission to hospital each attendance that is not a routine antenatal attendance, to a maximum of 1 visit per day</p> <p>(See para TN.4.3 of explanatory notes to this Category)</p> <p>Fee: \$48.60 Benefit: 75% = \$36.45 85% = \$41.35</p> <p>Extended Medicare Safety Net Cap: \$22.35</p>
16505	<p>THREATENED ABORTION, THREATENED MISCARRIAGE OR HYPEREMESIS GRAVIDARUM, requiring admission to hospital, treatment of each attendance that is not a routine</p>

T4. OBSTETRICS	
	antenatal attendance (See para TN.4.3 of explanatory notes to this Category) Fee: \$48.60 Benefit: 75% = \$36.45 85% = \$41.35 Extended Medicare Safety Net Cap: \$22.35
16508	Pregnancy complicated by acute intercurrent infection, fetal growth restriction, threatened premature labour with ruptured membranes or threatened premature labour treated by intravenous therapy, requiring admission to hospital - each professional attendance (other than a service to which item 16533 applies) that is not a routine antenatal attendance, to a maximum of one visit per day (See para TN.4.3 of explanatory notes to this Category) Fee: \$48.60 Benefit: 75% = \$36.45 85% = \$41.35 Extended Medicare Safety Net Cap: \$22.35
16509	Pre-eclampsia, eclampsia or antepartum haemorrhage, treatment of - each professional attendance (other than a service to which item 16534 applies) that is not a routine antenatal attendance (See para TN.4.3 of explanatory notes to this Category) Fee: \$48.60 Benefit: 75% = \$36.45 85% = \$41.35 Extended Medicare Safety Net Cap: \$22.35
16511	CERVIX, purse string ligation of (Anaes.) (See para TN.4.3 of explanatory notes to this Category) Fee: \$226.80 Benefit: 75% = \$170.10 85% = \$192.80 Extended Medicare Safety Net Cap: \$111.50
16512	CERVIX, removal of purse string ligature of (Anaes.) (See para TN.4.3 of explanatory notes to this Category) Fee: \$65.45 Benefit: 75% = \$49.10 85% = \$55.65 Extended Medicare Safety Net Cap: \$33.50
16514	ANTENATAL CARDIOTOCOGRAPHY in the management of high risk pregnancy (not during the course of the confinement) (See para TN.4.3 of explanatory notes to this Category) Fee: \$37.80 Benefit: 75% = \$28.35 85% = \$32.15 Extended Medicare Safety Net Cap: \$16.80
16515	Management of vaginal birth as an independent procedure, if the patient's care has been transferred by another medical practitioner for management of the birth and the attending medical practitioner has not provided antenatal care to the patient, including all attendances related to the birth (Anaes.) (See para TN.4.5, TN.4.10 of explanatory notes to this Category) Fee: \$650.55 Benefit: 75% = \$487.95 85% = \$565.85 Extended Medicare Safety Net Cap: \$178.40
16518	Management of labour, incomplete, if the patient's care has been transferred to another medical practitioner for completion of the birth (Anaes.) (See para TN.4.5, TN.4.10 of explanatory notes to this Category) Fee: \$464.70 Benefit: 75% = \$348.55 85% = \$395.00 Extended Medicare Safety Net Cap: \$178.40
16519	Management of labour and birth by any means (including Caesarean section) including post-partum care for 5 days (Anaes.) (See para TN.4.5, TN.4.6, TN.4.10 of explanatory notes to this Category) Fee: \$715.65 Benefit: 75% = \$536.75 85% = \$630.95

T4. OBSTETRICS	
	Extended Medicare Safety Net Cap: \$334.40
16520	<p>Caesarean section and post-operative care for 7 days, if the patient's care has been transferred by another medical practitioner for management of the confinement and the attending medical practitioner has not provided any of the antenatal care (Anaes.)</p> <p>(See para TN.4.6, TN.4.10 of explanatory notes to this Category) Fee: \$650.55 Benefit: 75% = \$487.95 85% = \$565.85 Extended Medicare Safety Net Cap: \$334.40</p>
16522	<p>Management of labour and birth, or birth alone, (including caesarean section), on or after 23 weeks gestation, if in the course of antenatal supervision or intrapartum management one or more of the following conditions is present, including postnatal care for 7 days:</p> <ul style="list-style-type: none"> (a) fetal loss; (b) multiple pregnancy; (c) antepartum haemorrhage that is: <ul style="list-style-type: none"> (i) of greater than 200 ml; or (ii) associated with disseminated intravascular coagulation; (d) placenta praevia on ultrasound in the third trimester with the placenta within 2 cm of the internal cervical os; (e) baby with a birth weight less than or equal to 2,500 g; (f) trial of vaginal birth in a patient with uterine scar where there has been a planned vaginal birth after caesarean section; (g) trial of vaginal breech birth where there has been a planned vaginal breech birth; (h) prolonged labour greater than 12 hours with partogram evidence of abnormal cervimetric progress as evidenced by cervical dilatation at less than 1 cm/hr in the active phase of labour (after 3 cm cervical dilatation and effacement until full dilatation of the cervix); (i) acute fetal compromise evidenced by: <ul style="list-style-type: none"> (i) scalp pH less than 7.15; or (ii) scalp lactate greater than 4.0; (j) acute fetal compromise evidenced by at least one of the following significant cardiotocograph abnormalities: <ul style="list-style-type: none"> (i) prolonged bradycardia (less than 100 bpm for more than 2 minutes); (ii) absent baseline variability (less than 3 bpm); (iii) sinusoidal pattern; (iv) complicated variable decelerations with reduced (3 to 5 bpm) or absent baseline variability; (v) late decelerations;

T4. OBSTETRICS

- (k) pregnancy induced hypertension of at least 140/90 mm Hg associated with:
- (i) at least 2+ proteinuria on urinalysis; or
 - (ii) protein-creatinine ratio greater than 30 mg/mmol; or
 - (iii) platelet count less than $150 \times 10^9/L$; or
 - (iv) uric acid greater than 0.36 mmol/L;
- (l) gestational diabetes mellitus requiring at least daily blood glucose monitoring;
- (m) mental health disorder (whether arising prior to pregnancy, during pregnancy or postpartum) that is demonstrated by:
- (i) the patient requiring hospitalisation; or
 - (ii) the patient receiving ongoing care by a psychologist or psychiatrist to treat the symptoms of a mental health disorder; or
 - (iii) the patient having a GP mental health treatment plan; or
 - (iv) the patient having a management plan prepared in accordance with item 291;
- (n) disclosure or evidence of domestic violence;
- (o) any of the following conditions either diagnosed pre-pregnancy or evident at the first antenatal visit before 20 weeks gestation:
- (i) pre-existing hypertension requiring antihypertensive medication prior to pregnancy;
 - (ii) cardiac disease (co-managed with a specialist physician and with echocardiographic evidence of myocardial dysfunction);
 - (iii) previous renal or liver transplant;
 - (iv) renal dialysis;
 - (v) chronic liver disease with documented oesophageal varices;
 - (vi) renal insufficiency in early pregnancy (serum creatinine greater than 110 $\mu\text{mol/L}$);
 - (vii) neurological disorder that confines the patient to a wheelchair throughout pregnancy;
 - (viii) maternal height of less than 148 cm;
 - (ix) a body mass index greater than or equal to 40;
 - (x) pre-existing diabetes mellitus on medication prior to pregnancy;
 - (xi) thyrotoxicosis requiring medication;
 - (xii) previous thrombosis or thromboembolism requiring anticoagulant therapy through pregnancy and the early puerperium;
 - (xiii) thrombocytopenia with platelet count of less than 100,000 prior to 20 weeks gestation;

T4. OBSTETRICS	
	<p>(xiv) HIV, hepatitis B or hepatitis C carrier status positive;</p> <p>(xv) red cell or platelet iso-immunisation;</p> <p>(xvi) cancer with metastatic disease;</p> <p>(xvii) illicit drug misuse during pregnancy (Anaes.)</p> <p>(See para TN.4.7 of explanatory notes to this Category) Fee: \$1,680.25 Benefit: 75% = \$1260.20</p>
16527	<p>Management of vaginal birth, if the patient's care has been transferred by a participating midwife for management of the birth, including all attendances related to the birth. Payable once only for a pregnancy.</p> <p>(Anaes.)</p> <p>(See para TN.4.8 of explanatory notes to this Category) Fee: \$650.55 Benefit: 75% = \$487.95 85% = \$565.85 Extended Medicare Safety Net Cap: \$178.40</p>

	not being a service associated with a service to which items 2801 - 3000 apply.	
	(See para TN.6.3 of explanatory notes to this Category)	
	Fee: \$41.40 Benefit: 75% = \$31.05 85% = \$35.20	
	Extended Medicare Safety Net Cap: \$124.20	
T7. REGIONAL OR FIELD NERVE BLOCKS		
	Group T7. Regional Or Field Nerve Blocks	
	INTRAVENOUS REGIONAL ANAESTHESIA of limb by retrograde perfusion	
18213	Fee: \$91.40	Benefit: 75% = \$68.55 85% = \$77.70
	Intrathecal, combined spinal-epidural or epidural infusion of a therapeutic substance, initial injection or commencement of, including up to 1 hour of continuous attendance by the medical practitioner	
	Applicable once per presentation, per medical practitioner, per complete new procedure (Anaes.)	
	(See para TN.10.7 of explanatory notes to this Category)	
18216	Fee: \$195.85	Benefit: 75% = \$146.90 85% = \$166.50
	Intrathecal, combined spinal-epidural or epidural infusion of a therapeutic substance, initial injection or commencement of, if continuous attendance by the medical practitioner extends beyond the first hour (Anaes.)	
18219	Derived Fee: The fee for item 18216 plus \$19.60 for each additional 15 minutes or part thereof beyond the first hour of attendance by the medical practitioner.	
	INFUSION OF A THERAPEUTIC SUBSTANCE to maintain regional anaesthesia or analgesia, subsequent injection or revision of, where the period of continuous medical practitioner attendance is 15 minutes or less	
	(See para TN.7.2, TN.10.7 of explanatory notes to this Category)	
18222	Fee: \$38.80	Benefit: 75% = \$29.10 85% = \$33.00

T7. REGIONAL OR FIELD NERVE BLOCKS	
18225	<p>INFUSION OF A THERAPEUTIC SUBSTANCE to maintain regional anaesthesia or analgesia, subsequent injection or revision of, where the period of continuous medical practitioner attendance is more than 15 minutes</p> <p>(See para TN.7.2, TN.10.7 of explanatory notes to this Category)</p> <p>Fee: \$51.60 Benefit: 75% = \$38.70 85% = \$43.90</p>
18226	<p>Intrathecal, combined spinal-epidural or epidural infusion of a therapeutic substance, initial injection or commencement of, including up to 1 hour of continuous attendance by the medical practitioner, for a patient in labour, where the service is provided in the after hours period, being the period from 8pm to 8am on any weekday, or any time on a Saturday, a Sunday or a public holiday.</p> <p>Applicable once per presentation, per medical practitioner, per complete new procedure</p> <p>(See para TN.7.4, TN.10.7 of explanatory notes to this Category)</p> <p>Fee: \$293.70 Benefit: 75% = \$220.30 85% = \$249.65</p>
18227	<p>Intrathecal, combined spinal-epidural or epidural infusion of a therapeutic substance, initial injection or commencement of, where continuous attendance by a medical practitioner extends beyond the first hour, for a patient in labour, where the service is provided in the after hours period, being the period from 8pm to 8am on any weekday, or any time on a Saturday, a Sunday or a public holiday.</p> <p>(See para TN.7.4, TN.10.7 of explanatory notes to this Category)</p> <p>Derived Fee: The fee for item 18226 plus \$29.50 for each additional 15 minutes or part there of beyond the first hour of attendance by the medical practitioner.</p>
18228	<p>INTERPLEURAL BLOCK, initial injection or commencement of infusion of a therapeutic substance</p> <p>Fee: \$64.45 Benefit: 75% = \$48.35 85% = \$54.80</p>
18230	<p>INTRATHECAL or EPIDURAL INJECTION of neurolytic substance (Anaes.)</p> <p>Fee: \$245.90 Benefit: 75% = \$184.45 85% = \$209.05</p>
18232	<p>INTRATHECAL or EPIDURAL INJECTION of substance other than anaesthetic, contrast or neurolytic solutions, not being a service to which another item in this Group applies (Anaes.)</p> <p>(See para TN.7.3 of explanatory notes to this Category)</p> <p>Fee: \$195.85 Benefit: 75% = \$146.90 85% = \$166.50</p>
18233	<p>EPIDURAL INJECTION of blood for blood patch (Anaes.)</p> <p>Fee: \$195.85 Benefit: 75% = \$146.90 85% = \$166.50</p>
18234	<p>TRIGEMINAL NERVE, primary division of, injection of an anaesthetic agent (Anaes.)</p> <p>(See para TN.7.5 of explanatory notes to this Category)</p> <p>Fee: \$128.75 Benefit: 75% = \$96.60 85% = \$109.45</p>
18236	<p>TRIGEMINAL NERVE, peripheral branch of, injection of an anaesthetic agent (Anaes.)</p> <p>(See para TN.7.5 of explanatory notes to this Category)</p> <p>Fee: \$64.45 Benefit: 75% = \$48.35 85% = \$54.80</p>
18238	<p>FACIAL NERVE, injection of an anaesthetic agent, not being a service associated with a service to which item 18240 applies</p> <p>(See para TN.7.5 of explanatory notes to this Category)</p> <p>Fee: \$38.80 Benefit: 75% = \$29.10 85% = \$33.00</p>
18240	<p>RETROBULBAR OR PERIBULBAR INJECTION of an anaesthetic agent</p>

T7. REGIONAL OR FIELD NERVE BLOCKS	
	(See para TN.7.5 of explanatory notes to this Category) Fee: \$96.55 Benefit: 75% = \$72.45 85% = \$82.10
18242	GREATER OCCIPITAL NERVE, injection of an anaesthetic agent (Anaes.) (See para TN.7.5 of explanatory notes to this Category) Fee: \$38.80 Benefit: 75% = \$29.10 85% = \$33.00
18244	VAGUS NERVE, injection of an anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$103.95 Benefit: 75% = \$78.00 85% = \$88.40
18248	PHRENIC NERVE, injection of an anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$91.40 Benefit: 75% = \$68.55 85% = \$77.70
18250	SPINAL ACCESSORY NERVE, injection of an anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$64.45 Benefit: 75% = \$48.35 85% = \$54.80
18252	CERVICAL PLEXUS, injection of an anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$103.95 Benefit: 75% = \$78.00 85% = \$88.40
18254	BRACHIAL PLEXUS, injection of an anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$103.95 Benefit: 75% = \$78.00 85% = \$88.40
18256	SUPRASCAPULAR NERVE, injection of an anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$64.45 Benefit: 75% = \$48.35 85% = \$54.80
18258	INTERCOSTAL NERVE (single), injection of an anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$64.45 Benefit: 75% = \$48.35 85% = \$54.80
18260	INTERCOSTAL NERVES (multiple), injection of an anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$91.40 Benefit: 75% = \$68.55 85% = \$77.70
18262	ILIO-INGUINAL, ILIOHYPOGASTRIC OR GENITOFEMORAL NERVES, 1 or more of, injection of an anaesthetic agent (Anaes.) (See para TN.7.5 of explanatory notes to this Category) Fee: \$64.45 Benefit: 75% = \$48.35 85% = \$54.80
18264	PUDENDAL NERVE and or dorsal nerve, injection of anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$103.95 Benefit: 75% = \$78.00 85% = \$88.40
18266	ULNAR, RADIAL OR MEDIAN NERVE, MAIN TRUNK OF, 1 or more of, injection of an anaesthetic agent, not being associated with a brachial plexus block (See para TN.7.5 of explanatory notes to this Category) Fee: \$64.45 Benefit: 75% = \$48.35 85% = \$54.80

T7. REGIONAL OR FIELD NERVE BLOCKS	
18268	OBTURATOR NERVE, injection of an anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$91.40 Benefit: 75% = \$68.55 85% = \$77.70
18270	FEMORAL NERVE, injection of an anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$91.40 Benefit: 75% = \$68.55 85% = \$77.70
18272	SAPHENOUS, SURAL, POPLITEAL OR POSTERIOR TIBIAL NERVE, MAIN TRUNK OF, 1 or more of, injection of an anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$64.45 Benefit: 75% = \$48.35 85% = \$54.80
18274	PARAVERTEBRAL, CERVICAL, THORACIC, LUMBAR, SACRAL OR COCCYGEAL NERVES, injection of an anaesthetic agent, (single vertebral level) (See para TN.7.5 of explanatory notes to this Category) Fee: \$91.40 Benefit: 75% = \$68.55 85% = \$77.70
18276	PARAVERTEBRAL NERVES, injection of an anaesthetic agent, (multiple levels) (See para TN.7.5 of explanatory notes to this Category) Fee: \$128.75 Benefit: 75% = \$96.60 85% = \$109.45
18278	SCIATIC NERVE, injection of an anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$91.40 Benefit: 75% = \$68.55 85% = \$77.70
18280	SPHENOPALATINE GANGLION, injection of an anaesthetic agent (Anaes.) (See para TN.7.5 of explanatory notes to this Category) Fee: \$128.75 Benefit: 75% = \$96.60 85% = \$109.45
18282	CAROTID SINUS, injection of an anaesthetic agent, as an independent percutaneous procedure (See para TN.7.5 of explanatory notes to this Category) Fee: \$103.95 Benefit: 75% = \$78.00 85% = \$88.40
18284	STELLATE GANGLION, injection of an anaesthetic agent, (cervical sympathetic block) (Anaes.) (See para TN.7.5 of explanatory notes to this Category) Fee: \$152.25 Benefit: 75% = \$114.20 85% = \$129.45
18286	LUMBAR OR THORACIC NERVES, injection of an anaesthetic agent, (paravertebral sympathetic block) (Anaes.) (See para TN.7.5 of explanatory notes to this Category) Fee: \$152.25 Benefit: 75% = \$114.20 85% = \$129.45
18288	COELIAC PLEXUS OR SPLANCHNIC NERVES, injection of an anaesthetic agent (Anaes.) (See para TN.7.5 of explanatory notes to this Category) Fee: \$152.25 Benefit: 75% = \$114.20 85% = \$129.45
18290	CRANIAL NERVE OTHER THAN TRIGEMINAL, destruction by a neurolytic agent, not being a service associated with the injection of botulinum toxin (Anaes.) Fee: \$257.55 Benefit: 75% = \$193.20 85% = \$218.95
18292	NERVE BRANCH, destruction by a neurolytic agent, not being a service to which any other item in this

T7. REGIONAL OR FIELD NERVE BLOCKS	
	Group applies or a service associated with the injection of botulinum toxin except those services to which item 18354 applies (Anaes.) (See para TN.7.5 of explanatory notes to this Category) Fee: \$128.75 Benefit: 75% = \$96.60 85% = \$109.45
18294	COELIAC PLEXUS OR SPLANCHNIC NERVES, destruction by a neurolytic agent (Anaes.) Fee: \$181.50 Benefit: 75% = \$136.15 85% = \$154.30
18296	LUMBAR SYMPATHETIC CHAIN, destruction by a neurolytic agent (Anaes.) Fee: \$155.25 Benefit: 75% = \$116.45 85% = \$132.00
18297	Assistance at the administration of an epidural blood patch (a service to which item 18233 applies) by another medical practitioner Fee: \$61.20 Benefit: 75% = \$45.90 85% = \$52.05
18298	CERVICAL OR THORACIC SYMPATHETIC CHAIN, destruction by a neurolytic agent (Anaes.) Fee: \$181.50 Benefit: 75% = \$136.15 85% = \$154.30
T8. SURGICAL OPERATIONS	
	1. GENERAL
	Group T8. Surgical Operations
	Subgroup 1. General
30001	OPERATIVE PROCEDURE, not being a service to which any other item in this Group applies, being a service to which an item in this Group would have applied had the procedure not been discontinued on medical grounds (See para TN.8.5 of explanatory notes to this Category) Derived Fee: 50% of the fee which would have applied had the procedure not been discontinued
30003	LOCALISED BURNS, dressing of, (not involving grafting) each attendance at which the procedure is performed, including any associated consultation Fee: \$37.45 Benefit: 75% = \$28.10 85% = \$31.85
30006	EXTENSIVE BURNS, dressing of, without anaesthesia (not involving grafting) each attendance at which the procedure is performed, including any associated consultation Fee: \$47.95 Benefit: 75% = \$36.00 85% = \$40.80
30010	LOCALISED BURNS, dressing of, under general anaesthesia (not involving grafting) (Anaes.) Fee: \$76.25 Benefit: 75% = \$57.20
30014	EXTENSIVE BURNS, dressing of, under general anaesthesia (not involving grafting) (Anaes.) Fee: \$160.25 Benefit: 75% = \$120.20
30017	BURNS, excision of, under general anaesthesia, involving not more than 10 per cent of body surface, where grafting is not carried out during the same operation (Anaes.) (Assist.) Fee: \$336.20 Benefit: 75% = \$252.15 85% = \$285.80
30020	BURNS, excision of, under general anaesthesia, involving more than 10 per cent of body surface, where grafting is not carried out during the same operation (Anaes.) (Assist.)

T8. SURGICAL OPERATIONS		1. GENERAL
	Fee: \$654.85 Benefit: 75% = \$491.15	
30023	<p>WOUND OF SOFT TISSUE, traumatic, deep or extensively contaminated, debridement of, under general anaesthesia or regional or field nerve block, including suturing of that wound when performed (Anaes.) (Assist.)</p> <p>(See para TN.8.6 of explanatory notes to this Category)</p> <p>Fee: \$336.20 Benefit: 75% = \$252.15 85% = \$285.80</p>	
30024	<p>WOUND OF SOFT TISSUE, debridement of extensively infected post-surgical incision or Fournier's Gangrene, under general anaesthesia or regional or field nerve block, including suturing of that wound when performed (Anaes.) (Assist.)</p> <p>Fee: \$336.20 Benefit: 75% = \$252.15 85% = \$285.80</p>	
30026	<p>SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, not on face or neck, small (NOT MORE THAN 7 CM LONG), superficial, not being a service to which another item in Group T4 applies (Anaes.)</p> <p>(See para TN.8.6 of explanatory notes to this Category)</p> <p>Fee: \$53.85 Benefit: 75% = \$40.40 85% = \$45.80</p>	
30029	<p>SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, not on face or neck, small (NOT MORE THAN 7 CM LONG), involving deeper tissue, not being a service to which another item in Group T4 applies (Anaes.)</p> <p>(See para TN.8.6 of explanatory notes to this Category)</p> <p>Fee: \$92.80 Benefit: 75% = \$69.60 85% = \$78.90</p>	
30032	<p>SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, on face or neck, small (NOT MORE THAN 7 CM LONG), superficial (Anaes.)</p> <p>(See para TN.8.6 of explanatory notes to this Category)</p> <p>Fee: \$85.05 Benefit: 75% = \$63.80 85% = \$72.30</p>	
30035	<p>SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, on face or neck, small (NOT MORE THAN 7 CM LONG), involving deeper tissue (Anaes.)</p> <p>(See para TN.8.6 of explanatory notes to this Category)</p> <p>Fee: \$121.25 Benefit: 75% = \$90.95 85% = \$103.10</p>	
30038	<p>SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, not on face or neck, large (MORE THAN 7 CM LONG), superficial, not being a service to which another item in Group T4 applies (Anaes.)</p> <p>(See para TN.8.6 of explanatory notes to this Category)</p> <p>Fee: \$92.80 Benefit: 75% = \$69.60 85% = \$78.90</p>	
30042	<p>SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, other than on face or neck, large (MORE THAN 7 CM LONG), involving deeper tissue, other than a service to which another item in Group T4 applies (Anaes.)</p> <p>(See para TN.8.6 of explanatory notes to this Category)</p> <p>Fee: \$191.40 Benefit: 75% = \$143.55 85% = \$162.70</p>	
30045	<p>SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, on face or neck, large (MORE THAN 7 CM LONG),</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
	superficial (Anaes.) (See para TN.8.6 of explanatory notes to this Category) Fee: \$121.25 Benefit: 75% = \$90.95 85% = \$103.10	
30049	SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, on face or neck, large (MORE THAN 7 CM LONG), involving deeper tissue (Anaes.) (See para TN.8.6 of explanatory notes to this Category) Fee: \$191.40 Benefit: 75% = \$143.55 85% = \$162.70	
30052	FULL THICKNESS LACERATION OF EAR, EYELID, NOSE OR LIP, repair of, with accurate apposition of each layer of tissue (Anaes.) (Assist.) Fee: \$261.90 Benefit: 75% = \$196.45 85% = \$222.65	
30055	WOUNDS, DRESSING OF, under general anaesthesia, with or without removal of sutures, not being a service associated with a service to which another item in this Group applies (Anaes.) Fee: \$76.25 Benefit: 75% = \$57.20 85% = \$64.85	
30058	POSTOPERATIVE HAEMORRHAGE, control of, under general anaesthesia, as an independent procedure (Anaes.) Fee: \$148.85 Benefit: 75% = \$111.65 85% = \$126.55	
30061	SUPERFICIAL FOREIGN BODY, REMOVAL OF, (including from cornea or sclera), as an independent procedure (Anaes.) Fee: \$24.25 Benefit: 75% = \$18.20 85% = \$20.65	
30062	Etonogestrel subcutaneous implant, removal of, as an independent procedure (Anaes.) Fee: \$62.65 Benefit: 75% = \$47.00 85% = \$53.30	
30064	SUBCUTANEOUS FOREIGN BODY, removal of, requiring incision and exploration, including closure of wound if performed, as an independent procedure (Anaes.) Fee: \$113.30 Benefit: 75% = \$85.00 85% = \$96.35	
30068	FOREIGN BODY IN MUSCLE, TENDON OR OTHER DEEP TISSUE, removal of, as an independent procedure (Anaes.) (Assist.) Fee: \$285.45 Benefit: 75% = \$214.10 85% = \$242.65	
30071	Diagnostic biopsy of skin, as an independent procedure, if the biopsy specimen is sent for pathological examination (Anaes.) (See para TN.8.7 of explanatory notes to this Category) Fee: \$53.85 Benefit: 75% = \$40.40 85% = \$45.80 Extended Medicare Safety Net Cap: \$43.10	
30072	Diagnostic biopsy of mucous membrane, as an independent procedure, if the biopsy specimen is sent for pathological examination (Anaes.) (See para TN.8.7 of explanatory notes to this Category) Fee: \$53.85 Benefit: 75% = \$40.40 85% = \$45.80	
30075	DIAGNOSTIC BIOPSY OF LYMPH NODE, MUSCLE OR OTHER DEEP TISSUE OR ORGAN, as an independent procedure, if the biopsy specimen is sent for pathological examination (Anaes.) Fee: \$154.45 Benefit: 75% = \$115.85 85% = \$131.30	

T8. SURGICAL OPERATIONS		1. GENERAL
30078	<p>DIAGNOSTIC DRILL BIOPSY OF LYMPH NODE, DEEP TISSUE OR ORGAN, as an independent procedure, where the biopsy specimen is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$50.00 Benefit: 75% = \$37.50 85% = \$42.50</p>	
30081	<p>DIAGNOSTIC BIOPSY OF BONE MARROW by trephine using open approach, where the biopsy specimen is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$113.30 Benefit: 75% = \$85.00 85% = \$96.35</p>	
30084	<p>DIAGNOSTIC BIOPSY OF BONE MARROW by trephine using percutaneous approach where the biopsy is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$60.65 Benefit: 75% = \$45.50 85% = \$51.60</p>	
30087	<p>DIAGNOSTIC BIOPSY OF BONE MARROW by aspiration or PUNCH BIOPSY OF SYNOVIAL MEMBRANE, where the biopsy is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$30.35 Benefit: 75% = \$22.80 85% = \$25.80</p>	
30090	<p>DIAGNOSTIC BIOPSY OF PLEURA, PERCUTANEOUS 1 or more biopsies on any 1 occasion, where the biopsy is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$132.55 Benefit: 75% = \$99.45 85% = \$112.70</p>	
30093	<p>DIAGNOSTIC NEEDLE BIOPSY OF VERTEBRA, where the biopsy is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$176.90 Benefit: 75% = \$132.70 85% = \$150.40</p>	
30094	<p>DIAGNOSTIC PERCUTANEOUS ASPIRATION BIOPSY of deep organ using interventional imaging techniques - but not including imaging, where the biopsy is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$195.35 Benefit: 75% = \$146.55 85% = \$166.05</p>	
30096	<p>DIAGNOSTIC SCALENE NODE BIOPSY, by open procedure, where the specimen excised is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$189.65 Benefit: 75% = \$142.25 85% = \$161.25</p>	
30097	<p>Personal performance of a Synacthen Stimulation Test, including associated consultation; by a medical practitioner with resuscitation training and access to facilities where life support procedures can be implemented, if:</p> <ul style="list-style-type: none"> a. serum cortisol at 0830-0930 hours on any day in the preceding month has been measured at greater than 100 nmol/L but less than 400 nmol/L; or b. in a patient who is acutely unwell and adrenal insufficiency is suspected. <p>(See para TN.8.139 of explanatory notes to this Category)</p> <p>Fee: \$100.20 Benefit: 75% = \$75.15 85% = \$85.20</p>	
30099	<p>SINUS, excision of, involving superficial tissue only (Anaes.)</p> <p>Fee: \$92.80 Benefit: 75% = \$69.60 85% = \$78.90</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
30103	SINUS, excision of, involving muscle and deep tissue (Anaes.) Fee: \$189.65 Benefit: 75% = \$142.25 85% = \$161.25	
30104	PRE-AURICULAR SINUS, on a person 10 years of age or over. Excision of, (Anaes.) Fee: \$130.90 Benefit: 75% = \$98.20 85% = \$111.30	
30105	PRE-AURICULAR SINUS, on a person under 10 years of age. Excision of, (Anaes.) Fee: \$170.10 Benefit: 75% = \$127.60 85% = \$144.60	
30107	GANGLION OR SMALL BURSA, excision of, other than a service associated with a service to which another item in this Group applies (Anaes.) Fee: \$226.80 Benefit: 75% = \$170.10 85% = \$192.80	
30111	BURSA (LARGE), INCLUDING OLECRANON, CALCANEUM OR PATELLA, excision of (Anaes.) (Assist.) Fee: \$383.10 Benefit: 75% = \$287.35 85% = \$325.65	
30114	BURSA, SEMIMEMBRANOSUS (Baker's cyst), excision of (Anaes.) (Assist.) Fee: \$383.10 Benefit: 75% = \$287.35	
30165	Lipectomy, wedge excision of abdominal apron that is a direct consequence of significant weight loss, not being a service associated with a service to which item 30168, 30171, 30172, 30176, 30177, 30179, 45530, 45564 or 45565 applies, if: (a) there is intertrigo or another skin condition that risks loss of skin integrity and has failed 3 months of conventional (or non surgical) treatment; and (b) the abdominal apron interferes with the activities of daily living; and (c) the weight has been stable for at least 6 months following significant weight loss prior to the lipectomy (H) (Anaes.) (Assist.) (See para TN.8.8 of explanatory notes to this Category) Fee: \$469.10 Benefit: 75% = \$351.85	
30168	Lipectomy, wedge excision of redundant non abdominal skin and fat that is a direct consequence of significant weight loss, not being a service associated with a service to which item 30165, 30171, 30172, 30176, 30177, 30179, 45530, 45564 or 45565 applies, if: (a) there is intertrigo or another skin condition that risks loss of skin integrity and has failed 3 months of conventional (or non surgical) treatment; and (b) the redundant skin and fat interferes with the activities of daily living; and (c) the weight has been stable for at least 6 months following significant weight loss prior to the lipectomy; and (d) the procedure involves 1 excision only (H) (Anaes.) (Assist.) (See para TN.8.8 of explanatory notes to this Category)	

T8. SURGICAL OPERATIONS		1. GENERAL
	Fee: \$469.10 Benefit: 75% = \$351.85	
30171	<p>Lipectomy, wedge excision of redundant non abdominal skin and fat that is a direct consequence of significant weight loss, not being a service associated with a service to which item 30165, 30168, 30172, 30176, 30177, 30179, 45530, 45564 or 45565 applies, if:</p> <p>(a) there is intertrigo or another skin condition that risks loss of skin integrity and has failed 3 months of conventional (or non surgical) treatment; and</p> <p>(b) the redundant skin and fat interferes with the activities of daily living; and</p> <p>(c) the weight has been stable for at least 6 months following significant weight loss prior to the lipectomy; and</p> <p>(d) the procedure involves 2 excisions only</p> <p>(H) (Anaes.) (Assist.)</p> <p>(See para TN.8.8 of explanatory notes to this Category)</p> <p>Fee: \$713.35 Benefit: 75% = \$535.05</p>	
30172	<p>Lipectomy, wedge excision of redundant non abdominal skin and fat that is a direct consequence of significant weight loss, not being a service associated with a service to which item 30165, 30168, 30171, 30176, 30177, 30179, 45530, 45564 or 45565 applies, if:</p> <p>(a) there is intertrigo or another skin condition that risks loss of skin integrity and has failed 3 months of conventional (or non surgical) treatment; and</p> <p>(b) the redundant skin and fat interferes with the activities of daily living; and</p> <p>(c) the weight has been stable for at least 6 months following significant weight loss prior to the lipectomy; and</p> <p>(d) the procedure involves 3 or more excisions</p> <p>(H) (Anaes.) (Assist.)</p> <p>(See para TN.8.8 of explanatory notes to this Category)</p> <p>Fee: \$713.35 Benefit: 75% = \$535.05</p>	
30176	<p>Lipectomy, radical abdominoplasty (Pitanguy type or similar), with excision of skin and subcutaneous tissue, repair of musculoaponeurotic layer and transposition of umbilicus, not being a service associated with a service to which item 30165, 30168, 30171, 30172, 30177, 30179, 45530, 45564 or 45565 applies, if the patient has previously had a massive intra-abdominal or pelvic tumour surgically removed (Anaes.) (Assist.)</p> <p>(See para TN.8.8 of explanatory notes to this Category)</p> <p>Fee: \$1,016.45 Benefit: 75% = \$762.35</p>	
30177	<p>Lipectomy, excision of skin and subcutaneous tissue associated with redundant abdominal skin and fat that is a direct consequence of significant weight loss, in conjunction with a radical abdominoplasty (Pitanguy type or similar), with or without repair of musculoaponeurotic layer and transposition of umbilicus, not being a service associated with a service to which item 30165, 30168, 30171, 30172, 30176, 30179, 45530, 45564 or 45565 applies, if:</p> <p>(a) there is intertrigo or another skin condition that risks loss of skin integrity and has failed 3 months of conventional (or non surgical) treatment; and</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
	<p>(b) the redundant skin and fat interferes with the activities of daily living; and</p> <p>(c) the weight has been stable for at least 6 months following significant weight loss prior to the lipectomy</p> <p>(H) (Anaes.) (Assist.)</p> <p>(See para TN.8.8 of explanatory notes to this Category)</p> <p>Fee: \$1,016.45 Benefit: 75% = \$762.35</p>	
30179	<p>Circumferential lipectomy, as an independent procedure, to correct circumferential excess of redundant skin and fat that is a direct consequence of significant weight loss, with or without a radical abdominoplasty (Pitanguy type or similar), not being a service associated with a service to which item 30165, 30168, 30171, 30172, 30176, 30177, 45530, 45564 or 45565 applies, if:</p> <p>(a) the circumferential excess of redundant skin and fat is complicated by intertrigo or another skin condition that risks loss of skin integrity and has failed 3 months of conventional (or non surgical) treatment; and</p> <p>(b) the circumferential excess of redundant skin and fat interferes with the activities of daily living; and</p> <p>(c) the weight has been stable for at least 6 months following significant weight loss prior to the lipectomy</p> <p>(H) (Anaes.) (Assist.)</p> <p>(See para TN.8.8 of explanatory notes to this Category)</p> <p>Fee: \$1,251.05 Benefit: 75% = \$938.30</p>	
30180	<p>AXILLARY HYPERHIDROSIS, partial excision for (Anaes.)</p> <p>Fee: \$140.80 Benefit: 75% = \$105.60 85% = \$119.70</p>	
30183	<p>AXILLARY HYPERHIDROSIS, total excision of sweat gland bearing area (Anaes.)</p> <p>Fee: \$254.20 Benefit: 75% = \$190.65 85% = \$216.10</p>	
30187	<p>PALMAR OR PLANTAR WARTS, removal of, by carbon dioxide laser or erbium laser, requiring admission to a hospital, or when performed by a specialist in the practice of his/her specialty, (5 or more warts) (Anaes.)</p> <p>(See para TN.8.9 of explanatory notes to this Category)</p> <p>Fee: \$264.95 Benefit: 75% = \$198.75 85% = \$225.25</p>	
30189	<p>WARTS or MOLLUSCUM CONTAGIOSUM (one or more), removal of, by any method (other than by chemical means), where undertaken in the operating theatre of a hospital, not being a service associated with a service to which another item in this Group applies (H) (Anaes.)</p> <p>(See para TN.8.9 of explanatory notes to this Category)</p> <p>Fee: \$151.90 Benefit: 75% = \$113.95</p>	
30190	<p>Angiofibromas, trichoepitheliomas or other severely disfiguring tumours of the face or neck (excluding melanocytic naevi, sebaceous hyperplasia, dermatosis papulosa nigra, Campbell De Morgan angiomas and seborrheic or viral warts), suitable for laser ablation as confirmed by the opinion of a specialist in the specialty of dermatology—removal of, by carbon dioxide laser or erbium laser ablation, including associated resurfacing (10 or more tumours) (Anaes.)</p> <p>Fee: \$410.15 Benefit: 75% = \$307.65 85% = \$348.65</p>	
30191	<p>Angiofibromas, trichoepithelioma, epidermal naevi, xanthelasma, pyogenic granuloma, genital</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
	angiokeratomas, hereditary haemorrhagic telangiectasia and other severely disfiguring or recurrently bleeding tumours (excluding melanocytic naevi, sebaceous hyperplasia, dermatosis papulosa nigra, Campbell De Morgan angiomas and seborrheic or viral warts), treatment of, with carbon dioxide/erbium or other appropriate laser (or curettage and fine point diathermy for pyogenic granuloma only), if confirmed by the opinion of a specialist in the specialty of dermatology, one or more lesions. Fee: \$65.45 Benefit: 75% = \$49.10 85% = \$55.65	
30192	PREMALIGNANT SKIN LESIONS (including solar keratoses), treatment of, by ablative technique (10 or more lesions) (Anaes.) (See para TN.8.9 of explanatory notes to this Category) Fee: \$40.80 Benefit: 75% = \$30.60 85% = \$34.70	
30196	Malignant neoplasm of skin or mucous membrane that has been: (a) proven by histopathology; or (b) confirmed by the opinion of a specialist in the specialty of dermatology where a specimen has been submitted for histologic confirmation; removal of, by serial curettage, or carbon dioxide laser or erbium laser excision-ablation, including any associated cryotherapy or diathermy (Anaes.) (See para TN.8.10 of explanatory notes to this Category) Fee: \$130.20 Benefit: 75% = \$97.65 85% = \$110.70	
30202	Malignant neoplasm of skin or mucous membrane proven by histopathology or confirmed by the opinion of a specialist in the specialty of dermatology—removal of, by liquid nitrogen cryotherapy using repeat freeze thaw cycles (See para TN.8.10 of explanatory notes to this Category) Fee: \$49.85 Benefit: 75% = \$37.40 85% = \$42.40	
30207	Skin lesions, multiple injections with glucocorticoid preparations (Anaes.) Fee: \$46.00 Benefit: 75% = \$34.50 85% = \$39.10	
30210	Keloid and other skin lesions, extensive, multiple injections of glucocorticoid preparations, if undertaken in the operating theatre of a hospital on a patient less than 16 years of age (Anaes.) Fee: \$168.05 Benefit: 75% = \$126.05	
30216	HAEMATOMA, aspiration of (Anaes.) Fee: \$28.20 Benefit: 75% = \$21.15 85% = \$24.00	
30219	HAEMATOMA, FURUNCLE, SMALL ABSCESS OR SIMILAR LESION not requiring admission to a hospital - INCISION WITH DRAINAGE OF (excluding aftercare) (See para TN.8.4 of explanatory notes to this Category) Fee: \$28.20 Benefit: 75% = \$21.15 85% = \$24.00	
30223	LARGE HAEMATOMA, LARGE ABSCESS, CARBUNCLE, CELLULITIS or similar lesion, requiring admission to a hospital, INCISION WITH DRAINAGE OF (excluding aftercare) (Anaes.) (See para TN.8.4 of explanatory notes to this Category) Fee: \$168.05 Benefit: 75% = \$126.05	
30224	PERCUTANEOUS DRAINAGE OF DEEP ABSCESS using interventional imaging techniques - but not including imaging (Anaes.)	

T8. SURGICAL OPERATIONS		1. GENERAL
	Fee: \$245.00 Benefit: 75% = \$183.75 85% = \$208.25	
30225	ABCESS DRAINAGE TUBE, exchange of using interventional imaging techniques - but not including imaging (Anaes.) Fee: \$276.05 Benefit: 75% = \$207.05 85% = \$234.65	
30226	MUSCLE, excision of (LIMITED), or fasciotomy (Anaes.) Fee: \$154.45 Benefit: 75% = \$115.85 85% = \$131.30	
30229	MUSCLE, excision of (EXTENSIVE) (Anaes.) (Assist.) Fee: \$281.45 Benefit: 75% = \$211.10 85% = \$239.25	
30232	MUSCLE, RUPTURED, repair of (limited), not associated with external wound (Anaes.) Fee: \$230.60 Benefit: 75% = \$172.95 85% = \$196.05	
30235	MUSCLE, RUPTURED, repair of (extensive), not associated with external wound (Anaes.) (Assist.) Fee: \$304.95 Benefit: 75% = \$228.75 85% = \$259.25	
30238	FASCIA, DEEP, repair of, FOR HERNIATED MUSCLE (Anaes.) Fee: \$154.45 Benefit: 75% = \$115.85 85% = \$131.30	
30241	BONE TUMOUR, INNOCENT, excision of, not being a service to which another item in this Group applies (Anaes.) (Assist.) Fee: \$367.50 Benefit: 75% = \$275.65 85% = \$312.40	
30244	STYLOID PROCESS OF TEMPORAL BONE, removal of (Anaes.) (Assist.) Fee: \$367.50 Benefit: 75% = \$275.65	
30246	PAROTID DUCT, repair of, using micro-surgical techniques (Anaes.) (Assist.) Fee: \$711.35 Benefit: 75% = \$533.55	
30247	PAROTID GLAND, total extirpation of (Anaes.) (Assist.) Fee: \$762.45 Benefit: 75% = \$571.85	
30250	PAROTID GLAND, total extirpation of, with preservation of facial nerve (Anaes.) (Assist.) Fee: \$1,290.15 Benefit: 75% = \$967.65	
30251	RECURRENT PAROTID TUMOUR, excision of, with preservation of facial nerve (Anaes.) (Assist.) Fee: \$1,981.80 Benefit: 75% = \$1486.35 85% = \$1897.10	
30253	PAROTID GLAND, SUPERFICIAL LOBECTOMY OF, with exposure of facial nerve (Anaes.) (Assist.) Fee: \$860.10 Benefit: 75% = \$645.10	
30255	SUBMANDIBULAR DUCTS, relocation of, for surgical control of drooling (Anaes.) (Assist.) Fee: \$1,145.35 Benefit: 75% = \$859.05	
30256	SUBMANDIBULAR GLAND, extirpation of (Anaes.) (Assist.) Fee: \$459.35 Benefit: 75% = \$344.55	

T8. SURGICAL OPERATIONS		1. GENERAL
30259	SUBLINGUAL GLAND, extirpation of (Anaes.) Fee: \$204.75 Benefit: 75% = \$153.60 85% = \$174.05	
30262	SALIVARY GLAND, DILATATION OR DIATHERMY of duct (Anaes.) Fee: \$60.65 Benefit: 75% = \$45.50 85% = \$51.60	
30266	Salivary gland, removal of calculus from duct or meatotomy or marsupialisation, 1 or more such procedures. (Anaes.) Fee: \$154.45 Benefit: 75% = \$115.85 85% = \$131.30	
30269	SALIVARY GLAND, repair of CUTANEOUS FISTULA OF (Anaes.) Fee: \$154.45 Benefit: 75% = \$115.85 85% = \$131.30	
30272	TONGUE, partial excision of (Anaes.) (Assist.) Fee: \$304.95 Benefit: 75% = \$228.75 85% = \$259.25	
30275	RADICAL EXCISION OF INTRAORAL TUMOUR INVOLVING RESECTION OF MANDIBLE AND LYMPH NODES OF NECK (commandotype operation) (Anaes.) (Assist.) Fee: \$1,817.80 Benefit: 75% = \$1363.35	
30278	TONGUE TIE, repair of, not being a service to which another item in this Group applies (Anaes.) Fee: \$47.95 Benefit: 75% = \$36.00 85% = \$40.80	
30281	TONGUE TIE, MANDIBULAR FRENULUM or MAXILLARY FRENULUM, repair of, in a person aged 2 years and over, under general anaesthesia (Anaes.) Fee: \$123.20 Benefit: 75% = \$92.40 85% = \$104.75	
30283	RANULA OR MUCOUS CYST OF MOUTH, removal of (Anaes.) Fee: \$211.10 Benefit: 75% = \$158.35 85% = \$179.45	
30286	BRANCHIAL CYST, on a person 10 years of age or over. Removal of, (Anaes.) (Assist.) Fee: \$410.25 Benefit: 75% = \$307.70 85% = \$348.75	
30287	BRANCHIAL CYST, on a person under 10 years of age. Removal of, (Anaes.) (Assist.) Fee: \$533.40 Benefit: 75% = \$400.05 85% = \$453.40	
30289	BRANCHIAL FISTULA, on a person 10 years of age or over. Removal of, (Anaes.) (Assist.) Fee: \$517.95 Benefit: 75% = \$388.50	
30293	CERVICAL OESOPHAGOSTOMY or CLOSURE OF CERVICAL OESOPHAGOSTOMY with or without plastic repair (Anaes.) (Assist.) Fee: \$459.35 Benefit: 75% = \$344.55 85% = \$390.45	
30294	CERVICAL OESOPHAGECTOMY with tracheostomy and oesophagostomy, with or without plastic reconstruction; or LARYNGOPHARYNGECTOMY with tracheostomy and plastic reconstruction (Anaes.) (Assist.) Fee: \$1,817.80 Benefit: 75% = \$1363.35	
30296	THYROIDECTOMY, total (Anaes.) (Assist.) (See para TN.8.137 of explanatory notes to this Category)	

T8. SURGICAL OPERATIONS		1. GENERAL
	Fee: \$1,055.70 Benefit: 75% = \$791.80	
30297	<p>THYROIDECTOMY following previous thyroid surgery (Anaes.) (Assist.)</p> <p>(See para TN.8.138 of explanatory notes to this Category)</p> <p>Fee: \$1,055.70 Benefit: 75% = \$791.80</p>	
30299	<p>SENTINEL LYMPH NODE BIOPSY OR BIOPSIES for breast cancer, involving dissection in a level I axilla, using preoperative lymphoscintigraphy and lymphotropic dye injection, not being a service associated with a service to which item 30300, 30302 or 30303 applies (Anaes.) (Assist.)</p> <p>(See para TN.8.12 of explanatory notes to this Category)</p> <p>Fee: \$657.35 Benefit: 75% = \$493.05</p>	
30300	<p>SENTINEL LYMPH NODE BIOPSY OR BIOPSIES for breast cancer, involving dissection in a level II/III axilla, using preoperative lymphoscintigraphy and lymphotropic dye injection, not being a service associated with a service to which item 30299, 30302 or 30303 applies (Anaes.) (Assist.)</p> <p>(See para TN.8.12 of explanatory notes to this Category)</p> <p>Fee: \$788.80 Benefit: 75% = \$591.60</p>	
30302	<p>SENTINEL LYMPH NODE BIOPSY OR BIOPSIES for breast cancer, involving dissection in a level I axilla, using lymphotropic dye injection, not being a service associated with a service to which item 30299, 30300 or 30303 applies (Anaes.) (Assist.)</p> <p>(See para TN.8.12 of explanatory notes to this Category)</p> <p>Fee: \$525.85 Benefit: 75% = \$394.40</p>	
30303	<p>SENTINEL LYMPH NODE BIOPSY OR BIOPSIES for breast cancer, involving dissection in a level II/III axilla, using lymphotropic dye injection, not being a service associated with a service to which item 30299, 30300 or 30302 applies (Anaes.) (Assist.)</p> <p>(See para TN.8.12 of explanatory notes to this Category)</p> <p>Fee: \$630.95 Benefit: 75% = \$473.25</p>	
30306	<p>TOTAL HEMITHYROIDECTOMY (Anaes.) (Assist.)</p> <p>(See para TN.8.137, TN.8.138 of explanatory notes to this Category)</p> <p>Fee: \$823.60 Benefit: 75% = \$617.70</p>	
30310	<p>Partial or subtotal thyroidectomy (Anaes.) (Assist.)</p> <p>(See para TN.8.137 of explanatory notes to this Category)</p> <p>Fee: \$823.60 Benefit: 75% = \$617.70</p>	
30314	<p>THYROGLOSSAL CYST or FISTULA or both, on a person 10 years of age or over. Radical removal of, including thyroglossal duct and portion of hyoid bone (Anaes.) (Assist.)</p> <p>Fee: \$471.65 Benefit: 75% = \$353.75</p>	
30315	<p>Minimally invasive parathyroidectomy. Removal of 1 or more parathyroid adenoma through a small cervical incision for an image localised adenoma, including thymectomy.</p> <p>For any particular patient - applicable only once per occasion on which the service is provided.</p> <p>Not in association with a service to which item 30318, 30317 or 30320 applies. (Anaes.) (Assist.)</p> <p>Fee: \$1,175.50 Benefit: 75% = \$881.65</p>	
30317	<p>Redo parathyroidectomy. Cervical re-exploration for persistent or recurrent hyperparathyroidism, including thymectomy and cervical exploration of the mediastinum.</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
	For any particular patient - applicable only once per occasion on which the service is provided. Not in association with a service to which item 30315, 30318 or 30320 applies. (Anaes.) (Assist.) Fee: \$1,407.55 Benefit: 75% = \$1055.70	
30318	Open parathyroidectomy, exploration and removal of 1 or more adenoma or hyperplastic glands via a cervical incision including thymectomy and cervical exploration of the mediastinum when performed. For any particular patient - applicable only once per occasion on which the service is provided. Not in association with a service to which item 30315, 30317 or 30320 applies. (Anaes.) (Assist.) Fee: \$1,175.50 Benefit: 75% = \$881.65	
30320	Removal of a mediastinal parathyroid adenoma via sternotomy or mediastinal thorascopic approach. For any particular patient - applicable only once per occasion on which the service is provided. Not in association with a service to which item 30315, 30317 or 30318 applies. (Anaes.) (Assist.) Fee: \$1,407.55 Benefit: 75% = \$1055.70	
30323	Excision of pheochromocytoma or extraadrenal paraganglioma via endoscopic or open approach. (Anaes.) (Assist.) Fee: \$1,407.55 Benefit: 75% = \$1055.70	
30324	Excision of an adrenocortical tumour or hyperplasia via endoscopic or open approach. (Anaes.) (Assist.) Fee: \$1,407.55 Benefit: 75% = \$1055.70	
30326	THYROGLOSSAL CYST or FISTULA or both, radical removal of, including thyroglossal duct and portion of hyoid bone, on a person under 10 years of age (Anaes.) (Assist.) Fee: \$613.15 Benefit: 75% = \$459.90	
30329	LYMPH NODES of GROIN, limited excision of (Anaes.) Fee: \$254.65 Benefit: 75% = \$191.00 85% = \$216.50	
30330	LYMPH NODES of GROIN, radical excision of (Anaes.) (Assist.) Fee: \$741.20 Benefit: 75% = \$555.90	
30332	LYMPH NODES of AXILLA, limited excision of (sampling) (Anaes.) (Assist.) Fee: \$357.60 Benefit: 75% = \$268.20	
30335	LYMPH NODES of AXILLA, complete excision of, to level I (Anaes.) (Assist.) (See para TN.8.13 of explanatory notes to this Category) Fee: \$893.90 Benefit: 75% = \$670.45	
30336	LYMPH NODES of AXILLA, complete excision of, to level II or level III (Anaes.) (Assist.) (See para TN.8.13 of explanatory notes to this Category) Fee: \$1,072.75 Benefit: 75% = \$804.60	
30373	LAPAROTOMY (exploratory), including associated biopsies, where no other intra-abdominal procedure is performed (Anaes.) (Assist.) Fee: \$498.35 Benefit: 75% = \$373.80	

T8. SURGICAL OPERATIONS		1. GENERAL
30375	<p>Caecostomy, Enterostomy, Colostomy, Enterotomy, Colotomy, Cholecystostomy, Gastrostomy, Gastrotomy, on a person 10 years of age or over. Reduction of intussusception, Removal of Meckel's diverticulum, Suture of perforated peptic ulcer, Simple repair of ruptured viscus, Reduction of volvulus, Pyloroplasty (adult) or Drainage of pancreas (Anaes.) (Assist.)</p> <p>(See para TN.8.14 of explanatory notes to this Category)</p> <p>Fee: \$537.55 Benefit: 75% = \$403.20</p>	
30376	<p>LAPAROTOMY INVOLVING DIVISION OF PERITONEAL ADHESIONS (where no other intraabdominal procedure is performed) on a person 10 years of age or over (Anaes.) (Assist.)</p> <p>Fee: \$537.55 Benefit: 75% = \$403.20</p>	
30378	<p>LAPAROTOMY involving division of adhesions in conjunction with another intraabdominal procedure where the time taken to divide the adhesions is between 45 minutes and 2 hours, on a person 10 years of age or over (Anaes.) (Assist.)</p> <p>Fee: \$540.10 Benefit: 75% = \$405.10</p>	
30379	<p>LAPAROTOMY WITH DIVISION OF EXTENSIVE ADHESIONS (duration greater than 2 hours) with or without insertion of long intestinal tube (Anaes.) (Assist.)</p> <p>Fee: \$957.15 Benefit: 75% = \$717.90</p>	
30382	<p>ENTEROCUTANEOUS FISTULA, radical repair of, involving extensive dissection and resection of bowel (Anaes.) (Assist.)</p> <p>Fee: \$1,347.70 Benefit: 75% = \$1010.80</p>	
30384	<p>LAPAROTOMY FOR GRADING OF LYMPHOMA, including splenectomy, liver biopsies, lymph node biopsies and oophoropexy (Anaes.) (Assist.)</p> <p>Fee: \$1,133.75 Benefit: 75% = \$850.35</p>	
30385	<p>LAPAROTOMY FOR CONTROL OF POSTOPERATIVE HAEMORRHAGE, where no other procedure is performed (Anaes.) (Assist.)</p> <p>Fee: \$580.90 Benefit: 75% = \$435.70</p>	
30387	<p>LAPAROTOMY INVOLVING OPERATION ON ABDOMINAL VISCERA (including pelvic viscera), not being a service to which another item in this Group applies (Anaes.) (Assist.)</p> <p>Fee: \$654.85 Benefit: 75% = \$491.15</p>	
30388	<p>LAPAROTOMY for trauma involving 3 or more organs (Anaes.) (Assist.)</p> <p>Fee: \$1,647.45 Benefit: 75% = \$1235.60</p>	
30390	<p>LAPAROSCOPY, diagnostic, not being a service associated with any other laparoscopic procedure, on a person 10 years of age or over (Anaes.)</p> <p>(See para TN.8.15 of explanatory notes to this Category)</p> <p>Fee: \$226.80 Benefit: 75% = \$170.10</p>	
30391	<p>LAPAROSCOPY with biopsy (Anaes.) (Assist.)</p> <p>Fee: \$293.25 Benefit: 75% = \$219.95</p>	
30392	<p>RADICAL OR DEBULKING OPERATION for advanced intra-abdominal malignancy, with or without omentectomy, as an independent procedure (Anaes.) (Assist.)</p> <p>Fee: \$695.60 Benefit: 75% = \$521.70</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
30393	<p>LAPAROSCOPIC DIVISION OF ADHESIONS in association with another intra-abdominal procedure where the time taken to divide the adhesions exceeds 45 minutes (Anaes.) (Assist.)</p> <p>Fee: \$540.10 Benefit: 75% = \$405.10</p>	
30394	<p>LAPAROTOMY for drainage of subphrenic abscess, pelvic abscess, appendiceal abscess, ruptured appendix or for peritonitis from any cause, with or without appendectomy (Anaes.) (Assist.)</p> <p>Fee: \$508.25 Benefit: 75% = \$381.20</p>	
30396	<p>LAPAROTOMY for gross intra peritoneal sepsis requiring debridement of fibrin, with or without removal of foreign material or enteric contents, with lavage of the entire peritoneal cavity via a major abdominal incision, with or without closure of abdomen and with or without mesh or zipper insertion (Anaes.) (Assist.)</p> <p>(See para TN.8.16 of explanatory notes to this Category)</p> <p>Fee: \$1,048.30 Benefit: 75% = \$786.25</p>	
30397	<p>LAPAROSTOMY, via wound previously made and left open or closed with zipper, involving change of dressings or packs, and with or without drainage of loculated collections (Anaes.)</p> <p>Fee: \$239.60 Benefit: 75% = \$179.70</p>	
30399	<p>LAPAROSTOMY, final closure of wound made at previous operation, after removal of dressings or packs and removal of mesh or zipper if previously inserted (Anaes.) (Assist.)</p> <p>Fee: \$329.55 Benefit: 75% = \$247.20</p>	
30400	<p>LAPAROTOMY WITH INSERTION OF PORTACATH for administration of cytotoxic therapy including placement of reservoir (Anaes.) (Assist.)</p> <p>Fee: \$652.25 Benefit: 75% = \$489.20</p>	
30402	<p>RETROPERITONEAL ABSCESS, drainage of, not involving laparotomy (Anaes.) (Assist.)</p> <p>Fee: \$479.15 Benefit: 75% = \$359.40</p>	
30403	<p>VENTRAL, INCISIONAL, OR RECURRENT HERNIA OR BURST ABDOMEN, repair of with or without mesh (Anaes.) (Assist.)</p> <p>Fee: \$537.55 Benefit: 75% = \$403.20</p>	
30405	<p>VENTRAL OR INCISIONAL HERNIA, (excluding recurrent inguinal or femoral hernia), repair of, requiring muscle transposition, mesh hernioplasty or resection of strangulated bowel (Anaes.) (Assist.)</p> <p>Fee: \$943.55 Benefit: 75% = \$707.70</p>	
30406	<p>PARACENTESIS ABDOMINIS (Anaes.)</p> <p>Fee: \$53.85 Benefit: 75% = \$40.40 85% = \$45.80</p>	
30408	<p>PERITONEOVENOUS shunt, insertion of (Anaes.) (Assist.)</p> <p>Fee: \$404.35 Benefit: 75% = \$303.30</p>	
30409	<p>LIVER BIOPSY, percutaneous (Anaes.)</p> <p>Fee: \$179.90 Benefit: 75% = \$134.95 85% = \$152.95</p>	
30411	<p>LIVER BIOPSY by wedge excision when performed in conjunction with another intraabdominal procedure (Anaes.)</p> <p>Fee: \$91.55 Benefit: 75% = \$68.70</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
	LIVER BIOPSY by core needle, when performed in conjunction with another intra-abdominal procedure (Anaes.)	
30412	Fee: \$54.00	Benefit: 75% = \$40.50 85% = \$45.90
	LIVER, subsegmental resection of, (local excision), other than for trauma (Anaes.) (Assist.)	
30414	Fee: \$711.35	Benefit: 75% = \$533.55
	LIVER, segmental resection of, other than for trauma (Anaes.) (Assist.)	
30415	Fee: \$1,422.55	Benefit: 75% = \$1066.95
	LIVER CYST, laparoscopic marsupialisation of, where the size of the cyst is greater than 5cm in diameter (Anaes.) (Assist.)	
30416	Fee: \$772.35	Benefit: 75% = \$579.30
	LIVER CYSTS, laparoscopic marsupialisation of 5 or more, including any cyst greater than 5cm in diameter (Anaes.) (Assist.)	
30417	Fee: \$1,158.45	Benefit: 75% = \$868.85
	LIVER, lobectomy of, other than for trauma (Anaes.) (Assist.)	
30418	Fee: \$1,647.45	Benefit: 75% = \$1235.60
	LIVER TUMOURS, destruction of, by hepatic cryotherapy, not being a service associated with a service to which item 50950 or 50952 applies (Anaes.) (Assist.)	
30419	Fee: \$842.60	Benefit: 75% = \$631.95 85% = \$757.90
	LIVER, TRI-SEGMENTAL RESECTION (extended lobectomy) of, other than for trauma (Anaes.) (Assist.)	
30421	Fee: \$2,058.95	Benefit: 75% = \$1544.25
	LIVER, repair of superficial laceration of, for trauma (Anaes.) (Assist.)	
30422	Fee: \$696.45	Benefit: 75% = \$522.35
	LIVER, repair of deep multiple lacerations of, or debridement of, for trauma (Anaes.) (Assist.)	
30425	Fee: \$1,347.70	Benefit: 75% = \$1010.80
	LIVER, segmental resection of, for trauma (Anaes.) (Assist.)	
30427	Fee: \$1,609.75	Benefit: 75% = \$1207.35
	LIVER, lobectomy of, for trauma (Anaes.) (Assist.)	
30428	Fee: \$1,722.15	Benefit: 75% = \$1291.65 85% = \$1637.45
	LIVER, extended lobectomy (tri-segmental resection) of, for trauma (Anaes.) (Assist.)	
30430	Fee: \$2,395.85	Benefit: 75% = \$1796.90 85% = \$2311.15
	LIVER ABSCESS, open abdominal drainage of (Anaes.) (Assist.)	
30431	Fee: \$537.55	Benefit: 75% = \$403.20 85% = \$456.95
	LIVER ABSCESS (multiple), open abdominal drainage of (Anaes.) (Assist.)	
30433	Fee: \$748.70	Benefit: 75% = \$561.55

T8. SURGICAL OPERATIONS		1. GENERAL
30434	HYDATID CYST OF LIVER, peritoneum or viscus, complete removal of contents of, with or without suture of biliary radicles (Anaes.) (Assist.) Fee: \$606.50 Benefit: 75% = \$454.90	
30436	HYDATID CYST OF LIVER, peritoneum or viscus, complete removal of contents of, with or without suture of biliary radicles, with omentoplasty or myeloplasty (Anaes.) (Assist.) Fee: \$673.85 Benefit: 75% = \$505.40	
30437	HYDATID CYST OF LIVER, total excision of, by cysto-pericystectomy (membrane plus fibrous wall) (Anaes.) (Assist.) Fee: \$838.70 Benefit: 75% = \$629.05	
30438	HYDATID CYST OF LIVER, excision of, with drainage and excision of liver tissue (Anaes.) (Assist.) Fee: \$1,186.80 Benefit: 75% = \$890.10 85% = \$1102.10	
30439	OPERATIVE CHOLANGIOGRAPHY OR OPERATIVE PANCREATOGRAPHY OR INTRA OPERATIVE ULTRASOUND of the biliary tract (including 1 or more examinations performed during the 1 operation) (Anaes.) (Assist.) Fee: \$191.40 Benefit: 75% = \$143.55	
30440	CHOLANGIOGRAM, percutaneous transhepatic, and insertion of biliary drainage tube, using interventional imaging techniques - but not including imaging, not being a service associated with a service to which item 30451 applies (Anaes.) (Assist.) Fee: \$542.80 Benefit: 75% = \$407.10 85% = \$461.40	
30441	INTRA OPERATIVE ULTRASOUND for staging of intra abdominal tumours (Anaes.) Fee: \$140.55 Benefit: 75% = \$105.45	
30442	CHOLEDOCHOSCOPY in conjunction with another procedure (Anaes.) Fee: \$191.40 Benefit: 75% = \$143.55	
30443	CHOLECYSTECTOMY (Anaes.) (Assist.) Fee: \$762.45 Benefit: 75% = \$571.85	
30445	LAPAROSCOPIC CHOLECYSTECTOMY (Anaes.) (Assist.) Fee: \$762.45 Benefit: 75% = \$571.85	
30446	LAPAROSCOPIC CHOLECYSTECTOMY when procedure is completed by laparotomy (Anaes.) (Assist.) Fee: \$762.45 Benefit: 75% = \$571.85	
30448	LAPAROSCOPIC CHOLECYSTECTOMY, involving removal of common duct calculi via the cystic duct (Anaes.) (Assist.) Fee: \$1,003.30 Benefit: 75% = \$752.50	
30449	LAPAROSCOPIC CHOLECYSTECTOMY with removal of common duct calculi via laparoscopic choledochotomy (Anaes.) (Assist.) Fee: \$1,115.65 Benefit: 75% = \$836.75	
30450	CALCULUS OF BILIARY OR RENAL TRACT, extraction of, using interventional imaging techniques - not being a service associated with a service to which items 36627, 36630, 36645 or 36648 applies	

T8. SURGICAL OPERATIONS		1. GENERAL
	(Anaes.) (Assist.) Fee: \$540.80 Benefit: 75% = \$405.60 85% = \$459.70	
30451	BILIARY DRAINAGE TUBE, exchange of, using interventional imaging techniques - but not including imaging, not being a service associated with a service to which item 30440 applies (Anaes.) (Assist.) Fee: \$276.05 Benefit: 75% = \$207.05 85% = \$234.65	
30452	CHOLEDOCHOSCOPY with balloon dilation of a stricture or passage of stent or extraction of calculi (Anaes.) (Assist.) Fee: \$389.30 Benefit: 75% = \$292.00	
30454	CHOLEDOCHOTOMY (with or without cholecystectomy), with or without removal of calculi (Anaes.) (Assist.) Fee: \$889.45 Benefit: 75% = \$667.10	
30455	CHOLEDOCHOTOMY (with or without cholecystectomy), with removal of calculi including biliary intestinal anastomosis (Anaes.) (Assist.) Fee: \$1,045.70 Benefit: 75% = \$784.30	
30457	CHOLEDOCHOTOMY, intrahepatic, involving removal of intrahepatic bile duct calculi (Anaes.) (Assist.) Fee: \$1,422.55 Benefit: 75% = \$1066.95 85% = \$1337.85	
30458	TRANSDUODENAL OPERATION ON SPHINCTER OF ODDI, involving 1 or more of, removal of calculi, sphincterotomy, sphincteroplasty, biopsy, local excision of peri-ampullary or duodenal tumour, sphincteroplasty of the pancreatic duct, pancreatic duct septoplasty, with or without choledochotomy (Anaes.) (Assist.) Fee: \$1,045.70 Benefit: 75% = \$784.30	
30460	CHOLECYSTODUODENOSTOMY, CHOLECYSTOENTEROSTOMY, CHOLEDOCHOJEJUNOSTOMY or Roux-en-Y as a bypass procedure when no prior biliary surgery performed (Anaes.) (Assist.) Fee: \$889.45 Benefit: 75% = \$667.10	
30461	RADICAL RESECTION of porta hepatis with biliary-enteric anastomoses, not being a service associated with a service to which item 30443, 30454, 30455, 30458 or 30460 applies (Anaes.) (Assist.) Fee: \$1,524.60 Benefit: 75% = \$1143.45	
30463	RADICAL RESECTION of common hepatic duct and right and left hepatic ducts, with 2 duct anastomoses (Anaes.) (Assist.) Fee: \$1,871.90 Benefit: 75% = \$1403.95	
30464	RADICAL RESECTION of common hepatic duct and right and left hepatic ducts, involving more than 2 anastomoses or resection of segment or major portion of segment of liver (Anaes.) (Assist.) Fee: \$2,246.30 Benefit: 75% = \$1684.75	
30466	INTRAHEPATIC biliary bypass of left hepatic ductal system by Roux-en-Y loop to peripheral ductal system (Anaes.) (Assist.) Fee: \$1,295.30 Benefit: 75% = \$971.50	
30467	INTRAHEPATIC BYPASS of right hepatic ductal system by Roux-en-Y loop to peripheral ductal	

T8. SURGICAL OPERATIONS		1. GENERAL
	system (Anaes.) (Assist.) Fee: \$1,602.25 Benefit: 75% = \$1201.70	
30469	BILIARY STRICTURE, repair of, after 1 or more operations on the biliary tree (Anaes.) (Assist.) Fee: \$1,774.70 Benefit: 75% = \$1331.05 85% = \$1690.00	
30472	HEPATIC OR COMMON BILE DUCT, repair of, as the primary procedure subsequent to partial or total transection of bile duct or ducts (Anaes.) (Assist.) Fee: \$958.35 Benefit: 75% = \$718.80 85% = \$873.65	
30473	Oesophagoscopy (not being a service to which item 41816 or 41822 applies), gastroscopy, duodenoscopy or panendoscopy (1 or more such procedures), with or without biopsy, not being a service associated with a service to which item 30478 or 30479 applies. (Anaes.) (See para TN.8.17 of explanatory notes to this Category) Fee: \$182.65 Benefit: 75% = \$137.00 85% = \$155.30	
30475	Endoscopic dilatation of stricture of upper gastrointestinal tract (including the use of imaging intensification where clinically indicated) (Anaes.) (See para TN.8.17, TN.8.133 of explanatory notes to this Category) Fee: \$359.85 Benefit: 75% = \$269.90 85% = \$305.90	
30478	Oesophagoscopy (other than a service to which item 41816, 41822 or 41825 applies), gastroscopy, duodenoscopy, panendoscopy or push enteroscopy, one or more such procedures, if: (a) the procedures are performed using one or more of the following endoscopic procedures: (i) polypectomy; (ii) sclerosing or adrenalin injections; (iii) banding; (iv) endoscopic clips; (v) haemostatic powders; (vi) diathermy; (vii) argon plasma coagulation; and (b) the procedures are for the treatment of one or more of the following: (i) upper gastrointestinal tract bleeding; (ii) polyps; (iii) removal of foreign body; (iv) oesophageal or gastric varices; (v) peptic ulcers;	

T8. SURGICAL OPERATIONS		1. GENERAL
	<p>(vi) neoplasia;</p> <p>(vii) benign vascular lesions;</p> <p>(viii) strictures of the gastrointestinal tract;</p> <p>(ix) tumorous overgrowth through or over oesophageal stents;</p> <p>other than a service associated with a service to which item 30473 or 30479 applies (Anaes.)</p> <p>(See para TN.8.17 of explanatory notes to this Category)</p> <p>Fee: \$253.25 Benefit: 75% = \$189.95 85% = \$215.30</p>	
30479	<p>Endoscopy with laser therapy, for the treatment of one or more of the following:</p> <p>(a) neoplasia;</p> <p>(b) benign vascular lesions;</p> <p>(c) strictures of the gastrointestinal tract;</p> <p>(d) tumorous overgrowth through or over oesophageal stents;</p> <p>(e) peptic ulcers;</p> <p>(f) angiodysplasia;</p> <p>(g) gastric antral vascular ectasia;</p> <p>(h) post-polypectomy bleeding;</p> <p>other than a service associated with a service to which item 30473 or 30478 applies (Anaes.)</p> <p>(See para TN.8.17 of explanatory notes to this Category)</p> <p>Fee: \$490.95 Benefit: 75% = \$368.25 85% = \$417.35</p>	
30481	<p>PERCUTANEOUS GASTROSTOMY (initial procedure):</p> <p>(a) including any associated imaging services; and</p> <p>(b) excluding the insertion of a device for the purpose of facilitating weight loss (Anaes.)</p> <p>(See para TN.8.17 of explanatory notes to this Category)</p> <p>Fee: \$368.15 Benefit: 75% = \$276.15 85% = \$312.95</p>	
30482	<p>PERCUTANEOUS GASTROSTOMY (repeat procedure):</p> <p>(a) including any associated imaging services; and</p> <p>(b) excluding the insertion of a device for the purpose of facilitating weight loss (Anaes.)</p> <p>Fee: \$261.75 Benefit: 75% = \$196.35 85% = \$222.50</p>	
30483	<p>GASTROSTOMY BUTTON, CAECOSTOMY ANTEGRADE ENEMA DEVICE (CHAIT etc.) or STOMAL INDWELLING DEVICE:</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
	(a) non-endoscopic insertion of; or (b) non-endoscopic replacement of; on a person 10 years of age or over, excluding the insertion of a device for the purpose of facilitating weight loss (Anaes.) Fee: \$182.60 Benefit: 75% = \$136.95 85% = \$155.25	
30484	ENDOSCOPIC RETROGRADE CHOLANGIOPANCREATOGRAPHY (Anaes.) (See para TN.8.17 of explanatory notes to this Category) Fee: \$376.30 Benefit: 75% = \$282.25 85% = \$319.90	
30485	ENDOSCOPIC SPHINCTEROTOMY with or without extraction of stones from common bile duct (Anaes.) (See para TN.8.17 of explanatory notes to this Category) Fee: \$580.90 Benefit: 75% = \$435.70 85% = \$496.20	
30488	SMALL BOWEL INTUBATION as an independent procedure (Anaes.) Fee: \$92.80 Benefit: 75% = \$69.60 85% = \$78.90	
30490	OESOPHAGEAL PROSTHESIS, insertion of, including endoscopy and dilatation (Anaes.) (See para TN.8.17 of explanatory notes to this Category) Fee: \$542.80 Benefit: 75% = \$407.10 85% = \$461.40	
30491	BILE DUCT, ENDOSCOPIC STENTING OF (including endoscopy and dilatation) (Anaes.) (See para TN.8.17 of explanatory notes to this Category) Fee: \$572.70 Benefit: 75% = \$429.55 85% = \$488.00	
30492	BILE DUCT, PERCUTANEOUS STENTING OF (including dilatation when performed), using interventional imaging techniques - but not including imaging (Anaes.) Fee: \$811.90 Benefit: 75% = \$608.95	
30494	ENDOSCOPIC BILIARY DILATATION (Anaes.) (See para TN.8.17 of explanatory notes to this Category) Fee: \$433.65 Benefit: 75% = \$325.25	
30495	PERCUTANEOUS BILIARY DILATATION for biliary stricture, using interventional imaging techniques - but not including imaging (Anaes.) Fee: \$811.90 Benefit: 75% = \$608.95	
30496	VAGOTOMY, truncal or selective, with or without pyloroplasty or gastroenterostomy (Anaes.) (Assist.) Fee: \$606.50 Benefit: 75% = \$454.90 85% = \$521.80	
30497	VAGOTOMY and ANTRECTOMY (Anaes.) (Assist.) Fee: \$723.20 Benefit: 75% = \$542.40	
30499	VAGOTOMY, highly selective (Anaes.) (Assist.) Fee: \$860.10 Benefit: 75% = \$645.10	
30500	VAGOTOMY, highly selective with duodenoplasty for peptic stricture (Anaes.) (Assist.) Fee: \$921.00 Benefit: 75% = \$690.75 85% = \$836.30	

T8. SURGICAL OPERATIONS		1. GENERAL
30502	VAGOTOMY, highly selective, with dilatation of pylorus (Anaes.) (Assist.) Fee: \$1,016.45 Benefit: 75% = \$762.35	
30503	VAGOTOMY or ANTRECTOMY, or both, for peptic ulcer following previous operation for peptic ulcer (Anaes.) (Assist.) Fee: \$1,138.25 Benefit: 75% = \$853.70 85% = \$1053.55	
30505	BLEEDING PEPTIC ULCER, control of, involving suture of bleeding point or wedge excision (Anaes.) (Assist.) Fee: \$569.10 Benefit: 75% = \$426.85	
30506	BLEEDING PEPTIC ULCER, control of, involving suture of bleeding point or wedge excision, and vagotomy and pyloroplasty or gastroenterostomy (Anaes.) (Assist.) Fee: \$995.90 Benefit: 75% = \$746.95	
30508	BLEEDING PEPTIC ULCER, control of, involving suture of bleeding point or wedge excision, and highly selective vagotomy (Anaes.) (Assist.) Fee: \$1,048.30 Benefit: 75% = \$786.25	
30509	BLEEDING PEPTIC ULCER, control of, involving gastric resection (other than wedge resection) (Anaes.) (Assist.) Fee: \$1,048.30 Benefit: 75% = \$786.25 85% = \$963.60	
30515	Gastroenterostomy (including gastroduodenostomy) or enterocolostomy or enteroenterostomy, not being a service to which any of items 31569 to 31581 apply (Anaes.) (Assist.) Fee: \$726.35 Benefit: 75% = \$544.80	
30517	GASTROENTEROSTOMY, PYLOROPLASTY or GASTRODUODENOSTOMY, reconstruction of (Anaes.) (Assist.) Fee: \$951.00 Benefit: 75% = \$713.25	
30518	Partial gastrectomy, not being a service associated with a service to which any of items 31569 to 31581 apply (Anaes.) (Assist.) Fee: \$1,018.35 Benefit: 75% = \$763.80	
30520	GASTRIC TUMOUR, removal of, by local excision, not being a service to which item 30518 applies (Anaes.) (Assist.) Fee: \$696.45 Benefit: 75% = \$522.35	
30521	GASTRECTOMY, TOTAL, for benign disease (Anaes.) (Assist.) Fee: \$1,490.00 Benefit: 75% = \$1117.50	
30523	GASTRECTOMY, SUBTOTAL RADICAL, for carcinoma, (including splenectomy when performed) (Anaes.) (Assist.) (See para TN.8.18 of explanatory notes to this Category) Fee: \$1,557.25 Benefit: 75% = \$1167.95	
30524	GASTRECTOMY, TOTAL RADICAL, for carcinoma (including extended node dissection and distal pancreatectomy and splenectomy when performed) (Anaes.) (Assist.) Fee: \$1,714.60 Benefit: 75% = \$1285.95	

T8. SURGICAL OPERATIONS		1. GENERAL
30526	<p>GASTRECTOMY, TOTAL, and including lower oesophagus, performed by left thoraco-abdominal incision or opening of diaphragmatic hiatus, (including splenectomy when performed) (Anaes.) (Assist.)</p> <p>Fee: \$2,223.70 Benefit: 75% = \$1667.80</p>	
30527	<p>ANTIREFLUX OPERATION by fundoplasty, via abdominal or thoracic approach, with or without closure of the diaphragmatic hiatus not being a service to which item 30601 applies (Anaes.) (Assist.)</p> <p>(See para TN.8.19 of explanatory notes to this Category)</p> <p>Fee: \$898.55 Benefit: 75% = \$673.95</p>	
30529	<p>ANTIREFLUX operation by fundoplasty, with OESOPHAGOPLASTY for stricture or short oesophagus (Anaes.) (Assist.)</p> <p>(See para TN.8.19 of explanatory notes to this Category)</p> <p>Fee: \$1,347.70 Benefit: 75% = \$1010.80</p>	
30530	<p>ANTIREFLUX operation by cardiopexy, with or without fundoplasty (Anaes.) (Assist.)</p> <p>(See para TN.8.19 of explanatory notes to this Category)</p> <p>Fee: \$808.70 Benefit: 75% = \$606.55</p>	
30532	<p>OESOPHAGOGASTRIC MYOTOMY (Heller's operation) via abdominal or thoracic approach, with or without closure of the diaphragmatic hiatus, by laparoscopy or open operation (Anaes.) (Assist.)</p> <p>(See para TN.8.19 of explanatory notes to this Category)</p> <p>Fee: \$928.55 Benefit: 75% = \$696.45</p>	
30533	<p>OESOPHAGOGASTRIC MYOTOMY (Heller's operation) via abdominal or thoracic approach, WITH FUNDOPLASTY, with or without closure of the diaphragmatic hiatus, by laparoscopy or open operation (Anaes.) (Assist.)</p> <p>(See para TN.8.19 of explanatory notes to this Category)</p> <p>Fee: \$1,104.45 Benefit: 75% = \$828.35</p>	
30535	<p>OESOPHAGECTOMY with gastric reconstruction by abdominal mobilisation and thoracotomy (Anaes.) (Assist.)</p> <p>Fee: \$1,749.65 Benefit: 75% = \$1312.25</p>	
30536	<p>OESOPHAGECTOMY involving gastric reconstruction by abdominal mobilisation, thoracotomy and anastomosis in the neck or chest - 1 surgeon (Anaes.) (Assist.)</p> <p>Fee: \$1,774.70 Benefit: 75% = \$1331.05</p>	
30538	<p>OESOPHAGECTOMY involving gastric reconstruction by abdominal mobilisation, thoracotomy and anastomosis in the neck or chest- conjoint surgery, principal surgeon (including aftercare) (Anaes.) (Assist.)</p> <p>Fee: \$1,228.00 Benefit: 75% = \$921.00</p>	
30539	<p>OESOPHAGECTOMY involving gastric reconstruction by abdominal mobilisation, thoracotomy and anastomosis in the neck or chest - conjoint surgery, co-surgeon (Assist.)</p> <p>Fee: \$898.55 Benefit: 75% = \$673.95</p>	
30541	<p>OESOPHAGECTOMY, by trans-hiatal oesophagectomy (cervical and abdominal mobilisation, anastomosis) with posterior or anterior mediastinal placement - 1 surgeon (Anaes.) (Assist.)</p> <p>Fee: \$1,564.95 Benefit: 75% = \$1173.75</p>	
30542	<p>OESOPHAGECTOMY, by trans-hiatal oesophagectomy (cervical and abdominal mobilisation, anastomosis) with posterior or anterior mediastinal placement - conjoint surgery, principal surgeon</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
	(including aftercare) (Anaes.) (Assist.) Fee: \$1,063.30 Benefit: 75% = \$797.50	
30544	OESOPHAGECTOMY, by trans-hiatal oesophagectomy (cervical and abdominal mobilisation, anastomosis) with posterior or anterior mediastinal placement - conjoint surgery, co-surgeon (Assist.) Fee: \$778.80 Benefit: 75% = \$584.10	
30545	OESOPHAGECTOMY with colon or jejunal anastomosis, (abdominal and thoracic mobilisation with thoracic anastomosis) - 1 surgeon (Anaes.) (Assist.) Fee: \$1,894.50 Benefit: 75% = \$1420.90	
30547	OESOPHAGECTOMY with colon or jejunal anastomosis, (abdominal and thoracic mobilisation with thoracic anastomosis) - conjoint surgery, principal surgeon (including aftercare) (Anaes.) (Assist.) Fee: \$1,302.80 Benefit: 75% = \$977.10 85% = \$1218.10	
30548	OESOPHAGECTOMY with colon or jejunal anastomosis, (abdominal and thoracic mobilisation with thoracic anastomosis) - conjoint surgery, co-surgeon (Assist.) Fee: \$973.30 Benefit: 75% = \$730.00 85% = \$888.60	
30550	OESOPHAGECTOMY with colon or jejunal replacement (abdominal and thoracic mobilisation with anastomosis of pedicle in the neck) - 1 surgeon (Anaes.) (Assist.) Fee: \$2,126.65 Benefit: 75% = \$1595.00	
30551	OESOPHAGECTOMY with colon or jejunal replacement (abdominal and thoracic mobilisation with anastomosis of pedicle in the neck) - conjoint surgery, principal surgeon (including aftercare) (Anaes.) (Assist.) Fee: \$1,467.60 Benefit: 75% = \$1100.70	
30553	OESOPHAGECTOMY with colon or jejunal replacement (abdominal and thoracic mobilisation with anastomosis of pedicle in the neck) - conjoint surgery, co-surgeon (Assist.) Fee: \$1,085.55 Benefit: 75% = \$814.20 85% = \$1000.85	
30554	OESOPHAGECTOMY with reconstruction by free jejunal graft - 1 surgeon (Anaes.) (Assist.) Fee: \$2,366.10 Benefit: 75% = \$1774.60	
30556	OESOPHAGECTOMY with reconstruction by free jejunal graft - conjoint surgery, principal surgeon (including aftercare) (Anaes.) (Assist.) Fee: \$1,632.20 Benefit: 75% = \$1224.15	
30557	OESOPHAGECTOMY with reconstruction by free jejunal graft - conjoint surgery, co-surgeon (Assist.) Fee: \$1,205.50 Benefit: 75% = \$904.15	
30559	OESOPHAGUS, local excision for tumour of (Anaes.) (Assist.) Fee: \$876.10 Benefit: 75% = \$657.10 85% = \$791.40	
30560	OESOPHAGEAL PERFORATION, repair of, by thoracotomy (Anaes.) (Assist.) Fee: \$973.30 Benefit: 75% = \$730.00	
30562	ENTEROSTOMY or COLOSTOMY, closure of (not involving resection of bowel), on a person 10 years of age or over (Anaes.) (Assist.)	

T8. SURGICAL OPERATIONS		1. GENERAL
	Fee: \$613.55 Benefit: 75% = \$460.20	
30563	COLOSTOMY OR ILEOSTOMY, refashioning of, on a person 10 years of age or over (Anaes.) (Assist.) Fee: \$613.55 Benefit: 75% = \$460.20 85% = \$528.85	
30564	SMALL BOWEL STRICTUREPLASTY for chronic inflammatory bowel disease (Anaes.) (Assist.) Fee: \$796.40 Benefit: 75% = \$597.30	
30565	SMALL INTESTINE, resection of, without anastomosis (including formation of stoma) (Anaes.) (Assist.) Fee: \$898.55 Benefit: 75% = \$673.95	
30566	SMALL INTESTINE, resection of, with anastomosis, on a person 10 years of age or over (Anaes.) (Assist.) Fee: \$998.10 Benefit: 75% = \$748.60	
30568	INTRAOPERATIVE ENTEROTOMY for visualisation of the small intestine by endoscopy (Anaes.) (Assist.) Fee: \$748.70 Benefit: 75% = \$561.55	
30569	ENDOSCOPIC EXAMINATION of SMALL BOWEL with flexible endoscope passed at laparotomy, with or without biopsies (Anaes.) (Assist.) Fee: \$381.75 Benefit: 75% = \$286.35	
30571	APPENDICECTOMY, not being a service to which item 30574 applies on a person 10 years of age or over (Anaes.) (Assist.) Fee: \$459.35 Benefit: 75% = \$344.55	
30572	LAPAROSCOPIC APPENDICECTOMY, on a person 10 years of age or over (Anaes.) (Assist.) Fee: \$459.35 Benefit: 75% = \$344.55	
30574	NOTE: <i>Multiple Operation and Multiple Anaesthetic rules apply to this item</i> APPENDICECTOMY, when performed in conjunction with any other intraabdominal procedure through the same incision (Anaes.) Fee: \$127.10 Benefit: 75% = \$95.35	
30575	PANCREATIC ABSCESS, laparotomy and external drainage of, not requiring retro-pancreatic dissection (Anaes.) (Assist.) Fee: \$528.70 Benefit: 75% = \$396.55	
30577	PANCREATIC NECROSECTOMY for PANCREATIC NECROSIS or ABSCESS FORMATION requiring major pancreatic or retro-pancreatic dissection, excluding aftercare (Anaes.) (Assist.) Fee: \$1,123.20 Benefit: 75% = \$842.40	
30578	ENDOCRINE TUMOUR, exploration of pancreas or duodenum, followed by local excision of pancreatic tumour (Anaes.) (Assist.) Fee: \$1,183.05 Benefit: 75% = \$887.30	
30580	ENDOCRINE TUMOUR, exploration of pancreas or duodenum, followed by local excision of duodenal	

T8. SURGICAL OPERATIONS		1. GENERAL
	tumour (Anaes.) (Assist.) Fee: \$1,078.10 Benefit: 75% = \$808.60	
30581	ENDOCRINE TUMOUR, exploration of pancreas or duodenum for, but no tumour found (Anaes.) (Assist.) Fee: \$786.15 Benefit: 75% = \$589.65	
30583	DISTAL PANCREATECTOMY (Anaes.) (Assist.) Fee: \$1,231.55 Benefit: 75% = \$923.70	
30584	PANCREATICO-DUODENECTOMY, WHIPPLE'S OPERATION, with or without preservation of pylorus (Anaes.) (Assist.) Fee: \$1,817.80 Benefit: 75% = \$1363.35	
30586	PANCREATIC CYST ANASTOMOSIS TO STOMACH OR DUODENUM - by open or endoscopic means (Anaes.) (Assist.) Fee: \$723.20 Benefit: 75% = \$542.40	
30587	PANCREATIC CYST, anastomosis to Roux loop of jejunum (Anaes.) (Assist.) Fee: \$748.70 Benefit: 75% = \$561.55	
30589	PANCREATICO-JEJUNOSTOMY for pancreatitis or trauma (Anaes.) (Assist.) Fee: \$1,290.15 Benefit: 75% = \$967.65	
30590	PANCREATICO-JEJUNOSTOMY following previous pancreatic surgery (Anaes.) (Assist.) Fee: \$1,422.55 Benefit: 75% = \$1066.95	
30593	PANCREATECTOMY, near total or total (including duodenum), with or without splenectomy (Anaes.) (Assist.) Fee: \$1,946.70 Benefit: 75% = \$1460.05 85% = \$1862.00	
30594	PANCREATECTOMY for pancreatitis following previously attempted drainage procedure or partial resection (Anaes.) (Assist.) Fee: \$2,246.30 Benefit: 75% = \$1684.75	
30596	SPLENORRHAPHY OR PARTIAL SPLENECTOMY (Anaes.) (Assist.) Fee: \$925.30 Benefit: 75% = \$694.00	
30597	SPLENECTOMY (Anaes.) (Assist.) Fee: \$742.70 Benefit: 75% = \$557.05	
30599	SPLENECTOMY, for massive spleen (weighing more than 1500 grams) or involving thoraco-abdominal incision (Anaes.) (Assist.) Fee: \$1,347.70 Benefit: 75% = \$1010.80	
30600	DIAPHRAGMATIC HERNIA, TRAUMATIC, repair of (Anaes.) (Assist.) Fee: \$801.40 Benefit: 75% = \$601.05	
30601	Diaphragmatic hernia, congenital repair of, by thoracic or abdominal approach, not being a service to	

T8. SURGICAL OPERATIONS		1. GENERAL
	which any of items 31569 to 31581 apply, on a person 10 years of age or over (Anaes.) (Assist.) Fee: \$987.20 Benefit: 75% = \$740.40	
30602	PORTAL HYPERTENSION, porto-caval shunt for (Anaes.) (Assist.) Fee: \$1,602.25 Benefit: 75% = \$1201.70	
30603	PORTAL HYPERTENSION, meso-caval shunt for (Anaes.) (Assist.) Fee: \$1,692.15 Benefit: 75% = \$1269.15 85% = \$1607.45	
30605	PORTAL HYPERTENSION, selective spleno-renal shunt for (Anaes.) (Assist.) Fee: \$1,924.25 Benefit: 75% = \$1443.20	
30606	PORTAL HYPERTENSION, oesophageal transection via stapler or oversew of gastric varices with or without devascularisation (Anaes.) (Assist.) Fee: \$1,145.50 Benefit: 75% = \$859.15	
30608	SMALL INTESTINE, resection of, with anastomosis, on a person under 10 years of age (Anaes.) (Assist.) Fee: \$1,297.55 Benefit: 75% = \$973.20	
30609	FEMORAL OR INGUINAL HERNIA, laparoscopic repair of, not being a service associated with a service to which item 30614 applies (Anaes.) (Assist.) Fee: \$479.05 Benefit: 75% = \$359.30	
30611	BENIGN TUMOUR of SOFT TISSUE, excluding tumours of skin, cartilage, and bone, simple lipomas covered by item 31345 and lipomata - removal of by surgical excision, where the specimen excised is sent for histological confirmation of diagnosis, on a person under 10 years of age, not being a service to which another item in this Group applies (Anaes.) (Assist.) Fee: \$580.95 Benefit: 75% = \$435.75 85% = \$496.25	
30614	FEMORAL OR INGUINAL HERNIA OR INFANTILE HYDROCELE, repair of, not being a service to which item 30403 or 30615 applies, on a person 10 years of age or over (Anaes.) (Assist.) Fee: \$479.05 Benefit: 75% = \$359.30	
30615	STRANGULATED, INCARCERATED OR OBSTRUCTED HERNIA, repair of, without bowel resection, on a person 10 years of age or over (Anaes.) (Assist.) Fee: \$537.55 Benefit: 75% = \$403.20	
30618	LYMPH NODES OF NECK, selective dissection of 1 or 2 lymph node levels involving removal of soft tissue and lymph nodes from one side of the neck, on a person under 10 years of age (Anaes.) (Assist.) (See para TN.8.24 of explanatory notes to this Category) Fee: \$538.55 Benefit: 75% = \$403.95 85% = \$457.80	
30619	LAPAROSCOPIC SPLENECTOMY, on a person under 10 years of age (Anaes.) (Assist.) Fee: \$965.50 Benefit: 75% = \$724.15	
30621	Repair of symptomatic umbilical, epigastric or linea alba hernia requiring mesh or other formal repair of, in a person 10 years of age or over, other than a service to which item 30403 or 30405 applies (Anaes.) (Assist.) Fee: \$420.20 Benefit: 75% = \$315.15	

T8. SURGICAL OPERATIONS		1. GENERAL
30622	Caecostomy, Enterostomy, Colostomy, Enterotomy, Colotomy, Cholecystostomy, Gastrostomy, Gastrotomy, Reduction of intussusception, Removal of Meckel's diverticulum, Suture of perforated peptic ulcer, Simple repair of ruptured viscus, Reduction of volvulus, Pyloroplasty or Drainage of pancreas on a person under 10 years of age (Anaes.) (Assist.) (See para TN.8.14 of explanatory notes to this Category) Fee: \$698.85 Benefit: 75% = \$524.15	
30623	LAPAROTOMY INVOLVING DIVISION OF PERITONEAL ADHESIONS (where no other intraabdominal procedure is performed) on a person under 10 years of age (Anaes.) (Assist.) Fee: \$698.85 Benefit: 75% = \$524.15	
30626	LAPAROTOMY involving division of adhesions in conjunction with another intraabdominal procedure where the time taken to divide the adhesions is between 45 minutes and 2 hours, on a person under 10 years of age (Anaes.) (Assist.) Fee: \$702.10 Benefit: 75% = \$526.60	
30627	LAPAROSCOPY, diagnostic, not being a service associated with any other laparoscopic procedure, on a person under 10 years of age (Anaes.) (See para TN.8.15 of explanatory notes to this Category) Fee: \$294.90 Benefit: 75% = \$221.20	
30628	HYDROCELE, tapping of Fee: \$36.70 Benefit: 75% = \$27.55 85% = \$31.20	
30631	Hydrocele, removal of, other than a service associated with a service to which item 30641, 30642 or 30644 applies (Anaes.) Fee: \$244.05 Benefit: 75% = \$183.05 85% = \$207.45	
30635	Varicocele, surgical correction of, other than a service associated with a service to which item 30641, 30642 or 30644 applies—one procedure (Anaes.) (Assist.) Fee: \$300.90 Benefit: 75% = \$225.70	
30636	GASTROSTOMY BUTTON, caecostomy antegrade enema device (chait etc) and/or stomal indwelling device, non-endoscopic insertion of, or non-endoscopic replacement of, on a person under 10 years of age (Anaes.) Fee: \$240.45 Benefit: 75% = \$180.35 85% = \$204.40	
30637	ENTEROSTOMY or COLOSTOMY, closure of not involving resection of bowel, on a person under 10 years of age (Anaes.) (Assist.) Fee: \$797.70 Benefit: 75% = \$598.30	
30639	COLOSTOMY OR ILEOSTOMY, refashioning of, on a person under 10 years of age (Anaes.) (Assist.) Fee: \$797.70 Benefit: 75% = \$598.30 85% = \$713.00	
30640	Repair of large and irreducible scrotal hernia, where duration of surgery exceeds 2 hours, in a person 10 years of age or over, other than a service to which item 30403, 30405, 30614, 30615 or 30621 applies (Anaes.) (Assist.) Fee: \$943.55 Benefit: 75% = \$707.70	
30641	ORCHIDECTOMY, simple or subscapsular, unilateral with or without insertion of testicular prosthesis	

T8. SURGICAL OPERATIONS		1. GENERAL
	(Anaes.) (Assist.) Fee: \$420.20 Benefit: 75% = \$315.15	
30642	Orchidectomy, radical, unilateral, with or without insertion of testicular prosthesis, other than a service associated with a service to which item 30631, 30635, 30641, 30643 or 30644 applies (Anaes.) (Assist.) Fee: \$537.55 Benefit: 75% = \$403.20	
30643	EXPLORATION OF SPERMATIC CORD, inguinal approach, with or without testicular biopsy and with or without excision of spermatic cord and testis on a person under 10 years of age (Anaes.) (Assist.) Fee: \$698.85 Benefit: 75% = \$524.15	
30644	EXPLORATION OF SPERMATIC CORD, inguinal approach, with or without testicular biopsy and with or without excision of spermatic cord and testis on a person 10 years of age or over (Anaes.) (Assist.) Fee: \$537.55 Benefit: 75% = \$403.20	
30645	APPENDICECTOMY, not being a service to which item 30574 applies, on a person under 10 years of age (Anaes.) (Assist.) Fee: \$597.05 Benefit: 75% = \$447.80	
30646	LAPAROSCOPIC APPENDICECTOMY, on a person under 10 years of age (Anaes.) (Assist.) Fee: \$597.05 Benefit: 75% = \$447.80	
30649	HAEMORRHAGE, arrest of, following circumcision requiring general anaesthesia on a person under 10 years of age (Anaes.) Fee: \$193.50 Benefit: 75% = \$145.15 85% = \$164.50	
30654	Circumcision of the penis (other than a service to which item 30658 applies) Fee: \$47.95 Benefit: 75% = \$36.00 85% = \$40.80	
30658	Circumcision of the penis, when performed in conjunction with a service to which an item in Group T7 or Group T10 applies (Anaes.) Fee: \$146.40 Benefit: 75% = \$109.80 85% = \$124.45	
30663	HAEMORRHAGE, arrest of, following circumcision requiring general anaesthesia on a person 10 years of age or over (Anaes.) Fee: \$148.85 Benefit: 75% = \$111.65 85% = \$126.55	
30666	PARAPHIMOSIS or PHIMOSIS, reduction of, under general anaesthesia, with or without dorsal incision, not being a service associated with a service to which another item in this Group applies (Anaes.) Fee: \$48.90 Benefit: 75% = \$36.70 85% = \$41.60	
30672	COCCYX, excision of (Anaes.) (Assist.) Fee: \$459.35 Benefit: 75% = \$344.55	
30676	PILONIDAL SINUS OR CYST, OR SACRAL SINUS OR CYST, excision of (Anaes.) Fee: \$390.90 Benefit: 75% = \$293.20 85% = \$332.30	
30679	PILONIDAL SINUS, injection of sclerosant fluid under anaesthesia (Anaes.)	

T8. SURGICAL OPERATIONS		1. GENERAL
	Fee: \$99.30 Benefit: 75% = \$74.50 85% = \$84.45	
	Balloon enteroscopy, examination of the small bowel (oral approach), with or without biopsy, WITHOUT intraprocedural therapy, for diagnosis of patients with obscure gastrointestinal bleeding, not in association with another item in this subgroup (with the exception of item 30682 or 30686)	
	The patient to whom the service is provided must:	
	(i) have recurrent or persistent bleeding; and	
	(ii) be anaemic or have active bleeding; and	
	(iii) have had an upper gastrointestinal endoscopy and a colonoscopy performed which did not identify the cause of the bleeding. (Anaes.)	
	(See para TN.8.17 of explanatory notes to this Category)	
30680	Fee: \$1,206.55 Benefit: 75% = \$904.95 85% = \$1121.85	
	Balloon enteroscopy, examination of the small bowel (anal approach), with or without biopsy, WITHOUT intraprocedural therapy, for diagnosis of patients with obscure gastrointestinal bleeding, not in association with another item in this subgroup (with the exception of item 30680 or 30684)	
	The patient to whom the service is provided must:	
	(i) have recurrent or persistent bleeding; and	
	(ii) be anaemic or have active bleeding; and	
	(iii) have had an upper gastrointestinal endoscopy and a colonoscopy performed which did not identify the cause of the bleeding.	
	(Anaes.)	
	(See para TN.8.17 of explanatory notes to this Category)	
30682	Fee: \$1,206.55 Benefit: 75% = \$904.95 85% = \$1121.85	
	Balloon enteroscopy, examination of the small bowel (oral approach), with or without biopsy, WITH 1 or more of the following procedures (snare polypectomy, removal of foreign body, diathermy, heater probe, laser coagulation or argon plasma coagulation), for diagnosis and management of patients with obscure gastrointestinal bleeding, not in association with another item in this subgroup (with the exception of item 30682 or 30686)	
	The patient to whom the service is provided must:	
	(i) have recurrent or persistent bleeding; and	
	(ii) be anaemic or have active bleeding; and	
	(iii) have had an upper gastrointestinal endoscopy and a colonoscopy performed which did not identify the cause of the bleeding.	
30684		

T8. SURGICAL OPERATIONS		1. GENERAL
	<p>(Anaes.)</p> <p>(See para TN.8.17 of explanatory notes to this Category) Fee: \$1,484.85 Benefit: 75% = \$1113.65 85% = \$1400.15</p>	
30686	<p>Balloon enteroscopy, examination of the small bowel (anal approach), with or without biopsy, WITH 1 or more of the following procedures (snare polypectomy, removal of foreign body, diathermy, heater probe, laser coagulation or argon plasma coagulation), for diagnosis and management of patients with obscure gastrointestinal bleeding, not in association with another item in this subgroup (with the exception of item 30680 or 30684)</p> <p>The patient to whom the service is provided must:</p> <p>(i) have recurrent or persistent bleeding; and</p> <p>(ii) be anaemic or have active bleeding; and</p> <p>(iii) have had an upper gastrointestinal endoscopy and a colonoscopy performed which did not identify the cause of the bleeding. 31374	<p>Malignant melanoma, appendageal carcinoma, malignant connective tissue tumour of skin or merkel cell carcinoma of skin, definitive surgical excision (other than by shave excision) and repair of, if:</p> <p>(a) the tumour is excised from any part of the body not covered by item 31371, 31372 or 31373; and</p> <p>(b) the necessary excision diameter is less than 15 mm; and</p> <p>(c) the excised specimen is sent for histological examination; and</p> <p>(d) malignancy is confirmed from the excised specimen or previous biopsy;</p>

T8. SURGICAL OPERATIONS		1. GENERAL
	not in association with item 45201 (Anaes.) (See para TN.8.125, TN.1.21 of explanatory notes to this Category) Fee: \$290.70 Benefit: 75% = \$218.05 85% = \$247.10	
31375	Malignant melanoma, appendageal carcinoma, malignant connective tissue tumour of skin or merkel cell carcinoma of skin, definitive surgical excision (other than by shave excision) and repair of, if: (a) the tumour is excised from any part of the body not covered by item 31371, 31372 or 31373; and (b) the necessary excision diameter is at least 15 mm but not more than 30 mm; and (c) the excised specimen is sent for histological examination; and (d) malignancy is confirmed from the excised specimen or previous biopsy; not in association with item 45201 (Anaes.) (See para TN.8.22, TN.8.125 of explanatory notes to this Category) Fee: \$312.85 Benefit: 75% = \$234.65 85% = \$265.95	
31376	Malignant melanoma, appendageal carcinoma, malignant connective tissue tumour of skin or merkel cell carcinoma of skin, definitive surgical excision (other than by shave excision) and repair of, if: (a) the tumour is excised from any part of the body not covered by item 31371, 31372 or 31373; and (b) the necessary excision diameter is more than 30 mm; and (c) the excised specimen is sent for histological examination; and (d) malignancy is confirmed from the excised specimen or previous biopsy (Anaes.) (See para TN.8.22, TN.8.125 of explanatory notes to this Category) Fee: \$362.60 Benefit: 75% = \$271.95 85% = \$308.25	
31400	MALIGNANT UPPER AERODIGESTIVE TRACT TUMOUR up to and including 20mm in diameter (excluding tumour of the lip), excision of, where histological confirmation of malignancy has been obtained (Anaes.) (Assist.) Fee: \$269.25 Benefit: 75% = \$201.95 85% = \$228.90	
31403	MALIGNANT UPPER AERODIGESTIVE TRACT TUMOUR more than 20mm and up to and including 40mm in diameter (excluding tumour of the lip), excision of, where histological confirmation of malignancy has been obtained (Anaes.) (Assist.) Fee: \$310.75 Benefit: 75% = \$233.10	
31406	MALIGNANT UPPER AERODIGESTIVE TRACT TUMOUR more than 40mm in diameter (excluding tumour of the lip), excision of, where histological confirmation of malignancy has been obtained (Anaes.) (Assist.) Fee: \$517.85 Benefit: 75% = \$388.40 85% = \$440.20	
31409	PARAPHARYNGEAL TUMOUR, excision of, by cervical approach (Anaes.) (Assist.) Fee: \$1,608.90 Benefit: 75% = \$1206.70	
31412	RECURRENT OR PERSISTENT PARAPHARYNGEAL TUMOUR, excision of, by cervical approach (Anaes.) (Assist.) Fee: \$1,981.80 Benefit: 75% = \$1486.35	

T8. SURGICAL OPERATIONS		1. GENERAL
31420	LYMPH NODE OF NECK, biopsy of (Anaes.) Fee: \$189.65 Benefit: 75% = \$142.25 85% = \$161.25	
31423	LYMPH NODES OF NECK, selective dissection of 1 or 2 lymph node levels involving removal of soft tissue and lymph nodes from one side of the neck, on a person 10 years of age or over (Anaes.) (Assist.) (See para TN.8.24 of explanatory notes to this Category) Fee: \$414.30 Benefit: 75% = \$310.75 85% = \$352.20	
31426	LYMPH NODES OF NECK, selective dissection of 3 lymph node levels involving removal of soft tissue and lymph nodes from one side of the neck (Anaes.) (Assist.) (See para TN.8.24 of explanatory notes to this Category) Fee: \$828.55 Benefit: 75% = \$621.45	
31429	LYMPH NODES OF NECK, selective dissection of 4 lymph node levels on one side of the neck with preservation of one or more of: internal jugular vein, sternocleido-mastoid muscle, or spinal accessory nerve (Anaes.) (Assist.) (See para TN.8.24 of explanatory notes to this Category) Fee: \$1,291.25 Benefit: 75% = \$968.45	
31432	LYMPH NODES OF NECK, bilateral selective dissection of levels I, II and III (bilateral supraomohyoid dissections) (Anaes.) (Assist.) (See para TN.8.24 of explanatory notes to this Category) Fee: \$1,381.00 Benefit: 75% = \$1035.75	
31435	LYMPH NODES OF NECK, comprehensive dissection of all 5 lymph node levels on one side of the neck (Anaes.) (Assist.) (See para TN.8.24 of explanatory notes to this Category) Fee: \$1,015.05 Benefit: 75% = \$761.30	
31438	LYMPH NODES OF NECK, comprehensive dissection of all 5 lymph node levels on one side of the neck with preservation of one or more of: internal jugular vein, sternocleido-mastoid muscle, or spinal accessory nerve (Anaes.) (Assist.) (See para TN.8.24 of explanatory notes to this Category) Fee: \$1,608.90 Benefit: 75% = \$1206.70	
31450	LAPAROSCOPIC DIVISION OF ADHESIONS, as an independent procedure, where the time taken is 1 hour or less (Anaes.) (Assist.) Fee: \$419.35 Benefit: 75% = \$314.55	
31452	LAPAROSCOPIC DIVISION OF ADHESIONS, as an independent procedure, where the time taken in more than 1 hour (Anaes.) (Assist.) Fee: \$733.75 Benefit: 75% = \$550.35	
31454	LAPAROSCOPY with drainage of pus, bile or blood, as an independent procedure (Anaes.) (Assist.) Fee: \$580.90 Benefit: 75% = \$435.70	
31456	GASTROSCOPY and insertion of nasogastric or nasoenteral feeding tube, where blind insertion of the feeding tube has failed or is inappropriate due to the patient's medical condition (Anaes.) Fee: \$253.25 Benefit: 75% = \$189.95	
31458	GASTROSCOPY and insertion of nasogastric or nasoenteral feeding tube, where blind insertion of the feeding tube has failed or is inappropriate due to the patient's medical condition, and where the use of

	imaging intensification is clinically indicated (Anaes.) Fee: \$303.85 Benefit: 75% = \$227.90	
31460	PERCUTANEOUS GASTROSTOMY TUBE, jejunal extension to, including any associated imaging services (Anaes.) (Assist.) Fee: \$368.15 Benefit: 75% = \$276.15	
31462	OPERATIVE FEEDING JEJUNOSTOMY performed in conjunction with major upper gastro-intestinal resection (Anaes.) (Assist.) Fee: \$537.55 Benefit: 75% = \$403.20	
31464	ANTIREFLUX OPERATION BY FUNDOPLASTY, via abdominal or thoracic approach, with or without closure of the diaphragmatic hiatus, by laparoscopic technique - not being a service to which item 30601 applies (Anaes.) (Assist.) (See para TN.8.19 of explanatory notes to this Category) Fee: \$898.55 Benefit: 75% = \$673.95	
31466	ANTIREFLUX OPERATION BY FUNDOPLASTY, via abdominal or thoracic approach, with or without closure of the diaphragmatic hiatus, revision procedure, by laparoscopy or open operation (Anaes.) (Assist.) (See para TN.8.19 of explanatory notes to this Category) Fee: \$1,347.75 Benefit: 75% = \$1010.85	
31468	PARA-OESOPHAGEAL HIATUS HERNIA, repair of, with complete reduction of hernia, resection of sac and repair of hiatus, with or without fundoplication (Anaes.) (Assist.) Fee: \$1,480.70 Benefit: 75% = \$1110.55	
31470	LAPAROSCOPIC SPLENECTOMY, on a person 10 years of age or over (Anaes.) (Assist.) Fee: \$742.70 Benefit: 75% = \$557.05	
31472	CHOLECYSTODUODENOSTOMY, CHOLECYSTOENTEROSTOMY, CHOLEDOCHOJEJUNOSTOMY OR ROUX-EN-Y as a bypass procedure where prior biliary surgery has been performed (Anaes.) (Assist.) Fee: \$1,206.35 Benefit: 75% = \$904.80	
31500	BREAST, BENIGN LESION up to and including 50mm in diameter, including simple cyst, fibroadenoma or fibrocystic disease, open surgical biopsy or excision of, with or without frozen section histology (Anaes.) (See para TN.8.25 of explanatory notes to this Category) Fee: \$268.15 Benefit: 75% = \$201.15 85% = \$227.95	
31503	BREAST, BENIGN LESION more than 50mm in diameter, excision of (Anaes.) (Assist.) (See para TN.8.25 of explanatory notes to this Category) Fee: \$357.60 Benefit: 75% = \$268.20 85% = \$304.00	
31506	BREAST, ABNORMALITY detected by mammography or ultrasound where guidewire or other localisation procedure is performed, excision biopsy of (Anaes.) (Assist.) (See para TN.8.25 of explanatory notes to this Category) Fee: \$402.30 Benefit: 75% = \$301.75	
31509	BREAST, MALIGNANT TUMOUR, open surgical biopsy of, with or without frozen section histology	

T8. SURGICAL OPERATIONS		1. GENERAL
	(Anaes.) (See para TN.8.25 of explanatory notes to this Category) Fee: \$357.60 Benefit: 75% = \$268.20 85% = \$304.00	
31512	BREAST, MALIGNANT TUMOUR, complete local excision of, with or without frozen section histology (Anaes.) (Assist.) Fee: \$670.45 Benefit: 75% = \$502.85	
31515	BREAST, TUMOUR SITE, re-excision of following open biopsy or incomplete excision of malignant tumour (Anaes.) (Assist.) (See para TN.8.25 of explanatory notes to this Category) Fee: \$449.80 Benefit: 75% = \$337.35	
31516	BREAST, MALIGNANT TUMOUR, complete local excision of, with or without frozen section histology when targeted intraoperative radiotherapy (using an Intrabeam® device) is performed concurrently, if the requirements of item 15900 are met for the patient (Anaes.) (Assist.) Fee: \$894.05 Benefit: 75% = \$670.55	
31519	BREAST, total mastectomy (H) (Anaes.) (Assist.) Fee: \$759.05 Benefit: 75% = \$569.30	
31524	BREAST, subcutaneous mastectomy (H) (Anaes.) (Assist.) Fee: \$1,072.75 Benefit: 75% = \$804.60	
31525	BREAST, mastectomy for gynecomastia, with or without liposuction (suction assisted lipolysis), not being a service associated with a service to which item 45585 applies (H) (Anaes.) (Assist.) Fee: \$536.20 Benefit: 75% = \$402.15	
31530	Breast, biopsy of solid tumour or tissue of, using a vacuum-assisted breast biopsy device under imaging guidance, for histological examination, if imaging has demonstrated: (a) microcalcification of lesion; or (b) impalpable lesion less than one cm in diameter; including pre-operative localisation of lesion, if performed, other than a service associated with a service to which item 31548 applies Fee: \$614.30 Benefit: 75% = \$460.75 85% = \$529.60	
31533	FINE NEEDLE ASPIRATION of an impalpable breast lesion detected by mammography or ultrasound, imaging guided - but not including imaging (Anaes.) (See para TN.8.26 of explanatory notes to this Category) Fee: \$142.20 Benefit: 75% = \$106.65 85% = \$120.90	
31536	Breast, preoperative localisation of lesion of, by hookwire or similar device, using interventional imaging techniques, but not including imaging (Anaes.) (Anaes.) Fee: \$195.35 Benefit: 75% = \$146.55 85% = \$166.05	
31548	Breast, biopsy of solid tumour or tissue of, using mechanical biopsy device, for histological examination, other than a service associated with a service to which item 31530 applies (Anaes.) (Anaes.) (See para TN.8.26 of explanatory notes to this Category) Fee: \$206.25 Benefit: 75% = \$154.70 85% = \$175.35	

T8. SURGICAL OPERATIONS		1. GENERAL
31551	BREAST, HAEMATOMA, SEROMA OR INFLAMMATORY CONDITION including abscess, granulomatous mastitis or similar, exploration and drainage of when undertaken in the operating theatre of a hospital, excluding aftercare (Anaes.) Fee: \$223.50 Benefit: 75% = \$167.65	
31554	BREAST, microdochotomy of, for benign or malignant condition (Anaes.) (Assist.) Fee: \$447.05 Benefit: 75% = \$335.30	
31557	BREAST CENTRAL DUCTS, excision of, for benign condition (Anaes.) (Assist.) Fee: \$357.60 Benefit: 75% = \$268.20 85% = \$304.00	
31560	ACCESSORY BREAST TISSUE, excision of (Anaes.) (Assist.) Fee: \$357.60 Benefit: 75% = \$268.20 85% = \$304.00 Extended Medicare Safety Net Cap: \$286.10	
31563	INVERTED NIPPLE, surgical eversion of (Anaes.) Fee: \$267.85 Benefit: 75% = \$200.90 85% = \$227.70	
31566	ACCESSORY NIPPLE, excision of (Anaes.) Fee: \$134.05 Benefit: 75% = \$100.55 85% = \$113.95	
BARIATRIC		
31569	Adjustable gastric band, placement of, with or without crural repair taking 45 minutes or less, for a patient with clinically severe obesity (Anaes.) (Assist.) (See para TN.8.29 of explanatory notes to this Category) Fee: \$876.10 Benefit: 75% = \$657.10	
31572	Gastric bypass by Roux-en-Y including associated anastomoses, with or without crural repair taking 45 minutes or less, for a patient with clinically severe obesity not being associated with a service to which item 30515 applies (Anaes.) (Assist.) (See para TN.8.29 of explanatory notes to this Category) Fee: \$1,078.10 Benefit: 75% = \$808.60	
31575	Sleeve gastrectomy, with or without crural repair taking 45 minutes or less, for a patient with clinically severe obesity (Anaes.) (Assist.) (See para TN.8.29 of explanatory notes to this Category) Fee: \$876.10 Benefit: 75% = \$657.10	
31578	Gastroplasty (excluding by gastric plication), with or without crural repair taking 45 minutes or less, for a patient with clinically severe obesity (Anaes.) (Assist.) (See para TN.8.29 of explanatory notes to this Category) Fee: \$876.10 Benefit: 75% = \$657.10	
31581	Gastric bypass by biliopancreatic diversion with or without duodenal switch including gastric resection and anastomoses, with or without crural repair taking 45 minutes or less, for a patient with clinically severe obesity (Anaes.) (Assist.) (See para TN.8.29 of explanatory notes to this Category) Fee: \$1,078.10 Benefit: 75% = \$808.60	
31584	Surgical reversal of adjustable gastric banding (removal or replacement of gastric band), gastric bypass, gastroplasty (excluding by gastric plication) or biliopancreatic diversion being services to which items	

T8. SURGICAL OPERATIONS		1. GENERAL
	31569 to 31581 apply (Anaes.) (Assist.) (See para TN.8.30 of explanatory notes to this Category) Fee: \$1,587.20 Benefit: 75% = \$1190.40	
31587	Adjustment of gastric band as an independent procedure including any associated consultation Fee: \$101.00 Benefit: 75% = \$75.75 85% = \$85.85	
31590	Adjustment of gastric band reservoir, repair, revision or replacement of (Anaes.) (Assist.) Fee: \$259.60 Benefit: 75% = \$194.70 85% = \$220.70	
T8. SURGICAL OPERATIONS		2. COLORECTAL
	Group T8. Surgical Operations	
	Subgroup 2. Colorectal	
32000	LARGE INTESTINE, resection of, without anastomosis, including right hemicolectomy (including formation of stoma) (Anaes.) (Assist.) Fee: \$1,063.55 Benefit: 75% = \$797.70	
32003	LARGE INTESTINE, resection of, with anastomosis, including right hemicolectomy (Anaes.) (Assist.) Fee: \$1,112.50 Benefit: 75% = \$834.40	
32004	LARGE INTESTINE, subtotal colectomy (resection of right colon, transverse colon and splenic flexure) without anastomosis, not being a service associated with a service to which item 32000, 32003, 32005 or 32006 applies (Anaes.) (Assist.) Fee: \$1,186.30 Benefit: 75% = \$889.75	
32005	LARGE INTESTINE, subtotal colectomy (resection of right colon, transverse colon and splenic flexure) with anastomosis, not being a service associated with a service to which item 32000, 32003, 32004 or 32006 applies (Anaes.) (Assist.) Fee: \$1,340.15 Benefit: 75% = \$1005.15	
32006	LEFT HEMICOLECTOMY, including the descending and sigmoid colon (including formation of stoma) (Anaes.) (Assist.) Fee: \$1,186.30 Benefit: 75% = \$889.75	
32009	TOTAL COLECTOMY AND ILEOSTOMY (Anaes.) (Assist.) Fee: \$1,407.25 Benefit: 75% = \$1055.45	
32012	TOTAL COLECTOMY AND ILEORECTAL ANASTOMOSIS (Anaes.) (Assist.) Fee: \$1,554.45 Benefit: 75% = \$1165.85	
32015	TOTAL COLECTOMY WITH EXCISION OF RECTUM AND ILEOSTOMY 1 surgeon (Anaes.) (Assist.) Fee: \$1,910.40 Benefit: 75% = \$1432.80	
32018	TOTAL COLECTOMY WITH EXCISION OF RECTUM AND ILEOSTOMY, COMBINED SYNCHRONOUS OPERATION; ABDOMINAL RESECTION (including aftercare) (Anaes.) (Assist.) Fee: \$1,619.95 Benefit: 75% = \$1215.00	

T8. SURGICAL OPERATIONS		2. COLORECTAL
32021	TOTAL COLECTOMY WITH EXCISION OF RECTUM AND ILEOSTOMY, COMBINED SYNCHRONOUS OPERATION; PERINEAL RESECTION (Assist.) Fee: \$580.90 Benefit: 75% = \$435.70	
32023	Endoscopic insertion of stent or stents for large bowel obstruction, stricture or stenosis, including colonoscopy and any image intensification, where the obstruction is due to: a) a pre-diagnosed colorectal cancer, or cancer of an organ adjacent to the bowel; or b) an unknown diagnosis (Anaes.) (See para TN.8.17 of explanatory notes to this Category) Fee: \$572.70 Benefit: 75% = \$429.55	
32024	RECTUM, HIGH RESTORATIVE ANTERIOR RESECTION WITH INTRAPERITONEAL ANASTOMOSIS (of the rectum) greater than 10 centimetres from the anal verge excluding resection of sigmoid colon alone not being a service associated with a service to which item 32103, 32104 or 32106 applies (Anaes.) (Assist.) Fee: \$1,407.25 Benefit: 75% = \$1055.45	
32025	RECTUM, LOW RESTORATIVE ANTERIOR RESECTION WITH EXTRAPERITONEAL ANASTOMOSIS (of the rectum) less than 10 centimetres from the anal verge, with or without covering stoma not being a service associated with a service to which item 32103, 32104 or 32106 applies (Anaes.) (Assist.) Fee: \$1,882.30 Benefit: 75% = \$1411.75	
32026	RECTUM, ULTRA LOW RESTORATIVE RESECTION, with or without covering stoma, where the anastomosis is sited in the anorectal region and is 6cm or less from the anal verge (Anaes.) (Assist.) Fee: \$2,027.05 Benefit: 75% = \$1520.30	
32028	RECTUM, LOW OR ULTRA LOW RESTORATIVE RESECTION, with peranal sutured coloanal anastomosis, with or without covering stoma (Anaes.) (Assist.) Fee: \$2,172.00 Benefit: 75% = \$1629.00	
32029	COLONIC RESERVOIR, construction of, being a service associated with a service to which any other item in this Subgroup applies (Anaes.) (Assist.) Fee: \$434.35 Benefit: 75% = \$325.80	
32030	RECTOSIGMOIDECTOMY (Hartmann's operation) (Anaes.) (Assist.) Fee: \$1,063.55 Benefit: 75% = \$797.70	
32033	RESTORATION OF BOWEL following Hartmann's or similar operation, including dismantling of the stoma (Anaes.) (Assist.) Fee: \$1,554.45 Benefit: 75% = \$1165.85	
32036	SACROCOCCYGEAL AND PRESACRAL TUMOUR excision of (Anaes.) (Assist.) Fee: \$1,971.55 Benefit: 75% = \$1478.70	
32039	RECTUM AND ANUS, ABDOMINOPERINEAL RESECTION OF 1 surgeon (Anaes.) (Assist.) Fee: \$1,583.00 Benefit: 75% = \$1187.25	
32042	RECTUM AND ANUS, ABDOMINOPERINEAL RESECTION OF, COMBINED SYNCHRONOUS	

T8. SURGICAL OPERATIONS		2. COLORECTAL
	OPERATION abdominal resection (Anaes.) (Assist.) Fee: \$1,333.55 Benefit: 75% = \$1000.20	
32045	RECTUM AND ANUS, ABDOMINOPERINEAL RESECTION OF, COMBINED SYNCHRONOUS OPERATION perineal resection (Assist.) Fee: \$499.10 Benefit: 75% = \$374.35	
32046	RECTUM and ANUS, abdomino-perineal resection of, combined synchronous operation - perineal resection where the perineal surgeon also provides assistance to the abdominal surgeon (Assist.) Fee: \$771.25 Benefit: 75% = \$578.45	
32047	PERINEAL PROCTECTOMY (Anaes.) (Assist.) Fee: \$898.55 Benefit: 75% = \$673.95	
32051	TOTAL COLECTOMY with excision of rectum and ileoanal anastomosis with formation of ileal reservoir, with or without creation of temporary ileostomy 1 surgeon (Anaes.) (Assist.) Fee: \$2,388.95 Benefit: 75% = \$1791.75	
32054	TOTAL COLECTOMY with excision of rectum and ileoanal anastomosis with formation of ileal reservoir, with or without creation of temporary ileostomy conjoint surgery, abdominal surgeon (including aftercare) (Anaes.) (Assist.) Fee: \$2,192.60 Benefit: 75% = \$1644.45	
32057	TOTAL COLECTOMY with excision of rectum and ileoanal anastomosis with formation of ileal reservoir conjoint surgery, perineal surgeon (Assist.) Fee: \$580.90 Benefit: 75% = \$435.70	
32060	ILEOSTOMY CLOSURE with rectal resection and mucosectomy and ileoanal anastomosis with formation of ileal reservoir, with or without temporary loop ileostomy 1 surgeon (Anaes.) (Assist.) Fee: \$2,388.95 Benefit: 75% = \$1791.75	
32063	ILEOSTOMY CLOSURE with rectal resection and mucosectomy and ileoanal anastomosis with formation of ileal reservoir, with or without temporary loop ileostomy conjoint surgery, abdominal surgeon (including aftercare) (Anaes.) (Assist.) Fee: \$2,192.60 Benefit: 75% = \$1644.45	
32066	ILEOSTOMY CLOSURE with rectal resection and mucosectomy and ileoanal anastomosis with formation of ileal reservoir, with or without temporary loop ileostomy conjoint surgery, perineal surgeon (Assist.) Fee: \$580.90 Benefit: 75% = \$435.70	
32069	ILEOSTOMY RESERVOIR, continent type, creation of, including conversion of existing ileostomy where appropriate (Anaes.) Fee: \$1,767.15 Benefit: 75% = \$1325.40	
32072	SIGMOIDOSCOPIC EXAMINATION (with rigid sigmoidoscope), with or without biopsy Fee: \$49.35 Benefit: 75% = \$37.05 85% = \$41.95
