GUIDE TO SUMMARY OF CHANGES INCLUDED IN THIS EDITION

Psychiatry Services

From 1 March 2024, there will be a variety of changes to psychiatry services, which will implement the Government's response to recommendations from the Taskforce relating to MBS psychiatry services. The changes will insert, amend and delete items to provide more flexible arrangements, strengthen the intent of the services and clarify and remove obsolete terms from items.

These changes include the introduction of nine items for time-tiered psychiatric services provided to the patient via telehealth and phone attendances in addition to the introduction of 13 items for time-tiered psychiatric interview services provided to a person other than the patient (five face to face, five telehealth and three phone services). Existing psychiatry items 348, 350 and 352 will be repealed and replaced by the new interview items.

Orthopaedic Services

From 1 March 2024, changes to orthopaedic services will be implemented to address patient access issues identified following the implementation of Taskforce recommendations relating to orthopaedic services on 1 July 2021. These changes will include 30 new items and 86 amended items.

Cleft and Craniofacial Services

These changes will implement the Taskforce recommendations related to cleft dental services and modernise the clinical practice for treating patients with cleft and craniofacial conditions from 1 March 2024.

These changes include:

- Updates to the table of MBS items at Schedule 1 to introduce nine new items, amend 35 existing items, and delete 26 items;
- The expansion of practitioner access to include eligible paediatric dentists and eligible prosthodontists;
- The removal of sub-categories listed under Category 7; and
- Updates to referral pathways for treating dental specialists, where required.

Other changes to the General Medical Services Table and Diagnostic Imaging Services Table

From 1 March 2024, the following changes will be made to medical and diagnostic imaging services under the MBS:

- Amend 14 plastic and reconstructive surgery items to ensure the appropriate provision of the specified services in hospital settings only;
- Amend six posterior spinal fusion items and the associated item for anterior exposure of the spine to clarify clinical intent and explicitly exclude their use for vertebral body tethering;
- Amend item 30662 for complex surgical repair following a complication from circumcision to include a benefit for patients when a surgical assistant is required for the procedure;
- Insert new item 30664 for the diagnosis of indeterminate biliary strictures and new item 30665 for the removal of difficult biliary stones;
- Insert new item 31537 for the insertion of a breast marker during a breast biopsy;
- Insert item 32118 to provide ongoing access to minimally invasive ventral rectopexy services for the treatment of external rectal prolapse and symptomatic high grade rectal intussusception;
- Insert two new items (37204 and 37205) for non-invasive treatment for benign prostate hyperplasia and remove four items for obsolete benign prostatic hyperplasia treatments;
- Insert three new items (40804, 40805 and 40806) for magnetic resonance-guided focused ultrasound (MRgFUS) for the treatment of medically refractory essential tremor into the GMST; and insert two new items (63019 and 63020) for related magnetic resonance imaging services into the DIST;
- Insert three new items (22052, 22053 and 22054), mirroring existing procedural items, into the anaesthetic Relative Value Guide (RVG) in the GMST to allow an anaesthetist to claim a procedural item in association with the administration of anaesthesia; and amend three existing procedural items (13703, 40018 and 55135) to restrict co-claiming with the new items;
- Insert new item 11732 for exercise electrocardiogram stress testing for patients under investigation, monitoring or treatment for genetic heart disease diagnoses, or first degree relative of patients with confirmed genetic heart disease;
- Amend item 35412 to clarify the pre-operative diagnostic imaging items 60009, 60072, 60075 and 60078 to be claimed in association with the service;

- Insert new item 38325 for intravascular ultrasound coronary stent insertion as an adjunct service to invasive coronary angiogram for patients undergoing percutaneous coronary intervention (stent placement only) with complex anatomical characteristics;
- Amendments to items 38373 and 38374 for percutaneous retrieval and/or replacement of a leadless permanent pacemaker to clarify requirements for standby cardiothoracic surgeon support and need for immediate access to a theatre capable of open cardiothoracic surgery;
- Amend item 38557 for complex replacement or repair of aortic arch to allow the service to be performed in conjunction with a service under item 38550, 38553, 38554, 38556, 38558 or 38571 performed by any medical practitioner;
- Amend four thoracic surgery items (38425, 38815, 38816 and 38859) to implement a co-claiming restriction, allow additional surgical methods and align the items with best clinical practice;
- Insert three new nurse practitioner items (82226, 82227 and 82228) for dressing burns and intradermal colouration of the nipple or areola;
- Increase the age limit for case conference services for complex neurodevelopmental disorders and disabilities from under 13 to under 25 years of age to align these services with other items for complex developmental disorder and eligible disability services;
- Amend 13 items for allied health services provided to a patient who is of Aboriginal or Torres Strait Islander descent to streamline access to up to 10 allied health services in a calendar year;
- Administrative amendments to most allied health services following the remake of the *Health Insurance (Allied Health Services) Determination 2014*; and
- Amend clause 1.2.4 of the GMST to include equivalent telehealth items in the co-claiming restriction for subsequent attendance items with high price items in Group T8.

SUMMARY OF CHANGES FROM 01/03/2024

The 01/03/2024 changes to the MBS are summarised below and are identified in the Schedule pages by one or more of the following words appearing above the item number:

- | | |
|-------------------------|-------|
| (a) new item | New |
| (b) amended description | Amend |
| (c) fee amended | Fee |
| (d) item number changed | Renum |
| (e) EMSN changed | EMSN |

GENERAL EXPLANATORY NOTES

GENERAL EXPLANATORY NOTES

GN.0.1 AskMBS Email Advice Service

If you are a patient seeking advice about Medicare services, benefits or your Medicare claims, please contact Services Australia on the Medicare general enquiry line - 132 011.

AskMBS responds to enquiries from providers of services listed on the Medicare Benefits Schedule (MBS) seeking advice on interpretation of MBS items (including those for dental, pathology and diagnostic imaging), explanatory notes and associated legislation. This advice is intended primarily to assist health professionals, practice managers and others to understand and comply with MBS billing requirements. AskMBS works closely with policy areas within the Department of Health and Aged Care, and with Services Australia, to ensure enquirers receive accurate, authoritative and up-to-date information.

If you have a query relating exclusively to interpretation of the Schedule, you should email askMBS@health.gov.au.

If you are seeking advice in relation to Medicare billing, claiming, payments or obtaining a provider number, please contact Services Australia on the Provider Enquiry Line on 13 21 50.

AskMBS issues advisories summarising responses to frequently asked questions on specific subject areas. [AskMBS Email Advice Service](#)

GN.1.1 The Medicare Benefits Schedule - Introduction Schedules of Services

Each professional service contained in the Schedule has been allocated a unique item number. Located with the item number and description for each service is the Schedule fee and Medicare benefit, together with a reference to an explanatory note relating to the item (if applicable).

If the service attracts an anaesthetic, the word (Anaes.) appears following the description. Where an operation qualifies for the payment of benefits for an assistant, the relevant items are identified by the inclusion of the word (Assist.) in the item description. Medicare benefits are not payable for surgical assistance associated with procedures which have not been so identified.

Higher rates of benefits are provided for consultations by a recognised consultant physician where the patient has been referred by another medical practitioner or an approved dental practitioner (oral surgeons).

Differential fees and benefits also apply to services listed in Category 5 (Diagnostic Imaging Services). The conditions relating to these services are set out in Category 5.

Explanatory Notes

Explanatory notes relating to the Medicare benefit arrangements and notes that have general application to services are located at the beginning of the schedule, while notes relating to specific items are located at the beginning of each Category. While there may be a reference following the description of an item to specific notes relating to that item, there may also be general notes relating to each Group of items.

GN.1.2 Medicare - an outline

The Medicare Program ('Medicare') provides access to medical and hospital services for all Australian residents and certain categories of visitors to Australia. Services Australia administers Medicare and the payment of Medicare benefits. The major elements of Medicare are contained in the *Health Insurance Act 1973*, as amended, and include the following:

- a. Free treatment for public patients in public hospitals.
- b. The payment of 'benefits', or rebates, for professional services listed in the Medicare Benefits Schedule (MBS). The relevant benefit rates are:

- i. 100% of the Schedule fee for services provided by a general practitioner to non-referred, non-admitted patients, or for general practitioner attendances specified as not being hospital treatments - see note below;
- ii. 100% of the Schedule fee for services provided on behalf of a general practitioner by a practice nurse or Aboriginal and Torres Strait Islander health practitioner*;
- iii. 75% of the Schedule fee for professional services rendered to a patient as part of an episode of hospital treatment (other than services provided to public patients), including services provided in hospital outpatient settings but not generally including services set out in the note below. Medical practitioners must indicate on their accounts if a medical service is rendered in these circumstances by placing an asterisk '*' or the letter 'H' directly after an item number where used; or a description of the professional service and an indication the service was rendered as an episode of hospital treatment (for example, 'in hospital', 'hospital outpatient service', 'admitted' or 'in patient');
- iv. 75% of the Schedule fee for professional services rendered as part of a privately insured episode of hospital-substitute treatment such as 'hospital in the home', but generally not including certain services listed below. Medical practitioners must indicate on their accounts if a medical service is rendered in these circumstances by placing the words 'hospital-substitute treatment' directly after an item number where used; or a description of the professional service, preceded by the words 'hospital-substitute treatment';
- v. 85% of the Schedule fee for all other services.

Note: while hospital treatments and hospital-substitute treatments attract a 75% rebate, most attendances, services provided to private patients in emergency departments, pathology services and diagnostic imaging services do not generally require hospital treatment and therefore do not attract a rebate of 75% of the Schedule fee unless certified as a 'Type C' treatment. A list of most MBS items in scope of this exception, and the requirements around certifying a treatment as 'Type C' can be found in the Private Health Insurance (Benefit Requirement) Rules 2011. Services provided to a private patient in an emergency department are exempted under the Private Health Insurance (Health Insurance Business) Rules 2018.

Medicare benefits are claimable only for 'clinically relevant' services rendered by an appropriate health practitioner. A 'clinically relevant' service is one which is generally accepted by the relevant profession as necessary for the appropriate treatment of the patient.

When a service is not clinically relevant, the fee and payment arrangements are a private matter between the practitioner and the patient.

Services listed in the MBS must be rendered according to the provisions of the relevant Commonwealth, State and Territory laws. For example, medical practitioners must ensure that the medicines and medical devices they use have been supplied to them in strict accordance with the provisions of the *Therapeutic Goods Act 1989*.

Where a Medicare benefit has been inappropriately paid, Services Australia may request its return from the practitioner concerned.

* MBS items 10988 and 10989 generally attract a 100% rebate but can be specified as 'Type C' treatments and attract a 75% rebate.

GN.1.3 Medicare benefits and billing practices

Key information on Medicare benefits and billing practices

The *Health Insurance Act 1973* stipulates that Medicare benefits are payable for professional services. A professional service is a clinically relevant service which is listed in the MBS. A medical service is clinically relevant if it is generally accepted in the medical profession as necessary for the appropriate treatment of the patient.

Medical practitioners are free to set their fees for their professional service. However, the amount specified in the patient's account must be the amount charged for the service specified. The fee may not include a cost of goods or services which are not part of the MBS service specified on the account.

Billing practices contrary to the Act

A *non-clinically relevant service* must not be included in the charge for a Medicare item. The non-clinically relevant service must be separately listed on the account and not billed to Medicare.

Goods supplied for the patient's home use (such as wheelchairs, oxygen tanks, continence pads) must not be included in the consultation charge. Medicare benefits are limited to services which the medical practitioner provides at the time of the consultation - any other services must be separately listed on the account and must not be billed to Medicare.

Charging part of all of an episode of hospital treatment or a hospital substitute treatment to a non-admitted consultation is prohibited. This would constitute a false or misleading statement on behalf of the medical practitioner and no Medicare benefits would be payable.

An account may not be re-issued to include charges and out-of-pocket expenses excluded in the original account. The account can only be reissued to correct a genuine error.

Potential consequence of improperly issuing an account

The potential consequences for improperly issuing an account are

- (a) No Medicare benefits will be paid for the service;
- (b) The medical practitioner who issued the account, or authorised its issue, may face charges under sections 128A or 128B of the *Health Insurance Act 1973*.
- (c) Medicare benefits paid as a result of a false or misleading statement will be recoverable from the doctor under section 129AC of the *Health Insurance Act 1973*.

Providers should be aware that Services Australia is legally obliged to investigate doctors suspected of making false or misleading statements, and may refer them for prosecution if the evidence indicates fraudulent charging to Medicare. If Medicare benefits have been paid inappropriately or incorrectly, Services Australia will take recovery action.

Services Australia (SA) has developed a [Health Practitioner Guideline for responding to a request to substantiate that a patient attended a service](#). There is also a [Health Practitioner Guideline for substantiating that a specific treatment was performed](#). These guidelines are located on the Department of Health and Aged Care's website.

GN.2.4 Provider eligibility for Medicare

To be eligible to provide medical service which will attract Medicare benefits, or to provide services for or on behalf of another practitioner, practitioners must meet one of the following criteria:

- (a) be a recognised specialist, consultant physician or general practitioner; or
- (b) be in an approved placement under section 3GA of the *Health Insurance Act 1973*; or
- (c) be a temporary resident doctor with an exemption under section 19AB of the *Health Insurance Act 1973*, and working in accord with that exemption.

Any practitioner who does not satisfy the requirements outlined above may still practice medicine but their services will not be eligible for Medicare benefits.

NOTE: New Zealand citizens entering Australia do so under a special temporary entry visa and are regarded as temporary resident doctors.

NOTE: It is an offence under Section 19CC of the *Health Insurance Act 1973* to provide a service without first informing a patient where a Medicare benefit is not payable for that service (i.e. the service is not listed in the MBS).

Non-medical practitioners

To be eligible to provide services which will attract Medicare benefits under MBS items 10950-10977 and MBS items 80000-88000 and 82100-82140 and 82200-82215, allied health professionals, dentists, and dental specialists, participating midwives and participating nurse practitioners must be

(a) registered according to State or Territory law or, absent such law, be members of a professional association with uniform national registration requirements; and

(b) registered with Services Australia to provide these services.

GN.2.5 Provider Numbers

Practitioners eligible to have Medicare benefits payable for their services and/or who for Medicare purposes wish to raise referrals for specialist services and requests for pathology or diagnostic imaging services, may apply *in writing* to Services Australia for a Medicare provider number for the locations where these services/referrals/requests will be provided. The form may be downloaded from the [Services Australia website](#).

For Medicare purposes, an account/receipt issued by a practitioner must include the practitioner's name and *either* the provider number for the location where the service was provided *or* the address where the services were provided.

Medicare provider number information is released in accord with the secrecy provisions of the *Health Insurance Act 1973* (section 130) to authorized external organizations including private health insurers, the Department of Veterans' Affairs and the Department of Health and Aged Care.

When a practitioner ceases to practice at a given location they must inform Medicare promptly. Failure to do so can lead to the misdirection of Medicare cheques and Medicare information.

GN.2.6 Locum tenens

Where a locum tenens will be in a practice for more than two weeks *or* in a practice for less than two weeks but on a regular basis, the locum should apply for a provider number for the relevant location. If the locum will be in a practice for less than two weeks and will not be returning there, they should contact Services Australia (provider liaison - 132 150) to discuss their options (for example, use one of the locum's other provider numbers).

A locum must use the provider number allocated to the location if

(a) they are an approved general practice or specialist trainee with a provider number issued for an approved training placement; or

(b) they are associated with an approved rural placement under Section 3GA of the *Health Insurance Act 1973*; or

(c) they have access to Medicare benefits as a result of the issue of an exemption under section 19AB of the *Health Insurance Act 1973* (i.e. they have access to Medicare benefits at specific practice locations); or

(d) they will be at a practice which is participating in the Practice Incentives Program; or

(e) they are associated with a placement on the MedicarePlus for Other Medical Practitioners (OMPs) program, the After Hours OMPs program, the Rural OMPs program or Outer Metropolitan OMPs program.

GN.2.7 Overseas trained doctor

Ten year moratorium

Section 19AB of the *Health Insurance Act 1973* states that services provided by overseas trained doctors (including New Zealand trained doctors) and former overseas medical students trained in Australia, will not attract Medicare benefits for 10 years from either

- a. their date of registration as a medical practitioner for the purposes of the *Health Insurance Act 1973*; or
- b. their date of permanent residency (the reference date will vary from case to case).

Exclusions - Practitioners who before 1 January 1997 had

- a. registered with a State or Territory medical board and retained a continuing right to remain in Australia; or
- b. lodged a valid application with the Australian Medical Council (AMC) to undertake examinations whose successful completion would normally entitle the candidate to become a medical practitioner.

The Minister of Health and Ageing may grant an overseas trained doctor (OTD) or occupational trainee (OT) an exemption to the requirements of the ten year moratorium, with or without conditions. When applying for a Medicare provider number, the OTD or OT must

- a. demonstrate that they need a provider number and that their employer supports their request; and
- b. provide the following documentation:
 - i. Australian medical registration papers; and
 - ii. a copy of their personal details in their passport and all Australian visas and entry stamps; and
 - iii. a letter from the employer stating why the person requires a Medicare provider number and/or prescriber number is required; and
 - iv. a copy of the employment contract.

GN.2.8 Contact details for Services Australia

The day-to-day administration and payment of benefits under the Medicare arrangements is the responsibility of Services Australia.

Changes to Provider Contact Details

It is important that you contact Services Australia promptly of any changes to your preferred contact details. Your preferred mailing address is used to contact you about Medicare provider matters. We require requests for changes to your preferred contact details to be made by the provider in writing to Services Australia at:

Medicare

GPO Box 9822

in your capital city

or

the Medicare Provider telephone line on 132 150.

You may also be able to update some provider details through HPOS <https://www.servicesaustralia.gov.au/hpos>

GN.3.9 Patient eligibility for Medicare services

This note sets out who can access Medicare services.

ELIGIBLE GROUPS

To be eligible for Medicare, a person must ordinarily live in Australia, be located in Australia at the time of the service, and be:

- an Australian citizen
- an Australian permanent resident
- a New Zealand citizen
- a Resident Return visa holder
- an applicant for permanent residency ([conditions apply](#)) or
- a temporary visa holder covered by a [Ministerial Order](#).

Ministerial Orders made under Section 6(1) of the [Health Insurance Act 1973](#) grant eligibility to groups including Australian citizens who have been absent from Australia for up to five years and holders of particular temporary visa types.

Note: access to Medicare by visitors to Australia who are covered by a Reciprocal Health Care Agreement is subject to the specific conditions of each Agreement (see below).

ENROLLING IN MEDICARE

The patient must enrol with Medicare before receiving Medicare benefits. Once enrolled, they will receive a Medicare Card. There are three types of Medicare cards, in the following colours:

Green – this is the standard Medicare card for Australian citizens, permanent residents and New Zealand citizens living in Australia and Resident Return visa holders.

Blue – this is the card for people who have applied for permanent residence or who hold a temporary visa covered by a Ministerial Order.

Yellow – this is the card for visitors to Australia from a country with a Reciprocal Health Care Agreement.

More information about enrolling in Medicare and the different Medicare cards is available from [Services Australia](#).

RECIPROCAL HEALTH CARE AGREEMENTS

Under Section 7 of the [Health Insurance Act 1973](#), the Australian Government has agreements with 11 other governments to cover the cost of certain medical care when Australians and overseas residents visit each other's countries.

Eligible overseas visitors from these countries generally receive:

- inpatient/outpatient services as a public patient in a public hospital
- out of hospital care
- Pharmaceutical Benefits Scheme (PBS) prescription medicines

Exceptions: Visitors from New Zealand and Ireland are entitled to public hospital care and PBS drugs only (not MBS services).

Reciprocal Health Care Agreements do not cover the cost of treatment as a private patient in a public or private hospital.

People visiting Australia for the specific purpose of receiving medical treatment are not covered.

Eligible Countries:

As at 1 February 2024, Australia has Reciprocal Health Care Agreements with the following countries:

- Belgium
- Finland
- Italy (eligibility limited to six months from date of arrival)
- Malta (eligibility limited to six months from date of arrival)
- Netherlands
- New Zealand (public hospital care and PBS medicines only, not MBS services)
- Norway
- Ireland (public hospital care and PBS medicines only, not MBS services)
- Slovenia
- Sweden
- United Kingdom

Eligible patients from these countries need to enrol in Medicare to access MBS services. Once enrolled they will have a yellow Medicare card.

- Visitors from New Zealand and Ireland do not need to enrol in Medicare to access public hospital services and PBS medicines under the Reciprocal Health Care Agreements. They are not eligible for MBS services unless they hold a green Medicare card.

More information about access to medical care under each Reciprocal Health Care Agreement is available from [Services Australia](#).

OTHER VISITORS AND TEMPORARY RESIDENTS

Other visitors and temporary residents are not eligible for Medicare and should arrange private health insurance cover.

RELEVANT LEGISLATION

Information about the legislative arrangements applying to Medicare and the Reciprocal Health Care Agreements is set out in the [Health Insurance Act 1973](#), which can be found on the [Federal Register of Legislation](#).

GN.4.13 Who can use the Medicare Benefits Schedule GP items?

SUMMARY

This general note sets out which medical practitioners can use the MBS general practitioner (GP) items.

Medical practitioners that are eligible to provide Medicare services who are not GPs but provide services in a general practice setting can use the medical practitioner and [prescribed medical practitioner](#) (explanatory note [AN.7.1](#)) MBS items.

WHO CAN USE THE MBS GP ITEMS?

The [Health Insurance Act 1973](#) (the Act), and legal instruments made under the Act, set out which medical practitioners can claim MBS GP items. The four categories of medical practitioner that can access MBS GP items are those that are:

1. Fellows of a General Practice College
2. On an approved placement in a general practice training program
3. Listed on the Vocational Register of GPs (closed to new participants)
4. Eligible non-VR GPs (closed to new participants)

Before you can claim MBS GP items you must have a Medicare provider number for the location at which you are practising. You can apply for a Medicare provider number through [Services Australia](#).

1. Medical practitioners who are fellows of a General Practice College

Medical practitioners that are fellows of either the:

- Australian College of Rural and Remote Medicine (ACRRM), or
- Royal Australian College of GPs (RACGP)

are GPs for MBS purposes.

Services Australia uses the Australian Health Practitioner Regulation Agency (Ahpra) [Register of Medical Practitioners](#) to determine practitioners' access to the GP items. Fellows of the RACGP and ACRRM must hold specialist registration as a GP with the [Medical Board of Australia](#) to access the GP items. The Ahpra registration for these medical practitioners will indicate that they are a specialist in the field of general practice.

2. Medical practitioners on an Approved Placement in a general practice training program

Section 1.1.3 of the [Health Insurance \(General Medical Services Table\) Regulations 2021](#) provides access to the MBS GP items to medical practitioners undertaking an approved training placement. That is, a training placement that will lead to fellowship with the RACGP or ACCRM.

- For more information on approved training placements see the [General Practice Fellowship Program Placement Guidelines](#).

Your placement organisation must advise [Services Australia](#) of the placement before MBS GP items can be accessed.

3. Medical practitioners on the Vocational Register of GPs

The Vocational Register of GPs closed to new participants on 16 June 2021.

Section 16 of the [Health Insurance Regulation 2018](#) allows medical practitioners whose names are entered onto the Vocational Register of GPs to access MBS GP items provided they continue to be registered with Ahpra.

4. Eligible non-vocationally recognised medical practitioners

The programs below closed to new participants on 1 January 2019.

Section 1.1.2 of the [Health Insurance \(General Medical Services Table\) Regulations 2021](#) specifies which non-vocationally recognised medical practitioners can access MBS GP items:

1. Medical practitioners who have been notified by the Chief Executive of Medicare that they have completed the requirements of the MedicarePlus for Other Medical Practitioners Program before 31 December 2023.
2. Participants in the [Other Medical Practitioners Extension Program](#) who were enrolled in one of the following programs as at 30 June 2023:
 - a. After Hours Other Medical Practitioner Program
 - b. Outer Metropolitan Other Medical Practitioner Program
 - c. Rural Other Medical Practitioner Program

RELEVANT LEGISLATION

Details of the legislative arrangements applying to the categories of medical practitioners able to use the MBS GP items can be found on the [Federal Register of Legislation](#), and are set out in three regulatory instruments:

- [Health Insurance Act 1973](#)
- [Health Insurance \(General Medical Services Table\) Regulations 2021](#)
- [Health Insurance Regulations 2018](#)

GN.5.14 Recognition as a Specialist or Consultant Physician

A medical practitioner who:

- is registered as a specialist under State or Territory law; or
- holds a fellowship of a specified specialist College and has obtained, after successfully completing an appropriate course of study, a relevant qualification from a relevant College

and has formally applied and paid the prescribed fee, may be recognised by the Minister as a specialist or consultant physician for the purposes of the *Health Insurance Act 1973*.

A relevant specialist College may also give Services Australia's Chief Executive Officer a written notice stating that a medical practitioner meets the criteria for recognition.

A medical practitioner who is training for a fellowship of a specified specialist College and is undertaking training placements in a private hospital or in general practice, may provide services which attract Medicare rebates. Specialist trainees should consult the information available at [Service Australia's Medicare website](#).

Once the practitioner is recognised as a specialist or consultant physician for the purposes of the *Health Insurance Act 1973*, Medicare benefits will be payable at the appropriate higher rate for services rendered in the relevant speciality, provided the patient has been appropriately referred to them.

Further information about applying for recognition is available at [Service Australia's Medicare website](#).

Services Australia has developed an [Health Practitioner Guideline to substantiate that a valid referral existed \(specialist or consultant physician\)](#) which is located on the Department of Health and Aged Care's website.

GN.5.15 Emergency Medicine

A practitioner will be acting as an emergency medicine specialist when treating a patient within 30 minutes of the patient's presentation, and that patient is

- (a) at risk of serious morbidity or mortality requiring urgent assessment and resuscitation; or

- (b) suffering from suspected acute organ or system failure; or
- (c) suffering from an illness or injury where the viability or function of a body part or organ is acutely threatened; or
- (d) suffering from a drug overdose, toxic substance or toxin effect; or
- (e) experiencing severe psychiatric disturbance whereby the health of the patient or other people is at immediate risk; or
- (f) suffering acute severe pain where the viability or function of a body part or organ is suspected to be acutely threatened; or
- (g) suffering acute significant haemorrhage requiring urgent assessment and treatment; and
- (h) treated in, or via, a bona fide emergency department in a hospital.

Benefits are not payable where such services are rendered in the accident and emergency departments or outpatient departments of public hospitals.

GN.5.16 Conjoint Committee for recognising training in Micro Bypass Glaucoma Surgery (MBGS)

The Conjoint Committee comprises representatives from the Australian and New Zealand Glaucoma Society (ANZGS) and the Royal Australian and New Zealand College of Ophthalmologists (RANZCO). For the purposes of MBS item 42504, specialists performing this procedure must have certification and training recognised by the Conjoint Committee for the Recognition of Training in Micro-Bypass Glaucoma Surgery, and Services Australia notified of that recognition.

GN.6.16 Referral Of Patients To Specialists Or Consultant Physicians

For certain services provided by specialists and consultant physicians, the Medicare benefit payable is dependent on acceptable evidence that the service has been provided following referral from another practitioner.

A reference to a referral in this Section does not refer to written requests made for pathology services or diagnostic imaging services. Information about the form of a diagnostic imaging request can be found in **Note IN.0.6** of the Diagnostic Imaging Services Table (Category 5) and information about the form of a pathology request can be found in **Note PN.2.1** of the Pathology Services Table (Category 6).

What is a Referral?

A "referral" is a request to a specialist or a consultant physician for investigation, opinion, treatment and/or management of a condition or problem of a patient or for the performance of a specific examination(s) or test(s).

Subject to the exceptions in the paragraph below, for a valid "referral" to take place

- (i) the referring practitioner must have undertaken a professional attendance with the patient and turned their mind to the patient's need for referral and have communicated relevant information about the patient to the specialist or consultant physician (this need not mean an attendance on the occasion of the referral);
- (ii) the instrument of referral must be in writing as a letter or note to a specialist or to a consultant physician and must be signed and dated by the referring practitioner; and
- (iii) the specialist or consultant physician to whom the patient is referred must have received the instrument of referral on or prior to the occasion of the professional service to which the referral relates.

The exceptions to the requirements in paragraph above are that

(a) sub-paragraphs (i), (ii) and (iii) do not apply to

- a pre-anaesthesia consultation by a specialist anaesthetist (items 16710-17625);

(b) sub-paragraphs (ii) and (iii) do not apply to

- a referral generated during an episode of hospital treatment, for a service provided or arranged by that hospital, where the hospital records provide evidence of a referral (including the referring practitioner's signature); or
- an emergency where the referring practitioner or the specialist or the consultant physician was of the opinion that the service be rendered as quickly as possible; and

(c) sub-paragraph (iii) does not apply to instances where a written referral was completed by a referring practitioner but was lost, stolen or destroyed.

Examination by Specialist Anaesthetists

A referral is not required in the case of pre-anaesthesia consultation items 17610-17625. However, for benefits to be payable at the specialist rate for consultations, other than pre-anaesthesia consultations by specialist anaesthetists (items 17640 -17655) a referral is required.

Who can Refer?

The general practitioner is regarded as the primary source of referrals. Cross-referrals between specialists and/or consultant physicians should usually occur in consultation with the patient's general practitioner.

Referrals by Dentists or Optometrists or Participating Midwives or Participating Nurse Practitioners

For Medicare benefit purposes, a referral may be made to

(i) a recognised specialist:

(a) by a registered dental practitioner, where the referral arises from a dental service; or

(b) by a registered optometrist where the specialist is an ophthalmologist; or

(c) by a participating midwife where the specialist is an obstetrician or a paediatrician, as clinical needs dictate. A referral given by a participating midwife is valid until 12 months after the first service given in accordance with the referral and for I pregnancy only or

(d) by a participating nurse practitioner to specialists and consultant physicians. A referral given by a participating nurse practitioner is valid until 12 months after the first service given in accordance with the referral.

(ii) a consultant physician, by an approved dental practitioner (oral surgeon), where the referral arises out of a dental service.

In any other circumstances (i.e. a referral to a consultant physician by a dentist, other than an approved oral surgeon, or an optometrist, or a referral by an optometrist to a specialist other than a specialist ophthalmologist), it is not a valid referral. Any resulting consultant physician or specialist attendances will attract Medicare benefits at unreferred rates.

Registered dentists and registered optometrists may refer themselves to specialists in accordance with the criteria above, and Medicare benefits are payable at the levels which apply to their referred patients.

Billing

Routine Referrals

In addition to providing the usual information required to be shown on accounts, receipts or assignment forms, specialists and consultant physicians must provide the following details (unless there are special circumstances as indicated in paragraph below):-

- name and either practice address or provider number of the referring practitioner;
- date of referral; and
- period of referral (when other than for 12 months) expressed in months, eg "3", "6" or "18" months, or "indefinitely" should be shown.

Special Circumstances

(i) Lost, stolen or destroyed referrals.

If a referral has been made but the letter or note of referral has been lost, stolen or destroyed, benefits will be payable at the referred rate if the account, receipt or the assignment form shows the name of the referring medical practitioner, the practice address or provider number of the referring practitioner (if either of these are known to the consultant physician or specialist) and the words 'Lost referral'. This provision only applies to the initial attendance. For subsequent attendances to attract Medicare benefits at the referred rate a duplicate or replacement letter of referral must be obtained by the specialist or the consultant physician.

(ii) Emergencies

If the referral occurred in an emergency, benefit will be payable at the referred rate if the account, receipt or assignment form is endorsed 'Emergency referral'. This provision only applies to the initial attendance. For subsequent attendances to attract Medicare benefits at the referred rate the specialist/consultant physician must obtain a letter of referral.

(iii) Hospital referrals.

Private Patients - Where a referral is generated during an episode of hospital treatment for a service provided or arranged by that hospital, benefits will be payable at the referred rate if the account, receipt or assignment form is endorsed 'Referral within (name of hospital)' and the patient's hospital records show evidence of the referral (including the referring practitioner's signature). However, in other instances where a medical practitioner within a hospital is involved in referring a patient (e.g. to a specialist or a consultant physician in private rooms) the normal referral arrangements apply, including the requirement for a referral letter or note and its retention by the specialist or the consultant physician billing for the service.

Public Hospital Patients

State and Territory Governments are responsible for the provision of public hospital services to eligible persons in accordance with the National Healthcare Agreement.

Bulk Billing

Bulk billing assignment forms should show the same information as detailed above. However, faster processing of the claim will be facilitated where the provider number (rather than the practice address) of the referring practitioner is shown.

Period for which Referral is Valid

The referral is valid for the period specified in the referral which is taken to commence on the date of the specialist's or consultant physician's first service covered by that referral.

Specialist Referrals

Where a referral originates from a specialist or a consultant physician, the referral is valid for 3 months, except where the referred patient is an admitted patient. For admitted patients, the referral is valid for 3 months or the duration of the admission and ceases when the patient is discharged.

A referral for a specialist professional service to a patient in a hospital who is not a public patient is valid until the patient ceases to be a patient in the hospital.

As it is expected that the patient's general practitioner will be kept informed of the patient's progress, a referral from a specialist or a consultant physician must include the name of the patient's general practitioners and/or practice. Where a patient is unable or unwilling to nominate a general practitioner or practice this must be stated in the referral.

Referrals by other Practitioners

Where the referral originates from a practitioner other than those listed in *Specialist Referrals*, the referral is valid for a period of 12 months, unless the referring practitioner indicates that the referral is for a period more or less than 12 months (eg. 3, 6 or 18 months or valid indefinitely). Referrals for longer than 12 months should only be used where the patient's clinical condition requires continuing care and management of a specialist or a consultant physician for a specific condition or specific conditions.

Definition of a Single Course of Treatment

A single course of treatment involves an initial attendance by a specialist or consultant physician and the continuing management/treatment up to the stage where the patient is referred back to the care of the referring practitioner. It also includes any subsequent review of the patient's condition by the specialist or the consultant physician that may be necessary. Such a review may be initiated by either the referring practitioner or the specialist/consultant physician.

The presentation of an unrelated illness, requiring the referral of the patient to the specialist's or the consultant physician's care would initiate a new course of treatment in which case a new referral would be required.

The receipt by a specialist or consultant physician of a new referral following the expiration of a previous referral for the same condition(s) does not necessarily indicate the commencement of a new course of treatment involving the itemisation of an initial consultation. In the continuing management/treatment situation the new referral is to facilitate the payment of benefits at the specialist or the consultant physician referred rates rather than the unreferral rates.

However, where the referring practitioner:-

- (a) deems it necessary for the patient's condition to be reviewed; and
- (b) the patient is seen by the specialist or the consultant physician outside the currency of the last referral; and
- (c) the patient was last seen by the specialist or the consultant physician more than 9 months earlier

the attendance following the new referral initiates a new course of treatment for which Medicare benefit would be payable at the initial consultation rates.

Retention of Referral Letters

The prima facie evidence that a valid referral exists is the provision of the referral particulars on the specialist's or the consultant physician's account.

A specialist or a consultant physician is required to retain the instrument of referral (and a hospital is required to retain the patient's hospital records which show evidence of a referral) for 2 years from the date the service was rendered.

A specialist or a consultant physician is required, if requested by the Services Australia CEO, to produce to a medical practitioner who is an employee of Services Australia, the instrument of referral within seven days after the request is received. Where the referral originates in an emergency situation or in a hospital, the specialist or consultant physician is required to produce such information as is in his or her possession or control relating to whether the patient was so treated.

Attendance for Issuing of a Referral

Medicare benefit is attracted for an attendance on a patient even where the attendance is solely for the purpose of issuing a referral letter or note. However, if a medical practitioner issues a referral without an attendance on the patient, no benefit is payable for any charge raised for issuing the referral.

Locum-tenens Arrangements

It should be noted that where a non-specialist medical practitioner acts as a locum-tenens for a specialist or consultant physician, or where a specialist acts as a locum-tenens for a consultant physician, Medicare benefit is only payable at the level appropriate for the particular locum-tenens, eg, general practitioner level for a general practitioner locum-tenens and specialist level for a referred service rendered by a specialist locum tenens.

Medicare benefits are not payable where a practitioner is not eligible to provide services attracting Medicare benefits acts as a locum-tenens for any practitioner who is eligible to provide services attracting Medicare benefits.

Fresh referrals are not required for locum-tenens acting according to accepted medical practice for the principal of a practice ie referrals to the latter are accepted as applying to the former and benefit is not payable at the initial attendance rate for an attendance by a locum-tenens if the principal has already performed an initial attendance in respect of the particular instrument of referral.

Self Referral

Medical practitioners may refer themselves to consultant physicians and specialists and Medicare benefits are payable at referred rates.

GN.7.17 Billing procedures

The Services Australia website contains information on Medicare billing and claiming options. Please visit the [Services Australia](#) website for further information.

Bulk billing

Under the *Health Insurance Act 1973*, a bulk billing facility for professional services is available to all persons in Australia who are eligible for a benefit under the Medicare program. If a practitioner bulk bills for a service the practitioner undertakes to accept the relevant Medicare benefit as full payment for the service. Additional charges for that service cannot be raised. This includes but is not limited to:

- any consumables that would be reasonably necessary to perform the service, including bandages and/or dressings;
- record keeping fees;
- a booking fee to be paid before each service, or;
- an annual administration or registration fee.

Where the patient is bulk billed, an additional charge can **only** be raised against the patient by the practitioner where the patient is provided with a vaccine or vaccines from the practitioner's own supply held on the practitioner's premises. This exemption only applies to general practitioners and other non-specialist practitioners in association with attendance items **3 to 96, 179 to 212, 733 to 789 and 5000 to 5267** (inclusive) and only relates to vaccines that are not available to the patient free of charge through Commonwealth or State funding arrangements or available through the Pharmaceutical Benefits Scheme. The additional charge must only be to cover the supply of the vaccine.

Where a practitioner provides a number of services (excluding operations) on the one occasion, they can choose to bulk bill some or all of those services and privately charge a fee for the other service (or services), in excess of the Medicare rebate. The privately charged fee can only be charged in relation to said service (or services). Where two or more operations are provided on the one occasion, all services must be either bulk billed or privately charged.

It should be noted that, where a service is not bulk billed, a practitioner may privately raise an additional charge against a patient, such as for a consumable. An additional charge can also be raised where a practitioner does not bulk bill a patient but instead charges a fee that is equal to the rebate for the Medicare service. For example, where a general practitioner provides a professional service to which item 23 relates the practitioner could, in place of bulk billing the patient, charge the rebate for the service and then also raise an additional charge (such as for a consumable).

GN.8.18 Provision for review of individual health professionals

The Professional Services Review (PSR) reviews and investigates service provision by health practitioners to determine if they have engaged in inappropriate practice when rendering or initiating Medicare services, or when prescribing or dispensing under the PBS.

Section 82 of the *Health Insurance Act 1973* defines inappropriate practice as conduct that is such that a PSR Committee could reasonably conclude that it would be unacceptable to the general body of the members of the profession in which the practitioner was practicing when they rendered or initiated the services under review. It is also an offence under Section 82 for a person or officer of a body corporate to knowingly, recklessly or negligently cause or permit a practitioner employed by the person to engage in such conduct.

Services Australia monitors health practitioners' claiming patterns. Where Services Australia detects an anomaly, it may request the Director of PSR to review the practitioner's service provision. On receiving the request, the Director must decide whether to conduct a review and in which manner the review will be conducted. The Director is authorized to require that documents and information be provided.

Following a review, the Director must:

decide to take no further action; or

enter into an agreement with the person under review (which must then be ratified by an independent Determining Authority); or

refer the matter to a PSR Committee.

A PSR Committee normally comprises three medically qualified members, two of whom must be members of the same profession as the practitioner under review. However, up to two additional Committee members may be appointed to provide wider range of clinical expertise.

The Committee is authorized to:

investigate any aspect of the provision of the referred services, and without being limited by the reasons given in the review request or by a Director's report following the review;

hold hearings and require the person under review to attend and give evidence;

require the production of documents (including clinical notes).

The methods available to a PSR Committee to investigate and quantify inappropriate practice are specified in legislation:

(a) Patterns of Services - The *Health Insurance (Professional Services Review) Regulations 1999* specify that when a general practitioner or other medical practitioner reaches or exceeds 80 or more attendances on each of 20 or more days in a 12-month period, they are deemed to have practiced inappropriately.

A professional attendance means a service of a kind mentioned in group A1, A2, A5, A6, A7, A9, A11, A13, A14, A15, A16, A17, A18, A19, A20, A21, A22 or A23 of Part 3 of the General Medical Services Table.

If the practitioner can satisfy the PSR Committee that their pattern of service was as a result of exceptional circumstances, the quantum of inappropriate practice is reduced accordingly. Exceptional circumstances include, but are not limited to, those set out in the *Regulations*. These include:

an unusual occurrence;

the absence of other medical services for the practitioner's patients (having regard to the practice location); and

the characteristics of the patients.

(b) Sampling - A PSR Committee may use statistically valid methods to sample the clinical or practice records.

(c) Generic findings - If a PSR Committee cannot use patterns of service or sampling (for example, there are insufficient medical records), it can make a 'generic' finding of inappropriate practice.

Additional Information

A PSR Committee may not make a finding of inappropriate practice unless it has given the person under review notice of its intention to review them, the reasons for its findings, and an opportunity to respond. In reaching their decision, a PSR Committee is required to consider whether or not the practitioner has kept adequate and contemporaneous patient records (See general explanatory note G15.1 for more information on adequate and contemporaneous patient records).

The practitioner under review is permitted to make submissions to the PSR Committee before key decisions or a final report is made.

If a PSR Committee finds that the person under review has engaged in inappropriate practice, the findings will be reported to the Determining Authority to decide what action should be taken:

(i) a reprimand;

(ii) counselling;

(iii) repayment of Medicare benefits; and/or

(iv) complete or partial disqualification from Medicare benefit arrangements for up to three years.

Further information is available from the PSR website - www.psr.gov.au

GN.8.19 Medicare Participation Review Committee

The Medicare Participation Review Committee determines what administrative action should be taken against a practitioner who:

(a) has been successfully prosecuted for relevant criminal offences;

(b) has breached an Approved Pathology Practitioner undertaking;

(c) has engaged in prohibited diagnostic imaging practices; or

(d) has been found to have engaged in inappropriate practice under the Professional Services Review scheme and has received Final Determinations on two (or more) occasions.

The Committee can take no further action, counsel or reprimand the practitioner, or determine that the practitioner be disqualified from Medicare for a particular period or in relation to particular services for up to five years.

Medicare benefits are not payable in respect of services rendered by a practitioner who has been fully disqualified, or partly disqualified in relation to relevant services under the *Health Insurance Act 1973* (Section 19B applies).

GN.8.20 Referral of professional issues to regulatory and other bodies

The *Health Insurance Act 1973* provides for the following referral, to an appropriate regulatory body:

- i. a significant threat to a person's life or health, when caused or is being caused or is likely to be caused by the conduct of the practitioner under review; or
- ii. a statement of concerns of non-compliance by a practitioner with 'professional standards'.

GN.8.21 Comprehensive Management Framework for the MBS

The Government announced the Comprehensive Management Framework for the MBS in the 2011-12 Budget to improve MBS management and governance into the future. As part of this framework, the Medical Services Advisory Committee (MSAC) Terms of Reference and membership have been expanded to provide the Government with independent expert advice on all new proposed services to be funded through the MBS, as well as on all proposed amendments to existing MBS items. Processes developed under the previously funded MBS Quality Framework are now being integrated with MSAC processes under the Comprehensive Management Framework for the MBS.

GN.8.22 Medical Services Advisory Committee

The Medical Services Advisory Committee (MSAC) advises the Minister on the strength of evidence relating to the safety, effectiveness and cost effectiveness of new and emerging medical services and technologies and under what circumstances public funding, including listing on the MBS, should be supported.

MSAC members are appointed by the Minister and include specialist practitioners, general practitioners, health economists, a health consumer representative, health planning and administration experts and epidemiologists.

For more information on the MSAC refer to their website - www.msac.gov.au or email on msac.secretariat@health.gov.au or by phoning the MSAC secretariat on (02) 6289 7550.

GN.8.23 Pathology Services Table Committee

This Pathology Services Table Committee comprises six representatives from the interested professions and six from the Australian Government. Its primary role is to advise the Minister on the need for changes to the structure and content of the Pathology Services Table (except new medical services and technologies) including the level of fees.

GN.9.25 Penalties and Liabilities

Penalties of up to \$10,000 or imprisonment for up to five years, or both, may be imposed on any person who makes a statement (oral or written) or who issues or presents a document that is false or misleading in a material particular and which is capable of being used with a claim for benefits. In addition, any practitioner who is found guilty of such offences by a court shall be subject to examination by a Medicare Participation Review Committee and may be counselled or reprimanded or may have services wholly or partially disqualified from the Medicare benefit arrangements.

A penalty of up to \$1,000 or imprisonment for up to three months, or both, may be imposed on any person who obtains a patient's signature on a direct-billing form without the obligatory details having been entered on the form before the person signs, or who fails to cause a patient to be given a copy of the completed form.

GN.10.26 Schedule fees and Medicare benefits

Medicare benefits are based on fees determined for each medical service. The fee is referred to in these notes as the "Schedule fee". The fee for any item listed in the MBS is that which is regarded as being reasonable on average for

that service having regard to usual and reasonable variations in the time involved in performing the service on different occasions and to reasonable ranges of complexity and technical difficulty encountered.

The Schedule fee and Medicare benefit levels for the medical services contained in the MBS are located with the item descriptions. Where appropriate, the calculated benefit has been rounded to the nearest higher 5 cents. However, in no circumstances will the Medicare benefit payable exceed the fee actually charged.

There are presently three levels of Medicare benefit payable:

- a. 75% of the Schedule fee:
 - i. for professional services rendered to a patient as part of an episode of hospital treatment (other than services provided to public patients). Medical practitioners must indicate on their accounts if a medical service is rendered in these circumstances by placing an asterisk '*' or the letter 'H' directly after an item number where used; or a description of the professional service and an indication the service was rendered as an episode of hospital treatment (for example, 'in hospital', 'hospital outpatient service', 'admitted' or 'in patient'). Certain services are not generally considered hospital treatments – see GN1.2;
 - ii. for professional services rendered as part of an episode of hospital-substitute treatment, and the patient who receives the treatment chooses to receive a benefit from a private health insurer. Medical practitioners must indicate on their accounts if a medical service is rendered in these circumstances by placing the words 'hospital-substitute treatment' directly after an item number where used; or a description of the professional service, preceded by the words 'hospital-substitute treatment'. Certain services are not generally considered hospital treatments – see GN1.2.
- b. 100% of the Schedule fee for non-referred attendances by general practitioners to non-admitted patients and services provided by a practice nurse or Aboriginal and Torres Strait Islander health practitioner on behalf of a general practitioner – see GN1.2 for exceptions.
- c. 85% of the Schedule fee, or the Schedule fee less \$98.70 (indexed annually in November), whichever is the greater, for all other professional services.

Public hospital services are to be provided free of charge to eligible persons who choose to be treated as public patients in accordance with the 2020-2025 Addendum to the National Health Reform Agreement.

Where a Medicare item with multiple components is provided, and some components are provided in the hospital and the remainder outside of the hospital (e.g. aftercare), the 75% benefit level applies. With regard to obstetric items, benefits would be attracted at the 75% level where the confinement takes place in hospital.

Pathology tests performed after discharge from hospital on bodily specimens taken during hospitalisation also attract the 75% level of benefits if not a type of item specified in GN1.2 as not generally being a hospital treatment.

It should be noted that private health insurers can cover the "patient gap" (that is, the difference between the Medicare rebate and the Schedule fee) for services attracting benefits at the 75% level. Patients may insure with private health insurers for the gap between the 75% Medicare benefits and the Schedule fee or for amounts in excess of the Schedule fee where the doctor has an arrangement with their health insurer.

GN.10.27 Medicare Safety Nets

The Medicare Safety Nets provide families and individuals with an additional rebate for out-of-hospital Medicare services, once annual thresholds are reached. There are two safety nets: the Original Medicare Safety Net (OMSN) and the Extended Medicare Safety Net (EMSN).

Original Medicare Safety Net:

Under the OMSN, the Medicare benefit for out-of-hospital services is increased to 100% of the Schedule Fee (up from 85%) once an annual threshold in gap costs is reached. Gap costs refer to the difference between the Medicare benefit (85%) and the Schedule Fee. The threshold from 1 January 2024 is \$560.40. This threshold applies to all Medicare-eligible individuals and families.

Extended Medicare Safety Net:

Under the EMSN, once an annual threshold in out-of-pocket costs for out-of-hospital Medicare services is reached, Medicare will pay for up to 80% of any future out-of-pocket costs for out-of-hospital Medicare services for the remainder of the calendar year. However, where the item has an EMSN benefit cap, there is a maximum limit on the EMSN benefit that will be paid for that item. Further explanation about EMSN benefit caps is provided below. Out-of-pocket costs refer to the difference between the Medicare benefit and the fee charged by the practitioner.

In 2024, the threshold for concessional individuals and families, including families that received Family Tax Benefit Part (A), is \$811.80. The threshold for all other (non-concessional) individuals and families in 2024 is \$2544.30.

The thresholds for both safety nets are indexed on 1 January each year in line with the Consumer Price Index (CPI).

Individuals are automatically registered with Services Australia for the safety nets. Families (including couples) are required to register in order to be recognised as a family for the purposes of the safety nets. In most cases, registered families have their expenses combined to reach the safety net thresholds. This may help to qualify for safety net benefits more quickly. Registration forms can be completed online at <https://www.servicesaustralia.gov.au/individuals/services/medicare/medicare-safety-nets>.

EMSN Benefit Caps:

The EMSN benefit cap is the maximum EMSN benefit payable for that item and is paid in addition to the standard Medicare rebate. Where there is an EMSN benefit cap in place for the item, the amount of the EMSN cap is displayed in the item descriptor. Once the EMSN threshold is reached, each time the item is claimed the patient is eligible to receive up to the EMSN benefit cap. In other words, once the patient reaches the EMSN threshold, they will receive either 80% of their out-of-pocket costs back or the EMSN cap amount, whichever is the lower amount.

For example: Item A has a Schedule fee of \$100, the out-of-hospital benefit is \$85 (85% of the Schedule fee). The EMSN benefit cap is \$30. Assuming that the patient has reached the EMSN threshold:

- o If the fee charged by the doctor for Item A is \$125, the standard Medicare rebate is \$85, with an out-of-pocket cost of \$40. The EMSN benefit is calculated as $\$40 \times 80\% = \32 . However, as the EMSN benefit cap is \$30, only \$30 will be paid.
- o If the fee charged by the doctor for Item A is \$110, the standard Medicare rebate is \$85, with an out-of-pocket cost of \$25. The EMSN benefit is calculated as $\$25 \times 80\% = \20 . As this is less than the EMSN benefit cap, the full \$20 is paid.

GN.11.28 Services not listed in the MBS

Benefits are not generally payable for services not listed in the MBS. However, there are some procedural services which are not specifically listed because they are regarded as forming part of a consultation or else attract benefits on an attendance basis. For example, intramuscular injections, aspiration needle biopsy, treatment of seborrheic keratoses and less than 10 solar keratoses by ablative techniques and closed reduction of the toe (other than the great toe).

If you are seeking advice in relation to Medicare billing, claiming, payments or obtaining a provider number, please contact Services Australia on the Provider Enquiry Line - 13 21 50.

If you have a query relating exclusively to interpretation of the Schedule, you should email <mailto:askmbs@health.gov.au>

GN.11.29 Ministerial Determinations

Section 3C of the *Health Insurance Act 1973* empowers the Minister to determine an item and Schedule fee (for the purposes of the Medicare benefits arrangements) for a service not included in the health insurance legislation. This provision may be used to facilitate payment of benefits for new developed procedures or techniques where close monitoring is desirable. Services which have received section 3C approval are located in their relevant Groups in the MBS with the notation "(Ministerial Determination)".

GN.12.30 Professional services

Professional services which attract Medicare benefits include medical services rendered by or "on behalf of" a medical practitioner. The latter include services where a part of the service is performed by a technician employed by or, in accordance with accepted medical practice, acting under the supervision of the medical practitioner.

The following medical services will attract benefits only if they have been personally performed by a medical practitioner on not more than one patient on the one occasion (i.e. two or more patients cannot be attended simultaneously, although patients may be seen consecutively), unless a group session is involved (i.e. Items 170-172). The requirement of "personal performance" is met whether or not essential assistance is provided, according to accepted medical practice:-

- (a) Category 1 (Professional Attendances) items except 170-172, 342-346, 820-880, 6029-6042, 6064-6075;
- (b) Each of the following items in Group D1 (Miscellaneous Diagnostic):- 11012, 11015, 11018, 11021, 11304, 11600, 11627, 11705, 11724, 11728, 11729, 11730, 11731, 11921, 12000, 12003;
- (c) All Group T1 (Miscellaneous Therapeutic) items (except 13020, 13025, 13200-13206, 13212-13221, 13703, 13706, 13750-13760, 13950, 14050, 14221 and 14245);
- (d) Item 15600 in Group T2 (Radiation Oncology);
- (e) All Group T3 (Therapeutic Nuclear Medicine) items;
- (f) All Group T4 (Obstetrics) items (except 16400 and 16514);
- (g) All Group T6 (Anaesthetics) items;
- (h) All Group T7 (Regional or Field Nerve Block) items;
- (i) All Group T8 (Operations) items;
- (j) All Group T9 (Assistance at Operations) items;
- (k) All Group T10 (Relative Value Guide for Anaesthetics) items.

For the group psychotherapy and family group therapy services covered by Items 170, 171, 172, 342, 344 and 346, benefits are payable only if the services have been conducted personally by the medical practitioner.

Medicare benefits are not payable for these group items or any of the items listed in (a) - (k) above when the service is rendered by a medical practitioner employed by the proprietor of a hospital (not being a private hospital), except where the practitioner is exercising their right of private practice, or is performing a medical service outside the hospital. For example, benefits are not paid when a hospital intern or registrar performs a service at the request of a staff specialist or visiting medical officer.

Medicare benefits are only payable for items 12306 - 12322 (Bone Densitometry) when the service is performed by a specialist or consultant physician in the practice of the specialist's or consultant physician's speciality where the patient is referred by another medical practitioner.

GN.12.31 Services rendered on behalf of medical practitioners

Medical services in Categories 2 and 3 not included in GN.12.30 and Category 5 (Diagnostic Imaging) services continue to attract Medicare benefits if the service is rendered by:-

- (a) the medical practitioner in whose name the service is being claimed;
- (b) a person, other than a medical practitioner, who is employed by a medical practitioner or, in accordance with accepted medical practice, acts under the supervision of a medical practitioner.

See Category 6 Notes for Guidance for arrangements relating to Pathology services.

So that a service rendered by an employee or under the supervision of a medical practitioner may attract a Medicare rebate, the service must be billed in the name of the practitioner who must accept full responsibility for the service. All practitioners should ensure they maintain adequate and contemporaneous records. All elements of the service must be performed in accordance with accepted medical practice.

Supervision from outside of Australia is not acceptable.

While the supervising medical practitioner need not be present for the entire service, they must have a direct involvement in at least part of the service. Although the supervision requirements will vary according to the service in question, they will, as a general rule, be satisfied where the medical practitioner has:-

- (a) established consistent quality assurance procedures for the data acquisition; and
- (b) personally analysed the data and written the report.

Benefits are not payable for these services when a medical practitioner refers patients to self-employed medical or paramedical personnel, such as radiographers and audiologists, who either bill the patient or the practitioner requesting the service.

GN.12.32 Medicare benefits and vaccinations

Where a medical practitioner administers an injection for immunisation purposes on the medical practitioner's own patient, Medicare benefits for that service would be payable on a consultation basis, that is, for the attendance at which the injection is given. However, the cost of the vaccine itself does not attract a Medicare rebate. The Medicare benefits arrangements cover only the professional component of the medical practitioner's service. There are some circumstances where a Medicare benefit is not payable when a medical practitioner administers an injection for immunisation purposes – please refer to example 3 below for further details.

Example 1

A patient presents to a GP to receive the influenza vaccination. The patient is not in the cohort of patients which is covered for the influenza vaccine under the NIP.

After taking a short patient history, the GP administers the vaccine to the patient. The GP has met the requirements of a level A consultation and claims item 3. The GP can bulk bill the patient for the cost of the MBS service and can charge a separate amount for the cost of the vaccine, which is not covered under the NIP.

If a patient presented to a GP to receive a vaccine and to enquire about a medical condition, the GP may claim the appropriate item (such as item 23).

Example 2

A patient presents to a GP to receive the influenza vaccination. The patient is in the cohort of patients which is covered for the influenza vaccine under the NIP.

After taking a short patient history, the GP administers the vaccine to the patient. The GP has met the requirements of a level A consultation and claims item 3. The GP can bulk bill the patient but does not need to charge a separate amount for the cost of the vaccine, which is covered under the NIP.

If a patient presented to a GP to receive a vaccine and to enquire about a medical condition, the GP may claim the appropriate item (such as item 23).

Example 3

A GP is employed by a State or Territory community health centre to administer vaccines and provides no additional medical services.

A Medicare benefit is not payable as the GP is providing the service under an arrangement with the State or Territory, which is prohibited under subsection 19(2) of the *Health Insurance Act 1973*. The service is also prohibited on the basis that it is a mass immunisation which is prohibited under subsection 19(4).

A mass immunisation is a program to inoculate people that is funded by the Commonwealth or State Government, or through an international or private organisation.

GN.13.33 Services which do not attract Medicare benefits

Services not attracting benefits

- (a) issue of repeat prescriptions when the patient does not attend the surgery in person;
- (b) group attendances (unless otherwise specified in the item, such as items 170, 171, 172, 342, 344 and 346);
- (c) non-therapeutic cosmetic surgery;
- (d) euthanasia and any service directly related to the procedure. However, services rendered for counselling/assessment about euthanasia will attract benefits.

Medicare benefits are not payable where the medical expenses for the service

- (a) are paid/payable to a public hospital;
- (b) are for a compensable injury or illness for which the patient's insurer or compensation agency has accepted liability. (Please note that if the medical expenses relate to a compensable injury/illness for which the insurer/compensation agency is disputing liability, then Medicare benefits are payable until the liability is accepted.);
- (c) are for a medical examination for the purposes of life insurance, superannuation, a provident account scheme, or admission to membership of a friendly society;
- (d) are incurred in mass immunisation (see General Explanatory Note 12.3 for further explanation).

Unless the Minister otherwise directs

Medicare benefits are not payable where:

- (a) the service is rendered by or on behalf of, or under an arrangement with the Australian Government, a State or Territory, a local government body or an authority established under Commonwealth, State or Territory law;
- (b) the medical expenses are incurred by the employer of the person to whom the service is rendered;
- (c) the person to whom the service is rendered is employed in an industrial undertaking and that service is rendered for the purposes related to the operation of the undertaking; or
- (d) the service is a health screening service.

(e) the service is a pre-employment screening service

Current regulations preclude the payment of Medicare benefits for professional services rendered in relation to or in association with:

(a) chelation therapy (that is, the intravenous administration of ethylenediamine tetra-acetic acid or any of its salts) other than for the treatment of heavy-metal poisoning;

(b) the injection of human chorionic gonadotrophin in the management of obesity;

(c) the use of hyperbaric oxygen therapy in the treatment of multiple sclerosis;

(d) the removal of tattoos;

(e) the transplantation of a thoracic or abdominal organ, other than a kidney, or of a part of an organ of that kind; or the transplantation of a kidney in conjunction with the transplantation of a thoracic or other abdominal organ, or part of an organ of that kind;

(f) the removal from a cadaver of kidneys for transplantation;

(g) the administration of microwave (UHF radio wave) cancer therapy, including the intravenous injection of drugs used in the therapy.

Pain pumps for post-operative pain management

The cannulation and/or catheterisation of surgical sites associated with pain pumps for post-operative pain management cannot be billed under any MBS item.

The filling or re-filling of drug reservoirs of ambulatory pain pumps for post-operative pain management cannot be billed under any MBS items.

Non Medicare Services

No MBS item applies to a service mentioned in the item if the service is provided to a patient at the same time as, or in connection with, an injection of blood or a blood product that is autologous.

No MBS item applies to a service mentioned in the item if the service is provided to a patient at the same time as, or in connection with, the harvesting, storage, in vitro processing or injection of non-haematopoietic stem cells.

An item in the range 1 to 10943 does not apply to the service described in that item if the service is provided at the same time as, or in connection with, any of the services specified below:

(a) endoluminal gastroplication, for the treatment of gastro-oesophageal reflux disease;

(b) gamma knife surgery;

(c) intradiscal electro thermal arthroplasty;

(d) intravascular ultrasound (except where used in conjunction with intravascular brachytherapy);

(e) intro-articular viscosupplementation, for the treatment of osteoarthritis of the knee;

(f) low intensity ultrasound treatment, for the acceleration of bone fracture healing, using a bone growth stimulator;

(g) lung volume reduction surgery, for advanced emphysema;

(h) photodynamic therapy, for skin and mucosal cancer;

(i) placement of artificial bowel sphincters, in the management of faecal incontinence;

- (j) selective internal radiation therapy for any condition other than hepatic metastases that are secondary to colorectal cancer;
- (k) specific mass measurement of bone alkaline phosphatase;
- (l) transmyocardial laser revascularisation;
- (m) vertebral axial decompression therapy, for chronic back pain;
- (n) autologous chondrocyte implantation and matrix-induced autologous chondrocyte implantation;
- (o) extracorporeal magnetic innervation.

Health Screening Services

Unless the Minister otherwise directs Medicare benefits are not payable for health screening services. A health screening service is defined as a medical examination or test that is not reasonably required for the management of the medical condition of the patient. Services covered by this proscription include such items as:

- (a) multiphasic health screening;
- (b) mammography screening (except as provided for in Items 59300/59303);
- (c) testing of fitness to undergo physical training program, vocational activities or weight reduction programs;
- (d) compulsory examinations and tests to obtain a flying, commercial driving or other licence;
- (e) entrance to schools and other educational facilities;
- (f) for the purposes of legal proceedings;
- (g) compulsory examinations for admission to aged persons' accommodation and pathology services associated with clinical ecology.

The Minister has directed that Medicare benefits be paid for the following categories of health screening:

- (a) a medical examination or test on a symptomless patient by that patient's own medical practitioner in the course of normal medical practice, to ensure the patient receives any medical advice or treatment necessary to maintain their state of health. Benefits would be payable for the attendance and tests which are considered reasonably necessary according to patients individual circumstances (such as age, physical condition, past personal and family history). For example, a cervical screening test in a person (see General Explanatory note 12.3 for more information), blood lipid estimation where a person has a family history of lipid disorder. However, such routine check-up should not necessarily be accompanied by an extensive battery of diagnostic investigations;
- (b) a pathology service requested by the National Heart Foundation of Australia, Risk Evaluation Service;
- (c) age or health related medical examinations to obtain or renew a licence to drive a private motor vehicle;
- (d) a medical examination of, and/or blood collection from persons occupationally exposed to sexual transmission of disease, in line with conditions determined by the relevant State or Territory health authority, (one examination or collection per person per week). Benefits are not paid for pathology tests resulting from the examination or collection;
- (e) a medical examination for a person as a prerequisite of that person becoming eligible to foster a child or children;
- (f) a medical or optometrical examination provided to a person who is an unemployed person (as defined by the *Social Security Act 1991*), as the request of a prospective employer.

The National Policy for the National Cervical Screening Program (NCSP) is as follows:

- (a) Cervical screening should be undertaken every five years in asymptomatic persons, using a primary human papillomavirus (HPV) test with partial genotyping and reflex liquid based cytology (LBC) triage;
- (b) Persons who have ever been sexually active should commence cervical screening at 25 years of age;
- (c) Persons aged 25 years or older and less than 70 years will receive invitations and reminders to participate in the program;
- (d) Persons will be invited to exit the program by having a HPV test between 70 years or older and less than 75 years of age and may cease cervical screening if their test result is low risk;
- (e) Persons 75 years of age or older who have either never had a cervical screening test or have not had one in the previous five years, may request a cervical screening test and can be screened;
- (f) All persons, both HPV vaccinated and unvaccinated, are included in the program;
- (g) Self collection of a sample for testing is available for persons who are aged 30 years and over and has never participated in the NCSP; or is overdue for cervical screening by two years or longer.
 - Self collection must be facilitated and requested by a healthcare professional who also routinely offers cervical screening services;
 - The self collection device and the HPV test, when used together, must meet the requirements of the National Pathology Accreditation Advisory Council (NPAAC) Requirements for Laboratories Reporting Tests for the NCSP; and
- (h) Persons with intermediate and higher risk screening test results should be followed up in accordance with the cervical screening pathway and the NCSP: Guidelines for the management of screen detected abnormalities, screening women in specific populations and investigation of women with abnormal vaginal bleeding (2016 Guidelines) – endorsed by the Royal Australian College of General Practitioners, the Royal Australian and New Zealand College of Obstetricians and Gynaecologists, the Royal College of Pathologists of Australasia, the Australian Society of Gynaecologic Oncologists and the Australian Society for Colposcopy and Cervical Pathology.

Note 1: As separate items exist for routine screening, screening in specific population and investigation of persons with abnormal vaginal bleeding, treating practitioners are asked to clearly identify on the request form, if the sample is collected as part of routine screening or for another purpose (see paragraph PP.16.11 of Pathology Services Explanatory Notes in Category 6).

Note 2: Where reflex cytology is performed following the detection of HPV in routine screening, the HPV test and the LBC test results must be issued as a combined report with the overall risk rating.

Note 3: See items 2501 to 2509, and 2600 to 2616 in Group A18 and A19 of Category 1 - Professional Attendances and the associated explanatory notes for these items in Category 1 - Professional Attendances.

Services rendered to a doctor's dependants, practice partner, or practice partner's dependants

Medicare benefits are not paid for professional services rendered by a medical practitioner to dependants or partners or a partner's dependants.

A 'dependant' person is a spouse or a child. The following provides definitions of these dependant persons:

- (a) a spouse, in relation to a dependant person means:
 - a. a person who is legally married to, and is not living, on a permanent basis, separately and apart from, that person; and
 - b. a de facto spouse of that person.

(b) a child, in relation to a dependant person means:

a. a child under the age of 16 years who is in the custody, care and control of the person or the spouse of the person; and

b. a person who:

(i) has attained the age of 16 years who is in the custody, care and control of the person or the spouse of the person; or

(ii) is receiving full time education at a school, college or university; and

(iii) is not being paid a disability support pension under the *Social Security Act 1991*; and

(iv) is wholly or substantially dependent on the person or on the spouse of the person.

GN.14.34 Principles of interpretation of the MBS

Each professional service listed in the MBS is a complete medical service. Where a listed service is also a component of a more comprehensive service covered by another item, the benefit for the latter service will cover the former.

Where a service is rendered partly by one medical practitioner and partly by another, only the one amount of benefit is payable. For example, where a radiographic examination is started by one medical practitioner and finalised by another.

GN.14.35 Services attracting benefits on an attendance basis

Some services are not listed in the MBS because they are regarded as forming part of a consultation or they attract benefits on an attendance basis.

GN.14.36 Consultation and procedures rendered at the one attendance

Where, during a single attendance, a consultation (under Category 1 of the MBS) and another medical service (under any other Category of the Schedule) occur, benefits are payable subject to certain exceptions, for both the consultation and the other service. Benefits are not payable for the consultation in addition to an item rendered on the same occasion where the item is qualified by words such as "each attendance", "attendance at which", "including associated attendances/consultations", and all items in Group T6 and T9. In the case of radiotherapy treatment (Group T2 of Category 3) benefits are payable for both the radiotherapy and an initial referred consultation.

Where the level of benefit for an attendance depends upon the consultation time (for example, in psychiatry), the time spent in carrying out a procedure which is covered by another item in the MBS, may not be included in the consultation time.

A consultation fee may only be charged if a consultation occurs; that is, it is not expected that consultation fee will be charged on every occasion a procedure is performed.

GN.14.37 Aggregate items

The MBS includes a number of items which apply only in conjunction with another specified service listed in the MBS. These items provide for the application of a fixed loading or factor to the fee and benefit for the service with which they are rendered.

When these particular procedures are rendered in conjunction, the legislation provides for the procedures to be regarded as one service and for a single patient gap to apply. The Schedule fee for the service will be ascertained in accordance with the particular rules shown in the relevant items.

GN.14.38 Residential aged care facility

A residential aged care facility is defined in the *Aged Care Act 1997*; the definition includes facilities formerly known as nursing homes and hostels.

GN.15.39 Practitioners should maintain adequate and contemporaneous records

All practitioners who provide, or initiate, a service for which a Medicare benefit is payable, should ensure they maintain **adequate** and **contemporaneous** records.

Note: 'Practitioner' is defined in Section 81 of the *Health Insurance Act 1973* and includes: medical practitioners, dentists, optometrists, chiropractors, physiotherapists, podiatrists and osteopaths.

Since 1 November 1999 PSR Committees determining issues of inappropriate practice have been obliged to consider if the practitioner kept adequate and contemporaneous records. It will be up to the peer judgement of the PSR Committee to decide if a practitioner's records meet the prescribed standards.

The standards which determine if a record is adequate and contemporaneous are prescribed in the *Health Insurance (Professional Services Review) Regulations 1999*.

To be **adequate**, the patient or clinical record needs to:

clearly identify the name of the patient; and

contain a separate entry for each attendance by the patient for a service and the date on which the service was rendered or initiated; and

each entry needs to provide clinical information adequate to explain the type of service rendered or initiated; and

each entry needs to be sufficiently comprehensible that another practitioner, relying on the record, can effectively undertake the patient's ongoing care.

To be **contemporaneous**, the patient or clinical record should be completed at the time that the service was rendered or initiated or as soon as practicable afterwards. Records for hospital patients are usually kept by the hospital and the practitioner could rely on these records to document in-patient care.

Services Australia has developed a [Health Practitioner Guideline to substantiate that a specific treatment was performed](#) which is located on the Department of Health and Aged Care website.

CATEGORY 1: PROFESSIONAL ATTENDANCES

SUMMARY OF CHANGES FROM 01/03/2024

The 01/03/2024 changes to the MBS are summarised below and are identified in the Schedule pages by one or more of the following words appearing above the item number:

(a) new item	New
(b) amended description	Amend
(c) fee amended	Fee
(d) item number changed	Renum
(e) EMSN changed	EMSN

Deleted Items

348 350 352 92458 92459 92460

New Items

341 343 345 347 349 91868 91869 91870 91871 91872 91873 91874 91875

Fee Amended

294

Psychiatry Services

From 1 March 2024, there will be a variety of changes to psychiatry services, which will implement the Government’s response to recommendations from the Taskforce relating to MBS psychiatry services. The changes will insert, amend and delete items to provide more flexible arrangements, strengthen the intent of the services and clarify and remove obsolete terms from items.

These changes include the introduction of nine items for time-tiered psychiatric services provided to the patient via telehealth and phone attendances in addition to the introduction of 13 items for time-tiered psychiatric interview services provided to a person other than the patient (five face to face, five telehealth and three phone services). Existing psychiatry items 348, 350 and 352 will be repealed and replaced by the new interview items.

Administrative amendment to item 92024

PROFESSIONAL ATTENDANCES NOTES

AN.0.1 Personal Attendance by Practitioner

The personal attendance of the medical practitioner upon the patient is necessary, before a "consultation" may be regarded as a professional attendance. In itemising a consultation covered by an item which refers to a period of time, only that time during which a patient is receiving active attention should be counted. Periods such as when a patient is resting between blood pressure readings, waiting for pupils to dilate after the instillation of a mydriatic, or receiving short wave therapy etc., should not be included in the time of the consultation. Similarly, the time taken by a doctor to travel to a patient's home should not be taken into consideration in the determination of the length of the consultation. While the doctor is free to charge a fee for "travel time" when patients are seen away from the surgery, benefits are payable only in respect of the time a patient is receiving active attention.

AN.0.2 Benefits For Services

All Australian residents and certain categories of visitors to Australia can claim Medicare benefits for services by optometrists. The *Health Insurance Act 1973* contains legislation covering the major elements of the Medicare program.

Responsibility for regulating the Medicare program lies with the Australian Government through the Department of Health and Aged Care. Services Australia is responsible for consideration of applications and for the day to day operation of Medicare and the payment of benefits. Contact details of the Department of Health and Aged Care and Services Australia are located at the end of these Notes.

AN.0.3 Professional Attendances

Professional attendances by medical practitioners cover consultations during which the practitioner: evaluates the patient's health-related issue or issues, using certain health screening services if applicable; formulates a management plan in relation to one or more health-related issues for the patient; provides advice to the patient and/or relatives (if authorised by the patient); provides appropriate preventive health care; and records the clinical detail of the service(s) provided to the patient. (See the General Explanatory Notes for more information on health screening services.)

AN.0.4 Provider Numbers

To ensure that benefits are paid only for services provided by optometrists registered with the Optometry Board of Australia, each optometrist providing services for which a Medicare benefit is payable requires an individual provider number.

Provider numbers will be issued only to registered optometrists. Corporations, other business entities and individuals who are not registered optometrists will not be issued with provider numbers.

Provider numbers are allocated to enable claims for Medicare benefits to be processed. The number may be up to eight characters. The second last character identifies the practice location, the last being a check character.

Optometrists can obtain a provider number from Services Australia. A separate provider number is issued for each location at which an optometrist practises and has current registration. Provider numbers for additional practice locations may also be obtained from Services Australia following confirmation of registration. Optometrists cannot use another optometrist's provider number.

Locum Tenens

An optometrist who has signed an Undertaking and is to provide services at a practice location as a locum for more than two weeks or will return to the practice on a regular basis for short periods should apply for a provider number for that location.

If the locum is to provide services at a practice for less than two weeks, the locum can use their own provider number or can obtain an additional provider number for that location.

Normally, Medicare benefits are payable for services rendered by an optometrist only when the optometrist has completed an Undertaking. However, benefits may be claimed for services provided by an optometrist who has not signed the Undertaking if the optometrist has provided them on behalf of an optometrist who has signed the Undertaking.

To ensure benefits are payable when a locum practises in these circumstances, the locum optometrist should:

- Check that they will be providing optometry services on behalf of a participating optometrist i.e. their employer has a current Undertaking.
- Complete the Schedule which is available on Service Australia's website <https://www.servicesaustralia.gov.au/>, before commencing the locum arrangement of the name and address of the participating optometrist on whose behalf they will be providing services.

Locums can direct Medicare payments to a third party, for example the principal of the practice, by either arranging a pay group link and/or by nominating the principal as the payee provider on bulk-bill stationery.

AN.0.5 Services not Attracting Medicare Benefits

Letters of advice by medical practitioners, the issue of repeat prescriptions when the patient is not in attendance, post mortem examinations, the issue of death certificates, cremation certificates, counselling of relatives (Note - items 348, 350 and 352 are not counselling services), group attendances (other than group attendances covered by items 170, 171, 172, 342, 344 and 346) such as group counselling, health education, weight reduction or fitness classes do not qualify for benefit.

Although Medicare benefits are not payable for the issue of a death certificate, an attendance on a patient at which it is determined that life is extinct can be claimed under the appropriate attendance item. The outcome of the attendance may be that a death certificate is issued, however, Medicare benefits are only payable for the attendance component of the service.

AN.0.7 Multiple Attendances on the Same Day

Payment of benefit may be made for each of several attendances on a patient on the same day by the same medical practitioner provided the subsequent attendances are not a continuation of the initial or earlier attendances. However, there should be a reasonable lapse of time between such attendances before they can be regarded as separate attendances.

Where two or more attendances are made on the one day by the same medical practitioner the time of each attendance should be stated on the account (eg 10.30 am and 3.15 pm) in order to assist in the assessment of benefits.

In some circumstances a subsequent attendance on the same day constitutes a continuation of an earlier attendance. For example, a preliminary eye examination may be concluded with the instillation of a mydriatic and then some time later an eye refraction is undertaken. These sessions are regarded as being one attendance for benefit purposes. Further examples of single attendances are skin sensitivity testing, and when a patient is issued a prescription for a vaccine and subsequently returns to the surgery for the injection.

AN.0.8 Benefits For Optometrists

What services are covered?

The *Health Insurance Act 1973* stipulates that Medicare benefits are payable for professional services. The professional services coming within the scope of the optometric benefit arrangements are those clinically relevant services ordinarily rendered by the optometrist in relation to a consultation on ocular or vision problems or related procedures. The *Health Insurance Act 1973* defines a 'clinically relevant service' as a service rendered by an optometrist that is generally accepted in the optometrical profession as being necessary for the appropriate treatment of the patient to whom it is rendered.

From 1 January 2015, optometrists will be free to set their own fees for their professional service. However, the amount specified in the patient's account must be the amount charged for the service specified. The fee may not include a cost of goods or services which are not part of the MBS service specified on the account. A non-clinically relevant service must not be included in the charge for a Medicare item. The non-clinically relevant service must be separately listed on the account and not billed to Medicare. Where it is necessary for the optometrist to seek patient information from Services Australia in order to determine appropriate itemisation of accounts, receipts or bulk-billed claims, the optometrist must ensure that:

- (a) the patient is advised of the need to seek the information and the reason the information is required;
- (b) the patient's informed consent to the release of information has been obtained; and
- (c) the patient's records verify the patient's consent to the release of information.

Benefits may only be claimed when:

- (a) a service has been performed and a clinical record of the service has been made;
- (b) a significant consultation or examination procedure has been carried out;
- (c) the service has been performed at premises to which the Undertaking relates;
- (d) the service has involved the personal attendance of both the patient and the optometrist; and
- (e) the service is "clinically relevant" (as defined in the *Health Insurance Act 1973*).

Where Medicare benefits are not payable

Medicare benefits may not be claimed for attendances for:

- (a) delivery, dispensing, adjustment or repairs of visual aids;
- (b) filling of prescriptions written by other practitioners.

Benefits are not payable for optometric services associated with:

- (a) cosmetic surgery;
- (b) refractive surgery;
- (c) tests for fitness to undertake sporting, leisure or vocational activities;
- (d) compulsory examinations or tests to obtain any commercial licence (e.g. flying or driving);
- (e) entrance to schools or other educational facilities;
- (f) compulsory examinations for admissions to aged care facilities;
- (g) vision screening.

Medicare benefits are not payable for services in the following circumstances:

- (a) where the expenses for the service are paid or payable to a recognised (public) hospital;
- (b) an attendance on behalf of teaching institutions on patients of supervised students of optometry;
- (c) where the service is not "clinically relevant" (as defined in the *Health Insurance Act 1973*).

Unless the Minister otherwise directs, a benefit is not payable in respect of an optometric service where:

- (a) the service has been rendered by or on behalf of, or under an arrangement with, the Commonwealth, a State or a local governing body or an authority established by a law of the Commonwealth, a law of a State or a law of an internal Territory; or
- (b) the service was rendered in one or more of the following circumstances -
 - (i) the employer arranges or requests the consultation
 - (ii) the results are provided to the employer by the optometrist
 - (iii) the employer requires that the employee have their eyes examined
 - (iv) the account for the consultation is sent to the employer
 - (v) the consultation takes place at the patient's workplace or in a mobile consulting room at the patient's workplace.

Services rendered to an optometrist's dependants, employer or practice partner or dependants

A condition of the participating arrangement is that the optometrist agrees not to submit an account or a claim for services rendered to any dependants of the optometrist, to the optometrist's employer or practice partner or any dependants of that employer or partner.

A 'dependant' person is a spouse or a child. The following provides definitions of these dependant persons:

a **spouse**, in relation to a dependant person means:

- (a) a person who is legally married to, and is not living, on a permanent basis, separately and apart from, that person; and
- (b) a de facto spouse of that person.

a **child**, in relation to a dependant person means:

- (a) a child under the age of 16 years who is in the custody, care and control of the person or the spouse of the person; and
- (b) a person who:
 - (i) has attained the age of 16 years who is in the custody, care and control of the person or the spouse of the person; or
 - (ii) is receiving full time education at a school, college or university; and
 - (iii) is not being paid a disability support pension under the *Social Security Act 1991*; and
 - (iv) is wholly or substantially dependent on the person or on the spouse of the person.

AN.0.9 Using time-tiered professional (general) attendance items

SUMMARY

This note sets out the key common principles that apply when using the time-tiered professional attendance (also referred to as general attendance, time-tiered attendance, and Level A-E attendance) MBS items for general practitioners (GPs), medical practitioners (who are not GPs) and prescribed medical practitioners (i.e. medical practitioners who are not GPs, specialists or consultant physicians). These items are usually claimed in a general practice setting.

Unless otherwise stated these principles apply to all general attendance items, regardless of location (in consulting rooms, out of consulting rooms or residential aged care facilities), time (business or after-hours), or mode (face to face or telehealth). For some categories of attendances (e.g. telehealth) additional requirements may apply.

Note: that within the general practice context, prescribed medical practitioners and medical practitioners who are not GPs are sometimes referred to as Other Medical Practitioners (OMPs) or non-vocationally registered (non-VR) GPs. References to OMPs in this Explanatory Note include both prescribed medical practitioners and medical practitioners who are not GPs.

Information on the definition of a GP for Medicare purposes is available in [GN.4.13](#) and prescribed medical practitioners in [AN.7.1](#).

Tables setting out the item numbers for the various time-tiers and locations, times of day and modes are available in Note [AN.0.74](#) for GPs, and [AN.7.2](#) for OMPs.

USE OF THE ITEMS

General attendance items are claimed for a professional attendance when no other MBS item applies. It is a general principle of the MBS that the item that best describes the service is the item that should be claimed. This means that where a more specific MBS item exists (for example a skin biopsy under MBS item 30071), the more specific item should be claimed. If no other MBS item accurately reflects the service provided, and the requirements of a general attendance item are met, the general attendance item is claimed.

General attendance items generally require that the medical practitioner attends the patient and does *at least* one of the following:

- taking a patient history
- performing a clinical examination
- arranging any necessary investigation
- implementing a management plan
- providing appropriate preventive health care.

Appropriate and contemporaneous records must be kept.

The time-tiers range from Level A short consultation for straightforward tasks to 60+ minute Level E consultations.

General attendance items are both professional and personal attendances.

What is a professional attendance?

The Regulations state that a professional attendance includes the "*provision, for a patient, of any of the following services:*

- *evaluating the patient's condition or conditions including, if applicable, evaluation using a health screening service mentioned in subsection 19(5) of the [Health Insurance] Act*
- *formulating a plan for the management and, if applicable, for the treatment of the patient's condition or conditions*
- *giving advice to the patient about the patient's condition or conditions and, if applicable, about treatment*
- *if authorised by the patient—giving advice to another person, or other persons, about the patient's condition or conditions and, if applicable, about treatment*
- *providing appropriate preventive health care*
- *recording the clinical details of the service or services provided to the patient.*"

Further information on professional attendances is at [AN.0.3](#).

What is a personal attendance?

The Regulations specify that personal attendance items “*apply to a service provided in the course of a personal attendance by a single medical practitioner on a single patient on a single occasion.*” This means that:

- the patient must be present and only time spent with the patient counts towards the attendance
- another health practitioner (e.g. a practice nurse) cannot provide the service on behalf of a medical practitioner
- benefits are not payable if more than one medical practitioner provides an attendance on the same patient at the same time.

In the case of telehealth (video) and telephone attendances this requirement is modified to be “a service that is an attendance by a single health professional on a single person”.

A guide on substantiating a patient’s attendance is available on the [Department of Health and Aged Care’s website](#).

Further information on personal attendances is at [AN.0.1](#).

How do I choose which general attendance item to use?

The correct general attendance item will depend on:

- practitioner type – GP, medical practitioner (excluding GPs) or prescribed medical practitioner
- length of time spent with the patient (i.e. the personal attendance time)
- location of the consultation – in consulting rooms, out of consulting rooms or residential aged care facility
- time of the consulting – business or after-hours
- mode of the consultation – face to face, telephone or telehealth (video), and
- for prescribed medical practitioners only – the location (by Modified Monash area) of the practice.

Reference tables setting out the relevant general attendance items are available at [AN.0.74](#) for GPs and [AN.7.2](#) for OMPs.

Can I address more than one issue in a general attendance?

Yes. All general attendance items can be claimed to address multiple issues with a patient.

When multiple issues are addressed in a single consultation, and more specific MBS items do not apply for any of these issues, medical practitioners should use the appropriate MBS general attendance item for the total time of the consultation. In these circumstances, medical practitioners should not claim each issue as a separate attendance.

What activities count towards the consultation time?

Only time spent with the patient (or on the telephone/video call with the patient in the case of telehealth) performing clinically relevant tasks can be included in the consultation time. Clinically relevant tasks include, but are not limited to:

- undertaking any of the activities described in the item descriptor
- communicating with the patient (and where relevant their carer)
- writing clinical notes, prescriptions or referrals, completing forms, reports or other paperwork relating to the patient while the patient is present
- reviewing, creating or updating entries in the patient’s My Health Record while the patient is present.

Time taken to write clinical notes, complete forms, reports or other paperwork, upload records in My Health Record (or other systems), or talk to carers or relatives when the patient is not present cannot be included in the consultation time.

If the patient has particular needs that mean good communication takes longer than average can this time be included?

Yes, communicating effectively with patients is crucial to achieving clinical outcomes and a key part of a clinical service. A wide range of factors may affect the time needed to communicate effectively with a patient during a consultation. These include, but are not limited to, situations where a language barrier exists between the medical practitioner and patient (including when an interpreter is required), or when a patient has hearing problems, difficulty with speech, an intellectual disability, and/or dementia.

When claiming for time-tiered MBS items, the total consultation time includes the time required to communicate effectively with the patient. Where more time than usual is required to communicate effectively with a particular patient, it is considered reasonable to claim a longer attendance item than might otherwise be expected for the service. This applies to both face to face and telehealth services.

In such situations, medical practitioners and other providers should make a brief record in the patient's notes including details about why the additional time was required. For example, stating 'consultation extended due to use of interpreter' and, if relevant, citing the Translating and Interpreting Service (TIS) job number.

Can I provide another medical service that is not a general attendance (e.g. a procedure or diagnostic test) and a general attendance to the same patient on the same day?

In general, yes. However, there are some limitations including:

- both services must be clinically relevant and distinct services
- the other item must not have restrictions on same day claiming as a general attendance item, and
- the other item is not listed in MBS Group T6 (Anaesthetics) or T9 (Assistance at Operation).

Where more than one service is provided to a patient on the same day, the time taken for the second service (e.g. a procedure) must not be included in the consultation time for the general attendance.

Procedural items include all necessary components required to provide the service. This would include obtaining informed procedural and financial consent, the procedure itself, a discussion of the results of the procedure and (unless stated otherwise) the provision of routine aftercare.

Where the results of a procedure inform a further consultation on management, the consultation may be eligible for a Medicare benefit.

Can I provide more than one general attendance service to the same patient on the same day?

Yes, provided that the subsequent attendance is not a continuation of the first attendance, both services are clinically relevant and distinct, and the item requirements are met for both attendances. Further information is available in [AN.0.7](#).

Are there specific requirements for any of the general attendance items?

Yes, several general attendance items have additional, specific requirements:

- Telephone and telehealth (video) – patients can only access these services through their “usual medical practitioner” with limited exemptions. See [AN.1.1](#) for further information. Some longer telephone items also require the patient to be registered with MyMedicare and can only be claimed at their registered practice.
- After-hours attendance items – can only be claimed in specific time periods. See [AN.0.19](#) (GPs) and [AN.7.24](#) (OMPs) for further information.
- Out of consulting rooms attendance items – have derived fee structures that vary with the number of patients attended or, in the case of some residential aged care facilities items, may be co-claimed with a flag fall item. See [AN.0.11](#) (derived fees) and [AN.35.1](#) and [AN.35.2](#) (flag falls) for further information.
- Residential aged care facility items – See [AN.0.15](#), [AN.35.1](#) and [AN.35.2](#) for further information.
- Items 179, 185, 189, 203, 301, 91906, 91916, 19794, 91806, 91807, 91808, 91926 – can only be claimed when the service is provided at a practice located in a Modified Monash 2-7 area. Practice locations can be checked on the [Health Workforce Locator](#).

Can I claim a general attendance for providing aftercare?

No, you cannot claim a general attendance item if you performed the procedure that resulted in the need for aftercare.

However, the [Health Insurance \(Subsection 3\(5\) General Practitioner Post-Operative Treatment\) Direction 2017](#) allows a medical practitioner working in general practice to use a general attendance item to provide aftercare provided that they did not perform the initial service that caused the need for aftercare. See [AN.0.71](#) for further information.

ELIGIBLE PATIENTS

Any patient who is eligible to receive Medicare benefits is eligible for face to face (in consulting rooms and out of consulting rooms) general attendance items (business hours or after-hours).

Residential aged care facility-specific items are only available to Medicare-eligible patients that are residents of a residential aged care facility.

Patients must meet the “usual medical practitioner” requirement to access telehealth (video) and telephone items, unless an exemption applies (see [AN.1.1](#) for more information). In the case of telephone items 91900, 91903, 91906, 91910, 91913, 91916, the patient must also be registered with the practice providing the service through MyMedicare.

ELIGIBLE PRACTITIONERS

General attendance items are available for different practitioner types:

- general practitioner items can be claimed by general practitioners only (see [GN.4.13](#)).
- medical practitioner items can be claimed by any medical practitioner that is not explicitly excluded in the relevant item descriptor.
- prescribed medical practitioner items can be claimed by prescribed medical practitioners only (see [AN.7.1](#)).

CO-CLAIMING RESTRICTIONS

To co-claim a general attendance item and another item both services must be clinically relevant and distinct services.

General attendance items and chronic disease management items 229, 230, 233, 721, 723 and 732 *cannot* be claimed on the same day for the same patient. This restriction is set out in clause 2.16.11 of the Health Insurance (General Medical Services Table) Regulations 2021.

Further information on co-claiming of general attendance items and other MBS items is available in the AskMBS Advisory – [General Practice Services #2](#).

RECORD KEEPING AND REPORTING REQUIREMENTS

The department undertakes regular post payment auditing to ensure that MBS items are claimed appropriately. Practitioners should ensure they keep adequate and contemporaneous records. For information on what constitutes adequate and contemporaneous records see [GN.15.39](#).

RELEVANT LEGISLATION

Details about the legislative requirements of the MBS item(s) can be found on the Federal Register of Legislation at www.legislation.gov.au. Attendance items are set out in three regulatory instruments:

- [Health Insurance \(Section 3C General Medical Service – Other Medical Practitioner\) Determination 2018](#) – items 733, 737, 741, 745, 761, 763, 766, 769, 772, 776, 788, 789, 2197, 2198, 2200
- [Health Insurance \(Section 3C General Medical Services – Telehealth and Telephone Attendances\) Determination 2021](#) – telehealth (video) and telephone attendance items.

- [Health Insurance \(General Medical Services Table\) Regulations 2021](#) – all other attendance items.

AN.0.11 Derived fee items for general practice

Derived fees apply to a range of attendance items that are used when services are provided outside of consulting rooms, including some MBS items used in residential aged care facilities.

An item is a derived fee item if the MBS benefit payable depends on the number of patients that are seen at the location. Not all out of consulting rooms items are derived fee items. Some out of consulting rooms items attract a flag fall, instead of using a derived fee. See [AN.35.1](#), [AN.35.2](#) and [AN.44.1](#) for further information on flag falls.

To facilitate assessment of the correct Medicare rebate in respect of a number of patients attended on the one occasion at one location, it is important that the total number of patients seen be recorded on each individual account, receipt or assignment form. For example, where ten patients were visited (for a brief consultation) in the one facility on the one occasion, each account, receipt or assignment form would show "Item 4 - 1 of 10 patients" for a general practitioner.

The number of patients seen should not include attendances which do not attract a Medicare rebate (e.g. public in-patients, attendances for normal after-care), or where a Medicare rebate is payable under an item other than these derived fee items (e.g. health assessments, care planning, emergency after-hours attendance - first patient).

AN.0.12 Billing Procedures

There are three ways benefits may be paid for optometric services:

- (a) the claimant may pay the optometrist's account in full and then claim benefits from the Services Australia office by submitting the account and the receipt;
- (b) the claimant may submit the unpaid account to Services Australia who will then send a cheque in favour of the optometrist, to the claimant; or
- (c) the optometrist may bill Medicare instead of the patient for the consultation. This is known as bulk billing. If an optometrist direct-bills, they undertake to accept the relevant Medicare benefit as full payment for the consultation. Additional charges for that service (irrespective of the purpose or title of the charge) cannot be raised against the patient.

Claiming of benefits

The patient, upon receipt of an optometrist's account, has two options open for paying the account and receiving benefits.

Paid accounts

If the account has been paid in full a claimant can claim Medicare benefits in a number of ways:

- Electronically if the claimant's doctor offers this service and the claimant has completed and lodged a Bank account details collection form with Medicare.
- Online through Medicare Online Services.
- At the claimant's local Services Australia Service Centre.
- By mail by sending a completed Medicare claim form with the original accounts and/or receipts to:

Medicare

GPO Box 9822

In the claimant's capital city

- Over the phone by calling 132 011 and giving the claim details and then sending the accounts and/or receipts to:

Practitioners seeking information regarding registration to allow EFT payments and other E-Business transactions, can do so by viewing the Health Professionals section on Services Australia's website at <https://www.servicesaustralia.gov.au/>.

Unpaid accounts

Where the patient has not paid the account in full, the unpaid account may be presented to Services Australia with a completed Medicare claim form. In this case Services Australia will forward to the claimant a benefit cheque made payable to the optometrist.

It is the patient's responsibility to forward the cheque to the optometrist and make arrangements for payment of the balance of the account, if any. "Pay optometrist" cheques involving Medicare benefits must (by law), not be sent direct to optometrists, or to the claimant at an optometrist's address (even if requested by the claimant to do so). "Pay optometrist" cheques are required to be forwarded to the claimant's last known address as recorded with Services Australia.

When issuing a receipt to a patient for an account that is being paid wholly or in part by a Medicare "pay optometrist" cheque the optometrist should indicate on the receipt that a "Medicare cheque for \$..... was involved in the payment of the account". The receipt should also include any money paid by the claimant or patient.

Itemised accounts

When an optometrist bills a patient for a service, the patient should be issued with a correctly itemised account and receipt to enable the patient to claim Medicare benefits. Where both a consultation and another service, for example computerised perimetry occur, these may be itemised on the same account.

Medicare benefits are only payable in respect of optometric services where it is recorded on the account setting out the fee for the service or on the receipt for the fee in respect of each service to each patient, the following information:

- (a) patient's name;
- (b) date on which the service(s) was rendered;
- (c) a description of the service(s) (e.g. "initial consultation," "subsequent consultation" or "contact lens consultation" and/or "computerised perimetry" in those cases where it is performed);
- (d) Medicare Benefits Schedule item number(s);
- (e) the name and practice address or name and provider number of the optometrist who actually rendered the service(s). Where the optometrist has more than one practice location, the provider number used should be that which is applicable to the practice location where the service(s) was given;
- (f) the fee charged for the service(s); and
- (g) the time each service began if the optometrist attended the patient on more than one occasion on the same day and on each occasion rendered a professional service relating to an optometric item, except where a perimetry item is performed in association with a consultation item, where times do not need to be specified.

The optometrist billing for the service bears responsibility for the accuracy and completeness of the information included on accounts, receipts and assignment of benefits forms even where such information has been recorded by an employee of the optometrist.

Payment of benefits could be delayed or disallowed if the account does not clearly identify the service as one which qualifies for Medicare benefits or that the practitioner is a registered optometrist practising at the address where the

service was rendered. It is important to ensure that an appropriate description of the service, the item number and the optometrist's provider number are included on accounts, receipts and assignment of benefit forms.

Details of any charges made other than for services, e.g. a dispensing charge, a charge for a domiciliary visit, should be shown separately either on the same account or on a separate account.

Patients must be eligible to receive Medicare benefits and must also meet the clinical requirements outlined in the relevant item descriptors.

Duplicate accounts

Only one original itemised account per service should be issued, except in circumstances where both a consultation and computerised perimetry occur, in which case these may be itemised on the same original account. Duplicates of accounts or receipts should be clearly marked "duplicate" and should be issued only where the original has been lost. Duplicates should not be issued as a routine system for "accounts rendered".

Assignment of benefit (bulk billed) arrangements

Under the *Health Insurance Act 1973* an Assignment of Benefit (bulk-billing) facility for professional services is available to all persons in Australia who are eligible for benefit under the Medicare program. This facility is NOT confined to pensioners or people in special need.

If an optometrist bulk-bills, they undertake to accept the relevant Medicare benefit as full payment for the service. Additional charges for that service (irrespective of the purpose or title of the charge) cannot be raised against the patient. Under these arrangements:

- the patient's Medicare number must be quoted on all bulk-bill assignment of benefit forms for that patient;
- the assignment of benefit forms provided are loose leaf to enable the patient details to be imprinted from the Medicare Card;
- the forms include information required by Regulations under Section 19(6) of the *Health Insurance Act 1973*; and
- the optometrist must cause the particulars relating to the professional service to be set out on the assignment of benefit form, before the patient signs the form and cause the patient to receive a copy of the form as soon as practicable after the patient signs it.

Where a patient is unable to sign the assignment of benefit form, the signature of the patient's parent, guardian or other responsible person (other than the optometrist, optometrist's staff, hospital proprietor, hospital staff, residential aged care facility proprietor or residential aged care facility staff) is acceptable.

Where the signature space is either left blank or another person signs on the patient's behalf, the form **must** include:

- the notation "Patient unable to sign" and
- in the section headed 'Practitioner's Use', an explanation should be given as to why the patient was unable to sign (e.g. unconscious, injured hand etc.) and this note should be signed or initialled by the optometrist. If in the opinion of the optometrist the reason is of such a "sensitive" nature that revealing it would constitute an unacceptable breach of patient confidentiality or unduly embarrass or distress the recipient of the patient's copy of the assignment of benefits form, a concessional reason "due to medical condition" to signify that such a situation exists may be substituted for the actual reason. However, this should not be used routinely and in most cases it is expected that the reason given will be more specific.

Use of Medicare cards in bulk-billing

Where a patient presents without a Medicare card and indicates that they have been issued with a card but does not know the details, the optometrist may contact Services Australia on 132 150 to obtain the number.

It is important for the optometrist to check the eligibility of their patients for Medicare benefits by reference to the card, as entitlement is limited to the "valid to" date shown on the bottom of the card. Additionally the card will show if a person is enrolled through a Reciprocal Health Care Agreement.

Assignment of benefit forms

Only the approved assignment of benefit forms available from Services Australia's website, <https://www.servicesaustralia.gov.au/>, can be used to bulk-bill patients for optometric services and no other form can be used without its approval.

(a) Form DB2-OP

This form is designed for the use of optical scanning equipment and is used to assign benefits for optometrical services. It is loose leaf to enable imprinting of patient details from the Medicare card and comprises a throw away cover sheet (after imprinting), a Medicare copy, a Practitioner copy and a Patient copy.

(b) Form DB4

This is a continuous stationery version of Form DB2 and has been designed for use on most office accounting machines.

The Claim for Assigned Benefits (Form DB1N, DB1H)

Optometrists who accept assigned benefits must claim from Services Australia using either Claim for Assigned Benefits form DB1N or DB1H. The DB1N form should be used where services are rendered to persons for treatment provided out of hospital or day hospital treatment. The DB1H form should be used where services are rendered to persons while hospital treatment is provided in a hospital or day hospital facility (other than public patients). Both forms have been designed to enable benefit for a claim to be directed to an optometrist other than the one who rendered the services. The facility is intended for use in situations such as where a short term locum is acting on behalf of the principal optometrist and setting the locum up with a provider number and pay-group link for the principal optometrist's practice is impractical. Optometrists should note that this facility cannot be used to generate payments to or through a person who does not have a provider number.

Each claim form must be accompanied by the assignment of benefit forms to which the claim relates.

Time limits applicable to lodgement of bulk bill claims for benefits

A time limit of two years applies to the lodgement of claims with Services Australia under the bulk billed (assignment of benefits) arrangements. This means that Medicare benefits are not payable for any service where the service was rendered more than two years earlier than the date the claim was lodged with Services Australia.

Provision exists whereby in certain circumstances (e.g. hardship cases), the Minister may waive the time limits. Special forms for this purpose are available, if required, from the [Services Australia Medicare website](#) or the processing centre to which bulk-bill claims are directed.

AN.0.13 Attendances at a Hospital (Items 4, 24, 37, 47, 124, 58, 59, 60, 65, 165)

These items refer to attendances on patients admitted to a hospital. Where medical practitioners have made arrangements with a local hospital to routinely use out-patient facilities to see their private patients, items for services provided in consulting rooms would apply.

AN.0.14 Referrals (Read in Connection with the Relevant Paragraphs at O.6)

General

Optometrists are required to refer a patient for medical attention when it becomes apparent to them that the patient's condition is such that it would be more appropriate for treatment to be undertaken by a medical practitioner.

Optometrists may refer patients directly to specialist ophthalmologists with the patient being able to claim benefits for the ophthalmologist's services at the referred specialist rate.

Optometrists may refer patients directly to another optometrist, based on the clinical needs of the patient.

A referral letter or note must have been issued by the optometrist for all such services provided by specialist ophthalmologists or optometrists in order for patients to be eligible for Medicare benefits at the referred rate. Unless such a letter or note has been provided, benefits will be paid at the non-referred attendance rate, which has a lower rebate..

Medicare benefits at the referred rate are not paid for patients referred by optometrists to consultant physicians or to specialists other than ophthalmologists. See relevant paragraph regarding emergency situations.

What is a referral?

For the purposes of the optometric arrangements, a "referral" is a request to a specialist ophthalmologist or another optometrist for investigation, opinion, treatment and/or management of a condition or problem of a patient or for the performance of a specific examination(s) or test(s).

Subject to the exceptions in the paragraph below, for a valid "referral" to take place:

- (a) the referring optometrist must have turned their mind to the patient's need for referral and communicate relevant information about the patient to the specialist ophthalmologist or optometrist to whom the patient is referred (but this does not necessarily mean an attendance on the occasion of the referral);
- (b) the instrument of referral must be in writing by way of a letter or note and must be signed and dated by the referring optometrist; and
- (c) the practitioner to whom the patient is referred must have received the instrument of referral on or prior to the occasion of the professional service to which the referral relates.

The exceptions to the requirements in the above paragraph are that:

- (a) sub-paragraphs (b) and (c) do not apply to an emergency situation where the specialist ophthalmologist was of the opinion that the service be rendered as quickly as possible (see paragraph below on emergency situations); and
- (b) sub-paragraph (c) does not apply to instances where a written referral was completed by a referring optometrist but was lost, stolen or destroyed.

Period for which referral is valid

A referral from an optometrist to an ophthalmologist is valid for twelve months unless the optometrist specifies on the referral that the referral is for a different period (e.g. three, six or eighteen months or valid indefinitely).

The referral applies for the period specified in the referral from the date that the ophthalmologist provides the first service to the patient. If there is no period specified in the referral then the referral is valid for twelve months from the date of the first service provided by the ophthalmologist.

Referrals for longer than twelve months should be made only when the patient's clinical condition requires continuing care and management.

An optometrist may write a new referral when a patient presents with a condition unrelated to the condition for which the previous referral to an ophthalmologist was written. In these circumstances Medicare benefits for the consultation with the ophthalmologist would be payable at initial consultation rates.

A new course of treatment for which Medicare benefits would be payable at the initial consultation rates will also be paid where the referring optometrist:

- (a) deems it necessary for the patient's condition to be reviewed; and
- (b) the patient is seen by the ophthalmologist outside the currency of the previous referral; and
- (c) the patient was last seen by the specialist ophthalmologist more than nine months earlier than the attendance following a new referral.

Self referral

Optometrists may refer themselves to specialist ophthalmologists or other optometrists and Medicare benefits are payable at referred rates.

Lost, stolen or destroyed referrals

If a referral has been made but the letter or note of referral has been lost, stolen or destroyed, benefits will be payable at the referred rate if the account, receipt or the assignment form shows the name of the referring practitioner, the practice address or provider number of the referring practitioner (if either of these are known to the consultant physician or specialist) and the words 'Lost referral'. This provision only applies to the initial attendance. For subsequent attendances to attract Medicare benefits at the referred rate, a duplicate or replacement letter of referral must be obtained by the specialist or the consultant physician.

Emergency situations

Medicare benefits are payable even though there is no written referral in an emergency situation (as defined in the *Health Insurance Regulations 2018*). The specialist or the consultant physician should be of the opinion that the service must be rendered as quickly as possible and endorses the account, receipt or assignment form as an "Emergency referral".

A referral must be obtained from a medical practitioner or, in the case of a specialist ophthalmologist, a medical practitioner or an optometrist if attendances subsequent to the emergency attendance are to attract Medicare benefits at the referred rate.

AN.0.15 After hours Residential Aged Care Facility Attendances (Items 772, 776, 788, 789, 2200, 5010, 5028, 5049, 5067, 5077, 5260, 5262, 5263, 5265, 5267)

These items refer to attendances on patients in residential aged care facilities.

Where a medical practitioner attends a patient in a self-contained unit, within a residential aged care facility complex, the attendance attracts benefits under the appropriate home visit item.

Where a patient living in a self-contained unit attends a medical practitioner at consulting rooms situated within the precincts of the residential aged care facility, or at free standing consulting rooms within the residential aged care facility complex, the appropriate surgery consultation item applies.

If a patient who is accommodated in the residential aged care facility visits a medical practitioner at consulting rooms situated within the residential aged care facility complex, whether free standing or situated within the residential aged care facility precincts, benefits would be attracted under the appropriate residential aged care facility attendance item.

To facilitate assessment of the correct Medicare rebate in respect of a number of patients attended on the one occasion at one of the above locations, it is important that the total number of patients seen be recorded on each individual account, receipt or assignment form. For example, where two patients were visited (for a brief consultation) in the one facility on the one occasion, each account, receipt or assignment form would show "Item 5010 - 1 of 2 patients" for a general practitioner.

The number of patients seen should not include attendances which do not attract a Medicare rebate (e.g. public in-patients, attendances for normal after-care), or where a Medicare rebate is payable under an item other than these

derived fee items (e.g. items that attract a flag fall, health assessments, care planning, emergency after-hours attendance - first patient).

AN.0.16 Provision for Review of the Schedule Optometric Benefits Consultative Committee (OBCC)

The OBCC is an advisory committee established in 1990 by arrangement between the Minister and Optometry Australia.

The OBCC's functions are:

- (a) to discuss the appropriateness of existing Medicare Benefits Schedule items for the purposes of considering whether an approach to the Medical Services Advisory Committee may be needed;
- (b) to undertake reviews of particular services and to report on the appropriateness of the existing structure of the Schedule, having regard to current optometric practice;
- (c) to consider and advise on the appropriateness of the participating optometrists' arrangements and the Common Form of Undertaking (as specified in the *Health Insurance Act 1973* and related legislation) and the administrative rules and interpretations which determine the payment of benefits for optometric services or the level of benefits;
- (d) to investigate specific matters associated with the participating optometrists' arrangements and to advise on desirable changes.

The OBCC comprises two representatives from the Department of Health and Aged Care, two representatives from Services Australia, and three representatives from Optometry Australia.

AN.0.18 Provision for Review of Practitioner Behaviour Professional Services Review (PSR) Scheme

The Professional Services Review (PSR) Scheme is a scheme for reviewing and investigating the provision of services by a health practitioner to determine whether the practitioner has engaged in inappropriate practice in the rendering or initiating of Medicare services or in prescribing under the Pharmaceutical Benefits Scheme (PBS). 'Practitioner' is defined in Section 81 of the *Health Insurance Act 1973* and includes: medical practitioners, dentists, optometrists, chiropractors, midwives, nurse practitioners, physiotherapists, podiatrists and osteopaths.

Section 82 of the *Health Insurance Act 1973* defines inappropriate practice as conduct that is such that a PSR Committee could reasonably conclude that it would be unacceptable to the general body of the members of the profession in which the practitioner was practising when they rendered or initiated the services. It is also an offence under Section 82 for a person who is an officer of a body corporate to knowingly, recklessly or negligently cause or permit a practitioner employed by the person to engage in such conduct.

Services Australia monitors health practitioners' claiming patterns. Where an anomaly is detected, for which a satisfactory explanation cannot be provided, Services Australia can request that the Director of PSR review the provision of services by the practitioner. On receiving the request, the Director must decide whether to conduct a review and in which manner the review will be conducted. The Director is authorised to require that documents and information be provided.

Following a review, the Director must:

- (a) decide to take no further action; or
- (b) enter into an agreement with the person under review (which must then be ratified by an independent Determining Authority); or

- (c) refer the matter to a PSR Committee.

A PSR Committee consists of the Chairperson and two other panel members who must be members of the same profession as the practitioner under review. However, up to two additional Committee members may be appointed to provide a wider range of clinical expertise.

The Committee is authorised to:

- (a) investigate any aspect of the provision of the referred services, and without being limited by the reasons given in the review request or by a Director's report following the review;
- (b) hold hearings and require the person under review to attend and give evidence; and
- (c) require the production of documents (including clinical notes).

A PSR Committee may not make a finding of inappropriate practice unless it has given the person under review notice of its intention to review them, the reasons for its findings, and an opportunity to respond. In reaching their decision, a PSR Committee is required to consider whether or not the practitioner has kept adequate and contemporaneous patient records. It will be up to the peer judgement of the PSR Committee to decide if a practitioner's records meet the prescribed standards.

The standards which determine if a record is adequate and contemporaneous are prescribed in the *Health Insurance (Professional Services Review) Regulations 1999*.

To be **adequate**, the patient or clinical record needs to:

- clearly identify the name of the patient; and
- contain a separate entry for each attendance by the patient for a service and the date on which the service was rendered or initiated; and
- each entry needs to provide clinical information adequate to explain the type of service rendered or initiated; and
- each entry needs to be sufficiently comprehensible that another practitioner, relying on the record, can effectively undertake the patient's ongoing care.

To be **contemporaneous**, the patient or clinical record should be completed at the time that the service was rendered or initiated or as soon as practicable afterwards. Records for hospital patients are usually kept by the hospital and the practitioner could rely on these records to document in-patient care.

The practitioner under review is permitted to make submissions to the PSR Committee before key decisions or a final report is made.

If a PSR Committee finds that the person under review has engaged in inappropriate practice, the findings will be reported to the Determining Authority to decide what action should be taken:

- (i) a reprimand;
- (ii) counselling;
- (iii) repayment of Medicare benefits; and/or
- (iv) complete or partial disqualification from Medicare benefit arrangements for up to three years.

Further information on the Professional Services Review is available at www.psr.gov.au.

Penalties

Penalties of up to \$10,000 or imprisonment for up to five years, or both may be imposed on any person who makes a statement (either orally or in writing) or who issues or presents a document that is false or misleading in a material particular and which is capable of being used with a claim for benefits. In addition, any practitioner who is found guilty of such offences shall be subject to examination by a Medicare Participation Review Committee (MPRC) and may be counselled or reprimanded or may have services wholly or partially disqualified from the Medicare benefit arrangements.

A penalty of up to \$1,000 or imprisonment for up to three months, or both, may be imposed on any person who obtains a patient's signature on an assignment of benefit form without necessary details having been entered on the form before the patient signs or who fails to cause a patient to be given a copy of the completed form.

Medicare Participation Review Committee (MPRC)

The Medicare Participation Review Committee determines what administrative action should be taken against a practitioner who:

- (a) has been successfully prosecuted for relevant criminal offences; or
- (b) has been found to have engaged in inappropriate practice under the Professional Services Review scheme.

The Committee can take no further action, counsel or reprimand the practitioner, or determine that the practitioner be disqualified from Medicare for a particular period or in relation to particular services for up to five years.

Medicare benefits are not payable in respect of services rendered by a practitioner who has been fully disqualified, or partly disqualified in relation to relevant services under the *Health Insurance Act 1973* (Section 19B applies).

AN.0.19 After-Hours Attendances (Items 585, 588, 591, 594, 599, 600, 5000, 5003, 5010, 5020, 5023, 5028, 5040, 5043, 5049, 5060, 5063, 5067, 5071, 5076, 5077, 5200, 5203, 5207, 5208, 5209, 5220, 5223, 5227, 5228, 5260, 5261, 5262, 5263, 5265 and 5267)

After-hours attendance items may be claimed as follows:

Items 585, 588, 591, 594, 599, 600 apply only to a professional attendance that is provided:

- on a public holiday;
- on a Sunday;
- before 8am, or after 12 noon on a Saturday;
- before 8am, or after 6pm on any day other than a Saturday, Sunday or public holiday.

Items 5000, 5020, 5040, 5060, 5071, 5200, 5203, 5207, 5208 and 5209 apply only to a professional attendance that is provided:

- on a public holiday;
- on a Sunday;
- before 8am, or after 1 pm on a Saturday;
- before 8am, or after 8pm on any day other than a Saturday, Sunday or public holiday.

Items 5003, 5010, 5023, 5028, 5043, 5049, 5063, 5067, 5076, 5077, 5220, 5223, 5227, 5228, 5260, 5261, 5262, 5263, 5265 and 5267 apply to a professional attendance that is provided:

- on a public holiday;

- on a Sunday;
- before 8am, or after 12 noon on a Saturday;
- before 8am, or after 6pm on any day other than a Saturday, Sunday or public holiday.

Urgent After-Hours Attendances (Items 585 - 600)

Items 585, 588, 591, 594, 599 and 600 can be used for urgent after-hours services.

Urgent After-Hours Attendances (Items 585, 588, 591, and 594) allow for urgent attendances (other than an attendance between 11pm and 7am) in an after-hours period.

Urgent After-Hours Attendances during Unsociable Hours (Items 599 and 600) allow for urgent attendances between 11pm and 7am in an after-hours period.

The attendance for all these items must be requested by the patient or a responsible person during the same unbroken urgent after-hours period in which the medical service is provided. The medical practitioner must first determine that the patient requires urgent medical assessment.

In considering the need for an urgent assessment of a patient's condition, the practitioner may rely on information conveyed by the patient or patient's carer, other health professionals or emergency services personnel. A record of the assessment must be completed and included in the patient's medical record.

The MBS urgent after-hours items may be used when, on the information available to the medical practitioner, the patient's condition requires urgent medical assessment during the after-hours period to prevent deterioration or potential deterioration in their health. Specifically, the patient's assessment:

- cannot be delayed until the next in-hours period; and
- the medical practitioner must attend the patient at the patient's location or reopen the practice rooms.

Appendix B of the Approved Medical Deputising Service (AMDS) Program Guidelines offers a useful protocol to determine whether prospective after-hours patients should be seen by a deputising medical practitioner or see their regular medical practitioner. The Guidelines are available on the Department of Health and Aged Care website at [AMDS Program Guidelines](#).

If the attendance is undertaken at consulting rooms, it is necessary for the practitioner to return to and specially open the consulting rooms for the attendance.

MBS Item 585 is available to medical practitioners who are:

- listed on the Vocational Register of General Practitioners maintained by Services Australia; or
- holders of the Fellowship of the Royal Australian College of General Practitioners (FRACGP) who participate in, and meet the requirements of the RACGP for continuing medical education and quality assurance as defined in the RACGP Continuing Professional Development Program; or
- holders of the Fellowship of the Australian College of Rural and Remote Medicine (FACRRM) who participate in, and meet the requirements of the Australian College of Rural and Remote Medicine (ACRRM) for continuing medical education and quality assurance as defined in ACRRM's Professional Development Program; or
- undertaking an approved placement in general practice as part of a training program for general practice leading to the award of the FRACGP or training recognised by the RACGP as being of an equivalent standard; or
- undertaking an approved placement in general practice as part of a training program for general practice leading to the award of the FACRRM or training recognised by ACRRM as being of an equivalent standard.

NOTE: MBS incentives continue to be available through the After-Hours Other Medical Practitioners (AHOMPs) Program to non-vocationally recognised medical practitioners who perform after-hours attendances. MBS item 585 will be available to AHOMPs Program participants if they perform an urgent after-hours attendance as part of their employment with a full-time general practice.

AHOMPs will not extend access to item 585 to non-vocationally recognised medical practitioners who work with an after-hours only practice or a medical deputising service (including an AMDS).

MBS Item 588 is available to non-vocationally recognised medical practitioners who are providing services (as a contractor, employee, member or otherwise) for a general practice or clinic or as part of medical deputising arrangements in Modified Monash Model Areas 2 to 7.

A locator map to identify a medical practice's Modified Monash Model Area location is on the [Health Workforce Locator](#).

MBS item 591 is available to non-vocationally recognised medical practitioners who perform attendances for after-hours clinics or as part of deputising arrangements in Modified Monash Model Area 1.

If more than one patient is seen on the same occasion (that is, the second and any further services are consequential to the first service) using either MBS items 585, 588 or 591.

MBS item 594 must be used in respect of the second and subsequent services to patients attended on the same occasion.

Medical practitioners who routinely provide services to patients in the after-hours periods at consulting rooms, or who provide the services (as a contractor, employee, member or otherwise) for a general practice or clinic that routinely provides services to patients in after-hours periods at consulting rooms, will not be able to bill urgent after-hours items 585, 588, 591, 594, 599 and 600.

A *routine service* means a regular or habitual provision of services to patients. This does not include *ad hoc* services provided after-hours in consulting rooms by a medical practitioner (excluding consultant physicians and specialists) working in a general practice or a clinic while participating in an on-call roster.

There is no change to the types of providers who can render services under the *Urgent After-Hours Attendances during Unsociable Hours items* (MBS items 599 and 600). Attendances using these items must be booked during the same unbroken urgent after-hours period.

MBS item 599 continues to be available to medical practitioners who are:

- listed on the Vocational Register of General Practitioners maintained by Services Australia; or
- holders of the Fellowship of the Royal Australian College of General Practitioners (FRACGP) who participate in, and meet the requirements of the RACGP for continuing medical education and quality assurance as defined in the RACGP Continuing Professional Development Program; or
- holders of the Fellowship of the Australian College of Rural and Remote Medicine (FACRRM) who participate in, and meet the requirements of the Australian College of Rural and Remote Medicine (ACRRM) for continuing medical education and quality assurance as defined in ACRRM's Professional Development Program; or
- undertaking an approved placement in general practice as part of a training program for general practice leading to the award of the FRACGP or training recognised by the RACGP as being of an equivalent standard; or
- undertaking an approved placement in general practice as part of a training program for general practice leading to the award of the FACRRM or training recognised by ACRRM as being of an equivalent standard non-vocationally recognised medical practitioners through the AHOMPs Program; or
- non-vocationally recognised medical practitioners participating in the AHOMPs Program.

MBS item 600 continues to be available to non-vocationally recognised medical practitioners.

Non-Urgent After-Hours Attendances (5000 - 5077 and 5200 - 5267)

Non-Urgent After-Hours Attendances in Consulting Rooms (Items 5000, 5020, 5040, 5060, 5071, 5200, 5203, 5207, 5208 and 5209) are to be used for non-urgent consultations at consulting rooms initiated either on a public holiday, on a Sunday, or before 8am and after 1pm on a Saturday, or before 8am and after 8pm on any other day.

Non-Urgent After-Hours Attendances at a Place Other than Consulting Rooms (Other than a Hospital or Residential Aged Care Facility) (items 5003, 5023, 5043, 5063, 5076, 5220, 5223, 5227, 5228 and 5261) and *Non-Urgent After-Hours Attendances in a Residential Aged Care Facility* (Items 5010, 5028, 5049, 5067, 5077, 5260, 5262, 5263, 5265 and 5267) are to be used for non-urgent attendances on 1 or more patients on 1 occasion on a public holiday, on a Sunday, or before 8am and after 12 noon on a Saturday, or before 8am and after 6pm on any other day.

Attendance Period	Applicable Time			Items
	Monday to Friday	Saturday*	Sunday and/or public holiday	
Urgent after-hours attendance	Between 7am - 8am and 6pm - 11pm	Between 7am - 8am and 12 noon - 11pm	Between 7am - 11pm	585, 588, 591, 594
Urgent after-hours in unsociable hours	Between 11pm - 7am	Between 11pm - 7am	Between 11pm - 7am	599, 600
Non-urgent After hours In consulting rooms	Before 8am or after 8pm	Before 8am or after 1pm	24 hours	5000, 5020, 5040, 5060, 5071 5200, 5203, 5207, 5208, 5209
Non-urgent after-hours at a place other than consulting rooms (other than a hospital or Residential Aged Care Facility)	Before 8am or after 6pm	Before 8am or after 12 noon	24 hours	5003, 5023, 5043, 5063, 5076 5220, 5223, 5227, 5228, 5261
Non-urgent after-hours in a Residential Aged Care Facility	Before 8am or after 6pm	Before 8am or after 12 noon	24 hours	5010, 5028, 5049, 5067, 5077 5260, 5262, 5263, 5265, 5267

*with the exception of public holidays which fall on a Saturday

AN.0.21 Minor Attendance by a Consultant Physician (Items 119, 120, 131)

A minor consultation is regarded as being a consultation in which the assessment of the patient does not require the physical examination of the patient and does not involve a substantial alteration to the patient's treatment. Examples of consultations which could be regarded as being 'minor consultations' are listed below (this is by no means an exhaustive list) :-

- hospital visits where a physical examination does not result, or where only a limited examination is performed;

- hospital visits where a significant alteration to the therapy or overall management plan does not ensue;
- brief consultations or hospital visits not involving subsequent discussions regarding patient's progress with a specialist colleague or the referring practitioner.

AN.0.22 Telehealth Patient-end Support Services by Optometrists

Telehealth Patient-end Support Services by Optometrists

These notes provide information on the telehealth MBS attendance items for optometrists to provide clinical support to their patients, when clinically relevant, during video consultations with ophthalmologists under items 10945 and 10946 in Group A10.

Telehealth patient-end support services can only be claimed where:

- a Medicare eligible specialist service is claimed;
- the service is rendered in Australia; and
- this is necessary for the provision of the specialist service.

A video consultation will involve a single optometrist attending to the patient, with the possible participation of another medical practitioner, a participating nurse practitioner, a participating midwife, practice nurse, Aboriginal and Torres Strait Islander health practitioner or Aboriginal health worker at the patient end. The above time-tiered items provide for patient-end support services in various settings, including consulting rooms, other than consulting rooms, eligible residential aged care services and Aboriginal Medical Services.

Clinical indications

The ophthalmologist must be satisfied that it is clinically appropriate to provide a video consultation to a patient. The decision to provide clinically relevant support to the patient is the responsibility of the ophthalmologist.

Telehealth specialist services can be provided to patients when there is no patient-end support service provided.

Collaborative Consultation

The optometrist who provides assistance to the patient where this is necessary for the provision of the specialist service, may seek assistance from a health professional (e.g. a medical practitioner, practice nurse, Aboriginal or Torres Strait Islander health practitioner or Aboriginal health worker) but only one item is billable for the patient-end support service. The optometrist must be present during part or all of the consultation in order to bill an appropriate time-tiered MBS item. Any time spent by another health professional called to assist with the consultation may not be counted against the overall time taken to complete the video consultation.

Restrictions

The MBS telehealth attendance items are not payable for services to an admitted hospital patient (this includes Hospital in the Home patients). Benefits are not payable for telephone or email consultations. In order to fulfil the item descriptor there must be a visual and audio link between the patient and the ophthalmologist. If the ophthalmologist is unable to establish both a video and audio link with the patient, a MBS rebate for a telehealth attendance is not payable.

Individual clinicians must be confident that the technology used is able to satisfy the item descriptor and that software and hardware used to deliver a videoconference meets the applicable laws for security and privacy.

Record Keeping

Telehealth optometrists must keep contemporaneous notes of the consultation including documenting that the service was performed by video conference, the date, time and the people who participated.

Only clinical details recorded at the time of the attendance count towards the time of the consultation. It does not include information added at a later time, such as reports of investigations.

Multiple attendances on the same day

In some situations a patient may receive a telehealth consultation and a face-to-face consultation by the same or different practitioner on the same day.

Medicare benefits may be paid for more than one video consultation on a patient on the same day by the same practitioner, provided the second (and any following) video consultations are not a continuation of the initial or earlier video consultations. Practitioners will need to provide the times of each consultation on the patient's account or bulk billing voucher.

Also, if a patient has an initial consultation via telehealth, they cannot also claim an initial face-to-face consultation as part of the same course of treatment.

Aftercare Rule

Video consultations are subject to the same aftercare rules as face-to-face consultations.

Referrals

The referral procedure for a video consultation is the same as for conventional face-to-face consultations.

Duration of attendance

The optometrist attending at the patient end of the video consultation does not need to be present for the entire consultation, only as long as is clinically relevant - this can be established in consultation with the ophthalmologist. The MBS fee payable for the supporting optometrist will be determined by the total time spent assisting the patient. This time does not need to be continuous.

AN.0.23 Referred Patient Consultant Physician Treatment and Management Plan (Items 132 and 133)

Patients with at least two morbidities which can include complex congenital, development and behavioural disorders are eligible for these services when referred by their referring practitioner.

Item 132 should include the development of options for discussion with the patient, and family members, if present, including the exploration of treatment modalities and the development of a comprehensive consultant physician treatment and management plan, with discussion of recommendations for services by other health providers as appropriate.

Item 133 is available in instances where a review of the consultant physician treatment and management plan provided under item 132 is required, up to a maximum of two claims for this item in a 12 month period. Should further reviews of the consultant physician treatment and management plan be required, the appropriate item for such service/s is 116.

Where a patient with a GP health assessment, GP management plan (GPMP) or Team Care Arrangements (TCA's) is referred to a consultant physician for further assessment, it is intended that the consultant physician treatment and management plan should augment the GPMP or TCA's for that patient.

Preparation of the consultant physician treatment and management plan should be in consultation with the patient. If appropriate, a written copy of the consultant physician treatment and management plan should be provided to the patient. A written copy of the consultant physician treatment and management plan should be provided to the referring medical practitioner, usually within two weeks of the consultant physician consultation. In more serious cases, more prompt provision of the plan and verbal communication with the referring medical practitioner may be

appropriate. A guide to the content of such consultant physician treatment and management plans which are to be provided under this item is included within this Schedule.

(Note: This information is provided as a guide only and each case should be addressed according to a patient's individual needs.)

REFERRED PATIENT CONSULTANT PHYSICIAN TREATMENT AND MANAGEMENT PLAN

- The following content outline is indicative of what would normally be sent back to the referring practitioner.
- The consultant physician treatment and management plan should address the specific questions and issues raised by the referring practitioner.

History

The consultant physician treatment and management plan should encompass a comprehensive patient history which addresses all aspects of the patient's health, including psychosocial history, past clinically relevant medical history, any relevant pathology results if performed and a review of medication and interactions. There should be a particular focus on the presenting symptoms and current difficulties, including precipitating and ongoing conditions. The results of relevant assessments by other health professionals, including GPs and/or specialists, including relevant care plans or health assessments performed by GPs under the Enhanced Primary Care and Chronic Disease Management should also be noted.

Examination

A comprehensive medical examination means a full multi-system or detailed single organ system assessment. The clinically relevant findings of the examination should be recorded in the management plan.

Diagnosis

This should be based on information obtained from the history and medical examination of the patient. The list of diagnoses and/or problems should form the basis of any actions to be taken as a result of the comprehensive assessment. In some cases, the diagnosis may differ from that stated by the referring practitioner, and an explanation of why the diagnosis differs should be included. The report should also provide a risk assessment, management options and decisions.

Management plan

Treatment options/Treatment plan

The consultant physician treatment and management plan should include a planned follow-up of issues and/or conditions, including an outline of the recommended intervention activities and treatment options. Consideration should also be given to recommendations for allied health professional services, where appropriate.

Medication recommendations

Provide recommendations for immediate management, including the alternatives or options. This should include doses, expected response times, adverse effects and interactions, and a warning of any contra-indicated therapies.

Social measures

Identify issues which may have triggered or are contributing to the problem in the family, workplace or other social environment which need to be addressed, including suggestions for addressing them.

Other non medication measures

This may include other options such as life style changes including exercise and diet, any rehabilitation recommendations and discussion of any relevant referrals to other health providers.

Indications for review

It is anticipated that the majority of patients will be able to be managed effectively by the referring practitioner using the consultant physician treatment and management plan. If there are particular concerns about the indications or possible need for further review, these should be noted in the consultant physician treatment and management plan.

Longer term management

Provide a longer term consultant physician treatment and management plan, listing alternative measures that might be taken in the future if the clinical situation changes. This might be articulated as anticipated response times, adverse effects and interactions with the consultant physician treatment and management plan options recommended under the consultant physician treatment and management plan.

Services Australia has developed an [Health Practitioner Guideline to substantiate that a valid referral existed \(specialist or consultant physician\)](#) which is located on the Department of Health and Aged Care website.

AN.0.24 Attendance services for complex neurodevelopmental disorders (such as autism spectrum disorder)

Intention of this service under item 135 and telehealth equivalent item 92140

Items 135 or telehealth equivalent item 92140 are intended for complex conditions, characterised by multi-domain cognitive and functional impairment. Patient eligibility is for neurodevelopmental disorders, which are assessed to be complex and mean that individuals require support across multiple domains.

The intention of this service is to provide access to treatment, through the development of a treatment and management plan by a paediatrician, for individuals diagnosed with a complex neurodevelopmental disorder (NDD). The development of the treatment and management plan, follows a comprehensive medical assessment, and provides the opportunity to refer to eligible Allied Health practitioners for up to a total of 20 MBS treatment services per patient's lifetime (items 82015, 82020, 82025, 82035, 93035, 93036, 93043 or 93044). This item is claimable once in a patient's lifetime.

Eligibility:

In the context of item 135 (or 92140), the diagnosis of a complex neurodevelopmental disorder requires evidence of requiring support and showing impairment across two or more neurodevelopmental domains. **Complexity** is characterised by multi-domain cognitive and functional disabilities, delay or clinically significant impairment.

Neurodevelopmental domains include:

- Cognition
- Language
- Social-emotional development
- Motor skills
- Adaptive behaviour: conceptual skills, practical skills, social skills or social communication skills

Age eligibility:

Whilst it is not expected that a paediatrician would routinely assess adult individuals (item 289 provides for assessments undertaken by a psychiatrist for patients aged over 18 years to under 25 years), item 135 provides an age ceiling which is consistent across all MBS items related to complex neurodevelopmental disorders and related Allied Health services. Where a paediatrician has been referred a patient (under 18 years of age) and the diagnostic formulation is not completed until after their 18th birthday, the higher age limit will allow the completion of the assessment by the paediatrician (as clinically appropriate).

Referral pathways:

Early identification of, and intervention for, individuals with complex NDD is important in promoting positive longer term outcomes. Symptoms can cause clinically significant impairment in social, occupational or other important areas of functioning.

Where neurodevelopmental concerns have been identified and brought to the attention of the patient's GP to initially assess these concerns and the GP considers there are persisting indications that require more specialised assessment, they are encouraged to refer to either a consultant paediatrician or psychiatrist for a comprehensive assessment.

Diagnostic Assessment:

The assessment and diagnosis of a complex NDD should be evaluated in the context of both a physical and developmental assessment. The paediatrician may require a number of separate attendances (through usual time-tiered or subsequent attendance items 110, 116, 119, 122, 128, 131 or telehealth items 91824 to 91826) to complete a comprehensive accurate assessment and formulate a diagnosis, exclude other disorders or assess for co-occurring conditions.

Multi-disciplinary assistance with assessment and/or contribution to the treatment and management plan:

Depending on a range of factors, not limited to the patient's age and nature of suspected complex NDD, the consultant physician may require a multi-disciplinary approach to complete a comprehensive accurate assessment and formulate a diagnosis.

Where the paediatrician determines the patient requires additional assessments to formulate a diagnosis, through the assistance of an Allied Health practitioner, they are able to refer the patient to an eligible Allied Health provider from standard attendance items (110 to 131 or telehealth items 91824 to 91826 and 91834 to 91836).

Whilst Medicare rebates provide for a total of 8 Allied Health assessment services per patient per lifetime, an eligible Allied Health practitioner can only provide **up to 4 services** before the need for a review (the type of review can be specified in the referral to the eligible Allied Health professional) by the referring paediatrician, who must agree to the need for any additional Allied Health services prior to the delivery of the remaining 4 Allied Health assessment services.

Eligible Allied Health Assessment practitioners include:

- Psychologist (MBS item 82000, 93032, 93040)
- Speech Pathologist (MBS item 82005, 93033, 93041)
- Occupational Therapist (82010, 93033, 93041)
- Audiologist, Optometrist, Orthoptist, Physiotherapist (MBS item 82030, 93033, 93041)

Requirements of the referral to Allied Health practitioners

The paediatrician can refer to multiple eligible Allied Health practitioners concurrently, but a separate referral letter must be provided to each Allied Health practitioner. The referral should specify the intent of the assessment and if appropriate, specify the number of services to be provided. Where the number of sessions is not specified, each Allied Health practitioner can provide up to 4 assessment services without the need for review or agreement to provide further assessment services.

Review requirements following delivery of 4 Allied Health Assessment services

Where an eligible Allied Health practitioner has provided 4 assessment services (through items 82000, 82005, 82010, 82030, 93032, 93033, 93040 or 93041) and considers additional assessment services are required, they must ensure the referring paediatrician undertakes a review. If the type of review is not specified by the referring paediatrician an acceptable means of review includes: a case conference, phone call, written correspondence, secure online messaging exchange or attendance of the patient with the referring paediatrician.

Inter-disciplinary Allied Health referral

Eligible Allied Health practitioners are also able to make inter-disciplinary referrals to other eligible Allied Health practitioners as clinically necessary to assist with the formulation of the diagnosis or contribute to the treatment and management plan. Inter-disciplinary referrals must be undertaken in consultation and agreement with the referring paediatrician. Whilst they do not require the need for an attendance with the patient (face-to-face or telehealth) by the referring paediatrician, they do require an agreement from the referring paediatrician. This can be undertaken (but is not limited to) an exchange by phone, written communication or secure online messaging.

Contribution to the Treatment and Management Plan through Allied Health referral

In addition to referring to Allied Health practitioners for assistance with formulating a diagnosis, once a paediatrician makes a complex neurodevelopmental disorder diagnosis, the paediatrician may require the contribution of an eligible Allied Health practitioner to assist with the development of the Treatment and Management plan (before billing item 135 or 92140).

MBS items 82000, 82005, 82010, 82030, 93032, 93033, 93040 or 93041 provide a dual function for this purpose. It is important to note that the service limit of a total of 8 services per patient per lifetime apply regardless of whether the items are used for assistance with diagnosis or contribution to the treatment and management plan, and the referring paediatrician should be mindful of this when referring to eligible Allied Health practitioners.

Development of the Treatment and Management Plan

Once the paediatrician has made a diagnosis of a complex neurodevelopmental disorder, to complete the item requirements of item 135 or 92140 they must develop a treatment and management plan which includes:

Written documentation of the patient's confirmed diagnosis of a complex neurodevelopmental disorder, including any findings of assessments performed (which assisted with the formulation of the diagnosis or contributed to the treatment and management plan)

- A risk assessment which means assessment of:
 - the risk to the patient of a contributing co-morbidity and
 - environmental, physical, social and emotional risk factors that may apply to the patient or to another individual.
- Treatment options which include:
 - Recommendations using a biopsychosocial model
 - Identify major treatment goals and important milestones and objectives
 - Recommendation and referral for treatment services provided by eligible Allied Health practitioners (where relevant) and who should provide this, specifying number of treatments recommended (to a maximum of 20 treatment services)
 - Indications for review or episodes requiring escalation of treatment strategies
- Documenting the Treatment and Management plan and providing a copy to the referring medical practitioner and relevant Allied Health practitioner/s.

Referral for Allied Health Treatment services

Once a treatment and management plan is in place (under item 135 or 92140) the paediatrician can refer the individual to eligible Allied Health practitioners for the provision of treatment services. Treatment services address the functional impairments identified through the comprehensive medical assessment which are outlined in the treatment and management plan. Treatment services focus on interventions to address developmental delays/disabilities or impairments.

Eligible Allied Health treatment practitioners include:

- Psychologist (MBS items 82015, 93035, 93043)
- Speech Pathologist (MBS items 82020, 93036, 93044)
- Occupational Therapist (MBS items 82025, 93036, 93044)
- Audiologist, Optometrist, Orthoptist, Physiotherapist (MBS items 82035, 93036, 93044)

A total of 20 Allied Health Treatment services per patient per lifetime are available through the MBS, which may consist of any combination of items 82015, 82020, 82025 or 82035 or equivalent telehealth items. Whilst the paediatrician can refer to multiple eligible Allied Health practitioners concurrently, a separate referral letter must be provided to each Allied Health practitioner.

The referral should specify the goals of the treatment and if appropriate, specify the number of services to be provided. It is the responsibility of the referring paediatrician to allocate the number of treatment services (up to a maximum of 10 services per course of treatment) in keeping with the individual's treatment and management plan.

It is important to note, that a benefit will not be paid for the MBS Allied Health Treatment services unless the pre-requisite items (135 or 92140) have been processed through the Medicare claiming system.

On the completion of a "course of treatment" (specified by the referring paediatrician, up to maximum of 10 services), the eligible Allied Health practitioner must provide a written report to the referring paediatrician, which should include information on the treatment provided, recommendations on future management of the individual's disorder and any advice to caregivers (such as parents, carers, school teachers). This written report will inform the referring paediatrician's decision to refer for further treatment services. Where subsequent courses of treatment are required after the initial 10 services (up to a maximum of 20 services per patient per lifetime) a new referral is required.

Inconclusive assessment:

Where a patient does not meet the diagnostic threshold of a complex neurodevelopmental disorder and where ongoing medical management is required, patients can be managed through subsequent attendance items (such as 116 or 91825) or where at least two separate diagnoses are made through item 132 or 92422.

Examples include where:

- Neurodevelopment assessment is incomplete or inconclusive
- Neurodevelopmental impairment is present in fewer than two domains
- Neurodevelopmental impairment is present in two or more domains, but individuals do not require sufficient support to meet criteria
- Comprehensive, age-appropriate neurodevelopmental assessment is impossible or unavailable (e.g. in infants or young children- particularly those under 6 years of age)

These individuals may be considered "at risk of a complex neurodevelopmental" and require follow-up and reassessment in the future.

AN.0.25 Attendance services for eligible disabilities

Intention and eligibility of this service under item 137 and telehealth equivalent item 92141

Items 137 or telehealth equivalent item 92141 are intended for diagnosis and treatment for patients under 25 years of age with an eligible disability by a specialist or consultant physician.

Definition of Eligible Disabilities is found at AR.29.1

Referral pathways:

Early identification of, and intervention for, individuals with eligible disabilities is important in promoting positive longer term outcomes. Symptoms can cause clinically significant impairment in social, occupational or other important areas of functioning.

Where indications of eligible disability concerns have been identified and brought to the attention of the patient's GP to initially assess these concerns and the GP considers there are persisting indications that require more specialised assessment, they are encouraged to refer to a specialist or consultant physician for a comprehensive assessment.

Diagnostic Assessment:

The assessment and diagnosis of an eligible disability should be evaluated in the context of both a physical and developmental assessment. The specialist or consultant physician may require a number of separate attendances (through usual time-tiered or subsequent attendance items 104, 105, 91822, 91823, or 91833, 110, 116, 119, 122, 128, 131, 91824 - 91826 or 91836) or 296 - 308, 310, 312, 314, 316, 318, 319 - 352, 92437, 91827 - 91831, 91837 - 91839, 92455 - 92460) to complete a comprehensive accurate assessment and formulate a diagnosis, exclude other disorders or assess for co-occurring conditions.

Multi-disciplinary assistance with assessment and/or contribution to the treatment and management plan:

Depending on a range of factors, not limited to the patient's age and nature of suspected disabilities, the specialist or consultant physician may require a multi-disciplinary approach to complete a comprehensive accurate assessment and formulate a diagnosis.

Where the specialist or consultant physician determines the patient requires additional assessments to formulate a diagnosis, through the assistance of an Allied Health practitioner, they are able to refer the patient to an eligible Allied Health provider from standard attendance items (104, 105, 91822, 91823, or 91833, 110, 116, 119, 122, 128, 131, 91824 - 91826 or 91836 or 296 - 308, 310, 312, 314, 316, 318, 319 - 352, 92437, 91827 - 91831, 91837 - 91839, 92455 - 92460).

Whilst Medicare rebates provide for a total of 8 Allied Health Assessment services per patient per lifetime, an eligible Allied Health practitioner can only provide **up to 4 services** before the need for a review (the type of review can be specified in the referral to the eligible Allied Health professional) by the referring specialist or consultant physician, who must agree to the need for any additional Allied Health services prior to the delivery of the remaining 4 Allied Health assessment services.

Eligible Allied Health Assessment practitioners include:

- Psychologist (MBS item 82000, 93032, 93040)
- Speech Pathologist (MBS item 82005, 93033, 93041)
- Occupational Therapist (82010, 93033, 93041)
- Audiologist, Optometrist, Orthoptist, Physiotherapist (MBS item 82030, 93033, 93041)

Requirements of the referral to Allied Health practitioners

The specialist or consultant physician can refer to multiple eligible Allied Health practitioners concurrently, but a separate referral letter must be provided to each Allied Health practitioner. The referral should specify the intent of the assessment and if appropriate, specify the number of services to be provided. Where the number of sessions is not specified, each Allied Health practitioner can provide up to 4 assessment services without the need for review or agreement to provide further assessment services.

Review requirements following delivery of 4 Allied Health Assessment services

Where an eligible Allied Health practitioner has provided 4 assessment services (through items 82000, 82005, 82010, 82030, 93032, 93040, 93033 or 93041) and considers additional assessment services are required, they must ensure the referring specialist or consultant physician undertakes a review. If the type of review is not specified by the referring specialist or consultant physician an acceptable means of review includes: a case conference, phone call, written correspondence, secure online messaging exchange or attendance of the patient with the referring psychiatrist.

Inter-disciplinary Allied Health referral

Eligible Allied Health practitioners are also able to make inter-disciplinary referrals to other eligible Allied Health practitioners as clinically necessary to assist with the formulation of the diagnosis or contribute to the treatment and management plan. Inter-disciplinary referrals must be undertaken in consultation and agreement with the referring specialist or consultant physician. Whilst they do not require the need for an attendance with the patient (face-to-

face or telehealth) by the referring specialist or consultant physician, they do require an agreement from the referring specialist or consultant physician. This can be undertaken (but is not limited to) an exchange by phone, written communication or secure online messaging.

Contribution to the Treatment and Management Plan through Allied Health referral

In addition to referring to Allied Health practitioners for assistance with formulating a diagnosis, once the specialist or consultant physician makes a diagnosis, the specialist or consultant physician may require the contribution of an eligible Allied Health practitioner to assist with the development of the Treatment and Management plan (before billing item 137 or 92141).

MBS items 82000, 82005, 82010, 82030, 93032, 93040, 93033 or 93041 provide a dual function for this purpose. It is important to note that the service limit of a total of 8 services per patient per lifetime apply regardless of whether the items are used for assistance with diagnosis or contribution to the treatment and management plan, and the referring specialist or consultant physician should be mindful of this when referring to eligible Allied Health practitioners.

Development of the Treatment and Management Plan

Once the specialist or consultant physician has made a diagnosis of an eligible disability, to complete the item requirements of item 137 or 92141 they must develop a treatment and management plan which includes:

- Written documentation of the patient's confirmed diagnosis of an eligible disability, including any findings of assessments performed (which assisted with the formulation of the diagnosis or contributed to the treatment and management plan)
- A risk assessment which means assessment of:
 - the risk to the patient of a contributing co-morbidity and
 - environmental, physical, social and emotional risk factors that may apply to the patient or to another individual.
- Treatment options which:
 - Recommendations using a biopsychosocial model
 - Identify major treatment goals and important milestones and objectives
 - Recommendation and referral for treatment services provided by eligible Allied Health practitioners (where relevant) and who should provide this, specifying number of treatments recommended (to a maximum of 20 treatment services)
 - Indications for review or episodes requiring escalation of treatment strategies
- Documenting the Treatment and Management plan and providing a copy to the referring medical practitioner and relevant Allied Health practitioner/s.

Referral for Allied Health Treatment services

Once a treatment and management plan is in place (after item 137 or 92141 has been claimed) the specialist or consultant physician can refer the individual to eligible Allied Health practitioners for the provision of treatment services. Treatment services address the functional impairments identified through the comprehensive medical assessment which are outlined in the treatment and management plan. Treatment services focus on interventions to address developmental delays/disabilities or impairments.

Eligible Allied Health treatment practitioners include:

- Psychologist (MBS items 82015, 93035, 93043)
- Speech Pathologist (MBS items 82020, 93036, 93044)
- Occupational Therapist (MBS items 82025, 93036, 93044)
- Audiologist, Optometrist, Orthoptist, Physiotherapist (MBS items 82035, 93036, 93044)

A total of 20 Allied Health Treatment services per patient per lifetime are available through the MBS, which may consist of any combination of items 82015, 82020, 82025 or 82035 or equivalent telehealth items. Whilst the

specialist or consultant physician can refer to multiple eligible Allied Health practitioners concurrently, a separate referral letter must be provided to each Allied Health practitioner.

The referral should specify the goals of the treatment and if appropriate, specify the number of services to be provided. It is the responsibility of the referring psychiatrist to allocate the number of treatment services (up to a maximum of 10 services per course of treatment) in keeping with the individual's treatment and management plan.

It is important to note, that a benefit will not be paid for the MBS Allied Health Treatment services unless the pre-requisite items (137 or 92141) have been processed through the Medicare claiming system.

On the completion of a "course of treatment" (specified by the referring specialist or consultant physician, up to maximum of 10 services), the eligible Allied Health practitioner must provide a written report to the referring specialist or consultant physician, which should include information on the treatment provided, recommendations for future management of the individual's disorder and any advice to caregivers (such as parents, carers, schoolteachers). This written report will inform the referring specialist or consultant physician's decision to refer for further treatment services. Where subsequent courses of treatment after the initial 10 services are required (up to a maximum of 20 services per patient per lifetime) a new referral is required.

AN.0.26 Geriatrician Referred Patient Assessment and Management Plan (Items 141-147)

Items 141 -147 apply only to services provided by a consultant physician or specialist in the specialty of Geriatric Medicine who has completed the additional requirements of the Royal Australasian College of Physicians for recognition in the subspecialty of geriatric medicine.

Referral for Items 141-147 should be through the general practitioner for the comprehensive assessment and management of frail older patients, older than 65, with complex, often interacting medical, physical and psychosocial problems who are at significant risk of poor health outcomes. In the event that a specialist of another discipline wishes to refer a patient for this item, the referral should take place through the GP.

A comprehensive assessment of an older person should as a minimum cover:

- current active medical problems
- past medical history;
- medication review;
- immunisation status;
- advance care planning arrangements;
- current and previous physical function including personal, domestic and community activities of daily living;
- psychological function including cognition and mood; and
- social function including living arrangements, financial arrangements, community services, social support and carer issues.

Note: Guidance on all aspects of conducting a comprehensive assessment on an older person is available on the Australian and New Zealand Society for Geriatric Medicine website at www.anzsgm.org.

Some of the information collection component of the assessment may be rendered by a nurse or other assistant in accordance with accepted medical practice, acting under the supervision of the geriatrician. The remaining components of the assessment and development of the management plan must include a personal attendance by the geriatrician.

A prioritised list of diagnoses/problems should be developed based on information provided by the history and examination, and any additional information provided by other means, including an interview of a person other than the patient.

The management plan should be explained and if necessary provided in written form to the patient or where appropriate, their family or carer(s).

A written report of the assessment including the management plan should be provided to the general practitioner within a maximum of 2 weeks of the assessment. More prompt verbal communication may be appropriate.

The Patient Assessment and Management plans must be kept for 2 years after the date of service.

Items 143 and 147 are available in instances where the GP initiates a review of the management plan provided under items 141 and 145, usually where the current plan is not achieving the anticipated outcome. It is expected that when a management plan is reviewed, any modification necessary will be made.

Items 143 and 147 can be claimed once in a 12 month period. However, if there has been a significant change in the patient's clinical condition or care circumstances necessitating another review, an additional item 143 or 147 can be claimed. In these circumstances, the patient's invoice or Medicare voucher should be annotated to briefly indicate the reason why the additional review was required (e.g. annotated as clinically indicated, exceptional circumstances, significant change etc).

AN.0.27 Prolonged Attendance in Treatment of a Critical Condition (Items 160 164)

The conditions to be met before services covered by items 160-164 attract benefits are:-

- (i) the patient must be in imminent danger of death;
- (ii) if the personal attendance is not continuous, the occasion on which the service is provided is taken to be the total time of the attendance; and
- (iii) if personal attendance on a single patient is provided by 1 or more general practitioners, specialists or consultant physicians concurrently, each general practitioner, specialist or consultant physician may claim an attendance fee.

AN.0.28 Family Group Therapy (Items 170, 171, 172)

These items refer to family group therapy supervised by general practitioner, specialist or consultant physician (other than consultant psychiatrists). To be used, these items require that a formal intervention with a specific therapeutic outcome, such as improved family function and/or communication, is undertaken. Other types of group attendances do not attract benefits. It should be noted that only one fee applies in respect of each group of patients.

AN.0.29 Acupuncture (Item 193, 195, 197 and 199)

Items 193, 195, 197 and 199 cover not only the performance of the acupuncture but include any consultation on the same occasion and any other attendance on the same day for the condition for which acupuncture was given.

For the purpose of payment of Medicare benefits "acupuncture" is interpreted as including treatment by means other than the use of acupuncture needles where the same effect is achieved without puncture, eg by application of ultrasound, laser beams, pressure or moxibustion, etc.

For more information on the content-based item structure used in this Group, see para AN.0.9 of explanatory notes to this Category.

AN.0.30 Consultant Psychiatrist - Initial consultations for NEW PATIENTS (Items 296 to 299) Referred Patient Assessment and Management Plan (Items 291 and 293) and referral to Allied Mental Health Professionals

Referral for items 291, 293, 92435 and 92436 should be through the general practitioner or participating nurse practitioner for the management of patients with mental illness. In the event that a specialist of another discipline wishes to refer a patient for this item the referral should take place through the GP or participating nurse practitioner.

In order to facilitate ongoing patient focussed management, an outcome tool will be utilised during the assessment and review stage of treatment, where clinically appropriate. The choice of outcome tools to be used is at the clinical discretion of the practitioner, however the following outcome tools are recommended:

- Kessler Psychological Distress Scale (K10)
- Short Form Health Survey (SF12)
- Health of the Nation Outcome Scales (HoNOS)

Preparation of the management plan should be in consultation with the patient. If appropriate, a written copy of the management plan should be provided to the patient. A written copy of the management plan should be provided to the general practitioner within a maximum of two weeks of the assessment. It should be noted that two weeks is the outer limit and in more serious cases more prompt provision of the plan and verbal communication with the GP or participating nurse practitioner may be appropriate. A guide to the content of the report which should be provided to the GP or participating nurse practitioner under this item is included within this Schedule.

It is expected that item 291 or 92435 will be a single attendance. However, there may be particular circumstances where a patient has been referred by a GP or participating nurse practitioner for an assessment and management plan, but it is not possible for the consultant psychiatrist to determine in the initial consultation whether the patient is suitable for management under such a plan. In these cases, where clinically appropriate, items 296, 297, 299 or 92437 (for a new patient) or 300-308 (for continuing patients) may be used, and item 291 or 92435 may be used subsequently, in those circumstances where the consultant psychiatrist undertakes a consultation (in accordance with the item requirements) prior to the consultation for providing the referring practitioner with an assessment and management plan. It is not intended that items 296, 297, 299, 92437 or 300-308 will generally or routinely be used in conjunction with, or prior to, item 291 or 92435.

Items 293 and 92436 are available in instances where the GP or participating nurse practitioner initiates a review of the plan provided under item 291 or 92435, usually where the current plan is not achieving the anticipated outcome. It is expected that when a plan is reviewed, any modifications necessary will be made.

The Royal Australian and New Zealand College of Psychiatrists (RANZCP) Referred Patient Assessment and Management Plan Guidelines

Note: This information is provided as a guide only and each case should be addressed according to a patient's individual needs. An electronic version of the Guidelines is available on the RANZCP website at www.ranzcp.org

REFERRED PATIENT ASSESSMENT AND MANAGEMENT PLAN

Preliminary

- The following content outline is indicative of what would usually be sent back to GPs or participating nurse practitioner.
- The Management plan should address the specific questions and issues raised by the GP or participating nurse practitioner
- In most cases the patient is usually well known by the GP or participating nurse practitioner

History and Examination

This should focus on the presenting symptoms and current difficulties, including precipitating and ongoing stresses; and only briefly mention any relevant aspects of the patient's family history, developmental history, personality features, past psychiatric history and past medical history.

It should contain a comprehensive relevant Mental Status Examination and any relevant pathology results if performed.

It should summarise any psychological tests that were performed as part of the assessment.

Diagnosis

A diagnosis should be made either using ICD 10 or DSM IV classification. In some cases the diagnosis may differ from that stated by the GP or participating nurse practitioner, and an explanation of why the diagnosis differs should be included.

Psychiatric formulation

A brief integrated psychiatric formulation focussing on the biological, psychological and physical factors. Any precipitant and maintaining factors should be identified including relevant personality factors. Protective factors should also be noted. Issues of risk to the patient or others should be highlighted.

Management plan

1. Education - Include a list of any handout material available to help people understand the nature of the problem. This includes recommending the relevant RANZCP consumer and carer clinical practice guidelines.
2. Medication recommendations - Give recommendations for immediate management including the alternatives or options. This should include doses, expected response times, adverse effects and interactions, and a warning of any contra-indicated therapies.
3. Psychotherapy - Recommendations should be given on the most appropriate mode of psychotherapy required, such as supportive psychotherapy, cognitive and behavioural psychotherapy, family or relationship therapy or intensive explorative psychotherapy. This should include recommendations on who should provide this therapy.
4. Social measures - Identify issues which may have triggered or are contributing to the maintenance of the problem in the family, workplace or other social environment which need to be addressed, including suggestions for addressing them.
5. Other non medication measures - This may include other options such as life style changes including exercise and diet, any rehabilitation recommendations, discussion of any complementary medicines, reading recommendations, relationship with other support services or agencies etc.
6. Indications for re-referral - It is anticipated that the majority of patients will be able to be managed effectively by the GP or participating nurse practitioner using the plan. If there are particular concerns about the possible need for further review, these should be noted.
7. Longer term management - Provide a longer term management plan listing alternative measures that might be taken in the future if the clinical situation changes. This might be articulated as a relapse signature and relapse drill, and should include drug doses and other indicated interventions, expected response times, adverse effects and interactions.

Initial Consultation for a NEW PATIENT (item 296 in rooms, item 297 at hospital, item 299 for home visits, or item 92437 for telehealth)

The rationale for items 296, 297, 299 and 92437 is to improve access to psychiatric services by encouraging an increase in the number of new patients seen by each psychiatrist, while acknowledging that ongoing care of patients with severe mental illness is integral to the role of the psychiatrist. Referral for items 296, 297, 299 and 92437 may

be from a participating nurse practitioner, medical practitioner practising in general practice, a specialist or another consultant physician.

It is intended that either item 296, 297, 299 and 92437 will apply once only for each new patient on the first occasion that the patient is seen by a consultant psychiatrist, unless the patient is referred by a medical practitioner practising in general practice or participating nurse practitioner for an assessment and management plan, in which case the consultant psychiatrist, if they agree that the patient is suitable for management in a general practice setting, will use item 291 or 92435 where an assessment and management plan is provided to the referring practitioner.

There may be particular circumstances where a patient has been referred by a GP or participating nurse practitioner to a consultant psychiatrist for an assessment and management plan, but it is not possible for the consultant psychiatrist to determine in the initial consultation whether the patient is suitable for management under such a plan. In these cases, where clinically appropriate, item 296, 297, 299 or 92437 (for a new patient) or 300-308 (for continuing patients) may be used and item 291 or 92435 may be used subsequently, in those circumstances where the consultant psychiatrist undertakes a consultation (in accordance with the item requirements) and provides the referring practitioner with an assessment and management plan. It is not generally intended that item 296, 297, 299 or 92437 will be used in conjunction with, or prior to, item 291 or 92435.

Use of items 296, 297, 299 or 92437 by one consultant psychiatrist does not preclude them being used by another consultant psychiatrist for the same patient. The use of items 296, 297, 299 or 92437 are identical except for the location of where the service is rendered. That is item 296 is only available for consultations rendered in consulting rooms, item 297 is only available for consultations rendered at a hospital, item 299 is only available for consultations rendered at a place other than consulting rooms or a hospital (such as in a patient's home) and item 92437 is only available for video consultations.

Items 300 - 308 are available for consultations in consulting rooms other than those provided under items 296, 291 and 293. Similarly, time tiered items remain available for hospital, and home visits. These would cover a new course of treatment for patients who have already been seen by the consultant psychiatrist in the preceding 24 months as well as subsequent consultations for all patients.

Referral to Allied Mental Health Professionals (for new and continuing patients)

To increase the clinical treatment options available to psychiatrists and paediatricians for which a Medicare benefit is payable, patients with an assessed mental disorder (dementia, delirium, tobacco use disorder and mental retardation are not regarded as mental disorders for the purposes of these items) may be referred to mental health professional for a total of ten individual allied mental health services in a calendar year. The ten services may consist of: GP focussed psychological strategies services (items 2721, 2723, 2725, 2727; 91818, 91819, 91842 and 91843) or non-specialist medical practitioner items (283, 285, 286, 287, 91820, 91821, 91844 and 91845); psychological therapy services items 80000, 80005, 80010, 80015, 91166, 91167, 91181 and 91182) - provided by eligible clinical psychologists; and/or focussed psychological strategies - allied mental health services (items 80100, 80105, 80110, 80115, 80125, 80130, 80135, 80140; 80150, 80155, 80160, 80165; 91169, 91170; 91172, 91173, 91175, 91176, 91183, 91184, 91185, 91186, 91187 and 91188) - provided by eligible psychologists, occupational therapists and social workers.

Referrals from psychiatrists and paediatricians to an allied mental health professional must be made from eligible Medicare services. For specialist psychiatrists and paediatricians these services include any of the specialist attendance items 104 through 109. For consultant physician psychiatrists the relevant eligible Medicare services cover any of the consultant psychiatrist items 293 to 299, 92436 and 92437; while for consultant physician paediatricians the eligible services are consultant physician attendance items 110 through 133.

Within the maximum service allocation of ten services, the allied mental health professional can provide one or more courses of treatment. For the purposes of these services, a course of treatment will consist of the number of services stated in the patient's referral (up to a maximum of six in any one referral). These services should be provided, as required, for an initial course of treatment (a maximum of six services but may be less depending on the referral and patient need) to a maximum of ten services per calendar year.

While such referrals are likely to occur for new patients seen under items 296, 297, 299 or 92437, they are also available for patients at any point in treatment (from items 293 to 299, 92436 and 92437), as clinically required, under the same arrangements and limitations as outlined above. The referral may be in the form of a letter or note to an eligible allied health professional signed and dated by the referring practitioner.

Patients will also be eligible to claim up to ten services within a calendar year for group therapy services involving 4-10 patients to which items 80020, 80021, 80022, 80023, 80024 and 80025 (psychological therapy - clinical psychologist), 80120, 80121, 80122, 80123, 80127 and 80128 (focussed psychological strategies - psychologist), 80145, 80146, 80147, 80148, 80152, 80153 (focussed psychological strategies - occupational therapist) and 80170 (focussed psychological strategies - social worker) apply. These group services are separate from the individual services and do not count towards the ten individual services per calendar year maximum associated with those items.

AN.0.31 Psychiatric Attendances (Item 319)

Medicare benefits are attracted under Item 319 only where patients are diagnosed as suffering from:

- severe personality disorder (predominantly from cluster B groupings), or in persons under 18 years of age a severe disruption of personality development; or
- anorexia nervosa; or
- bulimia nervosa; or
- dysthymic disorder; or
- substance-related disorder; or
- somatoform disorder; or
- a pervasive developmental disorder (including autism and Asperger's disorder)

according to the relevant criteria set out in the Diagnostic and Statistical Manual of the American Psychiatric Association - Fourth Edition (DSM-IV).

It is not sufficient for the patient's illness to fall within the diagnostic criteria. It must be evident that a significant level of impairment exists which interferes with the patient's quality of life. For persons 18 years and over, the level of impairment must be within the range 1 to 50 of the Global Assessment of Functioning (GAF) Scale contained in the DSM-IV (ie the patient is displaying at least "serious" symptoms). The GAF score, incorporating the parameters which have led to the score, should be recorded at the time of commencement of the current course of treatment. Once a patient is identified as meeting the criteria of item 319, he/she continues to be eligible under that item for the duration of the current course of treatment (provided that attendances under **items 300 to 308 and 319** do not exceed 160 in a calendar year). Where a patient commences a new course of treatment, the GAF score in relation to item 319 is the patient's score as assessed during the new course of treatment.

In addition to the above diagnostic criteria and level of functional impairment, it is also expected that other appropriate psychiatric treatment has been used for a suitable period and the patient has shown little or no response to such treatment. It is expected that such treatment would include, but not be limited to: shorter term psychotherapy; less frequent but long term psychotherapy; pharmacological therapy; cognitive behaviour therapy.

It is the responsibility of the psychiatrist to ensure that the patient meets these criteria. Services Australia will be closely monitoring the use of item 319.

When a patient who meets the criteria defined in item 319 attends a psychiatrist on more than 160 occasions in a calendar year, such attendances would be covered by items 310 to 318.

The Royal Australian and New Zealand College of Psychiatrists (RANZCP) has undertaken to establish an appropriate mechanism to enable use of item 319 by suitably trained psychiatrists. In the interim it is expected that psychiatrists whose usual practice includes long term intensive treatment of patients whose diagnoses meet the criteria defined in the item will be using item 319.

On the basis of advice from the RANZCP it is expected that it would be generally inappropriate in normal clinical practice for psychiatric treatment performed out of hospital to extend beyond 220 sessions in a calendar year. In this regard, Services Australia will be monitoring providers' practice patterns with a view to the referral of possible cases of inappropriate practice to the Director of Professional Services Review.

AN.0.32 Interview of Person other than a Patient by Consultant Psychiatrist (Items 348, 350, 352)

Items 348 and 350 refer to investigative interviews of a patient's relatives or close associates to determine whether the particular problem with which the patient presented was focused in the patient or in the interaction between the patient and the person being interviewed. These items do not cover counselling of family or friends of the patient. The term "in the course of initial diagnostic evaluation of the patient" should normally be interpreted as extending for up to one month from the date of the initial consultation. There is no strict limit to the number of interviews or persons interviewed in that period. These items should not be used for interviews concerned with the continuing management of the patient.

Item 352 refers to investigative interviews of a patient's relatives or close associates to focus on a particular clinically relevant problem arising in the continuing management of the patient. This item does not cover counselling of family or friends of the patient. The payment of Medicare benefits under this item is limited to four in any twelve month period.

Benefits are payable for Item 348, 350 or 352 and for a consultation with a patient (items 300 - 328) on the same day provided that separate attendances are involved.

For Medicare benefit purposes, charges relating to services covered by items 348, 350 and 352 should be raised against the patient rather than against the person interviewed.

AN.0.33 Consultant Occupational Physician Attendances (Items 385 to 388)

Attendances by consultant occupational physicians will attract Medicare benefits only where the attendance relates to one or more of the following:

- (i) evaluation and assessment of a patient's rehabilitation requirements where the patient presents with an accepted medical condition(s) which may be affected by the consultant occupational physician's working environment or employability; or
- (ii) management of accepted medical condition(s) which may affect a patient's capacity for continued employment or return to employment following a non-compensable accident, injury or ill-health; or
- (iii) evaluation and opinion and/or management of a patient's medical condition(s) where causation may be related to acute or chronic exposures from scientifically accepted environmental hazards or toxins.

AN.0.34 Contact Lenses (Items 10801-10809)

Benefits are paid for consultations concerned with the prescription and fitting of contact lenses only if patients fall into specified categories (ie patients with certain conditions). The classes of patients eligible for benefits for contact lens consultations are described in items 10801 to 10809.

Benefits are not payable for item 10809 in circumstances where patients want contact lenses only for:

- (a) reasons of appearance (because they do not want to wear spectacles);
- (b) sporting purposes;

- (c) work purposes; or
- (d) psychological reasons (because they cannot cope with spectacles).

Benefits are payable for an initial referred consultation rendered in association with the fitting and prescribing of the lenses. Subsequent follow-up attendances attract benefits on a consultation basis.

AN.0.35 Refitting of Contact Lenses (Item 10816)

This item covers the refitting of contact lenses where this becomes necessary within the thirty-six month time limit where the patient requires a change in contact lens material or basic lens parameters, other than simple power change, because of a structure or functional change in the eye or an allergic response.

AN.0.36 Health Assessments (Items 701, 703, 705, 707)

There are four time-based health assessment items, consisting of brief, standard, long and prolonged consultations.

Brief Health Assessment (MBS Item 701)

A brief health assessment is used to undertake simple health assessments. The health assessment should take no more than 30 minutes to complete.

Standard Health Assessment (MBS Item 703)

A standard health assessment is used for straightforward assessments where the patient does not present with complex health issues but may require more attention than can be provided in a brief assessment. The assessment lasts more than 30 minutes but takes less than 45 minutes.

Long Health Assessment (MBS Item 705)

A long health assessment is used for an extensive assessment, where the patient has a range of health issues that require more in-depth consideration, and longer-term strategies for managing the patient's health may be necessary. The assessment lasts at least 45 minutes but less than 60 minutes.

Prolonged Health Assessment (MBS Item 707)

A prolonged health assessment is used for a complex assessment of a patient with significant, long-term health needs that need to be managed through a comprehensive preventive health care plan. The assessment takes 60 minutes or more to complete.

General practitioners may select one of the MBS health assessment items to provide a health assessment service to a member of any of the target groups listed in the table below. The health assessment item that is selected will depend on the time taken to complete the health assessment service. This is determined by the complexity of the patient's presentation and the specific requirements that have been established for each target group eligible for health assessments.

MBS Items 701, 703, 705 and 707 may be used to undertake a health assessment for the following target groups:

Target Group	Frequency of Service
A type 2 diabetes risk evaluation for people aged 40-49 years (inclusive) with a high risk of developing type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool	Once every three years to an eligible patient
A health assessment for people aged 45-49 years (inclusive) who are at risk of developing chronic disease	Once only to an eligible patient

A health assessment for people aged 75 years and older	Provided annually to an eligible patient
A comprehensive medical assessment for permanent residents of residential aged care facilities	Provided annually to an eligible patient
A health assessment for people with an intellectual disability	Provided annually to an eligible patient
A health assessment for refugees and other humanitarian entrants	Once only to an eligible patient
A health assessment for former serving members of the Australian Defence Force	Once only to an eligible patient

A health assessment means the assessment of a patient's health and physical, psychological and social function and consideration of whether preventive health care and education should be offered to the patient, to improve that patient's health and physical, psychological and social function.

Health assessments are not available to people who are in-patients of a hospital or care recipients in a residential aged care facility (with the exception of a comprehensive medical assessment provided to a permanent resident of a residential aged care facility).

Before a health assessment is commenced, the patient (and/or the patient's parent(s), carer or representative, as appropriate) must be given an explanation of the health assessment process and its likely benefits. The patient must be asked whether they consent to the health assessment being performed. In cases where the patient is not capable of giving consent, consent must be given by the patient's parent(s), carer or representative. Consent to the health assessment must be noted in the patient's records.

A health assessment must include the following elements:

- a. information collection, including taking a patient history and undertaking or arranging examinations and investigations as required;
- b. making an overall assessment of the patient;
- c. recommending appropriate interventions;
- d. providing advice and information to the patient;
- e. keeping a record of the health assessment, and offering the patient a written report about the health assessment, with recommendations about matters covered by the health assessment; and
- f. offering the patient's carer (if any, and if the general practitioner considers it appropriate and the patient agrees) a copy of the report or extracts of the report relevant to the carer.

A health assessment may only be claimed by a general practitioner.

A health assessment should generally be undertaken by the patient's 'usual doctor'. For the purpose of the health assessment items, 'usual doctor' means the general practitioner, or a general practitioner working in the medical practice, which has provided the majority of primary health care to the patient over the previous twelve months and/or will be providing the majority of care to the patient over the next twelve months.

A health assessment should not take the form of a health screening service.

A copy of the Health Assessment must be retained for a period of 2 years after the date of service.

MBS health assessment items 701, 703, 705, 707 must be provided by a general practitioner personally attending upon a patient. Suitably qualified health professionals, such as practice nurses or Aboriginal and Torres Strait Islander health practitioners, employed and/or otherwise engaged by a general practice or health service, may assist general practitioners in performing health assessments. Such assistance must be provided in accordance with accepted medical practice and under the supervision of the general practitioner. This may include activities associated with:

- information collection; and

- providing patients with information about recommended interventions at the direction of the general practitioner.

The general practitioner should be satisfied that the assisting health professional has the necessary skills, expertise and training to collect the information required for the health assessment.

General practitioners should not conduct a separate consultation for another health-related issue in conjunction with a health assessment unless it is clinically necessary (ie. the patient has an acute problem that needs to be managed separately from the assessment). The only exception is the comprehensive medical assessment, where, if this health assessment is undertaken during the course of a consultation for another purpose, the health assessment item and the relevant item for the other consultation may both be claimed.

Items 701, 703, 705 and 707 do not apply for services that are provided by any other Commonwealth or State funded services. However, where an exemption under subsection 19(2) of the *Health Insurance Act 1973* has been granted to an Aboriginal Community Controlled Health Service or State/Territory Government health clinic, items 701, 703, 705 and 707 can be claimed for services provided by general practitioners salaried by or contracted to, the Service or health clinic. All other requirements of the items must be met.

Item 10990 or 10991 (bulk billing incentives) can be claimed in conjunction with any health assessment, provided the conditions of item 10990 and 10991 are satisfied.

AN.0.37 Health Assessment provided as a type 2 diabetes risk evaluation for people aged 40-49 years with a high risk of developing type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool

Items 701, 703, 705 and 707 may be used to undertake a type 2 diabetes risk evaluation for people aged 40-49 years (inclusive) with a high risk of developing type 2 diabetes, as determined by the Australian Type 2 Diabetes Risk Assessment Tool.

The aim of this health assessment is to review the factors underlying the 'high risk' score identified by the Australian Type 2 Diabetes Risk Assessment Tool to instigate early interventions to assist with the prevention of type 2 diabetes.

The Australian Type 2 Diabetes Risk Assessment Tool has been developed to provide a basis for both health professionals and health consumers to assess the risk of type 2 diabetes. It consists of a short list of questions which, when completed, provides a guide to a patient's current level of risk of developing type 2 diabetes.

The Australian Type 2 Diabetes Risk Assessment Tool can be obtained from [the Department's prevention of diabetes web page](#).

Clinical risk factors that the general practitioner must consider when providing this health assessment include:

- (a) lifestyle, such as smoking, physical inactivity and poor nutrition;
- (b) biomedical risk factors, such as high blood pressure, impaired glucose metabolism and excess weight;
- (c) any relevant recent diagnostic test results; and
- (d) a family history of chronic disease.

The health assessment must include the following:

- (a) assessing a patient's high risk score, as determined by the Australian Type 2 Diabetes Risk Assessment Tool which has been completed by the patient within a period of 3 months prior to undertaking the health assessment;
- (b) updating the patient's history and undertaking physical examinations and clinical investigations;
- (c) making an overall assessment of the patient's risk factors and of the results of examinations and investigations;

(d) initiating interventions, if appropriate, including referrals and follow-up services relating to the management of any risk factors identified; and

(e) giving the patient advice and information, including strategies to achieve lifestyle and behaviour changes if appropriate.

The completion of the Australian Type 2 Diabetes Risk Assessment Tool is mandatory for patient access to this health assessment. The tool can be completed either by the patient or with the assistance of a health professional or practice staff.

A health assessment for a type 2 diabetes risk evaluation for people aged 40-49 years with a high risk of developing type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool may only be claimed once every three years by an eligible patient.

AN.0.38 Health Assessment provided for people aged 45-49 years who are at risk of developing chronic disease

Items 701, 703, 705 and 707 may be used to undertake a health assessment for people aged 45-49 years (inclusive) who are at risk of developing chronic disease.

For the purposes of this health assessment, a patient is at risk of developing a chronic disease if, in the clinical judgement of the attending general practitioner, a specific risk factor for chronic disease is identified.

Risk factors that the general practitioner can consider include, but are not limited to:

- (a) lifestyle risk factors, such as smoking, physical inactivity, poor nutrition or alcohol use;
- (b) biomedical risk factors, such as high cholesterol, high blood pressure, impaired glucose metabolism or excess weight; or
- (c) family history of a chronic disease.

A chronic disease or condition is one that has been or is likely to be present for at least six months, including but not limited to asthma, cancer, cardiovascular illness, diabetes mellitus, mental health conditions, arthritis and musculoskeletal conditions.

If, after receiving this health assessment, a patient is identified as having a high risk of type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool, the general practitioner may refer that person to a subsidised lifestyle modification program, along with other possible strategies to improve the health status of the patient (further information is available at <https://www.health.gov.au/resources/apps-and-tools/the-australian-type-2-diabetes-risk-assessment-tool-ausdrisk>).

The Australian Type 2 Diabetes Risk Assessment Tool can be obtained from <https://www.health.gov.au/resources/apps-and-tools/the-australian-type-2-diabetes-risk-assessment-tool-ausdrisk>

A health assessment for people aged 45-49 years who are at risk of developing chronic disease may only be claimed once by an eligible patient.

AN.0.39 Health Assessment provided for people aged 75 years and older

Items 701, 703, 705 and 707 may be used to undertake a health assessment for people aged 75 years and older.

A health assessment for people aged 75 years and older is an assessment of a patient's health and physical, psychological and social function for the purpose of initiating preventive health care and/or medical interventions as appropriate.

This health assessment must include:

- (a) measurement of the patient's blood pressure, pulse rate and rhythm;
- (b) an assessment of the patient's medication;
- (c) an assessment of the patient's continence;
- (d) an assessment of the patient's immunisation status for influenza, tetanus and pneumococcus;
- (e) an assessment of the patient's physical function, including the patient's activities of daily living, and whether or not the patient has had a fall in the last 3 months;
- (f) an assessment of the patient's psychological function, including the patient's cognition and mood; and
- (g) an assessment of the patient's social function, including the availability and adequacy of paid and unpaid help, and whether the patient is responsible for caring for another person.
- (h) A health assessment for people aged 75 years and older may be claimed once every twelve months by an eligible patient.

AN.0.40 Health Assessment provided as a comprehensive medical assessment for residents of residential aged care facilities

Items 701, 703, 705 and 707 may be used to undertake a comprehensive medical assessment of a resident of a residential aged care facility

This health assessment requires assessment of the resident's health and physical and psychological function, and must include:

- (a) making a written summary of the comprehensive medical assessment;
- (b) developing a list of diagnoses and medical problems based on the medical history and examination;
- (c) providing a copy of the summary to the residential aged care facility; and
- (d) offering the resident a copy of the summary.

A residential aged care facility is a facility in which residential care services, as defined in the *Aged Care Act 1997*, are provided. This includes facilities that were formerly known as nursing homes and hostels. A person is a resident of a residential aged care facility if the person has been admitted as a permanent resident of that facility.

This health assessment is available to new residents on admission into a residential aged care facility. It is recommended that new residents should receive the health assessment as soon as possible after admission, preferably within six weeks following admission into a residential aged care facility.

A health assessment for the purpose of a comprehensive medical assessment of a resident of a residential aged care facility may be claimed by an eligible patient:

- (a) on admission to a residential aged care facility, provided that a comprehensive medical assessment has not already been provided in another residential aged care facility within the previous 12 months; and
- (b) at 12 month intervals thereafter.

AN.0.41 Health Assessment provided for people with an intellectual disability

Items 701, 703, 705 and 707 may be used to undertake a health assessment for people with an intellectual disability.

A person is considered to have an intellectual disability if they have significantly sub-average general intellectual functioning (two standard deviations below the average intelligence quotient [IQ]) and would benefit from assistance with daily living activities. Where general practitioners wish to confirm intellectual disability and a

patient's need for assistance with activities of daily living, they may seek verification from a paediatrician registered to practice in Australia or from a government-provided or funded disability service that has assessed the patient's intellectual function.

The health assessment provides a structured clinical framework for general practitioners to comprehensively assess the physical, psychological and social function of patients with an intellectual disability and to identify any medical intervention and preventive health care required. The health assessment must include the following items as relevant to the patient or the patient's representative:

- (a) Check dental health (including dentition);
- (b) Conduct aural examination (arrange formal audiometry if audiometry has not been conducted within 5 years);
- (c) Assess ocular health (arrange review by an ophthalmologist or optometrist if a comprehensive eye examination has not been conducted within 5 years);
- (d) Assess nutritional status (including weight and height measurements) and a review of growth and development;
- (e) Assess bowel and bladder function (particularly for incontinence or chronic constipation);
- (f) Assess medications (including non-prescription medicines taken by the patient, prescriptions from other doctors, medications prescribed but not taken, interactions, side effects and review of indications);
 - Advise carers of the common side effects and interactions.
 - Consider the need for a formal medication review.
- (g) Check immunisation status, including influenza, tetanus, hepatitis A and B, Measles, Mumps and Rubella (MMR) and pneumococcal vaccinations;
- (h) Check exercise opportunities (with the aim of moderate exercise for at least 30 minutes per day);
- (i) Check whether the support provided for activities of daily living adequately and appropriately meets the patient's needs, and consider formal review if required;
- (j) Consider the need for breast examination, mammography, cervical screening, testicular examination, lipid measurement and prostate assessment as for the general population;
- (k) Check for dysphagia and gastro-oesophageal disease (especially for patients with cerebral palsy), and arrange for investigation or treatment as required;
- (l) Assess risk factors for osteoporosis (including diet, exercise, Vitamin D deficiency, hormonal status, family history, medication fracture history) and arrange for investigation or treatment as required;
- (m) For patients diagnosed with epilepsy, review of seizure control (including anticonvulsant drugs) and consider referral to a neurologist at appropriate intervals;
- (n) Check for thyroid disease at least every two years (or yearly for patients with Down syndrome);
- (o) For patients without a definitive aetiological diagnosis, consider referral to a genetic clinic every 5 years;
- (p) Assess or review treatment for co-morbid mental health issues;
- (q) Consider timing of puberty and management of sexual development, sexual activity and reproductive health; and
- (r) Consider whether there are any signs of physical, psychological or sexual abuse.

A health assessment for people with an intellectual disability may be claimed once every twelve months by an eligible patient.

AN.0.42 General Practitioner Health Assessment provided for refugees and other humanitarian entrants

Items 701, 703, 705 and 707 may be used to undertake a health assessment for refugees and other humanitarian entrants.

The purpose of this health assessment is to introduce new refugees and other humanitarian entrants to the Australian primary health care system, as soon as possible (within twelve months) of their arrival in Australia.

The health assessment applies to humanitarian entrants who reside in Australia and are eligible to access Medicare services, including Refugees, Special Humanitarian Program, Temporary Humanitarian and Protection Program entrants with the following relevant visas granted under the *Migration Act 1958*:

Offshore Refugee Category including:

- (a) Subclass 200 (Refugee) visa;
- (b) Subclass 201 (In-Country Special Humanitarian) visa;
- (c) Subclass 203 (Emergency Rescue) visa; and
- (d) Subclass 204 (Woman at Risk) visa.

Offshore Global Special Humanitarian:

- (e) Subclass 202 (Global Special Humanitarian) visa.

Offshore - Temporary Humanitarian Visas (THV) including:

- (f) Subclass 070 Bridging (Removal Pending) visa;
- (g) Subclass 786 (Temporary (Humanitarian Concern)) visa; and
- (h) Subclass 790 (Safe Haven Enterprise) visa.

Onshore Protection Program including:

- (i) Subclass 866 (Protection) visa.

Patients are required to provide their general practitioner (other than a specialist or consultant physician) with proof of their visa status and date of arrival in Australia. Alternatively, general practitioners may telephone Services Australia on 132011 to check the patient's eligibility. The patient must be present with the general practitioner at the time that Services Australia is contacted.

The general practitioner and the patient can access translator services, through the Commonwealth Government's Translating and Interpreting Service (TIS) and the Doctors Priority Line. To be eligible for the fee-free TIS and Doctors Priority Line, the general practitioner must be in a general practice providing Medicare services to patients who are permanent residents in Australia and do not speak English.

A health assessment for refugees and other humanitarian entrants may only be claimed once by an eligible patient.

AN.0.43 Health Assessment for Aboriginal and Torres Strait Islander People (MBS Item 715)

This health assessment is available to all people of Aboriginal and Torres Strait Islander descent and should be used for health assessments for the following age categories:

- An Aboriginal or Torres Strait Islander child who is less than 15 years.
- An Aboriginal or Torres Strait Islander person who is aged between 15 years and 54 years.

· An Aboriginal or Torres Strait Islander older person who is aged 55 years and over.

A health assessment means the assessment of a patient's health and physical, psychological and social function and consideration of whether preventive health care and education should be offered to the patient, to improve that patient's health and physical, psychological and social function.

MBS item 715 must include the following elements:

- (a) information collection, including taking a patient history and undertaking examinations and investigations as required;
- (b) making an overall assessment of the patient;
- (c) recommending appropriate interventions;
- (d) providing advice and information to the patient; and
- (e) keeping a record of the health assessment, and offering the patient, and/or patient's carer, a written report about the health assessment with recommendations about matters covered by the health assessment; and
- (f) offering the patient's carer (if any, and if the general practitioner considers it appropriate and the patient agrees) a copy of the report or extracts of the report relevant to the carer.

If, after receiving this health assessment, a patient who is aged fifteen years and over but under the age of 55 years, is identified as having a high risk of developing type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool, the general practitioner may refer that person to a subsidised lifestyle modification program, along with other possible strategies to improve the health status of the patient.

The Australian Type 2 Diabetes Risk Assessment Tool can be obtained from <https://www.health.gov.au/resources/apps-and-tools/the-australian-type-2-diabetes-risk-assessment-tool-ausdrisk>.

A health assessment may only be claimed by a general practitioner.

A health assessment should generally be undertaken by the patient's 'usual doctor'. For the purpose of the health assessment, "usual doctor" means the general practitioner, or a general practitioner working in the medical practice, which has provided the majority of primary health care to the patient over the previous twelve months and/or will be providing the majority of care to the patient over the next twelve months.

The Health Assessment for Aboriginal and Torres Strait Islander People is not available to people who are in-patients of a hospital or care recipients in a residential aged care facility.

A health assessment should not take the form of a health screening service (see General Explanatory Notes G.13.1).

MBS health assessment item 715 must be provided by a general practitioner personally attending upon a patient. Suitably qualified health professionals, such as practice nurses, Aboriginal health workers or Aboriginal and Torres Strait Islander health practitioners employed and/or otherwise engaged by a general practice or health service, may assist general practitioners in performing this health assessment. Such assistance must be provided in accordance with accepted medical practice and under the supervision of the general practitioner. This may include activities associated with:

- information collection; and
- providing patients with information about recommended interventions at the direction of the general practitioner.

The general practitioner should be satisfied that the assisting health professional has the necessary skills, expertise and training to collect the information required for the health assessment.

General practitioners should not conduct a separate consultation in conjunction with a health assessment unless it is clinically necessary (ie. the patient has an acute problem that needs to be managed separately from the assessment).

Item 715 does not apply for services that are provided by any other Commonwealth or State funded services. However, where an exemption under subsection 19(2) of the *Health Insurance Act 1973* has been granted to an Aboriginal Community Controlled Health Service or State/Territory Government health clinic, item 715 can be claimed for services provided by general practitioners salaried by or contracted to, the Service or health clinic. All requirements of the item must be met.

Item 10990 or 10991 (bulk billing incentives) can be claimed in conjunction with any health assessment provided to an Aboriginal and Torres Strait Islander person, provided the conditions of item 10990 and 10991 are satisfied.

The Health Assessment for Aboriginal and Torres Strait Islander People may be provided once every 9 months.

AN.0.44 A Health Assessment for an Aboriginal and Torres Strait Islander child (less than 15 years of age)

An Aboriginal and Torres Strait Islander child health assessment must include:

- a. a personal attendance by a general practitioner;
- b. taking the patient's medical history, including the following:
 - i. mother's pregnancy history;
 - ii. birth and neo-natal history;
 - iii. breastfeeding history;
 - iv. weaning, food access and dietary history;
 - v. physical activity;
 - vi. previous presentations, hospital admissions and medication usage;
 - vii. relevant family medical history;
 - viii. immunisation status;
 - ix. vision and hearing (including neonatal hearing screening);
 - x. development (including achievement of age appropriate milestones);
 - xi. family relationships, social circumstances and whether the person is cared for by another person;
 - xii. exposure to environmental factors (including tobacco smoke);
 - xiii. environmental and living conditions;
 - xiv. educational progress;
 - xv. stressful life events;
 - xvi. mood (including incidence of depression and risk of self-harm);
 - xvii. substance use;
 - xviii. sexual and reproductive health; and
 - xix. dental hygiene (including access to dental services).
- c. examination of the patient, including the following:
 - i. measurement of height and weight to calculate body mass index and position on the growth curve;
 - ii. newborn baby check (if not previously completed);
 - iii. vision (including red reflex in a newborn);
 - iv. ear examination (including otoscopy);
 - v. oral examination (including gums and dentition);
 - vi. trachoma check, if indicated;
 - vii. skin examination, if indicated;
 - viii. respiratory examination, if indicated;
 - ix. cardiac auscultation, if indicated;
 - x. development assessment, if indicated, to determine whether age appropriate milestones have been achieved;
 - xi. assessment of parent and child interaction, if indicated; and
 - xii. other examinations in accordance with national or regional guidelines or specific regional needs, or as indicated by a previous child health assessment.
- d. undertaking or arranging any required investigation, considering the need for the following tests, in particular:

- i. haemoglobin testing for those at a high risk of anaemia; and
 - ii. audiometry, if required, especially for those of school age
- e. assessing the patient using the information gained in the child health check; and
- f. making or arranging any necessary interventions and referrals, and documenting a simple strategy for the good health of the patient.

AN.0.45 A health assessment for an Aboriginal and Torres Strait Islander adult (aged between 15 years and 54 years)

An Aboriginal and Torres Strait Islander adult health assessment must include:

- a. a personal attendance by a general practitioner;
- b. taking the patient's medical history, including the following:
 - i. current health problems and risk factors;
 - ii. relevant family medical history;
 - iii. medication usage (including medication obtained without prescription or from other doctors);
 - iv. immunisation status, by reference to the appropriate current age and sex immunisation schedule;
 - v. sexual and reproductive health;
 - vi. physical activity, nutrition and alcohol, tobacco or other substance use;
 - vii. hearing loss;
 - viii. mood (including incidence of depression and risk of self-harm); and
 - ix. family relationships and whether the patient is a carer, or is cared for by another person;
 - x. vision
- c. examination of the patient, including the following:
 - i. measurement of the patient's blood pressure, pulse rate and rhythm;
 - ii. measurement of height and weight to calculate body mass index and, if indicated, measurement of waist circumference for central obesity;
 - iii. oral examination (including gums and dentition);
 - iv. ear and hearing examination (including otoscopy and, if indicated, a whisper test); and
 - v. urinalysis (by dipstick) for proteinuria;
 - vi. eye examination; and
- d. undertaking or arranging any required investigation, considering the need for the following tests, in particular, (in accordance with national or regional guidelines or specific regional needs):
 - i. fasting blood sugar and lipids (by laboratory based test on venous sample) or, if necessary, random blood glucose levels;
 - ii. cervical screening;
 - iii. examination for sexually transmitted infection (by urine or endocervical swab for chlamydia and gonorrhoea, especially for those aged from 15 to 35 years); and
 - iv. mammography, if eligible (by scheduling appointments with visiting services or facilitating direct referral).
- e. assessing the patient using the information gained in the adult health assessment; and
- f. making or arranging any necessary interventions and referrals, and documenting a simple strategy for the good health of the patient.

An Aboriginal and Torres Strait Islander Older Person's health assessment must also include:

- a. keeping a record of the health assessment; and
- b. offering the patient a written report on the health assessment, with recommendations on matters covered by the health assessment;

AN.0.46 A health assessment for an Aboriginal and Torres Strait Islander older person (aged 55 years and over)

An Aboriginal and Torres Strait Islander Older Person's health assessment must include:

- a. a personal attendance by the general practitioner;
- b. measurement of the patient's blood pressure, pulse rate and rhythm;

- c. an assessment of the patient's medication;
- d. an assessment of the patient's continence;
- e. an assessment of the patient's immunisation status for influenza, tetanus and pneumococcus;
- f. an assessment of the patient's physical functions, including the patient's activities of daily living and whether or not the patient has had a fall in the last 3months;
- g. an assessment of the patient's psychological function, including the patient's cognition and mood;
- h. an assessment of the patient's social function, including:
 - i. the availability and adequacy of paid, and unpaid, help;
 - ii. whether the patient is responsible for caring for another person;
- i. an eye examination

An Aboriginal and Torres Strait Islander Older Person's health assessment must also include:

- a. keeping a record of the health assessment; and
- b. offering the patient a written report on the health assessment, with
- c. recommendations on matters covered by the health assessment; and
- d. offering the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees) a copy of the report or extracts of the report relevant to the carer.

AN.0.47 Chronic Disease Management Items (Items 721 to 732)

<i>Description</i>	<i>Item No</i>	<i>Minimum claiming period*</i>
Preparation of a GP Management Plan (GPMP)	721	12 months
Coordination of Team Care Arrangements (TCAs)	723	12 months
Contribution to a Multidisciplinary Care Plan, or to a Review of a Multidisciplinary Care Plan, for a patient who is not a care recipient in a residential aged care facility	729	3 months
Contribution to a Multidisciplinary Care Plan, or to a review of a multidisciplinary care plan, for a resident in an aged care facility	731	3 months
Review of a GP Management Plan or Coordination of a Review of Team Care Arrangements	732	3 months

* CDM services may be provided more frequently in the exceptional circumstances defined below.

Exceptional circumstances exist for a patient if there has been a significant change in the patient's clinical condition or care requirements that necessitates the performance of the service for the patient.

Patients with a mental health condition being treated under the *Better Access to Psychiatrists, Psychologists and General Practitioners through the Medicare Benefits Schedule (MBS)* (Better Access) initiative or under an Eating Disorder Treatment and Management Plan (EDTMP) are also eligible to receive a TCA service. However, the general practitioner should consider whether it would be more appropriate to review any existing TCA rather than develop a new one specifically for the patient's mental health condition.

Regulatory requirements

Items 721, 723, 729, 731 and 732 provide rebates to manage chronic or terminal medical conditions by preparing, coordinating, reviewing or contributing to chronic disease management (CDM) plans. They apply for a patient who suffers from at least one medical condition that has been present (or is likely to be present) for at least six months or is terminal.

Items 723 and 732 also provide rebates to manage mental health conditions by coordinating the development or review of TCAs. They apply for a patient who is being treated under the Better Access initiative or has an EDTMP.

Treated under the Better Access initiative means a patient has been referred for a:

- a focussed psychological strategies service delivered by a GP, OMP, psychologist, social worker or occupational therapist, or
- psychological therapy service delivered by a clinical psychologist

Please note: TCAs do not constitute a referral. A referral is still required to access allied mental health services.

Restriction of Co-claiming of Chronic Disease and General Consultation Items

Co-claiming of consultation items 3, 4, 23, 24, 36, 37, 44, 47, 52, 53, 54, 57, 58, 59, 60, 65, 123, 124, 151, 165, 179, 181, 185, 187, 189, 191, 203, 206, 301, 303, 585, 588, 591, 594, 599, 600, 733, 737, 741, 745, 761, 763, 766, 769, 2197, 2198, 5000, 5003, 5020, 5023, 5040, 5043, 5060, 5063, 5071, 5076, 5200, 5203, 5207, 5208, 5209, 5220, 5223, 5227, 5228, 5261, 91790, 91792, 91794, 91800, 91801, 91802, 91803, 91804, 91805, 91806, 91807, 91808, 91890, 91891, 91892, 91893, 91900, 91903, 91906, 91910, 91913, 91916, 91920, 91923, 91926, 92210 and 92211 with chronic disease management items 721, 723, or 732 is not permitted for the same patient, on the same day.

Patient eligibility

In addition to the eligibility requirements listed in the individual CDM item descriptors, the General Medical Services Table (GMST) mandates the following eligibility criteria:

CDM items 721, 723 and 732

These are:

- available to:
 - i. patients in the community; and
 - ii. private in-patients of a hospital (including private in-patients who are residents of aged care facilities) being discharged from hospital.
- not available to:
 - i. public in-patients of a hospital; or
 - ii. care recipients in a residential aged care facility.

CDM item 729

This is:

- available to:
 - i. patients in the community;
 - ii. both private and public in-patients being discharged from hospital.
- not available to care recipients in a residential aged care facility.

CDM item 731

This item is available to care recipients in a residential aged care facility only.

Item 721

A comprehensive written plan must be prepared describing:

- a. the patient's health care needs, health problems and relevant conditions;
- b. management goals with which the patient agrees;
- c. actions to be taken by the patient;
- d. treatment and services the patient is likely to need;

- e. arrangements for providing this treatment and these services; and
- f. arrangements to review the plan by a date specified in the plan.

In preparing the plan, the provider must:

- a. explain to the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees) the steps involved in preparing the plan; and
- b. record the plan; and
- c. record the patient's agreement to the preparation of the plan; and
- d. offer a copy of the plan to the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees); and
- e. add a copy of the plan to the patient's medical records.

A copy of the written plan must be retained for 2 years.

Item 723

When coordinating the development of Team Care Arrangements (TCAs), the general practitioner must:

- a. consult with at least two collaborating providers, each of whom will provide a different kind of treatment or service to the patient, and one of whom may be another medical practitioner, when making arrangements for the multidisciplinary care of the patient; and
- b. prepare a document that describes:
 - i. treatment and service goals for the patient;
 - ii. treatment and services that collaborating providers will provide to the patient; and
 - iii. actions to be taken by the patient;
 - iv. arrangements to review (i), (ii) and (iii) by a date specified in the document; and
- c. explain the steps involved in the development of the arrangements to the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees);
- d. discuss with the patient the collaborating providers who will contribute to the development of the TCAs and provide treatment and services to the patient under those arrangements; and
- e. record the patient's agreement to the development of TCAs;
- f. give copies of the relevant parts of the document to the collaborating providers;
- g. offer a copy of the document to the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees); and
- h. add a copy of the document to the patient's medical records.

The document described above must be retained for 2 years.

One of the minimum two service providers collaborating with the GP can be another medical practitioner. The patient's informal or family carer can be included in the collaborative process but does not count towards the minimum of three collaborating providers.

Item 729

A multidisciplinary care plan means a written plan that:

- a. is prepared for a patient by:
 - i. a general practitioner in consultation with two other collaborating providers, each of whom provides a different kind of treatment or service to the patient, and one of whom may be another medical practitioner; or
 - ii. a collaborating provider (other than a general practitioner) in consultation with at least two other collaborating providers, each of whom provides a different kind of treatment or services to the patient; and
- b. describes, at least, treatment and services to be provided to the patient by the collaborating providers.

When contributing to a multidisciplinary care plan or to a review of the care plan, the general practitioner must:

- a. prepare part of the plan or amendments to the plan and add a copy to the patient's medical records; or
- b. give advice to a person who prepares or reviews the plan and record in writing, on the patient's medical records, any advice provided to such a person.

A copy of the written plan must be retained for 2 years.

Item 731

A multidisciplinary care plan in a Residential Aged Care Facility (RACF) means a written plan that:

- a. is prepared for a patient by a collaborating provider (other than a general practitioner, e.g. a RACF), in consultation with at least two other collaborating providers, each of whom provides a different kind of treatment or services to the patient; and
- b. describes, at least, treatment and services to be provided to the patient by the collaborating providers.

When contributing to a multidisciplinary care plan or to a review of the care plan, the general practitioner must:

- a. prepare part of the plan or amendments to the plan and add a copy to the patient's medical records; or
- b. give advice to a person who prepares or reviews the plan and record in writing, on the patient's medical records, any advice provided to such a person.

Item 731 can also be used for contribution to a multidisciplinary care plan prepared for a resident by another provider before the resident is discharged from a hospital or an approved day-hospital facility, or to a review of such a plan prepared by another provider (not being a service associated with a service to which items 735 to 758 apply).

Item 732

An "associated general practitioner" is a general practitioner who, if not engaged in the same general practice as the general practitioner mentioned in that item, performs the service mentioned in the item at the request of the patient (or the patient's guardian).

When reviewing a GP Management Plan, the general practitioner must:

- a. explain to the patient and the patient's carer (if any, and if the general practitioner considers it appropriate and the patient agrees) the steps involved in the review;
- b. record the patient's agreement to the review of the plan;
- c. review all the matters set out in the relevant plan;
- d. make any required amendments to the patient's plan;
- e. offer a copy of the amended document to the patient and the patient's carer (if any, and if the general practitioner considers it appropriate and the patient agrees);
- f. add a copy of the amended document to the patient's records; and
- g. provide for further review of the amended plan by a date specified in the plan.

When coordinating a review of Team Care Arrangements, a multidisciplinary community care plan or a multidisciplinary discharge care plan, the general practitioner must:

- a. explain the steps involved in the review to the patient and the patient's carer (if any, and if the general practitioner considers it appropriate and the patient agrees);
- b. record the patient's agreement to the review of the TCAs or plan;
- c. consult with at least two health or care providers (each of whom provides a service or treatment to the patient that is different from each other and different from the service or treatment provided by the general practitioner who is coordinating the TCAs or plan) to review all the matters set out in the relevant plan;
- d. make any required amendments to the patient's plan;
- e. offer a copy of the amended document to the patient and the patient's carer (if any, and if the general practitioner considers it appropriate and the patient agrees);
- f. provide for further review of the amended plan by a date specified in the plan;
- g. give copies of the relevant parts of the amended plan to the collaborating providers; and
- h. add a copy of the amended document to the patient's records.

A copy of the amended plan must be retained for 2 years.

Item 732 can also be used to COORDINATE A REVIEW OF a Multidisciplinary Community Care Plan (former item 720) or to COORDINATE REVIEW OF A Discharge Care Plan (former item 722), where these services were coordinated or prepared by that general practitioner (or an associated general practitioner), and not being a service associated with a service to which items 735-758 apply.

Claiming of benefits

Each service to which item 732 applies (i.e. Review of a GP Management Plan and Review of Team Care Arrangements) may be claimed once in a three-month period, except where there are exceptional circumstances arising from a significant change in the patient's clinical condition or care circumstances that necessitates earlier performance of the service for the patient.

Where a service is provided in exceptional circumstances, the patient's invoice or Medicare voucher should be annotated to indicate the reason why the service was required earlier than the minimum time interval for the relevant item. Payment can then be made.

Item 732 can be claimed twice on the same day - for example for reviewing a GP Management Plan and another for reviewing Team Care Arrangements (TCAs) provided both are delivered on the same day as per the MBS item descriptors and explanatory notes.

Medicare requirements when item 732 is claimed twice on the same day

If a GPMP and TCAs are both reviewed on the same date and item 732 is to be claimed twice on the same day, both electronic claims and manual claims need to indicate they were rendered at different times:

· Non electronic Medicare claiming of items 732 on the same date

The time that each item 732 commenced should be indicated next to each item

· Electronic Medicare claiming of item 732 on the same date

Medicare Easyclaim: use the 'ItemOverrideCde' set to 'AP', which flags the item as *not duplicate services*

Medicare Online/ECLIPSE: set the 'DuplicateServiceOverrideIND' to 'Y', which flags the item as *not duplicate*

Items 721, 723 and 732

The GP Management Plan items (721 and 732) and the Team Care Arrangement items (723 and 732) can not be claimed by general practitioners when they are a recognised specialist in the specialty of palliative medicine and treating a referred palliative care patient under items 3005-3093. The referring practitioner is able to provide the CDM services.

Additional information

Items 721-732 should generally be undertaken by the patient's **usual general practitioner**. The patient's "usual GP" means the GP, or a GP working in the medical practice, who has provided the majority of care to the patient over the previous twelve months and/or will be providing the majority of GP services to the patient over the next twelve months. The term "usual GP" would not generally apply to a practice that provides only one specific CDM service.

A practice nurse, Aboriginal and Torres Strait Islander health practitioner, Aboriginal health worker or other health professional may assist a GP with items 721, 723, and 732 (e.g. in patient assessment, identification of patient needs and making arrangements for services). However, the GP must meet all regulatory requirements, review and confirm all assessments and see the patient.

Patients being managed under the chronic disease management items may be eligible for:

- individual allied health services (items 10950 to 10970); and/or
- group allied health services (items 81100 to 81125).

More information on eligibility requirements can be found in the explanatory note for individual allied health services and group allied health services.

Further information is also available for providers from Services Australia provider inquiry line on 132 150.

Services Australia has published the following guidelines to assist medical practitioners: Chronic disease [GP Management Plans and Team Care Arrangements](#).

AN.0.48 Medicare Dental Items For Patients With Chronic Conditions And Complex Care Needs - Services Provided By A Dental Practitioner On Referral From A GP [Items 85011-87777] Closure of Medicare Dental Items 85011-87777

The Medicare Chronic Disease Dental Scheme closed on 30 November 2012. No Medicare benefits will be payable for any dental services provided under Medicare dental items 85011-87777 provided after this date. The cost of any future dental services will need to be met by the patient.

Further details regarding the closure are available at www.health.gov.au/dental.

AN.0.49 Multidisciplinary Case Conferences by General Practitioners - (Items 735 to 758)

Items 735 to 758 provide rebates for general practitioners to organise and coordinate, or participate in, multidisciplinary case conferences for patients in the community or patients being discharged into the community from hospital or people living in residential aged care facilities.

REGULATORY REQUIREMENTS

To organise and coordinate case conference items **735, 739 and 743**, the provider must:

- (a) explain to the patient the nature of a multidisciplinary case conference, and ask the patient for their agreement to the conference taking place; and
- (b) record the patient's agreement to the conference; and
- (c) record the day on which the conference was held, and the times at which the conference started and ended; and
- (d) record the names of the participants; and
- (e) offer the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees) a summary of the conference and provide this summary to other team members; and
- (f) discuss the outcomes of the conference with the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees); and
- (g) record all matters discussed and identified by the case conferencing team and put a copy of that record in the patient's medical records.

To participate in multidisciplinary case conference items **747, 750 and 758**, the provider must:

- (a) explain to the patient the nature of a multidisciplinary case conference, and ask the patient whether they agree to the general practitioner's participation in the conference; and
- (b) record the patient's agreement to the general practitioner's participation; and
- (c) record the day on which the conference was held, and the times at which the conference started and ended; and
- (d) record the names of the participants; and

(e) record all matters discussed and identified by the case conferencing team and put a copy of that record in the patient's medical records.

ADDITIONAL INFORMATION

Usual general practitioner

Items 735-758 should generally be undertaken by the patient's usual general practitioner. This is a general practitioner, or a general practitioner working in the medical practice, that has provided the majority of services to the patient over the previous 12 months and/or will be providing the majority of services to the patient over the coming 12 months.

Multidisciplinary case conference team members

Examples of persons who, for the purposes of care planning and case conferencing may be included in a multidisciplinary care team are allied health professionals such as, but not limited to: Aboriginal health care workers; asthma educators; audiologists; dental therapists; dentists; diabetes educators; dietitians; mental health workers; occupational therapists; optometrists; orthoptists; orthotists or prosthetists; pharmacists; physiotherapists; podiatrists; psychologists; registered nurses; social workers; speech pathologists.

A team may also include home and community service providers, or care organisers, such as: education providers; "meals on wheels" providers; personal care workers (workers who are paid to provide care services); probation officers.

The patient's informal or family carer may be included as a formal member of the team in addition to the minimum of three health or care providers. The patient and the informal or family carer do not count towards the minimum of three.

Discharge case conference

Organisation and coordination of a multidisciplinary discharge case conference (items 735, 739 and 743) may be provided for private in-patients being discharged into the community from hospital.

Further sources of information

Further information is also available for providers from Services Australia provider inquiry line on 132 150.

AN.0.50 Public Health Medicine - (Items 410 to 417)

Attendances by public health physicians will attract Medicare benefits under the new items only where the attendance relates to one or more of the following: -

- (i) management of a patient's vaccination requirements for accepted immunisation programs; or
- (ii) prevention or management of sexually transmitted disease; or
- (iii) prevention or management of disease due to environmental hazards or poisons; or
- (iv) prevention or management of exotic diseases; or
- (v) prevention or management of infection during outbreaks of infectious disease.

For more information on the content-based item structure used in this Group, see A.5 in the explanatory notes.

AN.0.51 Case Conferences by Consultant Physician - (Items 820 to 838, 6029 to 6034 and 6064 to 6075)

Items 820, 822, 823, 825, 826, 828, 6029, 6031, 6032, 6034, 6064, 6065, 6067, 6068, 6035, 6037, 6038, 6042, 6071, 6072, 6074 and 6075 apply to a community case conference (including a case conference conducted in a residential

aged care facility) organised to discuss one patient in detail and applies only to a service in relation to a patient who suffers from at least one medical condition that has been (or is likely to be) present for at least 6 months, or that is terminal, and has complex needs requiring care from a multidisciplinary team. Community case conference items ie 820, 822, 823, 825, 826 and 828 do not apply to an in-patient of a hospital.

For items 830, 832, 834, 835, 837 and 838, a discharge case conference is a case conference carried out in relation to a patient before the patient is discharged from a hospital. Items 830, 832, 834, 835, 837 and 838 are payable not more than once for each hospital admission.

The purpose of a case conference is to establish and coordinate the management of the care needs of the patient.

A case conference is a process by which a multidisciplinary team carries out the following activities:

- discusses a patient's history;
- identifies the patient's multidisciplinary care needs;
- identifies outcomes to be achieved by members of the case conference team giving care and service to the patient;
- identifies tasks that need to be undertaken to achieve these outcomes, and allocating those tasks to members of the case conference team; and
- assesses whether previously identified outcomes (if any) have been achieved.

For the purposes of items 820, 822, 823, 830, 832, 834, 6029, 6031, 6032, 6034, 6064, 6065, 6067 and 6068 (that is, where a consultant physician organises a case conference) a multidisciplinary team requires the involvement of a minimum of four formal care providers from different disciplines. The consultant physician is counted toward the minimum of four. Although they may attend the case conference, neither the patient nor their informal carer can be counted toward the minimum of four. One member may be another medical practitioner.

For the purposes of items 825, 826, 828, 835, 837, 838, 6035, 6037, 6038, 6042, 6071, 6072, 6074 and 6075 (that is, where a consultant physician participates in a case conference) a multidisciplinary team requires the involvement of a minimum of three formal care providers from different disciplines. The consultant physician is counted toward the minimum of three. Although they may attend the case conference, neither the patient nor their informal carer can be counted toward the minimum of three. One member may be another medical practitioner.

In addition to the consultant physician and one other medical practitioner, "formal care providers" include:

-allied health professionals, being: registered nurse, physiotherapist, occupational therapist, podiatrist, speech pathologist, pharmacist; dietician; psychologist; orthoptist; orthotist and prosthetist, optometrist; audiologist, social worker, Aboriginal and Torres Strait Islander health practitioner, Aboriginal health worker, mental health worker, asthma educator, diabetes educator, dental therapist, dentist; and

-community service providers being: personal care worker, home and community care service provider, meals on wheels provider, education provider and probation officer.

Organisation of a case conference

For items 820, 822, 823, 830, 832, 834, 6029, 6031, 6032, 6034, 6064, 6065, 6067 and 6068, organise and coordinate a community case conference means undertaking the following activities in relation to a case conference:

- (a) explaining to the patient or the patient's agent the nature of a case conference, and asking the patient or the patient's agent whether they agree to the case conference taking place; and
- (b) recording the patient's or agent's agreement to the case conference; and
- (c) recording the day on which the conference was held, and the times at which the conference started and ended; and

- (d) recording the names of the participants; and
- (e) putting a copy of that record in the patient's medical records; and
- (f) giving the patient or the patient's agent, and each other member of the team a summary of the conference; and
- (h) giving a copy of the summary of the conference to the patient's usual general practitioner; and
- (i) discussing the outcomes of the patient or the patient's agent.

Organisation of a discharge case conference (items 830, 832 and 834), may be provided for private in-patients only, and must be organised by the medical practitioner who is providing in-patient care.

Participation in a case conference

For items 825, 826, 828, 835, 837, 838, 6035, 6037, 6038, 6042, 6071, 6072, 6074, 6075. participation in a case conference must be at the request of the person who organises and coordinates the case conference and includes undertaking the following activities when participating in a case conference:

- (a) recording the day on which the conference was held, and the times at which the conference started and ended; and
- (b) recording the matters mentioned in **Organisation of a case conference** in so far as they relate to the medical practitioner's participation in the case conference, and putting a copy of that record in the patient's medical records.

General requirements

The case conference must be arranged in advance, within a time frame that allows for all the participants to attend. The minimum of three care providers for participating in a case conference or four care providers for organising a case conference must be present for the whole of the case conference. All participants must be in communication with each other throughout the conference, either face to face, by telephone or by video link, or a combination of these.

A record of the case conference which contains: a list of the participants; the times the conference commenced and concluded; a description of the problems, goals and strategies; and a summary of the outcomes must be kept in the patient's record. The notes and summary of outcomes must be provided to all participants and to the patient's usual general practitioner.

Prior informed consent must be obtained from the patient, or the patient's agent. In obtaining informed consent the consultant physician should:

- Inform the patient that their medical history, diagnosis and care preferences will be discussed with other case conference participants;
- Provide an opportunity for the patient to specify what medical and personal information they want to be conveyed to, or withheld from, the other care providers;
- Inform the patient that they will incur a charge for the service for which a Medicare rebate will be payable.

Medicare benefits are only payable in respect of the service provided by the coordinating consultant physician or the participating consultant physician. Benefits are not payable for another medical practitioner organising a case conference or for participation by other medical practitioners at a case conference, except where a medical practitioner organises or participates in a case conference in accordance with items 735 to 758 (GPs), and items 235 to 244 (non-specialist practitioners).

The benefit is not claimable (and an account should not be rendered) until all components of these items have been provided. See General Explanatory Notes for further details on billing procedures.

It is expected that a patient would not normally require more than 5 case conferences in a 12 month period.

This item does not preclude the claiming of a consultation on the same day if other clinically relevant services are provided.

AN.0.52 Medication Management Reviews - (Items 900 and 903)

Item 900 - Domiciliary Medication Management Review

A Domiciliary Medication Management Review (DMMR) (Item 900), also known as Home Medicines Review, is intended to maximise an individual patient's benefit from their medication regimen, and prevent medication-related problems through a team approach, involving the patient's GP and preferred community pharmacy or accredited pharmacist.

Patient eligibility

The item is available to people living in the community who meet the criteria for a DMMR.

The item is not available for in-patients of a hospital, or care recipients in residential aged care facilities.

DMMRs are targeted at patients who are likely to benefit from such a review: patients for whom quality use of medicines may be an issue or; patients who are at risk of medication misadventure because of factors such as their co-morbidities, age or social circumstances, the characteristics of their medicines, the complexity of their medication treatment regimen, or a lack of knowledge and skills to use medicines to their best effect.

DMMR's are targeted at patients who are:

- currently taking five or more regular medications;
- taking more than 12 doses of medication per day;
- have had significant changes made to medication treatment regimen in the last three months;
- taking medication with a narrow therapeutic index or medications requiring therapeutic monitoring;
- experiencing symptoms suggestive of an adverse drug reaction;
- displaying sub-optimal response to treatment with medicines;
- suspected of non-compliance or inability to manage medication related therapeutic devices;
- having difficulty managing their own medicines because of literacy or language difficulties, dexterity problems or impaired sight, confusion/dementia or other cognitive difficulties;
- attending a number of different doctors, both general practitioners and specialists; and/or
- recently discharged from a facility / hospital (in the last four weeks).

In referring a patient for a DMMR, general practitioners should note that only patients meeting the following criteria will have the pharmacist portion funded through a Community Pharmacy Agreement program:

- Is a Medicare and/or Department of Veterans' Affairs (DVA) cardholder or a person who is eligible for a Medicare card;
- Is subject to a chronic condition and/or complex medication regimen; and
- Is failing to respond to treatment in the expected manner.

If the patient does not meet these criteria, the general practitioner can still issue a referral under this item. However, the remainder of the service will be on a “user pays” basis as determined by the accredited pharmacist.

REGULATORY REQUIREMENTS

In conducting a DMMR, a general practitioner must, with the patient’s consent:

- (a) assess a patient is subject to a chronic medical condition and/or complex medication regimen but their therapeutic goals are not being met; and
- (b) following that assessment, refer the patient to a community pharmacy or an accredited pharmacist for a DMMR and provide the relevant clinical information required for the review; and
- (c) discuss with the reviewing pharmacist the result of that review including suggested medication management strategies; and
- (d) develop a written medication management plan following discussion with the patient; and
- (e) provide the written medication management plan to a community pharmacy chosen by the patient.

For any particular patient - applicable not more than once in each 12 month period, except if there has been a significant change in the patient's condition or medication regimen requiring a new DMMR.

Claiming

A DMMR includes all DMMR-related services provided by the general practitioner from the time the patient is identified as potentially needing a medication management review to the preparation of a draft medication management plan, and discussion and agreement with the patient.

The benefit is not claimable until all the components of the item have been rendered.

Benefits for a DMMR service under item 900 are payable only once in each 12 month period, except where there has been a significant change in the patient's condition or medication regimen requiring a new DMMR (e.g. diagnosis of a new condition or recent discharge from hospital involving significant changes in medication). In such cases the patient's invoice or Medicare voucher should be annotated to indicate that the DMMR service was required to be provided within 12 months of another DMMR service.

Provision of a subsequent DMMR must not be made solely by reaching an anniversary date, and the service is not intended to be undertaken on an ongoing review cycle.

If the DMMR is initiated during the course of a consultation undertaken for another purpose, this consultation may also be claimed separately.

If the consultation at which the medication management review is initiated is only for the purposes of initiating the review, only item 900 may be claimed.

If the general practitioner determines that a DMMR is not necessary, item 900 does not apply. In this case, normal consultation items should be used.

Where a DMMR cannot be completed due to circumstances beyond the control of the general practitioner (e.g. because the patient decides to not proceed further with the DMMR, or because of a change in the circumstances of the patient), the relevant MBS attendance items should be used.

FURTHER GUIDANCE

A DMMR should generally be undertaken by the patient's usual general practitioner. This is the general practitioner, or a general practitioner working in the medical practice, that has provided the majority of services to the patient

over the previous 12 months and/or will be providing the majority of services to the patient over the coming 12 months.

The potential need for a DMMR may be identified either by the general practitioner in the process of a consultation or by receipt of advice from the patient, a carer or another health professional including a pharmacist.

The process of **referral to a community pharmacy or an accredited pharmacist** includes:

- Obtaining consent from the patient, consistent with normal clinical practice, for a pharmacist to undertake the medication management review and for a charge to be incurred for the service for which a Medicare rebate is payable. The patient must be clearly informed of the purpose and possible outcomes of the DMMR, the process involved (including that the pharmacist will visit the patient at home, unless exceptional circumstances apply or they are an Aboriginal or Torres Strait Islander patient), what information will be provided to the pharmacist as part of the DMMR, and any additional costs that may be incurred; and
- Provision to the patient's preferred community pharmacy or accredited pharmacist, of relevant clinical information, by the general practitioner for each individual patient, covering the patient's diagnosis, relevant test results and medication history, and current prescribed medications.
- A DMMR referral form is available for this purpose. If this form is not used, the general practitioner must provide patient details and relevant clinical information to the patient's preferred community pharmacy or accredited pharmacist.

The **discussion of the review findings and report including suggested medication management strategies with the reviewing pharmacist** includes:

- Receiving a written report from the reviewing pharmacist; and
- Discussing the relevant findings and suggested management strategies with the pharmacist (either by phone or face to face); and
- Developing a summary of the relevant review findings as part of the draft medication management plan.

Development of **a written medication management plan following discussion with the patient** includes:

- Developing a draft medication management plan and discussing this with the patient; and
- Once agreed, offering a copy of the written medication management plan to the patient and providing a copy to the community pharmacy or accredited pharmacist.

The agreed plan should identify the medication management goals and the proposed medication regimen for the patient.

Item 903 - Residential Medication Management Review

A Residential Medication Management Review (RMMR) is a collaborative service available to permanent residents of a Residential Aged Care facility (RACF) who are likely to benefit from such a review. This includes residents for whom quality use of medicines may be an issue or residents who are at risk of medication misadventure because of a significant change in their condition or medication regimen.

Patient eligibility

RMMRs are available to:

new residents on admission into a RACF; and

existing residents on an 'as required' basis, where in the opinion of the resident's general practitioner, it is required because of a significant change in medical condition or medication regimen.

RMMRs are not available to people receiving respite care in a RACF. Domiciliary Medicines Reviews are available to these people when they are living in the community setting.

REGULATORY REQUIREMENTS

When conducting a RMMR, a GP must:

- (a) discuss the proposed review with the resident and seek the resident's consent to the review; and
- (b) collaborate with the reviewing pharmacist about the pharmacist's involvement in the review; and
- (c) provide input from the resident's most recent comprehensive medical assessment or, if such an assessment has not been undertaken, provide relevant clinical information for the review and for the resident's records; and
- (d) If recommended changes to the resident's medication management arise out of the review, participate in a post-review discussion (either face-to-face or by telephone) with the pharmacist to discuss the outcomes of the review including:
 - (i) the findings; and
 - (ii) medication management strategies; and
 - (iii) means to ensure that the strategies are implemented and reviewed, including any issues for implementation and follow-up; and
 - (iv) develop or revise the resident's medication management plan after discussion with the reviewing pharmacist; and
 - (v) finalise the plan after discussion with the resident.

A general practitioner's involvement in a residential medication management review also includes:

- (a) offering a copy of the medication management plan to the resident (or the resident's carer or representative if appropriate); and
- (b) providing copies of the plan for the resident's records and for the nursing staff of the residential aged care facility; and
- (c) discussing the plan with nursing staff if necessary.

A post-review discussion is not required if:

- (a) there are no recommended changes to the resident's medication management arising out of the review; or
- (b) any changes are minor in nature and do not require immediate discussion; or
- (c) the pharmacist and general practitioner agree that issues arising out of the review should be considered in a case conference.

A RMMR comprises all activities to be undertaken by the general practitioner from the time the resident is identified as potentially needing a medication management review up to the development of a written medication management plan for the resident.

Claiming

A maximum of one RMMR rebate is payable for each resident in any 12 month period, except where there has been a significant change in the resident's medical condition or medication regimen requiring a new RMMR.

Benefits are payable when all the activities of a RMMR have been completed. A RMMR service covers the consultation at which the results of the medication management review are discussed and the medication management plan agreed with the resident:

- any immediate action required to be done at the time of completing the RMMR, based on and as a direct result of information gathered in the RMMR, should be treated as part of the RMMR item;
- any subsequent follow up should be treated as a separate consultation item;
- an additional consultation in conjunction with completing the RMMR should not be undertaken unless it is clinically indicated that a problem must be treated immediately.

In some cases a RMMR may not be able to be completed due to circumstances beyond the control of the general practitioner (e.g. because the resident decides not to proceed with the RMMR or because of a change in the circumstances of the resident). In these cases the relevant MBS attendance item should be used in relation to any consultation undertaken with the resident.

If the consultation at which the RMMR is initiated, including discussion with resident and obtaining consent for the RMMR, is only for the purposes of initiating the review, only the RMMR item should be claimed.

If the RMMR is initiated during the course of a consultation undertaken for another purpose, the other consultation may be claimed as a separate service and the RMMR service would also apply.

If the general practitioner determines that an RMMR is not necessary, the RMMR item does not apply. In this case, relevant consultation items should be used.

FURTHER GUIDANCE

A RMMR should generally be undertaken by the resident's 'usual GP'. This is the general practitioner, or a general practitioner working in the medical practice, that has provided the majority of care to the resident over the previous 12 months and/or will be providing the majority of care to the resident over the next 12 months.

GPs who provide services on a facility-wide contract basis, and/or who are registered to provide services to RACFs as part of aged care panel arrangements, may also undertake RMMRs for residents as part of their services.

Generally, new residents should receive an RMMR as soon as possible after admission. Where a resident has a Comprehensive Medical Assessment (CMA), the RMMR should be undertaken preferably after the results of the CMA are available to inform the RMMR.

A RMMR service should be completed within a reasonable time-frame. As a general guide, it is expected that most RMMR services would be completed within four weeks of being initiated.

The resident's general practitioner may identify the potential need for an 'as required' RMMR for existing residents, including in the course of a consultation for another purpose. The potential need for an RMMR may also be identified by the reviewing pharmacist, supply pharmacist, Residential Aged Care Facility staff, the resident, the resident's carer or other members of the resident's health care team.

The general practitioner should assess the clinical need for an RMMR from a quality use of medicines perspective with the resident as the focus, and initiate an RMMR if appropriate, in collaboration with the reviewing pharmacist.

The general practitioner and reviewing pharmacist should agree on a preferred means for communicating issues and information relating to the provision of an RMMR service. This should include the method(s) of initiating the RMMR, exceptions to the post review discussion, and the preferred method of communication. This can be done on a facility basis rather than on a case-by-case basis.

Where the provision of RMMR services involves consultation with a resident it should be read as including consultation with the resident and/or their carer or representative where appropriate.

RMMRs do not count for the purposes of derived fee arrangements that apply to other consultations in a Residential Aged Care Facility.

AN.0.56 GP Mental Health Treatment Items

This note provides information on the GP Mental Health Treatment items 2700, 2701, 2712, 2713, 2715 and 2717, and is also applicable for video and phone equivalent MBS items 92112, 92113, 92114, 92115, 92116, 92117, 92126 and 92127. It includes an overview of the items, patient and provider eligibility, what activities are involved in providing services rebated by these items, links to other Medicare items and additional claiming information.

Overview

The GP Mental Health Treatment items define services for which Medicare rebates are payable where GPs undertake early intervention, assessment and management of patients with mental disorders. They include referral pathways for treatment by psychiatrists, clinical psychologists and other allied mental health workers. These items complement the mental health items for psychiatrists (items 296, 297, 299 and 92437), clinical psychologists (items 80000, 80005, 80010, 80015, 91166, 91167, 91181 and 91182) and allied mental health providers (items 80100, 80105, 80110, 80115, 80125, 80130, 80135, 80140, 80150, 80155, 80160, 80165, 91169, 91170, 91172, 91173, 91175, 91176, 91183, 91184, 91185, 91186, 91187 and 91188).

The GP Mental Health Treatment items incorporate a model for best practice primary health treatment of patients with mental disorders, including patients with both chronic or non-chronic disorders, that comprises:

- assess and plan;
- provide and/or refer for appropriate treatment and services;
- review and ongoing management as required.

Who can provide

The GP Mental Health Treatment Plan, Review and Consultation items are available for use in general practice by general practitioner. The term 'GP' is used in these notes as a generic reference to general practitioners able to claim these items.

Training Requirements (items 2715, 2717, 92116 and 92117)

GPs providing Mental Health Treatment Plans, and who have undertaken mental health skills training recognised through the General Practice Mental Health Standards Collaboration, have access to items 2715, 2717, 92116 and 92117. For GPs who have not undertaken training, items 2700, 2701, 92112 and 92113 are available. Items 2700, 2715, 92112 and 92116 provides for a Mental Health Treatment Plan lasting at least 20 minutes and item 2701, 2717, 92113 and 92117 provides for a Mental Health Treatment Plan lasting at least 40 minutes. It is strongly recommended that GPs providing mental health treatment have appropriate mental health training. GP organisations support the value of appropriate mental health training for GPs using these items.

What patients are eligible - Mental Disorder

These items are for patients with a mental disorder who would benefit from a structured approach to the management of their treatment needs. Mental disorder is a term used to describe a range of clinically diagnosable disorders that significantly interfere with an individual's cognitive, emotional or social abilities (Refer to the World Health Organisation, 1996, Diagnostic and Management Guidelines for Mental Disorders in Primary Care: ICD-10 Chapter V Primary Care Version). Dementia, delirium, tobacco use disorder and mental retardation are not regarded as mental disorders for the purposes of the GP Mental Health Treatment items.

These GP services are available to eligible patients in the community. GP Mental Health Treatment Plan and Review services can also be provided to private in-patients (including private in-patients who are residents of aged care facilities) being discharged from hospital. Where the service is provided as part of an episode of hospital

treatment it must be claimed at the 75% MBS rebate. GPs are able to contribute to care plans for patients using item 729, Contribution to a Multidisciplinary Care Plan, and to care plans for residents of aged care facilities using item 731 or 92027.

PREPARING A GP MENTAL HEALTH TREATMENT PLAN - (Item 2700, 2701, 2715,2717, 92112, 92113, 92116 or 92117)

What is involved - Assess and Plan

A rebate can be claimed once the GP has undertaken an assessment and prepared a GP Mental Health Treatment Plan by completing the steps from Assessment to the point where patients do not require a new plan after their initial plan has been prepared, and meeting the relevant requirements listed under 'Additional Claiming Information'. This item covers both the assessment and preparation of the GP Mental Health Treatment Plan. Where the patient has a carer, the general practitioner may find it useful to consider having the carer present for the assessment and preparation of the GP Mental Health Treatment Plan or components thereof (subject to patient agreement).

Assessment

An assessment of a patient must include:

- recording the patient's agreement for the GP Mental Health Treatment Plan service;
- taking relevant history (biological, psychological, social) including the presenting complaint;
- conducting a mental state examination;
- assessing associated risk and any co-morbidity;
- making a diagnosis and/or formulation; and
- administering an outcome measurement tool, except where it is considered clinically inappropriate.

The assessment can be part of the same consultation in which the GP Mental Health Treatment Plan is developed, or can be undertaken in different visits. Where separate visits are undertaken for the purpose of assessing the patient and developing the GP Mental Health Treatment Plan, they are part of the GP Mental Health Treatment Plan service and are included in item 2700, 2701, 2715, 2717, 92112, 92113, 92116 or 92117.

In order to facilitate ongoing patient focussed management, an outcome measurement tool should be utilised during the assessment and the review of the GP Mental Health Treatment Plan, except where it is considered clinically inappropriate. The choice of outcome measurement tools to be used is at the clinical discretion of the practitioner. GPs using such tools should be familiar with their appropriate clinical use, and if not, should seek appropriate education and training.

Preparation of a GP Mental Health Treatment Plan

In addition to assessment of the patient, preparation of a GP Mental Health Treatment Plan must include:

- discussing the assessment with the patient, including the mental health formulation and diagnosis or provisional diagnosis;
- identifying and discussing referral and treatment options with the patient, including appropriate support services;
- agreeing goals with the patient - what should be achieved by the treatment - and any actions the patient will take;
- provision of psycho-education;
- a plan for crisis intervention and/or for relapse prevention, if appropriate at this stage;
- making arrangements for required referrals, treatment, appropriate support services, review and follow-up; and
- documenting this (results of assessment, patient needs, goals and actions, referrals and required treatment/services, and review date) in the patient's GP Mental Health Treatment Plan.

Treatment options can include referral to a psychiatrist; referral to a clinical psychologist for psychological therapies, or to an appropriately trained GP or allied mental health professional for provision of focussed

psychological strategy services; pharmacological treatments; and coordination with community support and rehabilitation agencies, mental health services and other health professionals.

Once a GP Mental Health Treatment Plan has been completed and claimed on Medicare either through item 2700, 2701, 2715, 2717, 92112, 92113, 92116 or 92117 a patient is eligible to be referred for up to 10 Medicare rebateable mental health services per calendar year for psychological therapy or focussed psychological strategy services. Patients will also be eligible to claim up to 10 separate services for the provision of group therapy (either as part of psychological therapy or focussed psychological strategies). Please note group therapy does not include family and couples therapy.

When referring patients GPs should provide the information outlined under the 'Referral' heading below. The necessary referrals should be made after the steps above have been addressed and the patient's GP Mental Health Treatment Plan has been completed. It should be noted that the patient's mental health treatment plan should be treated as a living document for updating as required. In particular, the plan can be updated at any time to incorporate relevant information, such as feedback or advice from other health professionals on the diagnosis or treatment of the patient.

On completion of a course of treatment provided through Medicare rebateable services, the service provider must provide a written report on the course of treatment to the GP.

Many patients will not require a new plan after their initial plan has been prepared. A new plan should not be prepared unless clinically required, and generally not within 12 months of a previous plan. Ongoing management can be provided through the GP Mental Health Treatment Consultation and standard consultation items, as required, and reviews of progress through the GP Mental Health Treatment Plan Review item. A rebate for preparation of a GP Mental Health Treatment Plan will not be paid within 12 months of a previous claim for the patient for the same or another Mental Health Treatment Plan item or within three months following a claim for a GP Mental Health Treatment Review (item 2712, 92114 or 92126).

REVIEWING A GP MENTAL HEALTH TREATMENT PLAN - (Item 2712, 92114 or 92126)

The review item is a key component for assessing and managing the patient's progress once a GP Mental Health Treatment Plan has been prepared, along with ongoing management through the GP Mental Health Treatment Consultation item and/or standard consultation items. A patient's GP Mental Health Treatment Plan should be reviewed at least once.

A rebate can be claimed once the GP who prepared the patient's GP Mental Health Treatment Plan (or another GP in the same practice or in another practice where the patient has changed practices) has undertaken a systematic review of the patient's progress against the GP Mental Health Treatment Plan by completing the activities that must be included in a review and meeting the relevant requirements listed under 'Additional Claiming Information'. The review item can also be used where a psychiatrist has prepared a referred assessment and management plan (item 291 or 92435), as if that patient had a GP Mental Health Treatment Plan.

The review must include:

- recording the patient's agreement for this service;
- a review of the patient's progress against the goals outlined in the GP Mental Health Treatment Plan;
- modification of the documented GP Mental Health Treatment Plan if required;
- checking, reinforcing and expanding education;
- a plan for crisis intervention and/or for relapse prevention, if appropriate and if not previously provided; and
- re-administration of the outcome measurement tool used in the assessment stage, except where considered clinically inappropriate.

Note: This review is a formal review point only and it is expected that in most cases there will be other consultations between the patient and the GP as part of ongoing management.

The recommended frequency for the review service, allowing for variation in patients' needs, is:

- an initial review, which should occur between four weeks to six months after the completion of a GP Mental Health Treatment Plan; and
- if required, a further review can occur three months after the first review.

In general, most patients should not require more than two reviews in a 12 month period, with ongoing management through the GP Mental Health Treatment Consultation and standard consultation items, as required.

A rebate will not be paid within three months of a previous claim for the same item/s or within four weeks following a claim for a GP Mental Health Treatment Plan item.

GP MENTAL HEALTH TREATMENT CONSULTATION - (Item 2713, 92115 or 92127)

The GP Mental Health Treatment Consultation item is for an extended consultation with a patient where the primary treating problem is related to a mental disorder, including for a patient being managed under a GP Mental Health Treatment Plan. This item may be used for ongoing management of a patient with a mental disorder. This item should not be used for the development of a GP Mental Health Treatment Plan.

A GP Mental Health Treatment Consultation must include:

- taking relevant history and identifying the patient's presenting problem(s) (if not previously documented);
- providing treatment, advice and/or referral for other services or treatment; and
- documenting the outcomes of the consultation in the patient's medical records and other relevant mental health plan (where applicable).

A patient may be referred from a GP Mental Health Treatment Consultation for other treatment and services. This does not include referral for Medicare rebateable services for focussed psychological strategy services, clinical psychology or other allied mental health services, unless the patient is being managed by the GP under a GP Mental Health Treatment Plan or under a referred psychiatrist assessment and management plan (item 291 or 92435).

Consultations associated with this item must be at least 20 minutes duration.

REFERRAL

Once a GP Mental Health Treatment Plan has been completed and claimed on Medicare, or a GP is managing a patient under a referred psychiatrist assessment and management plan, a patient is eligible for up to 10 Medicare rebateable individual mental health services per calendar year by:

- clinical psychologists providing psychological therapies; or
- appropriately trained GPs or allied mental health professionals providing focussed psychological strategy (FPS) services.

In addition to the above services, patients will also be eligible to claim up to 10 separate services for the provision of group therapy, in line with their clinical need. Please note group therapy does not include family and couples therapy.

When preparing a patient's Mental Health Treatment Plan and making a referral GPs should speak to the patient about their treatment needs and the type of treatment, for example individual and/or group sessions, that might be suitable for their particular circumstances.

Please note if a referral does not specify whether it relates to individual or group therapy, the patient can use a referral to access either or both individual and group therapy treatment options.

A referral for mental health services should be in writing (signed and dated by the GP) and include:

- the patient's name, date of birth and address;
- the patient's symptoms or diagnosis, including whether a GP Mental Health Treatment Plan has been completed for the patient;

- a list of any current medications;
- the number of sessions the patient is being referred for (the ‘course of treatment’);
- a statement about whether the patient has a mental health treatment plan or a psychiatrist assessment and management plan.

It may be useful for a referral to include a statement indicating whether group sessions could be considered.

Where appropriate, and with the patient’s agreement, the GP can also attach a copy of the mental health treatment plan to the referral.

Including these details on a referral will assist with any auditing undertaken by the Department of Health and Aged Care.

Number of Sessions

The GP can decide how many sessions the patient will receive in a course of treatment, within the maximum session limit for the course of treatment. The maximum session limit for each course of treatment is set out below:

- Initial course of treatment – a maximum of six sessions.
- Subsequent course of treatment – a maximum of six sessions up to the patient’s cap of ten sessions (for example, if the patient received six sessions in their initial course of treatment, they can only receive four sessions in a subsequent course of treatment).

The GP should consider the patient's clinical need for further sessions after each course of treatment, including through considering the written report provided by the treating practitioner. This can be done using a GP Mental Health Treatment Plan Review, a GP Mental Health Treatment Consultation or a standard consultation item.

In the instance where a patient has received the maximum number of services available under the Better Access to Psychiatrists, Psychologists and General Practitioners through the Medicare Benefits Schedule initiative per calendar year and is considered to clinically benefit from some additional services, the patient may be eligible for Primary Health Networks (PHNs) funded psychological therapies if they meet relevant eligibility criteria for the PHN commissioned services. It is recommended that providers refer to their PHN for further guidance.

Specifying the Number of Sessions in a Referral

If the GP:

- Does not specify the number of sessions
- Specifies a number of sessions above the maximum allowed for the course of treatment
- Specifies a number of sessions above the maximum allowed for the calendar year (including any sessions the patient has already received that year)

Then the treating practitioner can use their clinical judgment to provide services under the referral, noting the patient cannot receive more than:

- the maximum number of sessions allowed for that particular course of treatment (as set out above), and
- the maximum number of sessions allowed in a calendar year.

The treating practitioner must still provide a report at the end of a course of treatment in line with standard practice for these services. The referring medical practitioner should therefore consider the treating practitioner’s report on the services provided to the patient, and the need for further treatment.

Verbal Referral

A GP can verbally refer a patient for Better Access services only if:

- in their clinical judgement they consider it is necessary for the patient to have immediate access to support from an allied mental health professional, and
- it is not practicable in the circumstances to provide a written referral – for example, to do so would cause delays in treatment to the patient’s detriment, and
- the allied mental health professional documents in writing that they are treating the patient based on the GP’s verbal referral, and
- the GP provides a written referral to the allied mental health professional as soon as possible afterwards.

While waiting for the referring practitioner to provide a written referral, the treating practitioner can provide treatment according to the verbal referral until the referred number of sessions have been completed. If there is any doubt about the number of sessions the patient was verbally referred for, the treating practitioner should follow the guidance provided above under the heading ‘Specifying the Number of Sessions in a Referral’.

A verbal referral does not replace the requirement for the GP to review the patient’s progress (taking into account the written report from their treating allied health professional) after each course of treatment.

Referrals for the Additional 10 Sessions (available until 31 December 2022)

In response to the COVID-19 pandemic, the number of Medicare rebateable individual mental health services was temporarily increased from 10 to 20 per calendar year until 31 December 2022.

A patient does not need a new referral to access Better Access sessions from 1 January 2023. If the patient has a current referral (either for the initial 10 sessions or the additional 10 sessions) and has not used all of the sessions, they can use that referral to access sessions in 2023. However, they cannot receive more than 10 individual sessions in 2023.

ADDITIONAL CLAIMING INFORMATION

Before proceeding with any GP Mental Health Treatment Plan or Review service the GP must ensure that:

- the steps involved in providing the service are explained to the patient and (if appropriate and with the patient's permission) to the patient's carer; and
- the patient's agreement to proceed is recorded.

Before completing any GP Mental Health Treatment Plan or Review service and claiming a benefit for that service, the GP must offer the patient a copy of the treatment plan or reviewed treatment plan and add the document to the patient's records. This should include, subject to the patient's agreement, offering a copy to their carer, where appropriate. The GP may, with the permission of the patient, provide a copy of the GP Mental Health Treatment Plan, or relevant parts of the plan, to other providers involved in the patient's treatment.

The GP Mental Health Treatment Plan, Review and Consultation items cover the consultations at which the relevant items are undertaken, noting that:

- if a GP Mental Health Treatment item is undertaken or initiated during the course of a consultation for another purpose, the GP Mental Health Treatment Plan, Review or Consultation item and the relevant item for the other consultation may both be claimed;
- if a GP Mental Health Treatment Plan is developed over more than one consultation, and those consultations are for the purposes of developing the plan, only the GP Mental Health Treatment Plan item should be claimed; and
- if a consultation is for the purpose of a GP Mental Health Treatment Plan, Review or Consultation item, a separate and additional consultation should not be undertaken in conjunction with the mental health consultation, unless it is clinically indicated that a separate problem must be treated immediately.

Where an additional consultation is undertaken, both services must be clinically relevant and all item requirements must be met. For example, for item 2700, the duration of the service must have been at least 20 minutes. The time of the preceding consultation must not be counted towards the time of the mental health service.

Where separate consultations are undertaken in conjunction with mental health consultations, the patient's invoice or Medicare voucher (assignment of benefit form) for the separate consultation should be annotated (e.g. separate consultation clinically required/indicated).

A benefit is not claimable and an account should not be rendered until all components of the relevant item have been provided.

All consultations conducted as part of the GP Mental Health Treatment items must be rendered by the GP. A specialist mental health nurse, other allied health practitioner, Aboriginal and Torres Strait Islander health practitioner or Aboriginal Health Worker with appropriate mental health qualifications and training may provide general assistance to GPs in provision of mental health care.

Links to other Medicare Services

It is preferable that wherever possible patients have only one plan for primary care management of their mental disorder. As a general principle the creation of multiple plans should be avoided, unless the patient clearly requires an additional plan for the management of a separate medical condition.

The Chronic Disease Management (CDM) care plan items (items 721, 723, 729, 731 and 732) continue to be available for patients with chronic medical conditions, including patients with complex needs.

- Where a patient has a mental health condition only, it is anticipated that they will be managed under the new GP Mental Health Treatment items.
- Where a patient has a separate chronic medical condition, it may be appropriate to manage the patient's medical condition through a GP Management Plan, and to manage their mental health condition through a GP Mental Health Treatment Plan. In this case, both items can be used.
- Where a patient has a mental health condition as well as significant co-morbidities and complex needs requiring team-based care, the GP is able to use both the CDM items (for team-based care) and the GP Mental Health Treatment items.

AN.0.57 Provision of Focussed Psychological Strategies - (Items 2721, 2723, 2725, 2727, 91818, 91819, 91842 and 91843)

Focussed psychological strategies are specific mental health care management strategies, derived from evidence based psychological therapies that have been shown to integrate the best research evidence of clinical effectiveness with general practice clinical expertise. The decision to recommend Focussed Psychological Strategies to a patient must be made either in the context of a GP Mental Health Treatment Plan or a psychiatrist assessment and management plan.

Minimum Requirements

All consultations providing Focussed Psychological Strategies must be rendered by a medical practitioner (including a general practitioner, but not including a specialist or consultant physician).

To ensure appropriate standards for the provision of Focussed Psychological Strategies, payment of Medicare rebates for these items will be limited to medical practitioners who are registered with Services Australia as having satisfied the requirements for higher level mental health skills for provision of the service, as determined by the General Practice Mental Health Standards Collaboration.

Continued access to item numbers 2721, 2723, 2725, 2727, 91818, 91819, 91842 and 91843 will be dependent on the practitioner meeting the ongoing mental health education requirements as determined by the General Practice Mental Health Standards Collaboration.

Patients will be permitted to claim Medicare rebates for up to 10 mental health services under these item numbers per calendar year. The 10 services may consist of: GP focussed psychological strategies services (items 2721, 2723, 2725, 2727; 91818, 91819, 91842 and 91843) or non-specialist medical practitioner items (283, 285, 286, 287, 91820, 91821, 91844 and 91845); and/or psychological therapy services (items 80000, 80005, 80010, 80015, 91166,

91167, 91181 and 91182); and/or focussed psychological strategies – allied mental health services (items 80100, 80105, 80110, 80115, 80125, 80130, 80135, 80140, 80150, 80155, 80160, 80165, 91169, 91170, 91172, 91173, 91175, 91176, 91183, 91184, 91185, 91186, 91187 and 91188).

Out-of-Surgery Consultation

It is expected that this service would be provided only for patients who are unable to attend the practice.

Specific Focussed Psychological Strategies

A range of acceptable strategies has been approved for use by medical practitioners in this context. These are:

- 1. Psycho-education**
(including motivational interviewing)
- 2. Cognitive-behavioural therapy including:**
 - **Behavioural interventions**
 - Behaviour modification
 - Exposure techniques
 - Activity scheduling
 - **Cognitive interventions**
 - Cognitive therapy
- 3. Relaxation strategies**
 - Progressive muscle relaxation
 - Controlled breathing
- 4. Skills training**
 - Problem solving skills and training
 - Anger management
 - Social skills training
 - Communication training
 - Stress management
 - Parent management training
- 5. Interpersonal therapy**
- 6. Eye-Movement Desensitisation Reprocessing (EMDR)**

Mental Disorder

A mental disorder may be defined as a significant impairment of an individual's cognitive, affective and/or relational abilities which may require intervention and may be a recognised, medically diagnosable illness or disorder – this definition is informed by the World Health Organisation, 1996, Diagnostic and Management Guidelines for Mental Disorders in Primary Care:ICD - 10 Chapter V Primary Health Care Version.

Dementia, delirium, tobacco use disorder and mental retardation are not regarded as mental disorders for the purposes of these items.

AN.0.58 Pain and Palliative Medicine (Items 2801 to 3093)

Attendance by a recognised specialist or consultant physician in the specialty of pain medicine (2801, 2806, 2814, 2824, 2832, 2840) and Case conference by a recognised specialist or consultant physician in the specialty of pain medicine (2946, 2949, 2954, 2958, 2972, 2974, 2978, 2984, 2988, 2992, 2996, 3000).

Items 2801, 2806, 2814, 2824, 2832, 2840, 2946, 2949, 2954, 2958, 2972, 2974, 2978, 2984, 2988, 2992, 2996, 3000, apply only to a service provided by a recognised specialist or consultant physician in the specialty of pain medicine, in relation to a pain patient referred from another practitioner (see Paragraph 6 of the General Explanatory notes).

The conditions that apply to the Case Conferences items (2946, 2949, 2954, 2958, 2972, 2974, 2978, 2984, 2988, 2992, 2996, 3000) are the same as those for the Case Conferences by consultant physicians (Items 820 to 838). See explanatory note AN.0.51 for details of these conditions.

Where the service provided to a referred patient is by a medical practitioner who is a recognised specialist or consultant physician in the specialty of pain medicine and that service is pain medicine, then the relevant items from the pain specialist group (2801, 2806, 2814, 2824, 2832, 2840, 2946, 2949, 2954, 2958, 2972, 2974, 2978, 2984, 2988, 2992, 2996, 3000) must be claimed. Services to patients who are not receiving pain medicine services should be claimed using the relevant attendance or case conferencing items.

Attendance by a recognised specialist or consultant physician in the specialty of palliative medicine (3005, 3010, 3014, 3018, 3023, 3028) and Case conference by a recognised specialist or consultant physician in the specialty of palliative medicine (3032, 3040, 3044, 3051, 3055, 3062, 3069, 3074, 3078, 3083, 3088, 3093).

Items 3005, 3010, 3014, 3018, 3023, 3028, 3032, 3040, 3044, 3051, 3055, 3062, 3069, 3074, 3078, 3083, 3088, 3093, apply only to a service provided by a recognised specialist or consultant physician in the specialty of palliative medicine, in relation to a palliative patient referred from another practitioner (see Paragraph 6 of the General Explanatory notes).

General Practitioners who are recognised specialist in the specialty of palliative medicine and are treating a referred palliative patient and claiming items 3005, 3010, 3014, 3018, 3023, 3028, 3032, 3040, 3044, 3051, 3055, 3062, 3069, 3074, 3078, 3083, 3088, 3093 cannot access the GP Management Plan items (721 and 732) or Team Care Arrangement items (723 and 732) for that patient. The referring practitioner is able to provide these services.

The conditions that apply to the Case Conferences items (3032, 3040, 3044, 3051, 3055, 3062, 3069, 3074, 3078, 3083, 3088, 3093) are the same as those for the Case Conferences by consultant physicians (Items 820 to 838). See explanatory note AN.0.51 for details of these conditions.

Where the service provided to a referred patient is by a medical practitioner who is a recognised specialist or consultant physician in the specialty of palliative medicine and that service is a palliative medicine service, then the relevant items from the palliative specialist group (3005, 3010, 3014, 3018, 3023, 3028, 3032, 3040, 3044, 3051, 3055, 3062, 3069, 3074, 3078, 3083, 3088, 3093) must be claimed. Services to patients who are not receiving palliative care services should be claimed using the relevant attendance or case conferencing items.

AN.0.60 Attendances by Medical Practitioners who are Emergency Physicians - (Items 5001 to 5036)

Items 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017 and 5019 under Group A21 relate specifically to attendances rendered by medical practitioners who are holders of the Fellowship of the Australasian College for Emergency Medicine (FACEM) and who participate in, and meet the requirements for, quality assurance and maintenance of professional standards by the Australasian College for Emergency Medicine (ACEM).

Other than for point-of-care ultrasound (see below), only modifying add-on therapeutic and procedural items under Subgroup 14 in Group T1 may be claimed in conjunction with attendance items 5001 to 5019.

Items relating to point-of-care ultrasound services are not separately payable from emergency attendance items 5001 to 5019 where performed for a reason that represents routine use as standard of care in an Emergency Department attendance. For example, the following four (non-exhaustive) reasons:

- a. To identify nerves for the purposes of administering nerve blocks.
- b. To identify vessels, including abdominal aortic aneurysms.
- c. As part of a focused assessment with sonography for trauma (FAST) scan.

Where the “standard of care” principle does not apply, items relating to point-of-care ultrasound services are payable in addition to emergency attendance items 5001 to 5019, where the following three criteria are met:

- a. A formal report is provided and is stored in a manner that reasonably facilitates future retrieval / access.
- b. The images are stored in a manner that reasonably facilitates future retrieval / access.

- c. The provider is appropriately credentialed to provide the particular service, by a recognised body for the credentialing of ultrasound services.

For the sake of clarity, hospitals do not constitute recognised bodies for the credentialing of ultrasound services. The ACEM has published policy on the appropriate credentialing for Emergency Medicine ultrasonography, such as the “Policy on Credentialing for Emergency Medicine Ultrasonography”. As noted by ACEM, examples of appropriate credentials include the Diploma in Diagnostic Ultrasound (DDU) and the Certificate in Clinician Performed Ultrasound (CCPU) offered by the Australasian Society for Ultrasound in Medicine (ASUM).

Emergency Attendance Categories

Items 5001 to 5019 cover three categories of attendance to reflect the differing categories of professional involvement required during emergency attendances undertaken in a recognised emergency medicine department of a private hospital, based on the number of differential diagnoses and comorbidities that require consideration rather than simply on the time spent with the patient. The emergency department must be part of a private hospital and this department must be licensed as a “recognised emergency department” by the appropriate State or Territory government authority.

Mirror emergency attendance items (items 5021 to 5036) are provided for medical practitioners who are not emergency physicians to ensure a consistent framework for all emergency attendances, regardless of provider type (see notes below under 'Emergency Medicine Attendances by Medical Practitioners who are not Emergency Physicians').

A new subgroup of therapeutic and procedural add-on items is provided under Subgroup 14 in Group T1 of the MBS for services most commonly performed in emergency medicine (for example, fractures and resuscitation). These items are to be claimed in conjunction with attendances on patients by emergency physicians (items 5001 to 5019) or medical practitioners (5021 to 5036). Explanatory notes for Group T1, Subgroup 14 items are provided in TN.1.22.

The following notes in respect of the three categories are provided to assist emergency physicians and medical practitioners in selecting the appropriate attendance item number for Medicare benefit purposes. The essential difference between the three attendance categories relate not to time but to complexity.

It is recognised that change of shift handovers are common occurrences within the emergency care setting. Emergency physicians and medical practitioners assuming responsibility of care for patients from the first practitioner may bill the attendance items based on the level of complexity and engagement appropriate to the patient’s care.

The attendances for items 5001 to 5019 (and non-emergency physician items 5021 to 5036) are divided into three categories relating to the level of complexity involved in medical decision-making, namely:

- a. Ordinary complexity
- b. Complexity that is more than ordinary but not high
- c. High complexity

Age modifiers have been applied to each category of attendance to reflect the level of additional complexity and professional involvement, namely:

- a. Aged 4 years or over but under 75 years
- b. Aged under 4 years
- c. Aged 75 years or over

Ordinary Complexity

These items are for the consultation, investigation (if required) and management of a single system issue in a patient with no relevant comorbidities where the differential diagnosis is limited.

Includes targeted history and examination, interpretation of relevant investigations (if required), development and initiation of a management plan, relevant GP and specialist communication and associated documentation. These patients would typically be discharged home from the Emergency Department. A period of observation is not required for these patients.

Complexity More than Ordinary but Not High

These items are for the assessment, investigation and management of an undifferentiated presentation or a presentation with a clear diagnosis that needs risk stratification and complication exclusion. Where the diagnosis is clear from the outset, this item should be used when management is time consuming or more than one strategy is required. The attendance may include referral or consultation with alternate specialist(s). These patients may or may not be admitted.

Includes a period of observation in response to initial treatment and / or requiring results of investigations to inform an ongoing management plan, and includes any routine point-of-care procedures (such as ECGs, in-dwelling urinary catheterisation, venous and arterial blood gas sampling, ultrasound in conjunction with procedures such as vascular access or nerve block).

For patients requiring a prolonged period of observation, admission to an emergency department short stay unit may be required.

High Complexity

These items are for the assessment, investigation and management of an undifferentiated ED patient with one or more comorbidities and more than one differential diagnosis.

These items may include time consulting with alternate specialists, liaising with community services and arrangement of admission, pharmacy reconciliation, communication with family, carers and general practitioners; and any routine point-of-care procedures (such as ECGs, in-dwelling urinary catheterisation, venous and arterial blood gas sampling, ultrasound in conjunction with procedures such as vascular access or nerve block).

For patients requiring a prolonged period of observation, admission to an emergency department short stay unit may be required.

Related Items: 5001 5004 5011 5012 5013 5014 5016 5017 5019

Emergency Medicine Attendances by Medical Practitioners who are not Emergency Physicians (Items 5021 to 5036)

Mirror items (5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 and 5036) are provided for emergency medicine attendance services performed by medical practitioners who are not emergency physicians to ensure a consistent framework for all emergency attendances, regardless of provider type.

The mirror items reflect the emergency physician items and are divided into three categories relating to the level of complexity with age modifiers applied to each attendance category.

Related Items: 5021 5022 5027 5030 5031 5032 5033 5035 5036

AN.0.61 Emergency Medicine Attendances for the provision of Goals of Care (Items 5039, 5041, 5042 and 5044)

Items 5039 and 5041 are for goals of care services, performed by emergency physicians to support gravely ill patients to make informed decisions regarding treatment of their medical condition.

Mirror items (5042 and 5044) are for the provision of goals of care by medical practitioners who are not emergency physicians.

Items 5039 for emergency physicians and 5042 for medical practitioners are for goals of care services to be performed in conjunction with, or after, the new emergency medicine attendance services (items 5001 to 5036). It is expected the doctor would have performed the emergency attendance service on the patient and would be familiar with the patient's medical issues and circumstances.

Items 5041 for emergency physicians and 5044 for medical practitioners are for goals of care services that are not performed in conjunction with, or after, the new emergency medicine attendance services (items 5001 to 5036). These items are for situations where the doctor would not be familiar with the patient's medical issues and circumstances and the attendance is for at least 60 minutes.

Notes:

The conditions to be met before services covered by items 5039, 5041, 5042 and 5044 attract benefits are provided under the following definitions of "gravely ill patient lacking goals of care" and "preparation of goals of care" in the GMST.

"gravely ill patient lacking current goals of care" means a patient to whom all of the following apply:

- (a) the patient either:
 - (i) is suffering a life-threatening acute illness or injury; or
 - (ii) is suffering acute illness or injury and, apart from the illness or injury, has a high risk of dying within 12 months;
- (b) one or more alternatives to management of the illness or injury are clinically appropriate for the patient;
- (c) either:
 - (i) there is not a record of goals of care for the patient that can readily be retrieved by providers of health care for the patient and that identifies interventions that should, or should not, be made in care of the patient; or
 - (ii) there is such a record but it is reasonable to expect that, due to changes in the patient's condition, the goals recorded will change substantially.

"preparation of goals of care" for a patient, by a medical practitioner, means the carrying out of all of the following activities by the practitioner:

- (a) comprehensively evaluating the patient's medical, physical, psychological and social issues;
- (b) identifying major issues that require goals of care for the patient to be set;
- (c) assessing the patient's capacity to make decisions about goals of care for the patient;
- (d) discussing care of the patient with the patient, or a person (the surrogate) who can make decisions on the patient's behalf about care for the patient, and as appropriate with any of the following:
 - (i) members of the patient's family;
 - (ii) other persons who provide care for the patient;
 - (iii) other health practitioners;
- (e) offering in that discussion reasonable options for care of the patient, including alternatives to intensive or escalated care;
- (f) agreeing with the patient or the surrogate on goals of care for the patient that address all major issues identified;

- (g) recording the agreed goals so that:
 - (i) the record can be readily retrieved by other providers of health care for the patient; and
 - (ii) interventions that should, or should not, be made in care of the patient are identified.

Patients could be assessed for “a life-threatening acute illness or injury” (and suspicion that alternatives to active management may be an appropriate clinical choice) through the use of tools that assist in predicting end-of-life, such as the Supportive and Palliative Care Indicators Tool (SPICCTM).

“offering reasonable options for care” means that the patient must be provided with reasonable alternatives to continued intensive/active treatment or escalation of care, including where the patient has not directly asked for such information (in recognition that patients may not ask if they are not aware of such alternatives).

“recording the agreed goals” should be undertaken using standard forms (where available) appropriate to the facility in which a patient is receiving care.

Patients with existing goals of care plans are eligible if such records cannot be readily retrieved by the medical practitioners; or if their condition has changed to the point the record does not reflect the patient’s current medical condition and it is reasonable for new goals of care to be developed.

Providers of goals of care services should be appropriately trained to provide end-of-life care options and goals of care discussions.

Items 5039, 5041, 5042 and 5044 should not be claimed where the goals of care are defined only in relation to a subset of the patient’s major issues.

Related Items: 5039 5041 5042 5044

AN.0.62 Case Conferences by Consultant Psychiatrists - (Items 855 to 866)

A range of items are available for case conferences by consultant psychiatrists in community settings and for discharge planning for hospital in-patients. These items are introduced to improve the effectiveness of psychiatric case conferences and make it easier for psychiatrists to work with general practitioners and allied health professionals, thereby ensuring better coordinated care for patients. Three new items (855, 857 and 858) cover the organisation of a community case conference and a further three (861, 864 and 866) cover the organisation of a discharge case conference. Where a consultant psychiatrist organises a case conference a multidisciplinary team requires the involvement of a minimum of three formal care providers from different disciplines. The consultant psychiatrist and one other medical practitioner are counted towards the minimum of three.

Items 855, 857, and 858 apply to a community case conference (including a case conference conducted in a residential aged care facility) organised to discuss one patient in detail and applies only to a service in relation to a patient who suffers from at least one medical condition that has been (or is likely to be) present for at least 6 months, or that is terminal. Items 855, 857, and 858 do not apply to an in-patient of a hospital.

For items 861, 864 and 866 a discharge case conference is a case conference carried out in relation to a patient before the patient is discharged from a hospital. Items 861, 864 or 866 are payable not more than once for each hospital admission.

The purpose of a case conference is to establish and coordinate the management of the care needs of the patient.

A case conference is a process by which a multidisciplinary team carries out the following activities:

- discusses a patient's history;

- identifies the patient's multidisciplinary care needs;
- identifies outcomes to be achieved by members of the case conference team giving care and service to the patient;
- identifies tasks that need to be undertaken to achieve these outcomes, and allocates those tasks to members of the case conference team; and assesses whether previously identified outcomes (if any) have been achieved.

For the purposes of items 855 to 866, a multidisciplinary team requires the involvement of a minimum of three formal care providers from different disciplines, each of whom provides a different kind of care or service to the patient, and can include the patient's usual medical practitioner. The consultant psychiatrist and the medical practitioner are counted toward the minimum of three.

The patient's carer may be included as a member of the team, in addition to the minimum of three health or care providers but do not count towards the minimum of three for Medicare purposes.

For the purposes of items 855 to 866 a consultant psychiatrist should generally be the consultant psychiatrist that has provided the majority of services to the patient over the previous 12 months and/or will provide the majority of services to the patient over the coming 12 months.

In addition to the consultant psychiatrist and one other medical practitioner, "formal care providers" include:

- allied health professionals such as, but not limited to: Aboriginal health care workers; asthma educators; audiologists; dental therapists; dentists; diabetes educators; dieticians; mental health workers; occupational therapists; optometrists; orthoptists; orthotists or prosthetists; pharmacists; physiotherapists; podiatrists; psychologists; registered nurses; social workers; speech pathologists.
- home and community service providers, or care organisers, such as: education providers; "meals on wheels" providers; personal care workers (workers who are paid to provide care services); probation officers.

The involvement of a patient's carer, such as a friend or family member, in a multidisciplinary case conference team can provide significant benefits in terms of coordination of care for the patient. Where the patient has a carer, the consultant psychiatrist should consider inviting the carer to be an additional member of the multidisciplinary case conference team, with the patient's agreement and where the carer's input is likely to be relevant to the subject matter of the case conference. The involvement of the patient's carer is not counted towards the minimum of three members.

Where the patient's carer is not a member of the multidisciplinary team, the practitioner should involve the carer and provide information to the carer where appropriate and with the patient's agreement. However, the practitioner should take account of the impact of the tasks identified in the case conference on the capacity of the carer to provide support to the patient. Additional responsibilities should not be assigned to the patient's carer without the carer's agreement.

Organisation of a case conference

Organise and coordinate a case conference means undertaking the following activities in relation to a case conference:

- explaining to the patient the nature of a case conference, and asking the patient whether the patient agrees to the case conference taking place; and
- recording the patient's agreement to the case conference; and
- recording the day on which the conference was held, and the times at which the conference started and ended; and
- recording the names of the participants; and

- recording the matters mentioned in AN.0.51 and putting a copy of that record in the patient's medical records; and
- offering the patient (and the patient's carer, if appropriate and with the patient's agreement), and giving each other member of the team a summary of the conference; and
- discussing the outcomes of the case conference with the patient.

General requirements

It is expected that a patient would not normally require more than 5 case conferences in a 12-month period.

The case conference must be arranged in advance within a time frame that allows for all the participants to attend. The minimum three care providers must be present for the whole of the case conference. All participants must be in communication with each other throughout the conference, either face to face, by telephone or by video link, or a combination of these.

In explaining to the patient the nature of a case conference and asking the patient whether he or she agrees to the case conference taking place, the medical practitioner should:

- Inform the patient that their medical history, diagnosis and care preferences will be discussed with other care providers;
- Provide an opportunity for the patient to specify what medical and personal information they want to be conveyed to or withheld from the other case conference team members; and
- Inform the patient that they will incur a charge for the service provided by the practitioner for which a Medicare rebate will be payable.
- Inform the patient of any additional costs they will incur. The benefit is not claimable (and an account should not be rendered) until all components of these items have been provided.

AN.0.63 Case Conference by Consultant Physicians in Geriatric/Rehabilitation Medicine - (Item 880)

Item 880 applies only to a service provided by a consultant physician or a specialist in the specialty of Geriatric or Rehabilitation Medicine who has completed the additional requirements of the Royal Australasian College of Physicians for recognition in the subspecialty of geriatric medicine or rehabilitation medicine. The service must be in relation to an admitted patient in a hospital (not including a patient in a residential aged care facility) who is receiving one of the following types of specialist care:

- geriatric evaluation and management (GEM), in which the clinical intent is to maximise health status and/or optimise the living arrangements for a patient with multidimensional medical conditions with disabilities and psychosocial problems, who is usually (but not always) an older patient; or
- rehabilitation care, in which the clinical intent is to improve the functional status of a patient with an impairment or disability.

Both types of care are evidenced by multi-disciplinary management and regular assessments against a plan with negotiated goals and indicative time-frames. A case conference is usually held on each patient once a week throughout the patient's admission, usually as part of a regular scheduled team meeting, at which all the inpatients under the consultant physician's care are discussed in sequence.

The specific responsibilities of the coordinating consultant physician or specialist are defined as:

- coordinating and facilitating the multidisciplinary team meeting;
- resolving any disagreement or conflict so that management consensus can be achieved;
- clarifying responsibilities; and

- ensuring that the input of participants and the outcome of the case conference is appropriately recorded.

The multidisciplinary team participating in the case conference must include a minimum of three formal inpatient care providers from different disciplines, including at least two providers from different allied health disciplines (listed at dot point 2 of A24.7). The consultant physician or specialist is counted toward the minimum of three. Although they may attend the case conference, neither the patient nor their informal carer, or any other medical practitioner can be counted toward the minimum of three.

The case conference must be arranged in advance, within a time frame that allows for all the participants to attend. The minimum of three formal inpatient care providers must be present for the whole of the case conference.

Prior informed consent must be obtained from the patient, or the patient's agent including informing the patient that they will incur a charge for the service for which a Medicare rebate will be payable.

Item 880 is not payable more than once a week or on the same day as a claim for any of the physician discharge case conferencing items 830, 832, 834, 835, 837 and 838, in respect of a particular patient.

AN.0.64 Neurosurgery Specialist Referred Consultation - (Items 6007 to 6015)

Referred consultations provided by specialist neurosurgeons will be covered under items 6007 to 6015. These new items replace the use of specialist items 104 and 105 for referred consultations by neurosurgeons.

The neurosurgical consultation structure comprises an initial consultation (item 6007) and four categories of subsequent consultations (items 6009-6015). These categories relate to the time AND level of complexity of the attendance i.e

(i) Level 1 - 6009

(ii) Level 2 - 6011

(iii) Level 3 - 6013

(iv) Level 4 - 6015

The following provides further guidance for neurosurgeons in utilising the appropriate items in common clinical situations:

(i) Initial consultation item 6007 will replace item 104.

(ii) Subsequent consultation items 6009-6015 will replace item 105

Item 6009 (subsequent consultation on a patient for 15 mins or less) covers a minor subsequent attendance which is straightforward in nature. Some examples of a minor attendance would include consulting with the patient for the purpose of issuing a repeat script for anticonvulsant medications or the routine review of a patient with a ventriculo-peritoneal shunt.

Item 6011 (subsequent consultation on a patient for a duration of between 16 to 30 mins) would involve an detailed and comprehensive examination of the patient which is greater in complexity than would be provided under item 6009, arranging or evaluating any necessary investigations and include detailed relevant patient notes. Where a management plan is formulated it is expected that this plan is discussed in detail with the patient and a written record included in the patient notes. Some examples of a detailed neurosurgical attendance would include:

- the reviewing of neuroimaging for the monitoring of a tumour or lesion and discussion of the results with the patient (e.g. meningioma, spinal cord tumour);
- consultation on a patient to review imaging for spinal cord/cauda equina/ nerve root compression from a disc prolapse and discussion of results; or

- consultation on a patient prior to insertion of a ventriculo-peritoneal shunt)

Item 6013 (subsequent consultation on a patient with complex neurological conditions for the duration of between 31 to 45 mins) should involve an extensive and comprehensive examination of the patient greater in complexity than under item 6011, arranging or evaluating any necessary investigations and include detailed relevant patient notes. Item 6013 would be expected to cover complications, adverse outcomes, or review of chronic conditions. Where a management plan is formulated it is expected that this plan is discussed in detail with the patient and a written record be included in the patient notes. Some examples of an extensive neurosurgical attendance would include:

- an attendance on a patient prior to a craniotomy for cerebral tumour;
- surgery for spinal tumour;
- revision of spinal surgery;
- epilepsy surgery; or
- for the treatment of cerebral aneurysm.

Examination of such patients would include full cranial nerve examination or examination of upper and lower limb nervous system.

Item 6015 (subsequent consultation on a patient with complex neurological conditions for a duration of more than 45 mins) should involve an exhaustive examination of the patient that is more comprehensive than 6013 and any ordering or evaluation of investigations and include detailed relevant patient notes. It would be expected to cover complications, adverse outcomes, or review of chronic conditions. Where a management plan is formulated it is expected that this plan is thoroughly discussed with the patient and a written record be included in the patient notes. An exhaustive neurosurgical consultation includes:

- managing adverse neurological outcomes;
- detailed discussion when multiple modalities are available for treatment (e.g. clipping versus coiling for management of a cerebral aneurysm, surgical resection versus radiosurgery for cerebral tumour); or
- discussion where surgical intervention is likely to result in a neurological deficit but surgery is critical to patient's life or to stop progressive neurologic decline (e.g. cranial nerve dysfunction, motor dysfunction secondary to a cerebral or spinal cord lesion).

Examination of such patients would include exhaustive neurosurgical examination including full neurological examination (cranial nerves and limbs) or detailed 'focused examination' (e.g.: brachial plexus examination)

Complex neurosurgical problems referred to in items 6013 and 6015 include:

- deterioration in neurologic function following cranial or spinal surgery;
- presentation with new neurologic signs/symptoms; multifocal spinal and cranial disease (e.g. neurofibromatosis); or
- chronic pain states following spinal surgery (including discussion of other treatment options and referral to pain management)

NOTE: It is expected that informed financial consent be obtained from the patient where possible.

AN.0.65 Cancer Care Case Conference - (Items 871 and 872)

For the purposes of these items:

- private patients in public or private hospitals or the community with a malignancy of a solid organ or tissue or a systemic cancer such as a leukaemia or lymphoma are covered, with the exception of patients whose only cancer is a non-melanoma skin cancer;
- the billing general practitioner, specialist or consultant physician may be from any area of medical practice and must be a treating doctor of the patient discussed at the case conference. A treating doctor should generally have treated or provided a formal diagnosis of the patient's cancer in the past 12 months or expect to do so within the next 12 months. Attending non-treating clinicians, allied health providers or support staff are not eligible to bill the item.
- only one practitioner is eligible to claim item 871 for each patient case conference. This should be the doctor who assumes responsibility for leading and coordinating the case conference, ensures that records are kept and that the patient is informed of the outcome of the case conference. In most cases this will be the lead treating doctor.
- each billing practitioner must ensure that their patient is informed that a charge will be incurred for the case conference for which a Medicare rebate will be payable;
- participants must be in communication with each other throughout the case conference, either face-to-face, or by telephone or video link;
- suitable allied health practitioners would generally be from one of the following disciplines: aboriginal health care worker; asthma educator; audiologist; dental therapist; dentist; diabetes educator; dietician; mental health worker; occupational therapist; optometrist; orthoptist; orthotist or prosthetist; pharmacist; physiotherapist; podiatrist; psychologist; registered nurse; social worker; or, speech pathologist;
- in general, it is expected that no more than two case conferences per patient per year will be billed by a practitioner; and
- cancer care case conferences are for the purpose of developing a cancer treatment plan in a multidisciplinary team meeting and should not be billed against case conference items for other purposes eg community or discharge case conferences.

AN.0.66 Non-directive Pregnancy Support Counselling Service - (Item 4001)

Overview

The Pregnancy Support Counselling initiative provides for Medicare benefits to be paid for non-directive pregnancy support counselling services provided to a person who is:

- pregnant; or
- who has been pregnant in the 12 months preceding the first service to which this item, item 792 or item 81000, 81005 or 81010 applies in relation to that pregnancy.

There are five MBS items for the provision of non-directive pregnancy support counselling services:

Item 4001 - services provided by an eligible GP. The term 'GP' is used hereafter as a generic reference to general practitioners;

Item 792 – services provided by an eligible medical practitioner (not including a specialist or consultant physician)

Item 81000 - services provided by an eligible psychologist;

Item 81005 - services provided by an eligible social worker; and

Item 81010 - services provided by an eligible mental health nurse.

This notes relate to provision of a non-directive pregnancy support counselling service by an eligible GP.

Non-directive counselling is a form of counselling based on the understanding that, in many situations, people can resolve their own problems without being provided with a solution by the counsellor. The counsellor's role is to encourage the person to express their feelings but not suggest what decision the person should make. By listening and reflecting back what the person reveals to them, the counsellor helps them to explore and understand their feelings. With this understanding, the person is able to make the decision which is best for them.

The service involves the GP undertaking a safe, confidential process that helps the patient explore concerns they have about a current pregnancy or a pregnancy that occurred in the preceding 12 months. This includes providing, on request, unbiased, evidence-based information about all options and services available to the patient.

The service may be used to address any pregnancy related issues for which non-directive counselling is appropriate.

Patient eligibility

Medicare rebates for non-directive pregnancy support counselling services provided using item 4001 are available to a person who is:

- pregnant; or
- who has been pregnant in the 12 months preceding the first service to which this item, item 792 or item 81000, 81005 or 81010 applies in relation to that pregnancy.

Partners of eligible patients may attend each or any counselling session, however, only one fee applies to each service provided.

Medicare benefits

Medicare benefits are payable for up to three non-directive pregnancy support counselling services per patient, per pregnancy, from any of the following items - 792, 4001, 81000, 81005 and 81010.

Where the patient is unsure of the number of Medicare rebated non-directive pregnancy support counselling services they have already accessed, the patient may check with Services Australia on 132 011. Alternatively, the GP may check with Services Australia (although the patient must be present to give permission).

Item 10990 or item 10991 can also be claimed in conjunction with item 4001 provided the conditions of the relevant item, 10990 or 10991, are satisfied.

Minimum Requirements

This service may only be provided by a GP who has completed appropriate non-directive pregnancy counselling training.

AN.0.69 One-Off Veterans' Health Check

Items 701, 703, 705 and 707 may be used to undertake a health assessment for a former serving member of the Australian Defence Force, including a former member of permanent and reserve forces.

A health assessment for a former serving member of the Australian Defence Force is an assessment of:

- a. a patient's physical and psychological health and social function; and
- b. whether health care, education and other assistance should be offered to the patient to improve their physical, psychological health or social function.

This health assessment must include:

- a. a personal attendance by a general practitioner; and
- b. taking the patient's history, including the following:
 - i. the patient's service with the Australian Defence Force, including service type, years of service, field of work, number of deployments and reason for discharge;

- ii. the patient's social history, including relationship status, number of children (if any) and current occupation;
- iii. the patient's current medical conditions;
- iv. whether the patient suffers from hearing loss or tinnitus;
- v. the patient's use of medication, including medication prescribed by another doctor and medication obtained without a prescription;
- vi. the patient's smoking, if applicable;
- vii. the patient's alcohol use, if applicable;
- viii. the patient's substance use, if applicable;
- ix. the patient's level of physical activity;
- x. whether the patient has bodily pain;
- xi. whether the patient has difficulty getting to sleep or staying asleep;
- xii. whether the patient has psychological distress;
- xiii. whether the patient has posttraumatic stress disorder;
- xiv. whether the patient is at risk of harm to self or others;
- xv. whether the patient has anger problems;
- xvi. the patient's sexual health;
- xvii. any other health concerns the patient has.

The assessment must also include the following:

- i. measuring the patient's height;
- ii. weighing the patient and ascertaining, or asking the patient, whether the patient's weight has changed in the last 12 months;
- iii. measuring the patient's waist circumference;
- iv. taking the patient's blood pressure;
- v. using information gained in the course of taking the patient's history to assess whether any further assessment of the patient's health is necessary;
- vi. either making the further assessment or referring the patient to another medical practitioner who can make the further assessment;
- vii. documenting a strategy for improving the patient's health;
- viii. offering to give the patient a written report of the assessment that makes recommendations for treating the patient including preventive health measures;
- ix. keeping a record of the assessment.

A general practitioner may use the Veteran Health Check Tool as a screening tool for the health assessment. The tool can be viewed on the Department of Veterans' Affairs' website at: <https://www.dva.gov.au>. Other assessment tools mentioned in the Department of Veteran's Affairs Mental Health Advice Book may be relevant and can also be viewed on the Department's website.

This health assessment may only be claimed once by an eligible patient.

The health assessment must not be performed in conjunction with a separate consultation in relation to the patient unless the consultation is clinically necessary.

The health assessment must be performed by the patient's usual doctor.

AN.0.70 Limitation of items—certain attendances by specialists and consultant physicians

Medicare benefits are not payable for items 105, 116, 119, 386, 2806, 2814, 3010, 3014, 6009, 6011, 6013, 6015, 6019, 6052 and 16404 when claimed in association with an item in group T8 with a schedule fee of \$330.20 or more.

The restriction applies when the procedure is performed by the same practitioner, on the same patient, on the same day.

AN.0.71 General practitioner attendances and aftercare

Medical practitioners working in general practice (excluding specialists and consultant physicians) can provide an aftercare service for which patients are eligible to receive a Medicare benefit, providing that practitioner did not complete the initial procedure for which aftercare treatment is being provided.

Routine aftercare that is provided as follow-up care for a procedure, or that is specified as routine aftercare for a procedure in an MBS item, is not eligible to be billed to the MBS when it is provided by the same practitioner who provided the initial service requiring aftercare. Further information on aftercare treatments can be found in explanatory note [TN.8.4](#) and on [Services Australia's website](#).

RELEVANT LEGISLATION

Further details about the legislative requirements for practitioners to be eligible for Medicare benefits when providing aftercare can be found on the [Federal Register of Legislation](#) in the [Health Insurance \(Subsection 3\(5\) General Practitioner Post-Operative Treatment\) Direction 2017](#).

AN.0.72 Attendance services for complex neurodevelopmental disorders (such as autism spectrum disorder)

Intention of this service under item 289 and telehealth equivalent item 92434

Items 289 or telehealth equivalent item 92434 are intended for complex conditions, characterised by multi-domain cognitive and functional impairment. Patient eligibility is for neurodevelopmental disorders, which are assessed to be complex and mean that individuals require support across multiple domains.

The intention of this service is to provide access to treatment, through the development of a treatment and management plan by a psychiatrist, for individuals under 25 years of age, diagnosed with a complex neurodevelopmental disorder (NDD). The development of the treatment and management plan, follows a comprehensive medical assessment, and provides the opportunity to refer to eligible Allied Health practitioners for up to a total of 20 MBS treatment services per patient's lifetime (items 82015, 82020, 82025, 82035, 93035, 93036, 93043 or 93044). This item is claimable once in a patient's lifetime.

Eligibility:

In the context of item 289 (or 92434), the diagnosis of a complex neurodevelopmental disorder requires evidence of requiring support and showing impairment across two or more neurodevelopmental domains. **Complexity** is characterised by multi-domain cognitive and functional disabilities, delay or clinically significant impairment.

Neurodevelopmental domains include:

- Cognition
- Language
- Social-emotional development
- Motor skills
- Adaptive behaviour: conceptual skills, practical skills, social skills or social communication skills

Referral pathways:

Early identification of, and intervention for, individuals with complex NDD is important in promoting positive longer term outcomes. Symptoms can cause clinically significant impairment in social, occupational or other important areas of functioning.

Where neurodevelopmental concerns have been identified and brought to the attention of the patient's GP to initially assess these concerns and the GP considers there are persisting indications that require more specialised assessment, they are encouraged to refer to either a consultant paediatrician or psychiatrist for a comprehensive assessment.

Diagnostic Assessment:

The assessment and diagnosis of a complex NDD should be evaluated in the context of both a physical and developmental assessment. The psychiatrist may require a number of separate attendances (through usual time-tiered or subsequent attendance items 296 to 308, 310, 312, 314, 316, 318, 319 to 352, 91827 to 91831 or 91837 to 91839, 92437, 92455 to 92460) to complete a comprehensive accurate assessment and formulate a diagnosis, exclude other disorders or assess for co-occurring conditions.

Multi-disciplinary assistance with assessment and/or contribution to the treatment and management plan:

Depending on a range of factors, not limited to the patient's age and nature of suspected disabilities, the consultant physician may require a multi-disciplinary approach to complete a comprehensive accurate assessment and formulate a diagnosis.

Where the psychiatrist determines the patient requires additional assessments to formulate a diagnosis, through the assistance of an Allied Health practitioner, they are able to refer the patient to an eligible Allied Health provider from standard attendance items (296 to 308, 310, 312, 314, 316, 318, 319 to 352 or telehealth items 91827 to 91831, 91837 to 91839, 92437, 92455 to 92460).

Whilst Medicare rebates provide for a total of 8 Allied Health assessment services per patient per lifetime, an eligible Allied Health practitioner can only provide **up to 4 services** before the need for a review (the type of review can be specified in the referral to the eligible Allied Health professional) by the referring psychiatrist, who must agree to the need for any additional Allied Health services prior to the delivery of the remaining 4 Allied Health assessment services.

Eligible Allied Health Assessment practitioners include:

- Psychologist (MBS item 82000, 93032, 93040)
- Speech Pathologist (MBS item 82005, 93033, 93041)
- Occupational Therapist (82010, 93033, 93041)
- Audiologist, Optometrist, Orthoptist, Physiotherapist (MBS item 82030, 93033, 93041)

Requirements of the referral to Allied Health practitioners

The psychiatrist can refer to multiple eligible Allied Health practitioners concurrently, but a separate referral letter must be provided to each Allied Health practitioner. The referral should specify the intent of the assessment and if appropriate, specify the number of services to be provided. Where the number of sessions is not specified, each Allied Health practitioner can provide up to 4 assessment services without the need for review or agreement to provide further assessment services.

Review requirements following delivery of 4 Allied Health Assessment services

Whilst an eligible Allied Health practitioner has provided 4 assessment services (through items 82000, 82005, 82010, 82030, 93032, 93040, 93033 or 93041) and considers additional assessment services are required, they must ensure the referring psychiatrist undertakes a review. If the type of review is not specified by the referring psychiatrist an acceptable means of review includes: a case conference, phone call, written correspondence, secure online messaging exchange or attendance of the patient with the referring psychiatrist.

Inter-disciplinary Allied Health referral

Eligible Allied Health practitioners are also able to make inter-disciplinary referrals to other eligible Allied Health practitioners as clinically necessary to assist with the formulation of the diagnosis or contribute to the treatment and management plan. Inter-disciplinary referrals must be undertaken in consultation and agreement with the referring psychiatrist. Whilst they do not require the need for an attendance with the patient (face-to-face or telehealth) by the referring psychiatrist, they do require an agreement from the referring psychiatrist. This can be undertaken (but is not limited to) an exchange by phone, written communication or secure online messaging.

Contribution to the Treatment and Management Plan through Allied Health referral

In addition to referring to Allied Health practitioners for assistance with formulating a diagnosis, once a psychiatrist makes a complex neurodevelopmental disorder diagnosis, the psychiatrist may require the contribution of an eligible Allied Health practitioner to assist with the development of the Treatment and Management plan (before billing item 289 or 92434).

MBS items 82000, 82005, 82010, 82030, 93032, 93033, 93040 or 93041 provide a dual function for this purpose. It is important to note that the service limit of a total of 8 services per patient per lifetime apply regardless of whether the items are used for assistance with diagnosis or contribution to the treatment and management plan, and the referring psychiatrist should be mindful of this when referring to eligible Allied Health practitioners.

Development of the Treatment and Management Plan

Once the psychiatrist has made a diagnosis of a complex NDD, to complete the item requirements of item 289 or 92434 they must develop a treatment and management plan which includes:

- Written documentation of the patient's confirmed diagnosis of a complex neurodevelopmental disorder, including any findings of assessments performed (which assisted with the formulation of the diagnosis or contributed to the treatment and management plan)
- A risk assessment which means assessment of:
 - the risk to the patient of a contributing co-morbidity and
 - environmental, physical, social and emotional risk factors that may apply to the patient or to another individual.
- Treatment options which include:
 - Recommendations using a biopsychosocial model
 - Identify major treatment goals and important milestones and objectives
 - Recommendation and referral for treatment services provided by eligible Allied Health practitioners (where relevant) and who should provide this, specifying number of treatments recommended (to a maximum of 20 treatment services)
 - Indications for review or episodes requiring escalation of treatment strategies
- Documenting the Treatment and Management plan and providing a copy to the referring medical practitioner and relevant Allied Health practitioner/s.

Referral for Allied Health Treatment services

Once a treatment and management plan is in place (after item 289 or 92434 has been claimed) the psychiatrist can refer the individual to eligible Allied Health practitioners for the provision of treatment services. Treatment services address the functional impairments identified through the comprehensive medical assessment which are outlined in the treatment and management plan. Treatment services focus on interventions to address developmental delays/disabilities or impairments.

Eligible Allied Health treatment practitioners include:

- Psychologist (MBS items 82015, 93035, 93043)
- Speech Pathologist (MBS items 82020, 93036, 93044)
- Occupational Therapist (MBS items 82025, 93036, 93044)
- Audiologist, Optometrist, Orthoptist, Physiotherapist (MBS items 82035, 93036, 93044)

A total of 20 Allied Health Treatment services per patient per lifetime are available through the MBS, which may consist of any combination of items 82015, 82020, 82025 or 82035 or equivalent telehealth items. Whilst the psychiatrist can refer to multiple eligible Allied Health practitioners concurrently, a separate referral letter must be provided to each Allied Health practitioner.

The referral should specify the goals of the treatment and if appropriate, specify the number of services to be provided. It is the responsibility of the referring psychiatrist to allocate the number of treatment services (up to a maximum of 10 services per course of treatment) in keeping with the individual's treatment and management plan.

It is important to note, that a benefit will not be paid for the MBS Allied Health Treatment services unless the pre-requisite items (289 or 92434) have been processed through the Medicare claiming system.

On the completion of a “course of treatment” (specified by the referring psychiatrist, up to maximum of 10 services), the eligible Allied Health practitioner must provide a written report to the referring psychiatrist, which should include information on the treatment provided, recommendations for future management of the individual’s disorder and any advice to caregivers (such as parents, carers, school teachers). This written report will inform the referring psychiatrist’s decision to refer for further treatment services. Where subsequent courses of treatment after the initial 10 services are required (up to a maximum of 20 services per patient per lifetime) a new referral is required.

Inconclusive assessment:

Where a patient does not meet the diagnostic threshold of a complex neurodevelopmental disorder and where ongoing medical management is required, patients can be managed through psychiatry attendance items 300-308, 310, 312, 314, 316, 318 or telehealth equivalent items 91827-91831 or 91837-91839.

Examples include where:

- Neurodevelopment assessment is incomplete or inconclusive
- Neurodevelopmental impairment is present in fewer than two domains
- Neurodevelopmental impairment is present in two or more domains, but individuals do not require sufficient support to meet criteria
- Comprehensive, age-appropriate neurodevelopmental assessment is impossible or unavailable (e.g. in infants or young children- particularly those under 6 years of age)

These individuals may be considered “at risk of a complex neurodevelopmental” and require follow-up and reassessment in the future.

AN.0.73 Attendance services for eligible disabilities

Intention and eligibility of this service under item 139 and telehealth equivalent item 92142

Items 139 or telehealth equivalent item 92142 are intended for diagnosis and treatment for patients under 25 years of age with an eligible disability by a general practitioner.

Definition of Eligible Disabilities is found AR.29.1

The intention of this service is to provide access to treatment, through the development of a treatment and management plan by a general practitioner, for individuals under 25 years of age, diagnosed an eligible disability. The development of the treatment and management plan, follows a comprehensive medical assessment, and provides the opportunity to refer to eligible Allied Health practitioners for up to a total of 20 MBS treatment services per patient’s lifetime (items 82015, 82020, 82015, 82035, 93035, 93036, 93043 or 93044). This item is claimable once in a patient’s lifetime.

Diagnostic Assessment:

Early identification of, and intervention for, individuals with eligible disabilities is important in promoting positive longer term outcomes. Symptoms can cause clinically significant impairment in social, occupational or other important areas of functioning.

The assessment and diagnosis of an eligible disability should be evaluated in the context of both a physical and developmental assessment. The GP may require a number of separate attendances (through usual time-tiered or subsequent attendance items 3 to 51 or telehealth items 91790, 91800 to 91802, 91890 and 91891) to complete a comprehensive accurate assessment and formulate a diagnosis, exclude other disorders or assess for co-occurring conditions.

Multi-disciplinary assistance with assessment and/or contribution to the treatment and management plan:

Depending on a range of factors, not limited to the patient's age and nature of suspected disabilities, the GP may require a multi-disciplinary approach to complete a comprehensive accurate assessment and formulate a diagnosis.

Where the GP determines the patient requires additional assessments to formulate a diagnosis, through the assistance of an Allied Health practitioner, they are able to refer the patient to an eligible Allied Health provider from standard attendance items 3 to 51 or telehealth items 91790, 91800 to 91802, 91890 and 91891.

Whilst Medicare rebates provide for a total of 8 Allied Health assessment services per patient per lifetime, an eligible Allied Health practitioner can only provide **up to 4 services** before the need for a review (the type of review can be specified in the referral to the eligible Allied Health professional) by the referring GP, who must agree to the need for any additional Allied Health services prior to the delivery of the remaining 4 Allied Health assessment services.

Eligible Allied Health Assessment practitioners include:

- Psychologist (MBS item 82000, 93032, 93040)
- Speech Pathologist (MBS item 82005, 93033, 93041)
- Occupational Therapist (82010, 93033, 93041)
- Audiologist, Optometrist, Orthoptist, Physiotherapist (MBS item 82030, 93033, 93041)

Requirements of the referral to Allied Health practitioners

The GP can refer to multiple eligible Allied Health practitioners concurrently, but a separate referral letter must be provided to each Allied Health practitioner. The referral should specify the intent of the assessment and if appropriate, specify the number of services to be provided. Where the number of sessions is not specified, each Allied Health practitioner can provide up to 4 assessment services without the need for review or agreement to provide further assessment services.

Review requirements following delivery of 4 Allied Health Assessment services

Where an eligible Allied Health practitioner has provided 4 assessment services (through items 82000, 82005, 82010, 82030, 93032, 93033, 93040, or 93041) and considers additional assessment services are required, they must ensure the referring GP undertakes a review. If the type of review is not specified by the GP, an acceptable means of review includes: a case conference, phone call, written correspondence, secure online messaging exchange or attendance of the patient with the referring psychiatrist.

Inter-disciplinary Allied Health referral

Eligible Allied Health practitioners are also able to make inter-disciplinary referrals to other eligible Allied Health practitioners as clinically necessary to assist with the formulation of the diagnosis or contribute to the treatment and management plan. Inter-disciplinary referrals must be undertaken in consultation and agreement with the referring GP. Whilst they do not require the need for an attendance with the patient (face-to-face or telehealth) by the referring GP, they do require an agreement from the referring GP. This can be undertaken (but is not limited to) an exchange by phone, written communication or secure online messaging.

Contribution to the Treatment and Management Plan through Allied Health referral

In addition to referring to Allied Health practitioners for assistance with formulating a diagnosis, once the GP makes a diagnosis, the GP may require the contribution of an eligible Allied Health practitioner to assist with the development of the Treatment and Management plan (before billing item 139 or 92142).

MBS items 82000, 82005, 82010, 82030, 93032, 93033, 93040 or 93041 provide a dual function for this purpose. It is important to note that the service limit of a total of 8 services per patient per lifetime apply regardless of whether the items are used for assistance with diagnosis or contribution to the treatment and management plan, and the referring GP should be mindful of this when referring to eligible Allied Health practitioners.

Development of the Treatment and Management Plan

Once the GP has made a diagnosis of an eligible disability, to complete the item requirements of item 139 or 92142 they must develop a treatment and management plan which includes:

- Written documentation of the patient’s confirmed diagnosis of an eligible disability, including any findings of assessments performed (which assisted with the formulation of the diagnosis or contributed to the treatment and management plan)
- A risk assessment which means assessment of:
 - the risk to the patient of a contributing co-morbidity and
 - environmental, physical, social and emotional risk factors that may apply to the patient or to another individual.
- Treatment options which:
 - Recommendations using a biopsychosocial model
 - Identify major treatment goals and important milestones and objectives
 - Recommendation and referral for treatment services provided by eligible Allied Health practitioners (where relevant) and who should provide this, specifying number of treatments recommended (to a maximum of 20 treatment services)
 - Indications for review or episodes requiring escalation of treatment strategies
- Documenting the Treatment and Management plan and providing a copy to relevant Allied Health practitioner/s.

Referral for Allied Health Treatment services

Once a treatment and management plan is in place (after item 139 or 92142 has been claimed) the GP can refer the individual to eligible Allied Health practitioners for the provision of treatment services. Treatment services address the functional impairments identified through the comprehensive medical assessment which are outlined in the treatment and management plan. Treatment services focus on interventions to address developmental delays/disabilities or impairments.

Eligible Allied Health treatment practitioners include:

- Psychologist (MBS items 82015, 93035, 93043)
- Speech Pathologist (MBS items 82020, 93036, 93044)
- Occupational Therapist (MBS items 82025, 93036, 93044)
- Audiologist, Optometrist, Orthoptist, Physiotherapist (MBS items 82035, 93036, 93044)

A total of 20 Allied Health Treatment services per patient per lifetime are available through the MBS, which may consist of any combination of items 82015, 82020, 82025 or 82035 or equivalent telehealth items. Whilst the GP can refer to multiple eligible Allied Health practitioners concurrently, a separate referral letter must be provided to each Allied Health practitioner.

The referral should specify the goals of the treatment and if appropriate, the specify the number of services to be provided. It is the responsibility of the referring psychiatrist to allocate the number of treatment services (up to a maximum of 10 services per course of treatment) in keeping with the individual’s treatment and management plan.

It is important to note, that a benefit will not be paid for the MBS Allied Health Treatment services unless the pre-requisite items (139 or 92142) have been processed through the Medicare claiming system.

On the completion of a “course of treatment” (specified by the referring GP, up to maximum of 10 services), the eligible Allied Health practitioner must provide a written report to the referring GP, which should include information on the treatment provided, recommendations on future management of the individual’s disorder and any advice to caregivers (such as parents, carers, schoolteachers). This written report will inform the referring GPs decision to refer for further treatment services. Where subsequent courses of treatment after the initial 10 services are required (up to a maximum of 20 services per patient per lifetime) a new referral is required.

AN.0.74 General Attendance Items - General Practitioners

⁴Patients enrolled in MyMedicare only

AN.1.1 Patients Usual Medical Practitioner

It is a legislative requirement that GPs and other medical practitioners working in general practice must only perform a telehealth or telephone service where they have an established clinical relationship with the patient.

An established clinical relationship is defined as:

- the medical practitioner who performs the service has provided a face-to-face service to the patient in the last 12 months; or
- the medical practitioner who performs the service is located at a medical practice, and the patient has a face-to-face service arranged by that practice in the last 12 months. This can be a service performed by another doctor located at the practice, or a service performed by another health professional located at the practice (such as a practice nurse or Aboriginal and Torres Strait Islander health worker); or
- the medical practitioner who performs the service is a participant in the Approved Medical Deputising Service (AMDS) program, and the Approved Medical Deputising Service provider (AMDS provider) that employs the medical practitioner has a formal agreement with a medical practice that has provided at least one face-to-face service to the patient in the last 12 months.

This requirement does not apply to a person who is under the age of 12 months, a person who is experiencing homelessness, a person who has tested positive for COVID-19, or person who is experiencing acute respiratory

symptoms and who meets the PBS criteria for COVID-19 antiviral therapy (until 30 June 2024), or people living in a natural disaster affected area, a person receiving an urgent after-hours service (in unsociable hours), or a person who receives the service from a medical practitioner located at an Aboriginal Medical Service or an Aboriginal Community Controlled Health Service.

person who is experiencing homelessness means when a person does not have suitable accommodation alternatives they are considered homeless if their current living arrangement:

- (a) is in a dwelling that is inadequate; or
- (b) has no tenure, or if their initial tenure is short and not extendable; or
- (c) does not allow them to have control of, and access to space for social relations.

person who has tested positive for COVID-19 means a patient who has received a positive COVID-19 test result within the last 7 days, confirmed by either:

- (a) Laboratory testing (PCR); or
- (b) A COVID-19 rapid antigen self test (RAT) which has been approved for supply in Australia by the Therapeutic Goods Administration.

person who meets the PBS criteria for COVID-19 antiviral therapy means a person who is:

- (a) 70 years of age or older;
- (b) 50 years of age or older with at least two additional risk factors;
- (c) of First Nations descent, who is 30 years of age or older and with at least one additional risk factor; or
- (d) 18 years of age or older and who is moderately to severely immunocompromised

people living in a natural disaster affected area is defined as a State or Territory local government area which is currently declared as a natural disaster area by a State or Territory Government until that declaration is deemed to have expired.

AN.2.1 Limitation of items - certain attendances by diagnostic imaging providers Consultations rendered by specialist radiologists

Medicare benefits are not payable for items 52, 53, 54, 57, 151, 104 and 105 when claimed by a specialist radiologist in association with any of the following diagnostic imaging items:

- (a) an item in Subgroup 6 of Group I1;
- (b) an item in any of Subgroups 1 to 7 of Group I3;
- (c) items 58900 and 58903 in Subgroup 8 of Group I3; and
- (d) item 59103 in Subgroup 9 of Group I3.

Consultations rendered in association with magnetic resonance imaging (MRI) services - Group I5

Medicare benefits are not payable for items 52, 53, 54, 57, 151, 104 and 105 in association with MRI services unless the providing practitioner determines that the consultation is necessary for the treatment or management of the patient's condition.

The restrictions above apply when these services are performed by the same practitioner, on the same patient, on the same day.

AN.3.1 Subsequent attendance items

The current regulations prohibit the payment of Medicare benefits for subsequent attendance items 105, 116, 119, 386, 2806, 2814, 3010, 3014, 6009 to 6015, 6019, 6052, 16404, 91823, 91825, 91826, 91833, 91836, 92611, 92612, 92613 and 92618 if a claim is made for any Group T8 item (30001-50952) with a schedule fee of equal to or greater than \$330.20 on the same day. Non-compliance with the regulations can result in a referral to an appropriate regulatory body – such as the Professional Services Review. Subsequent attendance items (111, 117, and 120) can only be claimed on the same day as Group T8 items with schedule fees of equal to or greater than \$330.20, if the procedure is urgent and not able to be predicted prior to the commencement of the attendance. It is therefore expected that these items would be claimed only in exceptional circumstances.

Subsequent attendance item 115 can only be claimed, if the nature of the attendance was not able to be predicted prior to the procedure.

Item 115 should not be claimed if the consultation relates to the booked Group T8 procedure. Any consultation component related to the booked Group T8 procedure is considered to be covered under the fee for that procedure, if the Schedule fee is \$330.20 or more.

Should a component of the consultation be unrelated to the booked T8 procedure and it is considered by the medical practitioner that it would be a clinical risk to defer this consultation then item 115 could be claimable.

It would not be appropriate to claim item 115 if a patient attends for the booked operation, and prior to surgery an examination is conducted relevant to performing that procedure; together with a discussion of the outcomes and aftercare. If the consultation extends beyond this; including the development of a management plan involving a broader diagnosis, prognosis, associated treatments and follow-up; then it could be appropriate to claim item 115.

In claiming item 115, the specialist or consultant physician must be satisfied that it would be a clinical risk to defer the consultation for the patient at this time.

Where item 115 is claimed, the records for the consultation should clearly identify why the consultation is considered necessary for the patient including the clinical risk to defer the consultation.

AN.7.1 Prescribed Medical Practitioners

A prescribed medical practitioner is a medical practitioner:

- (a) who is not a general practitioner (see [GN.4.13](#)), specialist or consultant physician, and
- (b) who:

- a. is registered under section 3GA of the Act and is practising during the period, and in the location in respect of which the medical practitioner is registered, and insofar as the circumstances specified for paragraph 19AA(3)(b) of the Act apply; or
- b. is covered by an exemption under subsection 19AB(3) of the Act; or
- c. first became a medical practitioner before 1 November 1996.

AN.7.2 GENERAL ATTENDANCE ITEMS – MEDICAL PRACTITIONERS AND PRESCRIBED MEDICAL PRACTITIONERS

GENERAL ATTENDANCE ITEMS – MEDICAL PRACTITIONERS¹ (MPs) AND PRESCRIBED MEDICAL PRACTITIONERS² (PMPs)

¹MP items can be claimed by all MPs who are not general practitioners.

²PMP items can be claimed by medical practitioners that are not general practitioners, specialists or consultant physicians.

³MM means “Modified Monash”. The Modified Monash Model is how the department defines whether a location is metropolitan, rural, remote or very remote. The model measures remoteness and population size on a scale of Modified Monash (MM) categories MM 1 to MM 7. MM 1 is a major city and MM 7 is very remote.

⁴Available to patients enrolled in MyMedicare only.

AN.7.3 Prescribed Medical Practitioner Prolonged Attendance in Treatment of a Critical Condition (Items 214 to 220)

The conditions to be met before services covered by items 214-220 attract benefits are:-

- (i) the patient must be in imminent danger of death;
- (ii) if the personal attendance is not continuous, the occasion on which the service is provided is taken to be the total time of the attendance; and
- (iii) if personal attendance on a single patient is provided by 1 or more prescribed medical practitioners (see [note AN.7.1](#)) concurrently, each practitioner may claim an attendance fee.

Note: Medicare benefits are not payable for the issue of a death certificate, although an attendance on a patient at which it is determined that life is extinct can be claimed under the appropriate attendance item. The outcome of the attendance may be that a death certificate is issued, however, Medicare benefits are only payable for the attendance component of the service.

AN.7.4 Prescribed Medical Practitioner Family Group Therapy (Items 221, 222 and 223)

These items refer to family group therapy supervised by prescribed medical practitioners (see [note AN.7.1](#)). To be used, these items require that a formal intervention with a specific therapeutic outcome, such as improved family function and/or communication, is undertaken. Other types of group attendances do not attract benefits. It should be noted that only one fee applies in respect of each group of patients.

Telephone consultations, letters of advice by prescribed medical practitioners, the issue of repeat prescriptions when the patient is not in attendance, post mortem examinations, the issue of death certificates, cremation certificates, counselling of relatives (note - items 348, 350 and 352 are not counselling services), group attendances (other than group attendances covered by items 170, 171, 172, 221, 222, 223, 342, 344 and 346) such as group counselling, health education, weight reduction or fitness classes do not qualify for benefit.

Although Medicare benefits are not payable for the issue of a death certificate, an attendance on a patient at which it is determined that life is extinct can be claimed under the appropriate attendance item. The outcome of the attendance may be that a death certificate is issued, however, Medicare benefits are only payable for the attendance component of the service.

AN.7.5 Prescribed Medical Practitioner Health Assessments (Items 224 to 227)

There are four time-based health assessment items, consisting of brief, standard, long and prolonged consultations.

Brief Health Assessment (MBS Item 224)

A brief health assessment is used to undertake simple health assessments. The health assessment should take no more than 30 minutes to complete.

Standard Health Assessment (MBS Item 225)

A standard health assessment is used for straightforward assessments where the patient does not present with complex health issues but may require more attention than can be provided in a brief assessment. The assessment lasts more than 30 minutes but takes less than 45 minutes.

Long Health Assessment (MBS Item 226)

A long health assessment is used for an extensive assessment, where the patient has a range of health issues that require more in-depth consideration, and longer-term strategies for managing the patient's health may be necessary. The assessment lasts at least 45 minutes but less than 60 minutes.

Prolonged Health Assessment (MBS Item 227)

A prolonged health assessment is used for a complex assessment of a patient with significant, long-term health needs that need to be managed through a comprehensive preventive health care plan. The assessment takes 60 minutes or more to complete.

Prescribed medical practitioners (see [note AN.7.1](#)) may select one of the MBS health assessment items to provide a health assessment service to a member of any of the target groups listed in the table below. The health assessment item that is selected will depend on the time taken to complete the health assessment service. This is determined by the complexity of the patient's presentation and the specific requirements that have been established for each target group eligible for health assessments.

MBS Items 224, 225, 226 and 227 may be used to undertake a health assessment for the following target groups:

Target Group	Frequency of Service
A type 2 diabetes risk evaluation for people aged 40-49 years (inclusive) with a high risk of developing type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool	Once every three years to an eligible patient
A health assessment for people aged 45-49 years (inclusive) who are at risk of developing chronic disease	Once only to an eligible patient
A health assessment for people aged 75 years and older	Provided annually to an eligible patient
A comprehensive medical assessment for permanent residents of residential aged care facilities	Provided annually to an eligible patient
A health assessment for people with an intellectual disability	Provided annually to an eligible patient
A health assessment for refugees and other humanitarian entrants	Once only to an eligible patient
A health assessment for former serving members of the Australian Defence Force	Once only to an eligible patient

Frequency of service

The frequency with which patients in different population groups may receive a health assessment is described in the table above. Patients may not have more services than they are eligible for under the frequency provisions that apply to specific types of health assessment.

Important Note: patients may receive services using MBS items 224 to 227 and 701 to 707. However, once a patient has received a service using an MBS item from **either** group of MBS health assessment items, the patient may not receive another MBS health assessment until the appropriate time period has expired. In the case of health assessment services that are provided only once in a patient's lifetime, the patient would not be eligible for another health assessment.

The only exception is patients who are eligible for more than one type of health assessment (that is, the patient belongs to more than one eligible patient category). However, the frequency of service restrictions also apply to these services.

If a prescribed medical practitioner is not sure if a patient is eligible for an MBS health assessment service, they may telephone Services Australia on 132011, with the patient present, to check eligibility.

Guidance Notes

A health assessment means the assessment of a patient's health and physical, psychological and social function and consideration of whether preventive health care and education should be offered to the patient, to improve that patient's health and physical, psychological and social function.

Health assessments are not available to people who are in-patients of a hospital or care recipients in a residential aged care facility (with the exception of a comprehensive medical assessment provided to a permanent resident of a residential aged care facility).

Before a health assessment is commenced, the patient (and/or the patient's parent(s), carer or representative, as appropriate) must be given an explanation of the health assessment process and its likely benefits. The patient must be asked whether they consent to the health assessment being performed. In cases where the patient is not capable of giving consent, consent must be given by the patient's parent(s), carer or representative. Consent to the health assessment must be noted in the patient's records.

A health assessment must include the following elements:

- a. information collection, including taking a patient history and undertaking or arranging examinations and investigations as required;
- b. making an overall assessment of the patient;
- c. recommending appropriate interventions;
- d. providing advice and information to the patient;
- e. keeping a record of the health assessment, and offering the patient a written report about the health assessment, with recommendations about matters covered by the health assessment; and
- f. offering the patient's carer (if any, and if the prescribed medical practitioner considers it appropriate and the patient agrees) a copy of the report or extracts of the report relevant to the carer.

Restrictions on billing the health assessment items

A health assessment may only be billed by a prescribed medical practitioner.

A health assessment should generally be undertaken by the patient's 'usual doctor'. For the purpose of the health assessment items, 'usual doctor' means the prescribed medical practitioner, or a medical practitioner working in the same medical practice, which has provided the majority of primary health care to the patient over the previous twelve months and/or will be providing the majority of care to the patient over the next twelve months.

A health assessment should not take the form of a health screening service.

MBS health assessment items 224, 225, 226 and 227 must be provided by a prescribed medical practitioner personally attending upon a patient. Suitably qualified health professionals, such as practice nurses or Aboriginal and Torres Strait Islander health practitioners, employed and/or otherwise engaged by a medical practice or health service, may assist prescribed medical practitioners in performing health assessments. Such assistance must be provided in accordance with accepted medical practice and under the supervision of the prescribed medical practitioner. This may include activities associated with:

- information collection; and
- providing patients with information about recommended interventions at the direction of the prescribed medical practitioner.

The prescribed medical practitioner should be satisfied that the assisting health professional has the necessary skills, expertise and training to collect the information required for the health assessment.

Prescribed medical practitioners should not conduct a separate consultation for another health-related issue in conjunction with a health assessment unless it is clinically necessary (ie. the patient has an acute problem that needs to be managed separately from the assessment). The only exception is the comprehensive medical assessment, where, if this health assessment is undertaken during the course of a consultation for another purpose, the health assessment item and the relevant item for the other consultation may both be claimed.

Items 224, 225, 226 and 227 do not apply for services that are provided by any other Commonwealth or State funded services. However, where an exemption under subsection 19(2) of the *Health Insurance Act 1973* has been granted to an Aboriginal Community Controlled Health Service or State/Territory Government health clinic, items 224, 225, 226 and 227 can be claimed for services provided by prescribed medical practitioners salaried by or contracted to, the Service or health clinic. All other requirements of the items must be met.

Item 10990 or 10991 (bulk billing incentives) can be claimed in conjunction with any health assessment, provided the conditions of items 10990 and 10991 are satisfied.

AN.7.6 Prescribed Medical Practitioner Health Assessment Provided as a Type 2 Diabetes Risk Evaluation for People Aged 40-49 Years with a High Risk of Developing Type 2 Diabetes as Determined by the Australian Type 2 Diabetes Risk Assessment Tool

Items 224, 225, 226 and 227 may be used to undertake a type 2 diabetes risk evaluation for people aged 40-49 years (inclusive) with a high risk of developing type 2 diabetes, as determined by the Australian Type 2 Diabetes Risk Assessment Tool.

The aim of this health assessment is to review the factors underlying the 'high risk' score identified by the Australian Type 2 Diabetes Risk Assessment Tool to instigate early interventions, such as lifestyle modification programs, to assist with the prevention of type 2 diabetes.

The Australian Type 2 Diabetes Risk Assessment Tool has been developed to provide a basis for both health professionals and health consumers to assess the risk of type 2 diabetes. It consists of a short list of questions which, when completed, provides a guide to a patient's current level of risk of developing type 2 diabetes. The item scores and risk rating calculations in the tool have been developed using demographic, lifestyle, anthropometric and biomedical data from the 2000 Australian Diabetes, Obesity and Lifestyle baseline survey and the AusDiab 2005 follow-up study.

The Australian Type 2 Diabetes Risk Assessment Tool can be obtained from the Department's [prevention of diabetes web page](#).

Clinical risk factors that the prescribed medical practitioner (see [note AN.7.1](#)) must consider when providing this health assessment include:

- (a) lifestyle, such as smoking, physical inactivity and poor nutrition;
- (b) biomedical risk factors, such as high blood pressure, impaired glucose metabolism and excess weight;
- (c) any relevant recent diagnostic test results; and
- (d) a family history of chronic disease.

The health assessment must include the following:

- (a) evaluating a patient's high risk score, as determined by the Australian Type 2 Diabetes Risk Assessment Tool which has been completed by the patient within a period of 3 months prior to undertaking the health assessment;
- (b) updating the patient's history and undertaking physical examinations and clinical investigations in accordance with relevant guidelines;
- (c) making an overall assessment of the patient's risk factors and of the results of relevant examinations and investigations; and
- (d) initiating interventions, if appropriate, including referral to a lifestyle modification program and follow-up relating to the management of any risk factors identified (further information is available at the Department's [prevention of diabetes web page](#)).

The completion of the Australian Type 2 Diabetes Risk Assessment Tool is mandatory for patient access to this health assessment. The tool can be completed either by the patient or with the assistance of a health professional or practice staff. Patients with a 'high' score result are eligible for the health assessment, and subsequent referral to the subsidised lifestyle modification programs if appropriate (further information is available at the Department's [prevention of diabetes web page](#)).

A health assessment for a type 2 diabetes risk evaluation for people aged 40-49 years with a high risk of developing type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool may only be claimed once every three years by an eligible patient.

AN.7.7 Prescribed Medical Practitioner Health Assessment Provided for People Aged 45-49 Years Who are at Risk of Developing Chronic Disease

Items 224, 225, 226 and 227 may be used to undertake a health assessment for people aged 45-49 years (inclusive) who are at risk of developing chronic disease.

For the purposes of this health assessment, a patient is at risk of developing a chronic disease if, in the clinical judgement of the attending prescribed medical practitioner (see [note AN.7.1](#)), a specific risk factor for chronic disease is identified.

Risk factors that the prescribed medical practitioner can consider include, but are not limited to:

- (a) lifestyle risk factors, such as smoking, physical inactivity, poor nutrition or alcohol use;
- (b) biomedical risk factors, such as high cholesterol, high blood pressure, impaired glucose metabolism or excess weight; or
- (c) family history of a chronic disease.

A chronic disease or condition is one that has been or is likely to be present for at least six months, including but not limited to asthma, cancer, cardiovascular illness, diabetes mellitus, mental health conditions, arthritis and musculoskeletal conditions.

If, after receiving this health assessment, a patient is identified as having a high risk of type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool, the prescribed medical practitioner may refer that person to a subsidised lifestyle modification program, along with other possible strategies to improve the health status of the patient (further information is available at the Department's [prevention of diabetes web page](#)).

The Australian Type 2 Diabetes Risk Assessment Tool can be obtained from the Department's [prevention of diabetes web page](#).

A health assessment for people aged 45-49 years who are at risk of developing chronic disease may only be claimed once by an eligible patient.

AN.7.8 Prescribed Medical Practitioner Health Assessment Provided for People Aged 75 Years and Older

Items 224, 225, 226 and 227 may be used to undertake a health assessment for people aged 75 years and older.

A health assessment for people aged 75 years and older is an assessment of a patient's health and physical, psychological and social function for the purpose of initiating preventive health care and/or medical interventions as appropriate.

This health assessment must include:

- (a) measurement of the patient's blood pressure, pulse rate and rhythm;
 - (b) an assessment of the patient's medication;
 - (c) an assessment of the patient's continence;
 - (d) an assessment of the patient's immunisation status for influenza, tetanus and pneumococcus;
 - (e) an assessment of the patient's physical function, including the patient's activities of daily living, and whether or not the patient has had a fall in the last 3 months;
 - (f) an assessment of the patient's psychological function, including the patient's cognition and mood; and
 - (g) an assessment of the patient's social function, including the availability and adequacy of paid and unpaid help, and whether the patient is responsible for caring for another person.
- (h) A health assessment for people aged 75 years and older may be claimed once every twelve months by an eligible patient.

AN.7.9 Prescribed Medical Practitioner Health Assessment Provided as a Comprehensive Medical Assessment for Residents of Residential Aged Care Facilities

Items 224, 225, 226 and 227 may be used to undertake a comprehensive medical assessment of a resident of a residential aged care facility.

This health assessment requires assessment of the resident's health and physical and psychological function, and must include:

- (a) making a written summary of the comprehensive medical assessment;
- (b) developing a list of diagnoses and medical problems based on the medical history and examination;
- (c) providing a copy of the summary to the residential aged care facility; and
- (d) offering the resident a copy of the summary.

A residential aged care facility is a facility in which residential care services, as defined in the *Aged Care Act 1997*, are provided. This includes facilities that were formerly known as nursing homes and hostels. A person is a resident of a residential aged care facility if the person has been admitted as a permanent resident of that facility.

This health assessment is available to new residents on admission into a residential aged care facility. It is recommended that new residents should receive the health assessment as soon as possible after admission, preferably within six weeks following admission into a residential aged care facility.

A health assessment for the purpose of a comprehensive medical assessment of a resident of a residential aged care facility may be claimed by an eligible patient:

- (a) on admission to a residential aged care facility, provided that a comprehensive medical assessment has not already been provided in another residential aged care facility within the previous 12 months; and
- (b) at 12-month intervals thereafter.

AN.7.10 Prescribed Medical Practitioner Health Assessment Provided for People with an Intellectual Disability

Items 224, 225, 226 and 227 may be used to undertake a health assessment for people with an intellectual disability.

A person is considered to have an intellectual disability if they have significantly sub-average general intellectual functioning (two standard deviations below the average intelligence quotient [IQ]) and would benefit from assistance with daily living activities. Where prescribed medical practitioners (see [note AN.7.1](#)) wish to confirm intellectual disability and a patient's need for assistance with activities of daily living, they may seek verification from a paediatrician registered to practice in Australia (if the patient is a child) or from a government-provided or funded disability service that has assessed the patient's intellectual function.

The health assessment provides a structured clinical framework for prescribed medical practitioners to comprehensively assess the physical, psychological and social function of patients with an intellectual disability and to identify any medical intervention and preventive health care required. The health assessment must include the following items as relevant to the patient or the patient's representative:

- (a) Check dental health (including dentition);
- (b) Conduct aural examination (arrange formal audiometry if audiometry has not been conducted within 5 years);
- (c) Assess ocular health (arrange review by an ophthalmologist or optometrist if a comprehensive eye examination has not been conducted within 5 years);
- (d) Assess nutritional status (including weight and height measurements) and a review of growth and development;
- (e) Assess bowel and bladder function (particularly for incontinence or chronic constipation);
- (f) Assess medications (including non-prescription medicines taken by the patient, prescriptions from other doctors, medications prescribed but not taken, interactions, side effects and review of indications);
 - Advise carers of the common side effects and interactions.
 - Consider the need for a formal medication review.
- (g) Check immunisation status, including influenza, tetanus, hepatitis A and B, Measles, Mumps and Rubella (MMR) and pneumococcal vaccinations;
- (h) Check exercise opportunities (with the aim of moderate exercise for at least 30 minutes per day);
- (i) Check whether the support provided for activities of daily living adequately and appropriately meets the patient's needs, and consider formal review if required;
- (j) Consider the need for breast examination, mammography, cervical screening, testicular examination, lipid measurement and prostate assessment as for the general population;
- (k) Check for dysphagia and gastro-oesophageal disease (especially for patients with cerebral palsy), and arrange for investigation or treatment as required;
- (l) Assess risk factors for osteoporosis (including diet, exercise, Vitamin D deficiency, hormonal status, family history, medication fracture history) and arrange for investigation or treatment as required;

- (m) For patients diagnosed with epilepsy, review of seizure control (including anticonvulsant drugs) and consider referral to a neurologist at appropriate intervals;
- (n) Check for thyroid disease at least every two years (or yearly for patients with Down syndrome);
- (o) For patients without a definitive aetiological diagnosis, consider referral to a genetic clinic every 5 years;
- (p) Assess or review treatment for co-morbid mental health issues;
- (q) Consider timing of puberty and management of sexual development, sexual activity and reproductive health; and
- (r) Consider whether there are any signs of physical, psychological or sexual abuse.

A health assessment for people with an intellectual disability may be claimed once every twelve months by an eligible patient.

AN.7.11 Prescribed Medical Practitioner Health Assessment Provided for Refugees and Other Humanitarian Entrants

Items 224, 225, 226 and 227 may be used to undertake a health assessment for refugees and other humanitarian entrants.

The purpose of this health assessment is to introduce new refugees and other humanitarian entrants to the Australian primary health care system, as soon as possible (within 12 months) of their arrival in Australia.

The health assessment applies to humanitarian entrants who reside in Australia and are eligible to access Medicare services, including Refugees, Special Humanitarian Program, Temporary Humanitarian and Protection Program entrants with the following relevant visas granted under the *Migration Act 1958*:

Offshore Refugee Category including:

- (a) Subclass 200 (Refugee) visa;
- (b) Subclass 201 (In-Country Special Humanitarian) visa;
- (c) Subclass 203 (Emergency Rescue) visa; and
- (d) Subclass 204 (Woman at Risk) visa.

Offshore - Special Humanitarian Program:

- (e) Subclass 202 (Global Special Humanitarian) visa.

Offshore - Temporary Humanitarian Visas (THV) including:

- (f) Subclass 070 Bridging (Removal Pending) visa;
- (g) Subclass 786 (Temporary (Humanitarian Concern)) visa; and
- (h) Subclass 790 (Safe Haven Enterprise) visa.

Onshore Protection Program including:

- (i) Subclass 866 (Protection) visa.

Patients are required to provide their prescribed medical practitioner (see [note AN.7.1](#)) with proof of their visa status and date of arrival in Australia. Alternatively, medical practitioners may telephone Services Australia on 132011 to

check the patient's eligibility. The patient must be present with the prescribed medical practitioner at the time that Services Australia is contacted.

The prescribed medical practitioner and the patient can access translator services, through the Commonwealth Government's Translating and Interpreting Service (TIS) and the Doctors Priority Line. To be eligible for the fee-free TIS and Doctors Priority Line, medical practitioners must be in a general practice providing Medicare services to patients who are permanent residents in Australia and do not speak English.

A health assessment for refugees and other humanitarian entrants may only be claimed once by an eligible patient.

AN.7.12 Prescribed Medical Practitioner One-Off Veterans' Health Check

Items 224, 225, 226 and 227 may be used to undertake a health assessment for a former serving member of the Australian Defence Force, including a former member of permanent and reserve forces.

A health assessment for a former serving member of the Australian Defence Force is an assessment of:

- a patient's physical and psychological health and social function; and
- whether health care, education and other assistance should be offered to the patient to improve their physical, psychological health or social function.

This health assessment must include:

1. a personal attendance by a prescribed medical practitioner (see [note AN.7.1](#)); and
2. taking the patient's history, including the following:
 - i the patient's service with the Australian Defence Force, including service type, years of service, field of work, number of deployments and reason for discharge;
 - ii the patient's social history, including relationship status, number of children (if any) and current occupation;
 - iii the patient's current medical conditions;
 - iv whether the patient suffers from hearing loss or tinnitus;
 - v the patient's use of medication, including medication prescribed by another doctor and medication obtained without a prescription;
 - vi the patient's smoking, if applicable;
 - vii the patient's alcohol use, if applicable;
 - viii the patient's substance use, if applicable;
 - ix the patient's level of physical activity;
 - x whether the patient has bodily pain;
 - xi whether the patient has difficulty getting to sleep or staying asleep;
 - xii whether the patient has psychological distress;
 - xiii whether the patient has posttraumatic stress disorder;
 - xiv whether the patient is at risk of harm to self or others;
 - xv whether the patient has anger problems;

xvi the patient's sexual health;

xvii any other health concerns the patient has.

The assessment must also include the following:

1. measuring the patient's height;
2. weighing the patient and ascertaining, or asking the patient, whether the patient's weight has changed in the last 12 months;
3. measuring the patient's waist circumference;
4. taking the patient's blood pressure;
5. using information gained in the course of taking the patient's history to assess whether any further assessment of the patient's health is necessary;
6. either making the further assessment or referring the patient to another medical practitioner who can make the further assessment;
7. documenting a strategy for improving the patient's health;
8. offering to give the patient a written report of the assessment that makes recommendations for treating the patient including preventive health measures;
9. keeping a record of the assessment.

A prescribed medical practitioner may use the 'Veteran Health Check' as a screening tool for the health assessment. This assessment tool can be viewed on the Department of Veterans' Affairs' website at: <https://www.dva.gov.au/about-us/dva-forms/veteran-health-check-assessment-tool>.

This health assessment may only be claimed once by an eligible patient.

The health assessment must not be performed in conjunction with a separate consultation in relation to the patient unless the consultation is clinically necessary.

The health assessment must be performed by the patient's usual doctor.

AN.7.13 Prescribed Medical Practitioner Health Assessment for an Aboriginal and Torres Strait Islander People (Item 228)

This health assessment is available to all people of Aboriginal and Torres Strait Islander descent and should be used for health assessments for the following age categories:

- An Aboriginal or Torres Strait Islander child who is less than 15 years.
- An Aboriginal or Torres Strait Islander person who is aged between 15 years and 54 years.
- An Aboriginal or Torres Strait Islander older person who is aged 55 years and over.

A health assessment means the assessment of a patient's health and physical, psychological and social function and consideration of whether preventive health care and education should be offered to the patient, to improve that patient's health and physical, psychological and social function.

MBS item 228 must include the following elements:

(a) information collection, including taking a patient history and undertaking examinations and investigations as required;

- (b) making an overall assessment of the patient;
- (c) recommending appropriate interventions;
- (d) providing advice and information to the patient; and
- (e) keeping a record of the health assessment, and offering the patient, and/or patient's carer, a written report about the health assessment with recommendations about matters covered by the health assessment; and
- (f) offering the patient's carer (if any, and if the prescribed medical practitioner [see [note AN.7.1](#)] considers it appropriate and the patient agrees) a copy of the report or extracts of the report relevant to the carer.

If, after receiving this health assessment, a patient who is aged fifteen years and over but under the age of 55 years, is identified as having a high risk of developing type 2 diabetes as determined by the Australian Type 2 Diabetes Risk Assessment Tool, the prescribed medical practitioner may refer that person to a subsidised lifestyle modification program, along with other possible strategies to improve the health status of the patient.

The Australian Type 2 Diabetes Risk Assessment Tool can be obtained from <https://www.health.gov.au/resources/apps-and-tools/the-australian-type-2-diabetes-risk-assessment-tool-ausdrisk>.

A health assessment may only be claimed by a prescribed medical practitioner.

A health assessment should generally be undertaken by the patient's 'usual doctor'. For the purpose of the health assessment, "usual doctor" means the prescribed medical practitioner, or a medical practitioner working in the same medical practice, which has provided the majority of primary health care to the patient over the previous twelve months and/or will be providing the majority of care to the patient over the next twelve months.

The health assessment for Aboriginal and Torres Strait Islander People is not available to people who are in-patients of a hospital or care recipients in a residential aged care facility.

A health assessment should not take the form of a health screening service (see [General Explanatory Note GN.13.33](#)).

MBS health assessment item 228 must be provided by a prescribed medical practitioner personally attending upon a patient. Suitably qualified health professionals, such as practice nurses, Aboriginal health workers or Aboriginal and Torres Strait Islander health practitioners employed and/or otherwise engaged by a general practice or health service, may assist prescribed medical practitioners in performing this health assessment. Such assistance must be provided in accordance with accepted medical practice and under the supervision of the prescribed medical practitioner. This may include activities associated with:

- information collection; and
- providing patients with information about recommended interventions at the direction of the prescribed medical practitioner.

The prescribed medical practitioner should be satisfied that the assisting health professional has the necessary skills, expertise and training to collect the information required for the health assessment.

Prescribed medical practitioners should not conduct a separate consultation in conjunction with a health assessment unless it is clinically necessary (ie. the patient has an acute problem that needs to be managed separately from the assessment).

Item 228 does not apply for services that are provided by any other Commonwealth or State funded services. However, where an exemption under subsection 19(2) of the *Health Insurance Act 1973* has been granted to an Aboriginal Community Controlled Health Service or State/Territory Government health clinic, item 228 can be claimed for services provided by prescribed medical practitioners salaried by or contracted to, the Service or health clinic. All requirements of the item must be met.

Item 10990 or 10991 (bulk billing incentives) can be claimed in conjunction with any health assessment provided to an Aboriginal and Torres Strait Islander person, provided the conditions of items 10990 and 10991 are satisfied.

An eligible patient may only receive the Health Assessment for Aboriginal and Torres Strait Islander People using either item 228 or item 715 once in a 9-month period.

AN.7.14 Prescribed Medical Practitioner Health Assessment for an Aboriginal and Torres Strait Islander Child less than 15 years of age (Item 228)

An Aboriginal and Torres Strait Islander child health assessment must include:

- a. a personal attendance by a prescribed medical practitioner (see [note AN.7.1](#));
- b. taking the patient's medical history, including the following:
 - i. mother's pregnancy history;
 - ii. birth and neo-natal history;
 - iii. breastfeeding history;
 - iv. weaning, food access and dietary history;
 - v. physical activity;
 - vi. previous presentations, hospital admissions and medication usage;
 - vii. relevant family medical history;
 - viii. immunisation status;
 - ix. vision and hearing (including neonatal hearing screening);
 - x. development (including achievement of age appropriate milestones);
 - xi. family relationships, social circumstances and whether the person is cared for by another person;
 - xii. exposure to environmental factors (including tobacco smoke);
 - xiii. environmental and living conditions;
 - xiv. educational progress;
 - xv. stressful life events;
 - xvi. mood (including incidence of depression and risk of self-harm);
 - xvii. substance use;
 - xviii. sexual and reproductive health; and
 - xix. dental hygiene (including access to dental services).
- c. examination of the patient, including the following:
 - i. measurement of height and weight to calculate body mass index and position on the growth curve;
 - ii. newborn baby check (if not previously completed);

- iii. vision (including red reflex in a newborn);
 - iv. ear examination (including otoscopy);
 - v. oral examination (including gums and dentition);
 - vi. trachoma check, if indicated;
 - vii. skin examination, if indicated;
 - viii. respiratory examination, if indicated;
 - ix. cardiac auscultation, if indicated;
 - x. development assessment, if indicated, to determine whether age appropriate milestones have been achieved;
 - xi. assessment of parent and child interaction, if indicated; and
 - xii. other examinations in accordance with national or regional guidelines or specific regional needs, or as indicated by a previous child health assessment.
- d. undertaking or arranging any required investigation, considering the need for the following tests, in particular:
 - i. haemoglobin testing for those at a high risk of anaemia; and
 - ii. audiometry, if required, especially for those of school age
 - e. assessing the patient using the information gained in the child health check; and
 - f. making or arranging any necessary interventions and referrals, and documenting a simple strategy for the good health of the patient.

AN.7.15 Prescribed Medical Practitioner Health Assessment for an Aboriginal and Torres Strait Islander Adult Aged 15 Years to 54 Years (Item 228)

An Aboriginal and Torres Strait Islander adult health assessment must include:

- a. a personal attendance by a prescribed medical practitioner (see [note AN.7.1](#));
- b. taking the patient's medical history, including the following:
 - i. current health problems and risk factors;
 - ii. relevant family medical history;
 - iii. medication usage (including medication obtained without prescription or from other doctors);
 - iv. immunisation status, by reference to the appropriate current age and sex immunisation schedule;
 - v. sexual and reproductive health;
 - vi. physical activity, nutrition and alcohol, tobacco or other substance use;
 - vii. hearing loss;
 - viii. mood(including incidence of depression and risk of self-harm);
- ix. family relationships and whether the patient is a carer, or is cared for by another person; and

- x. vision
- c. examination of the patient, including the following:
 - i. measurement of the patient's blood pressure, pulse rate and rhythm;
 - ii. measurement of height and weight to calculate body mass index and, if indicated, measurement of waist circumference for central obesity;
 - iii. oral examination (including gums and dentition);
 - iv. ear and hearing examination (including otoscopy and, if indicated, a whisper test); and
 - v. urinalysis (by dipstick) for proteinuria;
 - vi. eye examination;
- d. undertaking or arranging any required investigation, considering the need for the following tests, in particular, (in accordance with national or regional guidelines or specific regional needs):
 - i. fasting blood sugar and lipids (by laboratory based test on venous sample) or, if necessary, random blood glucose levels;
 - ii. cervical screening;
 - iii. examination for sexually transmitted infection (by urine or endocervical swab for chlamydia and gonorrhoea, especially for those aged from 15 to 35years); and
 - iv. mammography, if eligible (by scheduling appointments with visiting services or facilitating direct referral).
- e. assessing the patient using the information gained in the adult health assessment; and
- f. making or arranging any necessary interventions and referrals, and documenting a simple strategy for the good health of the patient.

An Aboriginal and Torres Strait Islander Older Person's health assessment must also include:

- a. keeping a record of the health assessment; and
- b. offering the patient a written report on the health assessment, with recommendations on matters covered by the health assessment.

AN.7.16 Prescribed Medical Practitioner Health Assessment for an Aboriginal and Torres Strait Islander Older Person Aged 55 Years and Over (Item 228)

An Aboriginal and Torres Strait Islander Older Person's health assessment must include:

- a. a personal attendance by the prescribed medical practitioner (see [note AN.7.1](#));
- b. measurement of the patient's blood pressure, pulse rate and rhythm;
- c. an assessment of the patient's medication;
- d. an assessment of the patient's continence;
- e. an assessment of the patient's immunisation status for influenza, tetanus and pneumococcus;

- f. an assessment of the patient's physical function, including the patient's activities of daily living and whether or not the patient has had a fall in the last 3months;
- g. an assessment of the patient's psychological function, including the patient's cognition and mood;
- h. an assessment of the patient's social function, including:
 - i. the availability and adequacy of paid, and unpaid, help;
 - ii. whether the patient is responsible for caring for another person;
- i. an eye examination

An Aboriginal and Torres Strait Islander Older Person's health assessment must also include:

- a. keeping a record of the health assessment; and
- b. offering the patient a written report on the health assessment, with
- c. recommendations on matters covered by the health assessment; and
- d. offering the patient's carer (if any, and if the prescribed medical practitioner considers it appropriate and the patient agrees) a copy of the report or extracts of the report relevant to the carer.

AN.7.17 Prescribed Medical Practitioner Chronic Disease Management (Items 229 to 233)

Description	Item No	Minimum claiming period*
Preparation of a GP Management Plan (GPMP)	229	12 months
Coordination of Team Care Arrangements (TCAs)	230	12 months
Contribution to a Multidisciplinary Care Plan, or to a Review of a Multidisciplinary Care Plan, for a patient who is not a care recipient in a residential aged care facility	231	3 months
Contribution to a Multidisciplinary Care Plan, or to a review of a multidisciplinary care plan, for a resident in an aged care facility	232	3 months
Review of a GP Management Plan or Coordination of a Review of Team Care Arrangements	233	3 months

* CDM services may be provided more frequently in the exceptional circumstances defined below.

Exceptional circumstances exist for a patient if there has been a significant change in the patient's clinical condition or care requirements that necessitates the performance of the service for the patient.

Patients with a mental health condition being treated under the *Better Access to Psychiatrists, Psychologists and General Practitioners through the Medicare Benefits Schedule (MBS)* (Better Access) initiative or under an Eating Disorder Treatment and Management Plan (EDTMP) are also eligible to receive a TCA service. However, the prescribed medical practitioner (see [note AN.7.1](#)) should consider whether it would be more appropriate to review any existing TCA rather than develop a new one specifically for the patient's mental health condition.

Regulatory requirements

Items 229, 230, 231, 232 and 233 provide rebates for prescribed medical practitioners to manage chronic or terminal medical conditions by preparing, coordinating, reviewing or contributing to chronic disease management (CDM) plans. They apply for a patient who suffers from at least one medical condition that has been present (or is likely to be present) for at least six months or is terminal.

Items 723 and 732 also provide rebates to manage mental health conditions by coordinating the development or review of TCAs. They apply for a patient who is being treated under the Better Access initiative or has an EDTMP.

Treated under the Better Access initiative means a patient has been referred for a:

- a focussed psychological strategies service delivered by a GP, OMP, psychologist, social worker or occupational therapist, or
- psychological therapy service delivered by a clinical psychologist

Please note: TCAs do not constitute a referral. A referral is still required to access allied mental health services.

Restrictions on claiming multiple Chronic Disease Management Items

Patients may receive chronic disease management services using MBS items 229 to 233 and 721 to 732. However, once a patient has received a service using an MBS item from **either** group of MBS chronic disease management items, the patient may not receive another MBS chronic disease management service until the minimum claiming period has expired. The only exception is where there are exceptional circumstances necessitating an earlier performance of the service (see **Claiming of benefits** below).

If a prescribed medical practitioner is not sure if a patient is eligible for an MBS chronic disease management service, they may telephone Services Australia on 132011, with the patient present, to check eligibility.

Restriction of Co-claiming of Chronic Disease and General Consultation Items

Co-claiming of MBS general consultation items 3, 4, 23, 24, 36, 37, 44, 47, 52, 53, 54, 57, 58, 59, 60, 65, 123, 124, 151, 165, 179, 181, 185, 187, 189, 191, 203, 206, 301, 303, 585, 588, 591, 594, 599, 600, 733, 737, 741, 745, 761, 763, 766, 769, 2197, 2198, 5000, 5003, 5020, 5023, 5040, 5043, 5060, 5063, 5071, 5076, 5200, 5203, 5207, 5208, 5209, 5220, 5223, 5227, 5228, 5261, 91790, 91792, 91794, 91800, 91801, 91802, 91803, 91804, 91805, 91806, 91807, 91808, 91890, 91891, 91892, 91893, 91900, 91903, 91906, 91910, 91913, 91916, 91920, 91923, 91926, 92210, 92211 with chronic disease management items 229, 230 and 233 is not permitted for the same patient, on the same day.

Patient eligibility

CDM items 229, 230 and 233 are available to:

- patients in the community; and
- private in-patients of a hospital (including private in-patients who are residents of aged care facilities) being discharged from hospital.

CDM items 229, 230 and 233 are not available to:

- public in-patients of a hospital; or
- care recipients in a residential aged care facility.

CDM item 231 is available to:

- patients in the community;
- both private and public in-patients being discharged from hospital.

CDM item 231 is not available to:

- care recipients in a residential aged care facility.

CDM item 232 is available to care recipients in a residential aged care facility only.

Components of service

Item 229

A comprehensive written plan must be prepared describing:

- a. the patient's health care needs, health problems and relevant conditions;
- b. management goals with which the patient agrees;
- c. actions to be taken by the patient;
- d. treatment and services the patient is likely to need;
- e. arrangements for providing this treatment and these services; and
- f. arrangements to review the plan by a date specified in the plan.

In preparing the plan, the prescribed medical practitioner must:

- a. explain to the patient and the patient's carer (if any, and if the prescribed medical practitioner considers it appropriate and the patient agrees) the steps involved in preparing the plan; and
- b. record the plan; and
- c. record the patient's agreement to the preparation of the plan; and
- d. offer a copy of the plan to the patient and the patient's carer (if any, and if the prescribed medical practitioner considers it appropriate and the patient agrees); and
- e. add a copy of the plan to the patient's medical records.

Item 230

When coordinating the development of Team Care Arrangements (TCAs), the prescribed medical practitioner must:

- a. consult with at least two collaborating providers, each of whom will provide a different kind of treatment or service to the patient, and one of whom may be another prescribed medical practitioner, when making arrangements for the multidisciplinary care of the patient; and
- b. prepare a document that describes:
 - i. treatment and service goals for the patient;
 - ii. treatment and services that collaborating providers will provide to the patient; and
 - iii. actions to be taken by the patient;
 - iv. arrangements to review (i), (ii) and (iii) by a date specified in the document; and
- c. explain the steps involved in the development of the arrangements to the patient and the patient's carer (if any, and if the prescribed medical practitioner considers it appropriate and the patient agrees);
- d. discuss with the patient the collaborating providers who will contribute to the development of the TCAs and provide treatment and services to the patient under those arrangements; and
- e. record the patient's agreement to the development of TCAs;
- f. give copies of the relevant parts of the document to the collaborating providers;

- g. offer a copy of the document to the patient and the patient's carer (if any, and if the prescribed medical practitioner considers it appropriate and the patient agrees); and
- h. add a copy of the document to the patient's medical records.

One of the minimum two service providers collaborating with the prescribed medical practitioner can be another prescribed medical practitioner. The patient's informal or family carer can be included in the collaborative process but does not count towards the minimum of three collaborating providers.

Item 231

A multidisciplinary care plan means a written plan that:

- a. is prepared for a patient by:
 - i. a prescribed medical practitioner in consultation with two other collaborating providers, each of whom provides a different kind of treatment or service to the patient, and one of whom may be another prescribed medical practitioner; or
 - ii. a collaborating provider (other than a prescribed medical practitioner) in consultation with at least two other collaborating providers, each of whom provides a different kind of treatment or services to the patient; and
- b. describes, at least, treatment and services to be provided to the patient by the collaborating providers.

When contributing to a multidisciplinary care plan or to a review of the care plan, the prescribed medical practitioner must:

- i. prepare part of the plan or amendments to the plan and add a copy to the patient's medical records; or
- j. give advice to a person who prepares or reviews the plan and record in writing, on the patient's medical records, any advice provided to such a person.

Item 232

A multidisciplinary care plan in a Residential Aged Care Facility (RACF) means a written plan that:

- a. is prepared for a patient by a collaborating provider (other than a prescribed medical practitioner, e.g. a RACF), in consultation with at least two other collaborating providers, each of whom provides a different kind of treatment or services to the patient; and
- b. describes, at least, treatment and services to be provided to the patient by the collaborating providers.

When contributing to a multidisciplinary care plan or to a review of the care plan, the prescribed medical practitioner must:

- a. prepare part of the plan or amendments to the plan and add a copy to the patient's medical records; or
- b. give advice to a person who prepares or reviews the plan and record in writing, on the patient's medical records, any advice provided to such a person.

Item 232 can also be used for contribution to a multidisciplinary care plan prepared for a resident by another provider before the resident is discharged from a hospital or an approved day-hospital facility, or to a review of such a plan prepared by another provider (not being a service associated with a service to which items 235 to 240 apply).

Item 233

An "associated medical practitioner" is a medical practitioner who, if not engaged in the same general practice as the prescribed medical practitioner mentioned in that item, performs the service mentioned in the item at the request of the patient (or the patient's guardian).

When reviewing a GP Management Plan, the prescribed medical practitioner must:

- a. explain to the patient and the patient's carer (if any, and if the prescribed medical practitioner considers it appropriate and the patient agrees) the steps involved in the review;
- b. record the patient's agreement to the review of the plan;
- c. review all the matters set out in the relevant plan;
- d. make any required amendments to the patient's plan;
- e. offer a copy of the amended document to the patient and the patient's carer (if any, and if the prescribed medical practitioner considers it appropriate and the patient agrees);
- f. add a copy of the amended document to the patient's records; and
- g. provide for further review of the amended plan by a date specified in the plan.

When coordinating a review of Team Care Arrangements, a multidisciplinary community care plan or a multidisciplinary discharge care plan, the prescribed medical practitioner must:

- a. explain the steps involved in the review to the patient and the patient's carer (if any, and if the prescribed medical practitioner considers it appropriate and the patient agrees);
- b. record the patient's agreement to the review of the TCAs or plan;
- c. consult with at least two health or care providers (each of whom provides a service or treatment to the patient that is different from each other and different from the service or treatment provided by the prescribed medical practitioner who is coordinating the TCAs or plan) to review all the matters set out in the relevant plan;
- d. make any required amendments to the patient's plan;
- e. offer a copy of the amended document to the patient and the patient's carer (if any, and if the prescribed medical practitioner considers it appropriate and the patient agrees);
- f. provide for further review of the amended plan by a date specified in the plan;
- g. give copies of the relevant parts of the amended plan to the collaborating providers; and
- h. add a copy of the amended document to the patient's records.

Item 233 can also be used to COORDINATE A REVIEW OF a Multidisciplinary Community Care Plan or to COORDINATE REVIEW OF A Discharge Care, where these services were coordinated or prepared by that prescribed medical practitioner (or an associated medical practitioner), and not being a service associated with a service to which items 235 to 240 apply.

Claiming of benefits

Each service to which item 233 applies (i.e. Review of a GP Management Plan and Review of Team Care Arrangements) may be claimed once in a three-month period, except where there are exceptional circumstances arising from a significant change in the patient's clinical condition or care circumstances that necessitates earlier performance of the service for the patient.

Where a service is provided in exceptional circumstances, the patient's invoice or Medicare voucher should be annotated to indicate the reason why the service was required earlier than the minimum time interval for the relevant item. Payment can then be made.

Item 233 can be claimed twice on the same day - for example for reviewing a GP Management Plan and another for reviewing Team Care Arrangements (TCAs) provided both are delivered on the same day as per the MBS item descriptors and explanatory notes.

Medicare requirements when item 233 is claimed twice on the same day

If a GPMP and TCAs are both reviewed on the same date and item 233 is to be claimed twice on the same day, both electronic claims and manual claims need to indicate they were rendered at different times:

Non electronic Medicare claiming of items 233 on the same date

The time that each item 233 commenced should be indicated next to each item

Electronic Medicare claiming of item 233 on the same date

Medicare Easyclaim: use the 'ItemOverrideCde' set to 'AP', which flags the item as not duplicate services

Medicare Online/ECLIPSE: set the 'DuplicateServiceOverrideIND' to 'Y', which flags the item as not duplicate

Items 229, 230 233

The GP Management Plan items (229 and 233) and the Team Care Arrangement items (230 and 233) cannot be claimed by prescribed medical practitioners when they are a recognised specialist in the specialty of palliative medicine and treating a referred palliative care patient under items 3005-3093. The referring practitioner is able to provide the CDM services.

Additional information

Items 229-233 should generally be undertaken by the patient's usual medical practitioner. This means the prescribed medical practitioner, or a medical practitioner working in the same medical practice, who has provided the majority of care to the patient over the previous twelve months and/or will be providing the majority of medical services to the patient over the next twelve months. The term "usual medical practitioner" would not generally apply to a practice that provides only one specific CDM service.

A practice nurse, Aboriginal and Torres Strait Islander health practitioner, Aboriginal health worker or other health professional may assist with items 229, 230 and 233 (e.g. in patient assessment, identification of patient needs and making arrangements for services). However, the medical practitioner must meet all regulatory requirements, review and confirm all assessments and see the patient.

Patients being managed under the chronic disease management items may be eligible for:

- individual allied health services (items 10950 to 10970); and/or
- group allied health services (items 81100 to 81125).

More information on eligibility requirements can be found in the explanatory note for individual allied health services and group allied health services.

Further information is also available for providers from Services Australia provider inquiry line on 132 150.

AN.7.18 Prescribed Medical Practitioner Medication Management Reviews (Items 245 and 249)

Item 245 - Domiciliary Medication Management Review

A Domiciliary Medication Management Review (DMMR) (Item 245), also known as Home Medicines Review, is intended to maximise an individual patient's benefit from their medication regimen and prevent medication-related problems through a team approach, involving the patient's prescribed medical practitioner (see [note AN.7.1](#)) and preferred community pharmacy or accredited pharmacist.

Patient eligibility

The item is available to people living in the community who meet the criteria for a DMMR.

The item is not available for in-patients of a hospital, or care recipients in residential aged care facilities.

DMMRs are targeted at patients who are likely to benefit from such a review:

- patients for whom quality use of medicines may be an issue or;
- patients who are at risk of medication misadventure because of factors such as their co-morbidities, age or social circumstances, the characteristics of their medicines, the complexity of their medication treatment regimen, or a lack of knowledge and skills to use medicines to their best effect.

DMMR's are targeted at patients who are:

- currently taking five or more regular medications;
- taking more than 12 doses of medication per day;
- have had significant changes made to medication treatment regimen in the last three months;
- taking medication with a narrow therapeutic index or medications requiring therapeutic monitoring;
- experiencing symptoms suggestive of an adverse drug reaction;
- displaying sub-optimal response to treatment with medicines;
- suspected of non-compliance or inability to manage medication related therapeutic devices;
- having difficulty managing their own medicines because of literacy or language difficulties, dexterity problems or impaired sight, confusion/dementia or other cognitive difficulties;
- attending a number of different doctors, both prescribed medical practitioners and specialists; and/or
- recently discharged from a facility / hospital (in the last four weeks).

In referring a patient for a DMMR, prescribed medical practitioners should note that only patients meeting the following criteria will have the pharmacist portion funded through a Community Pharmacy Agreement program:

- Is a Medicare and/or Department of Veterans' Affairs (DVA) cardholder or a person who is eligible for a Medicare card;
- Is subject to a chronic condition and/or complex medication regimen; and
- Is failing to respond to treatment in the expected manner.

If the patient does not meet these criteria, the prescribed medical practitioner can still issue a referral under this item. However, the remainder of the service will be on a "user pays" basis as determined by the accredited pharmacist.

REGULATORY REQUIREMENTS

In conducting a DMMR, a prescribed medical practitioner must, with the patient's consent:

- (a) assess a patient is subject to a chronic medical condition and/or complex medication regimen but their therapeutic goals are not being met; and
- (b) following that assessment, refer the patient to a community pharmacy or an accredited pharmacist for a DMMR and provide the relevant clinical information required for the review; and
- (c) discuss with the reviewing pharmacist the result of that review including suggested medication management strategies; and
- (d) develop a written medication management plan following discussion with the patient; and
- (e) provide the written medication management plan to a community pharmacy chosen by the patient.

For any particular patient - applicable not more than once in each 12-month period, except if there has been a significant change in the patient's condition or medication regimen requiring a new DMMR.

Claiming

A DMMR includes all DMMR-related services provided by the prescribed medical practitioner from the time the patient is identified as potentially needing a medication management review to the preparation of a draft medication management plan, and discussion and agreement with the patient.

The benefit is not claimable until all the components of the item have been rendered.

Benefits for a DMMR service under item 245 are payable only once in each 12-month period, except where there has been a significant change in the patient's condition or medication regimen requiring a new DMMR (e.g. diagnosis of a new condition or recent discharge from hospital involving significant changes in medication). In such cases the patient's invoice or Medicare voucher should be annotated to indicate that the DMMR service was required to be provided within 12 months of another DMMR service.

Provision of a subsequent DMMR must not be made solely by reaching an anniversary date, and the service is not intended to be undertaken on an ongoing review cycle.

If the DMMR is initiated during the course of a consultation undertaken for another purpose, this consultation may also be claimed separately.

If the consultation at which the medication management review is initiated is only for the purposes of initiating the review, only item 245 may be claimed.

If the prescribed medical practitioner determines that a DMMR is not necessary, item 245 does not apply. In this case, normal consultation items should be used.

Where a DMMR cannot be completed due to circumstances beyond the control of the prescribed medical practitioner (e.g. because the patient decides to not proceed further with the DMMR, or because of a change in the circumstances of the patient), the relevant MBS attendance items should be used.

FURTHER GUIDANCE

A DMMR should generally be undertaken by the patient's usual medical practitioner. This is the prescribed medical practitioner, or a medical practitioner working in the same medical practice, that has provided the majority of services to the patient over the previous 12 months and/or will be providing the majority of services to the patient over the coming 12 months.

The potential need for a DMMR may be identified either by the prescribed medical practitioner in the process of a consultation or by receipt of advice from the patient, a carer or another health professional including a pharmacist.

The process of referral to a community pharmacy or an accredited pharmacist includes:

- Obtaining consent from the patient, consistent with normal clinical practice, for a pharmacist to undertake the medication management review and for a charge to be incurred for the service for which a Medicare rebate is payable. The patient must be clearly informed of the purpose and possible outcomes of the DMMR, the process involved (including that the pharmacist will visit the patient at home, unless exceptional circumstances apply or they are an Aboriginal or Torres Strait Islander patient), what information will be provided to the pharmacist as part of the DMMR, and any additional costs that may be incurred; and
- Provision to the patient's preferred community pharmacy or accredited pharmacist, of relevant clinical information, by the prescribed medical practitioner for each individual patient, covering the patient's diagnosis, relevant test results and medication history, and current prescribed medications.

A DMMR referral form is available for this purpose. If this form is not used, the prescribed medical practitioner must provide patient details and relevant clinical information to the patient's preferred community pharmacy or accredited pharmacist.

The discussion of the review findings and report including suggested medication management strategies with the reviewing pharmacist includes:

- Receiving a written report from the reviewing pharmacist; and
- Discussing the relevant findings and suggested management strategies with the pharmacist (either by phone or face to face); and
- Developing a summary of the relevant review findings as part of the draft medication management plan.

Development of a written medication management plan following discussion with the patient includes:

- Developing a draft medication management plan and discussing this with the patient; and
- Once agreed, offering a copy of the written medication management plan to the patient and providing a copy to the community pharmacy or accredited pharmacist.

The agreed plan should identify the medication management goals and the proposed medication regimen for the patient.

Item 249 - Residential Medication Management Review

A Residential Medication Management Review (RMMR) is a collaborative service available to permanent residents of a Residential Aged Care facility (RACF) who are likely to benefit from such a review. This includes residents for whom quality use of medicines may be an issue or residents who are at risk of medication misadventure because of a significant change in their condition or medication regimen.

Patient eligibility

RMMRs are available to:

- new residents on admission into a RACF; and
- existing residents on an 'as required' basis, where in the opinion of the resident's prescribed medical practitioner, it is required because of a significant change in medical condition or medication regimen.

RMMRs are not available to people receiving respite care in a RACF. Domiciliary Medicines Reviews are available to these people when they are living in the community setting.

REGULATORY REQUIREMENTS

When conducting a RMMR, a prescribed medical practitioner must:

- (a) discuss the proposed review with the resident and seek the resident's consent to the review; and
- (b) collaborate with the reviewing pharmacist about the pharmacist's involvement in the review; and
- (c) provide input from the resident's most recent comprehensive medical assessment or, if such an assessment has not been undertaken, provide relevant clinical information for the review and for the resident's records; and
- (d) If recommended changes to the resident's medication management arise out of the review, participate in a post-review discussion (either face-to-face or by telephone) with the pharmacist to discuss the outcomes of the review including:
 - (i) the findings; and
 - (ii) medication management strategies; and

(iii) means to ensure that the strategies are implemented and reviewed, including any issues for implementation and follow-up; and

(iv) develop or revise the resident's medication management plan after discussion with the reviewing pharmacist; and

(v) finalise the plan after discussion with the resident.

A prescribed medical practitioner's involvement in a residential medication management review also includes:

(a) offering a copy of the medication management plan to the resident (or the resident's carer or representative if appropriate); and

(b) providing copies of the plan for the resident's records and for the nursing staff of the residential aged care facility; and

(c) discussing the plan with nursing staff if necessary.

A post-review discussion is not required if:

(a) there are no recommended changes to the resident's medication management arising out of the review; or

(b) any changes are minor in nature and do not require immediate discussion; or

(c) the pharmacist and prescribed medical practitioner agree that issues arising out of the review should be considered in a case conference.

A RMMR comprises all activities to be undertaken by the prescribed medical practitioner from the time the resident is identified as potentially needing a medication management review up to the development of a written medication management plan for the resident.

Claiming

A maximum of one RMMR rebate is payable for each resident in any 12-month period, except where there has been a significant change in the resident's medical condition or medication regimen requiring a new RMMR.

Benefits are payable when all the activities of a RMMR have been completed. A RMMR service covers the consultation at which the results of the medication management review are discussed and the medication management plan agreed with the resident:

- any immediate action required to be done at the time of completing the RMMR, based on and as a direct result of information gathered in the RMMR, should be treated as part of the RMMR item;
- any subsequent follow up should be treated as a separate consultation item;
- an additional consultation in conjunction with completing the RMMR should not be undertaken unless it is clinically indicated that a problem must be treated immediately.

In some cases a RMMR may not be able to be completed due to circumstances beyond the control of the prescribed medical practitioner (e.g. because the resident decides not to proceed with the RMMR or because of a change in the circumstances of the resident). In these cases the relevant MBS attendance item should be used in relation to any consultation undertaken with the resident.

If the consultation at which the RMMR is initiated, including discussion with resident and obtaining consent for the RMMR, is only for the purposes of initiating the review, only the RMMR item should be claimed.

If the RMMR is initiated during the course of a consultation undertaken for another purpose, the other consultation may be claimed as a separate service and the RMMR service would also apply.

If the prescribed medical practitioner determines that an RMMR is not necessary, the RMMR item does not apply. In this case, relevant consultation items should be used.

FURTHER GUIDANCE

A RMMR should generally be undertaken by the resident's 'usual medical practitioner'. This is the prescribed medical practitioner, or a medical practitioner working in the same medical practice, that has provided the majority of care to the resident over the previous 12 months and/or will be providing the majority of care to the resident over the next 12 months.

Prescribed medical practitioners who provide services on a facility-wide contract basis, and/or who are registered to provide services to RACFs as part of aged care panel arrangements, may also undertake RMMRs for residents as part of their services.

Generally, new residents should receive an RMMR as soon as possible after admission. Where a resident has a Comprehensive Medical Assessment (CMA), the RMMR should be undertaken preferably after the results of the CMA are available to inform the RMMR.

A RMMR service should be completed within a reasonable timeframe. As a general guide, it is expected that most RMMR services would be completed within four weeks of being initiated.

The resident's prescribed medical practitioner may identify the potential need for an 'as required' RMMR for existing residents, including in the course of a consultation for another purpose. The potential need for an RMMR may also be identified by the reviewing pharmacist, supply pharmacist, Residential Aged Care Facility staff, the resident, the resident's carer or other members of the resident's health care team.

The prescribed medical practitioner should assess the clinical need for an RMMR from a quality use of medicines perspective with the resident as the focus, and initiate an RMMR if appropriate, in collaboration with the reviewing pharmacist.

The prescribed medical practitioner and reviewing pharmacist should agree on a preferred means for communicating issues and information relating to the provision of an RMMR service. This should include the method(s) of initiating the RMMR, exceptions to the post review discussion, and the preferred method of communication. This can be done on a facility basis rather than on a case-by-case basis.

Where the provision of RMMR services involves consultation with a resident it should be read as including consultation with the resident and/or their carer or representative where appropriate.

RMMRs do not count for the purposes of derived fee arrangements that apply to other consultations in a Residential Aged Care Facility.

AN.7.22 Prescribed Medical Practitioner Mental Health Treatment

This note provides information on the Mental Health Treatment items 272, 276, 277, 279, 281 and 282, and is also applicable for video and phone equivalent MBS items 92118, 92119, 92120, 92121, 92122, 92123, 92132 and 92133. It includes an overview of the items, patient and provider eligibility, what activities are involved in providing services rebated by these items, links to other Medicare items and additional claiming information.

Overview

The Mental Health Treatment items define services for which Medicare rebates are payable where prescribed medical practitioners (see [note AN.7.1](#)) undertake early intervention, assessment and management of patients with mental disorders. They include referral pathways for treatment by psychiatrists, clinical psychologists and other allied mental health workers. These items complement the mental health items for psychiatrists (items 296, 297, 299 and 92437), clinical psychologists (items 80000, 80005, 80010, 80015, 91166, 91167, 91181 and 91182) and allied mental health providers (items 80100, 80105, 80110, 80115, 80125, 80130, 80135, 80140, 80150, 80155, 80160, 80165, 91169, 91170, 91172, 91173, 91175, 91176, 91183, 91184, 91185, 91186, 91187 and 91188).

The Mental Health Treatment items incorporate a model for best practice primary health treatment of patients with mental disorders, including patients with both chronic or non-chronic disorders, that comprises:

- assess and plan;
- provide and/or refer for appropriate treatment and services; and
- review and ongoing management as required.

Who can provide

The GP Mental Health Treatment Plan, Review and Consultation items are available for use in general practice by prescribed medical practitioners.

Training Requirements (items 281, 282, 92122 and 92123)

Prescribed medical practitioners providing GP Mental Health Treatment Plans, and who have undertaken mental health skills training recognised through the General Practice Mental Health Standards Collaboration, have access to items 281, 282, 92122 and 92123. For prescribed medical practitioners who have not undertaken training, items 272, 276, 92118 and 92119 are available. Items 272, 281, 92118 and 92122 provides for a GP Mental Health Treatment Plan lasting at least 20 minutes and items 276, 282, 92119 and 92123 provides for a GP Mental Health Treatment Plan lasting at least 40 minutes. It is strongly recommended that prescribed medical practitioners providing mental health treatment have appropriate mental health training. Medical professional organisations support the value of appropriate mental health training for prescribed medical practitioners using these items.

Which patients are eligible - Mental Disorder

These items are for patients with a mental disorder who would benefit from a structured approach to the management of their treatment needs. Mental disorder is a term used to describe a range of clinically diagnosable disorders that significantly interfere with an individual's cognitive, emotional or social abilities (Refer to the World Health Organisation, 1996, Diagnostic and Management Guidelines for Mental Disorders in Primary Care: ICD-10 Chapter V Primary Care Version). Dementia, delirium, tobacco use disorder and mental retardation are not regarded as mental disorders for the purposes of the Mental Health Treatment items.

These services are available to eligible patients in the community. Mental Health Treatment Plan and Review services can also be provided to private in-patients (including private in-patients who are residents of aged care facilities) being discharged from hospital. Where the service is provided as part of an episode of hospital treatment it must be claimed at the 75% MBS rebate - see [note GN.1.2](#). Prescribed medical practitioners are able to contribute to care plans for patients using item 231, Contribution to a Multidisciplinary Care Plan, and to care plans for residents of aged care facilities using item 232.

PREPARING A GP MENTAL HEALTH TREATMENT PLAN (Item 272, 276, 281, 282, 92118, 92119, 92122 or 92123)

What is involved - Assess and Plan

A rebate can be claimed once the prescribed medical practitioner has undertaken an assessment and prepared a GP Mental Health Treatment Plan by completing the steps from Assessment to the point where patients do not require a new plan after their initial plan has been prepared, and meeting the relevant requirements listed under 'Additional Claiming Information'. This item covers both the assessment and preparation of the GP Mental Health Treatment Plan. Where the patient has a carer, the practitioner may find it useful to consider having the carer present for the assessment and preparation of the GP Mental Health Treatment Plan or components thereof (subject to patient agreement).

Assessment

An assessment of a patient must include:

- recording the patient's agreement for the GP Mental Health Treatment Plan service;

- taking relevant history (biological, psychological, social) including the presenting complaint;
- conducting a mental state examination;
- assessing associated risk and any co-morbidity;
- making a diagnosis and/or formulation; and
- administering an outcome measurement tool, except where it is considered clinically inappropriate.

The assessment can be part of the same consultation in which the GP Mental Health Treatment Plan is developed, or can be undertaken in different visits. Where separate visits are undertaken for the purpose of assessing the patient and developing the GP Mental Health Treatment Plan, they are part of the GP Mental Health Treatment Plan service and are included in item 272, 276, 281, 282, 92118, 92119, 92122 or 92123.

In order to facilitate ongoing patient focussed management, an outcome measurement tool should be utilised during the assessment and the review of the GP Mental Health Treatment Plan, except where it is considered clinically inappropriate. The choice of outcome measurement tools to be used is at the clinical discretion of the practitioner. Prescribed medical practitioners using such tools should be familiar with their appropriate clinical use, and if not, should seek appropriate education and training.

Preparation of a GP Mental Health Treatment Plan

In addition to assessment of the patient, preparation of a GP Mental Health Treatment Plan must include:

- discussing the assessment with the patient, including the mental health formulation and diagnosis or provisional diagnosis;
- identifying and discussing referral and treatment options with the patient, including appropriate support services;
- agreeing goals with the patient - what should be achieved by the treatment - and any actions the patient will take;
- provision of psycho-education;
- a plan for crisis intervention and/or for relapse prevention, if appropriate at this stage;
- making arrangements for required referrals, treatment, appropriate support services, review and follow-up; and
- documenting this (results of assessment, patient needs, goals and actions, referrals and required treatment/services, and review date) in the patient's GP Mental Health Treatment Plan.

Treatment options can include referral to a psychiatrist; referral to a clinical psychologist for psychological therapies, or to an appropriately trained medical practitioner or allied mental health professional for provision of focussed psychological strategy services; pharmacological treatments; and coordination with community support and rehabilitation agencies, mental health services and other health professionals.

Once a GP Mental Health Treatment Plan has been completed and claimed on Medicare either through items 272, 276, 281, 282, 92118, 92119, 92122 or 92123 or through GP items 2700, 2701, 2715, 2717 92112, 92113, 92116 or 92117, a patient is eligible to be referred for up to 10 Medicare rebateable mental health services per calendar year for psychological therapy or focussed psychological strategy services. Patients will also be eligible to claim up to 10 separate services for the provision of group therapy (either as part of psychological therapy or focussed psychological strategies). Please note group therapy does not include family and couples therapy.

When referring patients prescribed medical practitioners should provide the information outlined under the 'Referral' heading below. The necessary referrals should be made after the steps above have been addressed and the patient's GP Mental Health Treatment Plan has been completed. It should be noted that the patient's mental health treatment plan should be treated as a living document for updating as required. In particular, the plan can be updated at any time to incorporate relevant information, such as feedback or advice from other health professionals on the diagnosis or treatment of the patient.

On completion of a course of treatment provided through Medicare rebateable services, the service provider must provide a written report on the course of treatment to the prescribed medical practitioner.

Many patients will not require a new plan after their initial plan has been prepared. A new plan should not be prepared unless clinically required, and generally not within 12 months of a previous plan. Ongoing management can be provided through the GP Mental Health Treatment Consultation and standard consultation items, as required, and reviews of progress through the GP Mental Health Treatment Plan Review item. A rebate for preparation of a GP Mental Health Treatment Plan will not be paid within 12 months of a previous claim for the patient for the same or another Mental Health Treatment Plan item or within three months following a claim for a GP Mental Health Treatment Review (item 277, 92120 or 92132, or GP item 2712, 92114 or 92126).

REVIEWING A GP MENTAL HEALTH TREATMENT PLAN (Item 277, 92120 or 92132)

The review item is a key component for assessing and managing the patient's progress once a GP Mental Health Treatment Plan has been prepared, along with ongoing management through the GP Mental Health Treatment Consultation item and/or standard consultation items. A patient's GP Mental Health Treatment Plan should be reviewed at least once.

A rebate can be claimed once the prescribed medical practitioner who prepared the patient's GP Mental Health Treatment Plan (or another medical practitioner in the same practice or in another practice where the patient has changed practices) has undertaken a systematic review of the patient's progress against the GP Mental Health Treatment Plan by completing the activities that must be included in a review and meeting the relevant requirements listed under 'Additional Claiming Information'. The review item can also be used where a psychiatrist has prepared a referred assessment and management plan (item 291 or 92435), as if that patient had a GP Mental Health Treatment Plan.

The review must include:

- recording the patient's agreement for this service;
- a review of the patient's progress against the goals outlined in the GP Mental Health Treatment Plan;
- modification of the documented GP Mental Health Treatment Plan if required;
- checking, reinforcing and expanding education;
- a plan for crisis intervention and/or for relapse prevention, if appropriate and if not previously provided; and
- re-administration of the outcome measurement tool used in the assessment stage, except where considered clinically inappropriate.

Note: This review is a formal review point only and it is expected that in most cases there will be other consultations between the patient and the prescribed medical practitioner as part of ongoing management.

The recommended frequency for the review service, allowing for variation in patients' needs, is:

- an initial review, which should occur between four weeks to six months after the completion of a GP Mental Health Treatment Plan; and
- if required, a further review can occur three months after the first review.

In general, most patients should not require more than two reviews in a 12-month period, with ongoing management through the GP Mental Health Treatment Consultation and standard consultation items, as required.

A rebate will not be paid within three months of a previous claim for the same item/s or within four weeks following a claim for a GP Mental Health Treatment Plan item.

GP MENTAL HEALTH TREATMENT CONSULTATION (Item 279, 92121 or 92133)

The GP Mental Health Treatment Consultation item is for an extended consultation with a patient where the primary treating problem is related to a mental disorder, including for a patient being managed under a GP Mental Health Treatment Plan. This item may be used for ongoing management of a patient with a mental disorder. This item should not be used for the development of a GP Mental Health Treatment Plan.

A GP Mental Health Treatment Consultation must include:

- taking relevant history and identifying the patient's presenting problem(s) (if not previously documented);
- providing treatment, advice and/or referral for other services or treatment; and
- documenting the outcomes of the consultation in the patient's medical records and other relevant mental health plan (where applicable).

A patient may be referred from a GP Mental Health Treatment Consultation for other treatment and services. This does not include referral for Medicare rebateable services for focussed psychological strategy services, clinical psychology or other allied mental health services, unless the patient is being managed by the prescribed medical practitioner under a GP Mental Health Treatment Plan or under a referred psychiatrist assessment and management plan (item 291 or 92435).

Consultations associated with this item must be at least 20 minutes duration.

REFERRAL

Once a GP Mental Health Treatment Plan has been completed and claimed on Medicare, or a prescribed medical practitioner is managing a patient under a referred psychiatrist assessment and management plan, a patient is eligible for up to 10 Medicare rebateable allied mental health services per calendar year for services by:

- clinical psychologists providing psychological therapies; or
- appropriately trained medical practitioners or allied mental health professionals providing focussed psychological strategy (FPS) services.

In addition to the above services, patients will also be eligible to claim up to 10 separate services for the provision of group therapy, in line with their clinical need. Please note group therapy does not include family and couples therapy.

When preparing a patient's Mental Health Treatment Plan and making a referral prescribed medical practitioners should speak to the patient about their treatment needs and the type of treatment, for example individual and/or group sessions, that might be suitable for their particular circumstances.

Please note if a referral does not specify whether it relates to individual or group therapy, the patient can use a referral to access either or both individual and group therapy treatment options.

A referral for mental health services should be in writing (signed and dated by the prescribed medical practitioner) and include:

- the patient's name, date of birth and address;
- the patient's symptoms or diagnosis, including whether a GP Mental Health Treatment Plan has been completed for the patient;
- a list of any current medications;
- the number of sessions the patient is being referred for (the 'course of treatment');
- a statement about whether the patient has a mental health treatment plan or a psychiatrist assessment and management plan.

It may be useful for a referral to include a statement indicating whether group sessions could be considered.

Where appropriate, and with the patient's agreement, the prescribed medical practitioner can also attach a copy of the mental health treatment plan to the referral.

Including these details on a referral will assist with any auditing undertaken by the Department of Health and Aged Care.

Number of Sessions

The prescribed medical practitioner can decide how many sessions the patient will receive in a course of treatment, within the maximum session limit for the course of treatment. The maximum session limit for each course of treatment is set out below:

- Initial course of treatment – a maximum of six sessions.
- Subsequent course of treatment – a maximum of six sessions up to the patient’s cap of ten sessions (for example, if the patient received six sessions in their initial course of treatment, they can only receive four sessions in a subsequent course of treatment).

The prescribed medical practitioner should consider the patient's clinical need for further sessions after each course of treatment, including through considering the written report provided by the treating practitioner. This can be done using a GP Mental Health Treatment Plan Review, a GP Mental Health Treatment Consultation or a standard consultation item.

In the instance where a patient has received the maximum number of services available under the Better Access to Psychiatrists, Psychologists and General Practitioners through the Medicare Benefits Schedule initiative per calendar year and is considered to clinically benefit from some additional services, the patient may be eligible for Primary Health Networks (PHNs) funded psychological therapies if they meet relevant eligibility criteria for the PHN commissioned services. It is recommended that providers refer to their PHN for further guidance.

Specifying the Number of Sessions in a Referral

If the prescribed medical practitioner:

- Does not specify the number of sessions
- Specifies a number of sessions above the maximum allowed for the course of treatment
- Specifies a number of sessions above the maximum allowed for the calendar year (including any sessions the patient has already received that year)

Then the treating practitioner can use their clinical judgment to provide services under the referral, noting the patient cannot receive more than:

- the maximum number of sessions allowed for that particular course of treatment (as set out above), and
- the maximum number of sessions allowed in a calendar year.

The treating practitioner must still provide a report at the end of a course of treatment in line with standard practice for these services. The referring prescribed medical practitioner should therefore consider the treating practitioner’s report on the services provided to the patient, and the need for further treatment.

Verbal Referral

A prescribed medical practitioner can verbally refer a patient for Better Access services only if:

- in their clinical judgement they consider it is necessary for the patient to have immediate access to support from an allied mental health professional, and
- it is not practicable in the circumstances to provide a written referral – for example, to do so would cause delays in treatment to the patient’s detriment, and
- the allied mental health professional documents in writing that they are treating the patient based on the prescribed medical practitioner’s verbal referral, and
- the prescribed medical practitioner provides a written referral to the allied mental health professional as soon as possible afterwards.

While waiting for the referring practitioner to provide a written referral, the treating practitioner can provide treatment according to the verbal referral until the referred number of sessions have been completed. If there is any doubt about the number of sessions the patient was verbally referred for, the treating practitioner should follow the guidance provided above under the heading ‘Specifying the number of sessions in a referral’.

A verbal referral does not replace the requirement for the prescribed medical practitioner to review the patient's progress (taking into account the written report from their treating allied health professional) after each course of treatment.

Referrals for the Additional 10 Sessions (available until 31 December 2022)

In response to the COVID-19 pandemic, the number of Medicare rebateable individual mental health services was temporarily increased from 10 to 20 per calendar year until 31 December 2022.

A patient does not need a new referral to access Better Access sessions from 1 January 2023. If the patient has a current referral (either for the initial 10 sessions or the additional 10 sessions) and has not used all of the sessions, they can use that referral to access sessions in 2023. However, they cannot receive more than 10 individual sessions in 2023.

ADDITIONAL CLAIMING INFORMATION

Before proceeding with any GP Mental Health Treatment Plan or Review service the prescribed medical practitioner must ensure that:

- the steps involved in providing the service are explained to the patient and (if appropriate and with the patient's permission) to the patient's carer; and
- the patient's agreement to proceed is recorded.

Before completing any GP Mental Health Treatment Plan or Review service and claiming a benefit for that service, the prescribed medical practitioner must offer the patient a copy of the treatment plan or reviewed treatment plan and add the document to the patient's records. This should include, subject to the patient's agreement, offering a copy to their carer, where appropriate. The prescribed medical practitioner may, with the permission of the patient, provide a copy of the GP Mental Health Treatment Plan, or relevant parts of the plan, to other providers involved in the patient's treatment.

The GP Mental Health Treatment Plan, Review and Consultation items cover the consultations at which the relevant items are undertaken, noting that:

- if a GP Mental Health Treatment item is undertaken or initiated during the course of a consultation for another purpose, the GP Mental Health Treatment Plan, Review or Consultation item and the relevant item for the other consultation may both be claimed;
- if a GP Mental Health Treatment Plan is developed over more than one consultation, and those consultations are for the purposes of developing the plan, only the GP Mental Health Treatment Plan item should be claimed; and
- if a consultation is for the purpose of a GP Mental Health Treatment Plan, Review or Consultation item, a separate and additional consultation should not be undertaken in conjunction with the mental health consultation, unless it is clinically indicated that a separate problem must be treated immediately.

Where an additional consultation is undertaken, both services must be clinically relevant and all item requirements must be met. For example, for item 272, the duration of the service must have been at least 20 minutes. The time of the preceding consultation must not be counted towards the time of the mental health service.

Where separate consultations are undertaken in conjunction with mental health consultations, the patient's invoice or Medicare voucher (assignment of benefit form) for the separate consultation should be annotated (e.g. separate consultation clinically required/indicated).

A benefit is not claimable and an account should not be rendered until all components of the relevant item have been provided.

All consultations conducted as part of the GP Mental Health Treatment items must be rendered by the prescribed medical practitioner. A specialist mental health nurse, other allied health practitioner, Aboriginal and Torres Strait

Islander health practitioner or Aboriginal Health Worker with appropriate mental health qualifications and training may provide general assistance to prescribed medical practitioners in provision of mental health care.

Links to other Medicare Services

It is preferable that wherever possible patients have only one plan for primary care management of their mental disorder. As a general principle the creation of multiple plans should be avoided, unless the patient clearly requires an additional plan for the management of a separate medical condition.

The Chronic Disease Management (CDM) care plan items (items 229, 230, 231, 232 and 233, and GP items 721, 723, 729, 731 and 732) continue to be available for patients with chronic medical conditions, including patients with complex needs.

- Where a patient has a mental health condition only, it is anticipated that they will be managed under the GP Mental Health Treatment items.
- Where a patient has a separate chronic medical condition, it may be appropriate to manage the patient's medical condition through a GP Management Plan, and to manage their mental health condition through a GP Mental Health Treatment Plan. In this case, both items can be used.
- Where a patient has a mental health condition as well as significant co-morbidities and complex needs requiring team-based care, the prescribed medical practitioner is able to use both the CDM items (for team-based care) and the GP Mental Health Treatment items.

AN.7.23 Prescribed Medical Practitioner Provision of Focussed Psychological Strategies (Items 283, 285, 286, 287, 91820, 91821, 91844 and 91845)

Focussed psychological strategies are specific mental health care management strategies, derived from evidence based psychological therapies that have been shown to integrate the best research evidence of clinical effectiveness with general practice clinical expertise. The decision to recommend Focussed Psychological Strategies to a patient must be made either in the context of a GP Mental Health Treatment Plan, shared care plan or a psychiatrist assessment and management plan.

Minimum Requirements

All consultations providing Focussed Psychological Strategies must be rendered by a prescribed medical practitioner (see [note AN.7.1](#)).

To ensure appropriate standards for the provision of Focussed Psychological Strategies, payment of Medicare rebates for these items will be limited to prescribed medical practitioners who are registered with the Services Australia as having satisfied the requirements for higher level mental health skills for provision of the service, as determined by the General Practice Mental Health Standards Collaboration.

Continued access to item numbers 283, 285, 286, 287, 91820, 91821, 91844 and 91845 will be dependent on the practitioner meeting the ongoing mental health education requirements as determined by the General Practice Mental Health Standards Collaboration.

Patients will be permitted to claim Medicare rebates for up to 10 mental health services under these item numbers per calendar year. The 10 services may consist of: prescribed medical practitioner focussed psychological strategies services (items 283, 285, 286, 287, 91820, 91821, 91844 and 91845) or GP items (2721, 2723, 2725, 2727, 91818, 91819, 91842 and 91843); and/or psychological therapy services (items 80000, 80005, 80010, 80015, 91166, 91167, 91181 and 91182); and/or focussed psychological strategies – allied mental health services (items 80100, 80105, 80110, 80115, 80125, 80130, 80135, 80140, 80150, 80155, 80160, 80165, 91169, 91170, 91172, 91173, 91175, 91176, 91183, 91184, 91185, 91186, 91187 and 91188).

Out-of-Surgery Consultation

It is expected that this service would be provided only for patients who are unable to attend the practice.

Specific Focussed Psychological Strategies

A range of acceptable strategies has been approved for use by prescribed medical practitioners in this context. These are:

1. **Psycho-education**
(including motivational interviewing)
2. **Cognitive-behavioural therapy including:**
 - **Behavioural interventions**
 - Behaviour modification
 - Exposure techniques
 - Activity scheduling
 - **Cognitive interventions**
 - Cognitive therapy
3. **Relaxation strategies**
 - Progressive muscle relaxation
 - Controlled breathing
4. **Skills training**
 - Problem solving skills and training
 - Anger management
 - Social skills training
 - Communication training
 - Stress management
 - Parent management training
5. **Interpersonal therapy**
6. **Eye-Movement Desensitisation Reprocessing (EMDR)**

Mental Disorder

A mental disorder may be defined as a significant impairment of an individual's cognitive, affective and/or relational abilities which may require intervention and may be a recognised, medically diagnosable illness or disorder – this definition is informed by the World Health Organisation, 1996, Diagnostic and Management Guidelines for Mental Disorders in Primary Care:ICD - 10 Chapter V Primary Health Care Version.

Dementia, delirium, tobacco use disorder and mental retardation are not regarded as mental disorders for the purposes of these items.

AN.7.24 Prescribed Medical Practitioner After-Hours Attendances To Which No Other Item Applies (Items 733 to 789 and 2917 to 2200)

After-hours attendance items may be claimed as follows:

Items **733, 737, 741, 745 and 2197** apply only to a professional attendance on 1 patient on 1 occasion that is provided:

- on a public holiday;
- on a Sunday;
- before 8am, or after 1 pm on a Saturday;
- before 8am, or after 8pm on any day other than a Saturday, Sunday or public holiday.

Items **761, 763, 766, 769, 772, 776, 788, 789, 2198 and 2200** apply to a professional attendance on 1 or more patients on 1 occasion that is provided:

- on a public holiday;
- on a Sunday;

- before 8am, or after 12 noon on a Saturday;
- before 8am, or after 6pm on any day other than a Saturday, Sunday or public holiday.

AN.7.25 Prescribed Medical Practitioner Non-Directive Pregnancy Support Counselling Service (Item 792)

The Pregnancy Support Counselling initiative provides for Medicare benefits to be paid for non-directive pregnancy support counselling services provided to a person who is pregnant or who has been pregnant in the 12 months preceding the first service to which this item or items 4001, 81000, 81005 or 81010 applies in relation to that pregnancy, by an eligible prescribed medical practitioner (see [note AN.7.1](#)) or allied health professional on referral from a prescribed medical practitioner.

There are five MBS items for the provision of non-directive pregnancy support counselling services:

- Item 792 – services provided by an eligible prescribed medical practitioner;
- Item 4001 - services provided by an eligible GP;
- Item 81000 - services provided by an eligible psychologist;
- Item 81005 - services provided by an eligible social worker; and
- Item 81010 - services provided by an eligible mental health nurse.

This note relates to the provision of a non-directive pregnancy support counselling service by an eligible prescribed medical practitioner.

Non-directive counselling is a form of counselling based on the understanding that, in many situations, people can resolve their own problems without being provided with a solution by the counsellor. The counsellor's role is to encourage the person to express their feelings but not suggest what decision the person should make. By listening and reflecting back what the person reveals to them, the counsellor helps them to explore and understand their feelings. With this understanding, the person is able to make the decision which is best for them.

The service involves the prescribed medical practitioner undertaking a safe, confidential process that helps the patient explore concerns they have about a current pregnancy or a pregnancy that occurred in the preceding 12 months. This includes providing, on request, unbiased, evidence-based information about all options and services available to the patient.

The service may be used to address any pregnancy related issues for which non-directive counselling is appropriate.

Patient eligibility

Medicare rebates for non-directive pregnancy support counselling services provided using item 792 are available to a person who is pregnant or who has been pregnant in the 12 months preceding the first service to which this item or item 4001, 81000, 81005 or 81010 applies in relation to that pregnancy.

Partners of eligible patients may attend each or any counselling session, however, only one fee applies to each service provided.

Medicare benefits

Medicare benefits are payable for up to three non-directive pregnancy support counselling services per patient, per pregnancy, from any of the following items – 792, 4001, 81000, 81005 and 81010.

Where the patient is unsure of the number of Medicare rebated non-directive pregnancy support counselling services they have already accessed, the patient may check with Services Australia on 132 011. Alternatively, the prescribed medical practitioner may check with Services Australia (although the patient must be present to give permission).

Item 10990 or item 10991 can also be claimed in conjunction with item 792 provided the conditions of the relevant item, 10990 or 10991, are satisfied.

Minimum Requirements

This service may only be provided by a prescribed medical practitioner who has completed appropriate non-directive pregnancy counselling training.

AN.7.27 Prescribed Medical Practitioner Multidisciplinary Case Conferences (Items 235 to 244)

Items 235 to 244 provide rebates for prescribed medical practitioners (see [note AN.7.1](#)) to organise and coordinate, or participate in, multidisciplinary case conferences for patients in the community or patients being discharged into the community from hospital or people living in residential aged care facilities. This group of items include two items for prescribed medical practitioners participating in cancer care case conferences.

REGULATORY REQUIREMENTS

To organise and coordinate case conference items 235, 236 and 237, the prescribed medical practitioner must:

- (a) explain to the patient the nature of a multidisciplinary case conference, and ask the patient for their agreement to the conference taking place; and
- (b) record the patient's agreement to the conference; and
- (c) record the day on which the conference was held, and the times at which the conference started and ended; and
- (d) record the names of the participants; and
- (e) offer the patient and the patient's carer (if any, and if the prescribed medical practitioner considers it appropriate and the patient agrees) a summary of the conference and provide this summary to other team members; and
- (f) discuss the outcomes of the conference with the patient and the patient's carer (if any, and if the prescribed medical practitioner considers it appropriate and the patient agrees); and
- (g) record all matters discussed and identified by the case conferencing team and put a copy of that record in the patient's medical records.

To participate in multidisciplinary case conference items 238, 239 and 240, the prescribed medical practitioner must:

- (a) explain to the patient the nature of a multidisciplinary case conference, and ask the patient whether they agree to the prescribed medical practitioner's participation in the conference; and
- (b) record the patient's agreement to the prescribed medical practitioner's participation; and
- (c) record the day on which the conference was held, and the times at which the conference started and ended; and
- (d) record the names of the participants; and
- (e) record all matters discussed and identified by the case conferencing team and put a copy of that record in the patient's medical records.

Cancer care case conference items 243 and 244

For the purposes of these items:

- private patients in public or private hospitals or the community with a malignancy of a solid organ or tissue or a systemic cancer such as a leukaemia or lymphoma are covered, with the exception of patients whose only cancer is a non-melanoma skin cancer;
- the billing prescribed medical practitioner must be a treating doctor of the patient discussed at the case conference. A treating doctor should generally have treated or provided a formal diagnosis of the patient's cancer in the past 12 months or expect to do so within the next 12 months. Attending non-treating clinicians, allied health providers or support staff are not eligible to bill the item;
- only one prescribed medical practitioner is eligible to claim item 243 for each patient case conference. This should be the prescribed medical practitioner who assumes responsibility for leading and coordinating the case conference, ensures that records are kept and that the patient is informed of the outcome of the case conference. In most cases this will be the lead treating prescribed medical practitioner;
- each billing prescribed medical practitioner must ensure that their patient is informed that a charge will be incurred for the case conference for which a Medicare rebate will be payable;
- participants must be in communication with each other throughout the case conference, either face-to-face, or by telephone or video link;
- suitable allied health practitioners would generally be from one of the following disciplines: aboriginal health care worker; asthma educator; audiologist; dental therapist; dentist; diabetes educator; dietitian; mental health worker; occupational therapist; optometrist; orthoptist; orthotist or prosthetist; pharmacist; physiotherapist; podiatrist; psychologist; registered nurse; social worker; or speech pathologist;
- in general, it is expected that no more than two case conferences per patient per year will be billed by a prescribed medical practitioner; and
- cancer care case conferences are for the purpose of developing a cancer treatment plan in a multidisciplinary team meeting and should not be billed against case conference items for other purposes (eg. community or discharge case conferences).

ADDITIONAL INFORMATION

Usual medical practitioner

Items 235 to 244 should generally be undertaken by the patient's usual medical practitioner. This is a prescribed medical practitioner, or a medical practitioner working in the same medical practice that has provided the majority of services to the patient over the previous 12 months and/or will be providing the majority of services to the patient over the coming 12 months.

Multidisciplinary case conference team members

Examples of persons who, for the purposes of care planning and case conferencing may be included in a multidisciplinary care team are allied health professionals such as, but not limited to: Aboriginal health care workers; asthma educators; audiologists; dental therapists; dentists; diabetes educators; dietitians; mental health workers; occupational therapists; optometrists; orthoptists; orthotists or prosthetists; pharmacists; physiotherapists; podiatrists; psychologists; registered nurses; social workers; speech pathologists.

A team may also include home and community service providers, or care organisers, such as: education providers; "meals on wheels" providers; personal care workers (workers who are paid to provide care services); probation officers.

The patient's informal or family carer may be included as a formal member of the team in addition to the minimum of three health or care providers. The patient and the informal or family carer do not count towards the minimum of three.

Discharge case conference

Organisation and coordination of a multidisciplinary discharge case conference (items 235, 236 and 237) may be provided for private in-patients being discharged into the community from hospital.

Further sources of information

Further information is also available for providers from Services Australia provider inquiry line on 132 150.

AN.7.31 Provision of Focussed Psychological Strategies Services by Eligible Prescribed Medical Practitioners to a Person Other than the Patient (309, 311, 313, 315, 91862, 91863, 91866 and 91867)

OVERVIEW

The purpose of these MBS items is to enable eligible prescribed medical practitioners (see [note AN.7.1](#)) to involve another person in a patient's treatment, under the Better Access to Psychiatrists, Psychologists and General Practitioners through the Medicare Benefits Schedule (Better Access) initiative, where:

- the eligible prescribed medical practitioner providing the service determines it is clinically appropriate,
- the patient consents for the service to be provided to the other person as part of their treatment,
- the service is part of the patient's treatment, and
- the patient is not in attendance.

These MBS items recognise the important role another person, such as a family member or carer, can play in supporting patients with mental illness, and the benefits that can result from involving them in treatment.

Under these MBS items, Medicare rebates are available to a patient for up to two services provided to another person per calendar year. Any services delivered using these items count towards the patient's course of treatment and calendar year allocations under Better Access. For further information on patient allocations, please see explanatory [note AN.7.22](#).

For Medicare benefit purposes, charges relating to services covered by these MBS items should be raised against the patient rather than against the person receiving the service.

SERVICES ATTRACTING MEDICARE REBATES

MBS items

There are eight MBS items for the provision of focussed psychological strategies (FPS) health services to a person other than the patient by eligible prescribed medical practitioners:

- 309, 311, 313 and 315 for provision of in person FPS services by a prescribed medical practitioner;
- 91862 and 91863 for provision of telehealth FPS services by a prescribed medical practitioner; and
- 91866 and 91867 for provision of phone FPS services by a prescribed medical practitioner.

Telehealth services are the preferred approach for substituting a face-to-face consultation. However, eligible prescribed medical practitioners will also be able to offer phone (audio-only) services if video is not available or appropriate. As outlined above, there are separate items available for phone services.

To claim these MBS items the eligible prescribed medical practitioner must meet the provider eligibility requirements for the delivery of FPS services. For further information, please see explanatory [note AN.7.23](#).

Eligible focussed psychological strategies services

A range of acceptable strategies have been approved for use by eligible prescribed medical practitioners utilising FPS items. For further information, please see explanatory [note AN.7.23](#).

Eligible prescribed medical practitioners must use their professional judgement to determine what would be an appropriate FPS service to deliver to another person as part of the patient's treatment within the approved list of FPS.

Publicly funded services

These MBS items do not apply for services provided by any other Commonwealth or state funded services, or provided to an admitted patient of a hospital, unless there is an exemption under subsection 19(2) of the *Health Insurance Act 1973*.

SERVICE LIMITATIONS

Medicare rebates are available to a patient for up to two services provided to another person per calendar year. The two services may consist of:

- Prescribed medical practitioner items: 309, 311, 313, 315, 91862, 91863, 91866 and 91867
- GP items: 2739, 2741, 2743, 2745, 91859, 91861, 91864 and 91865
- Clinical psychologist items: 80002, 80006, 80012, 80016, 91168, 91171, 91198 and 91199
- Psychologist items: 80102, 80106, 80112, 80116, 91174, 91177, 91200 and 91201
- Occupational therapist items: 80129, 80131, 80137, 80141, 91194, 91195, 91202 and 91203
- Social worker items: 80154, 80156, 80162, 80166, 91196, 91197, 91204 and 91205

Any services delivered using these MBS items count towards:

- the maximum session limit for each course of treatment under Better Access, and
- the patient's calendar year allocation for individual services under Better Access.

For further information on the maximum session limits for each course of treatment and maximum calendar year allocation, please see explanatory [note AN.7.22](#).

CLAIMING REQUIREMENTS

Determining service is clinically appropriate

The eligible prescribed medical practitioner providing the service must use their professional judgment to determine it is clinically appropriate, and would form part of the patient's treatment, to provide a FPS service to another person.

This determination must be recorded in writing in the patient's records.

Obtaining and recording patient consent to deliver the service

The patient must consent to the other person receiving an FPS service using these MBS items. The eligible prescribed medical practitioner providing the service must:

- Explain the service to the patient.
- Obtain the patient's consent for the service to be provided to the other person as part of the patient's treatment.
- Make a written record of the patient's consent.

The patient may withdraw their consent at any time.

In the case of a child, the general laws relating to consent to medical treatment apply. These may differ between states and territories, and the prescribed medical practitioner should be aware of the requirements in the relevant state or territory.

Service must be part of the patient's treatment

Any service delivered using these MBS items must be part of the patient's treatment. These MBS items are not for the purposes of providing mental health treatment to the person receiving the service. Should that person also require mental health treatment the patient MBS items should be claimed (where all the requirements for the relevant item descriptor have been met).

Patient is not in attendance

These MBS items are for eligible prescribed medical practitioners to provide services to another person when the patient is not in attendance. If the patient is in attendance, the prescribed medical practitioner can consider whether the requirements of the patient MBS items for delivering Better Access services have been met. For further information, please see explanatory [note AN.7.23](#).

Course of treatment

These services may be accessed at any stage of a patient's course of treatment and do not need to be accessed consecutively, provided no more than two services are delivered to another person and delivering these services does not exceed the maximum allowed for the patient in a course of treatment or calendar year under Better Access.

ADDITIONAL INFORMATION

Out-of-pocket expenses and Medicare safety net

For Medicare benefit purposes, charges relating to services covered by these MBS items should be raised against the patient rather than against the person receiving the service.

Charges in excess of the Medicare benefit for these items are the responsibility of the patient. However, if a service was provided out of hospital, any out-of-pocket costs will count towards the Medicare safety net for that patient. The out-of-pocket costs for mental health services which are not Medicare eligible do not count towards the Medicare safety net.

Checking the number of services

If there is any doubt about a patient's eligibility, Services Australia will be able to confirm the number of mental health services already claimed by the patient during the calendar year. Eligible prescribed medical practitioners can call Services Australia on 132 150 to check this information, while patients can call on 132 011.

Further information

For further information about Medicare Benefits Schedule items, please go to the Department of Health and Aged Care's website at www.health.gov.au/mbsonline.

For providers, further information is also available from the Services Australia Medicare Provider Enquiry Line on 132 150.

AN.7.32 Mental Health Case Conferences - Prescribed Medical Practitioners

Items 969, 971, 972, 973, 975, 986 provide rebates for a prescribed medical practitioner (see [note AN.7.1](#)), to organise and coordinate, or participate in, mental health case conferences. They apply for a patient who is being treated under the Better Access to Psychiatrists, Psychologists and General Practitioners through the Medicare Benefits Schedule (MBS) initiative (Better Access) or an eating disorder treatment and management plan (EDTMP).

The purpose of a case conference is to establish and coordinate the management of the care needs of the patient. A case conference is a process by which a multidisciplinary team carries out the following activities:

- discusses a patient's history;
- identifies the patient's multidisciplinary care needs;

- identifies outcomes to be achieved by members of the case conference team giving care and service to the patient;
- identifies tasks that need to be undertaken to achieve these outcomes, and allocating those tasks to members of the case conference team; and
- assesses whether previously identified outcomes (if any) have been achieved.

PATIENT ELIGIBILITY

Case conferences using these new MBS items can be held for patients who have been referred for treatment under Better Access or have an active eating disorder treatment and management plan.

Patients can be referred for treatment under Better Access by a:

- GP or prescribed medical practitioner under a mental health treatment plan or psychiatrist assessment and management plan,
- psychiatrist, or
- paediatrician.

Treated under Better Access means a patient has been referred for a:

- a focussed psychological strategies service delivered by a GP, prescribed medical practitioner, psychologist, social worker or occupational therapist, or
- psychological therapy service delivered by a clinical psychologist

REGULATORY REQUIREMENTS

To organise and coordinate case conference items 969, 971 and 972, the provider must:

- a. explain to the patient the nature of a mental health case conference and ask for their agreement to the conference taking place; and
- b. record the patient's agreement to the conference; and
- c. record the day on which the conference was held, and the times at which the conference started and ended; and
- d. record the names of the participants; and
- e. offer the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees) a summary of the conference and provide this summary to other team members; and
- f. discuss the outcomes of the conference with the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees); and
- g. record all matters discussed and identified by the case conferencing team and put a copy of that record in the patient's medical records.

To participate in mental health case conference items 973, 975 and 986, the provider must:

- a. explain to the patient the nature of a mental health case conference, and ask for their agreement to the prescribed medical practitioner's participation in the conference; and
- b. record the patient's agreement to the prescribed medical practitioner's participation; and
- c. record the day on which the conference was held, and the times at which the conference started and ended; and
- d. record the names of the participants; and
- e. record all matters discussed and identified by the case conferencing team and put a copy of that record in the patient's medical records.

ADDITIONAL INFORMATION

Usual medical practitioner

Items 969-986 should generally be undertaken by the patient's usual medical practitioner. This is a prescribed medical practitioner, or a medical practitioner working in the same medical practice, that has provided the majority of services to the patient over the previous 12 months and/or will be providing the majority of services to the patient over the coming 12 months.

Mental health case conference team members

The case conference must be organised by a medical practitioner (GP, prescribed medical practitioner or consultant physician in their specialty of paediatrics or psychiatry) and involve at least two other members of the multidisciplinary case conference team providing different kinds of treatment to the patient. Participating providers must be invited to attend by the organising practitioner.

The case conference must be arranged in advance, within a time frame that allows for all the participants to attend. The minimum of three care providers for a case conference must be present for the whole of the case conference. All participants must be in communication with each other throughout the conference, either face to face, by telephone or by video link, or a combination of these.

The patient should be given the option to attend the case conference, however may choose not to do so. Family members or carers, as well as other individuals providing support to the patient (such as a close friend, counsellor, teacher or peer worker) can also attend the case conference if the patient has agreed. However, these individuals do not count towards the minimum number of providers required.

This item does not preclude the claiming of a consultation on the same day if other clinically relevant services are provided.

Claiming frequency

It is expected that a patient would not normally require more than 4 case conferences in a 12-month period.

This item does not preclude the claiming of a consultation on the same day if other clinically relevant services are provided.

Further sources of information

Further information is also available for providers from the Services Australia provider enquiry line on 132 150.

AN.10.1 Schedule Fees and Medicare Benefits

Medicare benefits are based on fees determined for each optometrical service. The services provided by participating optometrists which attract benefits are set out in the *Health Insurance (General Medical Services Table) Regulations* (as amended).

If the fee is greater than the Medicare benefit, optometrists participating in the scheme are to inform the patient of the Medicare benefit payable for the item, at the time of the consultation and that the additional fee will not attract benefits.

Medicare benefits are payable at 85% of the Schedule fee for services rendered.

Medicare Safety Nets

The Medicare safety net provides families and singles with an additional rebate for out-of-hospital Medicare services, once annual thresholds are reached. There are two safety nets: the original Medicare safety net and the extended Medicare safety net (EMSN).

Under the original Medicare safety net, the Medicare benefit for out-of-hospital services is increased to 100% of the Schedule Fee (up from 85%) once an annual threshold in gap costs is reached. Gap costs refer to the difference between the Medicare benefit (85%) and the Schedule Fee.

Under the EMSN, once an annual threshold in out-of-pocket costs for out-of-hospital Medicare services is reached, Medicare will pay for 80% of any future out-of-pocket costs for out-of-hospital Medicare services for the remainder of the calendar year. However, where the item has an EMSN benefit cap, there is a maximum limit on the EMSN benefit that will be paid for that item. Further explanation about EMSN benefit caps is provided at www.mbsonline.gov.au.

The thresholds for the Medicare safety nets are indexed on 1 January each year.

Individuals are automatically registered with the Services Australia for the safety nets, however couples and families are required to register in order to be recognised as a family for the purposes of the safety nets. In most cases, registered families have their expenses combined to reach the safety net thresholds. This may help to qualify for safety net benefits more quickly. Registration forms can be obtained from Services Australia, or completed at www.servicessaustralia.gov.au. If you have already registered it is important to ensure your details are up to date.

Further information on the Medicare safety nets is available at <https://www.servicessaustralia.gov.au/medicare-safety-nets>.

Limiting rule for patient claims

Where a fee charged for a service is less than the Medicare benefit, the benefit will be reduced to the amount of the fee actually charged. In no case will the benefit payable exceed the fee charged.

Multiple attendances

Payment of benefit may be made for several attendances on a patient on the same day by the same optometrist provided that the subsequent attendances are not a continuation of the initial or earlier attendances. However, there should be a reasonable lapse of time between the services before they can be regarded as separate attendances.

Where two or more attendances are made on the one day by the same optometrist the time of each attendance should be stated on the account (e.g. 10.30 am and 3.15 pm) in order to assist in the payment of benefits. Times do not need to be specified where a perimetry item is performed in association with a consultation item.

In some circumstances a subsequent consultation on the same day may be judged to be a continuation of an earlier attendance and a second benefit is not payable. For example, a preliminary eye examination may be concluded with the instillation of mydriatic or cycloplegic drops and some time later additional examination procedures are undertaken. These sessions are regarded as being one attendance for benefit purposes.

Release of prescription

Where a spectacle prescription is prepared for the patient, it becomes the property of the patient, who is free to have the spectacles dispensed by any person of the patient's choice. The optometrist will ensure that the patient is made aware that he or she is entitled to a copy of the spectacle prescription.

Contact lens prescriptions are excluded from the above provision, although the prescription remains the property of the patient and should be available to the patient at the completion of the prescription and fitting process.

Reminder notices

The optometrist will ensure that any notice sent to a patient suggesting re-examination is sent solely on the basis of the clinical needs of the patient.

Aftercare period following surgery

Medicare schedule items that apply to surgery include all professional attendances necessary for the post-operative treatment of the patient, other than attendances provided by vocationally or non-vocationally trained general practitioners. The aftercare period includes all post-operative treatment, when provided by a medical specialist, consultant physician or optometrist. The amount and duration of the aftercare may vary but includes all attendances until recovery from the operation. Attendances unrelated to the operation provided by a vocationally or non-

vocationally registered general practitioner in the aftercare period can also attract Medicare benefits. Attendances provided by an optometrist in the aftercare period do not attract a Medicare benefit.

The rebate for cataract surgery includes payment for aftercare attendances so payment for aftercare services provided by an optometrist on behalf of a surgeon should be arranged with the surgeon. The optometrist should not charge the patient. In the case of cataract surgery, the first visit following surgery for which the optometrist can charge a rebatable fee is generally the attendance at which a prescription for spectacles or contact lenses is written.

Medicare benefits are not available for refractive surgery, consultations in preparation for the surgery or consultations in the aftercare period. Charges for attendances by optometrists may be made directly to the patient or to the surgeon depending on the arrangements made prior to surgery. Accounts and the receipt issued to the patient should clearly indicate the fee is non-rebatable.

Single Course of Attention

A reference to a single course of attention means:

- (a) In the case of items 10905 to 10918, and old item 10900 - a course of attention by one or more optometrists in relation to a specific episode of optometric care.
- (b) In relation to items 10921 to 10930 - a course of attention, including all associated attendances, by one or more optometrists for the purpose of prescribing and fitting of contact lenses. This includes those after-care visits necessary to ensure the satisfactory performance of the lenses.

Referred comprehensive initial consultations (item 10905) - Read in conjunction with 08 Referrals

For the purposes of item 10905, the referring optometrist, having considered the patient's need for the referred consultation, is required to provide a written referral, dated and signed, and setting out the patient's condition and the reason for the referral.

Benefits will be paid at the level of item 10905 providing the referral is received before the provision of the service, and providing the account, receipt or bulk-billing form contains the name and provider number of the referring optometrist. Referrals from medical practitioners do not attract benefits under item 10905.

The optometrist claiming the item 10905 service is obliged to retain the written referral for a period of twenty-four months.

Referrals must be at "arms length". That is to say, no commercial arrangements or connections should exist between the optometrists.

Second comprehensive initial consultation, within 36 months for a patient who is less than 65 years of age and once every 12 months for a patient who is at least 65 years of age, of a previous comprehensive consultation (item 10907)

A patient can receive a comprehensive initial consultation by another optometrist within 36 months if the patient is less than 65 years of age, and once every 12 months if the patient is at least 65 years of age, if the patient has attended another optometrist for an attendance to which item 10905, 10907, 10910, 10911, 10912, 10913, 10914 or 10915 applies, or old item 10900 applied.

Comprehensive initial consultations (items 10910 and 10911)

There are two new MBS items for comprehensive initial consultation that have been introduced. Item 10910 has been introduced for a professional attendance of more than 15 minutes for a patient who is less than 65 years of age. This item is payable once only within a 36 month period, and if the patient has not received a service in this timeframe to which item 10905, 10907, 10910, 10912, 10913, 10914 or 10915 applies, or old item 10900 applied.

Item 10911 has been introduced for a professional attendance of more than 15 minutes for a patient who is at least 65 years of age. This item is payable once only within a 12 month period, and if the patient has not received a

service in this timeframe to which item 10905, 10907, 10910, 10911, 10912, 10913, 10914 or 10915 applies, or old item 10900 applied.

However, a benefit is payable under item 10912, 10913, 10914 or 10915 where the patient has an ocular condition which necessitates a further course of attention being started within 36 months for a patient who is less than 65 years of age (item 10910) and within 12 months for a patient who is at least 65 years of age (item 10911) of the previous initial consultation. The conditions which qualify for a further course of attention are contained in the descriptions of these items.

Where an attendance would have been covered by item 10905, 10907, 10910, 10911, 10912, 10913, 10914, or 10915 but is of 15 minutes duration or less, item 10916 (Short consultation) applies.

Significant change in visual function requiring comprehensive re-evaluation (item 10912)

Significant changes in visual function which justify the charging of item 10912 could include documented changes of:

- vision or visual acuity of 2 lines (0.2 logMAR) or more (corrected or uncorrected)
- visual fields or previously undetected field loss
- binocular vision
- contrast sensitivity or previously undetected contrast sensitivity loss.

New signs or symptoms requiring comprehensive re-evaluation (item 10913)

When charging item 10913 the optometrist should document the new signs or symptoms suffered by the patient on the patient's record card.

Progressive disorder requiring comprehensive re-evaluation (item 10914)

When charging item 10914, the optometrist should document the nature of the progressive disorder suffered by the patient on the patient's record card. Progressive disorders may include conditions such as maculopathy (including age related maculopathy) cataract, corneal dystrophies, glaucoma etc.

Examination of the eyes of a patient with diabetes mellitus (item 10915)

Where an examination of the eyes, with the instillation of a mydriatic, of a patient with diabetes mellitus is being conducted, where possible this item should be billed rather than item 10914 to assist in identifying whether such patients are receiving appropriate eye care.

Second or subsequent consultations (item 10918)

Each consultation, apart from the initial consultation, in a single course of attention, other than a course of attention involving the fitting and prescription of contact lenses, is covered by item 10918.

Contact lens consultations (items 10921 to 10930)

In the case of contact lens consultations, benefit is payable only where the patient is one of the prescribed classes of patient entitled to benefit for contact lens consultations as described in items 10921 to 10929.

For claims under items 10921,10922,10923,10925 and 10930, eligibility is based on the patient's distance spectacle prescription, determining the spherical equivalent by adding to the spherical prescription, half the cylindrical correction.

Medicare benefits are not payable for item 10929 in circumstances where a patient wants contact lenses for:

- (a) reasons of appearance (because they do not want to wear spectacles);

- (b) sporting purposes;
- (c) work purposes; or
- (d) psychological reasons (because they cannot cope with spectacles).

All attendances subsequent to the initial consultation in a course of attention involving the prescription and fitting of contact lenses are collectively regarded as a single service under items 10921 to 10930, as appropriate. The date of service is deemed to be the date on which the contact lenses are delivered to the patient. In some cases, where the patient decides not to proceed with contact lenses, no Medicare fee is payable because the patient has not taken delivery of the lenses. In such instances, the patient may be charged a non-rebatable (private) fee for a 'part' service. Any visits related to the prescribing and fitting of lenses are regarded to be covered by the relevant item in the range 10921 to 10930. The bulk item includes those aftercare visits necessary to ensure the satisfactory performance of the lenses. This interpretation is unaltered by the frequency of aftercare visits associated with various lens types including extended wear lenses.

Consultations during the aftercare period that are unrelated to the prescription and fitting of contact lenses or that are not part of normal aftercare may be billed under other appropriate items (not items 10921 to 10930).

For patients not eligible for Medicare rebates for contact lens care, fees charged for contact lens consultations are a matter between the practitioner and the patient. Any account for consultations involving the fitting and prescription of contact lenses issued to a patient who does not fall into the specified categories should be prepared in such a way that it cannot be used to obtain benefits. No Medicare item should be attached to any service that does not attract benefits and the optometrist should annotate the account with wording such as "Medicare benefits not payable".

Where an optometrist wishes to apportion the total fee to show the appropriate optometric consultation benefit and the balance of the fee, he or she should ensure that the balance is described in such a way (e.g. balance of account) that it cannot be mistaken as being a separate consultation. In particular no Medicare item number should be shown against the balance.

When a patient receives a course of attention involving the prescription and fitting of contact lenses an account should not be issued (or an assignment form completed) until the date on which the patient takes delivery of the lenses.

Benefit under items 10921 to 10929 is payable once only in any period of 36 consecutive months except where circumstances are met under item 10930 within a 36 month period.

Domiciliary visits (items 10931 - 10933)

Where patients are unable to travel to an optometrist's practice for treatment, and where the request for treatment is initiated by the patient, a domiciliary visit may be conducted, which involves the optometrist travelling to the patient's place of residence, and transporting the necessary equipment. Where possible, it is preferable that the patient travel to the practice so that the full range of equipment is available for the examination of the patient.

Benefits are payable under items 10931 - 10933 to provide some financial assistance in the form of a loading to the optometrist, in recompense for travel costs and packing and unpacking of equipment. The loading is in addition to the consultation item. For the purposes of the loading, acceptable places of residence for domiciliary visits are:

- the patient's home;
- a residential aged care facility as defined by the *Aged Care Act 1997*; or
- an institution which means a place (other than a residential aged care facility or hospital) at which residential accommodation and/or day care is made available to any of the following categories: disadvantaged children, juvenile offenders, aged persons, chronically ill psychiatric patients, homeless persons, unemployed persons, persons suffering from alcoholism, persons addicted to drugs, or physically or intellectually disabled persons.

Visits to a hospital at the patient's request are not covered by the loading and instead, an extra fee in addition to the Schedule fee can be charged, providing the service is not bulk-billed. Medicare benefits are not payable in respect of the private charge.

Items 10931 - 10933 may be used whether or not the optometrist chooses to bulk-bill but it is important that if the consultation is bulk-billed the loading is also, and no private charge can then be levied. If the consultation is not bulk-billed, the loading should also not be bulk-billed and a private charge may be levied. The usual requirement that the patient must have requested the domiciliary visit applies.

Domiciliary visit loading items cannot be claimed in conjunction with brief initial consultation item 10916, or with computerised perimetry items 10940 or 10941. The choice of appropriate item in the range 10931 - 10933 depends on how many patients are seen at the one location. Benefits are payable under item 10931 where the optometrist travels to see one patient at a single location. Item 10931 can be billed in addition to the appropriate consultation item (excluding items 10916, 10932, 10933, 10940 or 10941). If the optometrist goes on to see another single patient **at a different location**, that patient can also be billed an item 10931 plus the appropriate consultation. However, if two patients are visited at a single location on the same occasion, each of the two patients should be billed item 10932 as well as the appropriate consultation item applying to each patient. Similarly, if three patients are visited at a single location on the same occasion, each of the three patients should be billed item 10933 as well as the appropriate consultation item applying to each patient.

Where more than three patients are seen at the same location, additional benefits for domiciliary visits are not payable for the fourth, fifth etc patients. On such occasions, the first three patients should be billed item 10933 as well as the appropriate consultation item, and all subsequent patients may only be billed the appropriate consultation item. Where multiple patients are seen at one location on one occasion, there is no provision for patients to be 'grouped' into twos and threes for billing purposes.

Where a private charge is levied for a domiciliary visit, bulk-billing is precluded. Medicare benefits are not payable in respect of the private charge and the patient should be informed of this. Private charges should be shown separately on accounts issued by optometrists and must not be included in the fees for the service.

Computerised Perimetry Services (items 10940 and 10941)

Benefit under items 10940 and 10941 is payable where full quantitative computerised perimetry (automated absolute static threshold but not including multifocal multichannel objective perimetry) has been performed by an optometrist on both eyes (item 10940) or one eye (item 10941) where indicated by the presence of relevant ocular disease or suspected pathology of the visual pathways or brain. Item 10940 for bilateral procedures cannot be claimed for patients who are totally blind in one eye. In this instance, item 10941 for unilateral procedures should be claimed, where appropriate.

These items can be billed either in association with comprehensive consultation items 10905, 10907, 10910, 10911, 10912, 10913, 10914, or 10915, or independently, but they cannot be billed with items 10916, 10918, 10931, 10932 or 10933. An assessment and report is required and, where referral to an ophthalmologist for further treatment is required, the printed results of the perimetry should be provided to the ophthalmologist to discourage repetition of perimetry unless clinically necessary. If Medicare benefits are to be claimed, a maximum of two perimetry services in any twelve month period may be provided.

Low Vision Assessment (item 10942)

A benefit is payable under item 10942 where one or more of the tests outlined in the item description are carried out on a patient who has already been established during a comprehensive consultation as having low vision, as specifically defined in the item. This item is not intended for patients expected to undergo cataract surgery in the near future who may temporarily meet the criteria for having low vision.

Item 10942 may be claimed on the same day as either a comprehensive initial consultation (items 10905 - 10915) or a subsequent consultation (item 10918), but only where the additional low vision testing has been carried out on an eligible patient. Item 10942 is not intended to be claimed with a brief initial consultation (item 10916), or with any of the contact lens items (items 10921-10930).

Children's vision assessment (item 10943)

Children aged 0 to 2 years, and 15 years and over, are not eligible for item 10943 and may be treated under appropriate attendance items.

A benefit is payable under item 10943 where one or more of the assessment and testing procedures outlined in the item description are carried out on a patient aged 3 - 14 years inclusive, and where a finding of significant binocular or accommodative dysfunction is the outcome of the consultation and assessment/testing. The conditions to be assessed under this item are primarily amblyopia and strabismus, but dysfunctions relating to vergences are also covered, providing well established and evidence based optometry practice is observed.

A benefit is not payable under item 10943 for the assessment of learning difficulties or learning disabilities.

Item 10943 may be claimed on the same day as either a comprehensive consultation (items 10905 - 10915) or a subsequent consultation (item 10918), but only where the additional assessment/testing has been carried out on an eligible child. Item 10943 is not intended to be claimed with a brief initial consultation (item 10916), or with any of the contact lens items (items 10921-10930).

Removal of an embedded corneal foreign body (item 10944)

Item 10944 has been introduced for the complete removal of an embedded corneal foreign body that is sub-epithelial or intra-epithelial and the removal of rust rings from the cornea.

The removal of an embedded foreign body should be performed using a hypodermic needle, foreign body gouge or similar surgical instrument, with magnification provided by a slit lamp biomicroscope, loupe or similar device.

The optometrist should document the nature of the embedded foreign body (sub-epithelial or intra-epithelial), method of removal and the magnification. Similarly, with rust ring removal, the optometrist should document the method of removal and the magnification.

Where complexity of the procedure is beyond the skill of the optometrist, or if other complications are present (e.g. globe perforation, penetration >25%, or patient unable to hold still due to pathological anxiety, nystagmus, or tremor etc, without some form of systemic medication), the patient should be referred to an ophthalmologist.

This item cannot be billed on the same occasion as items 10905, 10907, 10910, 10911, 10912, 10913, 10914, 10915, 10916 or 10918. If the embedded foreign body or rust ring has not been completely removed, benefits are only payable under item 10916.

AN.14.2 Heart health assessment provided by general practitioners and medical practitioners

Item 699 and 177 may be used to undertake a heart health assessment, lasting at least 20 minutes, by a general practitioner (699) or medical practitioner (other than a specialist or consultant physician) (177) to support patients with cardiovascular disease, or patients at risk of developing cardiovascular disease (CVD). Unless indicated otherwise, the term medical practitioner in this note includes both a general practitioner providing a service under item 699 or a medical practitioner (other than a specialist or consultant physician) providing a service under item 177.

The items provide patients with a comprehensive assessment of their cardiovascular health, identification of any physical or lifestyle-related risks to their cardiovascular health, and a comprehensive preventive health care plan to improve their cardiovascular health. The assessment may include auscultation of the patient's heart, where clinically relevant.

The heart health assessment item can be claimed once per patient in a 12-month period. The heart health assessment items cannot be claimed if a patient has had a health assessment service, excluding an Aboriginal and Torres Strait Islander Peoples Health Assessment (item 715, 228, 92004, 92011), in the previous 12 months.

This item is available to all Medicare eligible patients aged 30 years and over who would benefit from an assessment of this type. The intention of this item is to identify CVD in people not known to have CVD.

The absolute cardiovascular disease risk is calculated as per the Australian Absolute Cardiovascular Disease Risk Calculator which can be viewed at '<http://www.cvdcheck.org.au/calculator/>'.

Revisions of the Australian Guidelines for the management of absolute cardiovascular disease risk (published in 2012) are currently underway ([ACDPA | Absolute CVD risk guideline update](#)), in the meantime resources on risk assessment can be found at [ACDPA | Resources](#). Medical practitioners can also refer to the RACGP's '[National Guide to a Preventative Assessment for Aboriginal and Torres Strait Islander People](#)' to complete this assessment.

Heart health assessments are not available to people who are in-patients of a hospital or care recipients in a residential aged care facility.

Before a health assessment is commenced, the patient (and/or the patient's parent(s), carer or representative, as appropriate) must be given an explanation of the health assessment process and its likely benefits. The patient must be asked whether they consent to the health assessment being performed. In cases where the patient is not capable of giving consent, consent must be given by the patient's parent(s), carer or representative. Consent to the health assessment must be noted in the patient's records.

The heart health assessment may only be provided by a general practitioner (699) or medical practitioner (other than a specialist or consultant physician) (177).

A health assessment should generally be undertaken by the patient's 'usual doctor'. For the purpose of the heart health assessment items, 'usual doctor' means the general practitioner, or a medical practitioner working in the medical practice, which has provided the majority of primary health care to the patient over the previous 12 months and/or will be providing the majority of care to the patient over the next 12 months.

A health assessment should not take the form of a health screening service.

A copy of the heart health assessment must be retained for a period of two years after the date of service.

MBS heart health assessment items must be provided by a medical practitioner personally attending upon a patient. Suitably qualified health professionals, such as practice nurses or Aboriginal and Torres Strait Islander health practitioners, employed and/or otherwise engaged by a general practice or health service, may assist medical practitioners in performing health assessments. Such assistance must be provided in accordance with accepted medical practice and under the supervision of the medical practitioner. This may include activities associated with:

- information collection; and
- providing patients with information about recommended interventions at the direction of the medical practitioner.

The medical practitioner should be satisfied that the assisting health professional has the necessary skills, expertise and training to collect the information required for the heart health assessment.

Medical practitioners should not conduct a separate consultation for another health-related issue in conjunction with a health assessment unless it is clinically necessary (ie. the patient has an acute problem that needs to be managed separately from the assessment).

Heart health assessment items do not apply for services that are provided by any other Commonwealth or State funded services. However, where an exemption under subsection 19(2) of the *Health Insurance Act 1973* has been granted to an Aboriginal Community Controlled Health Service or State/Territory Government health clinic, heart health assessment items can be claimed for services provided by medical practitioners salaried by or contracted to, the Service or health clinic. All other requirements of the items must be met.

Medicare bulk billing incentive items can be claimed in conjunction with any heart health assessment for eligible patients, provided the conditions of item are met.

AN.15.1 Mental Health Case Conferences

Items 930, 933, 935, 937, 943, 945 provide rebates for GPs to organise and coordinate, or participate in, mental health case conferences. They apply for a patient who is being treated under the Better Access to Psychiatrists, Psychologists and General Practitioners through the Medicare Benefits Schedule (MBS) initiative (Better Access) or an eating disorder treatment and management plan (EDTMP).

The purpose of a case conference is to establish and coordinate the management of the care needs of the patient. A case conference is a process by which a multidisciplinary team carries out the following activities:

- discusses a patient's history;
- identifies the patient's multidisciplinary care needs;
- identifies outcomes to be achieved by members of the case conference team giving care and service to the patient;
- identifies tasks that need to be undertaken to achieve these outcomes, and allocating those tasks to members of the case conference team; and
- assesses whether previously identified outcomes (if any) have been achieved.

PATIENT ELIGIBILITY

Case conferences using these new MBS items can be held for patients who have been referred for treatment under Better Access or have an active eating disorder treatment and management plan.

Patients can be referred for treatment under Better Access by a:

- GP or OMP under a mental health treatment plan or psychiatrist assessment and management plan,
- psychiatrist, or
- paediatrician.

Treated under Better Access means a patient has been referred for a:

- a focussed psychological strategies service delivered by a GP, OMP, psychologist, social worker or occupational therapist, or
- psychological therapy service delivered by a clinical psychologist

REGULATORY REQUIREMENTS

To organise and coordinate case conference items 930, 933 and 935, the provider must:

- a. explain to the patient the nature of a mental health case conference and ask for their agreement to the conference taking place; and
- b. record the patient's agreement to the conference; and
- c. record the day on which the conference was held, and the times at which the conference started and ended; and
- d. record the names of the participants; and
- e. offer the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees) a summary of the conference and provide this summary to other team members; and
- f. discuss the outcomes of the conference with the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees); and
- g. record all matters discussed and identified by the case conferencing team and put a copy of that record in the patient's medical records.

To participate in mental health case conference items 937, 943 and 945, the provider must:

- a. explain to the patient the nature of a mental health case conference and ask for their agreement to the general practitioner's participation in the conference; and
- b. record the patient's agreement to the general practitioner's participation; and
- c. record the day on which the conference was held, and the times at which the conference started and ended; and

- d. record the names of the participants; and
- e. record all matters discussed and identified by the case conferencing team and put a copy of that record in the patient's medical records.

ADDITIONAL INFORMATION

Usual general practitioner

Items 930-945 should generally be undertaken by the patient's usual general practitioner. This is a general practitioner, or a general practitioner working in the medical practice, that has provided the majority of services to the patient over the previous 12 months and/or will be providing the majority of services to the patient over the coming 12 months.

Mental health case conference team members

The case conference must be organised by a medical practitioner (GP, OMP or consultant physician in their speciality of paediatrics or psychiatry) and involve at least two other members of the multidisciplinary case conference team providing different kinds of treatment to the patient. Participating providers must be invited to attend by the organising practitioner.

The case conference must be arranged in advance, within a time frame that allows for all the participants to attend. The minimum of three care providers for a case conference must be present for the whole of the case conference. All participants must be in communication with each other throughout the conference, either face to face, by telephone or by video link, or a combination of these.

The patient should be given the option to attend the case conference, however may choose not to do so. Family members or carers, as well as other individuals providing support to the patient (such as a close friend, counsellor, teacher or peer worker) can also attend the case conference if the patient has agreed. However, these individuals do not count towards the minimum number of providers required.

This item does not preclude the claiming of a consultation on the same day if other clinically relevant services are provided.

Claiming frequency

It is expected that a patient would not normally require more than 4 case conferences in a 12 month period.

This item does not preclude the claiming of a consultation on the same day if other clinically relevant services are provided.

Further sources of information

Further information is also available for providers from the Services Australia provider enquiry line on 132 150.

AN.15.2 Mental Health Case Conferences - Psychiatrists and Paediatricians

A range of items are available for consultant physicians in their speciality of paediatrics or psychiatry to organise and co-ordinate, or participate in, mental health case conferences. They apply for a patient who is being treated under the Better Access to Psychiatrists, Psychologists and General Practitioners through the Medicare Benefits Schedule (MBS) initiative (Better Access) or an eating disorder treatment and management plan (EDTMP).

The purpose of a case conference is to establish and coordinate the management of the care needs of the patient. A case conference is a process by which a multidisciplinary team carries out the following activities:

- discusses a patient's history;
- identifies the patient's multidisciplinary care needs;
- identifies outcomes to be achieved by members of the case conference team giving care and service to the patient;

- identifies tasks that need to be undertaken to achieve these outcomes, and allocating those tasks to members of the case conference team; and
- assesses whether previously identified outcomes (if any) have been achieved.

PATIENT ELIGIBILITY

Case conferences using these new MBS items can be held for patients who have been referred for treatment under Better Access or have an active eating disorder treatment and management plan.

Patients can be referred for treatment under Better Access by a:

- GP or OMP under a mental health treatment plan or psychiatrist assessment and management plan,
- psychiatrist, or
- paediatrician.

Treated under Better Access means a patient has been referred for a:

- focussed psychological strategies service delivered by a GP, OMP, psychologist, social worker or occupational therapist, or
- psychological therapy service delivered by a clinical psychologist

REGULATORY REQUIREMENTS

To organise and coordinate case conference items 946, 948 and 959, the provider must:

- explain to the patient the nature of a mental health case conference and ask for their agreement to the conference taking place; and
- record the patient's agreement to the conference; and
- record the day on which the conference was held, and the times at which the conference started and ended; and
- record the names of the participants; and
- offer the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees) a summary of the conference and provide this summary to other team members; and
- discuss the outcomes of the conference with the patient and the patient's carer (if any, and if the practitioner considers it appropriate and the patient agrees); and
- record all matters discussed and identified by the case conferencing team and put a copy of that record in the patient's medical records.

To participate in mental health case conference items 961, 962 and 964, the provider must:

- explain to the patient the nature of a mental health case conference and ask for their agreement to the general practitioner's participation in the conference; and
- record the patient's agreement to the general practitioner's participation; and
- record the day on which the conference was held, and the times at which the conference started and ended; and
- record the names of the participants; and
- record all matters discussed and identified by the case conferencing team and put a copy of that record in the patient's medical records.

ADDITIONAL INFORMATION

Mental health case conference team members

The case conference must be organised by a medical practitioner (GP, OMP or consultant physician in their speciality of paediatrics or psychiatry) and involve at least two other members of the multidisciplinary case conference team providing different kinds of treatment to the patient. Participating providers must be invited to attend by the organising practitioner.

The case conference must be arranged in advance, within a time frame that allows for all the participants to attend. The minimum of three care providers for a case conference must be present for the whole of the case conference. All participants must be in communication with each other throughout the conference, either face to face, by telephone or by video link, or a combination of these.

The patient should be given the option to attend the case conference, however may choose not to do so. Family members or carers, as well as other individuals providing support to the patient (such as a close friend, counsellor, teacher or peer worker) can also attend the case conference if the patient has agreed. However, these individuals do not count towards the minimum number of providers required.

This item does not preclude the claiming of a consultation on the same day if other clinically relevant services are provided.

Claiming frequency

It is expected that a patient would not normally require more than 4 case conferences in a 12 month period.

This item does not preclude the claiming of a consultation on the same day if other clinically relevant services are provided.

Further sources of information

Further information is also available for providers from the Services Australia provider enquiry line on 132 150.

AN.20.1 Provision of Focussed Psychological Strategies Services by Eligible GPs to a Person Other than the Patient (2739, 2741, 2743, 2745, 91859, 91861, 91864 and 91865)

OVERVIEW

The purpose of these MBS items is to enable eligible GPs to involve another person in a patient's treatment, under the Better Access to Psychiatrists, Psychologists and General Practitioners through the Medicare Benefits Schedule (Better Access) initiative, where:

- the eligible GP providing the service determines it is clinically appropriate,
- the patient consents for the service to be provided to the other person as part of their treatment,
- the service is part of the patient's treatment, and
- the patient is not in attendance.

These MBS items recognise the important role another person, such as a family member or carer, can play in supporting patients with mental illness, and the benefits that can result from involving them in treatment.

Under these MBS items, Medicare rebates are available to a patient for up to two services provided to another person per calendar year. Any services delivered using these items count towards the patient's course of treatment and calendar year allocations under Better Access. For further information on patient allocations, please see explanatory note AN.0.56.

For Medicare benefit purposes, charges relating to services covered by these MBS items should be raised against the patient rather than against the person receiving the service.

SERVICES ATTRACTING MEDICARE REBATES

MBS items

There are eight MBS items for the provision of focussed psychological strategies (FPS) health services to a person other than the patient by eligible GPs:

- 2739, 2741, 2743 and 2745 for provision of in person FPS services by a GP;
- 91859 and 91861 for provision of telehealth FPS services by a GP; and

- 91864 and 91865 for provision of phone FPS services by a GP.

Telehealth services are the preferred approach for substituting a face-to-face consultation. However, eligible GPs will also be able to offer phone (audio-only) services if video is not available or appropriate. As outlined above, there are separate items available for phone services.

To claim these MBS items the eligible GP must meet the provider eligibility requirements for the delivery of FPS services. For further information, please see explanatory note AN.0.57.

Eligible focussed psychological strategies services

A range of acceptable strategies have been approved for use by eligible GPs utilising FPS items. For further information, please see explanatory note AN.0.57.

Eligible GPs must use their professional judgement to determine what would be an appropriate FPS service to deliver to another person as part of the patient's treatment within the approved list of FPS.

Publicly funded services

These MBS items do not apply for services provided by any other Commonwealth or state funded services, or provided to an admitted patient of a hospital, unless there is an exemption under subsection 19(2) of the *Health Insurance Act 1973*.

SERVICE LIMITATIONS

Medicare rebates are available to a patient for up to two services provided to another person per calendar year. The two services may consist of:

- GP items: 2739, 2741, 2743, 2745, 91859, 91861, 91864 and 91865
- Other Medical Practitioner items: 309, 311, 313, 315, 91862, 91863, 91866 and 91867
- Clinical psychologist items: 80002, 80006, 80012, 80016, 91168, 91171, 91198 and 91199
- Psychologist items: 80102, 80106, 80112, 80116, 91174, 91177, 91200 and 91201
- Occupational therapist items: 80129, 80131, 80137, 80141, 91194, 91195, 91202 and 91203
- Social worker items: 80154, 80156, 80162, 80166, 91196, 91197, 91204 and 91205

Any services delivered using these MBS items count towards:

- the maximum session limit for each course of treatment under Better Access, and
- the patient's calendar year allocation for individual services under Better Access.

For further information on the maximum session limits for each course of treatment and maximum calendar year allocation, please see explanatory note AN.0.56.

CLAIMING REQUIREMENTS

Determining service is clinically appropriate

The eligible GP providing the service must use their professional judgment to determine it is clinically appropriate, and would form part of the patient's treatment, to provide a FPS service to another person.

This determination must be recorded in writing in the patient's records.

Obtaining and recording patient consent to deliver the service

The patient must consent to the other person receiving a FPS service using these MBS items. The eligible GP providing the service must:

- Explain the service to the patient.

- Obtain the patient's consent for the service to be provided to the other person as part of the patient's treatment.
- Make a written record of the patient's consent.

The patient may withdraw their consent at any time.

In the case of a child, the general laws relating to consent to medical treatment apply. These may differ between states and territories, and the GP should be aware of the requirements in the relevant state or territory.

Service must be part of the patient's treatment

Any service delivered using these MBS items must be part of the patient's treatment. These MBS items are not for the purposes of providing mental health treatment to the person receiving the service. Should that person also require mental health treatment the patient MBS items should be claimed (where all the requirements for the relevant item descriptor have been met).

Patient is not in attendance

These MBS items are for eligible GPs to provide services to another person when the patient is not in attendance. If the patient is in attendance, the GP can consider whether the requirements of the patient MBS items for delivering Better Access services have been met. For further information, please see explanatory note AN.0.57.

Course of treatment

These services may be accessed at any stage of a patient's course of treatment and do not need to be accessed consecutively, provided no more than two services are delivered to another person and delivering these services does not exceed the maximum allowed for the patient in a course of treatment or calendar year under Better Access.

ADDITIONAL INFORMATION

Out-of-pocket expenses and Medicare safety net

For Medicare benefit purposes, charges relating to services covered by these MBS items should be raised against the patient rather than against the person receiving the service.

Charges in excess of the Medicare benefit for these items are the responsibility of the patient. However, if a service was provided out of hospital, any out-of-pocket costs will count towards the Medicare safety net for that patient. The out-of-pocket costs for mental health services which are not Medicare eligible do not count towards the Medicare safety net.

Checking the number of services

If there is any doubt about a patient's eligibility, Services Australia will be able to confirm the number of mental health services already claimed by the patient during the calendar year. Eligible GPs can call Services Australia on 132 150 to check this information, while patients can call on 132 011.

Further information

For further information about Medicare Benefits Schedule items, please go to the Department of Health and Aged Care's website at www.health.gov.au/mbsonline.

For providers, further information is also available from the Services Australia Medicare Provider Enquiry Line on 132 150.

AN.33.1 TAVI CASE CONFERENCE - (ITEMS 6080 AND 6081)

Items 6080 and 6081 apply to a TAVI Case Conference organised to discuss a patient's suitability to receive the service described in items 38495 or 38514 for Transcatheter Aortic Valve Implantation (TAVI).

For items 6080 and 6081 a TAVI Case Conference is a process by which:

- (a) there is a team of 3 or more participants, where:
 - (i) the first participant is a cardiothoracic surgeon; and
 - (ii) the second participant is an interventional cardiologist; and
 - (iii) the third participant is a specialist or consultant physician who does not perform a service described in items 38495 or 38514 for the patient being assessed; and
 - (iv) either the first or the second participant is also a TAVI Practitioner; and
- (b) the team assesses a patient's risk and technical suitability to receive the service described in items 38495 or 38514, taking into account matters such as:
 - (i) the patient's risk and technical suitability for a surgical aortic valve replacement; and
 - (ii) the patient's cognitive function and frailty; and
- (c) the result of the assessment is that the team makes a recommendation about whether or not the patient is suitable to receive the service described in item 38495 or item 38514; and
- (d) the particulars of the assessment and recommendation are recorded in writing.

TAVI Practitioner

For items 6080 and 6081 a TAVI Practitioner is either a cardiothoracic surgeon or interventional cardiologist who is accredited by Cardiac Accreditation Services Limited.

Accreditation by Cardiac Accreditation Services Limited must be valid prior to the service being undertaken in order for benefits to be payable under items 38495 or 38514.

The process for accreditation and re-accreditation is outlined in the *Transcatheter Aortic Valve Implantation - Rules for the Accreditation of TAVI Practitioners*, issued by Cardiac Accreditation Services Limited, and is available on the Cardiac Accreditation Services Limited website, www.tavi.org.au.

Cardiac Accreditation Services Limited is a national body comprising representatives from the Australian & New Zealand Society of Cardiac & Thoracic Surgeons (ANZSCTS) and the Cardiac Society of Australia and New Zealand (CSANZ).

Coordination of a TAVI Case Conference

For item 6080, coordination means undertaking all of the following activities in relation to a TAVI Case Conference:

- a. ensuring that the patient is aware of the purpose and nature of the patient's TAVI Case Conference and has consented to their TAVI Case Conference;
- b. recording the day the conference was held, and the times the conference started and ended;
- c. recording the names of the participants of the conference;
- d. provision of expertise to inform the recommendation resulting from the case conference;
- e. recording minutes of the TAVI Case Conference including the recommendation resulting from the conference;
- f. ensuring that the patient is aware of the recommendation.

Attendance at a TAVI Case Conference

For item 6081, attendance means undertaking all of the following activities in relation to a TAVI Case Conference:

- a. retaining a record of the day the conference was held, and the times the conference started and ended;
- b. retaining a record of the names of the participants;
- c. provision of expertise to inform the recommendation resulting from the case conference;
- d. retaining a record of the recommendation resulting from the conference.

General requirements

The TAVI Case Conference must be arranged in advance, within a time frame that allows for all the participants to attend. A TAVI Case Conference is to last at least 10 minutes and a minimum of three suitable participants (as defined under the item requirements), must be present for the whole of the case conference. All participants must be in communication with each other throughout the conference, either face to face, by telephone or by video link, or a combination of these.

A record of the TAVI Case Conference which contains: a list of the participants; the times the conference commenced and concluded; a description of the assessment of suitability; and a summary of the outcomes must be kept in the patient's record. The notes and summary of outcomes must be provided to all participants.

Prior informed consent must be obtained from the patient, or the patient's agent. In obtaining informed consent the TAVI Practitioner coordinating the TAVI Case Conference should ensure the patient has been:

- Informed that their medical history, diagnosis and care preferences will be discussed with other case conference participants;
- Informed that they may incur a charge for the service for which a Medicare rebate will be payable.

Medicare benefits are only payable in respect of the service provided by the coordinating TAVI Practitioner or the attending interventional cardiologist, cardiothoracic surgeon or independent specialist or consultant physician. Benefits are not payable for another medical practitioner organising a case conference or for attendance by other medical practitioners at a TAVI Case Conference.

It is expected that a patient would not normally require more than one TAVI Case Conference in determining suitability for the services described in items 38495 or 38514. As such, item 6080 is only payable once per patient in a five year period. Item 6081 is payable only twice per patient in a five year period.

Items 6080 and 6081 do not preclude the claiming of a consultation on the same day if other clinically relevant services are provided.

AN.35.1 Flag fall amount for residential aged care facility attendance by a general practitioner

Medicare item 90001 provides a flag fall fee for the initial attendance by a general practitioner at one RACF, on one occasion, applicable only to the first patient seen on the RACF visit.

The Medicare benefit for the single flag fall fee and the associated general consultation (Levels A to E) applies only for patients within a RACF who have a general consultation with a doctor in person.

If doctors do not bill the single flag fall fee, the benefit will not be paid.

If a doctor has to return to the RACF facility twice or more on the same day and the attendances are not a continuation of an earlier episode of treatment, another flag fall fee would apply per subsequent RACF visit.

When claiming the new attendance items there is no longer a requirement to transmit the number of patients seen. A doctor would claim each attendance item like any other consultation service.

MBS items 90001 is not to be used with existing derived fee services such as for afterhours, urgent afterhours, or telehealth services. The bulk billing incentive only applies to the attendance item, not to the single flag fall fee.

AN.35.2 Flag fall amount for residential aged care facility attendance by a medical practitioner or prescribed medical practitioner

Medicare item 90002 provides a flag fall fee for the initial attendance by a medical practitioner or prescribed medical practitioner at one RACF, on one occasion, applicable only to the first patient seen on the RACF visit.

The Medicare benefit for the single flag fall fee and the associated general consultation (Levels A to E) applies only for patients within a RACF who have a general consultation with a doctor in person.

If doctors do not bill the single flag fall fee, the benefit will not be paid.

If a doctor has to return to the RACF facility twice or more on the same day and the attendances are not a continuation of an earlier episode of treatment, another flag fall fee would apply per subsequent RACF visit.

When claiming the new attendance items there is no longer a requirement to transmit the number of patients seen. A doctor would claim each attendance item like any other consultation service.

MBS items 90002 is not to be used with existing derived fee services such as for afterhours, urgent afterhours, or telehealth services. The bulk billing incentive only applies to the attendance item, not to the single flag fall fee.

AN.36.1 Eating Disorders General Explanatory Notes

Eating Disorders General Explanatory Notes (items 90250-90257, 90260-90261, 90264-90267, 90271-90278; 92182, 92184, 92186 and 92188; 92194, 92196, 92198 and 92200)

This note provides a general overview of the full range of 1 November 2019 eating disorders items and supporting information more specifically on the Category 1 – Professional Attendances: Group A36 – Eating Disorders Services (90250-90257, 90260-90261, 90264-90267; 90271-90278, 92182, 92184, 92186 and 92188; 92194, 92196, 92198 and 92200).

It includes an overview of the items, model of care, patient eligibility, and links to other guidance and resources.

Overview

All 1 November 2019 Eating Disorders items:

The Eating Disorders items define services for which Medicare rebates are payable where service providers undertake assessment and management of patients with a diagnosis of anorexia nervosa and patients with other specified eating disorder diagnoses who meet the eligibility criteria (see – patient eligibility). It is expected that there will be a multidisciplinary approach to patient management through these items.

The items mean eligible patients are able to receive a Medicare rebate for development of an eating disorders treatment plan by a medical practitioner in general practice (Group A36, subgroup 1 and Group A40 subgroup 21), psychiatry or paediatrics (Group A36, subgroup 2 and Group A40, subgroup 23), psychiatry or paediatrics (Group A36, subgroup 2 and Group A40, subgroup 23). Patients with an eating disorders treatment and management plan (EDP) will be eligible for comprehensive treatment and management services for a 12 month period, including:

- Up to 20 dietetic services under items 110954, 82350, 93074 and 93108.
- Up to 40 eating disorder psychological treatment services (EDPT service).
- Review and ongoing management services to ensure that the patient accesses the appropriate level of intervention (Group A36, subgroup 3).

An EDPT service includes mental health treatment services which are provided by an allied health professional or a medical practitioner in general practice with appropriate mental health training. These treatment services include:

- Medicare mental health treatment services currently provided to patients under the ‘Better Access to Psychiatrists, Psychologists and General Practitioners through the MBS (‘Better Access’) initiative.

- This includes medical practitioner items 2721, 2723, 2725, 2727, 283, 285, 286, 287 and
- Their equivalent telehealth and phone items 91818, 91819, 91820, 91844, 91821 and 91845
- This includes allied health items in Groups M6 and M7 of Category 8; and
- Items for EDPT services provided by suitably trained medical practitioners in general practice (items 90271, 90278, 92182, 92184, 92186, 92188, 92194, 92198 and 92200)
- new items for EDPT services provided by eligible clinical psychologists (items 82352, 82354, 82355, 82357-82359; 93076, 93079, 93110 and 93113), eligible psychologists (items 82360, 82362-82363, 82365-82367; 93084, 93087, 93118 and 93121), eligible occupational therapists (items 82368, 82370-82371, 82373-82375; 93092, 93095, 93126 and 93129) and eligible social workers (items 82376, 82378-82379, 82381-82383; 93100, 93103, 93134 and 93137)

For the purpose of the 40 EDPT count; eating disorder psychological treatment service includes a service under provided under the following items: 90271, 90272, 90273, 90274, 90275, 90276, 90277, 90278, 92182, 92184, 92186, 92188, 92194, 92196, 92198 and 92200, 2721, 2723, 2725, 2727, 283, 285, 286, 287, 91818, 91819, 91820, 91821; 91842, 91843, 91844 and 91845 and items in Groups M6, M7 and M16 (excluding items 82350, 93074 and 93108)

For any particular patient, an eating disorder treatment and management plan expires at the end of a 12 month period following provision of that service. After that period, a patient will require a new EDP to continue accessing EDPT services.

Patient Eligibility

The Eating Disorder items are available to eligible patients in the community. These items do not apply to services provided to admitted (in-hospital) patients.

The referring practitioner is responsible for determining that a patient is eligible for an EDP and therefore EDPT and dietetic services.

‘Eligible patient’ defines the group of patients who can access the new eating disorder services. There are two cohorts of eligible patients.

1. Patients with a clinical diagnosis of anorexia nervosa; or
2. Patients who meet the eligibility criteria (below), and have a clinical diagnosis of any of the following conditions:
 - i. bulimia nervosa;
 - ii. binge-eating disorder;
 - iii. other specified feeding or eating disorder.

The eligibility criteria, for a patient, is:

- a. a person who has been assessed as having an Eating Disorder Examination Questionnaire score of 3 or more; and
- b. the condition is characterised by rapid weight loss, or frequent binge eating or inappropriate compensatory behaviour as manifested by 3 or more occurrences per week; and
- c. a person who has at least two of the following indicators:
 - i. clinically underweight with a body weight less than 85% of expected weight where weight loss is directly attributable to the eating disorder;
 - ii. current or high risk of medical complications due to eating disorder behaviours and symptoms;
 - iii. serious comorbid medical or psychological conditions significantly impacting on medical or psychological health status with impacts on function;
 - iv. the person has been admitted to a hospital for an eating disorder in the previous 12 months;
 - v. inadequate treatment response to evidence based eating disorder treatment over the past six months despite active and consistent participation.

Practitioners should have regard to the relevant diagnostic criteria set out in the Diagnostic and Statistical Manual of the American Psychiatric Association – Fifth Edition (DSM-5)

Practitioners can access the Eating Disorder Examination Questionnaire at https://www.credo-oxford.com/pdfs/EDE_17.0D.pdf

The Eating Disorders Items Stepped Model of Care

The eating disorder items incorporate a ‘stepped model’ for best practice care for eligible patients with eating disorders that comprise:

- assessment and treatment planning
- provision of and/or referral for appropriate evidence based eating disorder specific treatment services by allied mental health professionals and provision of services by dietitians
- review and ongoing management items to ensure that the patient accesses the appropriate level of intervention.

The Stepped Model

‘STEP 1’ – PLANNING (trigger Eating Disorders pathway) 90250-90257; 92146 to 92153 and 90260 or 90261

An eligible patient receives an EDP developed by a medical practitioner in general practice (items 90250-90257), psychiatry (items 90260) or paediatrics (items 90261).

‘STEP 2’ – COMMENCE INITIAL COURSE OF TREATMENT (psychological & dietetic services)

Once an eligible patient has an EDP in place, the 12 month period commences, and the patient is eligible for an initial course of treatment up to 20 dietetic services and 10 eating disorder psychological treatment (EDPT) services. A patient will be eligible for an additional 30 EDPT services in the 12 month period, subject to reviews from medical practitioners to determine appropriate intensity of treatment.

‘STEP 3’ – CONTINUE ON INITIAL COURSE OF TREATMENT 90264-90267 (managing practitioner review and progress up to 20 EDPT services)

It is expected that the managing practitioner will be reviewing the patient on a regular, ongoing and as required basis. However, a patient must have a review of the EDP (90264-90267; 92170, 92171, 92175 and 92177), to assess the patient’s progress against the EDP or update the EDP, before they can access more than 10 EDPT services. This is known as the ‘first review’. The first review should be provided by the patient’s managing practitioner, where possible.

‘STEP 4’ FORMAL SPECIALIST AND PRACTITIONER REVIEW 90266 and 90267 (continue beyond 20 EDPT services)

A patient must have two additional reviews before they can access more than 20 EDPT services. One review (the ‘second review’) must be performed by a medical practitioner in general practice (who is expected to be the managing practitioner), and the other (the ‘third review’) must be performed by a paediatrician (90267 or 92173) or psychiatrist (90266 or 92172). Should both recommend the patient requires more intensive treatment, the patient would be able to access an additional 10 EDPT services in the 12 month period. These reviews are required to determine that the patient has not responded to treatment at the lower intensity levels.

The patient’s managing practitioner should be provided with a copy of the specialist review.

The specialist review by the psychiatrist or paediatrician can occur at any point before 20 EDPT services. The practitioner should refer the patient for specialist review as early in the treatment process as appropriate. If the practitioner is of the opinion that the patient should receive more than 20 EDPT services, the referral should occur at the first practitioner review (after the first course of treatment) if it has not been initiated earlier.

Practitioners should be aware that the specialist review can be provided via telehealth (92172 and 92173). Where appropriate, provision has been made for practitioner participation on the patient-end of the telehealth consultation.

It is expected that the managing practitioner will be reviewing the patient on a regular, ongoing and as required basis. However, a patient must have a review of the EDP (90264-90267), to assess the patient's progress against the EDP or update the EDP, before they can access the next course of treatment.

‘STEP 5’ ACCESS TO MAXIMUM INTENSITY OF TREATMENT 90266-90267 (continue beyond 30 EDPT services)

To access more than 30 EDPT treatment services in the 12 month period, patients are required to have an additional review (the ‘fourth review’) to ensure the highest intensity of treatment is appropriate. Subject to this review, a patient could access the maximum of 40 EDPT treatment services in a 12 month period. The fourth review should be provided by the patient's managing practitioner, where possible.

An Integrated Team Approach

A patient's family and/or carers should be involved in the treatment planning and discussions where appropriate. The family can be involved in care options throughout the diagnosis and assessment, and are usually the support unit that help to bridge the gap between initial diagnosis and eating disorder specific treatment.

The National Standards for the safe treatment of eating disorders specify a multi-disciplinary treatment approach that provides coordinated psychological, physical, behavioural, nutritional and functional care to address all aspects of eating disorders. People with eating disorders require integrated inter-professional treatment that is able to work within a framework of shared goals, care plans and client and family information. Frequent communication is required between treatment providers to prevent deterioration in physical and mental health (RANZCP Clinical Guidelines: Hay et al., 2014). Consider regular case conferencing to ensure that the contributing team members are able to work within a shared care plan and with client and carers to achieve best outcomes.

Clinical guidelines and other resources

It is expected that the consultants providing services under these items should have the appropriate skills, knowledge and experience to provide eating disorders treatment. However, there are a number of resources which may be of assistance to practitioners in supporting and developing EDP and EDPT plans, these include:

- The [Royal Australian and New Zealand College of Psychiatrists clinical practice guidelines for the treatment of eating disorders](#)
- The [Royal Australian and New Zealand College of Psychiatrists \(RANZCP\) Referred Patient Assessment and Management Plan Guidelines](#)
- ANZAED eating disorder treatment principles and general clinical practice and training standards:

[Heruc, G., Hurst, K., Casey, A. et al. ANZAED eating disorder treatment principles and general clinical practice and training standards. J Eat Disord 8, 63 \(2020\).](#)

- ANZAED practice and training standards for dietitians providing eating disorder treatment:

[Heruc, G., Hart, S., Stiles, G. et al. ANZAED practice and training standards for dietitians providing eating disorder treatment. J Eat Disord 8, 77 \(2020\).](#)

- ANZAED practice and training standards for mental health professionals providing eating disorder treatment:

[Hurst, K., Heruc, G., Thornton, C. et al. ANZAED practice and training standards for mental health professionals providing eating disorder treatment. J Eat Disord 8, 58 \(2020\).](#)

Note: This information is provided as a guide only and each case should be addressed according to a patient's individual needs. An electronic version of the Guidelines is available on the RANZCP website at www.ranzcp.org

[National Eating Disorders Collaboration Eating Disorders: a professional resources for general practitioners](http://www.nedc.com.au)
available at www.nedc.com.au

Eating Disorders Training

It is expected that practitioners who are providing services under these items have appropriate training, skills and experience in treatment of patients with eating disorders and meet the national workforce core competencies for the safe and effective identification of and response to eating disorders more information available at National Eating Disorders Collaboration

Training Services

Practitioners should contact their professional organisation to identify education and training which may assist to practitioners to gain the skills and knowledge to provide services under these items.

The following organisations provide training which may assist practitioners to meet the workforce competency standards:

- The Australia and New Zealand Academy of eating disorders (ANZAED) - National
- InsideOut Institute - National
- The Victorian Centre of Excellence in Eating Disorders (CEED) - VIC
- Queensland Eating Disorder Service (QuEDS) - QLD
- Statewide Eating Disorder Service (SEDS) - SA
- WA Eating Disorders Outreach & Consultation Service (WAEDOCS) – WA

This list is not exhaustive but has been included to provide examples on the types of training available which may assist practitioners to upskill in this area.

AN.36.2 Eating Disorders Treatment and Management Plans Explanatory Notes **Eating Disorders Treatment and Management Plans Explanatory Notes (items 90250-90257 and 90260-90261)**

This note provides information on Eating Disorders Treatment and Management Plan (EDP) items and should be read in conjunction with the Eating Disorders General Explanatory Notes

Eating Disorder Treatment Plan (EDP) items overview

The EDP items define services for which Medicare rebates are payable where practitioners undertake the development of a treatment and management plan for patients with a diagnosis of anorexia nervosa and patients with other specified eating disorder diagnoses who meet the eligibility criteria.

The EDP items trigger eligibility for items which provide delivery of eating disorders psychological treatment (EDPT) services (up to a total of 40 psychological services in a 12 month period) and dietetic services (up to a total of 20 in a 12 Month period).

For any particular patient, an eating disorder treatment and management plan expires at the end of a 12 month period following provision of that service. Eating Disorders treatment services are not available to the patient if the EDP has expired.

Preparation of the EDP must include:

- discussing the patient's medical and psychological health status with the patient and if appropriate their family/carer;

- identifying and discussing referral and treatment options with the patient and their family/carer where appropriate, including identification of appropriate support services;
- agreeing goals with the patient and their family/carer where appropriate - what should be achieved by the treatment - and any actions the patient will take;
- planning for the provision of appropriate patient and family/carer education;
- a plan for crisis intervention and/or for relapse prevention, if appropriate at this stage;
- making arrangements for required referrals, treatment, appropriate support services, review and follow-up;
- documenting the results of assessment, patient needs, goals and actions, referrals and required treatment/services, and review date in the patient's plan;
- Discussing and organising the appropriate reviews throughout the patient's treatment; and
- discussing the need for the patient to be reviewed to access a higher intensity of EDPT services in a 12 month period.

Preparing a Medical practitioner in general practice Eating Disorder Treatment & Management Plan (items 90250-90257)

Who can provide the service

Items in subgroup 1 of Group A36 can be rendered by a medical practitioner in general practice. This includes:

- Medical practitioners who can render a general practitioner service in Group A1 of the MBS (see note AN.0.9 for the types of medical practitioners). These medical practitioners can render a 'general practitioner' service for items in subgroup 1 of Group A36.
- Medical practitioners who are not general practitioners, specialists or consultant physicians. These medical practitioners can render a 'medical practitioner' service for items in subgroup 1 of Group A36.

What is Involved - Assess and Plan

It is expected that the practitioner developing the EDP has either performed or reviewed the assessments and examinations required to make a judgement that the patient meets the eligibility criteria for accessing these items.

Items 90250-90257 provide services for development of the eating disorder treatment and management plan. Where a comprehensive physical examination is performed, either on the same occasion or different occasion, the appropriate item could be claimed provided the time taken performing the assessment is not included in the time for producing the plan, or time producing the EDP is not included in the time for assessment.

It is emphasised that it is best practice for the practitioner to perform a comprehensive physical assessment to facilitate ongoing patient management and monitoring of medical and nutritional status.

Patient Assessment

An assessment of a patient with an eating disorders includes:

- taking relevant history (biological, psychological, social, including family/carer support);
- eating disorder diagnostic assessment;
- medical review including physical examination and relevant tests;
- conducting an assessment of mental state, including identification of comorbid psychiatric conditions;
- an assessment of eating disorder behaviours;
- an assessment of associated risk and any medical co-morbidity, including as assessment on how this impacts on the patients functioning and activities of daily living;
- an assessment of family and/or carer support; and
- administering an outcome measurement tool, except where it is considered clinically inappropriate.

Risk assessment for a patient with an eating disorder should include identification of:

- medical instability and risk of hospitalisation;
- level of psychological distress and suicide risk;
- level of malnourishment;
- identification of psychiatric comorbidity;
- level of disability;
- duration of illness;
- response to earlier evidence-based eating disorders treatment;
- level of family/carer support.

It should be noted that the patient's EDP should be treated as a living document for updating as required. In particular, the plan can be updated at any time to incorporate relevant information, such as feedback or advice from other health professionals on the diagnosis or treatment of the patient.

Preparing a Consultant Psychiatrist Eating Disorder Treatment & Management Plan (90260-90261)

Who can provide the service

Items in subgroup 2 of Group 36 can be rendered by consultant psychiatrists (items 90260 and 90261).

What is Involved – Assess and Plan

Items 90260-90261 provide access to specialist assessment and treatment planning. It is expected that items will be a single attendance. However, there may be particular circumstances where a patient has been referred by a GP for an assessment and management plan, but it is not possible for the consultant to determine in the initial consultation whether the patient is suitable for management under such a plan. In these cases, where clinically appropriate, other appropriate consultation items may be used. In those circumstances where the consultant undertakes a consultation (in accordance with the item requirements) prior to the consultation for providing the referring practitioner with an assessment and management plan. It is expected that such occurrences would be unusual for the purpose of diagnosis under item 90260.

Patient Assessment

In order to facilitate ongoing patient focussed management, an assessment of the patient must include:

- administering an outcome measurement tool during the assessment and review stages of treatment, where clinically appropriate. The choice of outcome tool to be used is at the clinical discretion of the practitioner;
- conducting a mental state examination;
- taking relevant history (biological, psychological, behavioural, nutritional, social);
- assessing associated risk and any co-morbidity; and
- making a psychiatric diagnosis for conditions meeting the eligibility criteria.

Risk assessment for a patient with an eating disorder should include identification of:

- medical instability and risk of hospitalisation;
- level of psychological distress and suicide risk;
- level of malnourishment;
- identification of psychiatric comorbidity;
- level of disability;
- duration of illness;
- response to earlier evidence-based eating disorders treatment;
- level of family/carer support.

Where a consultant psychiatrist provides an EDP service, the service must also include:

- administering an outcome measurement tool, where clinically appropriate. The choice of outcome tool to be used is at the clinical discretion of the practitioner. Practitioners using such tools should be familiar with their appropriate clinical use, and if not, should seek appropriate education and training; and
- conducting a mental state examination.

Consultation with the patient's managing practitioner

A written copy of the EDP should be provided to the patient's managing practitioner, within a maximum of two weeks of the assessment. It should be noted that two weeks is the outer limit and in more serious cases more prompt provision of the plan and verbal communication with the managing practitioner may be appropriate.

Additional Claiming Information (general conditions and limitations)

Patients seeking rebates for items 90250-90257 and 90260-90261 will not be eligible if the patient has had a claim within the last 12 months.

Items 90250-90257 cannot be claimed with Items 2713, 279, 735, 758, 235 and 244. Items 90261 cannot be claimed with Items 110, 116, 119, 132, 133.

Consultant psychiatrist and paediatrician EDP items 90260-90261 do not apply if the patient does not have a referral within the period of validity.

Before proceeding with the EDP the medical practitioner must ensure that:

- (a) the steps involved in providing the service are explained to the patient and (if appropriate and with the patient's permission) to the patient's carer; and
- (b) the patient's agreement to proceed is recorded.

The medical practitioner must offer the patient a copy of the EDP and add the document to the patient's records. This should include, subject to the patient's agreement, offering a copy to their carer, where appropriate. The medical practitioner may, with the permission of the patient, provide a copy of the EDP, or relevant parts of the plan, to other providers involved in the patient's treatment.

The medical practitioner EDP cover the service of developing an EDP. A separate consultation item can be performed with the EDP if the patient is treated for an unrelated condition to their eating disorder. Where a separate consultation is performed, it should be annotated separately on the patient's account that a separate consultation was clinically required/indicated.

All consultations conducted as part of the EDP must be rendered by the medical practitioner and include a personal attendance with the patient. A specialist mental health nurse, other allied health practitioner, Aboriginal and Torres Strait Islander health practitioner or Aboriginal Health Worker with appropriate mental health qualifications and training may provide general assistance to the medical practitioner in provision of this care.

Additional Claiming Information (interaction with Chronic Disease Management and Better Access)

It is preferable that wherever possible patients have only one plan for primary care management of their disorder. As a general principle the creation of multiple plans should be avoided, unless the patient clearly requires an additional plan for the management of a separate medical condition.

The Chronic Disease Management (CDM) care plan items (items 721, 723, 729, 731 and 732) continue to be available for patients with chronic medical conditions, including patients with complex needs.

Where a patient has a separate chronic medical condition, it may be appropriate to manage the patient's medical condition through a CDM Plan, and to manage their eating disorder through an EDP. In this case, both items can be used. Where the patient receives dietetic services under the CDM arrangements (item 10954), these services will count towards the patients maximum of 20 dietetic services in a 12 month period.

Where a patient has other psychiatric comorbidities, these conditions should be managed under the EDP. Once a patient has a claim for an EDP, the patient should not be able to have a claim for the development or review of a Mental Health Treatment plan by a GP (items 2700, 2701, 2715 and 2717) or medical practitioner in general practice (items 272, 276, 281 and 282) within 12 months of their EDP unless there are exceptional circumstances.

For the purpose of the 40 EDPT count; eating disorder psychological treatment service includes a service under provided under the following items: 90271, 90272, 90273, 90274, 90275, 90276, 90277, 90278, 2721, 2723, 2725, 2727, 283, 285, 286, 287, 371, 372 and items in Groups M6, M7 and M16 (excluding item 82350).

AN.36.3 Eating Disorders Treatment and Management Plan Reviews

Eating Disorders Treatment and Management Plan Reviews (items 90264-90267)

This note provides information on Eating Disorders Treatment and Management Plan (EDP) review items and should be read in conjunction with the AN.36.1 Eating Disorders General Explanatory Notes and the AN.36.2 Eating Disorders Treatment and Management Plans Explanatory Notes

Eating Disorder Treatment Plan review (EDR) items overview

The EDR items define services for which Medicare rebates are payable where practitioners undertake to review the efficacy of the patient's eating disorder treatment and management plan (EDP). This includes modifying the patient's plan, where appropriate, to improve patient outcomes. The review services can be provided by medical practitioners working in general practice, psychiatry and paediatrics.

An EDR may be provided by the managing practitioner who prepared the patient's initial plan (or another practitioner in the same practice or in another practice where the patient has changed practices) and should include a systematic review of the patient's progress against the initial EDP (whether it was prepared by a GP, psychiatrist or paediatrician) and by completing the activities that must be included in a review (see below).

When to render an EDR review item

It is expected that the managing practitioner will be reviewing the patient on a regular, ongoing and as required basis. However, a patient must have a review of the EDP to assess the patient's progress against the EDP or update the EDP, as the patient is approaching the end of each course of treatment before they can access the next course of treatment.

The eating disorder items incorporate a 'stepped model' for best practice care for eligible patients with eating disorders. Under the Eating Disorders Items Stepped Model of Care a course of treatment is defined as 10 eating disorder psychological treatment (EDPT) services. It is required that a patient must have a review after each course of treatment (see AN.36.1 Eating Disorders General Explanatory Notes).

Reviewing an Eating Disorders Treatment Plan

The EDR must include:

- recording the patient's agreement for this service;
 - referral to a psychiatrist or paediatrician for review under items 90266-90267, if this has not been initiated at an earlier stage;
 - a review of the patient's progress against the goals outlined in the EDP, including discussion with the patient/and or their family/carer as to whether the EDPT services are meeting their needs;
 - modification of the documented EDP if required;
 - checking, reinforcing and expanding education;
 - a plan for crisis intervention and/or for relapse prevention, if appropriate and if not previously provided;
- and

- reviewing reports back from the allied mental health professional on the patient's response to treatment and documenting a recommendation on whether patient should continue with another course of EDPT services with that health professional or another health professional.

Where a consultant psychiatrist or paediatrician provides an EDR, the consultant physician must give the referring practitioner a copy of the diagnosis and the revised EDP within 2 weeks after the attendance. Where a consultant psychiatrist provides an EDR service, the review must also include:

- administering an outcome measurement tool, where clinically appropriate. The choice of outcome tool to be used is at the clinical discretion of the practitioner. Practitioners using such tools should be familiar with their appropriate clinical use, and if not, should seek appropriate education and training; and
- conducting a mental state examination.

Note: It is expected there will be other consultations between the patient and the managing practitioner as part of ongoing patient and medical management, including the ordering and reviewing of the required testing for monitoring the patients' medical and nutritional status. All other ongoing patient reviews should be claimed under the appropriate item.

Checking patient eligibility for services

Note: The 12 month period commences from the date of the EDP.

To provide an EDR service in items 90264-90267, the patient must have had an EDP 90250-90257 or 90260-90261 in the previous 12 months.

If the EDP service has not yet been claimed, Services Australia will not be aware of the patient's eligibility. In this case the practitioner should, with the patient's permission, contact the referring practitioner to ensure the relevant service has been provided to the patient.

Support:

If there is any doubt about whether a patient has had a claim for an eating disorder service, health professionals can access the Health Professionals Online System (HPOS). HPOS is a fast and secure way for health professionals and administrators to check if a patient is eligible for a Medicare benefit for a specific item on the date of the proposed service. However, this system will only return advice that the service/item is payable or not payable.

Patients can also access their own claiming history with a My Health Record or by establishing a Medicare online account through myGov or the Express Plus Medicare mobile app.

Alternatively, health professionals can call Services Australia on 132 150 to check this information, while patients can seek clarification by calling 132 011.

Additional Claiming Information (general conditions and limitations)

Items 90264-90265 cannot be claimed with item 2713 and 279.

Consultant psychiatrist and paediatrician EDP items 90266-90267 do not apply if the patient does not have a referral within the period of validity.

Before proceeding with the EDR service the medical practitioner must ensure that:

- (a) the steps involved in providing the service are explained to the patient and (if appropriate and with the patient's permission) to the patient's carer; and
- (b) the patient's agreement to proceed is recorded.

The medical practitioner must offer the patient a copy of the reviewed EDP and add the document to the patient's records. This should include, subject to the patient's agreement, offering a copy to their carer, where appropriate. The medical practitioner may, with the permission of the patient, provide a copy of the revised EDP, or relevant parts of the plan, to other providers involved in the patient's treatment.

The medical practitioner EDR items cover the service of reviewing an EDP. A separate consultation item can be performed with the EDP if the patient is treated for an unrelated condition to their eating disorder. Where a separate consultation is performed, it should be annotated separately on the patient's account that a separate consultation was clinically required/indicated.

All consultations conducted as part of the EDP or review must be rendered by the medical practitioner and include a personal attendance with the patient. A specialist mental health nurse, other allied health practitioner, Aboriginal and Torres Strait Islander health practitioner or Aboriginal Health Worker with appropriate mental health qualifications and training may provide general assistance to the medical practitioner in provision of this care.

Additional Claiming Information (interaction with Better Access)

Items 90264-90265 for an EDR, performed by a medical practitioner working in general practice, should not be performed in association with a GP mental health consultation review service (item 2712 and 277).

AN.36.4 Eating Disorders Psychological Treatment (EDPT) Services

Eating Disorders Psychological Treatment (EDPT) services (90271-78; 92182, 92184, 92186, 92188; 92194, 92196, 92198 and 92200)

This note provides information on the Category 1 – Professional Attendances: Group A36 – Subgroup 4 (90271-90278) should be read in conjunction the AN.36.1 Eating Disorders General Explanatory Notes

Eating Disorder Psychological Treatment (EDPT) Services Overview

Provision of EDPT by a suitably trained medical practitioner in general practice (90271-90278;92182, 92184, 92186, 92188; 92194, 92196, 92198 and 92200) is for patients with anorexia nervosa and other patients with complex presentations of diagnosed eating disorders who meet the eligibility requirements and would benefit from a structured approach to the management of their treatment needs in the community setting.

Patients seeking rebates for EDPT services must have had an EDP 90250-90257, 92146-92153, 90260 or 90261 in the previous 12 Months.

An 'eating disorder psychological treatment service' (EDPT) is defined in the AN.36.1 Eating Disorders General Explanatory Note. For any particular patient, an eating disorder treatment and management plan expires at the end of a 12 month period following provision of that service. After that period, a patient will require a new EDP to continue accessing EDPT services.

Rendering an EDPT item

Who can provide the service

Items in subgroup 4 of Group A36 can be rendered by a medical practitioner in general practice with the required mental training. This includes:

- Medical practitioners who can render a general practitioner service in Group A1 of the MBS (see note AN.0.9 for the types of medical practitioners). These medical practitioners can render a 'general practitioner' service for items in subgroup 1 of Group A36. These doctors must have the mental health training requirements as specified below.

- Medical practitioners who are not general practitioners, specialists or consultant physicians. These medical practitioners can render a ‘medical practitioner’ service for items in subgroup 1 of Group A36. These doctors must have the mental health training requirements as specified below.

Mental health training

Medical practitioner in general practice who meets the training and skills requirements as determined by the General Practice Mental Health Standards Collaboration, and are entered on the Register as being eligible to render a focussed psychological strategy service, can render an eating disorders psychological treatment service.

Note: The General Practice Mental Health Standards Collaboration operates under the auspices of the Royal Australian College of General Practitioners.

What is Involved in an EDPT service

The eating disorder items incorporate a ‘stepped model’ for best practice care for eligible patients with eating disorders. Under the Eating Disorders Items Stepped Model of Care a course of treatment is defined as 10 eating disorder psychological treatment (EDPT) services. It is required that a patient must have a review (an EDR item in subgroup 3 of A36) after each course of treatment (see AN.36.1 Eating Disorders General Explanatory Notes).

After each course of treatment, the relevant practitioners should provide the medical practitioner who is the managing the patient’s EDP (where appropriate) with a written report.

A range of acceptable treatments has been approved for use by practitioners in this context. It is expected that professionals will have the relevant education and training to deliver these services. The approved treatments are:

- Family Based Treatment for Eating Disorders (EDs) (including whole family, Parent Based Therapy, parent only or separated therapy)
- Adolescent Focused Therapy for EDs
- Cognitive Behavioural Therapy (CBT) for EDs (CBT-ED)
- CBT-Anorexia Nervosa (AN) (CBT-AN)
- CBT for Bulimia Nervosa (BN) and Binge-eating Disorder (BED) (CBT-BN and CBT-BED)
- Specialist Supportive Clinical Management (SSCM) for EDs
- Maudsley Model of Anorexia Treatment in Adults (MANTRA)
- Interpersonal Therapy (IPT) for BN, BED
- Dialectical Behavioural Therapy (DBT) for BN, BED
- Focal psychodynamic therapy for EDs

Checking patient eligibility for services

Note: The 12 month period commences from the date of the EDP.

Patients seeking rebates for EDPT 90271-90278; 92182, 92184, 92186, 92188; 92194, 92196, 92198, 92200 must have had an EDP 90250-90257; 92146-92153 or 90260 and 90261 in the previous 12 months.

If the EDP service has not yet been claimed, the Services Australia will not be aware of the patient's eligibility. In this case the practitioner should, with the patient's permission, contact the practitioner who developed the plan to ensure the relevant service has been provided to the patient.

Support:

If there is any doubt about whether a patient has had a claim for an eating disorder service, health professionals can access the Health Professionals Online System (HPOS). HPOS is a fast and secure way for health professionals and administrators to check if a patient is eligible for a Medicare benefit for a specific item on the date of the proposed service. However, this system will only return advice that the service/item is payable or not payable.

Patients can also access their own claiming history with a My Health Record or by establishing a Medicare online account through myGov or the Express Plus Medicare mobile app.

Alternatively, health professionals can call the Services Australia on 132 150 to check this information, while patients can seek clarification by calling 132 011.

Additional Claiming Information (general conditions and limitations)

Other than Consultation Room (items 90272, 90274, 90276, 90278)

It is expected that this service would be provided only for patients who are unable to attend the practice.

AN.36.5 Eating Disorders Telehealth – Medical Practitioner in general practice

Eating Disorders Telehealth – Medical Practitioner in general practice (92182, 92184, 92186 and 92188)

This note provides telehealth supporting information for eating disorders items provided via telehealth by a medical practitioner in general practice and should be read in conjunction with Eating Disorders General Explanatory Notes.

Record Keeping

Participating telehealth practitioners must keep contemporaneous notes of the consultation including documenting that the service was performed by video conference, the date, time and the people who participated.

Only clinical details recorded at the time of the attendance count towards the time of the consultation. It does not include information added at a later time, such as reports of investigations.

Aftercare Rule

Video consultations are subject to the same aftercare rules as practitioners providing face-to-face consultations.

Multiple Attendances on the Same Day

In some situations, a patient may receive a telehealth consultation and a face-to-face consultation by the same or different practitioner on the same day.

Medicare benefits may be paid for more than one video consultation on a patient on the same day by the same practitioner, provided the second (and any following) video consultations are not a continuation of the initial or earlier video consultations. Practitioners will need to provide the times of each consultation on the patient's account or bulk billing voucher.

AN.40.1 Specialist and Consultant Physician MBS Telehealth and Telephone attendance items

From 1 January 2022, a number of telehealth items were permanently added to the MBS.

The intent of these ongoing telehealth items is to allow practitioners to provide MBS attendances remotely (by videoconference or telephone) where it is safe and clinically appropriate to do so in accordance with relevant professional standards.

Providing telehealth services by videoconference is the preferred substitution for a face-to-face consultation. However, providers can provide a consultation via telephone where it is clinically relevant (and the service is covered by a relevant telephone item).

A list of the ongoing telehealth items and the equivalent face-to-face items can be found at Table 1.

Table 1 – Ongoing telehealth items and equivalent face to face services (out of hospital patients)

Service	Face-to-face items	Video items	Telephone items
Specialist Services			
Specialist. Initial attendance	104	91822	-
Specialist. Subsequent attendance	105	91823	91833
Consultant Physician Services			-
Consultant physician. Initial attendance	110	91824	-
Consultant physician. Subsequent attendance	116	91825	-
Consultant physician. Minor attendance	119	91826	91836
Consultant physician. Initial assessment, patient with at least 2 morbidities, prepare a treatment and management plan, at least 45 minutes	132	92422	-
Consultant physician, Subsequent assessment, patient with at least 2 morbidities, review a treatment and management plan, at least 20 minutes	133	92423	-
Specialist and Consultant Physician Services			
Specialist or consultant physician, develop a treatment and	137	92141	-

management plan, patient aged under 25, with an eligible disability			
Geriatrician Services			
Geriatrician, prepare an assessment and management plan, patient at least 65 years, more than 60 minutes	141	92623	-
Geriatrician, review a management plan, more than 30 minutes	143	92624	-
Consultant Psychiatrist services			
Consultant psychiatrist, develop a treatment and management plan, patient aged under 25, with a complex neurodevelopmental disorder (such as autism spectrum disorder), at least 45 minutes	289	92434	-
Consultant psychiatrist, prepare a management plan, more than 45 minutes	291	92435	-
Consultant psychiatrist, review management plan, 30 to 45 minutes	293	92436	-
Consultant psychiatrist, attendance, new patient (or has not received attendance in preceding 24 mths), more than 45 minutes	296	92437	-
Consultant psychiatrist. Consultation, not	300	91827	91837

more than 15 minutes			
Consultant psychiatrist. Consultation, 15 to 30 minutes	302	91828	91838
Consultant psychiatrist. Consultation, 30 to 45 minutes	304	91829	91839
Consultant psychiatrist. Consultation, 45 to 75 minutes	306	91830	-
Consultant psychiatrist. Consultation, more than 75 minutes	308	91831	-
Consultant psychiatrist, group psychotherapy, at least 1 hour, involving group of 2 to 9 unrelated patients or a family group of more than 3 patients, each referred to consultant psychiatrist	342	92455	-
Consultant psychiatrist, group psychotherapy, at least 1 hour, involving family group of 3 patients, each referred to consultant psychiatrist	344	92456	-
Consultant psychiatrist, group psychotherapy, at least 1 hour, involving family group of 2 patients, each referred to consultant psychiatrist	346	92457	
Consultant psychiatrist,	348	92458	-

interview of a person other than patient, in the course of initial diagnostic evaluation of patient, 20 to 45 minutes			
Consultant psychiatrist, interview of a person other than patient, in the course of initial diagnostic evaluation of patient, 45 minutes or more	350	92459	-
Consultant psychiatrist, interview of a person other than patient, in the course of continuing management of patient, not less than 20 minutes, not exceeding 4 attendances per calendar year	352	92460	-
Consultant psychiatrist, prepare an eating disorder treatment and management plan, more than 45 minutes	90260	92162	
Consultant psychiatrist, to review an eating disorder plan, more than 30 minutes	90266	92172	
Paediatrician Services (also refer to consultant physician services)			
Paediatrician, develop a treatment and management plan, patient aged under 25, with a complex neurodevelopmental disorder (such as	135	92140	

autism spectrum disorder), at least 45 minutes			
Paediatrician, prepare an eating disorder treatment and management plan, more than 45 minutes	90261	92163	
Paediatrician, to review an eating disorder plan, more than 20 minutes	90267	92173	
Public Health Physician Services			
Public health physician, level A attendance	410	92513	92521

attendance, advanced or complex			
---------------------------------------	--	--	--

Further information on the telehealth changes can be found at www.mbsonline.gov.au by searching under the Facts Sheets tab – July 2022.

Eligible providers

All MBS items for referred attendances require a valid referral. However, if the specialist, consultant physician, consultant psychiatrist, paediatrician or geriatrician has previously seen the patient under a referral that is still valid, there is no need to obtain a specific referral for the purposes of claiming the video and telephone items.

Restrictions

All MBS telehealth and telephone attendance items are stand-alone items and are to be billed instead of a face-to-face MBS item.

Billing Requirements

Bulk billing of specialist (and Allied Health) telehealth services is at the discretion of the provider, so long as informed financial consent is obtained prior to the provision of the service.

Further information on the assignment of benefit for bulk billed MBS telehealth services can be found in the ‘Provider Frequently Asked Questions’ at www.mbsonline.gov.au.

Relevant definitions and requirements

Specialist telehealth services (91822, 91823 and 91833) can be billed by all specialities that can currently bill items 104 and 105 or equivalent MBS items. This also includes sports and exercise medicine and occupational and environmental health medicine specialists.

Consultant physician telehealth services (91824, 91825, 91826 and 91836) can be billed by all specialities that can currently bill items 110, 116 and 119 or equivalent MBS items. This also includes pain and palliative medicine, sexual health medicine and addiction medicine.

Consultant physician telehealth services to prepare and review a management plan (92422 and 92423) can be billed by all physicians that can currently bill items 132 and 133 or equivalent MBS items. This also includes sexual health medicine, addiction medicine and paediatricians.

The specialist and consultant physician service for diagnosis and treatment for patients with an eligible disability (92141) can be billed by specialists and consultant physicians that are able to item 137.

Single course of treatment

The same conditions for a single course of treatment apply across all modalities (i.e. face-to-face, video or telephone). Once an initial consultation is billed, all subsequent services related to the same condition are considered to be part of a single course of treatment. For example, if a patient has seen a specialist in a face-to-face consultation (where item 104 has been billed), item 91823 (video) or 91833 (telephone) should be billed if the patient sees the specialist remotely for the same condition.

Anaesthetist services

The Anaesthetist telehealth service (92701) can be billed by practitioners that can currently bill item 17615.

Service limits

At present, the service limits that apply to standard psychiatry services do not currently apply to the video and telephone attendance items for psychiatry (except for item 92460). Patients who have received more than 50 attendances under existing items are eligible to receive services under the video and telephone psychiatry items as long as they meet the item descriptor requirements.

In addition, patients who have received more than 50 attendances under item 319 are eligible to receive services under the video and telephone psychiatry items as long as they meet the item descriptor requirements.

The Department of Health and Aged Care will work with the Royal Australian and New Zealand College of Psychiatrists (RANZCP) and the Medicare Review Advisory Committee (MRAC) to review the current service limits, and ensure a consistent approach across all of the psychiatry attendance items, including services provided by face-to-face, video and telephone.

Interview item (92460)

Item 92460 provides for an interview with a person other than the patient. A maximum of 4 services in a calendar year can be billed under item 92460, or the equivalent face-to-face item (item 352), in the continuing management of a patient. That is, a consultant psychiatrist can bill for a service under item 92460 once more in the calendar year if a patient has received three MBS services under items 352 or 92460 in the same calendar year.

Management Plan items (92435 and 92436)

The MBS remote attendance preparation and review of GP management plan items have the same diagnosis, assessment and record-keeping requirements as the existing face-to-face items (291 and 293). Refer to MBS Explanatory Note AN.0.30 for further information.

Group psychotherapy items (92455, 92456 and 92457)

The MBS remote attendance group psychotherapy items have the same requirements as the existing face-to-face items (342, 344 and 346). It is the responsibility of the practitioner rendering the service to maintain privacy and confidentiality for all participants throughout the service. Practitioners should refer to the relevant professional practice standards and guidelines for technology-based consultations.

Technical Requirements

The services can be provided by telehealth and by phone. It is the responsibility of the practitioner rendering the service to maintain privacy and confidentiality for all participants throughout the service.

Telehealth attendance means a professional attendance by video conference where the medical practitioner:

- a. has the capacity to provide the full service through this means safely and in accordance with relevant professional standards; and
- b. is satisfied that it is clinically appropriate to provide the service to the patient; and
- c. maintains a visual and audio link with the patient; and
- d. is satisfied that the software and hardware used to deliver the service meets the applicable laws for security and privacy.

Note – only the time where a visual and audio link is maintained between the patient and the provider can be counted in meeting the relevant item descriptor.

No specific equipment is required to provide Medicare-compliant telehealth services. Practitioners must ensure that their chosen telecommunications solution meets their clinical requirements and satisfies privacy laws. Information on how to select a web conferencing solution is available at: www.cyber.gov.au

Phone attendance means a professional attendance by telephone where the health practitioner:

- a. has the capacity to provide the full service through this means safely and in accordance with professional standards; and

- b. is satisfied that it is clinically appropriate to provide the service to the patient; and
- c. maintains an audio link with the patient.

There are no longer geographic restrictions on the MBS video or telephone services provided by specialists, consultant physicians, consultant psychiatrists, paediatricians, geriatricians and anaesthetists.

Recording Clinical Notes (for specialist, consultant physician, consultant psychiatrist, neurosurgery, public health medicine, geriatrician, paediatrician and anaesthetist)

In relation to the time taken in recording appropriate details of the service, only clinical details recorded at the time of the attendance count towards the time of consultation. It does not include information added later, such as reports of investigations, or when either the visual or audio link between the patient and the practitioner is lost.

Clinicians should record the date, time and duration of the consultation, and retain these records.

AN.40.5 MBS Items for Blood Borne Virus, Sexual and Reproductive Health Services

The video and phone items for the provision of services related to blood borne viruses, sexual or reproductive health provides for Medicare benefits to be paid for these health care services without the requirement for the patient to have an established clinical relationship with the physician. This does not exclude practitioners who have an established clinical relationship with the patient from using these items.

These items are intended to support patient access to medical services where there may be barriers due to privacy or limited service provision, and are not intended to replace routine services that a patient's usual practitioner might provide.

The practitioner must keep adequate and contemporary notes to support the service provided.

There are 24 MBS items for the provision of video or phone services related to blood borne viruses, sexual or reproductive health.

Video consultation

Item 92715 – services provided by a General Practitioner (level A)

Item 92716 – services provided by an Other Medical Practitioner - urban

Item 92717 – services provided by an Other Medical Practitioner – rural

Item 92718 – services provided by a General Practitioner (level B)

Item 92719 – services provided by an Other Medical Practitioner - urban

Item 92720 – services provided by an Other Medical Practitioner – rural

Item 92721 – services provided by a General Practitioner (level C)

Item 92722 – services provided by an Other Medical Practitioner - urban

Item 92723 – services provided by an Other Medical Practitioner – rural

Item 92724 – services provided by a General Practitioner (level D)

Item 92725 – services provided by an Other Medical Practitioner – urban

Item 92726 – services provided by an Other Medical Practitioner – rural

Phone consultation

Item 92731 – services provided by a General Practitioner (level A)

Item 92732 – services provided by an Other Medical Practitioner - urban

Item 92733 – services provided by an Other Medical Practitioner – rural

Item 92734 – services provided by a General Practitioner (level B)

Item 92735 – services provided by an Other Medical Practitioner - urban

Item 92736 – services provided by an Other Medical Practitioner – rural

Item 92737 – services provided by a General Practitioner (level C)

Item 92738 – services provided by an Other Medical Practitioner - urban

Item 92739 – services provided by an Other Medical Practitioner – rural

Item 92740– services provided by a General Practitioner (level D)

Item 92741– services provided by an Other Medical Practitioner – urban

Item 92742 – services provided by an Other Medical Practitioner - rural

To be eligible for use of this item, practitioners must be located at a medical practice or have a formal agreement with a medical practice that provides onsite face to face services to patients.

Consultations related to assisted reproductive technology and antenatal care are outside the scope of these items and cannot be rendered under these items.

AN.44.1 MBS COVID-19 Vaccine Support Services **MBS COVID-19 Vaccine Support Services**

Item descriptions

Attendance items to assess a patient’s suitability for a COVID-19 vaccine (items 93644, 93645, 93646, 93647, 93653, 93654, 93655, 93656)

Vaccine suitability assessments undertaken by a suitably qualified health professional on behalf of a medical practitioner in a location other than consulting rooms (items 93660 and 93661).

Attendance items for in-depth patient assessment services co-claimed with a vaccine suitability assessment service and provided where additional assessment and advice is required, including in relation to the patient’s individual risks and benefits associated with receiving a COVID-19 vaccine (items 10660 and 10661).

Flag-fall item co-claimed with a vaccine suitability assessment service provided as an initial attendance at a residential aged care facility (RACF), residential disability facility setting or a patient’s place of residence, on one occasion (item 90005).

All MBS COVID-19 Vaccine Support items must be bulk-billed.

The items can only be billed to Medicare if a dose of a COVID-19 vaccine is available to be given immediately to the patient who is to be assessed. Medical practices that do not have access to supplies of a COVID-19 vaccine for immediate delivery to patients cannot use any of the COVID-19 vaccine items.

In this explanatory note:

Other Medical Practitioner (OMP) includes specialist medical practitioners and consultant physicians working in a general practice setting in their capacity as medical practitioners who are not vocationally registered general practitioners (GPs); and

Suitably qualified health professional refers to a person, including a registered nurse, who is registered in a health profession regulated under the Health Practitioner Regulation National Law. More information is available at the AHPRA website at: www.ahpra.gov.au.

Application of the items

The attendance items for assessing patient suitability for a COVID-19 vaccine may be claimed as follows:

MBS Items 93644, 93645, 93646 and 93647 apply to a professional attendance that:

- is provided in a business hours period for the purpose of assessing a patient's suitability to receive a COVID-19 vaccine; and
- is bulk billed.

MBS Items 93653, 93654, 93655 and 93656 apply to a professional attendance that:

- is provided in an after-hours period hours for the purpose of assessing a patient's suitability to receive a COVID-19 vaccine; and
- is bulk billed.

MBS item 93660 and 93661 applies to a service provided by a suitably qualified health professional on behalf of the GP/OMP out of the consulting rooms and must be bulk billed.

MBS Items 93644, 93645, 93646, 93647, 93653, 93654, 93655, 93656, 93660 and 93661 can be used to assess vaccine suitability for a patient eligible for any vaccine dose, whether that is part of a primary course or a booster.

MBS items 10660 and 10661 apply to a professional attendance that can only be claimed once per patient during their lifetime. The service is bulk billed and must be personally performed by the medical practitioner.

MBS item 90005 applies only to the first service provided during a single attendance at a RACF, residential disability facility setting or a patient's place of residence. The item is bulk-billed.

Business hours and after-hours services

MBS Items 93644, 93645, 93646, and 93647 apply to a professional attendance that is provided:

- after 8am or before 8pm on a weekday;
- after 8am or before 1.00pm on a Saturday.

MBS Items 93653, 93654, 93655 and 93656 apply to a professional attendance that is provided:

- on a public holiday;
- on a Sunday;
- before 8am, or after 1pm on a Saturday;
- before 8am, or after 8pm on any day other than a Saturday, Sunday or public holiday.

Geographic requirements

MBS Items 93644, 93646, 93653, 93655 and 93660 apply to a professional attendance delivered in a Modified Monash 1 (metropolitan) location.

MBS Items 93645, 93647, 93654, 93656 and 93661 apply to a professional attendance delivered in a Modified Monash 2-7 (non-metropolitan) location.

A locator map to identify a medical practice's Modified Monash location is available at the Health Workforce Locator website at: www.health.gov.au/resources/apps-and-tools/health-workforce-locator/health-workforce-locator.

Eligible practitioners

MBS items 93644, 93645, 93653, 93654 and 10660 relate to attendances rendered by medical practitioners who are:

- listed on the Vocational Register of General Practitioners maintained by Services Australia; or
- holders of the Fellowship of the Royal Australian College of General Practitioners (FRACGP) who participate in, and meet the requirements of the RACGP for continuing medical education and quality assurance as defined in the RACGP Quality Assurance and Continuing Medical Education program; or
- holders of the Fellowship of the Australian College of Rural and Remote Medicine (FACRRM) who participate in, and meet the requirements of the ACRRM for continuing medical education and quality assurance as defined in ACRRM's Professional Development Program; or
- undertaking an approved placement in general practice as part of a training program for general practice leading to the award of the FRACGP or training recognised by the RACGP as being of an equivalent standard; or
- undertaking an approved placement in general practice as part of a training program for general practice leading to the award of the FACRRM or training recognised by ACRRM as being of an equivalent standard.

MBS items 93646, 93647, 93655, 93656 and 10661 relate to attendances rendered by a medical practitioner who is not a general practitioner.

Activities associated with the claiming of MBS items 93644, 93645, 93646, 93647, 93653, 93654, 93655 or 93656 can be undertaken by a GP, OMP or a suitably qualified health professional on the GP/OMP's behalf working within their scope of practice.

Services rendered under MBS items 93644, 93645, 93646, 93647, 93653, 93654, 93655 or 93656 will only attract a Medicare rebate where the service is billed in the name of the supervising GP or OMP, who must be present at the location at which the vaccine suitability assessment service is undertaken and must accept full responsibility for the service.

Services rendered under MBS items 93660 and 93661 may only be claimed by a medical practitioner, who retains clinical responsibility for the service, however, the GP/OMP is not required to be physically present at the location at which the vaccine suitability assessment service is provided. The medical practitioner retains full responsibility for the clinical outcome of the service at all times.

Eligible patients

Services utilising MBS items 93644, 93645, 93646, 93647, 93653, 93654, 93655, 93656, 93660, 93661, 10660, and 10661 can be provided to any patient who is eligible for Medicare.

Administration of a COVID-19 vaccine

If, following a vaccine suitability assessment service, a patient is offered and agrees to receive a COVID-19 vaccination, the vaccine will be administered (with no other MBS item claimable for that administration). The GP, OMP or suitably qualified health professional responsible for administering the vaccine must be appropriately qualified and trained to provide immunisation to the patient.

Co-administration of a COVID-19 vaccine and an influenza vaccine

ATAGI has advised that a COVID-19 vaccination and an influenza vaccination can be administered at the same time. These services may be provided during the same attendance.

A vaccine suitability assessment MBS item would be billed for the COVID-19 vaccination. Influenza vaccine services are typically administered with standard MBS attendance items.

Note: There are no MBS items for administering an influenza vaccine for and on behalf of a medical practitioner.

While a medical practitioner is under no obligation to bulk-bill a patient receiving an influenza vaccination, a patient who also receives a COVID-19 booster vaccination as part of the same occasion of care must be bulk-billed for the MBS COVID-19 vaccine suitability assessment component of the overall service. Patients should be informed of any potential out of pocket costs before any service is provided, preferably when they book their appointment.

Medical practitioners administering influenza vaccinations should be aware of the requirements of the National Immunisation Program including eligibility criteria for Government funded vaccines.

Billing the COVID-19 vaccine suitability assessment items

The MBS COVID-19 vaccine suitability assessment items can only be billed to Medicare by a GP or OMP.

No additional MBS attendance item can be used to bill Medicare for the time spent administering a vaccine following a suitability assessment service.

Co-claiming the COVID-19 vaccine suitability assessment items with other general attendance items

Patients presenting with multiple clinical matters requiring attention should be encouraged to book a separate consultation, and preferably with their usual medical practice. There may be some circumstances where deferral of treatment is not feasible or in the patient's best interests; these include clinical matters where treatment cannot be deferred or opportunistic treatment for other conditions.

Standard MBS multiple same-day attendance rules apply to the COVID-19 vaccination suitability assessment services. Co-claiming is only permitted where another Medicare service is provided that is unrelated to the vaccine suitability assessment item. Payment of benefit may be made for more than one attendance on a patient on the same day by the same GP or OMP, provided the subsequent attendances are not a continuation of the initial or earlier attendances. Examples of other Medicare services include but are not restricted to: a standard consultation for a different presenting problem; provision of a time-tiered health assessment service; or review of a chronic disease management plan.

Before an additional service is provided to the patient the medical practice must obtain and record the patient's informed financial consent to ensure that they (the patient) understand that there is no cost associated with the vaccine suitability assessment and/or the administration of the vaccine.

Patients must also be informed if any other service that they receive on the same occasion will be bulk-billed or will attract an out of pocket cost.

Note: where a GP or OMP completes a vaccine suitability assessment, but the patient is found to be unsuitable on clinical grounds or declines to receive the vaccination, the service may be billed using the appropriate vaccine suitability assessment item. If the patient returns at a later date, it would be appropriate for another vaccine suitability assessment to be undertaken and a claim made for the relevant Medicare item.

Co-claiming restrictions

The table below lists the restrictions on co-claiming the MBS vaccine support services.

MBS Item(s)	Must be co-claimed	May be co-claimed	Cannot be co-claimed
-------------	--------------------	-------------------	----------------------

93644, 93645, 93646, 93647, 93653, 93654, 93655, 93656		90005, 10660, 10661	10990, 10991, 10992, 75855, 75856, 75857, 75858, 10988
93660, 93661		90005	10990, 10991, 10992, 75855, 75856, 75857, 75858, 10988, 10660, 10661
90005	93644, 93645, 93646, 93647, 93653, 93654, 93655, 93656, 93660, 93661	10660, 10661	10990, 10991, 10992, 75855, 75856, 75857, 75858
10660	93644, 93645, 93653, 93654	90005	10990, 10991, 10992, 75855, 75856, 75857, 75858, 93660, 93661
10661	93646, 93647, 93655, 93656	90005	10990, 10991, 10992, 75855, 75856, 75857, 75858, 93660, 93661

Record keeping and reporting requirements

Medical practices participating in the vaccine program need to comply with the record keeping requirements to substantiate a Medicare service.

For the purposes of Medicare, a patient or clinical record should be created or updated at the time a service is provided, or as soon as practicable afterwards. The record needs to:

- clearly identify the name of the patient;
- contain a separate entry for each attendance by the patient for the vaccination suitability assessment service and the date(s) on which the service was provided;
- record the patient's consent to receive the vaccine;
- provide clinical information adequate to explain the service;
- be sufficiently comprehensible that another practitioner, relying on the record, can effectively undertake the patient's ongoing care as it relates to COVID-19 vaccinations.

Where a patient receives a service using either MBS item 10660 or 10661 in association with a vaccine suitability assessment service, the reason for the service also needs to be recorded.

Medical practices participating in the Australian Government's COVID-19 vaccination program will be required to update the vaccination status of a patient who has received the vaccine on the Australian Immunisation Register (AIR) portal in line with the Australian Immunisation Register requirements.

Restrictions

MBS items 93644, 93645, 93646, 93647, 93653, 93654, 93655, 93656, 93660 and 93661 apply only to a professional attendance where:

- the GP, OMP or suitably qualified health professional administering a COVID-19 vaccine is appropriately qualified and trained to provide immunisation to a patient; and
- a dose of COVID-19 vaccine is immediately available for administration to the patient at the practice location.

A service using the items cannot be provided as part of an episode of hospital treatment or hospital-substitute treatment.

AN.46.1 Attendance items to assess a patient's suitability for oral anti-viral medications by telephone, including provision of a relevant prescription if clinically appropriate (items 93716 and 93717).

General Practice COVID-19 Treatment Review (Items 93716 and 93717)

Item descriptions

Attendance items to assess a patient's suitability for oral anti-viral medications by telephone, including provision of a relevant prescription if clinically appropriate (items 93716 and 93717). These items are temporary, commencing from 19 July 2022 and ceasing at 11.59pm on 30 June 2024.

Item 93716 is to be used by General Practitioners (GP). Item 93717 is to be used by Medical Practitioners (other than a general practitioner). Refer to Eligible Providers section below for more detail.

Application of the items

Items 93716 and 93717 provide rebates for longer telephone consultations when assessing patients with COVID-19 for suitability for oral anti-viral medications.

Oral anti-viral medications for COVID-19 require a comprehensive patient history for safe prescribing. These items are available where a treating practitioner requires 20 minutes (25 minutes for medical practitioner other than a general practitioner) or longer to take a detailed history and assess a patient's suitability for prescription of COVID-19 oral anti-viral medication, where virtual consultation supports infection control if the patient has confirmed COVID-19.

Patients with COVID-19 can access general telehealth consultations from any GP under normal Medicare Benefits Schedule (MBS) telehealth eligibility requirements, supporting timely access to care. No face-to-face service to the patient in the 12 months preceding the telehealth attendance is required (unlike other GP telehealth items).

Timeliness of assessment for COVID-19 oral anti-virals is critical, as treatment must be initiated within 5 days of symptom onset. The temporary items recognise the additional time required to assess patients, particularly when the consultation is not undertaken by the patient's usual treating practitioner. Prescription of antiviral medication is not a requirement to claim the item number, as some patients may ultimately be determined to be ineligible.

In conducting this consultation, treating practitioners should note that these items can only be claimed for patients that meet the criteria outlined under Patient Eligibility (see below).

The treating practitioner must:

- confirm a patient's positive COVID-19 diagnosis;
- confirm that the patient has reported their positive diagnosis to meet relevant state and territory reporting requirements, or assist the patient to report their diagnosis if required; and
- include a record of a patient's positive pathology result for COVID-19 test, or their logging of their positive result from self-test with relevant authorities.

Further information is available on the application of these items [here](#).

Information on clinical criteria for prescribing medicines is published for the Pharmaceutical Benefits Scheme online, at www.pbs.gov.au.

Management of a patient's other health concerns in conjunction with assessment for antiviral eligibility is appropriate in the same consultation and contributes to the time taken in the consultation. The MBS rules for multiple attendances on the same day apply to these services.

Eligible providers

Items 93716 - relate to attendances rendered by General Practitioners who are:

- listed on the Vocational Register of General Practitioners maintained by Services Australia; or
- holders of the Fellowship of the Royal Australian College of General Practitioners (FRACGP) who participate in, and meet the requirements of the RACGP for continuing medical education and quality assurance as defined in the RACGP Quality Assurance and Continuing Medical Education program; or
- holders of the Fellowship of the Australian College of Rural and Remote Medicine (FACRRM) who participate in, and meet the requirements of the Australian College of Rural and Remote Medicine (ACRRM) for continuing medical education and quality assurance as defined in ACRRM's Professional Development Program; or
- undertaking an approved placement in general practice as part of a training program for general practice leading to the award of the FRACGP or training recognised by the RACGP as being of an equivalent standard; or
- undertaking an approved placement in general practice as part of a training program for general practice leading to the award of the FACRRM or training recognised by ACRRM as being of an equivalent standard.

Items 93716 and 93717 only apply to a service performed by a medical practitioner who:

- a. is located at a medical practice with capacity for in person face-to-face assessment where appropriate; or
- b. has a formal agreement with a medical practice to provide personal attendance services.

Item 93717 relates to attendances rendered by a medical practitioner who is not a general practitioner, and who:

- a. is registered under section 3GA of the Act, to the extent that the person is practising during the period in respect of which, and in the location in respect of which, they are registered, and insofar as the circumstances specified for paragraph 19AA(3)(b) of the Act apply; or
- b. is covered by an exemption under subsection 19AB(3) of the Act; or
- c. first obtained registration as a medical practitioner before 1 November 1996.

Patient eligibility

Items 93716 and 93717 are available to people who have at least one symptom of COVID-19 (with symptom onset less than or equal to 5 days ago), and have received a positive COVID-19 test result, confirmed by either:

- a. laboratory testing (PCR); or
- b. a COVID-19 rapid antigen self test (RAT) which has been approved for supply in Australia by the Therapeutic Goods Administration.

Billing

Normal arrangements of billing apply including payments of bulk billing incentives for eligible services.

Co-claiming

MBS items 93716 and 93717 are not payable in association with any other attendance service on the same occasion by the same treating practitioner.

Record keeping requirements

Record-keeping requirements for services claimed must be consistent with Medicare rules requiring practitioners to maintain adequate and contemporaneous records of the rendering or initiating of services.

Providers are required to record the date of the positive COVID-19 test result and the date of symptom onset in the patient's clinical record.

Restrictions

Items 93716 and 93717 are not available for patients admitted into hospital.

Items 93716 and 93717 cannot be claimed in association with any other attendance service on the same occasion by the same treating practitioner.

REGULATORY REQUIREMENTS

In conducting items 93716 and 93717 a treating practitioner must, with the patient's consent conduct an assessment and discussion with the patient lasting at least 20 minutes (25 minutes for a medical practitioner other than a general practitioner) which includes any of the following that are clinically relevant:

- taking a detailed patient history;
- arranging any necessary investigation;
- implementing a management plan, including follow up arrangements;
- providing any necessary treatment, including prescribing a COVID-19 oral antiviral treatment if appropriate; and
- providing appropriate preventive health care for one or more related issues.

The treating practitioner must also meet the below regulatory requirements:

- a. adhere to section 7 of the Determination*; and
- b. not apply the item to a service if the patient seeking treatment is an admitted patient; and
- c. not apply the item if the service is performed in association with any other attendance on the same occasion by the same medical practitioner.

*** 7. Application of COVID-19 Treatment Items**

1. An item in a Schedule of this Determination only applies to a service mentioned in the item if the patient's COVID-19 infection has been confirmed by either:

- a. laboratory testing; or
- b. COVID 19 rapid antigen self test which has been approved for supply in Australia by the Therapeutic Goods Administration, where:
 - i. the treating practitioner makes a record in the patient's notes that the relevant state and territory reporting requirements have been met, if applicable, and either:
 - A. confirms the patient has reported the positive test result to the relevant state or territory public health unit where reporting requirements are in place from time to time; or
 - B. assists the patient to report the positive result to the relevant state or territory public health unit where reporting requirements are in place from time to time.

2. An item in a Schedule of this Determination only applies to a service performed by a medical practitioner who:

- a. is located at a medical practice with capacity for in person assessment where appropriate; or
- b. has a formal agreement with a medical practice to provide personal attendance services.

AR.8.1 Attendance Services provided under Item 294 are to be provided by video conference rather than at consulting rooms

When a service provided to a patient under item 291, 293, 296, 300, 302, 304, 306, 308, 310, 312, 314, 316, 318 or 319 is provided under item 294, it may be provided by video conference rather than at consulting rooms.

AR.29.1 Attendance services for eligible disabilities

Eligibility of this service under 137 or 92141 (specialists and consultant physicians), 139 or 92142 (general practitioners)

'Eligible disabilities' for the purpose of these services means any of the following conditions:

- (a) sight impairment that results in vision of less than or equal to 6/18 vision or equivalent field loss in the better eye, with correction;
- (b) hearing impairment that results in:
 - (i) a hearing loss of 40 decibels or greater in the better ear, across 4 frequencies; or
 - (ii) permanent conductive hearing loss and auditory neuropathy;
- (c) deafblindness;
- (d) cerebral palsy;
- (e) Down syndrome;
- (f) Fragile X syndrome;
- (g) Prader-Willi syndrome;
- (h) Williams syndrome;

- (i) Angelman syndrome;
- (j) Kabuki syndrome;
- (k) Smith-Magenis syndrome;
- (l) CHARGE syndrome;
- (m) Cri du Chat syndrome;
- (n) Cornelia de Lange syndrome;
- (o) microcephaly, if a child has:
 - (i) a head circumference less than the third percentile for age and sex; and
 - (ii) a functional level at or below 2 standard deviations below the mean for age on a standard development test or an IQ score of less than 70 on a standardised test of intelligence*;
- (p) Rett's disorder;
- (q) Fetal Alcohol Spectrum Disorder (FASD);
- (r) Lesch-Nyhan syndrome;
- (s) 22q deletion syndrome.

*"standard developmental test" refers to tests such as the Bayley Scales of Infant Development or the Griffiths Mental Development Scales; "standardised test of intelligence" means the Wechsler Intelligence Scale for Children (WISC) or the Wechsler Preschool and Primary Scale of Intelligence (WPPSI). It is up to the clinical judgement of the diagnosing practitioner to determine which tests are appropriate to be used.

Information on the Ready Reckoners can be found on the MBS Online downloads page at <https://www.mbsonline.gov.au/internet/mbsonline/publishing.nsf/Content/Downloads-2023-11>

PROFESSIONAL ATTENDANCES ITEMS

A1. GENERAL PRACTITIONER ATTENDANCES TO WHICH NO OTHER ITEM APPLIES	
Group A1. General Practitioner Attendances To Which No Other Item Applies	
123	<p>Professional attendance by a general practitioner at consulting rooms (other than a service to which another item in this Schedule applies), lasting at least 60 minutes and including any of the following that are clinically relevant:</p> <ul style="list-style-type: none"> (a) taking an extensive patient history; (b) performing a clinical examination; (c) arranging any necessary investigation; (d) implementing a management plan; (e) providing appropriate preventive health care; <p>for one or more health related issues, with appropriate documentation</p> <p>(See para MN.1.4, MN.1.3, MN.1.5, MN.1.6, MN.1.7, MN.1.8, AN.0.9, AN.0.74 of explanatory notes to this Category)</p> <p>Fee: \$191.20 Benefit: 100% = \$191.20 Extended Medicare Safety Net Cap: \$500.00</p>
124	<p>Professional attendance by a general practitioner (other than attendance at consulting rooms or a residential aged care facility or a service to which another item in this Schedule applies), lasting at least 60 minutes and including any of the following that are clinically relevant:</p> <ul style="list-style-type: none"> (a) taking an extensive patient history; (b) performing a clinical examination; (c) arranging any necessary investigation; (d) implementing a management plan; (e) providing appropriate preventive health care; <p>for one or more health related issues, with appropriate documentation—an attendance on one or more patients at one place on one occasion—each patient</p> <p>(See para MN.1.4, MN.1.3, MN.1.5, MN.1.6, MN.1.7, MN.1.8, AN.0.13, AN.0.9, AN.0.11, AN.0.74 of explanatory notes to this Category)</p> <p>Derived Fee: The fee for item 123, plus \$29.00 divided by the number of patients seen, up to a maximum of six patients. For seven or more patients - the fee for item 123 plus \$2.30 per patient. Extended Medicare Safety Net Cap: 300% of the Derived fee for this item, or \$500.00, whichever is the lesser amount</p>
3	<p>Professional attendance at consulting rooms (other than a service to which another item applies) by a general practitioner for an obvious problem characterised by the straightforward nature of the task that requires a short patient history and, if required, limited examination and management—each attendance</p> <p>(See para MN.1.4, MN.1.3, MN.1.5, MN.1.6, MN.1.7, MN.1.8, AN.0.9, AN.0.74 of explanatory notes to this Category)</p> <p>Fee: \$18.95 Benefit: 100% = \$18.95 Extended Medicare Safety Net Cap: \$56.85</p>
4	<p>Professional attendance by a general practitioner (other than attendance at consulting rooms or a residential aged care facility or a service to which another item in the table applies) that requires a short patient history and, if necessary, limited examination and management—an attendance on one or more patients at one place on one occasion—each patient</p> <p>(See para MN.1.4, MN.1.3, MN.1.5, MN.1.6, MN.1.7, MN.1.8, AN.0.13, AN.0.9, AN.0.11, AN.0.74 of explanatory notes to this Category)</p> <p>Derived Fee: The fee for item 3, plus \$29.00 divided by the number of patients seen, up to a maximum of six patients. For seven or more patients - the fee for item 3 plus \$2.30 per patient. Extended Medicare Safety Net Cap: 300% of the Derived fee for this item, or \$500.00, whichever is the lesser amount</p>

**A1. GENERAL PRACTITIONER ATTENDANCES
TO WHICH NO OTHER ITEM APPLIES**

23	<p>Professional attendance by a general practitioner at consulting rooms (other than a service to which another item in this Schedule applies), lasting at least 6 minutes and less than 20 minutes and including any of the following that are clinically relevant:</p> <ul style="list-style-type: none"> (a) taking a patient history; (b) performing a clinical examination; (c) arranging any necessary investigation; (d) implementing a management plan; (e) providing appropriate preventive health care; <p>for one or more health-related issues, with appropriate documentation</p> <p>(See para MN.1.4, MN.1.3, MN.1.5, MN.1.6, MN.1.7, MN.1.8, AN.0.9, AN.0.74 of explanatory notes to this Category)</p> <p>Fee: \$41.40 Benefit: 100% = \$41.40 Extended Medicare Safety Net Cap: \$124.20</p>
24	<p>Professional attendance by a general practitioner (other than attendance at consulting rooms or a residential aged care facility or a service to which another item in this Schedule applies), lasting at least 6 minutes and less than 20 minutes and including any of the following that are clinically relevant:</p> <ul style="list-style-type: none"> (a) taking a patient history; (b) performing a clinical examination; (c) arranging any necessary investigation; (d) implementing a management plan; (e) providing appropriate preventive health care; <p>for one or more health-related issues, with appropriate documentation—an attendance on one or more patients at one place on one occasion—each patient</p> <p>(See para MN.1.4, MN.1.3, MN.1.5, MN.1.6, MN.1.7, MN.1.8, AN.0.13, AN.0.9, AN.0.11, AN.0.74 of explanatory notes to this Category)</p> <p>Derived Fee: The fee for item 23, plus \$29.00 divided by the number of patients seen, up to a maximum of six patients. For seven or more patients - the fee for item 23 plus \$2.30 per patient. Extended Medicare Safety Net Cap: 300% of the Derived fee for this item, or \$500.00, whichever is the lesser amount</p>
36	<p>Professional attendance by a general practitioner at consulting rooms (other than a service to which another item in the table applies), lasting at least 20 minutes and including any of the following that are clinically relevant:</p> <ul style="list-style-type: none"> (a) taking a detailed patient history; (b) performing a clinical examination; (c) arranging any necessary investigation; (d) implementing a management plan; (e) providing appropriate preventive health care; <p>for one or more health-related issues, with appropriate documentation—each attendance</p> <p>(See para MN.1.4, MN.1.3, MN.1.5, MN.1.6, MN.1.7, MN.1.8, AN.0.9, AN.0.74 of explanatory notes to this Category)</p> <p>Fee: \$80.10 Benefit: 100% = \$80.10 Extended Medicare Safety Net Cap: \$240.30</p>
37	<p>Professional attendance by a general practitioner (other than attendance at consulting rooms or a residential aged care facility or a service to which another item in the table applies), lasting at least 20 minutes and including any of the following that are clinically relevant:</p>

**A1. GENERAL PRACTITIONER ATTENDANCES
TO WHICH NO OTHER ITEM APPLIES**

	<p>(a) taking a detailed patient history;</p> <p>(b) performing a clinical examination;</p> <p>(c) arranging any necessary investigation;</p> <p>(d) implementing a management plan;</p> <p>(e) providing appropriate preventive health care;</p> <p>for one or more health-related issues, with appropriate documentation-an attendance on one or more patients at one place on one occasion-each patient</p> <p>(See para MN.1.4, MN.1.3, MN.1.5, MN.1.6, MN.1.7, MN.1.8, AN.0.13, AN.0.9, AN.0.11, AN.0.74 of explanatory notes to this Category)</p> <p>Derived Fee: The fee for item 36, plus \$29.00 divided by the number of patients seen, up to a maximum of six patients. A27. PREGNANCY SUPPORT COUNSELLING

Group A27. Pregnancy Support Counselling	
4001	<p>Professional attendance of at least 20 minutes in duration at consulting rooms by a general practitioner who is registered with the Chief Executive Medicare as meeting the credentialing requirements for provision of this service for the purpose of providing non-directive pregnancy support counselling to a patient who:</p> <p>(a) is currently pregnant; or</p>

A27. PREGNANCY SUPPORT COUNSELLING

(b) has been pregnant in the 12 months preceding the provision of the first service to which this item or item 81000, 81005 or 81010 applies in relation to that pregnancy

Note: For items 81000, 81005 and 81010, see the determination about allied health services under subsection 3C(1) of the Act.

(See para AN.0.66 of explanatory notes to this Category)

Fee: \$84.30 **Benefit:** 100% = \$84.30

Extended Medicare Safety Net Cap: \$252.90

A28. GERIATRIC MEDICINE**Group A28. Geriatric Medicine**

Professional attendance of more than 60 minutes in duration at consulting rooms or hospital by a consultant physician or specialist in the practice of the consultant physician's or specialist's specialty of geriatric medicine, if:

(a) the patient is at least 65 years old and referred by a medical practitioner practising in general practice (including a general practitioner, but not including a specialist or consultant physician) or a participating nurse practitioner; and

(b) the attendance is initiated by the referring practitioner for the provision of a comprehensive assessment and management plan; and

(c) during the attendance:

(i) the medical, physical, psychological and social aspects of the patient's health are evaluated in detail using appropriately validated assessment tools if indicated (the assessment); and

(ii) the patient's various health problems and care needs are identified and prioritised (the formulation); and

(iii) a detailed management plan is prepared (the management plan) setting out:

(A) the prioritised list of health problems and care needs; and

(B) short and longer term management goals; and

(C) recommended actions or intervention strategies to be undertaken by the patient's general practitioner or another relevant health care provider that are likely to improve or maintain health status and are readily available and acceptable to the patient and the patient's family and carers; and

(iv) the management plan is explained and discussed with the patient and, if appropriate, the patient's family and any carers; and

(v) the management plan is communicated in writing to the referring practitioner; and

(d) an attendance to which item 104, 105, 107, 108, 110, 116 or 119 applies has not been provided to the patient on the same day by the same practitioner; and

(e) an attendance to which this item or item 145 applies has not been provided to the patient by the same practitioner in the preceding 12 months

(See para AN.40.1, AN.0.26 of explanatory notes to this Category)

Fee: \$505.70 **Benefit:** 75% = \$379.30 85% = \$429.85

Extended Medicare Safety Net Cap: \$500.00

141

CATEGORY 2: DIAGNOSTIC PROCEDURES AND INVESTIGATIONS

SUMMARY OF CHANGES FROM 01/03/2024

The 01/03/2024 changes to the MBS are summarised below and are identified in the Schedule pages by one or more of the following words appearing above the item number:

(a) new item	New
(b) amended description	Amend
(c) fee amended	Fee
(d) item number changed	Renum
(e) EMSN changed	EMSN

New Items

11732

Other changes to the General Medical Services Table and Diagnostic Imaging Services Table

From 1 March 2024, the following changes will be made to medical and diagnostic imaging services under the MBS:

- Insert new item 11732 for exercise electrocardiogram stress testing for patients under investigation, monitoring or treatment for genetic heart disease diagnoses, or first degree relative of patients with confirmed genetic heart disease.

DIAGNOSTIC PROCEDURES AND INVESTIGATIONS NOTES

DN.1.1 Electroencephalography (EEG), Prolonged Recording - (item 11003)

Item 11003 covers an extended EEG recording of at least 3 hours duration, other than ambulatory or video recording.

DN.1.2 Electroencephalography (EEG), Ambulatory or Video - (Items 11004 and 11005)

Items 11004 and 11005 cover prolonged ambulatory or video EEG, recording of at least 3 hours duration for:

- Diagnosing the basis of episodic neurological dysfunction;
- Characterising the nature of a patient's epileptic seizures;
- Localising seizures in patients with uncontrolled epilepsy, with a view to surgery; or
- Assessing treatment response where subclinical seizures are suspected.

DN.1.3 Neuromuscular Diagnosis - (Item 11012)

Based on advice from the Australian Association of Neurologists, Medicare benefits are not payable under Item 11012 for quantitative sensory nerve testing using "Neurometer CPT" diagnostic devices. The advice indicated that the device was still in the evaluation and research stage and did not have widespread clinical application.

DN.1.4 Investigation of Central Nervous System Evoked Responses - (Items 11024 and 11027)

In the context of these items a study refers to one or more averaged samples of electrical activity recorded from one or more sites in the central nervous system in response to the same stimulus.

Second or subsequent studies refer to either stimulating the point of stimulation (e.g. right eye or left median nerve) with a different stimulus or stimulating another point of stimulation (e.g. left eye or right median nerve).

NOTE: Items 11024 and 11027 are not intended to cover bio-feedback techniques.

DN.1.5 Electroretinography - (Items 11204, 11205, 11210 and 11211)

Current professional guidelines and standards for electroretinography, electroculography and pattern retinography are produced by the International Society for Clinical Electrophysiology of Vision (ISCEV).

DN.1.6 Computerised Perimetry Printed Results - (Items 11221 and 11224)

Computerised perimetry performed by optometrists is covered by MBS items 10940 and 10941. Items 11221 and 11224 should not be used to repeat perimetry unless clinically necessary - such as where the results of the perimetry have been provided by the optometrist referring the patient to an ophthalmologist.

DN.1.7 Computerised Perimetry - (Items 11221 and 11224)

Item 11221 for bilateral procedures cannot be claimed for patients who are totally blind in one eye. In this instance, item 11224 for unilateral procedures should be claimed, where appropriate.

DN.1.8 Orbital Contents - (Items 11240, 11241, 11242 and 11243)

Items 11240 and 11241 may only be utilised once per patient per practitioner. Where an additional service is necessary items 11242 and 11243 should be utilised.

Partial coherence interferometry may also be referred to as optical (or ocular) coherence biometry or laser Doppler interferometry.

DN.1.10 Electrocochleography - (Item 11304)

Item 11304 refers to electrocochleography with insertion of electrodes through the tympanic membrane.

DN.1.11 Non-determinate Audiometry - (Item 11306)

This refers to screening audiometry covering those services, one or more, referred to in Items 11309-11318 when not performed under the conditions set out in paragraph D1.12.

DN.1.12 Audiology Services - (Items 11309 to 11318)

A medical service specified in Items 11309 to 11318 should be rendered:

(a) in conditions that allow the establishment of determinate thresholds, including better ear threshold in free field testing;

(b) in a sound attenuated environment with background noise conditions that comply with Australian Standard AS/NZS 1269.3-2005; and

(c) using calibrated equipment that complies with Australian Standard AS IEC 60645.1-22002, AS IEC 60645.2-2002 and AS IEC 60645.3-2002.

DN.1.13 Oto-Acoustic Emission Audiometry - (Item 11332)

Medicare benefits are not payable under Item 11332 for routine screening of infants. The equipment used to provide this service must be capable of displaying the recorded emission and not just a pass/fail indicator.

DN.1.14 Respiratory Function Tests - (Item 11503)

Specialists and consultant physicians providing services under item 11503 should successfully complete a substantial course of study and training in the relevant test, which has been endorsed by a professional medical organisation. Specialists and consultant physicians should keep appropriate records of this training. Tests should be performed in a respiratory laboratory capable of performing all of, or the majority of the tests listed.

Fractional exhaled nitric oxide (FeNO) testing cannot be claimed under item 11503.

When laboratory based spirometry (item 11512) is performed on the same day as a test approved under item 11503, then only 11503 must be claimed. When spirometry is the only laboratory test performed then 11512 must be claimed.

Maximum inspiratory and expiratory flow-volume loop testing for the purpose of diagnosing central airways obstruction is to be performed under item 11512 not 11503. Item 11503 is not for the purpose of investigation of sleep disorders. Polygraphic data obtained as part of a sleep study item in the range 12203 to 12250 cannot be used for the purpose of claiming item 11503.

For the purposes of item 11503, (c) (iii) measurement of airway or pulmonary resistance by any method includes measurement of nasal resistance by rhinomanometry when performed in a respiratory laboratory.

DN.1.15 Capsule Endoscopy - (Item 11820 and 11823)

Capsule endoscopy is primarily used to view the small bowel, which cannot be viewed by upper gastrointestinal endoscopy and colonoscopy.

Capsule endoscopy imaging must be kept in a manner that facilitates retrieval on the basis of the patient's name and date of service. Records must be retained for a period of 2 years commencing on the day on which the service was rendered.

Conjoint committee

The Conjoint Committee comprises representatives from the Gastroenterological Society of Australia (GESA), the Royal Australasian College of Physicians (RACP) and the Royal Australasian College of Surgeons (RACS). For the purposes of Items 11820 and 11823, specialists or consultant physicians performing this procedure must have endoscopic training recognised by The Conjoint Committee for the Recognition of Training in Gastrointestinal Endoscopy, and Services Australia notified of that recognition.

DN.1.16 Administration of Thyrotropin Alfa-rch for the Detection of Recurrent Well-differentiated Thyroid Cancer - (Item 12201)

Thyrotropin alfa-rch is a diagnostic agent that allows patients to remain on thyroid hormone therapy while being assessed for recurrent cancer. This item was introduced following an assessment by the Medical Services Advisory Committee (MSAC) of the available evidence relating to the safety, effectiveness and cost-effectiveness of thyrotropin alfa-rch. MSAC found that the use of thyrotropin alfa-rch is associated with a lower diagnostic accuracy than when the patient has withdrawn from thyroid hormone therapy. Accordingly, benefits are payable under the item only for patients in whom thyroid hormone therapy withdrawal is medically contraindicated and where concurrent whole body study using radioactive iodine and serum thyroglobulin are undertaken. Services provided to patients who do not demonstrate the indications set out in item 12201 do not attract benefits under the item.

"**Severe psychiatric illness**" is defined as patients with a severe pre-existing psychiatric illness who are currently under specialist psychiatric care.

The item includes the cost of supplying thyrotropin alfa-rch and the equivalent of a subsequent specialist attendance. "Administration" means an attendance by the specialist or consultant physician (the administering practitioner) that includes:

- an assessment that the patient meets the criteria prescribed by the item;
the supply of thyrotropin alfa-rch;
- ensuring that thyrotropin alfa-rch is injected (either by the administering practitioner or by another practitioner) in two doses at 24 hour intervals, with the second dose being administered 72 hours prior to whole body study with radioactive iodine and serum thyroglobulin test; and
- arranging the whole body radioactive iodine study and the serum thyroglobulin test.

Where thyrotropin alfa-rch is injected by the administering practitioner, benefits are not payable for an attendance on the day the second dose is administered. Where thyrotropin alfa-rch is injected by: a general practitioner - benefits are payable under a Level A consultation (item 3); other practitioners - benefits are payable under item 52.

DN.1.17 Investigations for sleep disorders (Items 12203 to 12250)

Items 12203 and 12250 are applicable for patients who require a diagnostic sleep study. They enable direct GP referral to testing without personal assessment by a sleep or respiratory physician, when validated screening questionnaires suggest a high pre-test probability for diagnosis of symptomatic, moderate to severe obstructive sleep apnoea (OSA). The screening questionnaires should be administered by the referring practitioner. Alternatively, the need for testing can be determined by a sleep or respiratory physician following direct clinical assessment (either face-to-face or by video conference).

Screening Questionnaires

For the purpose of items 12203 or 12250, a high probability for symptomatic, moderate to severe OSA would be indicated by one of the following clinical screening tool outcomes:

- STOP-Bang score of 3 or more AND an Epworth Sleepiness Scale score of 8 or more;

OR

- OSA50 score of 5 or more AND an Epworth Sleepiness Scale score of 8 or more;

OR

- high risk score on the Berlin Questionnaire AND an Epworth Sleepiness Scale score of 8 or more.

The STOP-Bang, OSA50, Berlin questionnaires and Epworth Sleepiness Scale can be accessed at Douglas et al, Guidelines for sleep studies in adults - a position statement of the Australasian Sleep Association. Sleep Med. 2017 Aug; 36 Suppl 1:S2-S22 (www.sleep.org.au/documents/item/2980) or on the American Thoracic Society website (www.thoracic.org/members/assemblies/assemblies/srn/questionnaires/).

Evidence of the screening tests being administered to the patient in full, including screening test scores must be recorded in the patient's clinical record as this may be subject to audit.

Out-dated or incomplete referrals (Items 12203 and 12250)

Referrals made prior to 1 November 2018 (or after 1 November 2018 but without the screening questionnaires) remain valid for the purposes of a service performed under items 12203 and 12250 from 1 November 2018 – providing:

- The patient is assessed by a qualified sleep medicine practitioner or consultant respiratory physician to determine the necessity for the sleep study; or
- The validated screening questionnaires are administered to the patient by the sleep medicine practitioner, sleep technician or other practice staff. If the screening questionnaires indicate a high pre-test probability for the diagnosis of symptomatic, moderate to severe OSA, the patient can proceed to testing. If there remains any uncertainty about the necessity for the study, a qualified sleep medicine practitioner or consultant respiratory physician should assess the patient.

Referrals for attended (Level 1) diagnostic studies

Where a patient with suspected OSA has been directly referred for a Level 1 sleep study under item 12203, but there is insufficient information to indicate if there are any contraindications for a Level 2 study, the following options are available:

- The patient can be assessed by a qualified sleep medicine practitioner or consultant respiratory physician to determine the most suitable study (i.e. Level 1 or Level 2); or
- The validated screening questionnaires can be administered to the patient by the sleep medicine practitioner, sleep technician or practice staff. If the screening questionnaires indicate a high pre-test probability for the diagnosis of symptomatic, moderate to severe OSA, the sleep provider can either – arrange for the patient to have a Level 2 study (notifying the referring practitioner of this decision); or seek additional information from the referring practitioner on why a Level 1 study is required (e.g. whether the patient has any contraindications for a Level 2 study). If there remains any uncertainty about the type of study which the patient should receive, a qualified sleep medicine practitioner or consultant respiratory physician should assess the patient.

Referrals made without (or incomplete) screening questionnaires (Items 12203 and 12250)

If a patient has been directly referred for testing without the use of the screening questionnaires, they can be administered to the patient by the sleep provider (e.g. by a sleep technician or other practice staff). Where the screening questionnaires have been provided with the referral but they are incomplete, the sleep provider may wish to contact the patient to determine what their responses were to the relevant questions.

Attended versus unattended sleep studies

Determination of the need for testing should conform with Australasian Sleep Association guidelines.

Unattended sleep studies are suitable for many patients with suspected OSA but patients with other sleep disorders should undergo an attended study. Assessment for potential contraindications to an unattended sleep study can be undertaken by either the referring practitioner, qualified adult sleep medicine practitioner or consultant respiratory physician. Standardised referrals should request sufficient information to enable such assessment.

In accordance with the Australasian Sleep Association's Guidelines for Sleep Studies in Adults, relative contraindications for an unattended sleep study to investigate suspected OSA include but are not limited to:

- (a) intellectual disability or cognitive impairment;
- (b) physical disability with inadequate carer attendance;
- (c) significant co-morbid conditions including neuromuscular disease, heart failure or advanced respiratory disease where more complex disorders are likely;
- (d) suspected respiratory failure where attended measurements are required, including measurement of carbon dioxide partial pressures;
- (e) suspected parasomnia or seizure disorder;
- (f) suspected condition where recording of body position is considered to be essential and would not be recorded as part of an unattended sleep study;
- (g) previously failed or inconclusive unattended sleep study;
- (h) unsuitable home environment including unsafe environments or where patients are homeless; and
- (i) consumer preference based on a high level of anxiety about location of study or where there is unreasonable cost or disruption based on distance to be travelled, or home circumstances.

Patients who have these features may be suitable for either attended (Level 1) or unattended (Level 2) studies.

Treatment options following testing

The results and treatment options following any diagnostic sleep study should be discussed during a professional attendance with a medical practitioner before the initiation of any therapy. If there is uncertainty about the significance of test results or the appropriate management for that individual then referral to a sleep or respiratory medicine specialist is recommended.

Any professional attendance by a qualified sleep medicine practitioner or consultant respiratory physician associated with this service may be undertaken face-to-face or by video conference.

Meaning of 'at least 8 hours'

The requirement 'for at least 8 hours' means the overnight investigation (including patient set-up time and actual period of recording) must be of at least 8 hours duration. Providers must keep evidence of the duration of the overnight investigation (including set-up time and period of recording) as part of their administrative records for MBS sleep studies.

Polygraphic data

Item 11503 is not for the purpose of investigation of sleep disorders. Polygraphic data obtained as part of a sleep study item in the range 12203 to 12250 cannot be used for the purpose of claiming item 11503.

Billing requirements for sleep studies

Items 12203 to 12250 do not support a figurehead billing arrangement. Figurehead or 'headline' billing is where one practitioner's provider number is used to bill patients for the services provided by other practitioners.

While individual components of the sleep study service (e.g. supervision of the investigation and interpretation and preparation of a permanent report) do not need to be performed by the same qualified sleep medicine practitioner, it is an MBS requirement that the qualified sleep medicine practitioner who prepared the report on the results of the investigation bill the relevant item.

Benefits are not payable for items 12203 to 12250 where the interpretation and preparation of a permanent report is provided by a technician or supervised staff rather than by a qualified sleep medicine practitioner.

Where the date of service for a sleep study item is the same as the date of service of any items 11000 to 11005, 11503, 11713 and 12203/12250, for a benefit to be payable, there must be written notification on the account identifying that the service under any of those items was not provided on the same occasion as the sleep study item.

The date of service for the purposes of items 12203 to 12250 is deemed to be the day of the morning the overnight investigation is completed. Billing for the service must only occur once all of the requirements of the item have been fulfilled.

DN.1.18 Bone Densitometry - (Items 12306 to 12322)

Definitions

Low bone mineral density is present when the bone (organ) mineral density falls more than 1.5 standard deviations below the age matched mean or more than 2.5 standard deviations below the young normal mean at the same site and in the same gender.

Item 12321 is intended to allow for bone mineral density measurement following a significant change in therapy - e.g. a change in the class of drugs - rather than for a change in the dosage regimen.

Items 12320 and 12322 enable the payment of a Medicare benefit for a bone densitometry service performed on a patient aged 70 years or over. Patients 70 years and over are eligible for an initial screening study.

Patients assessed as having a normal study or mild osteopenia as measured by a t-score down to -1.5 are eligible for one scan every 5 years (item 12320).

Patients with moderate to marked osteopenia as measured by a T-score of -1.5 to -2.5 are eligible for one scan every two years (item 12322).

An examination under any of these items covers the measurement of 2 or more sites, interpretation and provision of a report; all performed by a specialist or consultant physician in the practice of his or her specialty. Two or more sites must include the measurement of bone density of the lumbar spine and proximal femur. The measurement of bone mineral density at either forearms or both heels or in combination is excluded for the purpose of Medicare benefit, unless necessary for specific clinical indications (see below).

Patients unable to have a lumbar spine or proximal femur measurement taken

The recommended alternative measurement for patients who have been referred for a dual energy x-ray absorptiometry (DEXA) bone densitometry scan who are unable to have a lumbar spine or proximal femur measurement taken is the distal forearm, e.g. patients with spinal fusions or bilateral hip prostheses. Patients unable to have a lumbar spine or proximal femur measurement taken who have been referred for a quantitative computed tomography (QCT) scan are not subject to the two site measurements requirement. For these patients one site for which a QCT measurement can be appropriately referenced is sufficient.

Professional Supervision and Interpretation and Reporting

The interpretation and report for all bone densitometry services must be provided by a specialist or consultant physician.

Items 12306, 12312, 12315, 12321 and Items 12320 and 12322 (when performed using Dual Energy X-ray Absorptiometry) must be performed by a:

- (a) specialist or consultant physician; or
- (b) person who holds a State or Territory radiation license, and who is under the supervision of a specialist or consultant physician.

Items 12320 and 12322 (when performed using Quantitative Computed Tomography) must be performed by a:

- (a) specialist or consultant physician; or
- (b) a radiation licence holder who is registered as a medical radiation practitioner under a law of a State or Territory; and the specialist or consultant physician is available to monitor and influence the conduct and diagnostic quality of the examination and, if necessary, to attend on the patient personally.

Referrals

Bone densitometry services are available on the basis of referral by a medical practitioner to a specialist or consultant physician. However, providers of bone densitometry to whom a patient is referred for management may determine that a bone densitometry service is required in line with the provisions of Items 12306, 12312, 12315, 12320, 12321 and 12322.

For Item 12306 the referral should specify the indication for the test, namely:

- (a) 1 or more fractures occurring after minimal trauma; or
- (b) monitoring of low bone mineral density proven by previous bone densitometry.

For Item 12312 the referral should specify the indication for the test, namely:

- (a) prolonged glucocorticoid therapy;
- (b) conditions associated with excess glucocorticoid secretion;
- (c) male hypogonadism; or
- (d) female hypogonadism lasting more than 6 months before the age of 45.

For Item 12315 the referral should specify the indication for the test, namely:

- (a) primary hyperparathyroidism;
- (b) chronic liver disease;
- (c) chronic renal disease;
- (d) proven malabsorptive disorders;
- (e) rheumatoid arthritis; or
- (f) conditions associated with thyroxine excess.

For Item 12312

- (a) 'Prolonged glucocorticoid therapy' is defined as the commencement of a dosage of inhaled glucocorticoid equivalent to or greater than 800 micrograms beclomethasone dipropionate or budesonide per day; or

(b) a supraphysiological glucocorticoid dosage equivalent to or greater than 7.5 mg prednisolone in an adult taken orally per day;

for a period anticipated to last for at least 4 months.

Glucocorticoid therapy must be contemporaneous with the current scan. Patients no longer on steroids would not qualify for benefits.

For Item 12312

(a) Male hypogonadism is defined as serum testosterone levels below the age matched normal range.

(b) Female hypogonadism is defined as serum oestrogen levels below the age matched normal range.

For Item 12315

A malabsorptive disorder is defined as one or more of the following:

(a) malabsorption of fat, defined as faecal fat estimated at greater than 18 gm per 72 hours on a normal fat diet; or

(b) bowel disease with presumptive vitamin D malabsorption as indicated by a sub-normal circulating 25-hydroxyvitamin D level; or

(c) histologically proven Coeliac disease.

DN.1.19 Retinal Photography with a Non-Mydriatic Retinal Camera

This service is separated into two items, MBS item 12325 and MBS item 12326, in line with NHMRC guidelines' recommended frequency of repeat testing in persons of Aboriginal and Torres Strait Islander descent and the general population.

This item is intended for the provision of retinal photography with a non-mydriatic retinal camera. Mydriasis is permitted if adequate photographs cannot be obtained through an undilated pupil.

Presenting distance vision means unaided distance vision or the vision obtained with the current spectacles or contact lenses, if normally worn for distance vision.

Detection of any diabetic retinopathy should be followed by referral to an optometrist or ophthalmologist in accordance with the NHMRC guidelines.

Where images are inadequate quality for detection of diabetic retinopathy, referral to an optometrist or ophthalmologist for further assessment is indicated.

Any element(s) of the service may be performed by appropriately trained or qualified personnel under the direction of the medical practitioner co-ordinating the patient's care, who retains overall responsibility for claiming of the service.

DN.1.20 Spirometry (Items 11505, 11506 and 11512)

Specialists and consultant physicians providing services under item 11512 should successfully complete a substantial course of study and training in respiratory medicine, which has been endorsed by a professional medical organisation. Specialists and consultant physicians should keep appropriate records of this training.

Spirometry services billed to the MBS should meet international quality standards (Eur Respir J 2005; 26: 319–338).

The National Asthma Council's Australian Asthma Handbook (2016) and Lung Foundation Australia's and Thoracic Society of Australia and New Zealand's COPD-X Plan advise that properly performed spirometry is required to confirm airflow limitation and the diagnosis of asthma and/or COPD. Reversibility testing is the standard

required for asthma diagnosis. The diagnosis of COPD is confirmed with post bronchodilator spirometry. Item 11505 should not be repeated when diagnosis has been previously confirmed by properly performed spirometry. To meet quality requirements patients must have three acceptable tests for each testing period (pre/post bronchodilator), and meet repeatability criteria with the best effort recorded. Spirometry should be performed by a person who has undergone training and is qualified to perform it to recommended standards (see Spirometry Handbook, National Asthma Council of Australia (<https://www.nationalasthma.org.au/living-with-asthma/resources/health-professionals/information-paper/spirometry-handbook>) and ATS/ERS Standardisation of spirometry paper (<http://erj.ersjournals.com/content/erj/26/2/319.full.pdf>).

DN.1.21 Fraction of Exhaled Nitric Oxide (Item 11507) and Cardiopulmonary Exercise Testing (Item 11508)

Services billed to item 11507 should meet the following quality standards:

- An Official ATS Clinical Practice Guideline: Interpretation of Exhaled Nitric Oxide Levels (FENO) for Clinical Applications: Am J Respir Crit Care Med Vol 184. pp 602–615, 2011 DOI: 10.1164/rccm.912011ST.
- ATS/ERS Recommendations for Standardized Procedures for the Online and Offline Measurement of Exhaled Lower Respiratory Nitric Oxide and Nasal Nitric Oxide, 2005: Am J Respir Crit Care Med Vol 171. pp 912–930, 2005 DOI: 10.1164/rccm.200406-710ST

Fewer than three traces will be accepted as billable under item 11507 if three reproducible loops are difficult to achieve for clinical reasons. The clinical reason(s) for not achieving three reproducible loops must be documented.

Services billed to item 11508 should meet the following quality standards:

- Radtke T, Crook S, Kaltsakas G, et al. ERS statement on standardisation of cardiopulmonary exercise testing in chronic lung diseases. Eur Respir Rev 2019; 28: 180101 [<https://doi.org/10.1183/16000617.0101-2018>]
- Hallstrand TS, Leuppi JD, Joos G, et al. ERS technical standard on bronchial challenge testing: pathophysiology and methodology of indirect airway challenge testing. Eur Respir J 2018; 52: 1801033 [<https://doi.org/10.1183/13993003.01033-2018>]

For perioperative indications, the test should be conducted according to international guidelines: Perioperative cardiopulmonary exercise testing (CPET): consensus clinical guidelines on indications, organization, conduct, and physiological interpretation for the purpose of preoperative assessment and optimisation for major surgery (published by the Perioperative Exercise and Training Society [POETTS]; British Journal of Anaesthesia, 2018).

Specialists and consultant physicians providing services under item 11508 should successfully complete a substantial course of study and training in cardiopulmonary exercise testing, which has been endorsed by a professional medical organisation. Specialists and consultant physicians should keep appropriate records of this training.

DN.1.22 Skin Prick Testing (items 12000-12005)

Skin prick testing and Intradermal testing should always be performed in a medical setting with the ready availability of medical practitioners competent to treat systemic allergic reactions, and appropriate resuscitation equipment. Because intradermal testing carries a higher risk of anaphylaxis it should only be performed in a hospital setting (or equivalent) by either a specialist or consultant physician with proficiency and experience in all aspects of skin testing for allergy.

Item 12003 should only be used by appropriately trained doctors such as allergist immunologists or equivalently trained medical practitioners. An alternative to Skin Prick Testing (SPT) is serum specific IgE food allergen testing. Serum specific IgE (ssIgE) allergy blood testing to food panels is not recommended.

Item 12004 should only be used by appropriately trained doctors such as allergist immunologists or equivalently trained medical practitioners.

Item 12005 should only be used by appropriately trained doctors such as allergist immunologists, anaesthetists or equivalently trained medical practitioners.

DN.1.23 Multiple sleep latency testing and Maintenance of wakefulness testing

Determination of the need for testing and testing procedures should be performed in accordance with current Australasian Sleep Association guidelines. Not to be used as part of an occupational health service or pre-employment assessment.

The date of service for the purposes of items 12254 to 12272 is deemed to be the day on which the daytime investigation component of the test is completed. Billing for the service must only occur once all of the requirements of the item have been fulfilled.

DN.1.24 Electroencephalography (item 11000)

Routine electroencephalography should not be performed for the following indications/presentations, except after discussion with a Neurologist. In some of these situations a routine EEG is of relatively low diagnostic value, while in others it would be more appropriate to refer the patient directly for a prolonged EEG, or to a Neurologist for consultation and possible further investigation:

- Suspected Psychogenic Non-Epileptic Seizures (PNES)
- Syncope
- Exclusion of a mass lesion
- Headache & migraine
- Behavioural disturbance/aggression
- Tics
- Postural dizziness
- Non-specific fatigue
- Intellectual impairment
- Paediatric simple febrile seizures
- Breath-holding spells
- Attention Deficit Disorder/Attention Deficit Hyperactivity Disorder (ADD/ADHD)

DN.1.26 Discussion of results

Discussions of the results, findings or interpretation of a study are reasonably expected to be part of a formal report. Discussion of these findings with a patient does not constitute a consult. Similarly, discussion(s) during the course of a study or to determine the safety or appropriateness of the study is part of the service and should not be claimed as a consult.

DN.1.27 Implanted ECG Loop Recording (Item 11731)

- i. Also permissible for babies, young children and other patients, due to the patient's age, cognitive capacity or expressive language impairment, where symptoms have not been satisfactorily investigated by other methods.
- ii. Discussions of the results, findings or interpretation of a study are reasonably expected to be part of a formal report. Discussion of these findings with a patient does not constitute a consult. Similarly, discussion(s) during the course of a study or to determine the safety or appropriateness of the study is part of the service and should not be claimed as a consult.

DN.1.28 Indications considered appropriate & Discussion of Results (Item 11716)

Indications interpretation

The following indications would be considered appropriate even in patients who may not experience symptoms more often than once a week.

- a. For the detection of asymptomatic atrial fibrillation (AF) following a transient ischaemic attack (TIA) or cryptogenic stroke.
- b. For the surveillance of paediatric patients following cardiac surgeries that have an established risk of causing dysrhythmia.
- c. For babies, young children and other patients where there is a demonstrable benefit for the documentation of heart rate or if a cardiac dysrhythmia is suspected, but due to the patient's age, cognitive capacity or expressive language impairment, it is not possible to accurately assess symptom frequency based on medical history.

Results

Discussions of the results, findings or interpretation of a study are reasonably expected to be part of a formal report. Discussion of these findings with a patient does not constitute a consult. Similarly, discussion(s) during the course of a study or to determine the safety or appropriateness of the study is part of the service and should not be claimed as a consult.

DN.1.29 Multi- channel ECG monitoring & recording 17 years & over (Item 11729)

Indication interpretation

Heritable arrhythmias include those defined in the [CSANZ guidelines](#) for the diagnosis and management of catecholaminergic polymorphic ventricular tachycardia, familial long QT syndrome and genetic investigation of young sudden unexplained death and resuscitated out of hospital cardiac arrest.

A calcium score of zero is normal and clinician judgement should be applied for scores of 0–10.

Results

Discussions of the results, findings or interpretation of a study are reasonably expected to be part of a formal report. Discussion of these findings with a patient does not constitute a consult. Similarly, discussion(s) during the course of a study or to determine the safety or appropriateness of the study is part of the service and should not be claimed as a consult.

DN.1.30 Multi-channel ECG monitoring & recording Under 17 years (Item 11730)

Indications interpretation

Heritable arrhythmias include those defined in the [CSANZ guidelines](#) for the diagnosis and management of catecholaminergic polymorphic ventricular tachycardia, familial long QT syndrome and genetic investigation of young sudden unexplained death and resuscitated out of hospital cardiac arrest.

Results

Discussions of the results, findings or interpretation of a study are reasonably expected to be part of a formal report. Discussion of these findings with a patient does not constitute a consult. Similarly, discussion(s) during the course of a study or to determine the safety or appropriateness of the study is part of the service and should not be claimed as a consult.

Paediatric Investigation and Consultation

For investigations performed by a specialist paediatric cardiologist, co-claiming of a consultation with the investigation is permitted even when a consultation was not specifically requested when:

- the paediatric patient was referred for an investigation; and
- the paediatric patient was not known to the provider; and
- the paediatric patient was not under the care of another paediatric cardiologist; and
- the findings on the investigation appropriately warranted a consultation.

DN.1.31 ECG Report (Items 11704 and 11705)

The formal report is separate to any letter and entails interpretation of the trace commenting on the significance of the trace findings and their relationship to clinical decision making for the patient in their clinical context, in addition to any measurements taken or automatically generated.

DN.1.32 Neuromuscular electrodiagnosis (items 11012, 11015 and 11018)

Nerve conduction studies and/or EMG should not be used in the following indications/situations. In some of these situations these tests would be of relatively low diagnostic value, while in others it would be more appropriate to refer the patient for alternative investigations first (e.g. magnetic resonance imaging [MRI] in mild radiculopathy)

- Muscle pain in the absence of other abnormalities on examination or laboratory testing
- A four limb needle EMG/nerve conduction study for neck and back pain after trauma
- EMG for low back pain without leg pain or sciatica.

DN.1.33 Requirement of Medical Practitioner

Performed where a medical practitioner is immediately available to attend the patient for the purposes of review and can have an impact of patient outcomes, where such testing is clinically indicated.

DN.1.34 Formal Report

Discussions of the results, findings or interpretation of a study are reasonably expected to be part of a formal report. Discussion of these findings with a patient does not constitute a consult. Similarly, discussion(s) during the course of a study or to determine the safety or appropriateness of the study is part of the service and should not be claimed as a consult.

DN.1.35 Treatment plan guidelines and additional claiming guidelines for ambulatory blood pressure monitoring

Treatment plan guidelines for ambulatory blood pressure monitoring

To fulfil the treatment plan of item 11607, a comprehensive written plan must be prepared describing:

- a. the patient's diagnosis;
- b. management goals with which the patient agrees;
- c. appropriate interventions including lifestyle modification;

- d. treatment the patient may need; and
- f. arrangements to review the plan by a date specified in the plan.

In preparing the plan, the medical practitioner must:

- a. explain to the patient and the patient's carer (if any, and if the medical practitioner considers it appropriate and the patient agrees) the steps involved in preparing the plan; and
- b. record the plan; and
- c. record the patient's agreement to the preparation of the plan; and
- d. offer a copy of the plan to the patient and the patient's carer (if any, and if the medical practitioner considers it appropriate and the patient agrees); and
- e. add a copy of the plan to the patient's medical records.

Additional Claiming Guidelines for ambulatory blood pressure monitoring:

Blood pressure monitoring equipment:

Both the in-clinic blood pressure monitor and the ambulatory blood monitoring equipment (cuff and monitor) used for services under item 11607 must be listed on the Australian Register of Therapeutic Goods, with monitoring devices recalibrated at time intervals as per the manufacturer's recommendations.

Claiming separate consultations:

If a consultation is for the purpose of an Ambulatory blood pressure monitoring treatment plan, a separate and additional consultation should not be undertaken in conjunction with the Ambulatory blood pressure monitoring consultation, unless it is clinically indicated that a separate problem must be treated immediately.

Where a separate consultation is undertaken in conjunction with an Ambulatory blood pressure monitoring consultation, the patient's invoice or Medicare voucher (assignment of benefit form) for the separate consultation should be annotated (e.g. separate consultation clinically required/indicated).

DN.1.36 Audiology Services - (Items 11340, 11341 and 11343)

All vestibular assessment tests to be performed as indicated by standard clinical practice and must provide a quantifiable measure.

A single test is defined as one of the following:

- Video Head Impulse Test (vHIT) (up to all planes tested and +/- Suppression HIT);
- Ocular Vestibular Evoked Myogenic Potential (O VEMP) +/- threshold testing (air and/or bone conduction and/or skull-tap);
- Cervical Vestibular Evoked Myogenic Potential (C VEMP) +/- threshold testing (air and/or bone conduction and/or skull-tap);
- Videonystagmography (VNG) or Electronystagmography (ENG) to measure ocular-motor responses including spontaneous/gaze evoked nystagmus, optokinetic, saccade or smooth pursuit function;

- Videonystagmography (VNG) or Electronystagmography(ENG) to measure eye movement in response to positional testing +/- Dix-Hallpike +/- mechanical positioning;
- Videonystagmography (VNG) or Electronystagmography (ENG) to measure eye movement responses to stimuli such as pressure and sound (Tullio and/or Fistula testing), and/or hyperventilation and/or head shaking;
- Calorics, and/or Caloric Test of Labyrinth;
- Rotational testing including rotational chair;
- Subjective visual vertical/horizontal;
- Static posturography or Computerised Dynamic Posturography (CDP).

DR.1.1 AECG requirements for claiming

Items 11716, 11717, 11723 or 11735 do not apply to a service unless:

- (i) the patient is referred to a specialist or consultant physician by a referring practitioner; or
- (ii) the service is requested by a requesting practitioner.

Admitted patient

Item 11716, 11717, 11723 or 11735 do not apply to a service if the patient is an admitted patient.

An “admitted patient” includes an episode of hospital treatment and an episode of hospital-substitute treatment where a benefit is paid from a private health insurer.

Referred services

For referred services to which items 11716, 11717, 11723 or 11735 apply, the specialist or consultant physician who renders the service must:

- (i) manage the ongoing care of the patient; or
- (ii) perform an attendance to determine that testing is necessary, where the need for the test has not otherwise been scheduled; or
- (iii) perform an attendance immediately after the test has been performed, at which clinical management decisions are discussed with the patient.

A service is taken to be referred if the specialist or consultant physician who renders the service to which items 11716, 11717, 11723 or 11735 applies is the patient’s treating practitioner, determines the need for a cardiac investigation that has not otherwise been scheduled, or performs a scheduled test but also provides an attendance where clinical management decisions are discussed with the patient. Services in all other circumstances are considered to be requested.

Requested services

- (i) for requested services, items 11716, 11717, 11723 or 11735 do not apply to a service if the rendering specialist or consultant physician has performed a service to which an attendance applies for the same patient on the same day.
- (ii) definition of 'requesting practitioner' when applied to items 11716, 11717, 11723 or 11735 is as follows:
 - a. a medical practitioner (other than a specialist or consultant physician) requests that a specialist or consultant physician provide the service.
 - b. a specialist or consultant physician requests that a separate specialist or consultant physician provide the service.

DR.1.2 Exercise ECG stress testing requirements for claiming - Item 11729

This service can be performed as an out-of-hospital service or for admitted hospital patients.

Item 11729 does not apply to a service unless:

- i. the patient is referred to a specialist or consultant physician by a referring practitioner; or
- ii. the service is requested by a requesting practitioner.

Referred services

For referred services to which item 11729 applies, the specialist or consultant physician who renders the service must:

- i. manage the ongoing care of the patient; or
- ii. perform an attendance to determine that testing is necessary, where the need for the test has not otherwise been scheduled; or
- iii. perform an attendance immediately after the test has been performed, at which clinical management decisions are discussed with the patient.

A service is taken to be referred if the specialist or consultant physician who renders the service to which item 11729 applies is the patient's treating practitioner, determines the need for a cardiac investigation that has not otherwise been scheduled, or performs a scheduled test but also provides an attendance where clinical management decisions are discussed with the patient. Services in all other circumstances are considered to be requested.

Requested services

For requested services, item 11729 does not apply to a service if the rendering medical practitioner has performed a service to which an attendance applies for the same patient on the same day unless **both** of the following apply:

- i. another medical practitioner has requested the electrocardiogram service; and
- ii. the attendance service is provided at the same time as, or after, the electrocardiogram service and is required because there is an urgent clinical need to make decisions about the patient's care as a result of the electrocardiogram service.

Definition of 'requesting practitioner' when applied to item 11729 is as follows:

- i. a medical practitioner (other than a specialist or consultant physician) requests that a specialist or consultant physician provide the diagnostic service; or
- ii. a specialist or consultant physician requests that a separate specialist or consultant physician provide the diagnostic service; or
- iii. a medical practitioner (other than a specialist or consultant physician) requests that a medical practitioner (other than a specialist or consultant physician) provide the diagnostic service; or
- iv. a specialist or consultant physician requests that a medical practitioner (other than a specialist or consultant physician) provide the diagnostic service.

Patient requirements

- i. Item 11729 does not apply to a service unless:
the patient's body habitus, or other physical condition, is suitable for exercise stress testing or pharmacological induced stress testing; and
- ii. the patient can complete the exercise sufficiently or respond adequately to pharmacological induced stress, to take the required measurements.

Item 11729 does not apply to a service performed on a patient who:

- (i) is asymptomatic and has a normal cardiac examination; or
- (ii) has a known cardiac disease but the absence of symptom evolution suggests the disease has not progressed and the service is used for monitoring; or
- (iii) has an abnormal resting electrocardiography result which would prevent the interpretation of results.

Exercise testing and cardiopulmonary resuscitation

The Taskforce recommended changes to the performance of exercise or pharmacological electrocardiogram stress testing for optimal patient safety. For a service to be performed, the person performing the monitoring and recording must be:

- a. in continuous attendance; and
- b. trained in “exercise testing” and cardiopulmonary resuscitation; and
- c. a second person trained in cardiopulmonary resuscitation must be located at the premise and available to attend the electrocardiogram stress testing in an emergency.

Please refer to the Cardiac Society of Australia and New Zealand position statement on clinical exercise stress testing: https://www.csanz.edu.au/wp-content/uploads/2014/12/Clinical_Exercise_Stress_Testing_2014-December.pdf

DR.1.3 Paediatric Exercise ECG stress testing claiming requirements

This service can be performed as an out-of-hospital service or for admitted hospital patients.

Item 11730 does not apply to a service unless:

- (i) the patient’s body habitus, or other physical condition, is suitable for exercise stress testing or pharmacological induced stress testing; and
- (ii) the patient can complete the exercise sufficiently or respond adequately to pharmacological induced stress, to take the required measurements; and
- (iii) one of the persons mentioned in subparagraphs b(iv) and (v) of the item descriptor must be a medical practitioner.

Item 11730 does not apply to a service performed on a patient who is asymptomatic and has a normal cardiac examination.

Exercise testing and cardiopulmonary resuscitation

The Taskforce recommended changes to the performance of exercise or pharmacological electrocardiogram stress testing for optimal patient safety. For a service to be performed, the person performing the monitoring and recording must be:

- i. in continuous attendance; and
- ii. trained in “exercise testing” and cardiopulmonary resuscitation; and
- iii. A second person trained in cardiopulmonary resuscitation must be located at the premise and available to attend the electrocardiogram stress testing in an emergency.

Please refer to the Cardiac Society of Australia and New Zealand position statement on clinical exercise stress testing:

https://www.csanz.edu.au/wp-content/uploads/2014/12/Clinical_Exercise_Stress_Testing_2014-December.pdf

DR.1.4 12-lead electrocardiography requirements for claiming

There are four 12-lead electrocardiography items:

- Item 11704 for a trace and formal report service performed by a specialist or consultant physician.
- Item 11705 for a formal report service performed by a specialist or consultant physician, where the specialist reports on a trace.

- Item 11707 for a trace service performed by a medical practitioner.
- Item 11714 for trace and clinical note service performed by a specialist or consultant physician.

Admitted patient

Items 11704, 11707 and 11714 do not apply where the patient is an “admitted patient” of a hospital. An “admitted patient” includes an episode of hospital treatment and an episode of hospital-substitute treatment where a benefit is paid from a private health insurer. Item 11705 can be performed out-of-hospital or for admitted hospital patients.

Requested service

- a) Items 11704 and 11705 are requested services which require the rendering specialist or consultant physician to produce a written formal report which must be provided to the requesting practitioner. The rendering specialist or consultant physician cannot perform the service unless it has been requested by another medical practitioner.
- b) As a requested service, it is generally not expected that items 11704 or 11705 would involve any clinical work beyond performing the formal report (and the trace for item 11704). The MBS Review Taskforce recommended that an attendance should not be co-claimed with a diagnostic cardiac investigation in these circumstances. Item 11704 cannot be claimed if the rendering specialist or consultant physician has performed an attendance on the same patient on the same day.

Generally, it is expected that item 11705 should not be co-claimed with an attendance, but in exceptional clinical circumstances an attendance can be performed i.e. an admitted patient requires a formal report (on a trace) to be provided by a cardiologist and the result of this reporting determines that an urgent attendance (life threatening) is required by the cardiologist to guide immediate treatment (particularly when there is only one cardiologist rostered on the shift).

Financial relationship

The rendering specialist or consultant physician and the requesting practitioner cannot have a financial relationship. Definition of ‘financial relationship’: is where the requesting practitioner is a member of a group of practitioners of which the providing practitioners is a member (both the requestor and provider potentially financially benefit from the MBS service provided). The need for a request should be informed by a clinical decision only.

Item 11707

Item 11707 is a trace only service and can be performed by any medical practitioner.

Item 11714

Item 11714 allows specialist and consultant physicians to perform an electrocardiography trace and interpret the results (in the form of producing a written clinical note) where they consider it necessary for the management or treatment of the patient. No request is required for this service. There is no limitation on the claiming of an attendance with item 11714, as the Taskforce agreed that performance of an electrocardiography was part of routine assessment for patients presenting to specialist and consultant physicians for management of their cardiac condition.

DIAGNOSTIC PROCEDURES AND INVESTIGATIONS ITEMS

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		1. NEUROLOGY
	Group D1. Miscellaneous Diagnostic Procedures And Investigations	
	Subgroup 1. Neurology	
	ELECTROENCEPHALOGRAPHY, not being a service:	
	(a) associated with a service to which item 11003 or 11009 applies; or	
	(b) involving quantitative topographic mapping using neurometrics or similar devices (Anaes.)	
	(See para DN.1.24 of explanatory notes to this Category)	
11000	Fee: \$135.50 Benefit: 75% = \$101.65 85% = \$115.20	
	Electroencephalography, prolonged recording lasting at least 3 hours, that requires multi-channel recording using:	
	(a) for a service not associated with a service to which an item in Group T8 applies—standard 10-20 electrode placement; or	
	(b) for a service associated with a service to which an item in Group T8 applies—either standard 10-20 electrode placement or a different electrode placement and number of recorded channels;	
	other than a service:	
	(c) associated with a service to which item 11000, 11004 or 11005 applies; or	
	(d) involving quantitative topographic mapping using neurometrics or similar devices.	
	(See para DN.1.1 of explanatory notes to this Category)	
11003	Fee: \$358.45 Benefit: 75% = \$268.85 85% = \$304.70	
	Electroencephalography, ambulatory or video, prolonged recording lasting at least 3 hours and up to 24 hours, that requires multi channel recording using standard 10-20 electrode placement, first day, other than a service:	
	(a) associated with a service to which item 11000, 11003 or 11005 applies; or	
	(b) involving quantitative topographic mapping using neurometrics or similar devices.	
	(See para DN.1.2 of explanatory notes to this Category)	
11004	Fee: \$358.45 Benefit: 75% = \$268.85 85% = \$304.70	
	Electroencephalography, ambulatory or video, prolonged recording lasting at least 3 hours and up to 24 hours, that requires multi channel recording using standard 10-20 electrode placement, each day after the first day, other than a service:	
	(a) associated with a service to which item 11000, 11003 or 11004 applies; or	
	(b) involving quantitative topographic mapping using neurometrics or similar devices.	
	(See para DN.1.2 of explanatory notes to this Category)	
11005	Fee: \$358.45 Benefit: 75% = \$268.85 85% = \$304.70	
	ELECTROCORTICOGRAPHY	
11009	Fee: \$358.45 Benefit: 75% = \$268.85 85% = \$304.70	
	NEUROMUSCULAR ELECTRODIAGNOSIS conduction studies on 1 nerve OR ELECTROMYOGRAPHY of 1 or more muscles using concentric needle electrodes OR both these examinations (not being a service associated with a service to which item 11015 or 11018 applies)	
	(See para DN.1.32, DN.1.3 of explanatory notes to this Category)	
11012	Fee: \$123.25 Benefit: 75% = \$92.45 85% = \$104.80	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		1. NEUROLOGY
11015	<p>NEUROMUSCULAR ELECTRODIAGNOSIS conduction studies on 2 or 3 nerves with or without electromyography (not being a service associated with a service to which item 11012 or 11018 applies)</p> <p>(See para DN.1.32 of explanatory notes to this Category)</p> <p>Fee: \$165.00 Benefit: 75% = \$123.75 85% = \$140.25</p>	
11018	<p>NEUROMUSCULAR ELECTRODIAGNOSIS conduction studies on 4 or more nerves with or without electromyography OR recordings from single fibres of nerves and muscles OR both of these examinations (not being a service associated with a service to which item 11012 or 11015 applies)</p> <p>(See para DN.1.32 of explanatory notes to this Category)</p> <p>Fee: \$246.55 Benefit: 75% = \$184.95 85% = \$209.60</p>	
11021	<p>NEUROMUSCULAR ELECTRODIAGNOSIS repetitive stimulation for study of neuromuscular conduction OR electromyography with quantitative computerised analysis OR both of these examinations</p> <p>Fee: \$165.00 Benefit: 75% = \$123.75 85% = \$140.25</p>	
11024	<p>CENTRAL NERVOUS SYSTEM EVOKED RESPONSES, INVESTIGATION OF, by computerised averaging techniques, not being a service involving quantitative topographic mapping of event-related potentials or multifocal multichannel objective perimetry - 1 or 2 studies</p> <p>(See para DN.1.4 of explanatory notes to this Category)</p> <p>Fee: \$125.30 Benefit: 75% = \$94.00 85% = \$106.55</p>	
11027	<p>CENTRAL NERVOUS SYSTEM EVOKED RESPONSES, INVESTIGATION OF, by computerised averaging techniques, not being a service involving quantitative topographic mapping of event-related potentials or multifocal multichannel objective perimetry - 3 or more studies</p> <p>(See para DN.1.4 of explanatory notes to this Category)</p> <p>Fee: \$185.85 Benefit: 75% = \$139.40 85% = \$158.00</p>	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		2. OPHTHALMOLOGY
	Group D1. Miscellaneous Diagnostic Procedures And Investigations	
	Subgroup 2. Ophthalmology	
11200	<p>PROVOCATIVE TEST OR TESTS FOR OPEN ANGLE GLAUCOMA, including water drinking</p> <p>Fee: \$44.90 Benefit: 75% = \$33.70 85% = \$38.20</p>	
11204	<p>ELECTRORETINOGRAPHY of one or both eyes by computerised averaging techniques, including 3 or more studies performed according to current professional guidelines or standards, performed by or on behalf of a specialist or consultant physician in the practice of his or her speciality.</p> <p>(See para DN.1.5 of explanatory notes to this Category)</p> <p>Fee: \$119.15 Benefit: 75% = \$89.40 85% = \$101.30</p>	
11205	<p>ELECTROOCULOGRAPHY of one or both eyes performed according to current professional guidelines or standards, performed by or on behalf of a specialist or consultant physician in the practice of his or her speciality.</p> <p>(See para DN.1.5 of explanatory notes to this Category)</p> <p>Fee: \$119.15 Benefit: 75% = \$89.40 85% = \$101.30</p>	
11210	<p>PATTERN ELECTRORETINOGRAPHY of one or both eyes by computerised averaging techniques, including 3 or more studies performed according to current professional guidelines or standards</p> <p>(See para DN.1.5 of explanatory notes to this Category)</p> <p>Fee: \$119.15 Benefit: 75% = \$89.40 85% = \$101.30</p>	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		2. OPHTHALMOLOGY
11211	<p>DARK ADAPTOMETRY of one or both eyes with a quantitative (log cd/m²) estimation of threshold in log lumens at 45 minutes of dark adaptations</p> <p>(See para DN.1.5 of explanatory notes to this Category)</p> <p>Fee: \$119.15 Benefit: 75% = \$89.40 85% = \$101.30</p>	
11215	<p>RETINAL ANGIOGRAPHY, multiple exposures of 1 eye with intravenous dye injection</p> <p>Fee: \$135.35 Benefit: 75% = \$101.55 85% = \$115.05</p>	
11218	<p>RETINAL ANGIOGRAPHY, multiple exposures of both eyes with intravenous dye injection</p> <p>Fee: \$167.30 Benefit: 75% = \$125.50 85% = \$142.25</p>	
11219	<p>Optical coherence tomography for diagnosis of an ocular condition for the treatment of which there is a medication that is:</p> <p>(a) listed on the pharmaceutical benefits scheme; and</p> <p>(b) indicated for intraocular administration</p> <p>Applicable only once in any 12 month period</p> <p>Fee: \$43.95 Benefit: 75% = \$33.00 85% = \$37.40</p>	
11220	<p>OPTICAL COHERENCE TOMOGRAPHY for the assessment of the need for treatment following provision of pharmaceutical benefits scheme-subsidised ocriplasmin.</p> <p>Maximum of one service per eye per lifetime.</p> <p>Fee: \$43.95 Benefit: 75% = \$33.00 85% = \$37.40</p>	
11221	<p>Full quantitative computerised perimetry (automated absolute static threshold), other than a service involving multifocal multichannel objective perimetry, performed by or on behalf of a specialist in the practice of his or her specialty, if indicated by the presence of relevant ocular disease or suspected pathology of the visual pathways or brain with assessment and report, bilateral—to a maximum of 3 examinations (including examinations to which item 11224 applies) in any 12 month period</p> <p>(See para DN.1.7, DN.1.6 of explanatory notes to this Category)</p> <p>Fee: \$74.65 Benefit: 75% = \$56.00 85% = \$63.50</p>	
11224	<p>Full quantitative computerised perimetry (automated absolute static threshold), other than a service involving multifocal multichannel objective perimetry, performed by or on behalf of a specialist in the practice of his or her specialty, if indicated by the presence of relevant ocular disease or suspected pathology of the visual pathways or brain with assessment and report, unilateral—to a maximum of 3 examinations (including examinations to which item 11221 applies) in any 12 month period</p> <p>(See para DN.1.7, DN.1.6 of explanatory notes to this Category)</p> <p>Fee: \$44.95 Benefit: 75% = \$33.75 85% = \$38.25</p>	
11235	<p>EXAMINATION OF THE EYE BY IMPRESSION CYTOLOGY OF CORNEA for the investigation of ocular surface dysplasia, including the collection of cells, processing and all cytological examinations and preparation of report</p> <p>Fee: \$135.05 Benefit: 75% = \$101.30 85% = \$114.80</p>	
11237	<p>OCULAR CONTENTS, simultaneous ultrasonic echography by both unidimensional and bidimensional techniques, for the diagnosis, monitoring or measurement of choroidal and ciliary body melanomas, retinoblastoma or suspicious naevi or simulating lesions, one eye, not being a service associated with a service to which items in Group I1 of Category 5 apply</p>	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		2. OPHTHALMOLOGY
	Fee: \$89.65 Benefit: 75% = \$67.25 85% = \$76.25	
11240	<p>ORBITAL CONTENTS, unidimensional ultrasonic echography or partial coherence interferometry of, for the measurement of one eye prior to lens surgery on that eye, not being a service associated with a service to which items in Group II of Category 5 apply.</p> <p>(See para DN.1.8 of explanatory notes to this Category)</p> <p>Fee: \$89.65 Benefit: 75% = \$67.25 85% = \$76.25</p>	
11241	<p>ORBITAL CONTENTS, unidimensional ultrasonic echography or partial coherence interferometry of, for bilateral eye measurement prior to lens surgery on both eyes, not being a service associated with a service to which items in Group II apply</p> <p>(See para DN.1.8 of explanatory notes to this Category)</p> <p>Fee: \$114.10 Benefit: 75% = \$85.60 85% = \$97.00</p>	
11242	<p>ORBITAL CONTENTS, unidimensional ultrasonic echography or partial coherence interferometry of, for the measurement of an eye previously measured and on which lens surgery has been performed, and where further lens surgery is contemplated in that eye, not being a service associated with a service to which items in Group II apply</p> <p>(See para DN.1.8 of explanatory notes to this Category)</p> <p>Fee: \$88.20 Benefit: 75% = \$66.15 85% = \$75.00</p>	
11243	<p>ORBITAL CONTENTS, unidimensional ultrasonic echography or partial coherence interferometry of, for the measurement of a second eye where surgery for the first eye has resulted in more than 1 dioptre of error or where more than 3 years have elapsed since the surgery for the first eye, not being a service associated with a service to which items in Group II apply</p> <p>(See para DN.1.8 of explanatory notes to this Category)</p> <p>Fee: \$88.20 Benefit: 75% = \$66.15 85% = \$75.00</p>	
11244	<p>Orbital contents, diagnostic B-scan of, by a specialist practising in his or her speciality of ophthalmology, not being a service associated with a service to which an item in Group II of the diagnostic imaging services table applies.</p> <p>Fee: \$84.75 Benefit: 75% = \$63.60 85% = \$72.05</p>	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		3. OTOLARYNGOLOGY
	Group D1. Miscellaneous Diagnostic Procedures And Investigations	
	Subgroup 3. Otolaryngology	
11300	<p>Brain stem evoked response audiometry if:</p> <p>(a) the service is not for the purposes of programming either an auditory implant or the sound processor of an auditory implant; and</p> <p>(b) a service to which item 82300 applies has not been performed on the patient on the same day</p> <p>other than a service associated with a service to which item 11340, 11341 or 11343 applies (Anaes.)</p> <p>Fee: \$211.90 Benefit: 75% = \$158.95 85% = \$180.15</p>	
11302	<p>Programming an auditory implant or the sound processor of an auditory implant, unilateral, performed by or on behalf of a medical practitioner, if a service to which item 82301, 82302 or 82304 applies has not been performed on the patient on the same day</p> <p>Applicable up to a total of 4 services to which this item, item 11342 or item 11345 applies on the same day</p>	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		3. OTOLARYNGOLOGY
	Fee: \$211.90 Benefit: 75% = \$158.95 85% = \$180.15	
11303	ELECTROCOCHLEOGRAPHY, extratympanic method, 1 or both ears Fee: \$211.90 Benefit: 75% = \$158.95 85% = \$180.15	
11304	ELECTROCOCHLEOGRAPHY, transtympanic membrane insertion technique, 1 or both ears (See para DN.1.10 of explanatory notes to this Category) Fee: \$348.90 Benefit: 75% = \$261.70 85% = \$296.60	
11306	Non determinate audiometry, if a service to which item 82306 applies has not been performed on the patient on the same day. (See para DN.1.11 of explanatory notes to this Category) Fee: \$24.10 Benefit: 75% = \$18.10 85% = \$20.50	
11309	Audiogram, air conduction, if a service to which item 82309 applies has not been performed on the patient on the same day. (See para DN.1.12, DN.1.11 of explanatory notes to this Category) Fee: \$28.95 Benefit: 75% = \$21.75 85% = \$24.65	
11312	Audiogram, air and bone conduction or air conduction and speech discrimination, if a service to which item 82312 applies has not been performed on the patient on the same day. (See para DN.1.12, DN.1.11 of explanatory notes to this Category) Fee: \$40.85 Benefit: 75% = \$30.65 85% = \$34.75	
11315	Audiogram, air and bone conduction and speech, if a service to which item 82315 applies has not been performed on the patient on the same day (See para DN.1.12, DN.1.11 of explanatory notes to this Category) Fee: \$54.10 Benefit: 75% = \$40.60 85% = \$46.00	
11318	Audiogram, air and bone conduction and speech, with other cochlear tests, if a service to which item 82318 applies has not been performed on the patient on the same day (See para DN.1.12, DN.1.11 of explanatory notes to this Category) Fee: \$66.85 Benefit: 75% = \$50.15 85% = \$56.85	
11324	Impedance audiogram involving tympanometry and measurement of static compliance and acoustic reflex performed by, or on behalf of, a medical practitioner, if a service to which item 82324 applies has not been performed on the patient on the same day Fee: \$21.85 Benefit: 75% = \$16.40 85% = \$18.60	
11332	Oto-acoustic emission audiometry for the detection of outer hair cell functioning in the cochlea, performed by or on behalf of a specialist or consultant physician, when middle ear pathology has been excluded, if: (a) the service is performed: (i) on an infant or child who is at risk of permanent hearing impairment; or (ii) on an individual who is at risk of oto-toxicity due to medications or medical intervention; or (iii) on an individual at risk of noise induced hearing loss; or (iv) to assist in the diagnosis of auditory neuropathy; and (b) a service to which item 82332 applies has not been performed on the patient on the same day (See para DN.1.13 of explanatory notes to this Category) Fee: \$64.50 Benefit: 75% = \$48.40 85% = \$54.85	
11340	Investigation of the vestibular function to assist in the diagnosis, treatment or management of a vestibular or related disorder, performed by or on behalf of a medical practitioner: (a) to assess one or more of the following:	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS	3. OTOLARYNGOLOGY
	<p>(i) the organs of the peripheral vestibular system (utricle, saccule, lateral, superior and posterior semicircular canals, and vestibular nerve);</p> <p>(ii) muscular or eye movement responses elicited by vestibular stimulation;</p> <p>(iii) static signs of vestibular dysfunction;</p> <p>(iv) the central ocular-motor function; and</p> <p>(b) using up to 2 clinically recognised tests;</p> <p>other than a service associated with a service to which item 11015, 11021, 11024, 11027, 11205 or 11300 applies</p> <p>(See para DN.1.36 of explanatory notes to this Category) Fee: \$204.90 Benefit: 75% = \$153.70 85% = \$174.20</p>
11341	<p>Investigation of the vestibular function to assist in the diagnosis, treatment or management of a vestibular or related disorder, performed by or on behalf of a medical practitioner:</p> <p>(a) to assess one or more of the following:</p> <p>(i) the organs of the peripheral vestibular system (utricle, saccule, lateral, superior and posterior semicircular canals, and vestibular nerve);</p> <p>(ii) muscular or eye movement responses elicited by vestibular stimulation;</p> <p>(iii) static signs of vestibular dysfunction;</p> <p>(iv) the central ocular-motor function; and</p> <p>(b) using 3 or 4 clinically recognised tests;</p> <p>other than a service associated with a service to which item 11015, 11021, 11024, 11027, 11205 or 11300 applies</p> <p>(See para DN.1.36 of explanatory notes to this Category) Fee: \$410.75 Benefit: 75% = \$308.10 85% = \$349.15</p>
11342	<p>Programming by telehealth of an auditory implant, or the sound processor of an auditory implant, unilateral, performed by or on behalf of a medical practitioner, if a service to which items 82301, 82302 or 82304 applies has not been performed on the patient on the same day</p> <p>Applicable up to a total of 4 services to which this item, item 11302 or item 11345 applies on the same day</p> <p>Fee: \$169.45 Benefit: 85% = \$144.05</p>
11343	<p>Investigation of the vestibular function to assist in the diagnosis, treatment or management of a vestibular or related disorder, performed by or on behalf of a medical practitioner:</p> <p>(a) to assess one or more of the following:</p> <p>(i) the organs of the peripheral vestibular system (utricle, saccule, lateral, superior and posterior semicircular canals, and vestibular nerve);</p> <p>(ii) muscular or eye movement responses elicited by vestibular stimulation;</p>

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS **3. OTOLARYNGOLOGY**

	<p>(iii) static signs of vestibular dysfunction;</p> <p>(iv) the central ocular-motor function; and</p> <p>(b) using 5 or more clinically recognised tests;</p> <p>other than a service associated with a service to which item 11015, 11021, 11024, 11027, 11205 or 11300 applies</p> <p>(See para DN.1.36 of explanatory notes to this Category) Fee: \$614.55 Benefit: 75% = \$460.95 85% = \$522.40</p>
11345	<p>Programming by phone of an auditory implant, or the sound processor of an auditory implant, unilateral, performed by or on behalf of a medical practitioner, if a service to which items 82301, 82302 or 82304 applies has not been performed on the patient on the same day</p> <p>Applicable up to a total of 4 services to which this item, item 11302 or item 11342 applies on the same day</p> <p>Fee: \$169.45 Benefit: 85% = \$144.05</p>

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS **4. RESPIRATORY**

Group D1. Miscellaneous Diagnostic Procedures And Investigations	
Subgroup 4. Respiratory	
	<p>Complex measurement of properties of the respiratory system, including the lungs and respiratory muscles, that is performed:</p> <p>(a) in a respiratory laboratory; and</p> <p>(b) under the supervision of a specialist or consultant physician who is responsible for staff training, supervision, quality assurance and the issuing of written reports on tests performed; and</p> <p>(c) using any of the following tests:</p> <ul style="list-style-type: none"> (i) measurement of absolute lung volumes by any method; (ii) measurement of carbon monoxide diffusing capacity by any method; (iii) measurement of airway or pulmonary resistance by any method; (iv) inhalation provocation testing, including pre-provocation spirometry and the construction of a dose response curve, using a recognised direct or indirect bronchoprovocation agent and post-bronchodilator spirometry; (v) provocation testing involving sequential measurement of lung function at baseline and after exposure to specific sensitising agents, including drugs, or occupational asthma triggers; (vi) spirometry performed before and after simple exercise testing undertaken as a provocation test for the investigation of asthma, in premises equipped with resuscitation equipment and personnel trained in Advanced Life Support; (vii) measurement of the strength of inspiratory and expiratory muscles at multiple lung volumes;
11503	

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS

4. RESPIRATORY

	<p>(viii) simulated altitude test involving exposure to hypoxic gas mixtures and oxygen saturation at rest and/or during exercise with or without an observation of the effect of supplemental oxygen;</p> <p>(ix) calculation of pulmonary or cardiac shunt by measurement of arterial oxygen partial pressure and haemoglobin concentration following the breathing of an inspired oxygen concentration of 100% for a duration of 15 minutes or greater;</p> <p>(x) if the measurement is for the purpose of determining eligibility for pulmonary arterial hypertension medications subsidised under the Pharmaceutical Benefits Scheme or eligibility for the provision of portable oxygen—functional exercise test by any method (including 6 minute walk test and shuttle walk test);</p> <p>each occasion at which one or more tests are performed</p> <p>Not applicable to a service performed in association with a spirometry or sleep study service to which item 11505, 11506, 11507, 11508, 11512, 12203, 12204, 12205, 12207, 12208, 12210, 12213, 12215, 12217 or 12250 applies</p> <p>Not applicable to a service to which item 11507 applies</p> <p>(See para DN.1.14 of explanatory notes to this Category) Fee: \$152.60 Benefit: 75% = \$114.45 85% = \$129.75</p>
11505	<p>Measurement of spirometry, that:</p> <p>(a) involves a permanently recorded tracing, performed before and after inhalation of a bronchodilator; and</p> <p>(b) is performed to confirm diagnosis of:</p> <p style="padding-left: 40px;">(i) asthma; or</p> <p style="padding-left: 40px;">(ii) chronic obstructive pulmonary disease (COPD); or</p> <p style="padding-left: 40px;">(iii) another cause of airflow limitation;</p> <p>each occasion at which 3 or more recordings are made</p> <p>Applicable only once in any 12 month period</p> <p>(See para DN.1.20 of explanatory notes to this Category) Fee: \$45.30 Benefit: 75% = \$34.00 85% = \$38.55</p>
11506	<p>Measurement of spirometry, that:</p> <p>(a) involves a permanently recorded tracing, performed before and after inhalation of a bronchodilator; and</p> <p>(b) is performed to:</p> <p style="padding-left: 40px;">(i) confirm diagnosis of chronic obstructive pulmonary disease (COPD); or</p> <p style="padding-left: 40px;">(ii) assess acute exacerbations of asthma; or</p> <p style="padding-left: 40px;">(iii) monitor asthma and COPD; or</p> <p style="padding-left: 40px;">(iv) assess other causes of obstructive lung disease or the presence of restrictive lung disease;</p>

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS

4. RESPIRATORY

	<p>each occasion at which recordings are made</p> <p>(See para DN.1.20 of explanatory notes to this Category) Fee: \$22.65 Benefit: 75% = \$17.00 85% = \$19.30</p>
11507	<p>Measurement of spirometry:</p> <p>(a) that includes continuous measurement of the relationship between flow and volume during expiration or during expiration and inspiration, performed before and after inhalation of a bronchodilator; and</p> <p>(b) fractional exhaled nitric oxide (FeNO) concentration in exhaled breath;</p> <p>if:</p> <p>(c) the measurement is performed:</p> <ul style="list-style-type: none"> (i) under the supervision of a specialist or consultant physician; and (ii) with continuous attendance by a respiratory scientist; and (iii) in a respiratory laboratory equipped to perform complex lung function tests; and <p>(d) a permanently recorded tracing and written report is provided; and</p> <p>(e) 3 or more spirometry recordings are performed unless difficult to achieve for clinical reasons;</p> <p>each occasion at which one or more such tests are performed</p> <p>Not applicable to a service associated with a service to which item 11503 or 11512 applies</p> <p>(See para DN.1.21 of explanatory notes to this Category) Fee: \$110.30 Benefit: 75% = \$82.75 85% = \$93.80</p>
11508	<p>Maximal symptom-limited incremental exercise test using a calibrated cycle ergometer or treadmill, if:</p> <p>(a) the test is performed for the evaluation of:</p> <ul style="list-style-type: none"> (i) breathlessness of uncertain cause from tests performed at rest; or (ii) breathlessness out of proportion with impairment due to known conditions; or (iii) functional status and prognosis in a patient with significant cardiac or pulmonary disease for whom complex procedures such as organ transplantation are considered; or (iv) anaesthetic and perioperative risks in a patient undergoing major surgery who is assessed as substantially above average risk after standard evaluation; and <p>(b) the test has been requested by a specialist or consultant physician following professional attendance on the patient by the specialist or consultant physician; and</p> <p>(c) a respiratory scientist and a medical practitioner are in constant attendance during the test; and</p> <p>(d) the test is performed in a respiratory laboratory equipped with airway management and defibrillator equipment; and</p> <p>(e) there is continuous measurement of at least the following:</p> <ul style="list-style-type: none"> (i) work rate;

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS **4. RESPIRATORY**

	<p>(ii) pulse oximetry;</p> <p>(iii) respired oxygen and carbon dioxide partial pressures and respired volumes;</p> <p>(iv) ECG;</p> <p>(v) heart rate and blood pressure; and</p> <p>(f) interpretation and preparation of a permanent report is provided by a specialist or consultant physician who is also responsible for the supervision of technical staff and quality assurance</p> <p>(See para DN.1.21 of explanatory notes to this Category) Fee: \$320.10 Benefit: 75% = \$240.10 85% = \$272.10</p>
11512	<p>Measurement of spirometry:</p> <p>(a) that includes continuous measurement of the relationship between flow and volume during expiration or during expiration and inspiration, performed before and after inhalation of a bronchodilator; and</p> <p>(b) that is performed with a respiratory scientist in continuous attendance; and</p> <p>(c) that is performed in a respiratory laboratory equipped to perform complex lung function tests; and</p> <p>(d) that is performed under the supervision of a specialist or consultant physician who is responsible for staff training, supervision, quality assurance and the issuing of written reports; and</p> <p>(e) for which a permanently recorded tracing and written report is provided; and</p> <p>(f) for which 3 or more spirometry recordings are performed;</p> <p>each occasion at which one or more such tests are performed</p> <p>Not applicable for a service associated with a service to which item 11503 or 11507 applies</p> <p>(See para DN.1.20 of explanatory notes to this Category) Fee: \$68.00 Benefit: 75% = \$51.00 85% = \$57.80</p>

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS **5. VASCULAR**

Group D1. Miscellaneous Diagnostic Procedures And Investigations	
Subgroup 5. Vascular	
11600	<p>BLOOD PRESSURE MONITORING (central venous, pulmonary arterial, systemic arterial or cardiac intracavity), by indwelling catheter - once only for each type of pressure on any calendar day up to a maximum of 4 pressures (not being a service to which item 13876 applies and where not performed in association with the administration of general anaesthesia)</p> <p>(See para TN.1.11, TN.1.10 of explanatory notes to this Category) Fee: \$76.30 Benefit: 75% = \$57.25 85% = \$64.90</p>
11602	<p>Investigation of venous reflux or obstruction in one or more limbs at rest by CW Doppler or pulsed Doppler involving examination at multiple sites along each limb using intermittent limb compression or Valsalva manoeuvres, or both, to detect prograde and retrograde flow, other than a service associated with a service to which item 32500 applies—hard copy trace and written report, the report component of which must be performed by a medical practitioner, maximum of 2 examinations in a 12 month period, not to be used in conjunction with sclerotherapy</p>

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS **5. VASCULAR**

	Fee: \$63.55 Benefit: 75% = \$47.70 85% = \$54.05
11604	Investigation of chronic venous disease in the upper and lower extremities, one or more limbs, by plethysmography (excluding photoplethysmography)—examination, hard copy trace and written report, not being a service associated with a service to which item 32500 applies Fee: \$83.30 Benefit: 75% = \$62.50 85% = \$70.85
11605	Investigation of complex chronic lower limb reflux or obstruction, in one or more limbs, by infrared photoplethysmography, during and following exercise to determine surgical intervention or the conservative management of deep venous thrombotic disease—hard copy trace, calculation of 90% recovery time and written report, not being a service associated with a service to which item 32500 applies Fee: \$83.30 Benefit: 75% = \$62.50 85% = \$70.85
11607	<p>Continuous ambulatory blood pressure recording for 24 hours or more for a patient if:</p> <p>(a) the patient has a clinic blood pressure measurement (using a sphygmomanometer or a validated oscillometric blood pressure monitoring device) of either or both of the following measurements:</p> <ul style="list-style-type: none"> (i) systolic blood pressure greater than or equal to 140 mmHg and less than or equal to 180 mmHg; (ii) diastolic blood pressure greater than or equal to 90 mmHg and less than or equal to 110 mmHg; and <p>(b) the patient has not commenced anti-hypertensive therapy; and</p> <p>(c) the recording includes the patient’s resting blood pressure; and</p> <p>(d) the recording is conducted using microprocessor-based analysis equipment; and</p> <p>(e) the recording is interpreted by a medical practitioner and a report is prepared by the same medical practitioner; and</p> <p>(f) a treatment plan is provided for the patient; and</p> <p>(g) the service:</p> <ul style="list-style-type: none"> (i) is not provided in association with ambulatory electrocardiogram recording, and (ii) is not associated with a service to which any of the following items apply: <ul style="list-style-type: none"> (A) 177; (B) 224 to 228; (C) 229 to 244; (D) 699; (E) 701 to 707; (F) 715; (G) 721 to 732; (H) 735 to 758.

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		5. VASCULAR
	Applicable only once in any 12 month period	
	(See para DN.1.35 of explanatory notes to this Category) Fee: \$113.35 Benefit: 75% = \$85.05 85% = \$96.35	
11610	MEASUREMENT OF ANKLE: BRACHIAL INDICES AND ARTERIAL WAVEFORM ANALYSIS, measurement of posterior tibial and dorsalis pedis (or toe) and brachial arterial pressures bilaterally using Doppler or plethysmographic techniques, the calculation of ankle (or toe) brachial systolic pressure indices and assessment of arterial waveforms for the evaluation of lower extremity arterial disease, examination, hard copy trace and report. Fee: \$70.10 Benefit: 75% = \$52.60 85% = \$59.60	
11611	MEASUREMENT OF WRIST: BRACHIAL INDICES AND ARTERIAL WAVEFORM ANALYSIS, measurement of radial and ulnar (or finger) and brachial arterial pressures bilaterally using Doppler or plethysmographic techniques, the calculation of the wrist (or finger) brachial systolic pressure indices and assessment of arterial waveforms for the evaluation of upper extremity arterial disease, examination, hard copy trace and report. Fee: \$70.10 Benefit: 75% = \$52.60 85% = \$59.60	
11612	EXERCISE STUDY FOR THE EVALUATION OF LOWER EXTREMITY ARTERIAL DISEASE, measurement of posterior tibial and dorsalis pedis (or toe) and brachial arterial pressures bilaterally using Doppler or plethysmographic techniques, the calculation of ankle (or toe) brachial systolic pressure indices for the evaluation of lower extremity arterial disease at rest and following exercise using a treadmill or bicycle ergometer or other such equipment where the exercise workload is quantifiably documented, examination and report. Fee: \$123.70 Benefit: 75% = \$92.80 85% = \$105.15	
11614	Transcranial doppler, examination of the intracranial arterial circulation using CW Doppler or pulsed Doppler with hard copy recording of waveforms, examination and report, other than a service associated with a service to which item 55280 of the diagnostic imaging services table applies Fee: \$83.30 Benefit: 75% = \$62.50 85% = \$70.85	
11615	MEASUREMENT OF DIGITAL TEMPERATURE, 1 or more digits, (unilateral or bilateral) and report, with hard copy recording of temperature before and for 10 minutes or more after cold stress testing. Fee: \$83.50 Benefit: 75% = \$62.65 85% = \$71.00	
11627	PULMONARY ARTERY pressure monitoring during open heart surgery, in a patient under 12 years of age Fee: \$251.65 Benefit: 75% = \$188.75 85% = \$213.95

---	---

	Group D1. Miscellaneous Diagnostic Procedures And Investigations
	Subgroup 8. Genito/Urinary Physiological Investigations
11900	<p>Urine flow study, including peak urine flow measurement, not being a service associated with a service to which item 11912, 11917 or 11919 applies</p> <p>Fee: \$30.30 Benefit: 75% = \$22.75 85% = \$25.80</p>
11912	<p>Cystometrography:</p> <p>(a) with measurement of any one or more of the following:</p> <ul style="list-style-type: none"> (i) urine flow rate; (ii) urethral pressure profile; (iii) urethral sphincter electromyography; and <p>(b) with simultaneous measurement of:</p> <ul style="list-style-type: none"> (i) rectal pressure; or (ii) stomal or vaginal pressure if rectal pressure is not possible; <p>not being a service associated with a service to which any of items 11012 to 11027, 11900, 11917, 11919 and 36800 or an item in Group I3 of the diagnostic imaging services table applies (Anaes.)</p> <p>Fee: \$217.40 Benefit: 75% = \$163.05 85% = \$184.80</p>
11917	<p>Cystometrography, in conjunction with real time ultrasound of one or more components of the urinary tract:</p> <p>(a) with measurement of any one or more of the following:</p> <ul style="list-style-type: none"> (i) urine flow rate; (ii) urethral pressure profile; (iii) urethral sphincter electromyography; and <p>(b) with simultaneous measurement of:</p> <ul style="list-style-type: none"> (i) rectal pressure; or (ii) stomal or vaginal pressure if rectal pressure is not possible; <p>including all imaging associated with cystometrography, not being a service associated with a service to</p>

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		8. GENITO/URINARY PHYSIOLOGICAL INVESTIGATIONS	
	which any of items 11012 to 11027, 11900, 11912, 11919 and 36800 or an item in Group I3 of the diagnostic imaging services table applies (Anaes.)		
	Fee: \$471.55 Benefit: 75% = \$353.70 85% = \$400.85		
	CYSTOMETROGRAPHY IN CONJUNCTION WITH CONTRAST MICTURATING CYSTOURETHROGRAPHY, with measurement of any one or more of urine flow rate, urethral pressure profile, rectal pressure, urethral sphincter electromyography, being a service associated with a service to which items 60506 or 60509 applies; other than a service associated with a service to which items 11012-11027, 11900-11917 and 36800 apply (Anaes.)		
11919	Fee: \$471.55 Benefit: 75% = \$353.70 85% = \$400.85		

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		9. ALLERGY TESTING	
	Group D1. Miscellaneous Diagnostic Procedures And Investigations		
	Subgroup 9. Allergy Testing		
	Skin prick testing for aeroallergens by a specialist or consultant physician in the practice of the specialist or consultant physician's specialty, including all allergens tested on the same day, not being a service associated with a service to which item 12001, 12002, 12005, 12012, 12017, 12021, 12022 or 12024 applies		
	(See para DN.1.22 of explanatory notes to this Category)		
12000	Fee: \$42.85 Benefit: 75% = \$32.15 85% = \$36.45		
	Skin prick testing for aeroallergens, including all allergens tested on the same day, not being a service associated with a service to which item 12000, 12002, 12005, 12012, 12017, 12021, 12022 or 12024 applies.		
	Applicable only once in any 12 month period		
	(See para DN.1.22 of explanatory notes to this Category)		
12001	Fee: \$42.85 Benefit: 75% = \$32.15 85% = \$36.45		
	Repeat skin prick testing of a patient for aeroallergens, including all allergens tested on the same day, if:		
	(a) further testing for aeroallergens is indicated in the same 12 month period to which item 12001 applies to a service for the patient; and		
	(b) the service is not associated with a service to which item 12000, 12001, 12005, 12012, 12017, 12021, 12022 or 12024 applies		
	Applicable only once in any 12 month period		
	(See para DN.1.22 of explanatory notes to this Category)		
12002	Fee: \$42.85 Benefit: 75% = \$32.15 85% = \$36.45		
	Skin prick testing for food and latex allergens, including all allergens tested on the same day, not being a service associated with a service to which item 12012, 12017, 12021, 12022 or 12024 applies		
	(See para DN.1.22 of explanatory notes to this Category)		
12003	Fee: \$42.85 Benefit: 75% = \$32.15 85% = \$36.45		
	Skin testing for medication allergens (antibiotics or non general anaesthetics agents) and venoms (including prick testing and intradermal testing with a number of dilutions), including all allergens tested on the same day, not being a service associated with a service to which item 12012, 12017, 12021, 12022 or 12024 applies		
12004	(See para DN.1.22 of explanatory notes to this Category)		

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS		9. ALLERGY TESTING
	Fee: \$64.80 Benefit: 75% = \$48.60 85% = \$55.10	
	Skin testing: (a) performed by or on behalf of a specialist or consultant physician in the practice of the specialist or consultant physician's specialty; and (b) for agents used in the perioperative period (including prick testing and intradermal testing with a number of dilutions), to investigate anaphylaxis in a patient with a history of prior anaphylactic reaction or cardiovascular collapse associated with the administration of an anaesthetic; and (c) including all allergens tested on the same day; and (d) not being a service associated with a service to which item 12000, 12001, 12002, 12003, 12012, 12017, 12021, 12022 or 12024 applies (See para DN.1.22 of explanatory notes to this Category)	
12005	Fee: \$87.15 Benefit: 75% = \$65.40 85% = \$74.10	
	Epicutaneous patch testing in the investigation of allergic dermatitis using not more than 25 allergens	
12012	Fee: \$22.90 Benefit: 75% = \$17.20 85% = \$19.50	
	Epicutaneous patch testing in the investigation of allergic dermatitis using more than 25 allergens but not more than 50 allergens	
12017	Fee: \$77.30 Benefit: 75% = \$58.00 85% = \$65.75	
	Epicutaneous patch testing in the investigation of allergic dermatitis, performed by or on behalf of a specialist, or consultant physician, in the practice of his or her specialty, using more than 50 allergens but not more than 75 allergens	
12021	Fee: \$127.10 Benefit: 75% = \$95.35 85% = \$108.05	
	Epicutaneous patch testing in the investigation of allergic dermatitis, performed by or on behalf of a specialist, or consultant physician, in the practice of his or her specialty, using more than 75 allergens but not more than 100 allergens	
12022	Fee: \$149.25 Benefit: 75% = \$111.95 85% = \$126.90	
	Epicutaneous patch testing in the investigation of allergic dermatitis, performed by or on behalf of a specialist, or consultant physician, in the practice of his or her specialty, using more than 100 allergens	
12024	Fee: \$170.05 Benefit: 75% = \$127.55 85% = \$144.55

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS

10. OTHER DIAGNOSTIC PROCEDURES AND INVESTIGATIONS

	<p>(iv) EEG (with a minimum of 4 EEG leads or, in selected investigations, a minimum of 6 EEG leads);</p> <p>(v) EOG;</p> <p>(vi) oxygen saturation;</p> <p>(vii) respiratory movement of rib and abdomen (whether movement of rib is recorded separately from, or together with, movement of abdomen);</p> <p>(viii) measurement of carbon dioxide (either end-tidal or transcutaneous); and</p> <p>(d) a sleep technician, or registered nurse with sleep technology training, is in continuous attendance under the supervision of a qualified paediatric sleep medicine practitioner; and</p> <p>(e) polygraphic records are:</p> <p>(i) analysed (for assessment of sleep stage, and maturation of sleep indices, arousals, respiratory events and assessment of clinically significant alterations in heart rate and body movement) with manual scoring, or manual correction of computerised scoring in epochs of not more than 1 minute; and</p> <p>(ii) stored for interpretation and preparation of a report; and</p> <p>(f) interpretation and report are provided by a qualified paediatric sleep medicine practitioner based on reviewing the direct original recording of polygraphic data from the patient; and</p> <p>(g) a further investigation is indicated in the same 12 month period to which item 12210 applies to a service for the patient, for a patient using Continuous Positive Airway Pressure (CPAP) or non-invasive or invasive ventilation, or supplemental oxygen, in either or both of the following circumstances:</p> <p>(i) there is ongoing hypoxia or hypoventilation on the third study to which item 12210 applied for the patient, and further titration of respiratory support is needed to optimise therapy;</p> <p>(ii) there is clear and significant change in clinical status (for example lung function or functional status) or an intervening treatment that may affect ventilation in the period since the third study to which item 12210 applied for the patient, and repeat study is therefore required to determine the need for or the adequacy of respiratory support; and</p> <p>(h) the investigation is not provided to the patient on the same occasion that a service to which item 11704, 11705, 11707, 11714, 11716, 11717, 11723 or 11735 applies is provided to the patient</p> <p>Applicable only once in the same 12 month period to which item 12210 applies</p> <p>(See para DN.1.17 of explanatory notes to this Category) Fee: \$772.55 Benefit: 75% = \$579.45 85% = \$673.85</p>
12217	<p>Overnight paediatric investigation, for at least 8 hours, for a patient aged at least 12 years but less than 18 years, if:</p> <p>(a) the patient is referred by a medical practitioner; and</p> <p>(b) the necessity for the investigation is determined by a qualified sleep medicine practitioner before the investigation; and</p>

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS

10. OTHER DIAGNOSTIC PROCEDURES AND INVESTIGATIONS

(c) there is continuous monitoring of oxygen saturation and breathing using a multi-channel polygraph, and recordings of the following are made, in accordance with current professional guidelines:

(i) airflow;

(ii) continuous EMG;

(iii) ECG;

(iv) EEG (with a minimum of 4 EEG leads or, in selected investigations, a minimum of 6 EEG leads);

(v) EOG;

(vi) oxygen saturation;

(vii) respiratory movement of rib and abdomen (whether movement of rib is recorded separately from, or together with, movement of abdomen);

(viii) measurement of carbon dioxide (either end-tidal or transcutaneous); and

(d) a sleep technician, or registered nurse with sleep technology training, is in continuous attendance under the supervision of a qualified sleep medicine practitioner; and

(e) polygraphic records are:

(i) analysed (for assessment of sleep stage, and maturation of sleep indices, arousals, respiratory events and assessment of clinically significant alterations in heart rate and body movement) with manual scoring, or manual correction of computerised scoring in epochs of not more than 1 minute; and

(ii) stored for interpretation and preparation of a report; and

(f) interpretation and report are provided by a qualified sleep medicine practitioner based on reviewing the direct original recording of polygraphic data from the patient; and

(g) a further investigation is indicated in the same 12 month period to which item 12213 applies to a service for the patient, for a patient using Continuous Positive Airway Pressure (CPAP) or non-invasive or invasive ventilation, or supplemental oxygen, in either or both of the following circumstances:

(i) there is ongoing hypoxia or hypoventilation on the third study to which item 12213 applied for the patient, and further titration is needed to optimise therapy;

(ii) there is clear and significant change in clinical status (for example lung function or functional status) or an intervening treatment that may affect ventilation in the period since the third study to which item 12213 applied for the patient, and repeat study is therefore required to determine the need for or the adequacy of respiratory support; and

(h) the investigation is not provided to the patient on the same occasion that a service to which item 11704, 11705, 11707, 11714, 11716, 11717, 11723 or 11735 applies is provided to the patient

Applicable only once in the same 12 month period to which item 12213 applies

(See para DN.1.17 of explanatory notes to this Category)

Fee: \$695.95 **Benefit:** 75% = \$522.00 85% = \$597.25

D1. MISCELLANEOUS DIAGNOSTIC PROCEDURES AND INVESTIGATIONS

10. OTHER DIAGNOSTIC PROCEDURES AND INVESTIGATIONS

Overnight investigation of sleep for at least 8 hours of a patient aged 18 years or more to confirm diagnosis of obstructive sleep apnoea, if:

(a) either:

- (i) the patient has been referred by a medical practitioner to a qualified adult sleep medicine practitioner or a consultant respiratory physician who has determined that the patient has a high probability for symptomatic, moderate to severe obstructive sleep apnoea based on a STOP-Bang score of 3 or more, an OSA50 score of 5 or more or a high risk score on the Berlin Questionnaire, and an Epworth Sleepiness Scale score of 8 or more; or
- (ii) following professional attendance on the patient (either face-to-face or by video conference) by a qualified adult sleep medicine practitioner or a consultant respiratory physician, the qualified adult sleep medicine practitioner or consultant respiratory physician determines that investigation is necessary to confirm the diagnosis of obstructive sleep apnoea; and

(b) during a period of sleep, there is continuous monitoring and recording, performed in accordance with current professional guidelines, of the following measures:

- (i) airflow;
- (ii) continuous EMG;
- (iii) continuous ECG;
- (iv) continuous EEG;
- (v) EOG;
- (vi) oxygen saturation;
- (vii) respiratory effort; and

(c) the investigation is performed under the supervision of a qualified adult sleep medicine practitioner; and

(d) either:

- (i) the equipment is applied to the patient by a sleep technician; or
- (ii) if this is not possible—the reason it is not possible for the sleep technician to apply the equipment to the patient is documented and the patient is given instructions on how to apply the equipment by a sleep technician supported by written instructions; and

(e) polygraphic records are:

- (i) analysed (for assessment of sleep stage, arousals, respiratory events and cardiac abnormalities) with manual scoring, or manual correction of computerised scoring in epochs of not more than 1 minute; and
- (ii) stored for interpretation and preparation of a report; and

(f) interpretation and preparation of a permanent report is provided by a qualified adult sleep medicine practitioner with personal direct review of raw data from the original recording of polygraphic data from the patient; and

12250

Orthopaedic Services

From 1 March 2024, changes to orthopaedic services will be implemented to address patient access issues identified following the implementation of Taskforce recommendations relating to orthopaedic services on 1 July 2021. These changes will include 30 new items and 86 amended items.

Other changes to the General Medical Services Table and Diagnostic Imaging Services Table

From 1 March 2024, the following changes will be made to medical and diagnostic imaging services under the MBS:

- Amend 14 plastic and reconstructive surgery items to ensure the appropriate provision of the specified services in hospital settings only;
- Amend six posterior spinal fusion items and the associated item for anterior exposure of the spine to clarify clinical intent and explicitly exclude their use for vertebral body tethering;
- Insert new item 30664 for the diagnosis of indeterminate biliary strictures and new item 30665 for the removal of difficult biliary stones;
- Insert new item 31537 for the insertion of a breast marker during a breast biopsy;
- Insert item 32118 to provide ongoing access to minimally invasive ventral rectopexy services for the treatment of external rectal prolapse and symptomatic high grade rectal intussusception;
- Insert two new items (37204 and 37205) for non-invasive treatment for benign prostate hyperplasia and remove four items for obsolete benign prostatic hyperplasia treatments;

- Insert three new items (40804, 40805 and 40806) for magnetic resonance-guided focused ultrasound (MRgFUS) for the treatment of medically refractory essential tremor into the GMST;
- Insert three new items (22052, 22053 and 22054), mirroring existing procedural items, into the anaesthetic Relative Value Guide (RVG) in the GMST to allow an anaesthetist to claim a procedural item in association with the administration of anaesthesia; and amend two existing procedural items (13703 and 40018) to restrict co-claiming with the new items;
- Amend item 35412 to clarify the pre-operative diagnostic imaging items 60009, 60072, 60075 and 60078 to be claimed in association with the service;
- Insert new item 38325 for intravascular ultrasound coronary stent insertion as an adjunct service to invasive coronary angiogram for patients undergoing percutaneous coronary intervention (stent placement only) with complex anatomical characteristics;
- Amendments to items 38373 and 38374 for percutaneous retrieval and/or replacement of a leadless permanent pacemaker to clarify requirements for standby cardiothoracic surgeon support and need for immediate access to a theatre capable of open cardiothoracic surgery;
- Amend item 38557 for complex replacement or repair of aortic arch to allow the service to be performed in conjunction with a service under item 38550, 38553, 38554, 38556, 38558 or 38571 performed by any medical practitioner;
- Amend four thoracic surgery items (38425, 38815, 38816 and 38859) to implement a co-claiming restriction, allow additional surgical methods and align the items with best clinical practice.

Amend MBS item 30484

Update to include restriction with claiming 30664 and 30655.

THERAPEUTIC PROCEDURES NOTES

TN.1.1 Hyperbaric Oxygen Therapy - (Items 13015, 13020, 13025 and 13030)

Hyperbaric Oxygen Therapy not covered by these items would attract benefits on an attendance basis. For the purposes of these items, a comprehensive hyperbaric medicine facility means a separate hospital area that, on a 24 hour basis:

(a) is equipped and staffed so that it is capable of providing to a patient:

(i) hyperbaric oxygen therapy at a treatment pressure of at least 2.8 atmospheric pressure absolute (180 kilopascal gauge pressure); and

(ii) mechanical ventilation and invasive cardiovascular monitoring within a monoplace or multiplace chamber for the duration of the hyperbaric treatment; and

(b) is under the direction of at least 1 medical practitioner who is rostered, and immediately available, to the facility during the facility's ordinary working hours if the practitioner:

(i) is a specialist with training in diving and hyperbaric medicine; or

(ii) holds a Diploma of Diving and Hyperbaric Medicine of the South Pacific Underwater Medicine Society; and

(c) is staffed by:

(i) at least 1 medical practitioner with training in diving and hyperbaric medicine who is present in the facility and immediately available at all times when patients are being treated at the facility; and

(ii) at least 1 registered nurse with specific training in hyperbaric patient care to the published standards of the Hyperbaric Technicians and Nurses Association, who is present during hyperbaric oxygen therapy; and

(d) has admission and discharge policies in operation.

TN.1.2 Haemodialysis - (Items 13100 and 13103)

Item 13100 covers the supervision in hospital by a medical specialist for the management of dialysis, haemofiltration, haemoperfusion or peritoneal dialysis in the patient who is not stabilised where the total attendance time by the supervising medical specialist exceeds 45 minutes.

Item 13103 covers the supervision in hospital by a medical specialist for the management of dialysis, haemofiltration, haemoperfusion or peritoneal dialysis in a stabilised patient, or in the case of an unstabilised patient, where the total attendance time by the supervising medical specialist does not exceed 45 minutes.

TN.1.3 Consultant Physician Supervision of Home Dialysis - (Item 13104)

Item 13104 covers the planning and management of dialysis and the supervision of a patient on home dialysis by a consultant physician in the practice of his or her specialty of renal medicine. Planning and management would cover the consultant physician participating in patient management discussions coordinated by renal centres. Supervision of the patient at home can be undertaken by telephone or other electronic medium, and includes:

- Regular ordering, performance and interpretation of appropriate biochemical and haematological studies

(generally monthly);

- Feed-back of results to the home patient and his or her treating general physician;

- Adjustments to medications and dialysis therapies based upon these results;
- Co-ordination of regular investigations required to keep patient on active transplantation lists, where relevant;
- Referral to, and communication with, other specialists involved in the care of the patient; and
- Being available to advise the patient or the patient's agent.

A record of the services provided should be made in the patient's clinical notes.

The schedule fee equates to one hour of time spent undertaking these activities. It is expected that the item will be claimed once per month, to a maximum of 12 claims per year. The patient should be informed that he or she will incur a charge for which a Medicare rebate will be payable.

This item includes dialysis conducted in a residential aged care facility. In remote areas, where a patient's home is an unsuitable environment for home dialysis due to a lack of space, or the absence of telecommunication, electricity and water utilities, the item includes dialysis in a community facility such as the local primary health care clinic.

TN.1.4 Assisted Reproductive Technology ART Services - (Items 13200 to 13221)

Medicare benefits are not payable in respect of ANY other item in the Medicare Benefits Schedule, including Diagnostic Imaging and Pathology (with the exception of items 73384, 73385, 73386 and 73387) in lieu of or in connection with items 13200 - 13221. Specifically, Medicare benefits are not payable for these items in association with items 104, 105, 14203, 14206, 35631, 35632, 35637, 35641, pathology tests (not including pathology items 73384, 73385, 73386 and 73387) or diagnostic imaging.

A treatment cycle that is a series of treatments for the purposes of ART services is defined as beginning either on the day on which treatment by superovulatory drugs is commenced or on the first day of the patient's menstrual cycle, and ending either; not more than 30 days later, or if a service mentioned in item 13212, 13215 or 13221 is provided in connection with the series of treatments-on the day after the day on which the last of those services is provided.

The date of service in respect of treatment covered by Items 13200, 13201, 13203, 13209 and 13218 is **DEEMED** to be the **FIRST DAY** of the treatment cycle.

Items 13200, 13201, 13202 and 13203 are linked to the supply of hormones under the Section 100 (National Health Act) arrangements. Providers must notify Services Australia of Medicare card numbers of patients using hormones under this program, and hormones are only supplied for patients claiming one of these four items.

Medicare benefits are not payable for assisted reproductive services rendered in conjunction with surrogacy arrangements where surrogacy is defined as 'an arrangement whereby a woman agrees to become pregnant and to bear a child for another person or persons to whom she will transfer guardianship and custodial rights at or shortly after birth'.

NOTE: Items 14203 and 14206 are not payable for artificial insemination.

TN.1.5 Intracytoplasmic Sperm Injection - (Item 13251)

Item 13251 provides for intracytoplasmic sperm injection for male factor infertility under the following circumstances:

- where fertilisation with standard IVF is highly unlikely to be successful; or
- where in a previous cycle of IVF, the fertilisation rate has failed due to low or no fertilisation.

Item 13251 excludes a service to which item 13218 applies. Sperm retrieval procedures associated with intracytoplasmic sperm injection are covered under items 37605 and 37606.

Items 13251, 37605, 37606 do not include services provided in relation to artificial insemination using the husband's or donated sperm.

TN.1.6 Peripherally Inserted Central Catheters

Peripherally inserted central catheters (PICC) are an alternative to standard percutaneous central venous catheter placement or surgically placed intravenous catheters where long-term venous access is required for ongoing patient therapy.

Medicare benefits for PICC can be claimed under central vein catheterisation items 13318, 13319, 13815 and 22020.

These items are for central vein catheterisation (where the tip of the catheter is positioned in a central vein) and cannot be used for venous catheters where the tip is positioned in a peripheral vein.

TN.1.7 Administration of Blood or Bone Marrow already Collected (Item 13706)

Item 13706 is payable for the transfusion of blood, or platelets or white blood cells or bone marrow or gamma globulins. This item is not payable when gamma globulin is administered intramuscularly.

TN.1.9 Intensive Care Units - (Items 13870 to 13888)

TN.1.9 Intensive Care Units - (Items 13870 to 13888)

'Intensive Care Unit' means a separate hospital area that:

- (a) is equipped and staffed so as to be capable of providing to a patient:
 - (i) mechanical ventilation for respiratory failure for at least 24 hours; and
 - (ii) invasive cardiovascular monitoring; and
- (b) is supported by:
 - (i) at least one specialist in the specialty of intensive care who is immediately available and exclusively rostered to the ICU during normal working hours; and
 - (ii) a registered medical practitioner who is present in the hospital and immediately available to the unit at all times; and
 - (iii) a registered nurse for at least 18 hours in each day; and
- (c) has defined admission and discharge policies.

"immediately available" means that the intensivist must be predominantly present in the ICU during normal working hours. Reasonable absences from the ICU would be acceptable to attend conferences, meetings and other commitments, which might involve absences of up to 2 hours during the working day, provided suitable cover is available. Outside normal working hours the specialist must be immediately contactable and, if required, available to return to the ICU within a reasonable time.

"exclusively rostered" means that the specialist's sole clinical commitment is to intensive care.

For Neonatal Intensive Care Units an 'Intensive Care Unit' means a separate hospital area that:

- (a) is equipped and staffed so as to be capable of providing to a patient, being a newly-born child:
 - (i) mechanical ventilation for a period of several days; and
 - (ii) invasive cardiovascular monitoring; and
- (b) is supported by:
 - (i) at least one consultant physician in the specialty of paediatric medicine, appointed to manage the unit, and who is immediately available and exclusively rostered to the ICU during normal working hours; and
 - (ii) a registered medical practitioner who is present in the hospital and immediately available to the unit at all times; and
 - (iii) a registered nurse for at least 18 hours in each day; and
- (c) has defined admission and discharge policies.

Medicare benefits are payable under the 'management' items only once per day irrespective of the number of intensivists involved with the patient on that day. However, benefits are also payable for an attendance by another specialist/consultant physician who is not managing the patient but who has been asked to attend the patient. Where appropriate, accounts should be endorsed to the effect that the consultation was not part of the patient's intensive care management in order to identify which consultations should attract benefits in addition to the intensive care items.

In respect of Neonatal Intensive Care Units, as defined above, benefits are payable for admissions of babies who meet the following criteria:-

- (i) all babies weighing less than 1000gms;
- (ii) all babies with an endotracheal tube, and for the 24 hours following endotracheal tube removal;
- (iii) all babies requiring Constant Positive Airway Pressure (CPAP) for acute respiratory instability;
- (iv) all babies requiring more than 40% oxygen for more than 4 hours;
- (v) all babies requiring an arterial line for blood gas or pressure monitoring; or
- (vi) all babies having frequent seizures.

Cases may arise where babies admitted to a Neonatal Intensive Care Unit under the above criteria who, because they no longer satisfy the criteria are ready for discharge, in accordance with accepted discharge policies, but who are physically retained in the Neonatal Intensive Care Unit for other reasons. For benefit purposes such babies must be deemed as being discharged from the Neonatal Intensive Care Unit and not eligible for benefits under items 13870, 13873, 13876, 13881, 13882, 13885 and 13888.

Likewise, Medicare benefits are not payable under items 13870, 13873, 13876, 13881, 13882, 13885 and 13888 in respect of babies not meeting the above criteria, but who, for whatever other reasons, are physically located in a Neonatal Intensive Care Unit.

Medicare benefits are payable for admissions to an Intensive Care Unit following surgery only where clear clinical justification for post-operative intensive care exists.

TN.1.10 Procedures Associated with Intensive Care - (Items 13815, 13818, 13832, 13834, 13835, 13837, 13838, 13840, 13842, 13848, 13851, 13854 and 13857)

TN.1.10 Procedures Associated with Intensive Care - (Items 13815, 13818, 13832, 13834, 13835, 13837, 13838, 13840, 13842, 13848, 13851, 13854 and 13857)

Item 13815 covers the insertion of a central vein catheter, including under ultrasound guidance where clinically appropriate. No separate ultrasound item is payable with item 13815.

Item 13818 covers the insertion of a right heart balloon flotation catheter. Benefits are payable under this item only once per day except where a second discrete operation is performed on that day.

Items 13832, 13834, 13835, 13837, 13838 and 13840

These items cover extracorporeal life support services in an ICU. Benefits are payable only once per calendar day for a patient, irrespective of the number of medical practitioners involved.

Items 13832 and 13840 include the use of ultrasound guidance where clinically appropriate. No separate ultrasound item is payable with these items.

Item 13839

Provides for collection of blood for diagnostic purposes by arterial puncture.

Medicare benefits are not payable for sampling by arterial puncture under item 13839 in addition to item 13870 and 13873 on the same day.

Item 13842

This item provides for intra-arterial cannulation (including ultrasound guidance) for either or both intra-arterial pressure monitoring or blood sampling.

If a service covered by item 13842 is provided outside of an ICU, in association with, for example, an anaesthetic, benefits are payable under item 13842 in addition to item 13870 and 13873 when performed on the same day.

Where this occurs, accounts should be endorsed "performed outside of an Intensive Care Unit" against item 13842.

Item 13848

Item 13848 covers management of counterpulsation by intraaortic balloon on each day and includes initial and subsequent consultations and monitoring of parameters. Insertion of the intraaortic balloon is covered under item 38609.

Items 13851 and 13854

Items 13851 and 13854 cover the management of ventricular assist devices in an ICU. Benefits are payable only once per calendar day per patient, irrespective of the number of medical practitioners involved.

Item 13851 covers management of ventricular assist devices on the first day where the ICU admission relates to the device implantation or complication. Management on each day subsequent to the first is covered under item 13854.

Item 13857

This item covers the establishment of airway access and initiation of ventilation on a patient outside intensive care for the purpose of subsequent ventilatory support in intensive care. Benefits are not payable under item 13857 where airway access and ventilation is initiated in the context of an anaesthetic for surgery even if it is likely that following surgery the patient will be ventilated in an ICU. In such cases the appropriate anaesthetic item/s should be utilised.

TN.1.11 Management and Procedures in Intensive Care Unit - (Items 13870, 13873, 13876, 13888 and 13899)

TN.1.11 Management and Procedures in Intensive Care Unit - (Items 13870, 13873, 13876, 13888 and 13899)

Medicare benefits are only payable for management and procedures in intensive care covered by items 13870, 13873, 13876, 13882, 13885 and 13888 where the service is provided by a specialist or consultant physician who is immediately available and exclusively rostered for intensive care.

Items 13870 and 13873

Medicare Benefits Schedule fees for Items 13870 and 13873 represent global daily fees covering all attendances by the intensive care specialist in the ICU (and attendances provided by support medical personnel) and all electrocardiographic monitoring, arterial sampling and, bladder catheterisation performed on the patient on the one day. If a patient is transferred from one ICU to another it would be necessary for an arrangement to be made between the two ICUs regarding the billing of the patient.

Items 13870 and 13873 should be itemised on accounts according to each calendar day and not per 24 hour period. For periods when patients are in an ICU for very short periods (say less than 2 hours) with minimal ICU management during that time, a fee should not be raised.

Item 13876

Item 13876 covers the monitoring of pressures in an ICU. Benefits are paid only once for each type of pressure, up to a maximum of 4 pressures per patient per calendar day and irrespective of the number of medical practitioners involved in the monitoring of pressures within an ICU.

Item 11600

Item 11600 covers the monitoring of pressures outside the ICU by practitioners not associated with the ICU. Benefits are paid only once for each type of pressure, up to a maximum of 4 pressures per patient per calendar day and irrespective of the number of practitioners involved in monitoring the pressures.

Item 13899

Item 13899 covers the discussion and documentation of goals of care for a gravely ill patient lacking current goals of care by an intensive care specialist outside an Intensive Care Unit. Benefits are paid only once per patient admission (including instances of use of corresponding emergency medicine goals of care items 5039, 5041, 5042 and 5044), unless precipitated by a subsequent ICU referral or Cardiac Arrest/Medical Emergency Team call where the clinical circumstances change substantively with a resultant expectation that the original goals of care require amendment.

Item 13899 cannot be co-claimed with item 13870 or 13873 on the same day.

Notes:

“gravely ill patient lacking current goals of care” and “preparation of goals of care” are defined in the General Medical Services Table.

“gravely ill patient lacking current goals of care” means a patient to whom all of the following apply:

- (a) the patient either:
 - (i) is suffering a life-threatening acute illness or injury; or
 - (ii) is suffering acute illness or injury and, apart from the illness or injury, has a high risk of dying within 12 months;

- (b) one or more alternatives to management of the illness or injury are clinically appropriate for the patient;
- (c) either:
 - (i) there is not a record of goals of care for the patient that can readily be retrieved by providers of health care for the patient and that identifies interventions that should, or should not, be made in care of the patient; or
 - (ii) there is such a record but it is reasonable to expect that, due to changes in the patient's condition, the goals recorded will change substantially.

“preparation of goals of care” for a patient, by a medical practitioner, means the carrying out of all of the following activities by the practitioner:

- (a) comprehensively evaluating the patient's medical, physical, psychological and social issues;
- (b) identifying major issues that require goals of care for the patient to be set;
- (c) assessing the patient's capacity to make decisions about goals of care for the patient;
- (d) discussing care of the patient with the patient, or a person (the surrogate) who can make decisions on the patient's behalf about care for the patient, and as appropriate with any of the following:
 - (i) members of the patient's family;
 - (ii) other persons who provide care for the patient;
 - (iii) other health practitioners;
- (e) offering in that discussion reasonable options for care of the patient, including alternatives to intensive or escalated care;
- (f) agreeing with the patient or the surrogate on goals of care for the patient that address all major issues identified;
- (g) recording the agreed goals so that:
 - (i) the record can be readily retrieved by other providers of health care for the patient; and
 - (ii) interventions that should, or should not, be made in care of the patient are identified.

Patients could be assessed for “a life-threatening acute illness or injury” (and suspicion that alternatives to active management may be an appropriate clinical choice) through the use of tools that assist in predicting end-of-life, such as the Supportive and Palliative Care Indicators Tool (SPICCTM).

“offering reasonable options for care” means that the patient must be provided with reasonable alternatives to continued intensive/active treatment or escalation of care, including where the patient has not directly asked for such information (in recognition that patients may not ask if they are not aware of such alternatives).

“recording the agreed goals” should be undertaken using standard forms (where available) appropriate to the facility in which a patient is receiving care.

Patients with existing goals of care plans are eligible if such records cannot be readily retrieved by the medical practitioners; or if their condition has changed to the point the record does not reflect the patient's current medical condition and it is reasonable for new goals of care to be developed.

Providers of goals of care services should be appropriately trained to provide end-of-life care options and goals of care discussions.

Item 13899 should not be claimed where the goals of care are defined only in relation to a sub-set of the patient's major issues.

TN.1.12 Cytotoxic Chemotherapy Administration - (Item 13950)

Following a recommendation of a National Health and Medical Research Council review committee in 2005, Medicare benefits are no longer payable for professional services rendered for the purpose of administering microwave (UHF radiowave) cancer therapy, including the intravenous injection of drugs used in the therapy.

TN.1.14 PUVA or UVB Therapy - (Item 14050)

A component for any necessary subsequent consultation has been included in the Schedule fee for this item. However, the initial consultation preceding commencement of a course of therapy would attract benefits.

Phototherapy should only be used when:

- Topical therapy has failed or is inappropriate.
- The severity of the condition as assessed by specialist opinion (including symptoms, extent of involvement and quality of life impairment) warrants its use.

Narrow band UVB should be the preferred option for phototherapy unless there is documented evidence of superior efficacy of UVA phototherapy for the condition being treated.

Phototherapy treatment for psoriasis and palmoplantar pustulosis should consider the National Institute of Health and Care Excellence's Guidelines at <https://pathways.nice.org.uk/pathways/psoriasis>

Involvement by a specialist in the specialty of dermatology at a minimum should include a letter stating the diagnosis, need for phototherapy, estimated time of treatment and review date.

TN.1.15 Laser Photocoagulation - (Items 14100 to 14124)

All laser equipment used for services under items 14100-14124 must be listed on the Australian Register of Therapeutic Goods.

The Australasian College of Dermatologists has advised that the following ranges (applicable to an average 4 year old child and an adult) should be used as a reference to the treatment areas specified in Items 14106 - 14124:

Entire forehead	50 -75 cm ²
Cheek	55 - 85 cm ²
Nose	10 -25 cm ²
Chin	10 - 30 cm ²
Unilateral midline anterior - posterior neck	60 - 220 cm ²
Dorsum of hand	25 - 80 cm ²

Forearm	100 - 250 cm ²
Upper arm	105 - 320 cm ²

TN.1.16 Facial Injections of Poly-L-Lactic Acid - (Items 14201 and 14202)

Poly-L-lactic acid is listed within the standard arrangements on the Pharmaceutical Benefits Scheme (PBS) as an Authority Required listing for initial and maintenance treatments, for facial administration only, of severe facial lipoatrophy caused by therapy for HIV infection.

TN.1.17 Hormone and Living Tissue Implantation - (Items 14203 and 14206)

Items 14203 and 14206 are not payable for artificial insemination.

TN.1.18 Implantable Drug Delivery System for the Treatment of Severe Chronic Spasticity - (Items 14227 to 14237)

Baclofen is provided under Section 100 of the Pharmaceutical Benefits Scheme for the following indications: Severe chronic spasticity, where oral agents have failed or have caused unacceptable side effects, in patients with chronic spasticity:

- (a) of cerebral origin; or
- (b) due to multiple sclerosis; or
- (c) due to spinal cord injury; or
- (d) due to spinal cord disease.

Items 14227, 14234 and 14237 should be used in accordance with these restrictions.

TN.1.19 Immunomodulating Agent - (Item 14245)

Item 14245 applies only to a service provided by a medical practitioner who is registered by the Services Australia CEO to participate in the arrangements made, under paragraph 100 (1) (b) of the *National Health Act 1953*, for the purpose of providing an adequate pharmaceutical service for persons requiring treatment with an immunomodulating agent.

These drugs are associated with risk of anaphylaxis which must be treated by a medical practitioner. For this reason a medical practitioner needs to be available at all times during the infusion in case of an emergency.

TN.1.20 Therapeutic procedures may be provided by a specialist trainee (Items 13015 to 51318)

(1) Items 13015 to 51318 (excluding 13209 (T1) 16400 to 16500 (T4), 16590 to 16591 (T4), 17610 to 17690 (T6) and 18350 to 18373 (T11) apply to a medical service provided by;

- (a) A medical practitioner, or;
- (b) A specialist trainee under the direct supervision of a medical practitioner.

(2) For paragraph (1) (b), a medical service provided by a specialist trainee is taken to have been provided by the supervising medical practitioner.

(3) In this rule: Specialist trainee means a medical practitioner who is undertaking an Australian Medical Council (AMC) accredited Medical College Training Program. Direct Supervision means personal and continuous attendance for the duration of the service.

TN.1.22 Cryopreservation of semen (Item 13260)

A semen cycle collection process involves obtaining up to 3 semen samples on alternate days producing up to 50 cryopreserved straws of frozen sperm.

Maximum of two semen collection cycles, one cycle collected prior to a patient undergoing the first cytotoxic/radiation treatment and the second cycle to be collected if the patient has relapsed and requires treatment.

TN.1.23 MBS Item 13105 - Haemodialysis in very remote areas

The purpose of item 13105 is for the management of haemodialysis to a person with end-stage renal disease. The service is provided in very remote areas (defined as Modified Monash 7) by a registered nurse, an Aboriginal health worker or an Aboriginal and Torres Strait Islander health practitioner on behalf of a medical practitioner. The service is supervised by a medical practitioner (either in person or remotely).

As a condition of receiving the Medicare-funded dialysis treatment, the patient's care must be managed by a nephrologist, with the patient being treated or reviewed by the nephrologist every 3 to 6 months (either in person or remotely).

The patient is not an admitted patient of a hospital and the service is provided in a primary care setting.

Item 13104 should not be claimed if item 13105 is claimed.

TN.1.24 Emergency Medicine Therapeutic and Procedural Services (Items 14255 to 14288)

Items 14255, 14256, 14257, 14258, 14259, 14260, 14263, 14264, 14265, 14266, 14270, 14272, 14277, 14278, 14280, 14283, 14285 and 14288 relate to therapeutic and procedural services commonly performed in the emergency medicine setting rendered by medical practitioners who are holders of the Fellowship of the Australasian College for Emergency Medicine (FACEM) and who participate in, and meet the requirements for, quality assurance and maintenance of professional standards by the Australasian College for Emergency Medicine (ACEM).

Mirror emergency medicine therapeutic and procedural items are provided within the structure for medical practitioners who are not emergency physicians to ensure a consistent framework for all emergency services, regardless of provider type.

Group T1, Subgroup 14 items 14255 to 14288 (excluding items 14277 and 14278) must be performed in conjunction with and in addition to an emergency attendance (items 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017, 5019, 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036) by the practitioner under Group A21.

Items 14277 and 14288 (chemical or physical restraints) may be performed as a standalone service or in conjunction with an emergency attendance service in Group A21.

The following notes are provided to assist emergency physicians and medical practitioners in selecting the appropriate therapeutic or procedural item number for Medicare benefit purposes.

Resuscitation (Items 14255, 14256, 14257, 14258 and 14259)

These items include common procedures and processes involved in a resuscitation, which may include ANY of the following - rapid IV access, administration of fluid, vasopressors (via bolus or infusion), adrenaline nebulisers, use of point-of-care ultrasound in conjunction with focused assessment with sonography for trauma (FAST scan), central line access, arterial puncture and or access, ventilation, nasogastric tube insertion and in-dwelling urinary catheter insertion.

Examples of patients requiring resuscitation include: cardiac/respiratory arrest, generalised seizures, undifferentiated shock, severe sepsis +/- shock, anaphylaxis, STEMI, unstable cardiac dysrhythmias, acute stroke, perforated viscus, aortic dissection / ruptured aortic aneurysm, severe electrolyte/endocrine abnormalities (for example, DKA, hyperkalaemia).

Patients requiring resuscitation routinely require a second doctor to assist with access, airway management or other procedures as required. It is the expectation that, in cases where a second doctor is required to provide the resuscitation service, only one Group A21 emergency medicine attendance item may be billed with either the primary or secondary doctor billing a resuscitation item.

Minor Procedure (Items 14263 and 14265) and Procedures (Items 14264 and 14266)

These items account for minor procedures (14263 and 14265) and procedures (14264 and 14266) provided in conjunction with an attendance item under Group A21 and may be claimed for each minor procedure or procedure performed. Where multiple procedures are performed per patient attendance, the relevant procedure item/s may be billed more than once where clinically relevant for the appropriate treatment of the patient.

“minor procedures” could include simple foreign body removal (eg. corneal, intranasal, otic), superficial wound closure (<7cm, not of the face or neck), drainage of small abscess, incision and drainage abscess / cyst / haematoma (including Bartholin’s), pulp space drainage, removal of nail of finger/ thumb/ toe, incision of thrombosed external haemorrhoid, rectal prolapse reduction, bladder aspiration (suprapubic tap), passage of urethral sounds, paraphimosis reduction, sigmoidoscopy, simple wound dressings, burns dressings (<5% BSA)

“procedures” could include removal of foreign body from the ear or subcutaneous tissue (incision / closure), superficial laceration repair of the face / neck (including ear, eyelid, lip, nose) or of >7cm elsewhere on body, management of deep/ contaminated wound requiring debridement under general anaesthetic or field block, femoral nerve block, epistaxis cautery / packing, suprapubic cystotomy / catheter, cardioversion / defibrillation, thoracic cavity aspiration for diagnostic purposes, intercostal drain insertion, PEG tube replacement, laryngoscopy (including fibreoptic), nasendoscopy, priapism decompression, abdominal paracentesis, complex wound dressings, burns dressings (>5% BSA)

Management of Fractures (Items 14270 and 14272)

Items 14270 and 14272 are for fracture or dislocation diagnosis and management, excluding aftercare and performed in conjunction with an attendance item under Group A21.

All fractures are billed the same EXCEPT for fractures that are managed as soft tissue injuries which are NOT billed (for example, phalangeal tuft fractures, lateral malleolar tip avulsions). More complex fractures (for example, stable spinal fractures and multiple rib fractures) are included as fractures for billing purposes due to the multiple facets required to manage these injuries.

For fracture/dislocations requiring reduction (in addition to cast immobilisation) then a procedure item (14263, 14264, 14265 or 14266) may also be billed.

Where a patient presents with multiple fractures, the relevant fracture item/s may be billed more than once per attendance where clinically relevant for the appropriate treatment of the patient.

Chemical or Physical Restraints (Items 14277 and 14278)

Items 14277 and 14278 are for the application of chemical or physical restraints, where an acute severe behavioural disturbance necessitates involuntary management with a team-based approach and chemical and / or physical restraints (limited) and / or one on one nursing care to ensure the safety of the patient. Chemical or physical restraints may be performed as a standalone service or in conjunction with an emergency attendance item under Group A21.

Anaesthesia (Items 14280 and 14283) and Emergent Intubation (Items 14285 and 14288)

The anaesthesia items (14280 and 14283) account for all services that would otherwise be billed under the anaesthetic items in the MBS, including the pre anaesthetic consultation, the associated procedure, and any loadings / add-ons (such as duration of anaesthesia or the ASA classification of the patient). Anaesthesia items assume an average of 20 minutes anaesthesia, and an average ASA 3 classification, in an emergent and / or after-hours context.

Emergent intubation items (14285 and 14288) include endotracheal intubation, LMA insertion, front-of-neck access, and insertion of adjunctive airway devices (oro/nasopharyngeal airways).

Patients requiring procedural sedation or emergent intubation/airway management routinely require a second doctor to assist with access, airway management or other procedures as required. It is the expectation that, in cases where a second doctor is required to provide the anaesthesia or intubation service, only one Group A21 emergency medicine attendance item may be billed with either the primary or secondary doctor billing the procedural item.

Items under Subgroup 14 with the 'Anaesthesia' notation allow for Medicare benefits to be paid for a second medical practitioner to provide the anaesthesia service. Where the anaesthesia service is provided by an emergency physician or medical practitioner, anaesthesia items 14280 and 14283 would be claimed. Specialist anaesthetists may not claim items 14280 and 14283 but would provide the service under a relative value guide episode in T7 or T10 of the GMST.

TN.1.25 Extracorporeal photopheresis for treatment of cutaneous T-cell lymphoma

A response, for the purposes of administering MBS item 14249, is defined as attaining a reduction of at least 50% in the overall skin lesion score from baseline, for at least 4 consecutive weeks. Refer to the Product Information for methoxsalen for directions on calculating an overall skin lesion score. The definition of a clinically significant reduction in the Product Information differs to the 50% requirement for MBS-subsidy. Response only needs to be demonstrated after the first six months of treatment.

TN.1.26 In vitro processing with cryopreservation of bone marrow or peripheral blood

MBS rebates for autologous stem cell transplantation are only available for patients with aggressive malignancy or one which has proven refractory to prior treatment. Patients should also meet the criteria for treatment according to:

Updated Indications for Immune Effector Cell Therapy: 2023 Guidelines from the American Society for Transplantation and Cellular Therapy

Indications for haematopoietic cell transplantation for haematological diseases, solid tumours and immune disorders: current practice in Europe, 2022

In addition, the treatment should be authorised and overseen by a multidisciplinary cancer team.

TN.1.27 Appropriate billing of item 13950 – parenteral administration of antineoplastic agents Intent

The intent for item 13950 is to provide services through Medicare for private patients undergoing antineoplastic therapy. Specifically, Medicare benefits will be paid under item 13950 where the patient is administered with an antineoplastic agent or agents via parenteral route, by or on behalf of a specialist or consultant physician, for antineoplastic treatment (including; cytotoxic chemotherapy and monoclonal antibody therapy).

Item 13950 is not intended for treatment via the administration of agents used in anti-resorptive bone therapy or hormonal therapy.

For the purpose of claiming benefits under MBS item 13950, administration of antineoplastic agent/s commences with the establishment of the parenteral route, and ends with the disconnection of the infusion, regardless of the time expired between the commencement and end.

Irrespective of the number of antineoplastic agents administered, medical practitioners can only bill item 13950 once each time the patient presents for treatment, but may be billed on successive treatment days.

Further information relating to antineoplastic therapy services listed on the MBS can be directed to the Department of Health and Aged Care's AskMBS e-mail service at askmbs@health.gov.au. AskMBS responds to enquiries from providers who seek advice on interpretation of MBS items, explanatory notes and associated legislation. The advice is intended to assist health professionals, practice managers and others to understand and comply with MBS billing requirements. AskMBS works closely with policy areas within the Department of Health and Aged Care, and with Services Australia, to ensure enquirers receive accurate, authoritative and up-to-date information.

Administration

Parenteral administration refers to the delivery of a therapeutic agent via injection, as opposed to administration via the alimentary tract or topically (e.g. application of creams or ointments).

Examples of suitable parenteral routes for the administration of cytotoxic chemotherapy and/or monoclonal antibody therapy include:

- intravascular;
- intramuscular;
- subcutaneous;
- intrathecal; and
- intracavitary.

Multiple instances of administration in a single day

Item 13950 covers the administration of one or more antineoplastic agents, and whilst it is not expected that there would be multiple claims for item 13950 on the one day, there are clinical instances where this might occur. In these circumstances, the medical practitioner will need to assure themselves that these instances represent separate and distinctly relevant services and annotate the patients account or Medicare claim form that the services were 'separate occasion', 'separate attendance' or 'separate times' for multiple services provided on the same day'.

Irrespective of the number of antineoplastic agents administered, medical practitioners can only bill item 13950 once each time the patient presents for treatment.

Professional Attendances

An appropriate professional attendance item (such as item 116 for example) may be co-claimed with item 13950, so long as the provisions of the professional attendance are met. For example, in situations where the patient requires ongoing medical practitioner oversight, as a result of ongoing clinical consequences or side effects of the antineoplastic therapy, then the billing of a professional attendance item would be considered appropriate.

Item 13950 should not be claimed in circumstances where the physical act of parenteral administration of antineoplastic agents does not take place. For example, where a patient is admitted to hospital for a period of several days, the oversight of the patient, post administration of an antineoplastic agent/s, is more appropriately covered under a professional attendance item (so long as the provisions of the professional attendance item are met).

By or on behalf of

In modern practice, a nurse typically performs the administration of antineoplastic agent/s, with the medical practitioner maintaining the overall responsibility for the oversight and care of the patient.

The descriptor for item 13950 does not preclude remote or off-site administration of antineoplastic therapy. It is considered appropriate to bill item 13950 where the administration of the antineoplastic agent or agents occurs at a location other than where the consultant physician or specialist is attending, so long as the claiming consultant physician or specialist is satisfied that the administration of the antineoplastic therapy is being performed with the

level of supervision which is generally accepted by the profession as necessary for the appropriate treatment of the patient.

The specialist or consultant physician, who is undertaking or supervising the procedure, will bill the service using the provider number associated with the service location.

For item 13950, a service is taken to be rendered on behalf of a medical practitioner if, and only if, it is rendered by another person who is not a medical practitioner, and who provides the service in accordance with accepted medical practice, and under the supervision of the medical practitioner.

Accessing long-term implanted delivery devices

Accessing a long-term implanted device, such as a peripherally inserted central catheter (PICC) line, for the purpose of administering an antineoplastic agent at the time of administering the antineoplastic agent, is considered an integral component of this service, and therefore should not receive a separate MBS benefit. Item 14221 cannot be claimed in these circumstances.

Providers should note that the fee for item 13950 includes a component for accessing a long-term implanted drug delivery device when administering antineoplastic agents, and should be mindful of this when billing patients for services not specifically listed on the MBS. Note that billing against item 14221, for any reason (e.g. flushing or taking of bloods), is not permitted when the device is accessed for the purpose of delivering the service associated with item 13950.

However, it is recognised that the clinical need for access to an implanted device exists beyond the administration of antineoplastic therapy, for example, flushing a long-term intravascular access device in order to maintain patency during prolonged periods of disuse or giving antibiotic therapy or transfusing blood products or taking a blood sample. Billing against item 14221, in these situations, is considered clinically relevant and appropriate, so long as these services are not associated with the visit by the patient for a course of antineoplastic therapy under item 13950.

Where item 14221 is claimed on the same day as item 13950 for a separate and distinct clinically relevant service, the account for item 14221 must be annotated with 'separate attendance' or 'separate service' to enable the claim to be appropriately assessed. It would be expected that the account would be annotated with time of the attendances to demonstrate that separate services were provided to the patient.

Pumps and other devices

The loading of pumps, reservoirs or ambulatory drug delivery devices can be billed under item 13950 (so long as the conditions described in the item descriptor are met). For the purpose of claiming benefits under MBS item 13950, administration of antineoplastic agent/s commences with the establishment of the parenteral route, and ends with the disconnection of the infusion, regardless of the time expired between the commencement and end.

Irrespective of the number of antineoplastic agents administered, medical practitioners can only bill item 13950 once each time the patient presents for treatment.

Under the MBS, there is no item that specifically covers the disconnection of a pump or device as part of or following the administration of antineoplastic agents.

Item 14221 was amended on 1 November 2020 to clarify that it cannot be claimed in association with the administration of antineoplastic agents for which item 13950 is being claimed, as the MBS fee for item 13950 contains a component to cover accessing of a long-term implanted device for delivery of therapeutic agents.

Item 13950 cannot be claimed where the patient is receiving the infusion at home via a pre-loaded pump or ambulatory delivery device.

If, at the attendance to disconnect a pump or device, the practitioner further administers antineoplastic agents under a service described by item 13950, then item 13950 may be claimed for that episode of treatment. The administration of antineoplastic agents during the attendance to disconnect the pump or device is considered a

separate attendance from the claim associated with the initial loading of the pump or device. Item 14221 cannot be claimed in these circumstances, as item 14221 cannot be claimed in association with a claim for item 13950.

Alternatively, if at the attendance to disconnect a pump or device there is no service provided under item 13950 (i.e. no further administration of antineoplastic agents), then item 14221 may be claimed for a service associated with the accessing of a long-term implanted device for delivery of therapeutic agents, but only under circumstances where the long-term implanted device is accessed for the purpose of delivery of therapeutic agents (e.g. line maintenance for future access). Item 14221 should not be claimed merely for the disconnection of the device.

Therapies

The parenteral administration of antineoplastic agents, including cytotoxic chemotherapy and monoclonal antibody therapy, can be claimed under item 13950.

Item 13950 cannot be used for claims related to the administration of pharmaceuticals used as part of hormonal therapy nor for the administration of colony-stimulating factors. Also, the administration of anti-resorptive bone therapy is not covered under item 13950.

The administration of pharmaceuticals given as part of a treatment regimen for a non-malignant disease cannot be claimed under item 13950. For example, item 13950 cannot be used for claims related to the treatment of multiple sclerosis or for the treatment of arthritis.

TN.1.28 Repetitive Transcranial Magnetic Stimulation items 14216, 14217, 14219 and 14220

TN.1.28 Repetitive Transcranial Magnetic Stimulation (rTMS) therapy items (14216, 14217, 14219 and 14220)

Items for Initial course of repetitive transcranial magnetic stimulation (rTMS):

- Item 14216 - prescription and treatment mapping of an initial course of treatment provided by a psychiatrist with appropriate training in rTMS.
- Item 14217 - delivery of an initial course of rTMS treatment of up to 35 sessions provided by, or on behalf of, a psychiatrist with appropriate training in rTMS.

Items for retreatment course of rTMS:

- Item 14219 - prescription and mapping of a retreatment course of rTMS treatment by a psychiatrist with appropriate training in rTMS.
- Item 14220 - delivery of a retreatment course of rTMS treatment of up to 15 sessions provided by, or on behalf of, a psychiatrist with appropriate training in rTMS.

Referral

Referral for item 14216 should be through a GP or a psychiatrist. Where there is an existing therapeutic relationship between the patient and the rTMS-trained psychiatrist, no additional referral is required.

Patient Eligibility

Practitioners should have regard to the relevant diagnostic criteria set out in the International Statistical Classification of Diseases and Related Health Problems – 11th Revision (ICD-11) and the Diagnostic and Statistical Manual of the American Psychiatric Association – Fifth Edition (DSM-5). Major Depressive Disorder is defined as an episode of depression that lasts at least two weeks with marked impairment.

Eligibility for item 14216 requires trialling of each antidepressant medication at the recommended therapeutic dose for a minimum of 3 weeks. While this is the minimum period required, practitioners should have regard to the

RANZCP's clinical guidance, noting trialling of each antidepressant medication at the recommended therapeutic dose for a minimum of 4 weeks (with no response) and 6-8 weeks (where there has been a partial response).

Practice should further be guided by the [RANZCP Professional Practice Guidelines for the administration of repetitive transcranial magnetic stimulation](#).

Where can rTMS services be provided?

While clinical advice indicates that the majority of rTMS services will not require hospital treatment and can be provided on an outpatient basis or in consultation rooms, there will be circumstances where some patients may require hospital treatment. Medicare rebates will apply in both circumstances for eligible patients.

Where rTMS treatment is to be provided as part of hospital treatment (i.e. as an inpatient), the psychiatrist will need to provide written certification that hospital treatment is required for the patient in order for hospital accommodation and other private health insurance benefits to be paid. This is an important requirement under the Private Health Insurance (Benefit Requirements) Rules 2011 (the Rules).

The rTMS MBS items have a 'Type C' private health insurance procedure classification. Type C procedures are those not normally requiring hospital treatment under the Rules. However, the Rules allow for hospital accommodation and other private health insurance benefits to be paid for Type C procedures if certification is provided.

The medical practitioner (psychiatrist) providing the professional service must certify in writing that, because of the medical condition of the patient or because of the special circumstances specified, it would be contrary to accepted medical practice to provide the procedure to the patient except as hospital treatment in a hospital.

To assist psychiatrists, the Department has published further guidance on the type of information required in a Type C certification on the MBS online website found at [MBSonline](#).

Provider Eligibility and Training Requirements

Providers who can bill these items

These MBS services may only be provided by a psychiatrist, or health care professional on behalf of a psychiatrist, who has undertaken rTMS training.

Prescription and mapping services (items 14216 and 14219) must be personally performed by the psychiatrist trained in rTMS.

Treatment services (14217 and 14220) can be performed by a psychiatrist trained in rTMS, or a health care professional on behalf of the psychiatrist.

Requirements of the health care professional providing rTMS on behalf of the psychiatrist:

A health care professional may include a nurse practitioner, practice nurse or an allied health professional who is trained in the provision of rTMS treatment.

The health care professional performing rTMS treatment services "on behalf of" the psychiatrist should either:

- Be employed by the psychiatrist, or
- Supervised by the psychiatrist, in accordance with accepted medical practice.

It is the responsibility of the prescribing psychiatrist trained in rTMS to ensure that the health professional providing the treatment on behalf of the psychiatrist is appropriately and formally trained in rTMS. Records must be kept to demonstrate that all health care professionals providing rTMS services are appropriately trained.

In line with good practice, the psychiatrist should be available to provide advice as required during treatment and this supervision could be provided from a physician distance (this could be by phone). When rTMS services are provided on behalf the psychiatrist, the psychiatrist continues to remain responsible for planning and monitoring treatment outcomes.

Training requirements

The training requirements for psychiatrists have been endorsed through the Royal Australian and New Zealand College of Psychiatrists (RANZCP). RANZCP-endorsed training courses can be found on the RANZCP website [here](#).

All providers will be subject to ongoing Continuing Professional Development (CPD) requirements set by the RANZCP.

Co-claiming with other items

The following services may be claimed on the same day:

- Prescription and mapping of an initial course of treatment (14216) and the first service in the delivery of treatment (14217).
- Prescription and mapping of a course of retreatment (14219) and the first service in the delivery of retreatment (14220).

MBS item 14217 can be claimed more than once on the same day if deemed clinically appropriate and in line with [RANZCP Professional Practice Guidelines](#).

MBS item 14220 can be claimed more than once on the same day if deemed clinically appropriate and in line with [RANZCP Professional Practice Guidelines](#).

Further Information

Further information about the MBS items and provision of rTMS services is available on the MBS Online website at MBS Online under 'Fact Sheets'. The information on the website may be updated from time to time in response to questions or feedback from providers, patients and other stakeholders.

TN.1.29 Extracorporeal Photopheresis (ECP) for Chronic Graft Versus Host Disease (cGVHD)

For the purpose of administering MBS item 13761 the phrase 'treatment cycle' usually refers to a 12-week time period and item 13762 usually refers to a 6-week time period. A 'treatment session' is an attendance for ECP, which occurs two or three times per week.

A cycle of treatment funded under item 13762 can be preceded by a cycle funded by either item 13761 or by item 13762, provided at least a partial organ response occurs. A response, for the purposes of administering MBS item 13762, is defined as attaining a complete or partial response in at least one organ according to National Institutes of Health (NIH) criteria. A response only needs to be demonstrated after the first 12 weeks of treatment.

Patient Requirements

For the purpose of administering MBS item 13761 and item 13762, steroid-refractory or steroid-dependent disease is defined as one of the following:

- a. A lack of response or disease progression after a minimum of prednisone 1 mg/kg/day or equivalent for at least 1 week, OR

- b. Disease persistence without improvement despite continued treatment with prednisone at > 0.5 mg/kg/day or 1 mg/kg every day or equivalent other day for at least 4 weeks, OR
- c. Increase to prednisolone dose to > 0.25 mg/kg/day or equivalent after 2 unsuccessful attempts to taper the dose.

TN.2.1 Radiation Oncology - General

The level of benefits for radiotherapy depends on the number of fields irradiated and the number of times treatment is given.

Treatment by rotational therapy (including rotational therapy using volumetric modulated arc therapy or intensity modulated arc therapy) is considered to be equivalent to the irradiation of three fields (i.e., irradiation of one field plus two additional fields). For example, each attendance for orthovoltage rotational therapy at the rate of 3 or more treatments per week would attract benefit under Item 15100 plus twice Item 15103. Similarly, each attendance for arc therapy of the prostate using a dual photon linear accelerator would attract benefits under 15248 plus twice 15263. Benefits are payable once only per attendance for treatment irrespective of whether one or more arcs are involved.

Benefits for consultations rendered on the same day as treatment and/or planning services are only payable where they are clinically relevant. A clinically relevant service is one that is generally accepted by the relevant profession as being necessary for the appropriate treatment of the patient.

From 1 January 2016, separate items were listed for intensity-modulated radiotherapy (IMRT) and image-guided radiotherapy (IGRT). Previously, these services were delivered and billed against the existing MBS three-dimensional radiotherapy items.

Definitions have been inserted into the *Health Insurance (General Medical Services Table) Regulations 2021* as follows:

In items 15275, 15555, 15565 and 15715:

IMRT means intensity modulated radiation therapy, being a form of external beam radiation therapy that uses high energy megavoltage x rays to allow the radiation dose to conform more closely to the shape of a tumour by changing the intensity of the radiation beam.

In item 15275:

IGRT means image guided radiation therapy, being a process in which frequent 2 and 3 dimensional imaging is captured as close as possible to the time of treatment by using x rays and scans (similar to CT scans) before and during radiotherapy treatment, in order to show the size, shape and position of a cancer as well as the surrounding tissues and bones.

TN.2.2 Brachytherapy of the Prostate - (Item 15338)

One of the requirements of item 15338 is that patients have a Gleason score of less than or equal to 7. However, where the patient has a score of 7, comprising a primary score of 4 and a secondary score of 3 (ie. 4+3=7), it is recommended that low dose rate brachytherapy form part of a combined modality treatment.

Low dose brachytherapy of the prostate should be performed in patients with favourable anatomy allowing adequate access to the prostate without pubic arch interference and who have a life expectancy of at least greater than 10 years.

An 'approved site' for the purposes of this item is one at which radiation oncology services may be performed lawfully under the law of the State or Territory in which the site is located.

TN.2.3 Planning Services - (Items 15500 to 15565 and 15850)

A planning episode involves field setting and dosimetry. One plan only will attract Medicare benefits in a course of treatment. However, benefits are payable for further planning items where planning is undertaken in respect of a different tumour site to that (or those) specified in the original prescription by the radiation oncologist. Benefits are also payable for more than one plan when a plan for brachytherapy and a plan for megavoltage or teletherapy treatment are rendered in the same course of treatment.

Items 15500 to 15533 (inclusive) are for a planning episode for 2D conformal radiotherapy. Items 15550 to 15562 (excluding item 15555) are for a planning episode for 3D conformal radiotherapy. Items 15555 and 15565 are for a planning episode for intensity modulated radiotherapy (IMRT).

It is expected that the 2D simulation items (15500, 15503, and 15506) would be used in association with the 2D planning items (15518, 15521, and 15524) in a planning episode. However there may be instances where it may be appropriate to use the 3D Planning items (15556, 15559, and 15562) in association with the 2D simulation items (15500, 15503, and 15506) in a planning episode. The 3D simulation items (15550 and 15553) can only be billed in association with the 3D planning items (15556, 15559, and 15562) in a planning episode.

The IMRT simulation item (15555) and IMRT dosimetry item (15565) can only be billed in association with each other and only for IMRT (i.e. neither IMRT simulation item 15555, nor IMRT dosimetry item 15565, can be billed in association with any of the 2D or 3D treatment items for an episode of care).

Item 15850 covers radiation source localisation for high dose brachytherapy treatment. Item 15850 applies to brachytherapy provided to any part of the body.

TN.2.4 Treatment Verification - (Items 15700 to 15705, 15710, 15715 and 15800)

In these items, 'treatment verification' means:

A quality assurance procedure designed to facilitate accurate and reproducible delivery of the radiotherapy/brachytherapy to the prescribed site(s) or region(s) of the body as defined in the treatment prescription and/or associated dose plan(s) and which utilises the capture and assessment of appropriate images using:

- (a) x-rays (this includes portal imaging, either megavoltage or kilovoltage, using a linear accelerator)
- (b) computed tomography; or
- (c) ultrasound, where the ultrasound equipment is capable of producing images in at least three dimensions (unidimensional ultrasound is not covered); together with a record of the assessment(s) and any correction(s) of significant treatment delivery inaccuracies detected.

Item 15700 covers the acquisition of images in one plane and incorporates both single or double exposures. The item may be itemised once only per attendance for treatment, irrespective of the number of treatment sites verified at that attendance.

Item 15705 (multiple projections) applies where images in more than one plane are taken, for example orthogonal views to confirm the isocentre. It can be itemised only where verification is undertaken of treatments involving three or more fields. It can be itemised where single projections are acquired for multiple sites, eg multiple metastases for palliative patients. Item 15705 can be itemised only once per attendance for treatment, irrespective of the number of treatment sites verified at that attendance.

15710 applies to volumetric verification imaging using acquisition by computed tomography. It can be itemised only where verification is undertaken of treatments involving three or more fields and only once per attendance for treatment, irrespective of the number of treatment sites verified at that attendance.

Items 15700, 15705, 15710 and 15715:

- may not be claimed together for the same attendance at which treatment is rendered

- must only be itemised when the verification procedure has been prescribed in the treatment plan and the image has been reviewed by a radiation oncologist

Item 15800 - Benefits are payable once only per attendance at which treatment is verified.

TN.3.1 Therapeutic Dose of Yttrium 90 - (Item 16003)

This item cannot be claimed for selective internal radiation therapy (SIRT).

See items 35404, 35406 and 35408 for SIRT using SIR_Spheres (yttrium-90 microspheres).

TN.4.1 Antenatal Service Provided by a Nurse, Midwife or an Aboriginal and Torres Strait Islander health practitioner - (Item 16400)

Item 16400 can only be claimed by a medical practitioner (including a vocationally registered or non-vocationally registered GP, a specialist or a consultant physician) where an antenatal service is provided to a patient by a midwife, nurse or Aboriginal and Torres Strait Islander health practitioner on behalf of the medical practitioner at, or from an eligible practice location in a regional, rural or remote area.

A regional, rural or remote area is classified as a RRMA 3-7 area under the Rural Remote Metropolitan Areas classification system.

Evidence based national or regional guidelines should be used in the delivery of this antenatal service.

An eligible practice location is the place associated with the medical practitioner's Medicare provider number from which the service has been provided. If you are unsure if the location is in an eligible area you can call Services Australia on 132 150.

A midwife means a registered midwife who holds a current practising certificate as a midwife issued by a State or Territory regulatory authority and who is employed by, or whose services are otherwise retained by, the medical practitioner or their practice.

A nurse means a registered or enrolled nurse who holds a current practising certificate as a nurse issued by a State or Territory regulatory authority and who is employed by, or whose services are otherwise retained by, the medical practitioner or their practice. The nurse must have appropriate training and skills to provide an antenatal service.

An Aboriginal and Torres Strait Islander health practitioner means a person who has been registered as an Aboriginal and Torres Strait Islander health practitioner by the Aboriginal and Torres Strait Islander Health Practice Board of Australia and meets the Board's registration standards. The Aboriginal and Torres Strait Islander health practitioner must be employed or retained by a general practice, or by a health service that has an exemption to claim Medicare benefits under subsection 19(2) of the *Health Insurance Act 1973*.

An Aboriginal and Torres Strait Islander health practitioner may use any of the titles authorised by the Aboriginal and Torres Strait Islander Health Practice Board: Aboriginal health practitioner; Aboriginal and Torres Strait Islander health practitioner; or Torres Strait Islander health practitioner.

The midwife, nurse or Aboriginal and Torres Strait Islander health practitioner must also comply with any relevant legislative or regulatory requirements regarding the provision of the antenatal service.

The medical practitioner under whose supervision the antenatal service is provided retains responsibility for the health, safety and clinical outcomes of the patient. The medical practitioner must be satisfied that the midwife, nurse or Aboriginal and Torres Strait Islander health practitioner is appropriately registered, qualified and trained, and covered by indemnity insurance to undertake antenatal services.

Supervision at a distance is recognised as an acceptable form of supervision. This means that the medical practitioner does not have to be physically present at the time the service is provided. However, the medical practitioner should be able to be contacted if required.

The medical practitioner is not required to see the patient or to be present while the antenatal service is being provided by the midwife, nurse or Aboriginal and Torres Strait Islander health practitioner. It is up to the medical practitioner to decide whether they need to see the patient. Where a consultation with the medical practitioner has taken place prior to or following the antenatal service, the medical practitioner is entitled to claim for their own professional service, but item 16400 cannot be claimed in these circumstances.

Item 16400 cannot be claimed in conjunction with another antenatal attendance item for the same patient, on the same day by the same practitioner.

A bulk billing incentive item (10990, 10991 or 10992) cannot be claimed in conjunction with item 16400. An incentive payment is incorporated into the schedule fee.

Item 16400 can only be claimed 10 times per pregnancy.

Item 16400 cannot be claimed for an admitted patient of a hospital.

TN.4.2 Items for Initial and Subsequent Obstetric Attendances (Items 16401 and 16404)

16401 and 16404 replace items 104 and 105 for any specialist obstetric attendance relating to pregnancy. This includes any initial and subsequent attendance with a specialist obstetrician for discussion of pregnancy or pregnancy related conditions or complications, or any postnatal care provided to the patient subsequent to the expiration of normal aftercare period. Item 16500 is still claimed for routine antenatal attendances. These items are subject to Extended Medicare Safety Net caps.

TN.4.3 Antenatal Care - (Item 16500)

In addition to routine antenatal attendances covered by Item 16500 the following services, where rendered during the antenatal period, attract benefits:-

- (a) Items 16501, 16502, 16505, 16508, 16509 (but not normally before the 24th week of pregnancy), 16511, 16512, 16514, 16533, 16534 and 16600 to 16627.
- (b) The initial consultation at which pregnancy is diagnosed.
- (c) The first referred consultation by a specialist obstetrician when called in to advise on the pregnancy.
- (d) All other services, excluding those in Category 1 and Group T4 of Category 3 not mentioned above.
- (e) Treatment of an intercurrent condition not directly related to the pregnancy.

Item 16514 relates to antenatal cardiotocography in the management of high risk pregnancy. Benefits for this service are not attracted when performed during the course of the labour and birth.

TN.4.4 External Cephalic Version for Breech Presentation - (Item 16501)

Contraindications for this item are as follows:

- antepartum haemorrhage (APH)
- multiple pregnancy,

- fetal anomaly,
- fetal growth restriction,
- caesarean section scar,
- uterine anomalies,
- obvious cephalopelvic disproportion,
- isoimmunization,
- premature rupture of the membranes.

TN.4.5 Labour and Birth - (Items 16515, 16518, 16519, 16530 and 16531)

Benefits for management of labour and birth covered by Items 16515, 16518, 16519, 16530 and 16531 includes the following (where indicated):-

- surgical and/or intravenous infusion induction of labour;
- forceps or vacuum extraction;
- evacuation of products of conception by manual removal (not being an independent procedure);
- episiotomy or repair of tears.

Item 16519 covers birth by any means including Caesarean section. If, however, a patient is referred, or her care is transferred to another medical practitioner for the specific purpose of birth by Caesarean section, whether because of an emergency situation or otherwise, then Item 16520 would be the appropriate item.

In some instances the obstetrician may not be able to be present at all stages of confinement. In these circumstances, Medicare benefits are payable under Item 16519 provided that the doctor attends the patient as soon as possible during the confinement and assumes full responsibility for the mother and baby.

Two items in Group T9 provide benefits for assistance by a medical practitioner at a Caesarean section. Item 51306 relates to those instances where the Caesarean section is the only procedure performed, while Item 51309 applies when other operative procedures are performed at the same time.

Where, during labour, a medical practitioner hands the patient over to another medical practitioner, benefits are payable under Item 16518 for the referring practitioner's services. The second practitioner's services would attract benefits under Item 16515 (i.e., management of vaginal birth) or Item 16520 (Caesarean section). If another medical practitioner is called in for the management of the labour and birth, benefits for the referring practitioner's services should be assessed under Item 16500 for the routine antenatal attendances and on a consultation basis for the postnatal attendances, if performed.

At a high risk birth benefits will be payable for the attendance of any medical practitioner (called in by the doctor in charge of the birth) for the purposes of resuscitation and subsequent supervision of the neonate. Examples of high risk births include cases of difficult vaginal birth, Caesarean section or the birth of babies with Rh problems and babies of toxæmic mothers.

TN.4.6 Caesarean Section - (Item 16520)

Benefits under this item are attracted only where the patient has been specifically referred to another medical practitioner for the management of the birth by Caesarean section and the practitioner carrying out the procedure has

not rendered any antenatal care. Caesarean sections performed in any other circumstances attract benefits under Item 16519.

TN.4.7 Complicated Confinement - (Item 16522)

A record of the clinical indication/s that constitute billing under item 16522 should be retained on the patient's medical record.

TN.4.8 Labour and Birth Where Care is Transferred by a Participating Midwife - (Items 16527 to 16528)

Where the intrapartum care of a patient is transferred to a medical practitioner by a participating midwife for the management of birth, item 16527 or 16528 would apply depending on the service provided.

Where care is transferred by a participating midwife prior to the commencement of labour, items 16519 or 16522 would apply.

TN.4.9 Items for Planning and Management of a Pregnancy (Item 16590 and 16591)

Item 16590 is intended to provide for the planning and management of pregnancy that has progressed beyond 28 weeks, where the medical practitioner is intending to undertake the birth for a privately admitted patient.

Item 16591 is for the planning and management of a pregnancy that has progressed beyond 28 weeks and the medical practitioner is providing shared antenatal care and is not intending to undertake the birth.

Items 16590 and 16591 are to include the provision of a mental health assessment of the patient. Both items are subject to Extended Medicare Safety Net caps and should only be claimed by a patient once per pregnancy.

TN.4.10 Post-Partum Care - (Items 16515 to 16520 and 16564 to 16573)

The Schedule fees and benefits payable for Items 16519 and 16520 cover all postnatal attendances on the mother and the baby, except in the following circumstances:-

- (i) where the medical services rendered are outside those covered by a consultation, e.g., blood transfusion;
- (ii) where the condition of the mother and/or baby is such as to require the services of another practitioner (e.g., paediatrician, gynaecologist, etc);
- (iii) where the patient is transferred, at arms length, to another medical practitioner for routine post-partum, care (eg mother and/or baby returning from a larger centre to a country town or transferring between hospitals following confinement). In such cases routine postnatal attendances attract benefits on an attendance basis. The transfer of a patient within a group practice would not qualify for benefits under this arrangement except in the case of Items 16515 and 16518. These items cover those occasions when a patient is handed over while in labour from the practitioner who under normal circumstances would have delivered the baby, but because of compelling circumstances decides to transfer the patient to another practitioner for the birth;
- (iv) where during the postnatal period a condition occurs which requires treatment outside the scope of normal postnatal care;
- (v) in the management of premature babies (i.e. babies born prior to the end of the 37th week of pregnancy or where the birth weight of the baby is less than 2500 grams) during the period that close supervision is necessary.

Normal postnatal care by a medical practitioner would include:-

- (i) uncomplicated care and check of

- lochia
 - fundus
 - perineum and vulva/episiotomy site
 - temperature
 - bladder/urination
 - bowels
- (ii) advice and support for establishment of breast feeding
 - (iii) psychological assessment and support
 - (iv) Rhesus status
 - (v) Rubella status and immunisation
 - (vi) contraception advice/management

Examinations of apparently normal newborn infants by consultant or specialist paediatricians do not attract benefits

Items 16564 to 16573 relate to postnatal complications and should not be itemised in respect of a normal birth. To qualify for benefits under these items, the patient is required to be transferred to theatre, or be administered general anaesthesia or epidural injection for the performance of the procedure. Utilisation of the items will be closely monitored to ensure appropriate usage.

TN.4.11 Interventional Techniques - (Items 16600 to 16627, 35518 and 35674)

For Items 16600 to 16627, 35518 and 35674 there is no component in the Schedule fee for the associated ultrasound. Benefits are attracted for the ultrasound under the appropriate items in Group I1 of the Diagnostic Imaging Services Table. If diagnostic ultrasound is performed on a separate occasion to the procedure, benefits would be payable under the appropriate ultrasound item.

Item 51312 provides a benefit for assistance by a medical practitioner at interventional techniques covered by Items 16606, 16609, 16612, 16615, and 16627.

TN.4.13 Mental Health Assessments for Obstetric Patients (Items 16590, 16591, 16407)

Items for the planning and management of pregnancy (16590 and 16591) and for a postnatal attendance between 4 and 8 weeks after birth (16407), include a mental health assessment of the patient, including screening for drug and alcohol use and domestic violence, to be performed by the clinician or another suitably qualified health professional on behalf of the clinician. A mental health assessment must be offered to each patient, however, if the patient chooses not to undertake the assessment, this does not preclude a rebate being payable for these items.

It is recommended that mental health assessments associated with items 16590, 16591, and 16407 be conducted in accordance with the National Health and Medical Research Council (NHMRC) endorsed guideline: *Mental Health Care in the Perinatal Period: Australian Clinical Practice Guideline* – October 2017, Centre for Perinatal Excellence.

Results of the mental health assessment must be recorded in the patient's medical record. A record of a patient's decision not to undergo a mental health assessment must be recorded in the patient's clinical notes.

TN.4.14 Extended Medicare Safety Net (EMSN) for Obstetric Services (Items 16531, 16533 and 16534)

The Extended Medicare Safety Net (EMSN) benefit is capped at 65% of the schedule fee for obstetric items 16531, 16533, and 16534. However, as these items are for in-hospital services only, the EMSN does not apply

TN.4.15 COVID-19 Obstetric MBS Telehealth and Telephone attendance items

COVID-19 MBS telehealth and phone attendance items by obstetricians, general practitioners, midwives, nurse and Aboriginal and Torres Strait Islander health practitioners.

The intent of these temporary items is to allow practitioners to provide certain MBS attendances remotely (by videoconference or telephone), in response to COVID-19 pandemic. This can only be done where it is safe, in accordance with relevant professional standards and clinically appropriate to do so.

COVID-19 MBS telehealth services by videoconference is the preferred approach for substituting a face-to-face consultation. However, providers will also be able to offer audio-only services via telephone if video is not available, for which there are separate items.

COVID-19 – TEMPORARY MBS TELEHEALTH ITEMS

OBSTETRICIANS, GPs, MIDWIVES, NURSES OR ABORIGINAL AND TORRES STRAIT ISLANDER HEALTH PRACTITIONERS ATTENDANCES (from 13 March 2020)

As of 20 April 2020 bulk billing of specialist services is at the discretion of the provider, so long as informed financial consent is obtained prior to the provision of the service.

Service	Existing Items <i>face to face</i>	Telehealth Items - <i>video conference</i>	Telephone items - <i>for when video conferencing is not available</i>
Antenatal Service provided by a Nurse, Midwife or an Aboriginal and Torres Strait Islander health practitioner on behalf of, and under the supervision of, a medical practitioner	16400	91850	91855
Postnatal attendance by an obstetrician or GP	16407	91851	91856
Postnatal attendance by: (i) a midwife (on behalf of and under the supervision of the medical practitioner who attended the birth); or (ii) an obstetrician; or (iii) a general practitioner	16408	91852	91857
Antenatal attendance	16500	91853	91858

Further information related to services rendered by an obstetrician/general practitioner/midwife/nurse or Aboriginal and Torres Strait Islander health practitioner can be found in the [Temporary Telehealth Bulk-Billed Items for COVID-19 fact sheets](#).

All MBS items for referred attendances require a valid referral. However, if the obstetrician has previously seen the patient under a referral that is still valid, there is no need to obtain a specific referral for the purposes of claiming the COVID-19 items.

Restrictions

- Phone attendance items only apply if either the practitioner or the patient do not have the capacity to undertake the attendance by telehealth (videoconference).
- The new remote attendance items are to be billed **instead** of the usual face to face MBS items.
- Services do not apply to admitted patients.

Billing Requirements

As of 20 April 2020 bulk billing of specialist services is at the discretion of the provider, so long as informed financial consent is obtained prior to the provision of the service.

Further information on the assignment of benefit for bulk billed temporary COVID-19 MBS telehealth services can be found in the [‘Provider Frequently Asked Questions’ at MBSonline.gov.au](#).

Relevant definitions and requirements

For the purposes of these items, **admitted patient** means a patient who is receiving a service that is provided:

- a. as part of an episode of hospital treatment; or
- b. as part of an episode of hospital substitute treatment in respect of which the person to whom the treatment is provided chooses to receive a benefit from a private health insurer.

Note: “hospital treatment” and “hospital-substitute treatment” have the meaning given by subsection 3(1) of the *Health Insurance Act 1973*.

Mental Health Assessments for Obstetric Patients (Items 91851 and 91856)

The COVID-19 items for a postnatal attendance between 4 and 8 weeks after birth (91851 and 91856) include a mental health assessment of the patient, including screening for drug and alcohol use and domestic violence. A mental health assessment must be offered to each patient, however, if the patient chooses not to undertake the assessment, this does not preclude a rebate being payable for these items.

It is recommended that mental health assessments associated with items 91851 and 91856 be conducted in accordance with the National Health and Medical Research Council (NHMRC) endorsed guideline: Mental Health Care in the Perinatal Period: Australian Clinical Practice Guideline – October 2017, Centre for Perinatal Excellence.

It is expected that the results of the mental health assessment be recorded in the patient’s medical record. A record of a patient’s decision not to undergo a mental health assessment should also be recorded in the patient’s clinical notes

Technical Requirements

The services can be provided by telehealth, or in circumstances when video conferencing is unavailable, by phone.

Telehealth attendance means a professional attendance by video conference where the health practitioner:

- a. has the capacity to provide the full service through this means safely and in accordance with relevant professional standards; and

- b. is satisfied that it is clinically appropriate to provide the service to the patient; and
- c. maintains a visual and audio link with the patient; and
- d. is satisfied that the software and hardware used to deliver the service meets the applicable laws for security and privacy.

Note –only the time where both a visual and audio link is maintained between the patient and the provider can be counted in meeting the relevant item descriptor for telehealth items.

No specific equipment is required to provide Medicare-compliant telehealth services. Practitioners must ensure that their chosen telecommunications solution meets their clinical requirements and satisfies privacy laws. Information on how to select a web conferencing solution is available on the [Australian Cyber Security Centre website](#).

Phone attendance means a professional attendance by telephone where the health practitioner:

- a. has the capacity to provide the full service through this means safely and in accordance with professional standards; and
- b. is satisfied that it is clinically appropriate to provide the service to the patient; and
- c. maintains an audio link with the patient.

Note: A telephone attendance can only be performed in instances where the attendance could not be performed by telehealth (i.e. videoconference).

There are no geographic restrictions on telehealth and telephone services using items 91851, 91852, 91853, 91856, 91857, 91858. In addition, the patient and the practitioner are not required to be a minimum distance apart by road (usually 15 kilometres) when the service is provided.

Where there are restrictions on the number of services for the face to face items that are mirrored, these restrictions will also apply to the new COVID-19 items.

Recording Clinical Notes

In relation to the time taken in recording appropriate details of the service, only clinical details recorded at the time of the attendance count towards the time of consultation. It does not include information added later, such as reports of investigations.

Clinicians should retain for their records the date, time and duration of the consultation.

Creating and Updating a My Health Record

The time spent by a medical practitioner on the following activities may be counted towards the total consultation time:

- Reviewing a patient's clinical history, in the patient's file and/or the My Health Record, and preparing or updating a Shared Health Summary where it involves the exercise of clinical judgement about what aspects of the clinical history are relevant to inform ongoing management of the patient's care by other providers; or
- Preparing an Event Summary for the episode of care.

Preparing or updating a Shared Health Summary and preparing an Event Summary are clinically relevant activities. When either of these activities are undertaken with any form of patient history taking and/or the other clinically relevant activities that can form part of a consultation, the item that can be billed is the one with the time period that matches the total consultation time.

MBS rebates are not available for creating or updating a Shared Health Summary as a standalone service.

Antenatal Care - (Items 91853 and 91858)

In addition to routine antenatal attendances covered by items 91853 and 91858, the following services, where rendered during the antenatal period, attract benefits:

- a. Items 16501, 16502, 16505, 16508, 16509 (but not normally before the 24th week of pregnancy), 16511, 16512, 16514, 16533, 16534 and 16600 to 16627.
- b. The initial consultation at which pregnancy is diagnosed.
- c. The first referred consultation by a specialist obstetrician when called in to advise on the pregnancy.
- d. All other services, excluding those in Category 1 and Group T4 of Category 3 not mentioned above.
- e. Treatment of an intercurrent condition not directly related to the pregnancy.

Item 16514 relates to antenatal cardiotocography in the management of high risk pregnancy. Benefits for this service are not attracted when performed during the course of the labour and birth.

Antenatal Service Provided by a Nurse, Midwife or an Aboriginal and Torres Strait Islander health practitioner - (Items 91850 and 91855)

Items 91850 and 91855 can only be claimed by a medical practitioner (including a vocationally registered or non-vocationally registered GP, a specialist or a consultant physician) where an antenatal service is provided to a patient by a midwife, nurse or Aboriginal and Torres Strait Islander health practitioner on behalf of the medical practitioner.

Evidence based national or regional guidelines should be used in the delivery of this antenatal service.

A midwife means a registered midwife who holds a current practising certificate as a midwife issued by a State or Territory regulatory authority and who is employed by, or whose services are otherwise retained by, the medical practitioner or a practice operated by a medical practitioner.

A nurse means a registered or enrolled nurse who holds a current practising certificate as a nurse issued by a State or Territory regulatory authority and who is employed by, or whose services are otherwise retained by, the medical practitioner or their practice. The nurse must have appropriate training and skills to provide an antenatal service.

An Aboriginal and Torres Strait Islander health practitioner means a person who has been registered as an Aboriginal and Torres Strait Islander health practitioner by the Aboriginal and Torres Strait Islander Health Practice Board of Australia and meets the Board's registration standards. The Aboriginal and Torres Strait Islander health practitioner must be employed or retained by a general practice, or by a health service that has an exemption to claim Medicare benefits under subsection 19(2) of the *Health Insurance Act 1973*.

An Aboriginal and Torres Strait Islander health practitioner may use any of the titles authorised by the Aboriginal and Torres Strait Islander Health Practice Board: Aboriginal health practitioner; Aboriginal and Torres Strait Islander health practitioner; or Torres Strait Islander health practitioner. The midwife, nurse or Aboriginal and Torres Strait Islander health practitioner must also comply with any relevant legislative or regulatory requirements regarding the provision of the antenatal service. The medical practitioner under whose supervision the antenatal service is provided retains responsibility for the health, safety and clinical outcomes of the patient. The medical practitioner must be satisfied that the midwife, nurse or Aboriginal and Torres Strait Islander health practitioner is appropriately registered, qualified and trained, and covered by indemnity insurance to undertake antenatal services.

Supervision at a distance is recognised as an acceptable form of supervision. This means that the medical practitioner does not have to be physically present at the time the service is provided. However, the medical practitioner should be able to be contacted if required.

The medical practitioner is not required to see the patient or to be present while the antenatal service is being provided by the midwife, nurse or Aboriginal and Torres Strait Islander health practitioner. It is up to the medical practitioner to decide whether they need to consult with the patient. Where a consultation with the medical practitioner has taken place prior to or following the antenatal service, the medical practitioner is entitled to claim for their own professional service, but items 91850 and 91855 cannot be claimed in these circumstances.

Items 91850 and 91855 cannot be claimed in conjunction with another antenatal attendance item for the same patient, on the same day by the same practitioner.

A bulk billing incentive item (10990, 10991 or 10992) cannot be claimed in conjunction with items 91850 and 91855. An incentive payment is incorporated into the schedule fee.

Items 91850 and 91855 can only be claimed 10 times per pregnancy in total, including services claimed under item 16400.

None of the items, including 91850 and 91855, can be claimed for an admitted patient of a hospital.

TN.6.1 Pre-anaesthesia Consultations by an Anaesthetist - (Items 17610 to 17625)

Pre-anaesthesia consultations are covered by items in the range 17610 - 17625.

Pre-anaesthesia consultations comprise 4 time-based items utilising 15 minute increments up to and exceeding 45 minutes, in conjunction with content-based descriptors. A pre-anaesthesia consultation will attract benefits under the appropriate items based on **BOTH** the duration of the consultation **AND** the complexity of the consultation in accordance with the requirements outlined in the content-based item descriptions.

Whether or not the proposed procedure proceeds, the pre-anaesthetic attendance will attract benefits under the appropriate consultation item in the range 17610 - 17625, as determined by the duration and content of the consultation.

The following provides further guidance on utilisation of the appropriate items in common clinical situations:

(i) Item 17610 (15 mins or less) - a pre-anaesthesia consultation of a straightforward nature occurring prior to investigative procedures and other routine surgery. This item covers routine pre-anaesthesia consultation services including the taking of a brief history, a limited examination of the patient including the cardio-respiratory system and brief discussion of an anaesthesia plan with the patient.

(ii) Item 17615 (16-30 mins) - a pre-anaesthesia consultation of between 16 to 30 minutes duration **AND** significantly greater complexity than that required under item 17610. To qualify for benefits patients will be undergoing advanced surgery or will have complex medical problems. The consultation will involve a more extensive examination of the patient, for example: the cardio-respiratory system, the upper airway, anatomy relevant to regional anaesthesia and invasive monitoring. An anaesthesia plan of management should be formulated, of which there should be a written record included in the patient notes.

(iii) Item 17620 (31-45 mins) - a pre-anaesthesia consultation of high complexity involving all of the requirements of item 17615 and of between 31 to 45 minutes duration. The pre-anaesthesia consultation will also involve evaluation of relevant patient investigations and the formulation of an anaesthesia plan of management of which there should be a written record in the patient notes.

(iv) Item 17625 (more than 45 mins) - a pre-anaesthesia consultation of high complexity involving all of the requirements of item 17615 and item 17620 and of more than 45 minutes duration. The pre-anaesthesia consultation will also involve evaluation of relevant patient investigations as well as discussion of the patient's medical condition and/or anaesthesia plan of management with other relevant healthcare professionals. An anaesthesia plan of management should be formulated, of which there should be a written record included in the patient notes.

Some examples of advanced surgery that may require a longer consultation under items 17615-17625 would include:

- Bowel resection

- Caesarean section
- Neonatal surgery
- Major laparotomies
- Radical cancer resection
- Major reconstructive surgery eg free flap transfers, breast reconstruction
- major joint arthroplasty
- joint reconstruction
- Thoracotomy
- Craniotomy
- Spinal surgery eg spinal fusion, discectomy
- Major vascular surgery eg aortic aneurysm repair, arterial bypass surgery, carotid artery endarterectomy

Some examples of complex medical problems in relation to items 17615-17625 would include:

- Major cardiac problems - e.g cardiomyopathy, unstable ischaemic heart disease, heart failure
- Major respiratory disease - e.g COPD, respiratory failure, acute lung conditions eg. infection and asthma,
- Major neurological conditions - CVA, intra/extra cerebral haemorrhage, cerebral palsy and/or major intellectual disability, degenerative conditions of the CNS
- Major metabolic conditions - e.g unstable diabetes, uncontrolled hyperthyroidism, renal failure, liver failure, immune deficiency
- Anaesthetic problems - eg past history of awareness, known or anticipated difficulty with securing the airway, malignant hyperpyrexia, drug allergy,
- Other conditions -
 - patients with history of stroke/TIA's presenting for vascular surgery
 - patients on anti-platelet agents presenting for major surgery requiring management of anticoagulant status
 - patients with poor respiratory/cardiac function presenting for major surgery requiring management of perioperative medications, analgesia and monitoring

NOTE I:

It is important to note that:

- patients undergoing the types of advanced surgery listed above but who are otherwise of reasonable health and who, therefore, do not require a longer pre-anaesthesia consultation as provided for under items 17615-17625, would qualify for benefits under item 17610; and
- not all patients with complex medical problems will qualify for a longer consultation under items 17615-17625. For example, patients who have reasonably stable diabetes may only require a short consultation, covered under item 17610. Similarly, patients with reasonably well controlled emphysema (COPD) undergoing minor surgery may only require a short pre-anaesthesia consultation (item 17610), whereas the same patient scheduled for an upper

abdominal laparotomy and with recent onset angina with the possible need for ICU postoperatively may require a longer consultation.

NOTE II:

- Consultation services covered by pain specialists items in the range 2801-3000 cannot be claimed in conjunction with items 17610-17625
- The consultation time under items 17610 - 17625 only applies to the period of active attendance on the patient and does not include time spent in discussion with other health care practitioners.
- The requirement of a written patient management plan in items 17615-17625 or the discussion of the management plan with other health care professions, where this occurs, does not relate to and cannot be claimed in conjunction GP Management Plans, Team Care Arrangements, Multidisciplinary Care Plans or Case Conference items in Group A15 of the MBS.

TN.6.2 Referred Anaesthesia Consultations - (Items 17640 to 17655)

Referred anaesthesia consultations (other than pre-anaesthesia attendances) where the patient is referred will be covered by new items in the range 17640 - 17655. These new items replace the use of specialist referred items 104 and 105. Items 104 and 105 will no longer apply to referred anaesthesia consultations provided by specialist anaesthetists.

Referred anaesthesia consultations comprise 4 time-based items utilising 15 minute increments up to and exceeding 45 minutes, in conjunction with content-based descriptors. Services covered by these specialist referred items include consultations in association with the following:

(i) Acute pain management

- Postoperative, utilising specialised techniques eg Patient Controlled Analgesia System (PCAS)
- as an independent service eg pain control following fractured ribs requiring nerve blocks
- obstetric pain management

(ii) Perioperative management of patients

- postoperative management of cardiac, respiratory and fluid balance problems following major surgery
- vascular access procedures (other than intra-operative peripheral vascular access procedures)

Items 17645 - 17655 will involve the examination of multiple systems and the formulation of a written management plan. Items 17650 and 17655 would also entail the ordering and/or evaluation of relevant patient investigations.

NOTE :

- It should be noted that the consultation time under items 17640 - 17655 only applies to the period of active attendance on the patient and does not include time spent in discussion with other health care practitioners.
- Consultation services covered by pain medicine specialist items in the range 2801-3000 cannot be claimed in conjunction with items 17640 - 17655.
- The requirement of a written patient management plan in items 17645-17655 or the discussion of the management plan with other health care professions, where this occurs, does not relate to and cannot be claimed in conjunction GP Management Plans, Team Care Arrangements, Multidisciplinary Care Plans or Case Conference items in Group A15 of the MBS.

It would be expected that in the vast majority of cases, the insertion of a peripheral venous cannula (other than in association with anaesthesia) where the patient is referred, would attract benefit under item 17640. However, in exceptional clinical circumstances, where the procedure is considerably more difficult and exceeds 15 minutes, such as for patients with chronic disease undergoing long term intravenous therapy, paediatric patients or patients having chemotherapy, item 17645 would apply.

TN.6.3 Anaesthetist Consultations - Other - (Items 17680, 17690)

A consultation occurring immediately before the institution of major regional blockade for a patient in labour is covered by item 17680.

Item 17690 can only be claimed where all of the conditions set out in (a) to (d) of item 17690 have been met.

Item 17690 can only be claimed in conjunction with a service covered by items 17615, 17620, or 17625.

Item 17690 cannot be claimed where the pre-anaesthesia consultation covered by items 17615, 17620 or 17625 is provided on the same day as admission to hospital for the subsequent episode of care involving anaesthesia services.

NOTE: Consultation services covered by pain medicine specialist items in the range 2801-3000 cannot be claimed in conjunction with anaesthesia consultation items 17610 - 17690.

TN.7.1 Regional or Field Nerve Blocks - General

A nerve block is interpreted as the anaesthetising of a substantial segment of the body innervated by a large nerve or an area supplied by a smaller nerve where the technique demands expert anatomical knowledge and a high degree of precision.

Where anaesthesia combines a regional nerve block with general anaesthesia for an operative procedure, benefit will be paid only under the relevant anaesthesia item as set out in Group T10.

Where a regional or field nerve block is administered by a medical practitioner other than the practitioner carrying out the operation, the block attracts benefits under the Group T10 anaesthesia item and not the block item in Group T7.

If not stipulated in the item descriptor, when a regional nerve block or field nerve block covered by an item in Group T7 of the Schedule is administered by a medical practitioner in the course of a surgical procedure undertaken by the same medical practitioner, then such a block will attract benefit under the appropriate item in Group T7.

If stipulated in the item descriptor, when a regional nerve block or field nerve block covered by an item in Group T7 of the Schedule is administered by a medical practitioner in the course of a surgical procedure the block will not attract benefit under the relevant item in Group T7 unless the block has been performed using a targeted percutaneous approach. If the block has been performed using a targeted percutaneous approach this must be noted on the Medicare claim.

When a block is carried out in cases not associated with an operation, such as for pain or during labour, the service falls under Group T7.

Digital ring analgesia, local infiltration into tissue surrounding a lesion or paracervical (uterine) analgesia are not eligible for the payment of Medicare benefits under items within Group T7. Where procedures are carried out with local infiltration or digital block as the means of anaesthesia, that anaesthesia is considered to be part of the procedure.

TN.7.2 Maintenance of Regional or Field Nerve Block - (Items 18222 and 18225)

Medicare benefit is attracted under these items only when the service is performed other than by the operating surgeon. This does not preclude benefits for an obstetrician performing an epidural block during labour.

When the service is performed by the operating surgeon during the post-operative period of an operation it is considered to be part of the normal aftercare. In these circumstances a Medicare benefit is not attracted.

TN.7.3 Intrathecal or Epidural Injection - (Items 18230 and 18232)

Items 18230 and 18232 cover caudal infusion/injection.

Item 18230 includes the intrathecal or epidural injection of a neurolytic substance for the palliative treatment of pain.

TN.7.4 Intrathecal or Epidural Infusion - (Items 18226 and 18227)

Items 18226 and 18227 apply where intrathecal or epidural analgesia is required for obstetric patients in the after hours period. For these items, the after hours period is defined as the period from 8pm to 8am on any weekday, or any time on a Saturday, Sunday or a public holiday.

Medicare benefits are only payable under item 18227 where more than 50% of the service is provided in the after hours period, otherwise benefits would be payable under item 18219.

TN.7.5 Regional or Field Nerve Blocks - (Items 18234 to 18298)

Items in the range 18234 - 18298 are intended to cover the injection of anaesthetic into the nerve or nerve sheath and not for the treatment of carpal tunnel or similar compression syndromes.

Paravertebral nerve block item 18276 covers the provision of regional anaesthesia for surgical and related procedures for the management acute pain or of chronic pain related to radiculopathy. Blockade of lumbar paravertebral nerves should be claimed under 18276. Infiltration of the soft tissue of the paravertebral area for the treatment of other pain symptoms does not attract benefit under this item. Additionally, item 18276 does not cover zygo-apophyseal joint blocks/injections. This procedure is covered under item 39013.

Item 18292 may not be claimed for the injection of botulinum toxin, but may be claimed where a neurolytic agent (such as phenol) is used to treat the obturator nerve in patients receiving botulinum toxin injections under item 18354 for a dynamic foot deformity.

TN.7.6 Services performed under image guidance (Items 18290, 18292, 18294, 18296, 39013, 39014, 39100)

These services must be performed under image guidance.

Imaging items can be co-claimed with these items when indicated.

TN.8.1 Surgical Operations

Many items in Group T8 of the Schedule are qualified by one of the following phrases:

- "as an independent procedure";

- "not being a service associated with a service to which another item in this Group applies"; or
- "not being a service to which another item in this Group applies"

An explanation of each of these phrases is as follows.

As an Independent Procedure

The inclusion of this phrase in the description of an item precludes payment of benefits when:-

- (i) a procedure so qualified is associated with another procedure that is performed through the same incision, e.g. nephrostomy (Item 36552) in the course of an open operation on the kidney for another purpose;
- (ii) such procedure is combined with another in the same body area, e.g. direct examination of larynx (Item 41501) with another operation on the larynx or trachea;
- (iii) the procedure is an integral part of the performance of another procedure, e.g. removal of foreign body (Item 30068) in conjunction with debridement of deep or extensive contaminated wound of soft tissue, including suturing of that wound when performed under general anaesthetic (Item 30023).

Not Being a Service Associated with a Service to which another Item in this Group Applies

"Not being a service associated with a service to which another item in this Group applies" means that benefit is not payable for any other item in that Group when it is performed on the same occasion as this item. eg item 30666.

"Not being a service associated with a service to which Item applies" means that when this item is performed on the same occasion as the reference item no benefit is payable. eg item 31526.

Not Being a Service to which another Item in this Group Applies

"Not being a service to which another item in this Group applies" means that this item may be itemised if there is no specific item relating to the service performed, e.g. Item 37351 URETHROPLASTY, not being a service to which another item in this Group applies. Benefits may be attracted for an item with this qualification as well as benefits for another service during the course of the same operation.

TN.8.2 Multiple Operation Rule

The fees for two or more operations, listed in Group T8 (other than Subgroup 12 of that Group), performed on a patient on the one occasion are calculated by the following rule:-

- 100% for the item with the greatest Schedule fee
- plus 50% for the item with the next greatest Schedule fee
- plus 25% for each other item.

Note:

- (a) Fees so calculated which result in a sum which is not a multiple of 5 cents are to be taken to the next higher multiple of 5 cents.
- (b) Where two or more operations performed on the one occasion have Schedule fees which are equal, one of these amounts shall be treated as being greater than the other or others of those amounts.
- (c) The Schedule fee for benefits purposes is the aggregate of the fees calculated in accordance with the above formula.

(d) For these purposes the term "operation" only refers to all items in Group T8 (other than Subgroup 12 of that Group).

This rule does not apply to an operation which is one of two or more operations performed under the one anaesthetic on the same patient if the medical practitioner who performed the operation did not also perform or assist at the other operation or any of the other operations, or administer the anaesthetic. In such cases the fees specified in the Schedule apply.

Where two medical practitioners operate independently and either performs more than one operation, the method of assessment outlined above would apply in respect of the services performed by each medical practitioner.

If the operation comprises a combination of procedures which are commonly performed together and for which a specific combined item is provided in the Schedule, it is regarded as the one item and service in applying the multiple operation rule.

There are a number of items in the Schedule where the description indicates that the item applies only when rendered in association with another procedure. The Schedule fees for such items have therefore been determined on the basis that they would always be subject to the "multiple operation rule".

Where the need arises for the patient to be returned to the operating theatre on the same day as the original procedure for further surgery due to post-operative complications, which would not be considered as normal aftercare - see note TN.8.4, such procedures would generally not be subject to the "multiple operation rule". Accounts should be endorsed to the effect that they are separate procedures so that a separate benefit may be paid.

Extended Medicare Safety Net Cap

The Extended Medicare Safety Net (EMSN) benefit cap for items subject to the multiple operations rule, where all items in that claim are subject to a cap are calculated from the abated (reduced) schedule fee.

For example, if an item has a Schedule fee of \$100 and an EMSN benefit cap equal to 80 per cent of the schedule fee, the calculated EMSN benefit cap would be \$80. However, if the schedule fee for the item is reduced by 50 per cent in accordance with the multiple operations rule provisions, and all items in that claim carry a cap, the calculated EMSN benefit cap for the item is \$40 (50% of \$100*80%).

TN.8.3 Procedure Performed with Local Infiltration or Digital Block

It is to be noted that where a procedure is carried out with local infiltration or digital block as the means of anaesthesia, that anaesthesia is considered to be part of the procedure and an additional benefit is therefore not payable.

TN.8.4 Aftercare (Post-operative Treatment)

Definition

Section 3(5) of the *Health Insurance Act 1973* states that services included in the Schedule (other than attendances) include all professional attendances necessary for the purposes of post-operative treatment of the patient. For the purposes of this book, post-operative treatment is generally referred to as "aftercare".

Aftercare is deemed to include all post-operative treatment rendered by medical specialists and consultant physicians, and includes all attendances until recovery from the operation, the final check or examination, regardless of whether the attendances are at the hospital, private rooms, or the patient's home. Aftercare need not necessarily be limited to treatment given by the surgeon or to treatment given by any one medical practitioner.

If the initial procedure is performed by a general practitioner, normal aftercare rules apply to any post-operative service provided by the same practitioner.

The medical practitioner determines each individual aftercare period depending on the needs of the patient as the amount and duration of aftercare following an operation may vary between patients for the same operation, as well as between different operations.

Private Patients

Medicare will not normally pay for any consultations during an aftercare period as the Schedule fee for most operations, procedures, fractures and dislocations listed in the MBS item includes a component of aftercare.

There are some instances where the aftercare component has been excluded from the MBS item and this is clearly indicated in the item description.

There are also some minor operations that are merely stages in the treatment of a particular condition. As such, attendances subsequent to these services should not be regarded as aftercare but rather as a continuation of the treatment of the original condition and attract benefits. Likewise, there are a number of services which may be performed during the aftercare period for pain relief which would also attract benefits. This includes all items in Groups T6 and T7, and items 39013, 39100, 39110, 39014, 39111, 39116, 39117, 39118, 39119, 39121, 39127, 39130, 39133, 39136, 39324 and 39327.

Where there may be doubt as to whether an item actually does include the aftercare, the item description includes the words "including aftercare".

If a service is provided during the aftercare phase for a condition not related to the operation, then this can be claimed, provided the account identifies the service as 'Not normal aftercare', with a brief explanation of the reason for the additional services.

If a patient was admitted as a private patient in a public hospital, then unless the MBS item does not include aftercare, no Medicare benefits are payable for aftercare.

Medicare benefits are not payable for surgical procedures performed primarily for cosmetic reasons. However, benefits are payable for certain procedures when performed for specific medical reasons, such as breast reconstruction following mastectomy. Surgical procedures not listed on the MBS do not attract a Medicare benefit.

Where an initial or subsequent consultation relates to the assessment and discussion of options for treatment and, a cosmetic or other non-rebatable service are discussed, this would be considered a rebatable service under Medicare. Where a consultation relates entirely to a cosmetic or other non-Medicare rebatable service (either before or after that service has taken place), then that consultation is not rebatable under Medicare. Any aftercare associated with a cosmetic or non-Medicare rebatable service is also not rebatable under Medicare.

Public Patients

All care directly related to a public in-patient's care should be provided free of charge. Where a patient has received in-patient treatment in a hospital as a public patient (as defined in Section 3(1) of the *Health Insurance Act 1973*), routine and non-routine aftercare directly related to that episode of admitted care will be provided free of charge as part of the public hospital service, regardless of where it is provided, on behalf of the state or territory as required by the National Healthcare Agreement. In this case no Medicare benefit is payable.

Notwithstanding this, where a public patient independently chooses to consult a private medical practitioner for aftercare, then the clinically relevant service provided during this professional attendance will attract Medicare benefits.

Where a public patient independently chooses to consult a private medical practitioner for aftercare following treatment from a public hospital emergency department, then the clinically relevant service provided during this professional attendance will attract Medicare benefits.

Fractures

Where the aftercare for fractures is delegated to a doctor at a place other than where the initial reduction was carried out, then Medicare benefits may be apportioned on a 50:50 basis rather than on the 75:25 basis for surgical operations.

Where the reduction of a fracture is carried out by hospital staff in the out-patient or emergency department of a public hospital, and the patient is then referred to a private practitioner for aftercare, Medicare benefits are payable for the aftercare on an attendance basis.

The following table shows the period which has been adopted as reasonable for the after-care of fractures:-

Treatment of fracture of	After-care Period
Terminal phalanx of finger or thumb	6 weeks
Proximal phalanx of finger or thumb	6 weeks
Middle phalanx of finger	6 weeks
One or more metacarpals not involving base of first carpometacarpal joint	6 weeks
First metacarpal involving carpometacarpal joint (Bennett's fracture)	8 weeks
Carpus (excluding navicular)	6 weeks
Navicular or carpal scaphoid	3 months
Colles'/Smith/Barton's fracture of wrist	3 months
Distal end of radius or ulna, involving wrist	8 weeks
Radius	8 weeks
Ulna	8 weeks
Both shafts of forearm or humerus	3 months
Clavicle or sternum	4 weeks
Scapula	6 weeks
Pelvis (excluding symphysis pubis) or sacrum	4 months
Symphysis pubis	4 months
Femur	6 months
Fibula or tarsus (excepting os calcis or os talus)	8 weeks
Tibia or patella	4 months
Both shafts of leg, ankle (Potts fracture) with or without dislocation, os calcis (calcaneus) or os talus	4 months
Metatarsals - one or more	6 weeks
Phalanx of toe (other than great toe)	6 weeks
More than one phalanx of toe (other than great toe)	6 weeks
Distal phalanx of great toe	8 weeks
Proximal phalanx of great toe	8 weeks
Nasal bones, requiring reduction	4 weeks
Nasal bones, requiring reduction and involving osteotomies	4 weeks
Maxilla or mandible, unilateral or bilateral, not requiring splinting	6 weeks
Maxilla or mandible, requiring splinting or wiring of teeth	3 months
Maxilla or mandible, circumosseous fixation of	3 months
Maxilla or mandible, external skeletal fixation of	3 months

Zygoma	6 weeks
Spine (excluding sacrum), transverse process or bone other than vertebral body requiring immobilisation in plaster or traction by skull calipers	3 months
Spine (excluding sacrum), vertebral body, without involvement of cord, requiring immobilisation in plaster or traction by skull calipers	6 months
Spine (excluding sacrum), vertebral body, with involvement of cord	6 months

Note: This list is a guide only and each case should be judged on individual merits.

TN.8.5 Abandoned surgery - (Item 30001)

Item 30001 applies when a procedure has commenced, but is then discontinued for medical reasons, or for other reasons which are beyond the surgeon's control (eg equipment failure).

An operative procedure commences when:

- a) The patient is in the procedure room or on the bed or operation table where the procedure is to be performed; and
- b) The patient is anaesthetised or operative site is sufficiently anaesthetised for the procedure to commence; and
- c) The patient is positioned or the operative site which is prepared with antiseptic or draping.

Where an abandoned procedure eligible for a benefit under item 30001 attracts an assistant under the provisions of the items listed in Group T9 (Assistance at Operations), the fee for the surgical assistant is calculated as 50% of the assistance fee that would have applied under the relevant item from Group T9.

Practitioners claiming an assistant fee for abandoned surgery should itemise their accounts with the relevant item from group T9. Such claims should include an account endorsement "assistance at abandoned surgery" or similar.

Under the *Health Insurance Act 1973* the Chief Executive Medicare does not require claims for this item to be accompanied by details of the proposed surgery and the reasons why the operation was discontinued. However, practitioners must maintain a clinical record of this information, which may be subject to audit.

TN.8.6 Repair of Wound - (Items 30023 to 30049)

The repair of wound referred to in these items must be undertaken by suture, tissue adhesive resin (such as methyl methacrylate) or clips. These items do not cover repair of wound at time of surgery.

Item 30023 covers debridement of traumatic, "deep or extensively contaminated" wound. Benefits are not payable under this item for debridement which would be expected to be encountered as part of an operative approach to the treatment of fractures.

For the purpose of items 30026 to 30049 the term 'superficial' means affecting skin and subcutaneous tissue including fat and the term 'deeper tissue' means all tissues deep to but not including subcutaneous tissue such as fascia and muscle.

TN.8.7 Biopsy for Diagnostic Purposes - (Items 30071 to 30094 and 30820)

Needle aspiration biopsy attracts benefits on an attendance basis and not under item 30078.

Item 30071 (diagnostic biopsy of the skin) or 30072 (diagnostic biopsy of mucous membrane) should be used when a biopsy (including shave) of a lesion is required to confirm a diagnosis and would facilitate the appropriate management of that lesion. If the shave biopsy results in a definitive excision of the lesion, only 30071 or 30072 can be claimed.

Items 30071-30094 and 30820 require that the specimen be sent for pathological examination.

The aftercare period for item 30071 or 30072 is 2 days rather than the standard aftercare period for skin excision of 10 days.

TN.8.8 Lipectomy - (Items 30166, 30169, 30177 and 30179)

Lipectomy is not intended as a primary bariatric procedure to correct obesity. MBS benefits are not available for surgery performed for cosmetic purposes.

For the purpose of informing patient eligibility for lipectomy items (30166, 30169, 30177 and 30179) for the management of significant weight loss (SWL), SWL is defined as a weight loss equivalent to at least five body mass index (BMI) units. Weight must have been stable for at least six months prior to lipectomy, following SWL.

For SWL that has occurred following pregnancy, the products of conception must not be included in the calculation of baseline weight to measure weight loss against.

The lipectomy items cannot be claimed in association with items 45530, 45531, 45564, 45565 and 45567. Where the abdomen requires surgical closure with reconstruction of the umbilicus following free tissue transfer (45564, 45565, 45567) or breast reconstruction (45530, 45531), item 45571 is to be claimed.

TN.8.9 Treatment of Keratoses, Warts etc (Items 30187, 30189, 30192 and 36815)

Treatment of seborrheic keratoses by any means, attracts benefits on an attendance basis only.

Treatment of fewer than 10 solar keratoses by ablative techniques such as cryotherapy attracts benefits on an attendance basis only. Where 10 or more solar keratoses are treated by ablative techniques, benefits are payable under item 30192.

Warts and molluscum contagiosum where treated by any means attract benefits on an attendance basis except where:

- (a) admission for treatment in an operating theatre of an accredited day surgery facility or hospital is required. In this circumstance, benefits are paid under item 30189 where a definitive removal of the wart or molluscum contagiosum is to be undertaken.
- (b) benefits have been paid under item 30189, and recurrence occurs.
- (c) palmar and plantar warts are treated by laser and require treatment in an operating theatre of an accredited day surgery facility or hospital. In this circumstance, benefits are paid under item 30187.

TN.8.10 Cryotherapy and Serial Curettage Excision - (Items 30196 and 30202)

In item 30196, serial curettage excision, as opposed to simple curettage, refers to the technique where the margin having been defined, the lesion is carefully excised by a skin curette using a series of dissections and cauterisations so that all extensions and infiltrations of the lesion are removed.

For the purposes of items 30196 and 30202, the requirement for histopathological proof of malignancy is satisfied where multiple lesions are to be removed from the one anatomical region if a single lesion from that region is histologically tested and proven for malignancy.

For the purposes of items 30196 and 30202, an anatomical region is defined as: hand, forearm, upper arm, shoulder, upper trunk or chest (anterior and posterior), lower trunk (anterior or posterior) or abdomen (anterior lower trunk), buttock, genital area/perineum, upper leg, lower leg and foot, neck, face (six sections: left/right lower, left/right mid and left/right upper third) and scalp.

For Medicare benefits to be payable for item 30196 and 30202, the provider performing the service must also retain documented evidence that malignancy has either been proven by histopathology or confirmed by opinion of a specialist in the specialty of dermatology or plastic surgery.

Guidelines are available on the Department of Health and Aged Care website for what [health practitioners can do to substantiate proof of malignancy](#) where required for MBS items.

TN.8.14 Laparotomy and Other Procedures on the Abdominal Viscera - (Items 30622 and 30722)

Procedures on the abdominal viscera may be performed by laparotomy or laparoscopically. Both items 30622 and 30722 cover several operations on abdominal viscera. Where more than one of the procedures referred to in these items are performed during the one operation, each procedure may be itemised according to the multiple operation formula.

TN.8.15 Diagnostic Laparoscopy - (Items 30390 and 30627)

If a diagnostic laparoscopy procedure is performed at a different time on the same day to another laparoscopic service, the procedures are considered to be un-associated services. The claim for benefits should be annotated to indicate that the two services were performed on separate occasions, otherwise the claims will be considered to be a single service.

TN.8.17 Gastrointestinal Endoscopic Procedures - (Items 30473 to 30481, 30484, 30485, 30490 to 30494, 30680 to 32023, 32084 to 32095, 32106, 32232 and 32222 to 32229)

The following are guidelines for appropriate minimum standards for the performance of GI endoscopy in relation to (a) cleaning, disinfection and sterilisation procedures, and (b) anaesthetic and resuscitation equipment.

These guidelines are based on the advice of the Gastroenterological Society of Australia, the Sections of HPB and Upper GI and of Colon and Rectal Surgery of the Royal Australasian College of Surgeons, and the Colorectal Surgical Society of Australia.

Cleaning, disinfection and sterilisation procedures

Endoscopic procedures should be performed in facilities where endoscope and accessory reprocessing protocols follow procedures outlined in:

- i. Infection Control in Endoscopy, Gastroenterological Society of Australia and Gastroenterological Nurses College of Australia, 2011;
- ii. Australian Guidelines for the Prevention and Control of Infection in Healthcare (NHMRC, 2010);
- iii. Australian Standard AS 4187-2014 (and Amendments), Standards Association of Australia.

Anaesthetic and resuscitation equipment

Where the patient is anaesthetised, anaesthetic equipment, administration and monitoring, and post-operative and resuscitation facilities should conform to the standards outlined in 'Guidelines on Sedation and/or Analgesia for Diagnostic and Interventional Medical, Dental or Surgical Procedures' (PS09), Australian & New Zealand College of Anaesthetists, Gastroenterological Society of Australia and Royal Australasian College of Surgeons.

Single operator, single use peroral cholangiopancreatography (POCPS) item 30665

For the purposes of item 30665 a treatment cycle, for a patient, means a series of treatments for the patient that:

- (a) begins on the day of the initial failed attempt at biliary stone removal via endoscopic retrograde cholangiopancreatography (ERCP) extraction techniques; and
- (b) ends at the conclusion of the aftercare period for the procedure, being either the lithotripsy procedure or a definitive surgical management procedure, that has resulted in removal of the biliary stones.

Conjoint Committee

For the purposes of Items 32023, 30664 and 30665 the procedure is to be performed by a surgeon or gastroenterologist with ERCP training recognised by the Conjoint Committee for the Recognition of Training in Gastrointestinal Endoscopy.

TN.8.19 Anti reflux Operations - (Items 30529 to 30533, 30756 and 31466)

These items cover various operations for reflux oesophagitis. Where the only procedure performed is the simple closure of a diaphragmatic hiatus benefit would be attracted under Item 30387 (Laparoscopy or laparotomy when an operation is performed on abdominal, retroperitoneal or pelvic viscera, excluding lymph node biopsy, other than a service to which another item in this Group applies).

TN.8.20 Radiofrequency ablation of mucosal metaplasia for the treatment of Barrett's Oesophagus (Item 30687)

The diagnosis of high grade dysplasia is recommended to be confirmed by two expert pathologists with experience in upper gastrointestinal pathology.

A multidisciplinary team should review treatment options for patients with high grade dysplasia and would typically include upper gastrointestinal surgeons and/or interventional gastroenterologists.

TN.8.21 Endoscopic or Endobronchial Ultrasound +/- Fine Needle Aspiration - (Items 30688 - 30694, 38416 - 38417)

For the purposes of these items the following definitions apply:

Biopsy means the removal of solid tissue by core sampling or forceps

FNA means aspiration of cellular material from solid tissue via a small gauge needle.

The provider should make a record of the findings of the ultrasound imaging in the patient's notes for any service claimed against items 30688 to 30694, 38416 and 38417.

Endoscopic ultrasound is an appropriate investigation for patients in whom there is a strong clinical suspicion of pancreatic neoplasia with negative imaging (such as CT scanning). Scenarios include, but are not restricted to:

- A middle aged or elderly patient with a first attack of otherwise unexplained (eg negative abdominal CT) first episode of acute pancreatitis; or
- A patient with biochemical evidence of a neuroendocrine tumour.

The procedure is not claimable for periodic surveillance of patients at increased risk of pancreatic cancer, such as chronic pancreatitis. However, EUS would be appropriate for a patient with chronic pancreatitis in whom there was a clinical suspicion of pancreatic cancer (eg: a pancreatic mass occurring on a background of chronic pancreatitis).

TN.8.22 Removal of Skin Lesions - (Items 31356 to 31388)

The excision of warts and seborrheic keratoses attracts benefits on an attendance basis with the exceptions outlined in TN.8.9 of the explanatory notes to this category. Excision of pre-malignant lesions including solar keratoses where clinically indicated are covered by items 31357, 31360, 31362, 31364, 31366, 31368 and 31370.

The excision of pigmented lesions which are clinically suspicious for melanoma attracts benefits under items 31377, 31378, 31379, 31380, 31381, 31382 or 31383.

Excision of malignant tumours are covered by items 31356, 31358, 31359, 31361, 31363, 31365, 31367, 31369, 31371 to 31376, 31386, 31387 and 31388.

Items 31386, 31387 and 31388 should be used for very large, fungating skin cancers.

Items 31357, 31360, 31362, 31364, 31366, 31368, 31370, 31377, 31378, 31379, 31380, 31381, 31382 and 31383 *require* that the specimen be sent for histological examination. Items 31356, 31358, 31359, 31361, 31363, 31365, 31367, 31369, 31371-31376, 31386, 31387 and 31388 also require that a specimen has been sent for histological confirmation of malignancy, and any subsequent specimens are sent for histological examination. Confirmation of malignancy *must* be received before itemisation of accounts for Medicare benefits purposes, except in the case of items 31377, 31378, 31379, 31380, 31381, 31382 or 31383.

An incomplete surgical excision of a malignant skin lesion with curative intent should be billed as a malignant skin lesion excision item even when further surgery is needed.

Where histological results are available at the time of issuing accounts, the histological diagnosis will decide the appropriate itemisation for excised lesions. If the histological report shows the lesion to be benign, items 31357, 31360, 31362, 31364, 31366, 31368 or 31370 should be used.

Practitioners should retain copies of histological reports.

TN.8.23 Removal of Skin Lesion From Face - (Items 31245, 31361 to 31364, 31372, 31373, 31379 and 31380)

For the purposes of these items, the face is defined as that portion of the head anterior to the hairline and above the jawline.

TN.8.24 Dissection of Lymph Nodes of Neck - (Items 30618, 31423 to 31438)

For the purposes of these items, the lymph node levels referred to are as follows:

Level I	Submandibular and submental lymph nodes
Level II	Lymph nodes of the upper aspect of the neck including the jugulodigastric node, upper jugular chain nodes and upper spinal accessory nodes
Level III	Lymph nodes deep to the middle third of the sternomastoid muscle consisting of mid jugular chain nodes, the lower most of which is the jugulo-omohyoid node, lying at the level where the omohyoid muscle crosses the internal jugular vein
Level IV	Lower jugular chain nodes, including those nodes overlying the scalenus anterior muscle
Level V	Posterior triangle nodes, which are usually distributed along the spinal accessory nerve in the posterior triangle

Comprehensive dissection involves all 5 neck levels while *selective* dissection involves the removal of only certain lymph node groups, for example:-

Item 31426 (removal of 3 lymph node levels) - e.g. supraomohyoid neck dissection (levels I-III) or lateral neck dissection (levels II-IV).

Item 31429 (removal of 4 lymph node levels) - e.g. posterolateral neck dissection (levels II-V) or anterolateral neck dissection (levels I-IV)

Other combinations of node levels may be removed according to clinical circumstances.

TN.8.25 Excision of Breast Lesions, Abnormalities or Tumours - Malignant or Benign - (Items 31500 to 31515)

Therapeutic biopsy or excision of breast lesions, abnormalities or tumours under Items: 31500, 31503, 31506, 31509, 31512, 31515 either singularly or in combination should not be claimed when using the Advanced Breast Biopsy Instrumentation (ABBI) procedure, or any other large core breast biopsy device.

TN.8.26 Breast Biopsy Items – items 31533 (Fine Needle Aspiration) and 31548 (Mechanical Device Biopsy)

Breast abnormalities requiring biopsy should be assessed by core biopsy or vacuum-assisted core biopsy. If a service has access to high-quality cytology with immediate reporting, then fine needle aspiration (FNA) may be used in addition to mechanical device biopsy, but not instead of it. In exceptional cases, based on a clinician's judgement, FNA may be used alone if mechanical device biopsy is not possible.

FNA is indicated for patients with a suspected breast abscess or a symptomatic simple breast cyst.

In relation to item 31533 (FNA) an impalpable lesion includes those lesions that clinically require definition by ultrasound or mammography for accurate or safe sampling, eg. lesions in association with breast prostheses or in areas of breast thickening.

TN.8.29 Bariatric Procedures - (Items 31569 to 31581, anaesthesia item 20791)

Items 31569 to 31581 and item 20791 provide for surgical treatment of clinically severe obesity and the accompanying anaesthesia service (or similar). The term clinically severe obesity generally refers to a patient with a Body Mass Index (BMI) of 40kg/m² or more, or a patient with a BMI of 35kg/m² or more with other major medical co-morbidities (such as diabetes, cardiovascular disease, cancer). The BMI values in different population groups may vary due, in part, to different body proportions which affect the percentage of body fat and body fat distribution. Consequently, different ethnic groups may experience major health risks at a BMI that is below the 35-40 kg/m² provided for in the definition. The decision to undertake obesity surgery remains a matter for the clinical judgment of the surgeon.

If crural repair taking 45 minutes or less is performed in association with the bariatric procedure, additional hernia repair items cannot be claimed for the same service.

Practitioners providing items 31569, 31572, 31575 and 31581 should be registered with and provide relevant data to the Bariatric Surgery Registry.

TN.8.30 Surgical reversal of a bariatric procedure including revision or conversion surgery (item 31584)

Item 31584 includes the surgical reversal of a previous bariatric procedure and conversion to an alternative bariatric procedure when clinically appropriate.

TN.8.31 Per Anal Excision of Rectal Tumour using Rectoscopy - (Items 32232 and 32106)

Surgeons performing these procedures should be colorectal surgeons and have undergone appropriate training which is recognised by the Colorectal Surgical Society of Australasia.

Items 32232 and 32106 cannot be claimed in conjunction with each other or with anterior resection items 32024 or 32025 for the same patient, on the same day, by any practitioner.

TN.8.32 Varicose veins (Items 32500 to 32517) and Peripheral Arterial or Venous Embolisation (Item 35321)

Under the *Health Insurance (General Medical Services Table) Regulations*, items 32500 to 32517 and 35321 do not apply to services mentioned in those items if the services are delivered by:

- a. endovenous laser treatment (ELT); or
- b. radiofrequency diathermy; or
- c. radiofrequency ablation for varicose veins.

It is recommended that a practitioner who intends to bill ELT, radiofrequency diathermy or radiofrequency ablation for varicose veins on the same occasion as providing items 32500 to 32517 or 35321 contact the Services Australia provider information line on 132 150 to confirm requirements for correct itemisation of services on a single invoice.

The Department of Health and Aged Care monitors billing practices associated with MBS items. Services for ELT, radiofrequency diathermy or radiofrequency ablation for varicose veins provided on the same occasion as items 32500 to 32517 or 35321 must be itemised separately on the invoice, showing the full fees for each service separately to the fees billed against these MBS items.

TN.8.33 Varicose Vein Intervention

Claiming Guide for the following procedures:

1. Sclerotherapy (Item 32500)
2. Surgical Dissection and Ligation (Items 32507, 32508, 32511, 32514, 32517)
3. Endovenous Laser Therapy (Items 32520 and 32522)
4. Radiofrequency Ablation (Items 32523 and 32526)
5. Cyanoacrylate adhesive (Items 32528 and 32529)

It is recommended that the medical practitioner performing the above procedures has successfully completed a substantial course of study and training in duplex ultrasound and the management of venous disease, which has been endorsed by their relevant professional organisation.

It is recommended that providers familiarise themselves with the symptoms to be used to assess the severity of chronic venous disease as indicated in the item descriptor. Providers should also refer to the latest Clinical Impact, Etiology/Aetiology, Anatomy and Pathophysiology (CEAP) classification description for symptoms, to help determine when intervention is required.

TN.8.34 Uterine Artery Embolisation - (Item 35410)

This item was introduced on an interim basis in November 2006 following a recommendation of the Medical Services Advisory Committee (MSAC), pending the outcome of clinical trials and further consideration by the MSAC. The requirement for specialist referral by a gynaecologist for uterine artery embolisation was a MSAC recommendation. Providers should retain the instrument of specialist referral for each patient from the date of the procedure, as this may be subject to audit by Services Australia.

TN.8.35 Endovascular Coiling of Intracranial Aneurysms - (Item 35412)

This service includes balloon angioplasty and insertion of stents (assisted coiling) associated with intracranial aneurysm coiling. The use of liquid embolics alone is not covered by this item. Digital Subtraction Angiography

(DSA) done to diagnose the aneurysm (items 60009 and either 60072, 60075 or 60078) is claimable, however this must be clearly noted on the claim and in the clinical notes as separate from the intra-operative DSA done with the coiling procedure.

TN.8.36 Arterial and Venous Patches - (Items 33545 to 33551 and 34815)

Vascular surgery items have been constructed on the basis that arteriotomy and venotomy wounds are closed by simple suture without the use of a patch.

Where a patch angioplasty is used to enlarge a narrowed vein, artery or arteriovenous fistula, the correct item would be 34815 or 34518. If the vein is harvested for the patch through a separate incision, Item 33551 would also apply, in accordance with the multiple operation rule.

If a patch graft is involved in conjunction with an operative procedure included in Items 33500 - 33542, 33803, 33806, 33815, 33833 or 34142, the patch graft would attract benefits under Item 33545 or 33548 in addition to the item for the primary operation (under the multiple operation rule). Where vein is harvested for the patch through a separate incision Item 33551 would also apply.

TN.8.37 Carotid Disease - (Item 32700, 32703, 32760, 33500, 33545, 33548, 33551, 33554, 35303, 35307)

Interventional procedures for the management of carotid disease should be performed in accordance with the NHMRC endorsed *Clinical Guidelines for Stroke Management 2010*.

Carotid Percutaneous Transluminal Angioplasty with Stenting (CPTAS), under item 35307 is only funded under the MBS for patients who meet the criteria for carotid endarterectomy but are unfit for open surgery.

TN.8.38 Peripheral Arterial or Venous Catheterisation - (Item 35317)

Item 35317 is restricted to the regional delivery of thrombolytic, vasoactive or chemotherapeutic oncologic agents in association with a radiological service. This item is not intended for infusions with systemic effect.

TN.8.40 Selective Internal Radiation Therapy (SIRT) using SIR-Spheres - (Items 35404, 35406 and 35408)

These items were introduced into the Schedule on an interim basis in May 2006 following a recommendation of the Medical Services Advisory Committee (MSAC) pending the outcome of clinical trials and further consideration by the MSAC. SIRT should not be performed in an outpatient or day patient setting to ensure patient and radiation safety requirements are met.

TN.8.42 Colposcopic Examination - (Item 35614)

It should be noted that colposcopic examination (screening) of a person during the course of a consultation does not attract Medicare benefits under Item 35614 except in the following circumstances:

- (a) where the patient has had an abnormal cervical screen result;
- (b) where there is a history of ingestion of oestrogen by the patient's mother during their pregnancy; or
- (c) where the patient has been referred by another medical practitioner because of suspicious signs of genital cancer.

TN.8.43 Hysteroscopy - (Item 35626)

Hysteroscopy undertaken in outpatient settings, consulting suites or offices can be claimed under this item where the conditions set out in the description of the item are met.

TN.8.44 Curettage of Uterus under GA or Major Nerve Block - (Items 35639 and 35640)

Uterine scraping or biopsy using small curettes (e.g. Sharman's or Zeppelin's) and requiring minimal dilatation of the cervix, not necessitating a general anaesthesia, does not attract benefits under these items but would be paid under Item 35620 where malignancy is suspected, or otherwise on an attendance basis.

TN.8.45 Neoplastic Changes of the Cervix - (Items 35644-35648)

The term "previously confirmed intraepithelial neoplastic changes of the cervix" in these items refers to diagnosis made by either cytologic, colposcopic or histologic methods. This may also include persistent human papilloma virus (HPV) changes of the cervix.

TN.8.46 Sterilisation of Minors - Legal Requirements - (Items 35637, 35687, 35688, 35691, 37622 and 37623)

(i) It is unlawful throughout Australia to conduct a sterilisation procedure on a minor which is not a by-product of surgery appropriately carried out to treat malfunction or disease (eg malignancies of the reproductive tract) unless legal authorisation has been obtained.

(ii) Practitioners are liable to be subject to criminal and civil action if such a sterilisation procedure is performed on a minor (a person under 18 years of age) which is not authorised by the Family Court of Australia or another court or tribunal with jurisdiction to give such authorisation.

(iii) Parents/guardians have no legal authority to consent on behalf of minors to such sterilisation procedures. Medicare Benefits are only payable for sterilisation procedures that are clinically relevant professional services as defined in Section 3 (1) of the *Health Insurance Act 1973*.

TN.8.47 Debulking of Uterus - (Item 35658)

Benefits are payable under Item 35658, using the multiple operation rule, in addition to hysterectomy.

TN.8.50 Sacral Nerve Stimulation (items 36663-36668)

A two-stage process of testing and treatment is required to ensure suitability for Sacral Nerve Stimulation for detrusor overactivity or non obstructive urinary retention where urethral obstruction has been urodynamically excluded. The testing phase involves acute and sub-chronic testing. The first stage includes peripheral nerve evaluation and patients who achieve greater than 50% improvement in urinary incontinence or retention episodes during testing will be eligible to receive permanent SNS treatment.

TN.8.51 Ureteroscopy - (Item 36803)

Item 36803 refers to ureteroscopy of one ureter when performed for the purpose of inspection alone. It may not be used when one of the other ureteroscopy numbers (Items 36806 or 36809) or pyeloscopy numbers (Items 36652, 36654 or 36656) is used for a ureteroscopic procedure performed in the same ureter or collecting system. It may be used when inspection alone is carried out in one ureter independently from a ureteroscopic or pyeloscopy procedure in another ureter or collecting system. If Item number 36803 is used with one of the other above 5 numbers, it must be specified that item number 36803 refers to ureteroscopy performed in another ureter eg 36654 (Right side) and 36803 (Left side). 36803 may also be used in this way if there is a partial or complete duplex collecting system eg 36809 (Lower pole moiety ureter, Left side) and 36803 (Upper pole moiety ureter, Left side).

Item numbers 36806 and 36809 may only be used together when 2 independent ureteroscopic procedures are performed in separate ureters. These separate ureters may be components of a complete or partial duplex system. If both these numbers are used together, the Regulations require qualification of these item numbers by the site, as is necessary with 36803 eg 36806 (Right side) and 36809 (Left side).

TN.8.53 Transurethral Needle Ablation (TUNA) of the Prostate - (Item 37201)

Moderate to severe lower urinary tract symptoms are defined using the American Urological Association (AUA) Symptom Score or the International Prostate Symptom Score (IPSS).

Patients not medically fit for transurethral resection of the prostate (TURP) can be defined as:

- (i) Those patients who have a high risk of developing a serious complication from the surgery. Retrograde ejaculation is **not** considered to be a serious complication of TURP.
- (ii) Those patients with a co-morbidity which may substantially increase the risk of TURP or the risk of the anaesthetic necessary for TURP.

TN.8.54 Fiducial Markers into the Prostate - (Item 37217)

Item 37217 is for the insertion of fiducial markers into the prostate or prostate surgical bed as markers for radiotherapy. The service can not be claimed under item 37218 or any other surgical item.

This item is introduced into the Schedule on an interim basis pending the outcome of an evaluation being undertaken by the Medical Services Advisory Committee (MSAC).

Further information on the review of this service is available from the MSAC Secretariat.

TN.8.55 Brachytherapy of the Prostate - (Item 37220)

One of the requirements of item 37220 is that patients have a Gleason score of less than or equal to 7 (Grade Group 1-3). However, where the patient has a score of 7, comprising a primary score of 4 and a secondary score of 3 (ie. 4+3=7; Grade Group 3), it is recommended that low dose rate brachytherapy form part of a combined modality treatment.

Low dose rate brachytherapy of the prostate should be performed in patients, with favourable anatomy allowing adequate access to the prostate without pubic arch interference, and who have a life expectancy of greater than 10 years.

An 'approved site' for the purposes of this item is one at which radiation oncology services may be performed lawfully under the law of the State or Territory in which the site is located.

TN.8.56 High Dose Rate Brachytherapy - (Item 37227)

Item 37227 covers the service undertaken by an urologist or radiation oncologist as part of the High Dose Rate Brachytherapy procedure, in association with a radiation oncologist. If the service is undertaken by an urologist, a radiation oncologist must be present in person at the time of the service. The removal of the catheters following completion of the Brachytherapy is also covered under this item.

TN.8.57 Radical or Debulking Operation for Ovarian Tumour - (Item 35720)

This item refers to the operation for carcinoma of the ovary where the bulk of the tumour and the omentum are removed. Where this procedure is undertaken in association with hysterectomy benefits are payable under both item numbers with the application of the multiple operation formula.

TN.8.58 Transcutaneous Sperm Retrieval - (Item 37605)

Item 37605 covers transcutaneous sperm retrieval for the purposes of intracytoplasmic sperm injection (item 13251) for male factor infertility, in association with assisted reproductive technologies.

Item 37605 provides for the procedure to be performed unilaterally. Where it is clinically necessary to perform the service bilaterally, the multiple operation rule would apply, in accordance with point T8.5 of these Explanatory Notes.

Where the procedure is carried out under local infiltration as the means of anaesthesia, additional benefit is not payable for the anaesthesia component as this is considered to be part of the procedure.

TN.8.59 Surgical Sperm Retrieval, by Open Approach - (Item 37606)

Item 37606 covers open sperm retrieval for the purposes of intracytoplasmic sperm injection (item 13251) for male factor infertility, in association with assisted reproductive technologies. Item 37606 provides for the procedure to be performed unilaterally. Where it is clinically necessary to perform the service bilaterally, the multiple operation rule would apply.

Benefits for item 37606 may be claimed in conjunction with a service or services provided under item 37605, where an open approach is clinically necessary following an unsuccessful percutaneous approach. Likewise, such services would be subject to the multiple operation rule.

Benefit is not payable for item 37606 in conjunction with item 37604.

TN.8.60 Cardiac Pacemaker Insertion - (Items 38209, 38212, 38350, 38353 and 38356)

The fees for the insertion of a pacemaker (Items 38350, 38353 and 38356) cover the testing of cardiac conduction or conduction threshold, etc related to the pacemaker and pacemaker function.

Accordingly, additional benefits are not payable for such routine testing under Item 38209 or 38212 (Cardiac electrophysiological studies).

TN.8.61 Implantable ECG Loop Recorder - (Item 38285)

The fee for implantation of the loop recorder (item 38285) covers the initial programming and testing of the device for satisfactory rhythm capture. Benefits are payable only once per day.

The term "recurrent" refers to more than one episode of syncope, where events occur at intervals of 1 week or longer. The term "other available cardiac investigations" includes the following:

- a complete history and physical examination that excludes a primary neurological cause of syncope and does not exclude a cardiac cause;
- *electrocardiography (ECG) (items 11704, 11705, 11707, 11714);*
- *echocardiography (items 55126, 55127, 55128, 55129, 55132, 55133, 55134);*
- *continuous ECG recording or ambulatory ECG monitoring (items 11716, 11717, 11723, 11735);*
- *up-right tilt table test (item 11724); and*

- cardiac electrophysiological study, unless there is reasonable medical reason to waive this requirement (item 38209).T

TN.8.63 Permanent Cardiac Synchronisation Device (Items 38365 & 38368)

Items 38365 and 38368 apply only to patients who meet the criteria listed in the item descriptor, and to patients who do not meet the criteria listed in the descriptor but have previously had a CRT device and transvenous left ventricular electrode inserted and who prior to its insertion met the criteria and now need the device replaced.

TN.8.64 Intravascular Extraction of Permanent Pacing Leads - (Item 38358)

For the purposes of Item 38358 specialists or consultant physicians claiming this item must have training recognised by the Lead Extraction Advisory Committee of the Cardiac Society of Australia and New Zealand, and Services Australia notified of that recognition. The procedure should only be undertaken in a hospital capable of providing cardiac surgery.

TN.8.67 Cardiac and Thoracic Surgical Items - (Items 38470 to 38766, 38817 to 38818)

Items 38470 to 38766 and 38817 to 38818 must be performed using open exposure or minimally invasive surgery which excludes percutaneous and transcatheter techniques unless otherwise stated in the item.

TN.8.70 Skull Base Surgery - (Items 39638 to 39656)

The surgical management of lesions involving the skull base (base of anterior, middle and posterior fossae) often requires the skills of several surgeons or a number of surgeons from different surgical specialties working together or in tandem during the operative session. These operations are usually not staged because of the need for definitive closure of the dura, subcutaneous tissues, and skin to avoid serious infections such as osteomyelitis and/or meningitis.

Items 39638 to 39656 cover the removal of the tumour, which would normally be performed by a neurosurgeon or an otolaryngology surgeon. Other items are available to cover procedures performed as a part of skull base surgery by practitioners in other specialities, such as plastic and reconstructive surgery.

TN.8.71 Intradiscal Injection of Chymopapain - (Item 40336)

The fee for this item includes routine post-operative care. Associated radiological services attract benefits under the appropriate item in Group I3.

TN.8.72 Removal of Ventilating Tube from Ear - (Item 41500)

Benefits are not payable under Item 41500 for removal of ventilating tube. This service attracts benefits on an attendance basis.

TN.8.73 Meatoplasty - (Item 41515)

When this procedure is associated with Item 41530, 41548, 41557, 41560 or 41563 the multiple operation rule applies.

TN.8.74 Reconstruction of Auditory Canal - (Item 41524)

When associated with Item 41557, 41560 or 41563 the multiple operation rule applies.

TN.8.75 Removal of Nasal Polyp or Polypi - (Items 41662 and 41668)

Item 41662 is intended to cover the removal of simple nasal polyp or polypi. Simple nasal polyp or polypi are those confined to the middle meatus, the equivalent of Grade 0, 1 or 2 in any accepted clinical nasal polyp grading system.

Item 41668 is intended to cover the removal of nasal polyp or polypi extending beyond the middle meatus, the equivalent of Grade 3 or beyond in any accepted clinical nasal polyp grading system.

Appropriate documentation, ideally with photographic and / or recordings and / or diagnostic imaging evidence demonstrating the grade should be collected and retained to demonstrate the clinical need for the service as this may be subject to audit. Where photographic or diagnostic imaging is not retained, the reasons for this should be clearly documented.

TN.8.76 Larynx, Direct Examination - (Item 41501)

Benefit is not attracted under this item when an anaesthetist examines the larynx during the course of administration of a general anaesthetic.

TN.8.78 Imbedded Foreign Body - (Item 42644)

For the purpose of item 42644, an imbedded foreign body is one that is sub-epithelial or intra-epithelial and is completely removed using a hypodermic needle, foreign body gouge or similar surgical instrument with magnification provided by a slit lamp biomicroscope, loupe or similar device.

Item 42644 also provides for the removal of rust rings from the cornea, which requires the use of a dental burr, foreign body gouge or similar instrument with magnification by a slit lamp biomicroscope.

Where the imbedded foreign body is not completely removed, benefits are payable under the relevant attendance item.

TN.8.79 Corneal Incisions - (Item 42672)

The description of this item refers to two sets of calculations, one performed some time prior to the operation, the other during the course of the operation. Both of these measurements are included in the Schedule fee and benefit for Item 42672.

TN.8.80 Cataract surgery (Items 42698 and 42701)

Items 42698 and 42701 provide for intraocular lens extraction and replacement as a separate procedure to be used in instances when lens removal and replacements are contraindicated at the same operation, such as in patients presenting with proliferative diabetic retinopathy or recurrent uveitis.

TN.8.81 Posterior Juxtasclear Depot injection - (Item 42741)

For the purpose of item 42741, the therapeutic substance must be registered with the Therapeutic Goods Administration (or listed on the Pharmaceutical Benefits Schedule, if so listed) as being suitable for injection for the treatment of predominantly (greater than or equal to 50%) classic, subfoveal choroidal neovascularisation due to age-related macular degeneration, as diagnosed by fluorescein angiography, in a patient with a baseline visual acuity equal to or better than 6/60.

TN.8.82 Cyclodestructive Procedures - (Items 42770)

Item 42770 is restricted to a maximum of 2 treatments in a 2 year period.

TN.8.83 Insertion of drainage device for glaucoma (Item 42752)

Item 42752 provides for the insertion of a drainage device for the treatment of glaucoma patients who are at high risk of failure of trabeculectomy (such as patients who have aggressive neovascular glaucoma or extensive conjunctival scarring); have iridocorneal endothelial syndrome; inflammatory (uveitic) glaucoma; or aphakic glaucoma.

TN.8.84 Laser Trabeculoplasty - (Item 42782)

Item 42782 is restricted to a maximum of 4 treatments in a 2 year period.

TN.8.85 Laser Iridotomy - (Item 42785)

Item 42785 is restricted to a maximum of 3 treatments in a 2 year period.

TN.8.86 Laser Capsulotomy - (Items 42788)

Item 42788 is restricted to a maximum of 2 treatments in a 2 year period.

TN.8.87 Laser Vitreolysis or Corticolysis of Lens Material or Fibrinolysis - (Item 42791)

Item 42791 is restricted to a maximum of 3 treatments in a 2 year period.

TN.8.88 Division of Suture by Laser - (Item 42794)

Benefits under this item are restricted to a maximum of 2 treatments in a 2 year period. There is no provision for additional treatments in that period.

TN.8.89 Ophthalmic Sutures - (Item 42845)

This item refers to the occasion when readjustment has to be made to the sutures to vary the angle of deviation of the eye. It does not cover the mere tightening of the loosely tied sutures without repositioning, or adjustment performed prior to the patient leaving the operating theatre.

TN.8.91 Abrasive Therapy/Resurfacing - (Items 45021 to 45026)

For the purpose of items 45025 and 45026, one aesthetic area is any of the following of the whole face (considered to be divided into six segments): forehead; right cheek; left cheek; nose; upper lip; and chin.

Item 45021 covers abrasive therapy only. For the purpose of this item, abrasive therapy requires the removal of the epidermis and into the deeper papillary dermis. Services performed using a laser are not eligible for benefits under this item.

Items 45025 and 45026 do not cover the use of fractional laser therapy.

TN.8.92 Escharotomy - (Item 45054)

Benefits are payable once only under Item 45054 for each limb (or chest) regardless of the number of incisions to each of these areas.

TN.8.93 Local Skin Flap - Definition

Medicare benefits for flaps are only payable when clinically appropriate. Clinically appropriate in this instance means that the flap or graft is required to close the defect because the defect cannot be closed directly, or because the flap is required to adapt scar position optimally with regard to skin creases or landmarks, maintain contour on the face or neck, or prevent distortion of adjacent structures or apertures.

A local skin flap is an area of skin and subcutaneous tissue designed to be elevated from the skin adjoining a defect requiring closure. The flap remains partially attached by its pedicle and is moved into the defect by rotation, advancement or transposition, or a combination of these manoeuvres. A benefit is only payable when the flap is required for adequate wound closure. A secondary defect will be created which may be closed by direct suture, skin grafting or sometimes a further local skin flap. This later procedure will also attract benefit if closed by graft or flap repair but not when closed by direct suture.

By definition, direct wound closure (e.g. by suture) does not constitute skin flap repair. Similarly, angled, curved or trapdoor incisions which are used for exposure and which are sutured back in the same position relative to the adjacent tissues are not skin flap repairs. Undermining of the edges of a wound prior to suturing is considered a normal part of wound closure and is not considered a skin flap repair.

A "Z" plasty is a particular type of transposition flap repair. Although 2 flaps are created, benefit will be paid on the basis of Item 45201, claimable once per defect. Additional flaps are to be claimed under Item 45202, if clinically indicated.

Note: refer to TN.8.126 for MBS item 45202 for circumstances where other services might involve flap repair.

TN.8.95 Revision of Scar - (Items 45510 to 45518)

For the purposes of items 45510 to 45518, revision of scar refers to modification of existing scars (traumatic, surgical or pathological) that is designed to decrease scar width, adapt scar position with regard to skin creases and landmarks, release scars from adhering to underlying structures, improve scar contour in keeping with undamaged skin or restore the shape of facial aperture.

Items 45510 to 45518 are only claimable when performed by a specialist in the practice of the specialist's specialty or where undertaken in the operating theatre of a hospital.

Only items 45510 and 45512, for the face and neck, can be claimed in association with items providing for graft or flap services.

For excision of scar services which do not meet the requirements of the revision of scar items as defined, the appropriate item in the range 31206 to 31225 should be claimed.

TN.8.96 Augmentation Mammoplasty - breast volume (45524)

Where volume differences of breasts are referenced, it is expected that volumetric measurement of the breasts is performed using a recognised technique published in a peer-reviewed journal article. Breast volumes and volume differences should be recorded in the patient case notes.

TN.8.97 Breast Reconstruction - Large Muscle or Myocutaneous Flap - (Items 45530 and 45531)

When a prosthesis or prostheses are inserted in conjunction with this operation, benefit would be attracted under Item 45527 or 45529. Benefits would also be payable for nipple reconstruction (Item 45545) when performed.

When claiming item 45530 for a pedicled rectus abdominis flap; item 45571 should be claimed for closure of the abdomen and reconstruction of the umbilicus, including repair of the musculoaponeurotic layer of abdomen. When claiming item 45530 for a latissimus dorsi flap, no item for the closure of the musculoaponeurotic layer should be claimed as it is expected that repair will be by direct suture.

Lipectomy items 30166, 30169, 30177 and 30179 and radical abdominoplasty items 30175 and 30176 should not be claimed in association with post-mastectomy breast reconstruction items 45530 and 45531.

TN.8.98 Breast Prosthesis, Removal and Replacement of - (Items 45553 and 45554)

It is generally expected that the replacement prosthesis will be the same size as the prosthesis that is removed. Medicare benefits are not payable for services under items 45553-45554 where the procedure is performed solely to increase breast size.

Where the original implant was not inserted in the context of breast cancer or developmental abnormality, intra-operative photographs of the patient in the supine position need to demonstrate unacceptable deformity in the form of a discrete concavity to justify use of 45553 or 45554.

In the context of eligibility for item 45553 and 45554, an unacceptable deformity would not include asymmetry caused as a result of removal of one implant out of a pair of implants.

Where a rupture has been established through imaging and reported, items 45553 and 45554 will still apply even if intra-operatively the implant is found to be structurally intact.

Full clinical details must be documented in patient notes, including pre-operative photographic and / or diagnostic imaging evidence demonstrating the clinical need for the service as this may be subject to audit.

TN.8.99 Breast Ptosis - (Items 45556 and 45558)

For the purposes of item 45556, Medicare benefit is only payable for the correction of breast ptosis when performed unilaterally, in the context of breast cancer or developmental breast abnormality to match the position of the contralateral breast. This item is payable only once per patient. Additional benefit is not payable if this procedure is also performed on the contralateral breast.

Item 45558 applies where correction of breast ptosis is indicated because at least two-thirds of the breast tissue, including the nipple, lies inferior to the infra-mammary fold where the nipple is located at the most dependent, inferior part of the breast contour.

Item 45556 should not be used with the insertion of any prosthesis on the same side.

Item 45558 should not be used with the insertion of any prosthesis.

Full clinical details must be documented in patient notes, including pre-operative photographic evidence (including anterior, left lateral and right lateral views) as specified in the item descriptor which demonstrates the clinical need for the service, as this may be subject to audit.

TN.8.100 Nipple and/or Areola Reconstruction - (Items 45545 and 45546)

Item 45545 involves the taking of tissue from, for example, the other breast, the ear lobe and the inside of the upper thigh with or without local flap.

Item 45546 covers the non-surgical creation of nipple or areola by intradermal colouration.

TN.8.101 Liposuction - (Items 45584 and 45585)

Medicare benefits for liposuction are generally attracted under item 45584, that is for the treatment of post-traumatic pseudolipoma. Such trauma must be significant and result in large haematoma and localised swelling. Only on very rare occasions would benefits be payable for bilateral liposuction.

Where liposuction is indicated for the treatment of Barraquer-Simons Syndrome, lymphoedema or macrodystrophia lipomatosa, or the reduction of buffalo hump, item 45585 applies. One regional area is defined as one limb or trunk. If liposuction is required on more than one limb, item 45585 can be claimed once per limb.

Full clinical details must be documented in patient notes, including pre-operative photographic and / or diagnostic imaging evidence demonstrating the clinical need for the service as this may be subject to audit.

TN.8.102 Meloplasty for Correction of Facial Asymmetry - (Items 45587 and 45588)

Benefits are payable under items 45587 and 45588 for face lift operations performed in hospital to correct soft tissue abnormalities of the face due to causes other than the ageing process, including trauma, a congenital condition or disease.

Where bilateral meloplasty is indicated because of congenital malformation for conditions such as drooling from the angles of the mouth and deep pitting of the skin resulting from disease or trauma (but not as a result of previous cosmetic surgery), item 45588 applies.

Full clinical details must be documented in patient notes, including pre-operative photographic and/or diagnostic imaging evidence demonstrating the clinical need for the service as this may be subject to audit.

TN.8.103 Reduction of Eyelids - (Items 45617 and 45620)

Where a reduction is performed for a medical condition of one eyelid, it may be necessary to undertake a similar compensating procedure on the other eyelid to restore symmetry. The latter operation would also attract benefits.

Medicare benefits are not payable for non-therapeutic cosmetic services. Full clinical details must be documented in patient notes, including clear photographic evidence of eyelid skin prolapsing over the lashes in a relaxed straight-ahead gaze, causing visual field obstruction. The clinical need for the service must be demonstrated as this may be subject to audit.

TN.8.104 Rhinoplasty - (Items 45632 to 45644, and 45650)

Benefits are payable for septoplasty (item 41671) where performed in conjunction with rhinoplasty.

A Medicare benefit for items 45632 – 45644 and 45650 is payable where the indication for surgery is for:

(i) airway obstruction and the patient has a self-reported NOSE Scale score of greater than 45; or

(ii) significant acquired, congenital or developmental deformity.

The NOSE Scale refers to the Nasal Obstruction Symptom Evaluation Scale, as published in:

Stewart, M.G., Witsell, D.L., Smith, T.L., Weaver, E.M., Yueh, B. and Hannley, M.T. (2004), Development and Validation of the Nasal Obstruction Symptom Evaluation (NOSE) Scale. *Otolaryngology–Head and Neck Surgery*, 130: 157-163.

The NOSE Scale can be accessed here: <https://www.entnet.org/wp-content/uploads/files/NOSE-Instrument.pdf>

Full clinical details must be documented in patient notes, including pre-operative photographic and / or NOSE Scale evidence demonstrating the clinical need for the service as this may be subject to audit.

TN.8.105 Contour Restoration - (Item 45718)

For the purpose of item 45718, a region in relation to the face is defined as either being upper left or right, mid left or right or lower left or right. Accounts should be annotated with region/s to which the service applies.

TN.8.106 Vermilionectomy - (Item 45669)

Item 45669 covers treatment of the entire lip.

TN.8.107 Osteotomy of Jaw - (Items 46150 to 46158)

The fee and benefit for these items include the various forms of internal or dental fixation, jaw immobilisation, the transposition of nerves and vessels and bone grafts taken from the same site. Bone grafts taken from a separate site, eg iliac crest, would attract additional benefit under the relevant bone graft item in the range of 48248 to 48257.

For the purposes of these items, a reference to maxilla includes any procedure involving the adjacent zygoma.

Item 75621 for the provision of fitting of surgical templates may be claimed in association with the appropriate orthognathic surgical items in the range of 46150 to 46158 for dental patients with eligible conditions under Cleft and Craniofacial Services.

TN.8.108 Genioplasty - (Item 45761)

Genioplasty attracts benefit once only although a section is made on both sides of the symphysis of the mandible.

TN.8.109 Tumour, Cyst, Ulcer or Scar - (Items 45801 to 45813)

It is recognised that odontogenic keratocysts, although not neoplastic, often require the same surgical management as benign tumours.

TN.8.111 Reduction of Dislocation or Fracture

Closed reduction means treatment of a dislocation or fracture by non-operative reduction, and includes the use of percutaneous fixation or external splintage by cast or splints.

Open reduction means treatment of a dislocation or fracture by either operative exposure including the use of any internal or external fixation; or non-operative (closed reduction) where intra-medullary or external fixation is used.

Where the treatment of a fracture requires reduction on more than one occasion to achieve an adequate alignment, benefits are payable for each separate occasion at which reduction is performed under the appropriate item covering the fracture being treated.

The treatment of fractures/dislocations not specifically covered by an item in Subgroup 15 (Orthopaedic) attracts benefits on an attendance basis.

TN.8.117 Autologous Chondrocyte Implantation in the Knee

The Medical Services Advisory Committee (MSAC) evaluated the available evidence and did not support public funding for matrix-induced autologous chondrocyte implantation (MACI) or autologous chondrocyte implantation (ACI) for the treatment of chondral defects in the knee and other joints, due to the increased cost compared to existing procedures and the lack of evidence showing short term or long-term improvements in clinical outcomes. Medicare benefits are not payable in association with this technology as per GN.13.33.

TN.8.118 Paediatric Patients - (Items 50450 to 50658)

For the purpose of Medicare benefits a paediatric patient is considered to be a patient under the age of eighteen years, except in those instances where an item provides further specifications (i.e. fracture items for paediatric patients which state "with open growth plates").

TN.8.119 Treatment of Fractures in Paediatric Patients - (Items 50500 to 50588)

Items 50552 and 50560 apply to fractures that may arise during delivery and at an age when anaesthesia poses a significant risk and thus reduction is usually performed in the neonatal unit or nursery.

Item 50576 provides for closed reduction in the skeletally immature patient and will require application of a hip spica cast and related aftercare.

Medicare benefits are payable for services that specify reduction with or without internal fixation by open or percutaneous means, where reduction is carried out on the growth plate or joint surface or both.

TN.8.120 Unresectable primary malignant tumour of the liver destruction of by open or laparoscopic ablation (Item 50952)

A multi-disciplinary team for the purposes of item 50952 would include a hepatobiliary surgeon, interventional radiologist and a gastroenterologist or oncologist.

TN.8.121 Paracentesis of anterior chamber or vitreous cavity and/or intravitreal injection - (Items 42738 to 42740)

Items 42738 and 42739 provide for paracentesis for the injection of therapeutic substances and/or the removal of aqueous or vitreous, when undertaken as an independent procedure. That is, not in conjunction with other intraocular surgery.

Item 42739 should be claimed for patients requiring the administration of anaesthetic by an anaesthetist for the procedure. The administration of oral sedation is not sufficient justification for the use of item 42739, and item 42738 is applicable in those circumstances. Advice from the Royal Australian and New Zealand College of Ophthalmologists is that independent injections require only topical anaesthesia, with or without subconjunctival anaesthesia, except in specific circumstances as outlined below where the administration of anaesthetic by an anaesthetist may be indicated:

- nystagmus or eye movement disorder;
- cognitive impairment precluding safe intravitreal injection without sedation;

- a patient under the age of 18 years;
- a patient unable to tolerate intravitreal injection under local anaesthetic without sedation; or
- endophthalmitis or other inflammation requiring more extensive anaesthesia (eg peribulbar).

GP anaesthetists are expected to meet the Joint Consultative Committee on Anaesthesia (JCCA) Continuing Professional Development (CPD) Standard which defines the minimum recommended requirements for all general practitioners providing anaesthesia services.

Practitioners billing item 42739 must keep clinical notes outlining the basis of the requirement for the administration of anaesthetic by an anaesthetist.

Item 42740 provides for intravitreal injection of therapeutic substances and/or the removal of vitreous for diagnostic purposes when performed in conjunction with other intraocular surgery including with a service to which Item 42809 (retinal photocoagulation) applies.

TN.8.123 Vulvoplasty and Labioplasty - (Items 35533 and 35534)

Item 35533 is intended to cover the surgical repair of female genital mutilation or a major congenital anomaly of the uro-gynaecological tract which is not covered by existing MBS items. For example, this item would apply where a patient who has previously received treatment for cloacal extrophy, bladder exstrophy or congenital adrenal hyperplasia requires additional or follow-up treatment.

Item 35534 is intended to cover services for a structural abnormality causing significant functional impairment and is restricted to patients aged 18 years and over.

A detailed clinical history outlining the structural abnormality and the medical need for surgery of the vulva and/or labia must be included in patient notes, as this may be subject to audit.

Medicare benefits are not payable for non-therapeutic cosmetic services.

TN.8.124 Treatment of Wrist and Finger Fractures - (Items 47301 to 47319, and 47361 to 47373)

- For the purposes of these items, fixation includes internal and external.
- Regarding item 47362, major regional anaesthesia includes bier block.

TN.8.125 Removal of Skin Lesions - Necessary Excision Diameter - (Items 31356 to 31388)

The necessary excision diameter (or defect size) refers to the lesion size plus a clinically appropriate margin of healthy tissue required with the intent of complete surgical excision. Measurements should be taken prior to excision. Margin size should be determined in line with current NHMRC guidelines.

For the purpose of items 31356 to 31388, the defect size is calculated by the average of the width and the length of the skin lesion and an appropriate margin. The necessary excision diameter is calculated as shown in the Factsheet at this link: [Determining lesion size for MBS selection](#)

Practitioners must retain copies of histological reports and any other supporting evidence (patient notes, photographs etc). Photographs should include scale.

An episode of care includes both the excision and closure for the same defect, even when excision and closure occur at separate attendances.

The initial excision of a suspected melanoma may be claimed using item 31377, 31378, 31379, 31380, 31381, 31382 or 31383, depending on the location of the malignancy and the size of the excision diameter. Wide excision of the primary tumour bed following histological confirmation of melanoma, appendageal carcinoma, malignant connective tissue or merkel cell carcinoma of the skin may be claimed using item 31371, 31372, 31373, 31374, 31375 or 31376, depending on the location of the malignancy and the size of the excision diameter.

For items 31356 to 31370, 31386, 31387 and 31388, a malignant skin lesion is defined as a basal cell carcinoma; a squamous cell carcinoma (including keratoacanthoma); a cutaneous deposit of lymphoma; or a cutaneous metastasis from an internal malignancy.

TN.8.126 Flap Repair - (Item 45202)

Practitioners must only perform a muscle or skin flap repair where clinical need can be clearly evidenced (i.e. where a patient has severe pre-existing scarring, severe skin atrophy, sclerodermoid changes or where the defect is contiguous with a free margin).

Clinical evidence may be supported by patient notes, photographs of the affected area and pathology reports.

TN.8.127 Interpretation of femoroacetabular impingement (FAI) restriction (item 49366)

Patients presenting with hip dysplasia, Perthes Disease and Slipped Upper Femoral Epiphysis (SUFE) are eligible for treatment under item 49366.

TN.8.132 Transcatheter occlusion of left atrial appendage for stroke prevention (item 38276) Eligibility requirements for Item 38276

This item is intended for use in patients where an independent medical practitioner has documented an absolute and permanent contraindication to oral coagulation. The medical practitioner who has documented this contraindication should not have been involved in any decision to provide the service or the actual provision of the service, and is not engaged in the same or a similar group of practitioners.

The following list provides examples of the conditions for which this item is intended:

- i. A previous major bleeding complication experienced whilst undergoing treatment with oral anticoagulation therapy without remedial cause, or
- ii. History of intracranial, intraocular, spinal, retroperitoneal or atraumatic intra-articular bleeding, or
- iii. Chronic, irreversible, recurrent gastrointestinal bleeding of any cause (eg, radiation proctitis, gut angiodysplasia, hereditary haemorrhagic telangiectasia, gastric antral vascular ectasia (GAVE), portal hypertensive gastropathy, refractory radiation proctitis, obscure source), or
- iv. Life-long spontaneous impairment of haemostasis, or
- v. A vascular abnormality predisposing to potentially life threatening haemorrhage, or
- vi. Irreversible hepatic disease with coagulopathy and increased bleeding risk (Child Pugh B and C), or
- vii. Receiving concomitant medications with strong inhibitors of both CYP3A4 and P-glycoprotein (P-gp), or
- viii. Severe renal impairment defined as creatinine clearance (CrCL) < 15 ml/min or undergoing dialysis and where warfarin is inappropriate, or
- ix. Known hypersensitivity to the direct oral anticoagulant (DOAC) or to any of the excipients.

This item is not intended for use in patients with a relative contraindication to oral anticoagulation.

TN.8.133 Endoscopic upper gastrointestinal strictures (item 30475)

Endoscopic upper GI stricture services 41819 and 41820 have been consolidated under item 30475. This consolidated item will allow any endoscopic technique to be performed for oesophageal through to gastroduodenal procedures and will include imaging intensification if done. The fee is the same as item 41819 which higher than item 30475 but lower than 41820.

TN.8.134 Application of items 32084 and 32087

If a service to which item 32084 or 32087 applies is provided by a practitioner to a patient on more than one occasion on a day, the second service is taken to be a separate service for the purposes of the item if the second service is provided under a second episode of anaesthesia or other sedation.

TN.8.135 Transcatheter Aortic Valve Implantation (Item 38495)

Items 38495 (high-risk), 38514 (intermediate-risk) and 38522 (low-risk with native calcific aortic stenosis) apply only to a service for Transcatheter Aortic Valve Implantation (TAVI) for the treatment of symptomatic severe aortic stenosis (items 38495 & 38514) and Transcatheter Aortic Valve Implantation (TAVI) for the treatment of symptomatic severe native calcific aortic stenosis, that is to be provided in a TAVI Hospital by a TAVI Practitioner on a TAVI patient.

TAVI Hospital

For items 38495, 38514 and 38522 a TAVI Hospital means a hospital, as defined by subsection 121-5(5) of the *Private Health Insurance Act 2007*, that is clinically accepted as being a suitable hospital in which the service described in items 38495, 38514 or 38522 may be performed.

The Transcatheter Aortic Valve Implantation - Rules for the Accreditation of TAVI Practitioners developed by Cardiac Accreditation Services Limited provides guidance on what are considered by the sector as minimum requirements that must be met in order to be a clinically acceptable facility that is suitable for TAVI procedures to be performed at.

Transcatheter Aortic Valve Implantation - Rules for the Accreditation of TAVI Practitioners can be accessed via www.tavi.org.au.

TAVI Practitioner

For items 38495, 38514 and 38522 a TAVI Practitioner is either a cardiothoracic surgeon or interventional cardiologist who is accredited by Cardiac Accreditation Services Limited.

Accreditation by Cardiac Accreditation Services Limited must be valid prior to the service being undertaken in order for benefits to be payable under items 38495, 38514 and 38522.

The process for accreditation and re-accreditation is outlined in the *Transcatheter Aortic Valve Implantation - Rules for the Accreditation of TAVI Practitioners*, issued by Cardiac Accreditation Services Limited, and is available on the Cardiac Accreditation Services Limited website, www.tavi.org.au.

Cardiac Accreditation Services Limited is a national body comprising representatives from the Australian & New Zealand Society of Cardiac & Thoracic Surgeons (ANZSCTS) and the Cardiac Society of Australia and New Zealand (CSANZ).

TAVI Patient

A TAVI Patient means a patient who, as a result of a TAVI Case Conference, has been assessed as having one of the following:

- A. an unacceptably high risk for surgical aortic valve replacement and is recommended as being suitable to receive the service described in item 38495; or
- B. has been assessed as having an intermediate risk for surgical aortic valve replacement and is recommended as being suitable to receive the service described in item 38514; or
- C. has been assessed as having a low risk for surgical aortic valve replacement (with native calcific aortic stenosis) and is recommended as being suitable to receive the service described in item 38522

A TAVI Case Conference is a process by which:

- (a) there is a team of 3 or more participants, where:
 - (i) the first participant is a cardiothoracic surgeon; and
 - (ii) the second participant is an interventional cardiologist; and
 - (iii) the third participant is a specialist or consultant physician who does not perform a service described in items 38495, 38514 or 38522 for the patient being assessed; and
 - (iv) either the first or the second participant is also a TAVI Practitioner; and
- (b) the team assesses a patient's risk and technical suitability to receive the service described in item 38495, item 38514 or item 38522, taking into account matters such as:
 - (i) the patient's risk and technical suitability for a surgical aortic valve replacement; and
 - (ii) the patient's cognitive function and frailty; and
- (c) the result of the assessment is that the team makes a recommendation about whether or not the patient is suitable to receive the service described in item 38495, 38514 or 38522; and
- (d) the particulars of the assessment and recommendation are recorded in writing.

While benefits are payable for an eligible TAVI Case Conference under Items 6080 and 6081, a claim for these services does not have to be made in order for a benefit to be paid under items 38495, 38514 or 38522. Item 38495, item 38514 or item 38522 are only payable once per patient in a five year period. E.g. if a patient has received a rebate for item 38495 then they cannot receive a rebate for items 38495, 38514 or 38522 for 5 years.

TN.8.136 Corneal Collagen Cross Linking (Item 42652)

Evidence of progression in patients over the age of twenty five is determined by the patient history including an objective change in tomography or refraction over time. Evidence of progression in patients aged twenty five years or younger is determined by patient history including an objective change in tomography or refraction over time and/or posterior elevation data and objective documented progression at a subclinical level.

TN.8.137 Thyroidectomy and hemithyroidectomy procedures (items 30296, 30306, and 30310)

Total thyroidectomy or total hemithyroidectomy are the most appropriate procedures in the majority of circumstances when a thyroidectomy is required. The preferred procedure for thyrotoxicosis is total thyroidectomy (item 30296). Item 30310 is to be used only in uncommon circumstances where a subtotal or partial thyroidectomy is indicated and includes a subtotal lobectomy, nodulectomy, or isthmusectomy or equivalent partial thyroidectomy.

TN.8.138 Re-exploratory thyroid surgery (item 30297)

Item 30297 is for re-exploratory thyroid surgery where prior thyroid surgery and associated scar tissue increases the complexity of surgery. For completion hemithyroidectomy on the contralateral side to a previous hemithyroidectomy for thyroid cancer, item 30306 is the appropriate item.

TN.8.139 Personal performance of a Synacthen Stimulation Test (item 30097)

A 0900h serum cortisol (0830-0930) less than 100 nmol/L indicates adrenal deficiency and a Synacthen Test is not required.

A 0900h serum cortisol (0830-0930) greater than 400 nmol/L indicates adrenal sufficiency and a Synacthen Test is not required. An exception to this is when testing women on oral contraception where cortisol levels may be higher due to increases in cortisol-binding globulin and this threshold may not exclude women with adrenal insufficiency.

TN.8.140 Excision of graft material - Items 35581 and 35582

For items 35581 and 35582 the size of the excised graft material must be histologically tested and confirmed.

TN.8.141 Application of items 51011 to 51171 (Sub-group 17)

Spinal surgery items 51011 to 51171 cannot be performed in conjunction with any other item (outside of subgroup 17) in Group T8 of the MBS (surgical operation items 30001 to 50952), when that surgical item is related to spinal surgery. Items 50600 to 50644 - spine surgery for scoliosis and kyphosis in paediatric patients - are excepted from this rule when claimed in conjunction with items 51113 and 51114.

Meaning of Motion Segment

Motion segment is defined as including all anatomical structures (including traversing and exiting nerve roots) between and including the top of the pedicle above to the bottom of the pedicle below.

Combined Anterior and Posterior Surgery

Combined anterior/ posterior surgery items 51061, 51062, 51063, 51064, 51065 and 51066 cannot be claimed with any item between 51020 and 51045 (i.e. items for spinal instrumentation, posterior bone graft and/or anterior column fusion).

Spinal instrumentation

Spinal instrumentation items 51021 to 51026 cannot be claimed for vertebral body tethering for the treatment of scoliosis. Medicare benefits are not payable for this procedure.

Full clinical details should be documented in the patient notes, including the number of motion segments fused, which demonstrates the clinical need for the service, as this may be subject to audit.

Interpretation of Lumbar Spinal Fusion

Lumbar spinal fusion may not be claimed for chronic low back pain for which a diagnosis has not been made.

TN.8.142 Spinal Decompression - Items 51011 to 51015

Items 51011 to 51015 are for services which include discectomy, decompression of central spinal canal by laminectomy or partial corpectomy (vertebral spurs and osteophytes; less than 50% of the vertebral body), and decompression of the subfacetal recess, the exit foramen and far lateral (intertransverse) space.

Items 51011 to 51015 should only be used for direct decompression, and not where decompression occurs as an indirect result of the procedure performed. Direct decompression enables the cord and exiting nerve roots to be visualised, and the neural structures decompressed.

Through the anterior approach to the cervical spine, direct decompression can be performed with the resection of the annulus and posterior longitudinal ligament (PLL) and/or uncovertebral joints, the removal of herniated nucleus pulposa (HNP) or osteophytes. In the anterior lumbar interbody space, direct decompression can occur with resection of the posterior annulus and PLL, and removal of the HNP or osteophytes to visualise the cauda equina and decompress the neural structures.

With XLIF and OLIF, decompression can only be indirect.

For decompression procedures, only one item is selected from 51011 to 51015.

For posterolateral spinal fusion without instrumentation, if a decompression procedure is combined with the fusion, two items numbers can be selected: one from 51011 to 51015 and one from 51031 to 51036.

For posterolateral spinal fusion with instrumentation, two item numbers can be selected: one from 51020 to 51026 and one from 51031 to 51036. If decompression is also performed, three items can be selected: one from 51011 to 51015, one from 51020 to 51026 and one from 51031 to 51036.

For instrumented spinal fusion with interbody and posterolateral bone graft (with or without cages) and decompression, four item numbers can be selected: one from one from 51011 to 51015, one from 51020 to 51026, one from 51031 to 51036 and one from 51041 to 51045.

If more than 50% of a vertebral body is resected (piecemeal vertebrectomy) an item from 51051 to 51059 can be selected in addition to an item from 51011 to 51015.

Items 51011 to 51015 can be used when the purpose of the laminectomy is exposure or posterior spinal release.

TN.8.143 Spinal Instrumentation (cervical, thoracic and lumbar) - Items 51020 to 51026

Items 51020 to 51026 are intended for spinal instrumentation at any level. The appropriate item is determined by the number of motion segments instrumented, barring item 51020 which applies to one vertebra.

The use of items (51021 to 51026) excludes vertebral body tethering for the treatment of scoliosis.

Full clinical details should be documented in the patient notes, including the number of motion segments fused, which demonstrates the clinical need for the service, as this may be subject to audit.

For posterolateral spinal fusion with instrumentation, two item numbers are selected: one from 51020 to 51026 and one from 51031 to 51036. If decompression is also performed, three items are selected: one from 51011 to 51015, one from 51020 to 51026 and one from 51031 to 51036.

For instrumented spinal fusion with interbody and posterolateral bone graft (with or without cages) and decompression, four item numbers are selected: one from one from 51011 to 51015, one from 51020 to 51026, one from 51031 to 51036 and one from 51041 to 51045.

TN.8.144 Posterior and/or Posterolateral (intertransverse or facet joint) bone graft (cervical, thoracic and lumbar) - Items 51031 to 51036

Items 51031 to 51036 are for services which include local morcellized, artificial or harvested bone graft with or without bone morphogenic protein (BMP).

For posterolateral spinal fusion without instrumentation, if a decompression is combined with the fusion, two items numbers are selected: one from 51011 to 51015 and one from 51031 to 51036.

For posterolateral spinal fusion with instrumentation, two item numbers are selected: one from 51020 to 51026 and one from 51031 to 51036. If decompression is also performed, three items are selected: one from 51011 to 51015, one from 51020 to 51026 and one from 51031 to 51036.

For instrumental spinal fusion with interbody and posterolateral bone graft (with or without cages) and decompression, four item numbers are selected: one from one from 51011 to 51015, one from 51020 to 51026, one from 51031 to 51036 and one from 51041 to 51045.

TN.8.145 Anterior column fusion, with or without implant, or limited vertebrectomy (less than 50%) and anterior fusion (cervical, thoracic and lumbar) - Items 51041 to 51045

Items 51041 to 51045 are for services which include placement of local morcellized, artificial, harvested bone graft, bone morphogenic protein (BMP) and prosthetic devices into the intervertebral space. Artificial bone grafting materials must be used in accordance with the manufacturer's instructions.

Items 51041 to 51045 are to be selected irrespective of surgical approach (anterior, direct lateral or posterior via open or minimally invasive techniques).

For instrumented spinal fusion with interbody and posterolateral bone graft (with or without cages) and decompression, four item numbers are selected: one from one from 51011 to 51015, one from 51020 to 51026, one from 51031 to 51036 and one from 51041 to 51045.

For and instrumented anterior cervical decompression and fusion, (with or without cage) three items are selected: one from 51011 to 51015, one from 51020 to 51026, and one from 51041 to 51045.

Items 51041 to 51045 cannot be claimed with any item between 51051 and 51059 if performed at the same motion segment.

If an assisting surgeon is used at any time during the procedure, then 51160 or 51165 should be used in isolation by the assisting surgeon. If the assisting surgeon needs to perform complex non-spinal surgery, they may use a more appropriate item from outside the spinal surgery schedule.

TN.8.146 Spinal Osteotomy and/or vertebrectomy - Items 51051 to 51059

Items 51051 to 51059 are intended for spinal osteotomy and/or vertebrectomy at any level.

For the purpose of items 51054, 51055 and 51056, the definition of piecemeal or subtotal excision is the removal of at least 50% of the vertebral body.

Items 51051 to 51059 cannot be claimed with any item between 51041 and 51045 if performed at the same motion segment.

TN.8.147 Anterior and Posterior (combined) Spinal fusion under one anaesthetic via separate incisions - Items 51061 to 51066

Only one of these items should be billed for any appropriate combined anterior and posterior surgeries which are completed under one anaesthetic. The appropriate item is determined by the number of motion segments to which grafting and fusion occur.

These items cannot be claimed with any item between 51020 to 51026, 51031 to 51036 and 51041 to 51045.

If a laminectomy is included, an item from 51011 to 51015 can also be used appropriate to the level of decompression.

If spinal osteotomy or vertebrectomy (>50%) is performed as part of the combined anterior/posterior approach, it is appropriate to claim one item between 51051 to 51056 in addition to an item between 51061 to 51066.

TN.8.148 Odontoid Screw fixation – Item 51103

This item is not for use when another item is claimed for the management of the odontoid fracture.

TN.8.149 Application of items 51160 and 51165

If the spine surgeon performs their own exposure to the thoracic or lumbar spine then 51160 or 51165 can be added to the claim for the overall surgery. If an assisting surgeon is used at any time during the procedure, then 51160 or 51165 should be used in isolation by the assisting surgeon. If the assisting surgeon needs to perform complex non-spinal surgery, they may use a more appropriate item but not in combination with 51160 or 51165. If an exposure surgeon claims a number from any section of the MBS schedule, the spinal surgeon cannot claim 51160 or 51165.

TN.8.150 Correction of Developmental Breast Abnormality - (Items 45060 to 45062)

Full clinical details must be documented in patient notes, including pre-operative photographic and / or diagnostic imaging evidence as specified in the item descriptor which demonstrates the clinical need for the service, as this may be subject to audit.

Volumetric measurement of the breasts should be performed using a technique which has been reported in a published study.

TN.8.151 Mohs surgery service caseload

Services under items 31000, 31001 and 31002 should make up at least 90% of a Mohs surgeon's caseload of items 31000-31005 annually.

TN.8.152 Colonoscopy Items (items 32222-32229)

Colonoscopy items (items 32222-32229)

It is expected that clinicians using the MBS items for colonoscopy also refer to national guidelines such as the National Health and Medical Research Council (NHMRC) Clinical Practice Guidelines for Surveillance Colonoscopy (NHMRC guidelines). For more information on clinical practice guidelines for surveillance colonoscopy see the colorectal cancer pages on the [Cancer Council Australia website](#).

Surveillance colonoscopy should be planned based on high-quality endoscopy in a well-prepared colon using most recent and previous procedure information when histology is known. Clinicians should use their best clinical judgement to determine the interval between testing and the item that best suits the condition of the patient.

The NHMRC guidelines do not support the use of colonoscopy for patients at average or slightly above average risk of colorectal cancer who do not have symptoms or a positive faecal occult blood test (FOBT).

Items 32222-32228 specify that there is endoscopic examination to the caecum. The 'to the caecum' requirements for colonoscopy examinations do not apply to patients who have no caecum following right hemi colectomy. For these patients the examination should be to the anastomosis. Item 32084 should be billed if preparation is inadequate to allow visualisation to the caecum.

General practitioners should ensure colonoscopy referral practices align with applicable national guidelines, including the Royal Australian College of General Practitioners' guidelines for preventive activities in general

practice ([the red book](#)). In addition, general practitioners are urged to recommend biennial FOBT screening to age-appropriate patients.

Colonoscopy where a polyp/polyps are removed

Items 32222-32226 and 32228 provide for diagnostic colonoscopy when claimed alone. Where a polyp or polyps are removed during the colonoscopy, item 32229 should also be claimed in association with the appropriate colonoscopy item.

Definition of previous history (items 32222-32225)

For items 32223-32225 the most appropriate item to be billed is determined by the previous history of the patient. The previous history for the purpose of these items is defined by number, size and type of adenomas removed during any previous colonoscopy.

Although a patient with a previous history of 1-2 low risk adenomas (<10mm with no high-risk histological features) is eligible for a colonoscopy every five years under item 32223, clinical guidelines indicate that colonoscopy every 10 years is sufficient.

Definition of moderate risk of colorectal cancer due to family history (item 32223)

For item 32223 a patient is considered at moderate risk of colorectal cancer if there is moderate risk family history of colorectal cancer – defined as:

- 1 first degree relative less than 55 years of age at diagnosis; OR
- 2 first degree relatives with a history of colorectal cancer; OR
- 1 first degree relative and 2 second degree relatives with a history of colorectal cancer.

The national clinical practice guidelines support the use of FOBT as a first line test for patients with a low risk family history of colorectal cancer.

Exception item (item 32228)

Timing of colonoscopy following polypectomy should conform to the recommended surveillance intervals set out in clinical guidelines, taking into account individualised risk assessment. In the absence of reliable clinical history, clinicians should use their best clinical judgement to determine the interval between testing and the item that best suits the condition of the patient. Where the clinician is unable to access sufficient patient information to enable a colonoscopy to be performed under items 32222-32226, but in their opinion there is a clinical need for a colonoscopy, then item 32228 should be used. This item is available once per patient per lifetime.

Time intervals

Items 32223, 32224, 32225 and 32226 have time intervals for repeat colonoscopy which are consistent with guidelines. These services are payable under Medicare only when provided in accordance with the approved intervals.

Patients may fit several categories and the most appropriate fit is a matter for clinician judgement with the highest risk indicating what subsequent colonoscopy intervals are appropriate. The examples provided below show that the result of the histopathology will not lengthen the surveillance intervals (in the case of patient with familial adenomatous polyposis (FAP) or Lynch syndrome) and may actually shorten the surveillance intervals.

Example 1

A patient at high risk of colorectal cancer with FAP or Lynch syndrome has a number of polyps removed at a surveillance colonoscopy. Item 32226 and 32229 are the appropriate items to bill. If the histology result returns 1-2 adenomas for patients at low to moderate risk then the next surveillance colonoscopy is recommended in 5 years. However, the patient's familial condition means that a shorter interval (12 months) is recommended and payable.

Example 2

A patient at moderate risk of colorectal cancer because of family history has a number of polyps removed at a surveillance colonoscopy. Item 32223 and 32229 are the appropriate items to bill based on the patient's family history. If the histology testing returns showing an adenoma with high-risk histological features then the next surveillance colonoscopy is recommended in 3 years instead of 5 years.

How to use the items with new patients who have undergone previous colonoscopy

Patients whose care continues within one practice should have the relevant history readily available to guide decision making. For new patients, practitioners should make reasonable efforts to establish a patient's previous colonoscopy history. This includes seeking information from My Health Record, the records department of the hospital where the previous procedure occurred, the GP or the patient. The patients' MBS claims history for colonoscopy services will also assist with this.

For audit purposes it is important to record the most appropriate item. In accordance with good practice, clinicians are required to maintain records that include pathology results which must be made available to the patient or other practitioners as required.

The Australian Commission on Safety and Quality in Health Care's [Colonoscopy Clinical Care Standard](#) states all facilities and clinicians delivering colonoscopy services must provide a timely copy of the colonoscopy report and histology result to the patient and their GPs. Compliance with the Colonoscopy Clinical Care Standard is mandatory under the Australian Health Service Safety and Quality Accreditation Scheme.

Patient eligibility for colonoscopy services

Services Australia will be able to confirm whether a colonoscopy service has been claimed by an individual patient and the date of service. It will also be able to confirm any restriction on the frequency of the item claimed which would prevent a rebate from being paid if the service was provided again within the restricted period. Patients can seek clarification from Services Australia by calling 132 011.

Patients can also access their own claiming history with a My Health Record or by establishing a Medicare online account through [myGov](#) or the Express Plus Medicare mobile app.

Further information about these services can be found on the [Services Australia website](#).

Practitioners providing colonoscopy services can call Medicare on **132 150** to check the patient's claiming history. The patient's Medicare card number will be required together with the range of item numbers to be checked. For example, the new item numbers for colonoscopy services are in the range 32222-32229. The operator will interrogate the patient's claiming history and provide advice on any claims paid for a colonoscopy service within the range of items specified and the date of the service.

Providers can also check a patient's eligibility via [Health Professional Online Services](#) (HPOS). HPOS will be able to return advice on whether a service is payable or not payable.

All patients who require a colonoscopy will be eligible for a service. However, MBS rebates will not be payable for services which do not meet the clinical indications and the item requirements for a colonoscopy or a repeat colonoscopy where the interval is specified in the item. Practitioners should ensure that their practice conforms to the approved clinical guidelines.

The Services Australia enquiry lines for providers and for patients is available 24 hours a day, seven days a week. Further information about these services can be found on the Services Australia website.

TN.8.153 Urology Oncology: Intestinal Conduit - (Items 36600 and 36603)

Patients undergoing these procedures should ideally be treated at a facility adequately resourced for stoma therapy support, where High Dependency Units or Intensive Care Units, experienced nursing staff, and stomal therapy is available.

TN.8.154 Urology Oncology: Nephrectomy and Nephroureterectomy - (Items 36516, 36519, 36522, 36528, 36529, 36531, 36532, 36533 and 36576)

Best practice in treating kidney cancer patients with an estimated glomerular filtration rate (eGFR) <60ml/min/1.73m² involves multi-disciplinary management in collaboration with a nephrologist.

TN.8.155 Paediatric and reconstructive urology: Pyeloplasty - (Item 36567)

Where laparoscopic surgery is used, this should allow for retroperitoneal as well as abdominal approaches.

TN.8.156 Paediatric and reconstructive urology: Ureterolysis - (Item 36615)

Item 36615 should be used only where there is radiological evidence of obstruction or proximal dilatation of the ureter at surgery. Routine dissection of ureter as part of another operation is not considered ureterolysis for ureteric obstruction.

TN.8.157 Urology Oncology: Bladder Excision or Transection - (Items 37000 and 37014)

Best practice in management of invasive bladder cancer is to discuss cases at multi-disciplinary meetings to determine the role of neo-adjuvant chemotherapy prior to surgery or radiation therapy with or without chemotherapy. Information and management decisions on patient care from the multi-disciplinary meeting should be communicated to the referring GP in a timely manner.

TN.8.158 Urology Oncology: Cystoscopy - (Item 36842)

The co-claiming restrictions for 36842 with items 36812, 36827 to 36863 and 37203, prevent the restricted items from being co-claimed as part of the same procedure, but do not prevent the restricted items from being claimed as separate procedures on the same day.

TN.8.159 General Urology: Bladder repair and Cystotomy - (Item 37011)

Co-claiming of this item is reasonable in urgent situations that cannot be resolved with a urethral catheter alone.

TN.8.160 Urology Oncology: Prostate Biopsy - (Item 37216 and 37219)

Best practice is to ensure patients are informed of the uncommon but serious risk of severe infection when a transrectal needle biopsy is performed, and that alternative methods of biopsy are available that reduces this risk. Practitioners are to ensure that the referring GP is informed of the biopsy result as soon as possible (optimally 2-4 weeks) after the biopsy. This ensures that GPs will be informed early after diagnosis of prostate cancer, and will be in a better position to support the patient after diagnosis.

TN.8.161 Urology Oncology: Prostatectomy - (Items 37210, 37211, 37213 and 37214)

Best practice prior to claiming for a 37210, 37211, 37213 and 37214 would be for the operating surgeon to have a long consult with the patient within 6 months prior to surgery to discuss and provide patients with written information about all guideline-endorsed treatment options for their condition. A thorough consult discussing all available treatment modalities, is required to ensure patients make well-informed decision about their treatment.

Multi-disciplinary management constitutes clinical best practice in patients with intermediate risk or advanced prostate cancer. As such, patients should ideally be reviewed by a multi-disciplinary team before a treatment decision is made. Multi-disciplinary teams involve radiation oncologists (for alternate radical treatments), medical oncologists (for adjuvant or therapeutic approaches) and other disciplines (e.g. urology nurses, exercise physiotherapists, exercise physiologists, physiotherapists, psychologists, pathologists, radiologists). Recommendations from multi-disciplinary reviews should be documented in writing and provided to the patient and referring GP.

Men in whom curative treatment for prostate cancer is recommended, should be offered and encouraged to discuss treatment options with a urologist and a radiation oncologist prior to any treatment, as part of fully informed decision making. A record of a patient's decision not to accept a referral to a radiation oncologist (from the urologist or general practitioner) should be clearly documented in the patient's medical record.

TN.8.162 Prostate: Benign prostatic hyperplasia and prostatectomy - (Item 37200)

The laparoscopic or robotic assisted approaches to prostatectomy may include trans-peritoneal or extra-peritoneal access.

TN.8.164 General Urology: Lengthening of penis - (Item 37423)

The partial penectomy or penile epispadias secondary repair does not need to occur during the same episode that item 37423 is claimed.

TN.8.165 General Urology: Lymph Node Dissection - (Item 37607 and 37610)

Items 37607 and 37610 should be performed using a bilateral template.

TN.8.166 Item 40803 - co-claiming restrictions

Items 39015, 39503, 39906 and 40104 do not apply to a service if the service is provided in conjunction with the service described in item 40803.

TN.8.167 Breast Prosthesis Removal (Item 45551)

Providers should note that 45551 is intended to be claimed when there is a medical indication for performing capsulectomy, such as capsular contracture, presence of a mass within the capsule (seen on pre-operative imaging or intraoperatively) or evidence of Breast Implant Associated Anaplastic Large Cell Lymphoma or other malignancy. If this item is claimed the capsule must be sent for histopathology.

TN.8.168 Procedure for osteotomy (47501, 48400 - 48427)

An osteotomy is a planned bone cut that is intended to realign the bone or alter the length of a bone.

TN.8.169 Procedure for the treatment of unicameral bone cysts (Item 47900)

The item is for the treatment of unicameral bone cysts and is not to be used for the treatment of other cystic lesions of bone such as geodes, subchondral cysts, arthritis associated cysts, or cysts associated with anterior cruciate ligament grafts.

TN.8.171 Procedure for neoplastic mass lesions - intralesional or marginal excision of bone tumor (Items 50203 - 50209)

- The items 50203, 50206 and 50209 are not for removal of a subchondral cyst (geode).
- The items include all aspects of the surgical approach, the resection, and the subsequent reconstruction (as required).
- The resection of a tumour and associated reconstruction includes any neurolysis, arthrotomy, synovectomy, joint stabilisation, ligamentous stabilisation or reconstruction, tendon transfer of any kind, use of any arthroscopic procedure, osteotomy or osteectomy (with or without bone grafting and / or internal fixation), bone grafting (with or without internal fixation), arthroplasty, arthrodesis, internal fixation by any technique, rhizolysis, laminectomy, or spinal fixation, fusion or grafting.

TN.8.173 Procedure for neoplastic mass lesions - wide excision of bone tumor (Items 50212 - 50224)

The histological diagnosis of the aggressive or malignant nature of the tumour should have been previously documented.

TN.8.174 Procedure for neoplastic mass lesions - wide excision of bone tumor (Item 50212)

- The item includes all aspects of the surgical approach, the resection, and the subsequent reconstruction by the same surgeon (as required).

- The resection of a tumour and associated reconstruction includes any bony or soft tissue procedures.
- A second surgeon may claim additional items used in soft-tissue reconstruction associated with tumour resections.

TN.8.175 Procedure for neoplastic mass lesions - wide excision of bone tumor (Items 50215 - 50224)

- The items include all aspects of the surgical approach, the resection, and the subsequent reconstruction by the same surgeon (as required).
- The resection of a tumour and associated reconstruction includes any bony or soft tissue procedures, except for bone grafting items which may be co-claimed where appropriate.
- A second surgeon may claim additional items used in soft-tissue reconstruction associated with tumour resections.

TN.8.176 Procedure for neoplastic mass lesions - amputation (Items 50233 - 50239)

- The histological diagnosis of the aggressive or malignant nature of the tumour should have been previously documented. The item includes all aspects of the surgical approach, the resection, and the subsequent reconstruction by the same surgeon (as required).
- The resection of a tumour and associated reconstruction includes any bony or soft tissue procedures.
- A second surgeon may claim additional items used in soft-tissue reconstruction associated with tumour resections.

TN.8.177 Procedure for bone graft (Items 48245 - 48257)

- Bone grafts may be free, meaning the bone flap is not vascularised.
- Bone harvested with a vascular pedicle would be referred to as a pedicled bone flap.
- Item 48254 covers harvesting and insertion of a pedicled bone flap.
- Item 48254 does not cover free bone flaps, however alternative MBS items may be appropriate, for example 48245 or 48248.

TN.8.178 Procedure for bone graft using bone graft substitutes (Item 48257)

‘Other graft substitute’ does not include demineralised bone matrix or bone graft substitutes such as synthetic materials, ceramics (bone void fillers), collagen composites, composite cement materials, bone morphogenetic protein, or recombinant human bone morphogenetic protein.

TN.8.179 Procedure for removal of internal fixation (Item 47924 - 47929)

- Items 47924, 47927 and 47929 are appropriate to be claimed once per bone.
- Where an implant crosses a joint, or multiple bones, the item should be claimed once, using one of the items, rather than multiple claims of items 47924 and 47927 and 47929.

TN.8.180 Procedure for tendon repair (Item 47954)

For the purpose of item 47954:

1. the service is per tendon if it is the primary procedure; and
2. where a tendon is conjoined or has common origin, it is considered one tendon.

TN.8.182 Procedure for ligament repair, reconstruction and associated intra-articular surgery (Items 49536 and 49542)

- These items are intended to cover all knee ligament repair and reconstruction procedures and associated intra-articular surgery, including (but not limited to), meniscal surgery, notchplasty, chondroplasty and removal of loose bodies.

- Repair is reattachment of a displaced structure and reconstruction is surgery that modifies or augments underlying anatomy. Each item is intended to cover all aspects of the surgery.
- In rare circumstances, patients may require additional osteotomy or patella-femoral stabilisation and in these instances, the relevant item numbers can also be claimed.

TN.8.183 Procedure for arthroscopic knee surgery (Items 49570 - 49590)

- Only a single arthroscopy item for each procedure may be utilised per knee.
- This item must be for the most complex procedure undertaken and must not be utilised in conjunction with any other knee arthroscopy item. Refer to the Australian Orthopaedic Association guidelines for appropriate use.
- Osteoarthritis is a progressive disease involving structural and compositional changes of the whole joint. Multiple clinical trials have demonstrated that knee arthroscopic procedures have no clinically meaningful benefit in patients with uncomplicated osteoarthritis.
- Uncomplicated osteoarthritis is defined as a circumstance where the patient's symptoms or illness are not due to obstructive atraumatic chondral, meniscal or chondral lesions, or repairable menisci, sepsis, neoplasia or inflammatory disorders.
- For patients with uncomplicated osteoarthritis, arthroscopy should only be performed in patients with surgeon-confirmed obstructive symptoms (locked or locking knee), or where the identified pathology is atraumatic chondral, meniscal or chondral lesions that are causative of the symptoms.
- Patient selection for knee arthroscopy in the presence of osteoarthritis should conform to the October 2016 Position statement from the Australian Knee Society on arthroscopic surgery of the knee, including reference to the presence of osteoarthritis or degenerative joint disease, or such standards that supersede these.

TN.8.184 Procedure for synovectomy (Items 46335 and 46340)

Item 46340 is intended to be used at wrist level, while item 46335 is intended to be used distal to the wrist.

TN.8.185 Procedure for synovectomy (Items 46335, 46339, 46340 and 46341)

- Procedures 46335, 49339, 46340 and 46341, if performed, include tenoplasty, tenolysis, tendon nodules removal, and neurolysis.
- Item 46339, for flexor tendon synovectomy, includes carpal tunnel release, if performed.
- Items 46340 and 46341 may be for either flexor or extensor tendon synovectomy.
 - Where the procedure is for flexor tendon synovectomy, these items include carpal tunnel release, if performed.
 - Where the procedure is for extensor tendon synovectomy only, carpal tunnel release is not included and may be separately claimed under item 39331 if performed.
- Item 46335, for extensor tendon synovectomy, does not include carpal tunnel release, if performed.
- The item claimed should be chosen based on the tendons being treated rather than the site of the incision.

TN.8.186 Procedure for neurolysis (Item 39329)

“Extensive” neurolysis should include scar tissue involvement of greater than 5 cm and / or post traumatic adhesions not isolated to a local point of decompression.

TN.8.187 Procedure for pulp re-innervation and soft tissue cover (Item 46504)

- Item 46504 includes all steps of the surgical procedure.
- Reconstruction of the secondary defect by direct closure or a split or full thickness graft is also covered by this item.

TN.8.188 Procedure for reconstruction of nail bed (Item 46489)

'Reconstruction' refers to a late secondary procedure.

TN.8.189 Procedure for nerve transposition (Item 39321)

The item may be claimed in elective or trauma contexts in association with fractures.

TN.8.190 Definitions - Hand and Wrist Items

- **Ray:** From the tip of the digit to proximal metacarpal base of that digit, including phalanges and metacarpal.
- **Index ray:** First web in Dupuytren contracture releases is considered part of the index ray.
- **Primary:** Acute injury and first management of a pathology.
- **Secondary:** Delayed or subsequent to primary treatment, or occurring after normal expected relevant tissue healing time.
- **Vascular graft:** Harvesting of graft, inseting and anastomosis of both ends of graft.
- **Nerve graft:** Harvesting of graft, inseting and neurorrhaphy at both ends of graft.
- **Tendon graft:** Harvesting of graft, inseting and tensioning of graft and tendon weave/repair at both ends of graft.
- **Transcarpal amputation:** Includes the hand through the radiocarpal, midcarpal or carpometacarpal joints.
- **Wrist joint:** Includes radiocarpal, midcarpal and radioulnar joints, which are not to be billed independently.
- **Z-plasty:** Raising, transfer, inseting and suturing of both components (flaps) of the Z-plasty procedure.
- **Flexor tendon:** A tendon on the volar aspect of the digits, hand or wrist.
 - Treatment of only two flexors can be claimed per digit/ray.
 - The two slips of flexor digitorum superficialis (FDS) inserting to the middle phalanx are not to be claimed as two tendons and are to be billed as part of the single FDS tendon.
- **Nerve Trunk:** A bundle of nerve fibers enclosed in a connective tissue sheath.

TN.8.191 Procedure for hip arthroplasty (Items 49318, 49319, 49372 - 49398)

For the purpose of acetabular bone grafting:

1. Minor bone grafting is intended to cover Paprosky 1 and 2A defects (i.e. minor acetabular derangement / bone loss).
2. Major bone grafting is intended to cover Paprosky 2B, 2C, 3A and 3B defects (i.e. major acetabular derangement / bone loss). Outside of the acetabulum, a major bone graft is considered to be structural in nature, such as a substantive impaction femoral graft, a strut allograft, or equivalent.

TN.8.192 Procedure for adjustment of a fixator (Item 50310)

It is expected that the item 50310 is used in cases where three or more struts or equivalent hardware is adjusted, or in cases where the adjustment of ring fixator or similar device is undertaken with a minimum duration of 30 minutes, in a clinic setting without anaesthetic.

TN.8.193 Procedure for the application or adjustment of a fixator (Item 50300 - 50309)

Each item can only be used once per bone per treatment episode.

TN.8.194 Procedure for the correction of hallux valgus deformity (Items 49821 - 49838)

- Correction of a hallux valgus deformity involves realignment of the joint using soft tissue stabilization and osteotomy of the metatarsal as needed.
- The following items are not to be used on the same joint: arthroscopy (49730 or 49732), bone removal or osteotomy (48430, 48400 or 48403), joint interposition (49821, 49824 or 49783-49788), arthrodesis procedure, ganglion excision, neurolysis (39330), wound debridement (30023) or joint stabilization unless the procedure is performed at a site separate to the 1st metatarsal.

TN.8.195 Procedure for ligamentous stabilisation (Item 49709)

- The item is intended to be claimed once per ligament complex. In most cases, this will correspond to one incision.
- Where multiple incisions are used to access the same ligament complex, this item should only be claimed once.

TN.8.196 Procedure for osteotomy (Items 48400 - 48421 and 48430)

- Removal of prominent bone or osteophytes can be billed as an isolated procedure under 48430 or when through a separate incision to other procedures.
- When an osteotomy is performed through the bone to correct a deformity then the appropriate number is chosen from 48400, 48403, 48406, 48409, 48418 or 48421.
- Not to be used when performing joint arthroscopy (49703, 49730 or 49732), bunion correction (49827, 49830, 49833, 49836, 49837 or 49838), neurolysis (39330), wound debridement (30023) or an arthrodesis procedure unless performed at a site separate to the excluded items.

TN.8.197 Procedure for plantar fascia release (Items 49818 and 49854)

Item 49818 is for simple release of the plantar fascia and item 49854 is for extensive plantar fascia release.

TN.8.199 Definitions - Foot and Ankle Items

- **Ray:** From the tip of a digit to the proximal metatarsal base of that digit, including phalanges and metatarsal bones.
- **Hindfoot joints:** Consist of subtalar, talonavicular and calcaneocuboid joints.
- **Hindfoot bones:** Consist of the calcaneus, talus, navicular and cuboid.
- **Midfoot joints:** Consist of naviculocuneiform and tarsometatarsal joints.
- **Midfoot bones:** Consist of cuneiforms.
- **Major ankle tendons:** Consist of the Achilles', tibialis anterior, tibialis posterior, peroneal (both longus and brevis), extensor hallucis longus and flexor hallucis longus tendons.
- **Flexor tendon:** Both the flexor digitorum longus and flexor digitorum brevis tendons.
- **Extensor tendon:** Both the extensor digitorum longus and extensor digitorum brevis tendons.
- **Reconstruction of a tendon:** Treatment of a degenerative tendon where more than end-to-end repair of tendon rupture is involved.
- **Transtarsal amputation:** Involves amputation of the foot through the tarsal or metatarsal bones, or through the tarsometatarsal joints.
- **Joint debridement:** Removal of osteophytes, removal of part of the joint, and removal of intervening soft tissue, loose bone ossicles or fragments from one or both sides of a joint.
- **Primary treatment:** Acute and first management of an injury or pathology.
- **Delayed or secondary treatment:** Subsequent to primary treatment, or occurring after the normal expected healing time for the relevant tissue.
- **Revision procedure:** A repeat operation to replace or compensate for a failed implant, correct a painful non-union of fracture or fusion, correct malunion, reconstruct a failed soft tissue procedure, or correct undesirable complications of previous surgery.
- **Operative exposure:** Includes (if performed) arthrotomy and/or arthroscopy of joint, washout of joint, removal of loose fragments or loose bodies, synovectomy of neurovascular bundle and closure of capsule.
- **Radical plantar fasciotomy or fasciectomy:** Involves the partial or complete removal of the plantar fascia, but does not involve simple release of the fascia.

TN.8.200 Procedure for arthrodesis in the foot and ankle

- An arthrodesis consists of joint preparation, removal of surrounding osteophytes, intraarticular joint correction and fixation by any means.
- Bone procedure items (48430, 48400, 48406, 48409, 48419, or 48420) are not to be claimed unless performed at a separate site to the arthrodesis.

- Neurolysis (39330), wound debridement (30023) and ganglion excision (30107) items are not to be claimed unless performed at a site separate to the arthrodesis site.

TN.8.201 Procedures for excisional and interpositional arthroplasty in the foot and ankle

- Items for excisional or interposition arthroplasty procedures are indicated for use when items 49734, 48430, 49860, or 49812 do not represent the complete procedure performed.
- Not to be used on the same joint undergoing arthroscopy (49730 or 49732), bunion correction (49827, 49830, 49833, 49836, 49837 or 49838) or an arthrodesis procedure for stabilisation.

TN.8.202 Procedure for arthroscopy in the foot and ankle (Items 49703, 49730 and 49732)

- Arthroscopy of joint includes associated intraarticular pathology treatment, such as treatment of cartilage, loose bodies, synovectomy, scar removal, and excision of exostosis by arthroscopic means.
- In cases of inflammatory synovitis or osteochondral defect $>1.5\text{cm}^2$, it is appropriate to use item 50312.

TN.8.204 Procedures for tendon transfer (Items 49724 and 49736)

- An adjacent tendon transfer is defined as a side to side repair or transfer of an adjacent tendon to the tendon being reconstructed and covered under 49724.
- When a tendon is harvested from a site separate to the reconstructed tendon or moved to the contralateral side of the foot then item 49736 can be combined.

TN.8.205 Peritonectomy surgery - (item 30732)

Item 30732 (peritonectomy of duration greater than 5 hours, including hyperthermic intra-peritoneal chemotherapy) represents a complete medical service and is inclusive of all procedures performed as part of peritonectomy surgery and chemotherapy. Accordingly, item 30732 cannot be co-claimed with the MBS items for the individual procedures performed as part of the surgery or chemotherapy items.

Note the time requirement for item 30732 refers to operative time only, not overall theatre utilisation time.

On the occasion that peritonectomy surgery is completed in less than 5 hours, and therefore not meeting the item requirements for item 30732, it may be appropriate for relevant individual procedure and chemotherapy items to be claimed, if the requirements of these items are met, with application of the multiple operations rule.

TN.8.206 Exploration of pancreas or duodenum for endocrine tumour (Item 30810)

Extensive exploration includes full surgical exposure of the pancreas with intraoperative ultrasound or endoscopy as required.

TN.8.207 Excision of pilonidal sinus - (item 30676)

Where a fasciocutaneous flap is required to close the pilonidal sinus excision defect item 45203 (single stage local flap to repair defect) can be co-claimed with item 30676.

TN.8.208 Cholangiography and cholecystectomy items (items 30439, 30442, 30445)

An Intraoperative ultrasound of the biliary tract or operative cholangiography (30439) can be claimed in association with a cholecystectomy (item 30448 or 30449).

A choledochoscopy (item 30442) can be claimed in association with a cholecystectomy (30448).

For item 30445 an attempt at cholangiography requires use of a cholangiography catheter and presence of radiography staff and equipment in theatre.

TN.8.209 Procedure for diagnostic biopsy of bone tumor (Items 50200 and 50201)

- Histological proof of either the benign, the aggressive benign, or the malignant nature of the process should be obtained.
- Histological proof may be obtained in conjunction with items 50203, 50206 or 50209. It may be obtained at the time of the procedure (e.g. by intraoperative frozen section analysis of the tumour tissue).

TN.8.210 Eligibility for Paediatric Conditions

This item may be claimed without evidence of right heart overload in highly rare paediatric conditions.

TN.8.211 In and Out of Hospital Claiming Guidance

- The service to which item 38285 applies may be claimed for the insertion of an implanted loop recorder (ILR) rendered to a patient as part of an episode of hospital treatment, including services provided in hospital outpatient settings.
- Private health insurers are required to pay benefits for products listed on the Prostheses List, if the product is rendered to a patient with the appropriate level of cover, as part of an episode of hospital treatment or hospital substitute treatment.
- When the ILR is inserted in the outpatient setting (the specialist or consultant physicians private rooms/clinic) the private insurer may opt to cover the cost of the device, but is not required to do so.

TN.8.213 Congenital surgery alternative

For congenital surgery, alternative dissolvable options may be used instead of the insertion of permanent fixed rings which may result in negative long term outcomes.

TN.8.214 International guidelines and claiming guide for extraction of leads

International guidelines state that delays from injury to open access to the heart of more than 5–10 minutes are often associated with a fatal outcome. Preparations for this procedure should provide for this rare but life threatening circumstance.

Claiming guide:

When the service to which item 38358 applies is provided to a patient by an accredited **interventional cardiologist** the following claiming will apply:

- Item 38358 is to be claimed by the accredited interventional cardiologist; and
- Item 90300 is to be claimed by the standby cardiothoracic surgeon.

When the service to which item 38358 applies is provided to a patient by an accredited **cardiothoracic surgeon** the following claiming will apply:

- Item 38358 is to be claimed by the accredited cardiothoracic surgeon only

TN.8.215 Discussions of Findings and Abandoned Procedures

Discussions of the results

Discussions of the results, findings or interpretation of a study are reasonably expected to be part of a formal report. Discussion of these findings with a patient does not constitute a consult. Similarly, discussion(s) during the course of a study or to determine the safety or appropriateness of the study is part of the service and should not be claimed as a consult.

Abandoned T8 Surgical Procedures and Selective Coronary Angiography

The new selective coronary angiography items now have time restrictions applied whether claimed by the same or different providers. It is important for the patient that if a provider cannot complete (abandoned) a comprehensive diagnostic angiography that appropriately informs the diagnosis and treatment pathway or is discontinued due to the clinical status of the patient, item 30001 is claimed. This will allow claiming by the provider who subsequently completes the entire diagnostic angiography service taking into consideration the time restrictions for each of the selective angiography items.

TN.8.216 Claiming restrictions to graft patients

Claiming Guidance

This item is only claimable when the patient has graft arteries present and has undergone angiographic investigation of the native coronary arteries and any graft arteries, which can include but is not limited to free coronary grafts attached to the aorta or direct internal mammary artery grafts.

TN.8.217 Staging rules for PCI for acute

Staging

- If a staged procedure is appropriately performed over multiple days, items 38316, 38317 or 38319 must be used for subsequent stages.
- For subsequent stages of an acute percutaneous coronary intervention completed up to 3 months after the initial procedure, it is expected that the patient would receive the subsequent stage/s of the intervention based on the qualifying indication for the initial procedure

Vascular Territories

- The item number claimed should reflect the number of coronary vascular territories (Left Anterior Descending, Circumflex or Right Coronary Artery distribution) that are treated during the procedure, not the total number of treated territories the patient has received to date.
- For isolated Left Main (no involvement of the bifurcation), a single territory should be claimed but if the treated segment involves the bifurcation then 2 territories should be claimed.
- The Intermediate Artery when treated in isolation is single territory, when treated with the Left Anterior Descending or Circumflex or both, should be claimed as two territories.
- A single lesion in a bypass graft should be claimed as single territory regardless of how many vascular territories are supplied by that graft. If the graft has multiple lesions and those lesions are in separate skip portions to a different territory, then an additional territory may be claimed.

TN.8.218 Percutaneous Coronary Intervention (PCI) for stable patients

Stable Angina or Angina Equivalent

- Stable angina or angina equivalent includes chest pain, chest discomfort and/or shortness of breath due to myocardial ischaemia.

- Limiting angina includes patients with symptoms that are Canadian Cardiovascular Society (CCS) class II, III or IV.

Staging

- If a staged procedure is appropriately performed over multiple days, items 38320, 38322 or 38323 should be used for subsequent stages.
- For subsequent stages of a stable percutaneous coronary intervention completed up to 3 months after the initial procedure, it is expected that the patient would receive the subsequent stage/s of the intervention based on the qualifying indication for the initial procedure

Coronary Vascular Territories

- The item number claimed should reflect the number of coronary vascular territories (Left Anterior Descending, Circumflex or Right Coronary Artery distribution) that are treated during the procedure, not the total number of treated territories the patient has received to date.
- The number of coronary vascular territory refers to any of the 3 major arteries (Left Anterior Descending, Circumflex or Right Coronary Artery) or their branches. The item number claimed should reflect the number of coronary vascular territories that are treated during the procedure, not the total number of diseased territories.
- For isolated Left Main (no involvement of the bifurcation), a single territory should be claimed but if the treated segment involves the bifurcation then 2 territories should be claimed.
- The intermediate artery when treated in isolation is considered a single territory, however when treated with the Left Anterior Descending or Circumflex or both, it can be claimed as two territories.
- A single lesion in a bypass graft should be claimed as a single territory regardless of how many vascular territories are supplied by that graft. If the graft has multiple lesions and those lesions are in separate skip portions to a different territory, then an additional territory may be claimed.

TN.8.219 Complex coronary artery disease definition Complex Coronary Artery Disease

Complex coronary artery disease is defined as

- a. a stenosis >50% in the left main coronary artery; or
- b. >90% in the proximal left anterior coronary artery; or
- c. bifurcation lesions involving side branches with a diameter >2.75mm; or
- d. chronic vessel occlusions (>3 months); or
- e. severely angulated or severely calcified lesions; or
- f. SYNTAX score >23.

Such disease should only undergo PCI with a documented recommendation from a Heart Team Conference.

TN.8.220 Co-claiming a consultation for Paediatric patient

Discussions of the results, findings or interpretation of a study are reasonably expected to be part of a formal report. Discussion of these findings with a patient does not constitute a consult. Similarly, discussion(s) during the course of a study or to determine the safety or appropriateness of the study is part of the service and should not be claimed as a consult.

TN.8.221 Paediatric conditions exemption Claiming Guidance

This item may be claimed without evidence of right heart overload in highly rare paediatric conditions such as abnormal development of the right heart. Additionally, in patients under 16 years old, risk of paradoxical embolism is sufficient.

TN.8.222 Indications for Percutaneous transluminal coronary rotational atherectomy

Percutaneous transluminal coronary rotational atherectomy is suitable for revascularisation of stenoses in heavily calcified coronary arteries in the absence of significant lesion angulation or vessel tortuosity in patients for whom coronary artery bypass graft surgery is not indicated.

Item 38309 describes an episode of care and can only be claimed once in a single episode.

TN.8.223 Procedures for stabilisation in the foot and ankle (Items 49734, 48400, 48403, 49809 and 49812)

- Items for stabilisation of a joint procedure are indicated for use when items 49734, 48400, 48403, 49809 or 49812 do not represent the complete procedure performed.
- Not to be used on the same joint undergoing arthroscopy (49730 or 49732), bunion correction (49827, 49830, 49833, 49836, 49837 or 49838) or an arthrodesis procedure for stabilisation.

TN.8.224 Procedure for revision arthrodesis in the hindfoot (Item 49776)

Item 49776 is claimable once per joint.

TN.8.225 Percutaneous Coronary Intervention (PCI) Acute/Unstable Staging of acute/unstable PCI

- Staging of acute PCI is permissible when clinically appropriate.
- An example of appropriate Acute Coronary Syndrome (ACS) staging could include intervention on an occluded proximal lesion in the context of an ST elevation myocardial infarction (STEMI) and a decision is made not to intervene on a distal lesion as it is difficult to determine whether it is a real lesion (possibly a thrombus) or the patient's haemodynamic status remains compromised (clinically unsafe to continue).

Requirements of subsequent stages of a staged acute/unstable PCI

- The qualifying indication for the initial procedure is to be used as the qualifier for the relevant subsequent stages.
- Subsequent stages are required to be completed within 3 months of the initial procedure otherwise the patient will need to requalify under the appropriate indication (if applicable).
- It would generally be expected that subsequent stages would be completed as soon as is practicable proceeding the initial intervention.
- For subsequent stages of an acute/unstable PCI it is implied that diagnostic angiography has been completed in the previous 3 months and therefore it is only permissible to claim items 38316, 38317 or 38319 for subsequent stages.

Multiple Providers of one episode of care (acute/unstable or stable) PCI – Separate interventional sites or Same interventional site

One of the primary intentions of the changes to selective coronary angiography and PCI items, is to encourage the provision of the entire intervention in a single episode of care. Therefore, the provider should consider that there will be a reasonable need to intervene (revascularise), noting that in some cases intervention is not required (e.g. pressure testing – FFR result does not support the need for stenting).

However, it is recognised that some providers of interventional cardiology services only provide selective coronary angiography (diagnostic) and require a secondary provider to undertake angioplasty, stenting and/or atherectomy.

Non-interventional – selective angiography providers (clinical assessment suggests intervention required)

Acute/Unstable patients

- Acute/Unstable patients should undergo both selective coronary angiography and PCI by an accredited PCI provider in a single episode of care, unless staging is clinically required.
- Rare exceptions might include rural or remote sites that offer diagnostic angiography as a triage service prior to limited availability PCI.
- It would be expected that the non-interventional cardiologist (non-PCI accredited) has a limited role in the management of acute/unstable patients.

Separate hospital/procedural sites (Acute/Unstable or Stable)

- The first provider undertakes the diagnostic angiography and either makes an independent decision or following discussion with the interventional cardiologist refers to the secondary provider at another site for the purposes of revascularisation (e.g. referral from a rural or regional hospital to a metropolitan hospital); therefore
- In this scenario there is a clear delineation between the angiography and revascularisation services due to the different geographical locations (separate episodes of care). Example claiming is as follows:

Acute (ACS) - claiming example

- Provider 1 – site 1 (diagnostic angiography) claims item 38244 (ACS – selective angiography). Provider 2 – site 2 (PCI) claims item 38316 (ACS – PCI single territory)

Abandoned T8 Surgical Procedures and Acute or Stable Percutaneous Coronary Intervention (PCI) – Excluding appropriate staging

The new acute PCI items have time restrictions applied whether claimed by the same or different providers. It is important for the patient that if a provider cannot complete (abandoned) the PCI and rescue PCI needs to be conducted by another provider, item 30001 is claimed. This will allow claiming by the provider who subsequently completes the rescue PCI, taking into consideration the time restrictions for each of the selective angiography items.

The new stable PCI items do not have time restrictions. However, it is important for the patient that if a provider cannot complete (abandoned) the PCI and rescue PCI needs to be conducted by another provider, item 30001 is claimed. This will allow claiming by the provider who subsequently completes the rescue PCI, taking into consideration the time restrictions for each of the selective angiography items.

TN.8.226 Staging Rules for Stable PCI Staging of non-acute (stable) PCI

- Staging of stable PCI is permissible when clinically appropriate. An example of appropriate stable staging could include intervention on the primary target lesion and a decision is made not to intervene on secondary lesions (in triple vessel disease) due to the patient's deteriorating haemodynamic status (clinically unsafe to continue).

Requirements of subsequent stages of a staged stable PCI

- The qualifying indication for the initial procedure is to be used as the qualifier for the relevant subsequent stages. Subsequent stages are expected to be completed within a reasonable time period following the initial intervention.

- For subsequent stages of a stable PCI it is implied that diagnostic angiography has been completed in the previous 3 months and therefore it is only permissible to claim items 38320, 38322 or 38323 (standalone PCI items) for subsequent stages.
- **Note:** For patients who meet the criteria in subclause (2)(b) of note TR.8.4 in 3 vascular territories (triple vessel disease), whether treated in an initial procedure (items 38314 or 38323) or in subsequent stages (items 38311, 38313, 38320 or 38322) it is expected that the patient must meet the criteria for (2)(b) of note TR.8.4 for each territory for each subsequent stage. This requirement ensures that the patient who has triple vessel disease must meet the criteria for (2)(b) for each territory when staged or completed in an initial procedure.

The Department will be closely monitoring claiming patterns for staged procedures, particularly where volumes for staged procedures at the same site are not consistent with the broader provider claiming base.

Multiple Providers of one episode of care (stable) PCI – Separate interventional sites or Same interventional site.

One of the primary intentions of the changes to selective coronary angiography and PCI items, is to encourage the provision of the entire intervention in a single episode of care. Therefore, the provider should consider that there will be a reasonable need to intervene (revascularise), noting that in some cases intervention is not required (e.g. pressure testing – FFR result does not support the need for stenting).

It is recognised that some providers of interventional cardiology services only provide selective coronary angiography (diagnostic) and require a secondary provider to undertake angioplasty, stenting and/or atherectomy.

Non-interventional – selective angiography providers (clinical assessment suggests intervention required)

Stable patients

It is accepted clinical practice that the following patient pathways for stable PCI service provision (other than a complete service by an accredited PCI cardiologist) may occur when considering the role of the non-interventional cardiologist (non-PCI accredited) as follows:

Ad-hoc PCI:

- Provider 1 completes the selective angiography and hands over to provider 2 to perform the PCI while the patient is still on the cardiac catheterisation table with the arterial access still in place.
- Similar to the acute items, this scenario would likely be rare for e.g. dissection of a coronary artery caused by the angiography catheter that may convert the patient from stable to unstable.
- It is current accepted practice that the selective coronary angiography component of the service can be performed by a non-interventional cardiologist and the PCI component (when required) completed by a PCI accredited provider.
- Ideally ad-hoc stable PCI should be completed by a PCI accredited provider and therefore consideration should be given to current practice site arrangements going forward.

Delayed PCI:

- Provider 1 completes ICA and refers the patient to provider 2, who performs the PCI later on the same day.
- In the stable patient this scenario presents the opportunity to pause and consider whether optimal medical therapy, PCI or coronary artery bypass may be the preferred option in consultation with a PCI accredited cardiologist and/or cardiothoracic surgeon; and
- It also allows for a further opportunity to obtain informed consent from the patient for the proposed intervention.
- In most cases this would involve maintaining the arterial access with an indwelling arterial sheath to avoid repuncture.

Elective PCI:

- Provider 1 completes ICA and refers the patient to provider 2, who performs the PCI on the next day, or any subsequent day.
- Similar to delayed PCI, however the PCI accredited cardiologist may not be available on the same day as when the selective coronary angiography was completed; or
- A short trial of optimal medical therapy is recommended; or
- Further non-invasive functional testing is recommended.

The Department will be closely monitoring claiming patterns, particularly at the same site where selective angiography is completed by a non-accredited cardiologist and the PCI component completed by a PCI accredited provider.

The following provides guidance for when the provider can only undertake the selective angiography component of a complete PCI service (PCI non-accredited provider):

Separate hospital/procedural sites (Stable)

The first provider undertakes the diagnostic angiography and either makes an independent decision or following discussion with the interventional cardiologist refers to the secondary provider at another site for the purposes of revascularisation (e.g. referral from a rural or regional hospital to a metropolitan hospital). In this scenario there is a clear delineation between the angiography and revascularisation services due to the different geographical locations (separate episodes of care). Example claiming is as follows:

- Stable - example
Provider 1 – site 1 (diagnostic angiography) claims item 38248 (stable – selective angiography). Provider 2 – site 2 (PCI) claims item 38320 (stable – PCI single territory)

Same hospital/procedural site (Stable)

- The first provider undertakes the diagnostic angiography and either makes an independent decision or following discussion with the interventional cardiologist requesting that the secondary provider undertakes the revascularisation component.
- Please note that the underlying intention of a complete PCI service is that the entire service, including diagnostic angiography is completed by a single provider where possible.

Abandoned T8 Surgical Procedures and Acute or Stable Percutaneous Coronary Intervention (PCI) – Excluding appropriate staging

The new acute PCI items have time restrictions applied whether claimed by the same or different providers. It is important for the patient that if a provider cannot complete (abandoned) the PCI and rescue PCI needs to be conducted by another provider, item 30001 is claimed. This will allow claiming by the provider who subsequently completes the rescue PCI, taking into consideration the time restrictions for each of the selective angiography items.

The new stable PCI items do not have time restrictions. However, it is important for the patient that if a provider cannot complete (abandoned) the PCI and rescue PCI needs to be conducted by another provider, item 30001 is claimed. This will allow claiming by the provider who subsequently completes the rescue PCI, taking into consideration the time restrictions for each of the selective angiography items.

TN.8.227 Vertebroplasty MBS Service Monitor (item 35401)

For item 35401 practitioners should be registered with and provide relevant service data to the Vertebroplasty MBS Service Monitor, managed by the Interventional Radiology Society of Australasia (IRSA).

IRSA can be contacted via e-mail at secretariat@irsa.com.au for enquiries.

TN.8.228 Varicose Vein Intervention and Proximal Reflux (item 32500)

Claiming Guide for the following procedures:

1. Sclerotherapy (32500)
2. Surgical Dissection and Ligation (Items 32507, 32508, 32511, 32514, 32517)
3. Endovenous Laser Therapy (Items 32520 and 32522)
4. Radiofrequency Ablation (Items 32523 and 32526)
5. Cyanoacrylate adhesive (Items 32528 and 32529)

It is recommended that the medical practitioner performing the above procedures has successfully completed a substantial course of study and training in duplex ultrasound and the management of venous disease, which has been endorsed by their relevant professional organisation.

It is recommended that providers familiarise themselves with the symptoms to be used to assess the severity of chronic venous disease as indicated in the item descriptor. Providers should also refer to the latest Clinical Impact, Etiology/Aetiology, Anatomy and Pathophysiology (CEAP) classification description for symptoms, to help determine when intervention is required.

Definition of Proximal Reflux (item 32500)

For the purposes of item 32500, proximal reflux can include: truncal, perforating or other sources of ultrasound demonstrated reflux into the vein/s being treated.

TN.8.229 Appropriate Documentation

Appropriate documentation, ideally with photographic and/or histological evidence, is to be collected and retained to demonstrate the complexity of the procedure performed. Where photographic evidence is not retained, the reasons for this should be clearly documented.

TN.8.230 Hydrotubation (Item 35703)

It is expected that this item should only be billed once per patient per lifetime unless clinically indicated in cases where a successful pregnancy has been achieved following hydrotubation of fallopian tubes or another intervening and documented condition has occurred such a tubal infection, an episode of surgery or conservative treatment of an ectopic pregnancy.

TN.8.231 Hysterectomy (Items 35750, 35751, 35753, 35754, 35756)

Procedure may be undertaken using laparoscopy with any number of ports or by any approach as clinically indicated.

A laparoscopically assisted vaginal hysterectomy is defined as the introduction of the laparoscope to assess the pelvis and commence the procedure taking the round ligaments, adnexal attachments as indicated and to the level of the uterine arteries with the uterine arteries and uterosacral pedicles secured vaginally.

A total laparoscopic hysterectomy is defined as the introduction of the laparoscope to assess the pelvis and complete the procedure laparoscopically including securing the uterine arteries and uterosacral pedicles.

The complex hysterectomy items 35753 and 35754 are intended to cover procedures with increased complexity. 35753 is to be used for the excision of moderate endometriosis. 35754 is to be used for the excision of extensive endometriosis and when side wall dissection is required.

TN.8.232 Documentation collection

Appropriate documentation is to be collected and retained to demonstrate the complexity of the procedure performed.

TN.8.233 National Cervical Screening Program

The procedure should only be performed if a patient satisfies the criteria according to the current National Cervical Screening Program.

TN.8.234 Cervical ablation (Item 35644 and 35645)

- Not for use in patients with a type 3 transformation zone.
- A second ablative treatment for a HSIL (CIN2/3) should NOT be performed (an excisional treatment is indicated in this situation).
- Treatment of high-grade lesions (CIN 2/3) in an immunocompromised patients should be by excisional methods only.

TN.8.235 Gynaecological Oncologist or MDT Review

If the procedure is for glandular high grade abnormality or any suspected invasive cancer the procedure should be performed by a gynaecological oncologist or only after discussion with, or review by, a gynaecological oncologist or gynaecological oncology multidisciplinary team (MDT).

TN.8.236 Radical Debulking with abdominal cavity involvement (Item 35721)

This procedure should be undertaken by a person with appropriate training in line with the National Framework for Gynaecological Cancer Control.

This item includes the extensive dissection and removal of the peritoneum from organs contained in the abdominal/pelvic cavity, including bowel, bladder, spleen, pancreas or liver.

This item does not include resection of bowel, bladder, spleen, pancreas or liver.

This item should not be used for staging procedures for gynaecological malignancy.

This item should not be used for a lymph node recurrence without involvement of peritoneal surfaces.

TN.8.237 Excision of benign vaginal tumours (Item 35557)

This item should not to be used for the sole purpose of vaginal biopsy, drainage or Gartner duct cysts, cautery of granulation tissue, or removal of vaginal polyps.

Item 35615 should be used for vaginal biopsies.

Item 35611 should be used for vaginal polyp removal.

TN.8.238 Partial Vaginectomy (Item 35548)

This item not to be used for vaginal biopsy or polypectomy.

Item 35615 should be used for vaginal biopsies.

Item 35611 should be used for vaginal polyp removal.

TN.8.239 Radical Vulvectomy (Item 35548)

Co-claiming with a relevant flap procedure is permitted. However, deep tissue mobilisation is included in this item.

TN.8.240 Intra-articular injection (Item 39013)

This service must be performed under image guidance. Imaging items can be co-claimed with item 39013 when indicated.

Where intra-articular zygapophyseal joint injection provides a short term effect that is repeatedly observed, consideration should be given to longer lasting pain management techniques.

TN.8.241 Placement of peripheral nerve leads for the management of chronic intractable neuropathic pain (Items 39129 and 39138)

Items 39129 and 39138 are for the insertion of leads that are intended to remain in situ long term. Percutaneous Electrical Nerve Stimulation (PENS) is not to be claimed under these items.

The use of PENS for the management of chronic pain has not been assessed by the Medical Services Advisory Committee (MSAC) or recommended for public funding. Therefore, PENS procedures for management of chronic pain cannot be billed under the MBS, including items 39129 and 39138.

Item 39138 is the appropriate item to claim when surgical lead placement is required for a trial procedure prior to longer term placement. Item 39129 is the appropriate item for the percutaneous placement of leads, including for trial procedures.

Items 39129 and 39138 provide for the insertion of one or multiple leads. There is no intention to change current billing practices for these items, e.g. where more than one lead is inserted as part of an episode then the item can be billed once per lead.

TN.8.244 Implanted device items

As with all interventions, implant procedures should be performed in the context of clinical best practice. This is of particular importance given the high cost of the devices. Current clinical best practice for use of these item numbers includes:

- All procedures being performed in the context of a comprehensive pain management approach with a multidisciplinary team.
- Patients should be appropriately selected for the procedure, including, but not limited to assessment of physical and psychological function prior to implantation with findings documented in the medical record.
- Outcome evaluation pre and post implantation.
- Appropriate follow up and ongoing management of implanted medical devices should be ensured.

Implantable devices require ongoing monitoring and management. If the person providing the implantation service is not the ongoing physician manager of the device, they are responsible for ensuring that appropriate ongoing management has been arranged.

Items 39130 and 39139 provide for the insertion of one or multiple leads. There is no intention to change current billing practices for these items, e.g. where more than one lead is inserted as part of an episode then the item can be billed once per lead.

Item 39133 can be billed twice per attendance where services are separate procedures. Accompanying text is required for these claims such as one item is for the removal of an infusion pump and one item is for the removal or repositioning of a spinal catheter.

TN.8.245 Percutaneous denervation (Items 39110, 39111, 39116 to 39119, 39323)

In the majority of circumstances, thermal radiofrequency should be the modality of choice. Pulsed radiofrequency should only be used in limited cases, such as when an anatomic abnormality precludes the correct positioning of a thermal radiofrequency probe.

Prior to commencing treatment, the patient should be made aware of:

- (a) which modality is being used and why;
- (b) what longevity of response is expected;
- (c) the mechanism involved;
- (d) technical details such as the temperature used;
- (e) the evidence base for the modality recommended; and
- (f) cost

Clear distinctions should be made between thermal (continuous) radiofrequency neurotomy and pulsed radiofrequency of the medial branch of the dorsal rami of spinal nerves for treatment of zygapophyseal pain.

Items 39110, 39111, 39116, 39117, 39118, 39119

There are six MBS items applicable to percutaneous neurotomy (items 39110, 39111, 39116, 39117, 39118 and 39119). The items relate to six regions of the spine (lumbar, thoracic, and cervical divided into left and right sides). These items commenced on 1 March 2022.

Effective 11 April 2022, there are new frequency claiming restrictions for these items.

A patient can now receive percutaneous neurotomy treatment in up to three episodes of care in a 12-month period. An episode of care means one or more percutaneous neurotomy services performed in a single attendance, where clinically relevant.

The percutaneous neurotomy items are claimable per joint treated, not per nerve or lesion.

For compliance purposes, practitioner should record the name of the joint/s that are being treated during an attendance in the patient's clinical notes.

More than one joint in the same region can be treated and claimed on the same day (i.e. as part of the same episode), and joints in another region can also be treated in the same episode.

The Multiple Operation Rule will continue to apply when more than one joint is being treated in the same episode.

The 12-month period is a rolling period, commencing on the date of the first episode (for treatment provided on or after 11 April 2022), to a maximum of three episodes over the next 12 months. For example, if the first episode of treatment is provided on 20 April 2022, up to two further episodes of treatment can be provided up to 19 April 2023.

Treatment provided under these items from 1 March 2022 to 10 April 2022 (inclusive) will not be counted in the 12-month period for the patient.

Treatment of the T12/L1 zygapophyseal joint should be classified as a thoracic region procedure. Accordingly, the thoracic items 39116 or 39117 would be appropriate for such a procedure.

The C7/T1 facet joint is innervated by the medial branches of C7 and C8 (cervical region). Accordingly, the relevant cervical items 39118 or 39119 would be appropriate for such a procedure.

Item 39323

Item 39323 is limited to 6 services for a given nerve per 12-month period. The 12-month period will start from the first time the item has been claimed on or after 1 March 2022 and will continue on a rolling 12-month basis.

For compliance purposes, the applicable nerve name must be documented in the patient record and noted on Medicare claims for item 39323 e.g. '39323 - Right Genicular nerve.'

TN.8.246 Rectal Resection (items 32025, 32026 and 32028)

These rectal resection procedures should be performed with the following requirements:

- in an appropriate setting with High Dependency Unit or Intensive Care Unit availability;
- include multidisciplinary team discussion of patient;
- have patient managed using Enhanced Recovery after Surgery (ERAS) principles; and
- in a setting with adequate access to stomal therapy nurse services.

In addition, item 32028 is appropriately used by 1 surgeon incorporating transanal total mesorectal excision.

TN.8.247 Faecal incontinence management items (32213, 32216 and 32237)

These services may be performed using fluoroscopic guidance.

The relevant fluoroscopic guidance item can be co-claimed with items 32213, 32216 and 32237 when indicated.

TN.8.248 Endometriosis classification system

For the purposes of any item in which an endometriosis grading is referenced the equivalent grade under the American Fertility Society (rAFS) endometriosis classification system is as follows:

Minimal endometriosis is the equivalent of stage I.

Mild endometriosis is the equivalent stage II.

Moderate endometriosis is the equivalent to stage III.

Severe endometriosis is the equivalent stage IV or higher.

TN.8.249 Hysteroscopy (Items 35633 and 35635)

For the purposes of item 35633, minor intrauterine adhesions means Grade 1 under the European Society for Hysteroscopy (ESH) classification system. For the purposes of item 35635, moderate to severe intrauterine adhesions means Grade 2 or higher under the ESH classification system.

TN.8.250 Multi-disciplinary team for cryoablation for renal cell carcinoma

For the purpose of item 36530, a multi-disciplinary team typically includes a urologist, interventional radiologist and oncologist. Patients eligible for Medicare-funded cryoablation need to be considered by the multi-disciplinary team as not suitable for partial nephrectomy and typically have one or more of the following characteristics:

- Elderly and/or frailty;
- High surgical risk;
- Poor renal function;
- Solitary kidney;
- Bilateral kidney tumours.

TN.8.251 Interventional radiologist for renal cell carcinoma cryoablation

For the purpose of item 36530, the procedure is to be performed by an interventional radiologist specially trained for the procedure. Percutaneous cryoablation should be the preferred approach unless the percutaneous approach is considered not suitable for the individual patient by the multi-disciplinary team.

TN.8.252 Circumcision Revision items (items 30661 and 30662)

Items 30661 and 30662 provide for clinically relevant revision surgery following a circumcision procedure (performed on a previous occasion).

A minor repair procedure (item 30661) would apply to the removal of redundant skin, or the correction of minor scarring where there is a clinical need for revision.

A major repair (item 30662) applies to the correction of major scarring where there is a deformity, pain, significant loss of tissue or functional disability.

TN.8.253 Reprogramming of a neurostimulator for the treatment of chronic pain or pain from refractory angina pectoris (items 39131 and 39141)

Items 39131 (in person service) and 39141 (remote service by video conference) provide for the reprogramming of an implanted neurostimulator when this has been deemed clinically relevant for the care of a patient by the treating practitioner.

Item 39131 should be billed if the medical practitioner attends in person, and item 39141 should be billed if the medical practitioner attends remotely by video conference. Item 39141 cannot be provided by phone. Only one service can be billed for a patient on a particular day.

Items 39131 and 39141 should not be billed with each other on the same day, or with another attendance item on the same day unless the consultation pertains to a condition other than chronic neuropathic pain, or pain from refractory angina pectoris.

TN.8.254 Parotid gland surgery - (Items 30247 - 30253)

Exposure of the facial nerve and the great auricular nerve with or without mobilisation are considered integral parts of parotid gland surgery and hence part of the complete procedure for items 30247, 30250, 30251 and 30253. As such, co-claiming of items 39321, 39324, 39327, 39330 is not appropriate.

TN.8.255 Otology - (Item 41647)

Item 41647 applies where use of an operating microscope or endoscope is clinically necessary, such as where examination by conventional means (hand-held or spectacle-mounted auroscope) does not provide sufficient detail.

In addition, item 41647 cannot be claimed for the removal of uncomplicated wax in the absence of other disorders of the ear.

The removal of uncomplicated wax in the absence of other disorders of the ear by operating microscope or endoscope, or the removal of wax by microsuction or syringing using any visualisation method may be claimed as part of an MBS general attendance item provided all other requirements of the item have been met.

TN.8.256 Rhinology - (Items 41707 and 41725)

It is not expected that this item would be claimed with routine endoscopic sinus surgery procedures. It may be legitimately claimed in some advanced sinonasal or tumour procedures.

TN.8.257 Rhinology - (Item 41764)

Item 41764 can be performed on a patient by an eligible speech pathologist on behalf of a specialist in the speciality of otolaryngology head and neck surgery, if:

(a) the service is performed following a written request made by the specialist to assist the specialist in the diagnosis, treatment or management of a laryngeal condition or related disorder in the patient; and

(b) the service is performed in a medical facility; and

- (c) the service is performed on the patient individually and in person; and
- (d) after the service is performed, the eligible speech pathologist gives the specialist:
 - (i) recorded dynamic images of, and a copy of the results of, the service; and
 - (ii) relevant written comments, prepared by the eligible speech pathologist, about those results; and
- (e) a service to which item 41764 applies has not been performed on the same patient on the same day.

For the purposes of item 41764, a medical facility may include medical or allied health consulting rooms, hospitals (including outpatient clinics and wards), community health facilities, and residential aged care facilities (as defined in the *Aged Care Act 1997*).

TN.8.258 Laryngology - (Items 41837 and 41840)

Items 41837 and 41840 may be claimed for both open procedures and endoscopic equivalents. In the case of endoscopic procedures, it is required that the extent of the resection be anatomically equivalent to open procedures excepting resection of thyroid cartilage. This item can only be claimed once per provider, per patient per lifetime.

TN.8.259 Repair or radical correction of pectus excavatum or pectus carinatum

Item 38846 - Repair or radical correction of pectus excavatum or pectus carinatum

Where the repair or correction of the condition requires the insertion of a device, the insertion of the device is included in the procedure.

TN.8.260 Plating of ribs

Item 38859 - Plating of ribs

This item allows for the plating of multiple ribs for flail segment in the circumstance of failure to wean from mechanical ventilation. Internal fixation of a single rib can be performed under item 48409.

TN.8.261 Radical excision of intra-oral tumour - (Item 30275)

Item 30275 only applies when both an intra-oral resection and a lymph node dissection are performed during the same procedure. The procedure may, or may not, include the resection of the mandible.

TN.8.262 Revision of Breast Prosthesis Pocket – (Item 45547)

Item 45547 provides for the reinsertion of an existing prosthesis and not for insertion of a new prosthesis. Items 45553 and 45554 provide for the removal of a prosthesis and replacement with a new prosthesis.

TN.8.263 Terminology for Vascular Anomalies – (Items 45027 to 45045)

For further guidance on terminology used for vascular anomalies, providers are encouraged to consult the classification of the *International Society for the Study of Vascular Anomalies (ISSVA) 2018* at <https://www.issva.org/classification>.

Where a haemangioma has been medically treated and there is only a residuum present, the appropriate MBS item should relate to the size of the residuum and not the size of the original haemangioma.

TN.8.264 Terminology for “maxilla” – (Items 45596 and 45597)

Historically, the term “maxilla” referred to one of the two identical bones that form the upper jaw with the “maxillae” meeting in the midline of the face. Currently the “maxilla” is considered a double structure or one bone (i.e. the entire upper jaw).

A “hemimaxillectomy” refers to the surgical removal of one side of the upper jaw while a “total maxillectomy” refers to the removal of all of the “maxilla” (i.e. both sides). For item 45597, the term "bilateral" will be included in recognition that some practitioners still conduct their practice using the historical terminology, however, it is expected that most providers will use the current terminology.

TN.8.265 Oncoplastic Breast Surgery – (Items 31513 and 31514)

For guidance, item 31513 provides for simple oncoplastic breast surgery using simple glandular flaps, while item 31514 provides for breast reduction and/or mastopexy techniques to reshape the breast.

TN.8.266 Free Grafting - Split Skin and Full Thickness - (Items 45440, 45443, and 45451)

In relation to items 45440, 45443 and 45451, each site where there is an excision of a lesion and a skin graft (or a skin graft without an excision at the same sitting), is considered a separate procedure. The site of each procedure should be clearly documented in the patient records.

Item 45451 is not to be used for small punch grafts. Defects with an average diameter of less than 5 mm can generally be closed by direct suturing.

TN.8.267 Bony Reshaping - (Item 45609)

Item 45609 applies when in conjunction with a bone-containing free flap (i.e. in association with items 46060 to 46068).

TN.8.268 Dissection of Perforator Flaps - (Items 46050 and 46052)

Item 46050 represents a complete stand-alone procedure.

Item 46052 should be performed alongside a microsurgical procedure.

TN.8.269 Advancement, Retrusion or Alteration of Tilt by Osteotomy in Standard Planes - (Items 46150, 46151, 46152 and 46153)

Examples of mandible and maxilla (bimaxillary) procedures for advancement, retrusion or alteration of tilt by osteotomies in standard planes include sagittal split of mandible and horizontal osteotomy of maxilla.

TN.8.270 Procedures for Thoracic Outlet Syndrome - (Items 46170 - 46185)

Items 46174 and 46175 may be used as a standalone item or in conjunction with items 46177 to 46185.

Item 46176 may be used as a standalone item or in conjunction with items 46170 to 46173.

For items 46177, 46178 and 46179, an example of “single cord or trunk” is the upper trunk. These items should not be used for reconstruction of peripheral nerves.

For items 46177 to 46185, examples of appropriate methods of reconstruction include nerve grafts, vascularised nerve conduit and nerve transfers.

TN.8.271 Direct and Indirect Flap - (Item 45209 and 45212)

Item 45209, for the first stage of multistage flap repair procedure, should be performed in hospital.

Item 45212, for the second or third stage of multistage flap repair procedure, would generally be performed under sedation or general anaesthetic in hospital, with the exception of flap division, which can be performed under local anaesthetic out of hospital.

TN.8.273 Modifier Item for Burns Involving Hands, Face or Anterior Neck - (Item 46100)

Item 46100 is a modifier item that provides extra funding for burns involving the hands, face and anterior neck.

The modifier item can be co-claimed with any of items 46101 to 46135 (other than item 46112 or 46124), where excision of burnt tissue or definitive burn wound closure involves greater than 1% of the hands, face or anterior neck.

The modifier items cannot be co-claimed with whole-of-face burns items 46112, 46124 or 46136.

The derived fee for claims including the modifier item will be an additional 40% of the fee for the co-claimed service.

Claiming the modifier item

The modifier item (46100) should be claimed immediately after the burns excision or closure item it is associated with.

If multiple burns excision/closure item are eligible to be claimed with the modifier items (i.e. the excision of burnt tissue or definitive burn wound closure involves greater than 1% of the hands, face or anterior neck for multiple items) then the modifier item should be claimed immediately after each of the burns excision/closure items it is associated with. However, where multiple burns excision/closure items are claimed, the modifier item may not necessarily apply to each of the items.

For example, for a claim involving burns excision and closure items 46101, 46114 and 46127, where the modifier item only applies to items 46101 and 46114, the following items should be claimed:

Excision of burnt tissue item	46101
Modifier item	46100
Immediate closure item	46114
Modifier item	46100
Non-excisional debridement item	46127

When claiming the modifier item with one of the burns excision or closure items:

- the modifier item and the associated burns excision or closure item is treated as one service for the purpose of the [Multiple Operation Rule](#)
- the derived fee resulting from claiming the modifier item is calculated before the Multiple Operation Rule is applied/calculated.

TN.8.274 Rules for Burns Excision and Closure Items - (Items 46100 to 46136)

Only one item can be claimed from the excision of burnt tissue items (items 46101 to 46111) for one provider in one operation.

Item 46112, for excision of burnt tissue involving whole of face, may be claimed with one excision of burnt tissue item (items 46101 to 46111), based on the percentage of total body surface (excluding the face).

For any size of burn, each surgeon can work with another surgeon and each surgeon chooses the excision item from items 46101 to 46112 based on the area that they, as an individual surgeon, have excised.

Where two surgeons are claiming item numbers, the sum of items of each of the surgeons should match the total percentage surface area of burn excised for that patient.

Excision of burnt tissue items (items 46101 to 46112) can be co-claimed with immediate closure items (items 46113 to 46124), but not with delayed definitive closure items (items 46130 to 46136).

When immediate closure is being performed, if it is indicated, both an immediate closure item (items 46113 to 46124) and a non-excisional debridement item (items 46125 to 46129) can be claimed.

Delayed definitive closure items (items 46130 to 46136) cannot be co-claimed with excision of burnt tissue items (items 46101 to 46112), immediate closure items (items 46113 to 46124) or non-excisional debridement items (items 46125 to 46129).

The modifier item (46100) can be co-claimed with the excision of burnt tissue items, immediate closure items, the non-excisional debridement items and the delayed closure items, but it cannot to co-claimed with whole-of-face items 46112, 46124 or 46136.

TN.8.275 Aftercare - (item 46108)

Item 46108 excludes aftercare and therefore professional attendances necessary for the purposes of post-operative treatment of the patient can be claimed.

TN.8.276 Abdominoplasty for abdominal wall defects - (Items 30175)

In the context of eligibility for item 30175, acceptable examples of conservative non-surgical treatment must include physiotherapy, however could also include symptomatic management with pain medication, lower back braces, lifestyle changes and/or exercise.

MBS benefits are not available for surgery performed for cosmetic purposes.

Diagnostic imaging refers to imaging provided by a radiology provider. Diagnostic imaging reports, symptoms of pain and discomfort, and failure to respond to non-surgical conservative treatment must be documented in patient notes.

TN.8.277 Contraindications for an artificial bowel sphincter (item 32221)

An artificial bowel sphincter under item 32221 is contraindicated in:

- (a) patients with inflammatory bowel disease, pelvic sepsis, pregnancy, progressive degenerative diseases or a scarred or fragile perineum; and
- (b) patients who have had an adverse reaction to radiopaque solution; and
- (c) patients who engage in receptive anal intercourse.

TN.8.278 Balloon valvuloplasty co-claiming restriction with Transcatheter Aortic Valve Implantation (TAVI) items

The services performed under TAVI items (38495, 38514 and 38522) are complete medical services and include balloon valvuloplasty as part of the TAVI procedural service. MBS item 38270 for balloon valvuloplasty cannot be co-claimed with the TAVI items for the same occasion of service.

Accompanying text is required for claims where a TAVI item and item 38270 are performed on the same day at separate occasions. Suitable texts could include "separate attendances" or "10 AM and 3PM".

Providers are legally responsible for services billed under their provider number or their own name. This includes any incorrect billing of services that result in overpayment of Medicare benefits, regardless of who does the billing or receives the benefit.

TN.8.279 Minimally invasive ventral rectopexy (item 32118)

Surgeons performing minimally invasive ventral rectopexy procedures should be colorectal surgeons or general surgeons with a sub-specialist interest in colorectal surgery, with experience in the procedure.

TN.8.280 Localisation of lesions in the breast and or axilla (items 31536 and 31537)

MBS item 31536 is for the preoperative insertion of a hookwire (or a similar device) into the breast or axilla to mark the site of a lesion, when the insertion is not associated with a breast biopsy. The hookwire (or similar device) is to be inserted under imaging which is billed under a separate MBS item.

MBS item 31537 is for the insertion of a marker clip (or tissue marker) into the breast and/or axilla, to mark the site of lesion that has been totally or almost removed at biopsy and requires localisation.

In accordance with accepted clinical practice guidelines, marker clips (or tissue markers) are not required for every biopsy and the particular occasions where they should be inserted are listed in MBS item 31537 (a) – (f). Please note the requirement at d) includes where neoadjuvant therapy may occur prior to future interventions on the breast and there is potential lack of lesion conspicuity following completion of neoadjuvant therapy.

For further information practitioners could refer to the accepted clinical guidance for the use of marker clips that is provided by BreastScreen Australia and Assessment Services.

TN.8.281 Operative treatment of non-union or malunion in the arms and lower limbs (items 48446-48454)

Items 48446-48454 include bone grafting as a mandatory component. The nature of the bone grafting required should be consistent with items 48248-48257.

These items are inclusive of any bone graft harvesting and insertion, arthrotomy, debridement, osteotomy, removal of hardware, or internal fixation performed on that bone. Claiming a bone grafting item (48245-48257) and non-union item on the same occasion on the same bone is not permitted. This does not prevent MBS items that include bone grafting from being claimed for surgery undertaken on another bone on the same occasion.

These items are not inclusive of additional procedures required for the treatment of osteomyelitis. In circumstances where patients require additional surgical treatment for osteomyelitis, the relevant item numbers (43527, 43530, or 43533) can also be claimed.

These items are claimable once per bone treated. For the purposes of item 48446, repair of non-union or malunion located in the left and/or right side of the pelvic bone, sacrum and coccyx can be claimed as separate bones provided all item requirements are met for each bone.

TN.8.282 Operative treatment of non-union or malunion in the hand (items 46401, 48456)

Items 48456 includes bone grafting as a mandatory component. The nature of the bone grafting required should be consistent with items 48248-48257.

Items 46401 and 48456 are both for the operative treatment of non-union of the phalanx or metacarpal of hand. 46401 should be claimed where no bone grafting meeting the threshold of 48248-48257 has been performed.

Item 48456 is inclusive of any bone graft harvesting and insertion, arthrotomy, debridement, osteotomy, removal of hardware, or internal fixation performed on that bone. Claiming a bone grafting item (48245-48257) and item 48456 on the same occasion on the same bone is not permitted. This does not prevent MBS items that include bone grafting from being claimed for surgery undertaken on another bone on the same occasion.

Item 48456 is not inclusive of additional procedures required for the treatment of osteomyelitis. In circumstances where patients require additional surgical treatment for osteomyelitis in the hand, item 43527 can also be claimed.

Item 48456 is claimable once per bone treated.

TN.8.283 Procedures involving wound debridement (item 30023) on the same occasion as some orthopaedic or neurosurgical procedures

Items 39303, 39309-39315, 39329-39345, 46335, 46339-46341, 46348-46360, 46364, 46387, 46390-46395, 46408, 46414, 46423, 46434, 46450, 46453, 46522, 46525, 49717, 49740, 49744, 49771-49776, 49782, 49866, 49881-49890 all include the phrase "other than a service associated with a service to which item 30023 applies that is performed at the same site".

This indicates that an additional benefit is not payable for debridement of a soft tissue wound under item 30023 where it is performed at the same site on the same occasion.

These procedures are considered to be performed at the same site as the wound debridement (item 30023) where:

- Any incision for the orthopaedic or neurosurgical procedures involves the wound that is debrided.
- Debridement of the wound is required as part of the surgical approach and is considered an inherent part of the orthopaedic or neurosurgical procedure.

TN.8.284 Trigger finger release and flexor tendon procedures (items 46348, 46351, 46354, 46357, 46360, 46363, 46498)

Item 46363, for trigger finger release, should not be claimed in addition to any of items 46348, 46351, 46354, 46357, 46360, or 46498 where it is performed on one of the same rays as those procedures.

TN.8.285 Complex primary knee arthroplasty (items 49521, 49524)

Item 49521 is for a complex primary arthroplasty of the knee where revision components to either the tibia or the femur are used.

Item 49524 is for a complex primary arthroplasty of the knee where revision components to both the tibia and the femur are used.

Item 49524 may also be used in rare circumstances where an anatomic-specific allograft is required as part of a complex primary arthroplasty of the knee.

TN.8.286 Primary hip arthroplasty (items 49318, 49321)

A 'complex hip arthroplasty' procedure is one that requires additional pre-operative planning or intraoperative management that extends beyond a traditional hip arthroplasty, secondary to underlying abnormalities with bone or soft tissue or systemic health issues. This may include, but is not limited to:

- patients with previous hip surgery or fractures;
- femoral head dysplasia or deformities;
- known skeletal dysplasia or neuromuscular conditions; or
- the presence of infection.

TN.8.287 Shoulder replacement with bone graft (item 48919)

Bone grafting is a mandatory component of item 48919 and should not be separately claimed. Where the only bone grafting performed is minor grafting within the surgical site of the shoulder replacement, 48918 is the appropriate item.

A bone graft harvested from the excised humeral head and inserted into the glenoid during a shoulder replacement procedure is not considered to be minor grafting and will allow the requirements of this item to be met.

TN.8.288 Removal or revision of radial head replacement (items 49113, 49114)

Where radial head revision or radial head prosthesis removal is a component of a more comprehensive procedure performed at the same time, for example an elbow arthroplasty or revision arthroplasty (items 49115, 49116, or 49117), items 49113 and 49114 are not to be claimed in addition to the items corresponding to those procedures.

TN.8.289 Arthroplasty of the shoulder, elbow, acromioclavicular, or sternoclavicular joints (items 48925, 48932, 49127)

These items are for arthroplasty procedures, including interpositional arthroplasties, of the shoulder joint (48925), acromioclavicular joint (48932), sternoclavicular joint (48932), or elbow joint (49127) for which no other MBS items are applicable.

These items should not be claimed together with another arthroplasty item of the same joint.

The removal of exostoses, where performed, is an inherent part of these items and should not be separately claimed for the same joint.

TN.8.290 Open tenotomy in the shoulder and elbow region (items 47968, 47970, 47973)

Where an open tenotomy is part of a more comprehensive procedure, items 47968-47973 should not be claimed in addition to the item for said procedure.

These items should also not be claimed on the same occasion as item 47960, for subcutaneous tenotomy, unless they are performed at separate sites.

TN.8.291 Excision of exostoses in the hand, wrist, arm, or shoulder (items 48436, 48438, 48440)

Items 48436, 48438, and 48440 each provide for the removal of one or more exostoses when undertaken via the same incision.

Where multiple incisions are made to access the same exostosis, the relevant item should only be claimed once.

For the removal of exostoses in the hand and wrist on the same occasion:

- Where exostoses are removed from the hand and wrist via separate incisions, items 48436 and 48438 may both be claimed.
- Where exostoses are removed from the hand and wrist via a single, common incision, only item 48436 should be claimed.

For the removal of exostoses in the arm and wrist on the same occasion:

- Where exostoses are removed from the arm and wrist via separate incisions, items 48438 and 48440 may both be claimed.
- Where exostoses are removed from the arm and wrist via a single, common incision, only item 48438 should be claimed.

These items are not to be used in addition to an item for another arthroscopy, arthrodesis, arthroplasty, osteotomy, or removal of hardware where those procedures are performed on the same joint or bone.

TN.8.292 Excision of exostoses in the hip or leg (items 48442, 48444)

Items 48442 and 48444 each provide for the removal of one or more exostoses when undertaken via the same incision.

Where multiple incisions are made to access the same exostosis, the relevant item should only be claimed once.

For the removal of exostoses in the hip and leg on the same occasion:

- Where exostoses are removed from the hip and leg via separate incisions, items 48442 and 48444 may both be claimed.
- Where exostoses are removed from the hip and leg via a single, common incision, only item 48444 should be claimed.

Services for the removal of exostoses in the foot and ankle should be claimed under item 48430. For the removal of exostoses in the leg and ankle on the same occasion:

- Where exostoses are removed from the leg and ankle via separate incisions, items 48444 and 48430 may both be claimed.
- Where exostoses are removed from the leg and ankle via a single, common incision, only item 48430 should be claimed.

These items are not to be used in addition to an item for another arthroscopy, arthrodesis, arthroplasty, osteotomy, or removal of hardware where those procedures are performed on the same joint or bone.

TN.9.1 Assistance at Operations - (Items 51300 to 51318)

Items covering operations which are eligible for benefits for surgical assistance have been identified by the inclusion of the word "Assist." in the item description. Medicare benefits are not payable for surgical assistance associated with procedures which have not been so identified.

The assistance must be rendered by a medical practitioner other than the surgeon, the anaesthetist or the assistant anaesthetist.

Where more than one practitioner provides assistance to a surgeon no additional benefits are payable. The assistance benefit payable is the same irrespective of the number of practitioners providing surgical assistance.

NOTE: The Benefit in respect of assistance at an operation is not payable unless the assistance is rendered by a medical practitioner other than the anaesthetist or assistant anaesthetist. The amount specified is the amount payable whether the assistance is rendered by one or more medical practitioners.

Assistance at Multiple Operations

Where surgical assistance is provided at two or more operations performed on a patient on the one occasion the multiple operation formula is applied to all the operations to determine the surgeon's fee for Medicare benefits purposes. The multiple-operation formula is then applied to those items at which assistance was rendered and for which Medicare benefits for surgical assistance is payable to determine the abated fee level for assistance. The abated fee is used to determine the appropriate Schedule item covering the surgical assistance (ie either Item 51300 or 51303).

Multiple Operation Rule - Surgeon	Multiple Operation Rule - Assistant
Item A - \$300@100%	Item A (Assist.) - \$300@100%
Item B - \$250@50%	Item B (No Assist.)
Item C - \$200@25%	Item C (Assist.) - \$200@50%
Item D - \$150@25%	Item D (Assist.) - \$150@25%

The derived fee applicable to Item 51303 is calculated on the basis of one-fifth of the abated Schedule fee for the surgery which attracts an assistance rebate.

Surgeons Operating Independently

Where two surgeons operate independently (ie neither assists the other or administers the anaesthetic) the procedures they perform are considered as two separate operations, and therefore, where a surgical assistant is engaged by each, or one of the surgeons, benefits for surgical assistance are payable in the same manner as if the surgeons were operating separately.

TN.9.2 Benefits Payable under Item 51300

Medicare benefits are payable under item 51300 for assistance rendered at any operation identified by the word "Assist." for which the fee does not exceed the fee threshold specified in the item descriptor, or at a series or

combination of operations identified by the word "Assist." for which the aggregate Schedule fee threshold specified in the item descriptor has not been exceeded.

TN.9.3 Benefits Payable Under Item 51303

Medicare benefits are payable under item 51303 for assistance rendered at any operation identified by the word "Assist." for which the fee exceeds the fee threshold specified in the item descriptor or at a series or combination of operations identified by the word "Assist." for which the aggregate Schedule fee exceeds the threshold specified in the item descriptor.

TN.9.4 Benefits Payable Under Item 51309

Medicare benefits are payable under item 51309 for assistance rendered at any operation identified by the word "Assist." or a series or combination of operations identified by the word "Assist." and assistance at a birth involving Caesarean section.

Where assistance is provided at a Caesarean section birth and at a procedure or procedures which have not been identified by the word "Assist.", benefits are payable under item 51306.

TN.9.5 Assistance at Cataract and Intraocular Lens Surgery - (Item 51318)

The reference to "previous significant surgical complication" covers vitreous loss, rupture of posterior capsule, loss of nuclear material into the vitreous, intraocular haemorrhage, intraocular infection (endophthalmitis), cystoid macular oedema, corneal decompensation or retinal detachment.

TN.10.1 Relative Value Guide For Anaesthetics - (Group T10) Overview of the RVG

The RVG groups anaesthesia services within anatomical regions. These items are listed in the MBS under Group T10, Subgroups 1-16 Anaesthesia for radiological and other therapeutic and diagnostic services are grouped separately under Subgroup 17. Also included in the RVG format are certain additional monitoring and therapeutic services, such as blood pressure monitoring (item 22012) and central vein catheterisation (item 22020) when performed in association with the administration of anaesthesia. These services are listed at subgroup 19. The RVG also provides for assistance at anaesthesia under certain circumstances. These items are listed at subgroup 26.

Details of the billing requirements for the RVG are available from Services Australia website.

The RVG is based on an anaesthesia unit system reflecting the complexity of the service and the total time taken for the service. Each unit has been assigned a dollar value.

Under the RVG, the MBS fee for anaesthesia in connection with a procedure is comprised of up to three components:

1. The basic units allocated to each anaesthetic procedure, reflecting the complexity of the procedure (an item in the range 20100-21997);
2. The time unit allocation reflecting the total time of the anaesthesia (an item in the range 23010-24136); and
3. Where appropriate, modifying units recognising certain added complexities in anaesthesia (an item/s in the range 25000-25020).

Assistance at anaesthesia

To establish the fee for the assistant service items 25200 and 25205, both services have been allocated a number of base units. The total time that the assistant anaesthetist was in active attendance on the patient is then added, along with modifiers as appropriate to determine the MBS fee.

Whole body perfusion

Where whole body perfusion is performed, the MBS fee is determined by adding together the following:

1. The base units allocated to the service (item 22060);
2. The time unit allocation reflecting the total time of the perfusion (an item in the range 23010 - 24136); and
3. Where appropriate, modifying units recognising certain added complexities in perfusion (an item/s in the range 25000 – 25020).

TN.10.2 Eligible Services

Generally, a Medicare benefit is only payable for anaesthesia which is performed in connection with an "eligible" service. An "eligible" service is defined as a clinically relevant professional service which is listed in the Schedule and which has been identified as attracting an anaesthetic fee.

TN.10.3 RVG Unit Values

As per clause 5.9.5 of Schedule 1 of the GMST, all RVG items 23010 to 24136 apply to a service provided to a patient under anaesthesia, but only if the anaesthesia start and end times are recorded in writing.

Basic Units

The RVG basic unit allocation represents the complexity of the anaesthetic procedure relative to the anatomical site and physiological impact of the surgery.

Time Units

The number of time units is calculated from the total time of the anaesthesia service, the assistant at anaesthesia service or the whole body perfusion service:

- *for anaesthesia*, time is considered to begin when the anaesthetist commences exclusive and continuous care of the patient for anaesthesia. Time ends when the anaesthetist is no longer in professional attendance, that is, when the patient is safely placed under the supervision of other personnel;
- *for assistance at anaesthesia*, time is taken to be the period that the assistant anaesthetist is in active attendance on the patient during anaesthesia; and
- *for perfusion*, perfusion time begins with the commencement of anaesthesia and finishes with the closure of the chest.

For up to and including the first - 2 hours of time, each 15 minutes (or part thereof) constitutes 1 time unit. For time beyond 2 hours, each time unit equates to 10 minutes (or part thereof).

Modifying Units (25000 - 25050)

Modifying units have been included in the RVG to recognise added complexities in anaesthesia or perfusion, associated with the patient's age, physical status or the requirement for emergency surgery. These cover the following clinical situations:

ASA physical status indicator 3 - A patient with severe systemic disease that significantly limits activity (item 25000). This would include: severely limiting heart disease; severe diabetes with vascular complications or moderate to severe degrees of pulmonary insufficiency.

Some examples of clinical situations to which ASA 3 would apply are:

- a patient with ischaemic heart disease such that they encounter angina frequently on exertion thus significantly limiting activities;
- a patient with chronic airflow limitation who gets short of breath such that the patient cannot complete one flight of stairs without pausing;
- a patient who has suffered a stroke and is left with a residual neurological deficit to the extent that is significantly limits normal activity, such as hemiparesis; or
- a patient who has renal failure requiring regular dialysis.

ASA physical status indicator 4 - A patient with severe systemic disease which is a constant threat to life (item 25005). This covers patients with severe systemic disorders that are already life-threatening, not always correctable by an operation. This would include: patients with heart disease showing marked signs of cardiac failure; persistent angina or advanced degrees of pulmonary, hepatic, renal or endocrine insufficiency.

ASA physical status indicator 4 would be characterised by the following clinical examples:

- a person with coronary disease such that they get angina daily on minimum exertion thus severely curtailing their normal activities;
- a person with end stage emphysema who is breathless on minimum exertion such as brushing their hair or walking less than 20 metres; or
- a person with severe diabetes which affects multiple organ systems where they may have one or more of the following examples:
- severe visual impairment or significant peripheral vascular disease such that they may get intermittent claudication on walking less than 20 metres; or
- severe coronary artery disease such that they suffer from cardiac failure and/or angina whereby they are limited to minimal activity.

ASA physical status indicator 5 - a moribund patient who is not expected to survive for 24 hours with or without the operation (item 25010). This would include: a burst abdominal aneurysm with profound shock; major cerebral trauma with rapidly increasing intracranial pressure or massive pulmonary embolus.

The following are some examples that would equate to ASA physical status indicator 5

- a burst abdominal aneurysm with profound shock;
- major cerebral trauma with increasing intracranial pressure; or
- massive pulmonary embolus.

NOTE: It should be noted that the Medicare Benefits Schedule does NOT include modifying units for patients assessed as ASA physical status indicator 2. Some examples of ASA 2 would include:

- A patient with controlled hypertension which has no affect on the patient's normal lifestyle;
- A patient with coronary artery disease that results in angina occurring on substantial exertion but not limiting normal activity; or

- A patient with insulin dependant diabetes which is well controlled and has minimal effect on normal lifestyle.
- Where the patient is aged under 4 years old (item 25013) or at least 75 years (item 25014).
- For anaesthesia, assistance at anaesthesia or a perfusion service in association with an *emergency procedure (item 25020).
- For anaesthesia or assistance at anaesthesia in association with an *after hours emergency procedure (items 25025 and 25030).
- For a perfusion service in association with *after hours emergency surgery (item 25050).

*** NOTE:** It should be noted that the emergency modifier and the after hours emergency modifiers cannot both be claimed in the one anaesthesia assistance at anaesthesia or perfusion episode.

It should also be noted that modifiers are not stand alone services and can only be claimed in association with anaesthesia, assistance at anaesthesia or with a perfusion service covered by item 22060.

Definition of Emergency

For the purposes of both the emergency modifier and the after hours emergency modifiers, emergency is defined as existing where the patient requires immediate treatment without which there would be significant threat to life or body part.

Definition of After Hours

For the purposes of the after hours emergency modifier items, the after hours period is defined as being the period from 8pm to 8am on any weekday or at any time on a Saturday, a Sunday or a public holiday. Benefit for the After Hours Emergency Modifiers is only payable where more than 50% of the time for the emergency anaesthesia, the assistance at emergency anaesthesia or the perfusion service is provided in the after hours period. In situations where less than the 50% of the time for the service falls in the after hours period, the emergency modifier rather than the after hours emergency modifier applies. For information about deriving the fee for the service where the after hours emergency modifier applies.

TN.10.4 Deriving the Schedule Fee under the RVG

The Schedule fee for each component of anaesthesia (base items, time items and modifier items) in the RVG Schedule is derived by applying the unit value to the total number of anaesthesia units for each component. For example:

ITEM	DESCRIPTION	UNITS	SCHEDULE FEE (Units x \$20.10)
20840	Anaesthesia for resection of perforated bowel	6	\$120.60
23200	Time - 4 hours 40 minutes	24	\$482.40
25000	Modifier - Physical status	1	\$20.10
22012	Central Venous Pressure Monitoring	3	\$60.30
	TOTAL	34	\$683.40

After Hours Emergency Services

When deriving the fee for the after hours emergency modifier for anaesthesia or assistance at anaesthesia, the 50% loading applies to the anaesthesia or assistance service from Group T10 and to any additional clinically relevant therapeutic or diagnostic service from Group T10, Subgroup 18, provided during the anaesthesia episode. For example:

ITEM	DESCRIPTION	UNITS	SCHEDULE FEE (Units x \$20.10)
------	-------------	-------	--------------------------------

20840	Anaesthesia for resection of perforated bowel	6	\$120.60
23200	Time - 4 hours 40 minutes	24	\$482.40
25000	Modifier - Physical status	1	\$20.10
22012	Central Venous Pressure Monitoring	3	\$60.30
	TOTAL	34	Schedule fee = \$683.40
25025	Anaesthesia After Hours Emergency Modifier		Schedule Fee \$683.40 x 50% = \$341.70

Definition of Radical Surgery for the RVG

Where the term radical appears in an item description, it refers to an extensive surgical procedure, performed for the treatment of malignancy. It usually denotes extensive block dissection not only of the malignant tissue, but also of the surrounding tissue, particularly fat and lymphatic drainage systems. See notes T10.18 and T10.22 which clarify the definitions of the words "extensive" and "radical" used in items 20192 and 20474.

Multiple Anaesthesia Services

Where anaesthesia is provided for services covered by multiple items in the RVG, Medicare benefit is only payable for the RVG item with the highest basic unit value. However, the time component should include the total anaesthesia time taken for all services. For example:

ITEM	DESCRIPTION	UNITS	SCHEDULE FEE
20790	Anaesthesia for open Cholecystectomy	8	\$160.80
20752	Incisional Hernia	6	(lower value than 20790 = 20752 schedule fee not payable) \$120.60
23111	Time - 2hrs 30mins	11	\$221.10
25014	Physical Status - 75 or over	1	\$20.10
	TOTAL	20	\$402.00

Prolonged Anaesthesia

Under the RVG, the previous rules that related to prolonged anaesthesia no longer apply. Where anaesthesia is prolonged beyond that which an anaesthetist would normally encounter for a particular service, the RVG provides for the anaesthetist to claim the total anaesthesia time for the procedure/s.

TN.10.5 Minimum Requirements for Claiming Benefits under Items in the RVG (including sedation)

Medicare benefits for RVG services (including sedation) are only payable where both the staffing and the facility in which the service was rendered meets the following minimum guidelines. These guidelines are based on protocols established by the Australian and New Zealand College of Anaesthetists.

Staffing

- Techniques intended to produce loss of consciousness must not be used unless an anaesthetist is present to care exclusively for the patient;
- Where the patient is a young child, is elderly or has any serious medical condition (such as significant cardio-respiratory disease or danger of airway compromise), an anaesthetist should be present to administer sedation and monitor the patient;
- In all other cases, an appropriately trained medical practitioner, other than the proceduralist, is required to be in exclusive attendance on the patient during the procedure, to administer sedation and to monitor the patient; and
- There must be sufficient equipment (including oxygen, suction and appropriate medication), to enable resuscitation should it become necessary.

Facilities

The procedure must be performed in a location which is adequate in size and staffed and equipped to deal with a cardiopulmonary emergency. This must include:

- An operating table, trolley or chair which can be readily tilted;
- Adequate uncluttered floor space to perform resuscitation, should this become necessary;
- Adequate suction and room lighting;
- A supply of oxygen and suitable devices for the administration of oxygen to a spontaneously breathing patient;
- A self inflating bag suitable for artificial ventilation together with a range of equipment for advance airway management;
- Appropriate drugs for cardiopulmonary resuscitation;
- A pulse oximeter; and
- Ready access to a defibrillator.

These requirements apply equally to dental anaesthesia or sedation services provided under items in Group T10, Subgroup 20 of the RVG.

TN.10.6 Account Requirements

Before a benefit will be paid for the administration of anaesthesia, or for the services of an assistant anaesthetist, a number of details additional to those set out in the General Explanatory Notes of the Medicare Benefits Schedule are required on the anaesthetist's account:

- **the anaesthetist's account** must show the name/s of the medical practitioner/s who performed the associated operation/s. In addition, where the after hours emergency modifier applies to the anaesthesia service, the account must include the start time, the end time and total time of the anaesthetic.
- **the assistant anaesthetist's account** must show the names/s of the medical practitioners who performed the associated operation/s, as well as the name of the principal anaesthetist. In addition, where the after hours emergency modifier applies, the assistant anaesthetist's account must record the start time, the end time and the total time for which he or she was providing professional attention to the patient during the anaesthetic.
- **the perfusionist's account** must record the start time, end time and total time of the perfusion service where the after hours emergency modifier is claimed.

TN.10.7 General Information

The *Health Insurance Act 1973* provides that where anaesthesia is administered to a patient, the premedication of the patient in preparation for anaesthesia is deemed to form part of the administration of anaesthesia. The administration of anaesthesia also includes the pre-anaesthesia consultation with the patient in preparation for that administration, except where such consultation entails a separate attendance carried out at a place other than an operating theatre or an anaesthesia induction room. The pre-anaesthesia consultation for a patient should be performed in association with a clinically relevant service.

Except in special circumstances, benefit is not payable for the administration of anaesthesia listed in Subgroups 1-18, unless the anaesthesia is administered by a medical practitioner other than the medical practitioner who renders the medical service in connection with which anaesthesia is administered.

Fees and benefits for anaesthesia services under the RVG cover all essential components in the administration of the anaesthesia service. Separate benefit may be attracted, however, for complementary services such as central venous pressure and direct arterial pressure monitoring (see note TN.10.8).

It should be noted that additional benefit is not payable for intravenous infusion or electrocardiographic monitoring, provision for which has been made in the value determined for the anaesthetic units.

The Medicare benefit derived under the RVG for the administration of anaesthesia is the benefit payable for that service irrespective of whether one or more than one medical practitioner administers it. However, benefit is provided under Subgroup 26 for the services of one assistant anaesthetist (who must not be either the surgeon or assistant surgeon (see Note TN.10.9)).

Where a regional nerve block or field nerve block is administered by a medical practitioner other than the practitioner carrying out the operation, the block is assessed as an anaesthesia item according to the advice in paragraph TN.7.1. When a block is carried out in cases not associated with an operation, such as for pain or during labour, the service falls under Group T7.

If not stipulated in the item descriptor, when a regional nerve block or field nerve block covered by an item in Group T7 of the Schedule is administered by a medical practitioner in the course of a surgical procedure undertaken by the same medical practitioner, then such a block will attract benefit under the appropriate item in Group T7.

If stipulated in the item descriptor, when a regional nerve block or field nerve block covered by an item in Group T7 of the Schedule is administered by a medical practitioner in the course of a surgical procedure the block will not attract benefit under the relevant item in Group T7 unless the block has been performed using a targeted percutaneous approach. If the block has been performed using a targeted percutaneous approach this must be noted on the Medicare claim.

It should be noted that where a procedure is carried out with local infiltration or digital block as the means of anaesthesia, that anaesthesia is considered to be part of the procedure and an additional benefit is therefore not payable.

It may happen that the professional service for which the anaesthesia is administered does not itself attract a benefit because it is part of the after-care of an operation. This does not, however, affect the benefit payable for the anaesthesia service. Benefit is payable for anaesthesia administered in connection with such a professional service (or combination of services) even though no benefit is payable for the associated professional service.

The administration of epidural anaesthesia during labour is covered by items 18216 or 18219 (18226 and 18227 for after hours) in Group T7 of the Schedule whether administered by the medical practitioner undertaking the confinement or by another medical practitioner. Subsequent "top-ups" are covered by Item 18222 or 18225.

For the purposes of items 18216 and 18226, one attendance means that the medical practitioner cannot claim either of these items if the additional attendance is to optimise the initial treatment. Optimise means extension or improvement in analgesic quality of an existing block, without the insertion of a new block as a separate procedure.

TN.10.8 Additional Services Performed in Connection with Anaesthesia - Subgroup 19

Included in the RVG format are a number of additional or complementary services which may be provided in connection with anaesthesia such as blood pressure monitoring (item 22012) and intra-arterial cannulation (item 22025).

These items (with the exception of peri-operative nerve blocks (22031-22042)) and perfusion services (22055-22075) have also been retained in the MBS in the non-RVG format, for use by practitioners who provide these services other than in association with anaesthesia.

Items 22012 and 22014

Benefits are payable under items 22012 and 22014 only once for each type of pressure, up to a maximum of 4 pressures per patient per calendar day, and irrespective of the number of practitioners involved in monitoring the pressures.

Items 22012, 22014 and 22025

A patient who is categorised as having a high risk of complications is one where clinical indications allow for the following items to be claimed (in conjunction with items 22012, 22014 and 22025) with item 25000, item 25005 or item 25010 modifiers, and/or item 25013, and/or item 25014, and/or items 25020, 25025 and/or when the basic surgical item value is 10 or more units, and/or is conjunction with items in group T10 Subgroup 13 (Shoulder and Axilla), or with items 23170 – 24136 (for procedures of greater than four hours duration) noting this is not an exhaustive list.

Item 22042

This item can be co-claimed with item 20142 (anaesthesia for lens surgery), when anaesthesia or sedation was also provided by the same anaesthetist.

Item 22042 cannot be co-claimed with item 20142, 20144, 20145 and 20147 when a general anaesthetic is the primary anaesthetic approach.

TN.10.9 Assistance in the Administration of Anaesthesia

The RVG provides for a separate benefit to be paid for the services of an assistant anaesthetist in connection with an operation or series of operations in specified circumstances, as outlined below. This benefit is payable only in respect of one assistant anaesthetist who must not be the surgeon or assistant surgeon.

Therapeutic and Diagnostic services covered by Subgroup 19 items (such as blood transfusion, pressure monitoring, insertion of CVC, etc) are payable only once per patient per anaesthetic episode. Where these services are provided by the assistant anaesthetist these services are eligible for Medicare benefits only where the same service is not also claimed by the primary anaesthetist.

Assistance at anaesthesia in connection with emergency treatment (Item 25200)

Item 25200 provides for assistance at anaesthesia where the patient is in imminent danger of death. Situations where imminent danger of death requiring an assistant anaesthetist might arise include: complex airway problems, anaphylaxis or allergic reactions, malignant hyperpyrexia, neonatal and complicated paediatric anaesthesia, massive blood loss and subsequent resuscitation, intra-operative cardiac arrest, critically ill patients from intensive care units or inability to wean critically ill patients from pulmonary bypass.

Assistance in the administration of elective anaesthesia (Item 25205)

A separate benefit is payable under Item 25205 for the services of an assistant anaesthetist in connection with elective anaesthesia in the circumstances outlined in the item descriptor. This benefit is only payable in respect of one assistant anaesthetist who must not be the surgeon or assistant surgeon.

For the purposes of Item 25205, a 'complex paediatric case' involves one or more of the following:

- the need for invasive monitoring (intravascular or transoesophageal); or
- organ transplantation; or
- craniofacial surgery; or
- major tumour resection; or
- separation of conjoint twins.

TN.10.10 Perfusion Services - (Items 22055 to 22075)

Perfusion services covered by items 22055-22075 have been included in the RVG format.

As with anaesthesia, where whole body perfusion is performed, the Schedule fee is determined on the base units allocated to the service (item 22060), the total time for the perfusion, and modifying units, as appropriate, i.e.

(a) the basic units allocated to whole body perfusion under item 22060:

22060	WHOLE BODY PERFUSION, CARDIAC BYPASS , where the heart-lung machine or equivalent is continuously operated by a medical perfusionist, other than a service associated with anaesthesia to which an item in Subgroup 21 applies. (20 basic units) (See para TN.10.10 of explanatory notes to this Category)
-------	--

(b) plus, the time unit allocation reflecting the total time of the perfusion (an item in the range 23010 - 24136), for example:

23170	4:01 HOURS TO 4:10 HOURS (21 basic units)
-------	---

plus, where appropriate

(c) modifying units recognising certain added complexities in perfusion (an item/s in the range 25000 - 25020), for example:

25014	Anaesthesia, perfusion or assistance in the management of anaesthesia, if the patient is aged 75 years or more (1 basic unit)
-------	---

The time component for item 22060 is defined as beginning with the commencement of anaesthesia and finishing with the closure of the chest.

Item 22065 may only be used in association with item 22060.

Medicare benefits are not payable for perfusion unless the perfusion is performed by a medical practitioner other than the medical practitioner who renders the associated service in Group T8 or the medical practitioner who administers the anaesthesia listed in the RVG in Group T10.

The medical practitioner providing the service must comply with the training requirements in the Australian and New Zealand College of Anaesthetists *Guidelines for Major Extracorporeal Perfusion* (PS27).

Benefits are not payable if another person primarily and/or continuously operates the Heart Lung Machine.

TN.10.12 Discontinued Procedure - (Item 21990)

Item 21990 applies when a patient has been anaesthetised but the proposed procedure has been abandoned prior to surgery commencing.

Claims should include notation of the surgery or procedure which had been proposed.

Under the *Health Insurance Act 1973* the Chief Executive Medicare does not require claims for this item to be accompanied by details of the proposed surgery and the reasons why the operation was discontinued. However, practitioners must maintain a clinical record of this information, which may be subject to audit.

TN.10.13 Anaesthesia in Connection with a Procedure not Identified as Attracting a Medicare Benefit for Anaesthesia - (Item 21997)

Payment of benefit for Item 21997 is not restricted to the service being performed in connection with a surgical service in Group T8. Item 21997 may be performed with any item in the Medicare Benefits Schedule that has not been identified as attracting a Medicare benefit for anaesthesia (including attendances) in circumstances where anaesthesia is considered clinically necessary.

TN.10.14 Anaesthesia in Connection with a Dental Service - (Items 22900 and 22905)

Items 22900 and 22905 cover the administration of anaesthesia in connection with a dental service that is not a service covered by an item in the Medicare Benefits Schedule i.e removal of teeth and restorative dental work. Therefore, the requirement that anaesthesia be performed in association with an 'eligible' service (as defined in point T10.2) does not apply to dental anaesthesia items 22900 and 22905.

TN.10.15 Anaesthesia in Connection with Cleft Lip and Cleft Palate Repair - (Items 20102 and 20172)

Anaesthesia associated with cleft lip and cleft palate repair is covered in Subgroup 1 of the RVG Schedule, under items 20102 and 20172.

TN.10.16 Anaesthesia in Connection with an Oral and Maxillofacial Service - (Category 4 of the Medicare Benefits Schedule)

Benefit for anaesthesia provided by a medical practitioner in association with an Oral and Maxillofacial service (Category 4 of the Medicare Benefits Schedule) is derived using the RVG. Benefit for anaesthesia for oral and maxillofacial services should be claimed under the appropriate RVG item from Subgroup 1 or 2.

TN.10.17 Nerve or Plexus Blocks for Post Operative Pain - (Items 22031 to 22041) Items 22031 to 22041

Benefits are only payable for intra-operative nerve or plexus blocks performed for the management of post-operative pain that are specifically catered for under items 22031 to 22041.

Items 22031 and 22036

For items 22031 and 22036, postoperative pain management means that the injected therapeutic substance is expected to prolong the analgesic effect of the epidural or intrathecal technique.

Item 22031 (initial intrathecal or epidural injection)

Benefits are payable under item 22031 for the initial intrathecal or epidural injection of a therapeutic substance/s, in association with anaesthesia and surgery, for the control of post-operative pain. Benefit is not payable for subsequent intra-operative intrathecal and epidural injection (item 22036) in the same anaesthetic episode. Where subsequent infusion is provided post operatively, to maintain analgesia, benefit would be payable under items 18222 or 18225.

Item 22036 (subsequent intrathecal or epidural injection)

Benefits are payable under item 22036 for subsequent intrathecal or epidural injection of a therapeutic substance/s, in association with anaesthesia and surgery, performed intra-operatively, for postoperative pain management, where the catheter is already in-situ. Benefits are not payable under this item where the initial injection was performed intra-operatively, under item 22031, in the same anaesthetic episode.

Item 22041 (plexus or nerve block)

Benefits are payable under item 22041 in addition to the general anaesthesia for the related procedure.

TN.10.18 Anaesthesia in Connection with Extensive Surgery on Facial Bones - (Item 20192)

The term 'extensive' in relation to this item is defined as major facial bone surgery or reconstruction including major resection or osteotomies or osteectomies of mandibles and/or maxillae, surgery for prognathism or surgery for Le Fort II or III fractures.

TN.10.22 Anaesthesia for Radical Procedures on the Chest Wall - (Item 20474)

Radical procedures on the chest wall referred to in item 20474 would include procedures such as pectus excavatum.

TN.10.23 Anaesthesia for Extensive Spine or Spinal Cord Procedures - (Item 20670)

This item covers major spinal surgery involving multiple levels of the spinal cord and spinal fusion where performed. Procedures covered under this item would include the Harrington Rod technique. Surgery on individual spinal levels would be covered under items 20600, 20620 and 20630.

TN.10.24 Anaesthesia for Femoral Artery Embolectomy - (Item 21274)

Item 21274 covers anaesthesia for femoral artery embolectomy. Grafts involving intra-abdominal vessels would be covered under item 20880.

TN.10.25 Anaesthesia for Cardiac Catheterisation - (Item 21941)

Item 21941 does not include either central vein catheterisation or insertion of right heart balloon catheter. Anaesthesia for these procedures is covered under item 21943.

TN.10.27 Anaesthesia for Services on the Upper and Lower Abdomen - (Subgroups 6 and 7)

Establishing whether an RVG anaesthetic item pertains to the upper or lower abdomen, depends on whether the majority of the associated surgery was performed in the region above or below the umbilicus.

Some examples of upper abdomen would be:

- laparoscopy on upper abdominal viscera;
- laparoscopy with operative focus superior to the umbilical port;
- surgery to the liver, gallbladder and ducts, stomach, pancreas, small bowel to DJ flexure;
- the kidneys in their normal location (as opposed to pelvic kidney); or
- spleen or bowel (where it involves a diaphragmatic hernia or adhesions to gallbladder bed).

Some examples of lower abdomen would be:

- abdominal wall below the umbilicus;
- laparoscopy on lower abdominal viscera;
- laparoscopy with operative focus inferior to the umbilical port;
- surgery on the jejunum, ileum, or colon;
- surgery on the appendix; or
- surgery associated with the female reproductive system.

TN.10.28 Anaesthesia for Microvascular Free Tissue Flap Surgery - (Items 20230, 20355, 20475, 20704, 20804, 20905, 21155, 21275, 21455, 21535, 21685, 21785 and 21865)

Benefits are only payable where complete free tissue flap surgery is undertaken involving microsurgical arterial and venous anastomoses. Benefits do not apply for microsurgical rotation flaps or for re-implementation of digits or either the hand or the foot.

TN.10.29 Anaesthesia for Endoscopic Ureteric Surgery - Including Laser Procedure - (Item 20911)

Benefits are not payable under item 20911 for diagnostic ureteroscopy.

TN.10.30 Credentialing for peri-operative cardiac ultrasound services (22051)

Item 22051 should be performed by a provider who is appropriately credentialed to provide the particular service, by a recognised body for the credentialing of peri-operative cardiac ultrasound services. Credentialing must be based on criteria consistent with those recommended by the Australian and New Zealand College of Anaesthetists in the current version of their Professional Document PS46 "Guidelines on Training and Practice of Perioperative Cardiac Ultrasound in Adults.

TN.11.1 Botulinum Toxin - (Items 18350 to 18379)

The Therapeutic Goods Administration (TGA) assesses each indication for the therapeutic use of botulinum toxin on an individual basis. There are currently three botulinum toxin agents with TGA registration (Botox®, Dysport® and Xeomin®). Each has undergone a separate evaluation of its safety and efficacy by the TGA as they are neither bioequivalent, nor dose equivalent. When claiming under an item for the injection of botulinum toxin, only the botulinum toxin agent specified in the item can be used. Benefits are not payable where an agent other than that specified in the item is used.

The TGA assesses each indication for the therapeutic use of botulinum toxin by assessment of clinical evidence for its use in paediatric or adult patients. Where an indication has been assessed for adult use, data has generally been assessed using patients over 12 years of age. Paediatric indications have been assessed using data from patients under 18 years of age. Botulinum toxin should only be administered to patients under the age of 18 where an item is for a paediatric indication, and patients over 12 years of age where the item is for an adult indication, unless otherwise specified.

Items for the administration of botulinum toxin can only be claimed by a medical practitioner who is recognised as an eligible medical practitioner for the relevant indication under the arrangements under Section 100 of the *National Health Act 1953* (the Act) relating to the use and supply of botulinum toxin. The specialist qualifications required to administer botulinum toxin vary across the indications for which the medicine is listed on the PBS, and are detailed within the relevant PBS restrictions available at: www.pbs.gov.au/browse/section100-mf

Item 18354 for the treatment of equinus, equinovarus or equinovalgus is limited to a maximum of 4 injections per patient on any day (2 per limb). Accounts should be annotated with the limb which has been treated. Item 18292 may not be claimed for the injection of botulinum toxin, but may be claimed where a neurolytic agent (such as phenol) is used, in addition to botulinum toxin injection(s), to treat the obturator nerve in patients with a dynamic foot deformity.

Treatment under item 18375 or 18379 can only continue if the patient achieves at least a 50% reduction in urinary incontinence episodes from baseline from the start of week 6 through to the end of week 12 after the first treatment. The term 'continue' means the patient can be retreated under item 18375 or 18379 at some point after the 12 week period (for example; 6 to 12 months after the first treatment). This requirement is in line with the PBS listing for the supply of the medicine for this indication under Section 100 of the *Act*.

Item 18362 for the treatment of severe primary axillary hyperhidrosis allows for a maximum number of 3 treatments per patient in a 12 month period, with no less than 4 months to elapse between treatments.

Botulinum toxin which is not supplied and administered in accordance with the arrangements under Section 100 of the *Act* is not required to be provided free of charge to patients. Where a charge is made for the botulinum toxin administered, it must be separately listed on the account and not billed to Medicare. Since 1 September 2015, PBS patient co-payments have applied to botulinum toxin supplied and administered in accordance with the arrangements under Section 100 of the *Act*.

Services Australia has developed a [Health Practitioner Guideline to substantiate that a patient had a pre-existing condition at the time of the service](#) which is located on the Department of Health and Aged Care website.

TR.8.1 Mechanical thrombectomy - (Item 35414)

For the purposes of this item, *eligible stroke centre* means a facility that:

- (a) has a designated stroke unit;
- (b) is equipped and has staff available or on call so that it is capable of providing the following to a patient on a 24-hour basis:
 - (i) the services of a specialist or consultant physician who has the training required under paragraph (b) of item 35414;
 - (ii) diagnostic imaging services using advanced imaging techniques, which must include computed tomography, computed tomography angiography, digital subtraction angiography, magnetic resonance imaging, and magnetic resonance angiography; and
 - (iii) care from a team of health practitioners which includes a stroke physician, a neurologist, a neurosurgeon, a radiologist, an anaesthetist, an intensive care unit specialist, a medical imaging technologist, and a nurse;
- (c) has dedicated endovascular angiography facilities; and
- (d) has written procedures for assessing and treating patients who have, or may have, experienced a stroke.

Note: A health practitioner may fulfil the role of more than one of the types of health practitioner specified in paragraph (b)(iii). For example, a neurologist may also be a stroke physician.

Conjoint Committee for Recognition of Training in Interventional Neuroradiology (CCINR)

CCINR comprises representatives from the Australian and New Zealand Society of Neuroradiology (ANZSNR), the Neurosurgical Society of Australasia (NSA) and the Australian and New Zealand Association of Neurologists (ANZAN). For the purposes of this item, specialists or consultant physicians performing this procedure must have training recognised by CCINR, and Services Australia notified of that recognition.

TR.8.2 Selective Coronary Angiography Indications

Clause 5.10.17A Items 38244, 38247, 38307, 38308, 38310, 38316, 38317 and 38319—patient eligibility and timing

- (1) A patient is eligible for a service to which item 38244, 38247, 38307, 38308, 38310, 38316, 38317 or 38319 applies if:
 - (a) subclause (2) applies to the patient; and
 - (b) a service to which the item applies has not been provided to the patient in the previous 3 months, unless:
 - (i) the patient experiences a new acute coronary syndrome or angina, as described in paragraph (2)(a), (b) or (c), in that period; or
 - (ii) for a service to which item 38316, 38317 or 38319 applies—the service was provided to the patient in that period as a subsequent stage following an initial primary percutaneous coronary intervention procedure.
- (2) This subclause applies to a patient who has:
 - (a) an acute coronary syndrome evidenced by any of the following:
 - (i) ST segment elevation;
 - (ii) new left bundle branch block;
 - (iii) troponin elevation above the local upper reference limit;
 - (iv) new resting wall motion abnormality or perfusion defect;

- (v) cardiogenic shock;
 - (vi) resuscitated cardiac arrest;
 - (vii) ventricular fibrillation;
 - (viii) sustained ventricular tachycardia; or
- (b) unstable angina or angina equivalent with a crescendo pattern, rest pain or other high-risk clinical features, such as hypotension, dizziness, pallor, diaphoresis or syncope occurring at a low threshold; or
- (c) either of the following, detected on computed tomography coronary angiography:
- (i) significant left main coronary artery disease with greater than 50% stenosis or a cross-sectional area of less than 6 mm²;
 - (ii) severe proximal left anterior descending coronary artery disease (with stenosis of more than 70% or a cross-sectional area of less than 4 mm² before the first major diagonal branch).

TR.8.3 Acute Coronary Syndrome - Selective Coronary Angiography and Percutaneous Coronary Intervention Indications

Clause 5.10.17B Items 38248 and 38249—patient eligibility

- (1) A patient is eligible for a service to which item 38248 or 38249 applies if:
- (a) subclause (2) applies to the patient; or
 - (b) the patient is recommended for coronary angiography as a result of a heart team conference that meets the requirements of subclause (3).
- (2) This subclause applies to a patient who has:
- (a) limiting angina or angina equivalent, despite an adequate trial of optimal medical therapy; or
 - (b) high risk features, including at least one of the following:
 - (i) myocardial ischaemia demonstrated on functional imaging;
 - (ii) ST segment elevation, sustained ST depression, hypotension or a Duke treadmill score of minus 11 or less, demonstrated by stress electrocardiogram testing;
 - (iii) computed tomography coronary angiography evidence of one or more coronary arteries with stenosis of 70% or more; or
 - (iv) left ventricular dysfunction with an ejection fraction of less than 40% or segmental wall motion abnormality at rest
- (3) For the purposes of paragraph (1)(b), the requirements for a heart team conference are as follows:
- (a) the conference must be conducted by a team of specialists or consultant physicians practising in the speciality of cardiology or cardiothoracic surgery, including each of the following:
 - (i) an interventional cardiologist;
 - (ii) a non-interventional cardiologist;
 - (iii) a specialist or consultant physician; and

- (b) the team must:
 - (i) assess the patient's risk and technical suitability to receive the service; and
 - (ii) make a recommendation about whether or not the patient is suitable for invasive coronary angiography; and
- (c) a record of the conference must be created, and must include the following:
 - (i) the particulars of the assessment of the patient during the conference;
 - (ii) the recommendations made as a result of the conference;
 - (iii) the names of the members of the team making the recommendations.

TR.8.4 Stable - Percutaneous Coronary Intervention Indications

Clause 5.10.17C Items 38311, 38313, 38314, 38320, 38322 and 38323—patient eligibility

- (1) A patient is eligible for a service to which item 38311, 38313, 38314, 38320, 38322 or 38323 applies if:
 - (a) subclause (2) applies to the patient; or
 - (b) the patient is recommended for the service as a result of a heart team conference that meets the requirements of subclause (4).
- (2) This subclause applies to a patient if:
 - (a) the patient has any of the following:
 - (i) limiting angina or angina equivalent despite an adequate trial of optimal medical therapy;
 - (ii) myocardial ischaemia demonstrated on functional imaging;
 - (iii) high risk features such as ST segment elevation, sustained ST depression, hypotension or a Duke treadmill score of minus 11 or less, demonstrated by stress electrocardiogram testing; and
 - (b) the patient has either of the following in a vascular territory treated:
 - (i) a stenosis of 70% or more;
 - (ii) a fractional flow reserve of 0.80 or less, or non-hyperaemic pressure ratios distal to the lesions of 0.89 or less; and
 - (c) for items 38314 and 38323—either:
 - (i) the patient does not have diabetes mellitus and the multi-vessel coronary artery disease of the patient meets the criterion in subclause (3); or
 - (ii) despite a recommendation that surgery is preferable, the patient has expressed a preference for catheter-based intervention.
- (3) For the purposes of subparagraph (2)(c)(i), the criterion for the multi-vessel coronary artery disease is that the disease does not involve any of the following:
 - (a) stenosis of more than 50% in the left main coronary artery;
 - (b) bifurcation lesions involving side branches with a diameter of more than 2.75 mm;

- (c) chronic vessel occlusions for more than 3 months;
- (d) severely angulated or calcified lesions;
- (e) a SYNTAX score of more than 23.

(4) For the purposes of paragraph (1)(b), the requirements for a heart team conference are as follows:

(a) the conference must be conducted by a team of specialists or consultant physicians practising in the speciality of cardiology or cardiothoracic surgery, including each of the following:

- (i) an interventional cardiologist;
- (ii) a specialist or consultant physician;
- (iii) for items 38314 and 38323—a cardiothoracic surgeon;
- (iv) for items 38311, 38313, 38320 and 38322—a cardiothoracic surgeon or a non-interventional cardiologist; and

(b) the team must:

- (i) assess the patient's risk and technical suitability to receive the service; and
- (ii) make a recommendation about whether or not the patient is suitable for percutaneous coronary intervention; and

(c) a record of the conference must be created, and must include the following:

- (i) the particulars of the assessment of the patient during the conference;
- (ii) the recommendations made as a result of the conference;
- (iii) the names of the members of the team making the recommendations.

TR.8.5 Selective Coronary Angiography and Percutaneous Coronary Intervention - Documentation Requirements

Clause 5.10.17D Restriction on items 38244, 38247, 38248, 38249, 38251, 38252, 38307, 38308, 38310, 38311, 38313, 38314, 38320, 38322, 38323, 38316, 38317 and 38319—reports and clinical notes

Items 38244, 38247, 38248, 38249, 38251, 38252, 38307, 38308, 38310, 38311, 38313, 38314, 38320, 38322, 38323, 38316, 38317 and 38319 apply to a service provided to a patient only if a report or clinical note:

- (a) is prepared for the service; and
- (b) includes documentation that demonstrates how the item applies to the service, including how the patient is eligible for the service.

TR.8.6 Heart Team Conferences - Items 38248, 38249, 38311, 38313, 38320, 38322 and 57364

Definition of a heart team conference: relevant to items 38248, 38249, 38311, 38313, 38320, 38322 and 57364

- (a) A heart team conference is a team of 3 or more participants who are cardiac specialists; where:
 - i. the first participant is a specialist or consultant physician who is an interventional cardiologist; and
 - ii. the second participant is a specialist or consultant who is a non-interventional cardiologist; and
 - iii. the third participant is a specialist or consultant physician; and

- (b) the team assesses a patient's risk and technical suitability to receive the service; and
- (c) the result of the heart team conference's assessment is that the team makes a recommendation about whether or not the patient is suitable for selective coronary angiography (for items 38248, 38249, 38320) or percutaneous coronary intervention (for items 38311, 38313, 38320, 38322) ; and
- (d) the particulars of the assessment and recommendation/s, and the names of those providers making the recommendation/s are recorded in writing.

Note: For non-complex stable triple vessel disease, providers are encouraged to include a cardiothoracic surgeon in the heart team.

TR.8.7 Heart Team Conferences for items 38314 and 38323

Definition of a heart team conference: relevant to items 38314 and 38323

- (a) A heart team conference is a team of 3 or more participants who are cardiac specialists, where:
 - i. the first participant is a specialist or consultant physician who is an interventional cardiologist; and
 - ii. the second participant is a specialist or consultant who is a cardiothoracic surgeon; and
 - iii. the third participant is a specialist or consultant who is a non-interventional cardiologist ; and
- (b) the team assesses a patient's risk and technical suitability to receive the service; and
- (c) the result of the heart team conference's assessment is that the team makes a recommendation about whether or not the patient is suitable for percutaneous coronary intervention; and
- (d) the particulars of the assessment and recommendation/s, and the names of those providers making the recommendation/s are recorded in writing.

THERAPEUTIC PROCEDURES ITEMS

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		1. HYPERBARIC OXYGEN THERAPY
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 1. Hyperbaric Oxygen Therapy	
13015	<p>HYPERBARIC, OXYGEN THERAPY, for treatment of localised non-neurological soft tissue radiation injuries excluding radiation-induced soft tissue lymphoedema of the arm after treatment for breast cancer, performed in a comprehensive hyperbaric medicine facility, under the supervision of a medical practitioner qualified in hyperbaric medicine, for a period in the hyperbaric chamber of between 1 hour 30 minutes and 3 hours, including any associated attendance.</p> <p>(See para TN.1.1 of explanatory notes to this Category) Fee: \$280.45 Benefit: 75% = \$210.35 85% = \$238.40</p>	
13020	<p>HYPERBARIC OXYGEN THERAPY, for treatment of decompression illness, gas gangrene, air or gas embolism; diabetic wounds including diabetic gangrene and diabetic foot ulcers; necrotising soft tissue infections including necrotising fasciitis or Fournier's gangrene; or for the prevention and treatment of osteoradionecrosis, performed in a comprehensive hyperbaric medicine facility, under the supervision of a medical practitioner qualified in hyperbaric medicine, for a period in the hyperbaric chamber of between 1 hour 30 minutes and 3 hours, including any associated attendance</p> <p>(See para TN.1.1 of explanatory notes to this Category) Fee: \$284.90 Benefit: 75% = \$213.70 85% = \$242.20</p>	
13025	<p>HYPERBARIC OXYGEN THERAPY for treatment of decompression illness, air or gas embolism, performed in a comprehensive hyperbaric medicine facility, under the supervision of a medical practitioner qualified in hyperbaric medicine, for a period in the hyperbaric chamber greater than 3 hours, including any associated attendance - per hour (or part of an hour)</p> <p>(See para TN.1.1 of explanatory notes to this Category) Fee: \$127.35 Benefit: 75% = \$95.55 85% = \$108.25</p>	
13030	<p>HYPERBARIC OXYGEN THERAPY performed in a comprehensive hyperbaric medicine facility where the medical practitioner is pressurised in the hyperbaric chamber for the purpose of providing continuous life saving emergency treatment, including any associated attendance - per hour (or part of an hour)</p> <p>(See para TN.1.1 of explanatory notes to this Category) Fee: \$179.85 Benefit: 75% = \$134.90 85% = \$152.90</p>	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		2. DIALYSIS
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 2. Dialysis	
13100	<p>SUPERVISION IN HOSPITAL by a medical specialist of haemodialysis, haemofiltration, haemoperfusion or peritoneal dialysis, including all professional attendances, where the total attendance time on the patient by the supervising medical specialist exceeds 45 minutes in 1 day</p> <p>(See para TN.1.2 of explanatory notes to this Category) Fee: \$150.45 Benefit: 75% = \$112.85 85% = \$127.90</p>	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		2. DIALYSIS
13103	<p>SUPERVISION IN HOSPITAL by a medical specialist of haemodialysis, haemofiltration, haemoperfusion or peritoneal dialysis, including all professional attendances, where the total attendance time on the patient by the supervising medical specialist does not exceed 45 minutes in 1 day</p> <p>(See para TN.1.2 of explanatory notes to this Category)</p> <p>Fee: \$78.40 Benefit: 75% = \$58.80 85% = \$66.65</p>	
13104	<p>Planning and management of home dialysis (either haemodialysis or peritoneal dialysis), by a consultant physician in the practice of his or her specialty of renal medicine, for a patient with end-stage renal disease, and supervision of that patient on self-administered dialysis, to a maximum of 12 claims per year</p> <p>(See para TN.1.23, TN.1.3 of explanatory notes to this Category)</p> <p>Fee: \$162.80 Benefit: 85% = \$138.40</p>	
13105	<p>Haemodialysis for a patient with end-stage renal disease if:</p> <p>(a) the service is provided by a registered nurse, an Aboriginal health worker or an Aboriginal and Torres Strait Islander health practitioner on behalf of a medical practitioner; and</p> <p>(b) the service is supervised by the medical practitioner (either in person or remotely); and</p> <p>(c) the patient's care is managed by a nephrologist; and</p> <p>(d) the patient is treated or reviewed by the nephrologist every 3 to 6 months (either in person or remotely); and</p> <p>(e) the patient is not an admitted patient of a hospital; and</p> <p>(f) the service is provided in a Modified Monash 7 area</p> <p>Fee: \$651.60 Benefit: 100% = \$651.60</p>	
13106	<p>DECLOTTING OF AN ARTERIOVENOUS SHUNT</p> <p>Fee: \$133.55 Benefit: 75% = \$100.20 85% = \$113.55</p>	
13109	<p>INDWELLING PERITONEAL CATHETER (Tenckhoff or similar) FOR DIALYSIS INSERTION AND FIXATION OF (Anaes.)</p> <p>Fee: \$250.65 Benefit: 75% = \$188.00 85% = \$213.10</p>	
13110	<p>INDWELLING PERITONEAL CATHETER (Tenckhoff or similar) FOR DIALYSIS , removal of (including catheter cuffs) (Anaes.)</p> <p>Fee: \$251.50 Benefit: 75% = \$188.65 85% = \$213.80</p>	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		3. ASSISTED REPRODUCTIVE SERVICES
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 3. Assisted Reproductive Services	
13200	<p>Assisted reproductive technologies superovulated treatment cycle proceeding to oocyte retrieval, involving the use of drugs to induce superovulation and including quantitative estimation of hormones, ultrasound examinations, all treatment counselling and embryology laboratory services but excluding</p>	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES

3. ASSISTED REPRODUCTIVE SERVICES

	<p>artificial insemination, transfer of frozen embryos or donated embryos or ova or a service to which item 13201, 13202, 13203 or 13218 applies, being services rendered during one treatment cycle—initial cycle in a single calendar year</p> <p>(See para TN.1.4 of explanatory notes to this Category) Fee: \$3,424.00 Benefit: 75% = \$2568.00 85% = \$3325.30 Extended Medicare Safety Net Cap: \$1,996.80</p>
13201	<p>Assisted reproductive technologies superovulated treatment cycle proceeding to oocyte retrieval, involving the use of drugs to induce superovulation and including quantitative estimation of hormones, ultrasound examinations, all treatment counselling and embryology laboratory services but excluding artificial insemination, transfer of frozen embryos or donated embryos or ova or a service to which item 13200, 13202, 13203 or 13218 applies, being services rendered during one treatment cycle—each cycle after the first in a single calendar year</p> <p>(See para TN.1.4 of explanatory notes to this Category) Fee: \$3,202.80 Benefit: 75% = \$2402.10 85% = \$3104.10 Extended Medicare Safety Net Cap: \$2,898.50</p>
13202	<p>Assisted reproductive technologies superovulated treatment cycle that is cancelled before oocyte retrieval, involving the use of drugs to induce superovulation and including quantitative estimation of hormones and ultrasound examinations, but excluding artificial insemination, transfer of frozen embryos or donated embryos or ova or a service to which item 13200, 13201, 13203 or 13218 applies, being services rendered during one treatment cycle</p> <p>(See para TN.1.4 of explanatory notes to this Category) Fee: \$512.40 Benefit: 75% = \$384.30 85% = \$435.55 Extended Medicare Safety Net Cap: \$77.30</p>
13203	<p>Ovulation monitoring services for artificial insemination or gonadotrophin, stimulated ovulation induction, including quantitative estimation of hormones and ultrasound examinations, being services rendered during one treatment cycle but excluding a service to which item 13200, 13201, 13202, 13212, 13215 or 13218 applies</p> <p>(See para TN.1.4 of explanatory notes to this Category) Fee: \$535.70 Benefit: 75% = \$401.80 85% = \$455.35 Extended Medicare Safety Net Cap: \$128.70</p>
13207	<p>Biopsy of an embryo, from a patient who is eligible for a service described in item 73384 under clause 2.7.3A of the pathology services table (see PR.7.1), for the purpose of providing a sample for pre-implantation genetic testing—applicable to one or more tests performed in one assisted reproductive treatment cycle</p> <p>(See para PR.7.1 of explanatory notes to this Category) Fee: \$121.65 Benefit: 75% = \$91.25 85% = \$103.45</p>
13209	<p>Planning and management of a referred patient by a specialist for the purpose of treatment by assisted reproductive technologies or for artificial insemination—applicable once during a treatment cycle</p> <p>(See para TN.1.4 of explanatory notes to this Category) Fee: \$93.20 Benefit: 75% = \$69.90 85% = \$79.25 Extended Medicare Safety Net Cap: \$12.90</p>
13212	<p>Oocyte retrieval for the purpose of assisted reproductive technologies—only if rendered in connection with a service to which item 13200 or 13201 applies (Anaes.)</p> <p>(See para TN.1.4 of explanatory notes to this Category) Fee: \$390.15 Benefit: 75% = \$292.65 85% = \$331.65</p>

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES

3. ASSISTED REPRODUCTIVE SERVICES

	Extended Medicare Safety Net Cap: \$83.70
13215	<p>Transfer of embryos or both ova and sperm to the uterus or fallopian tubes, excluding artificial insemination—only if rendered in connection with a service to which item 13200, 13201 or 13218 applies, being services rendered in one treatment cycle (Anaes.)</p> <p>(See para TN.1.4 of explanatory notes to this Category) Fee: \$122.35 Benefit: 75% = \$91.80 85% = \$104.00 Extended Medicare Safety Net Cap: \$57.90</p>
13218	<p>Preparation of frozen or donated embryos or donated oocytes for transfer to the uterus or fallopian tubes, by any means and including quantitative estimation of hormones and all treatment counselling but excluding artificial insemination services rendered in one treatment cycle and excluding a service to which item 13200, 13201, 13202, 13203 or 13212 applies (Anaes.)</p> <p>(See para TN.1.4, TN.1.5 of explanatory notes to this Category) Fee: \$873.45 Benefit: 75% = \$655.10 85% = \$774.75 Extended Medicare Safety Net Cap: \$837.40</p>
13221	<p>Preparation of semen for the purpose of artificial insemination—only if rendered in connection with a service to which item 13203 applies</p> <p>(See para TN.1.4 of explanatory notes to this Category) Fee: \$55.90 Benefit: 75% = \$41.95 85% = \$47.55 Extended Medicare Safety Net Cap: \$25.80</p>
13241	<p>Open surgical testicular sperm retrieval, unilateral, using operating microscope, including the exploration of scrotal contents, with biopsy, for the purposes of intracytoplasmic sperm injection, for male factor infertility, not being a service associated with a service to which item 13218 or 37604 applies (H) (Anaes.)</p> <p>(See para TN.8.2 of explanatory notes to this Category) Fee: \$935.60 Benefit: 75% = \$701.70</p>
13251	<p>Intracytoplasmic sperm injection for the purpose of assisted reproductive technologies, for male factor infertility, excluding a service to which item 13203 or 13218 applies</p> <p>(See para TN.1.5 of explanatory notes to this Category) Fee: \$460.05 Benefit: 75% = \$345.05 85% = \$391.05 Extended Medicare Safety Net Cap: \$128.70</p>
13260	<p>Processing and cryopreservation of semen for fertility preservation treatment before or after completion of gonadotoxic treatment for malignant or non-malignant conditions, in a post-pubertal male in Tanner stages II-V, up to 60 years old, if the patient is referred by a specialist or consultant physician, initial cryopreservation of semen (not including storage) - one of a maximum of two semen collection cycles per patient in a lifetime.</p> <p>(See para TN.1.22 of explanatory notes to this Category) Fee: \$456.75 Benefit: 75% = \$342.60 85% = \$388.25 Extended Medicare Safety Net Cap: \$296.90</p>
13290	<p>SEMEN, collection of, from a patient with spinal injuries or medically induced impotence, for the purposes of analysis, storage or assisted reproduction, by a medical practitioner using a vibrator or electro-ejaculation device including catheterisation and drainage of bladder where required</p> <p>Fee: \$224.75 Benefit: 75% = \$168.60 85% = \$191.05</p>

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		4. PAEDIATRIC & NEONATAL
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 4. Paediatric & Neonatal	
13300	UMBILICAL OR SCALP VEIN CATHETERISATION in a NEONATE with or without infusion; or cannulation of a vein in a neonate Fee: \$62.65 Benefit: 75% = \$47.00 85% = \$53.30	
13303	UMBILICAL ARTERY CATHETERISATION with or without infusion Fee: \$92.90 Benefit: 75% = \$69.70 85% = \$79.00	
13306	BLOOD TRANSFUSION with venesection and complete replacement of blood, including collection from donor Fee: \$367.75 Benefit: 75% = \$275.85 85% = \$312.60	
13309	BLOOD TRANSFUSION with venesection and complete replacement of blood, using blood already collected Fee: \$313.55 Benefit: 75% = \$235.20 85% = \$266.55	
13312	BLOOD for pathology test, collection of, BY FEMORAL OR EXTERNAL JUGULAR VEIN PUNCTURE IN INFANTS Fee: \$31.30 Benefit: 75% = \$23.50 85% = \$26.65	
13318	CENTRAL VEIN CATHETERISATION - by open exposure in a patient under 12 years of age (Anaes.) (See para TN.1.6 of explanatory notes to this Category) Fee: \$250.35 Benefit: 75% = \$187.80 85% = \$212.80	
13319	CENTRAL VEIN CATHETERISATION in a neonate via peripheral vein (Anaes.) Fee: \$250.35 Benefit: 75% = \$187.80 85% = \$212.80	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		5. CARDIOVASCULAR
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 5. Cardiovascular	
13400	Restoration of cardiac rhythm by electrical stimulation (cardioversion), other than in the course of cardiac surgery (H) (Anaes.) Fee: \$106.60 Benefit: 75% = \$79.95	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		6. GASTROENTEROLOGY
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 6. Gastroenterology	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		6. GASTROENTEROLOGY
13506	GASTRO-OESOPHAGEAL balloon intubation, for control of bleeding from gastric oesophageal varices Fee: \$203.00 Benefit: 75% = \$152.25 85% = \$172.55	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		8. HAEMATOLOGY
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 8. Haematology	
13700	HARVESTING OF HOMOLOGOUS (including allogeneic) or AUTOLOGOUS bone marrow for the purpose of transplantation (Anaes.) Fee: \$366.90 Benefit: 75% = \$275.20 85% = \$311.90	
Amend 13703	Transfusion of blood including collection from donor, when used for intra-operative normovolaemic haemodilution, other than a service associated with a service to which item 22052 applies Fee: \$131.50 Benefit: 75% = \$98.65 85% = \$111.80	
13706	TRANSFUSION OF BLOOD or bone marrow already collected (See para TN.1.7 of explanatory notes to this Category) Fee: \$91.70 Benefit: 75% = \$68.80 85% = \$77.95	
13750	THERAPEUTIC HAEMAPHERESIS for the removal of plasma or cellular (or both) elements of blood, utilising continuous or intermittent flow techniques; including morphological tests for cell counts and viability studies, if performed; continuous monitoring of vital signs, fluid balance, blood volume and other parameters with continuous registered nurse attendance under the supervision of a consultant physician, not being a service associated with a service to which item 13755 applies - payable once per day Fee: \$150.45 Benefit: 75% = \$112.85 85% = \$127.90	
13755	DONOR HAEMAPHERESIS for the collection of blood products for transfusion, utilising continuous or intermittent flow techniques; including morphological tests for cell counts and viability studies; continuous monitoring of vital signs, fluid balance, blood volume and other parameters; with continuous registered nurse attendance under the supervision of a consultant physician; not being a service associated with a service to which item 13750 applies - payable once per day Fee: \$150.45 Benefit: 75% = \$112.85 85% = \$127.90	
13757	THERAPEUTIC VENESECTION for the management of haemochromatosis, polycythemia vera or porphyria cutanea tarda Fee: \$80.30 Benefit: 75% = \$60.25 85% = \$68.30	
13760	In vitro processing with cryopreservation of bone marrow or peripheral blood, for autologous stem cell transplantation for a patient receiving high-dose chemotherapy for management of: (a) aggressive malignancy; or (b) malignancy that has proven refractory to prior treatment (See para TN.1.26 of explanatory notes to this Category) Fee: \$839.40 Benefit: 75% = \$629.55 85% = \$740.70	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES

8. HAEMATOLOGY

<p>13761</p>	<p>Extracorporeal photopheresis for the treatment of chronic graft-versus-host disease, if:</p> <ul style="list-style-type: none"> (a) the person is: <ul style="list-style-type: none"> (i) has received allogeneic haematopoietic stem cell transplantation; and (ii) has been diagnosed with chronic graft versus host disease following the transplantation; and (iii) steroid treatment is clinically unsuitable as the disease is steroid refractory or the person is steroid-dependent or steroid-intolerant; and (b) the person has not previously received extracorporeal photopheresis treatment; and (c) the service is delivered using an integrated, closed extracorporeal photopheresis system; and (d) the service is provided in combination with the use of methoxsalen that is listed on the Pharmaceutical Benefits Scheme; and (e) the service is provided by, or on behalf of, a specialist or consultant physician who: <ul style="list-style-type: none"> (i) is practising in the speciality of haematology or oncology; and (ii) has experience with allogeneic bone marrow transplantation. <p>Applicable once per treatment session</p> <p>(See para TN.1.29 of explanatory notes to this Category) Fee: \$2,018.75 Benefit: 75% = \$1514.10 85% = \$1920.05</p>
<p>13762</p>	<p>Extracorporeal photopheresis for the treatment of chronic graft-versus-host disease, if:</p> <ul style="list-style-type: none"> (a) the person is: <ul style="list-style-type: none"> (i) has received allogeneic haematopoietic stem cell transplantation; and (ii) has been diagnosed with chronic graft versus host disease following the transplantation; and (iii) steroid treatment is clinically unsuitable as the disease is steroid refractory or the person is steroid-dependent or steroid-intolerant; and (b) the person has previously received an extracorporeal photopheresis treatment cycle and had a partial or complete response in at least one organ in response to treatment; and (c) the person requires further extracorporeal photopheresis; and (d) the service is delivered using an integrated, closed extracorporeal photopheresis system; and (e) the service is provided in combination with the use of methoxsalen that is listed on the Pharmaceutical Benefits Scheme; and (f) the service is provided by, or on behalf of, a specialist or consultant physician who:

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES	8. HAEMATOLOGY
	<p>(i) is practising in the speciality of haematology or oncology; and</p> <p>(ii) has experience with allogeneic bone marrow transplantation.</p> <p>Applicable once per treatment session</p> <p>(See para TN.1.29 of explanatory notes to this Category)</p> <p>Fee: \$2,018.75 Benefit: 75% = \$1514.10 85% = \$1920.05</p>

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES	9. PROCEDURES ASSOCIATED WITH INTENSIVE CARE AND CARDIOPULMONARY SUPPORT
	Group T1. Miscellaneous Therapeutic Procedures
	Subgroup 9. Procedures Associated With Intensive Care And Cardiopulmonary Support
	<p>Central vein catheterisation, including under ultrasound guidance where clinically appropriate, by percutaneous or open exposure other than a service to which item 13318 applies (Anaes.)</p> <p>No separate ultrasound item is payable with this item. (Anaes.)</p> <p>(See para TN.1.6, TN.1.10 of explanatory notes to this Category)</p> <p>13815 Fee: \$125.10 Benefit: 75% = \$93.85 85% = \$106.35</p>
	<p>RIGHT HEART BALLOON CATHETER, insertion of, including pulmonary wedge pressure and cardiac output measurement (Anaes.)</p> <p>(See para TN.1.10 of explanatory notes to this Category)</p> <p>13818 Fee: \$125.15 Benefit: 75% = \$93.90 85% = \$106.40</p>
	<p>INTRACRANIAL PRESSURE, monitoring of, by intraventricular or subdural catheter, subarachnoid bolt or similar, by a specialist or consultant physician - each day</p> <p>13830 Fee: \$82.90 Benefit: 75% = \$62.20 85% = \$70.50</p>
	<p>Peripheral cannulation, including under ultrasound guidance where clinically appropriate, for veno-arterial cardiopulmonary extracorporeal life support</p> <p>No separate ultrasound item is payable with this item</p> <p>(See para TN.1.10 of explanatory notes to this Category)</p> <p>13832 Fee: \$970.60 Benefit: 75% = \$727.95 85% = \$871.90</p>
	<p>Veno-arterial cardiopulmonary extracorporeal life support, management of—the first day</p> <p>(See para TN.1.10 of explanatory notes to this Category)</p> <p>13834 Fee: \$543.35 Benefit: 75% = \$407.55 85% = \$461.85</p>
	<p>Veno-arterial cardiopulmonary extracorporeal life support, management of—each day after the first</p> <p>(See para TN.1.10 of explanatory notes to this Category)</p> <p>13835 Fee: \$126.40 Benefit: 75% = \$94.80 85% = \$107.45</p>
	<p>Veno-venous pulmonary extracorporeal life support, management of—the first day</p> <p>(See para TN.1.10 of explanatory notes to this Category)</p> <p>13837</p>

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		9. PROCEDURES ASSOCIATED WITH INTENSIVE CARE AND CARDIOPULMONARY SUPPORT
	Fee: \$543.35 Benefit: 75% = \$407.55 85% = \$461.85	
13838	Veno-venous pulmonary extracorporeal life support, management of—each day after the first (See para TN.1.10 of explanatory notes to this Category) Fee: \$126.40 Benefit: 75% = \$94.80 85% = \$107.45	
13839	ARTERIAL PUNCTURE and collection of blood for diagnostic purposes Fee: \$25.40 Benefit: 75% = \$19.05 85% = \$21.60	
13840	Peripheral cannulation, including under ultrasound guidance where clinically appropriate, for veno-venous pulmonary extracorporeal life support No separate ultrasound item is payable with this item (See para TN.1.10 of explanatory notes to this Category) Fee: \$650.30 Benefit: 75% = \$487.75 85% = \$552.80	
13842	Intra-arterial cannulation, including under ultrasound guidance where clinically appropriate, for the purpose of intra-arterial pressure monitoring or arterial blood sampling (or both) No separate ultrasound item is payable with this item (See para TN.1.10 of explanatory notes to this Category) Fee: \$102.95 Benefit: 75% = \$77.25 85% = \$87.55	
13848	Counterpulsation by intra-aortic balloon-management including associated consultations and monitoring of parameters by means of full haemodynamic assessment and management on several occasions on a day – each day (See para TN.1.10 of explanatory notes to this Category) Fee: \$171.85 Benefit: 75% = \$128.90 85% = \$146.10	
13851	Ventricular assist device, management of, for a patient admitted to an intensive care unit for implantation of the device or for complications arising from implantation or management of the device - first day (See para TN.1.10 of explanatory notes to this Category) Fee: \$543.35 Benefit: 75% = \$407.55 85% = \$461.85	
13854	Ventricular assist device, management of, for a patient admitted to an intensive care unit, including management of complications arising from implantation or management of the device - each day after the first day (See para TN.1.10 of explanatory notes to this Category) Fee: \$126.40 Benefit: 75% = \$94.80 85% = \$107.45	
13857	AIRWAY ACCESS, ESTABLISHMENT OF AND INITIATION OF MECHANICAL VENTILATION (other than in the context of an anaesthetic for surgery), outside an Intensive Care Unit, for the purpose of subsequent ventilatory support in an Intensive Care Unit (See para TN.1.10 of explanatory notes to this Category) Fee: \$161.15 Benefit: 75% = \$120.90 85% = \$137.00	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		10. MANAGEMENT AND PROCEDURES UNDERTAKEN IN AN INTENSIVE CARE UNIT	
		Group T1. Miscellaneous Therapeutic Procedures	
		Subgroup 10. Management And Procedures Undertaken In An Intensive Care Unit	
		<p style="text-align: center;"><i>(Note: See para T1.8 of Explanatory Notes to this Category for definition of an Intensive Care Unit)</i></p>	
13870	MANAGEMENT of a patient in an Intensive Care Unit by a specialist or consultant physician who is immediately available and exclusively rostered for intensive care - including initial and subsequent attendances, electrocardiographic monitoring, arterial sampling and bladder catheterisation - management on the first day (H)	(See para TN.1.9, TN.1.11, TN.1.10 of explanatory notes to this Category)	Fee: \$398.60 Benefit: 75% = \$298.95
13873	MANAGEMENT of a patient in an Intensive Care Unit by a specialist or consultant physician who is immediately available and exclusively rostered for intensive care - including all attendances, electrocardiographic monitoring, arterial sampling and bladder catheterisation - management on each day subsequent to the first day (H)	(See para TN.1.9, TN.1.11 of explanatory notes to this Category)	Fee: \$295.60 Benefit: 75% = \$221.70
13876	CENTRAL VENOUS PRESSURE, pulmonary arterial pressure, systemic arterial pressure or cardiac intracavity pressure, continuous monitoring by indwelling catheter in an intensive care unit and managed by a specialist or consultant physician who is immediately available and exclusively rostered for intensive care - once only for each type of pressure on any calendar day (up to a maximum of 4 pressures) (H)	(See para TN.1.9, TN.1.11, TN.1.10 of explanatory notes to this Category)	Fee: \$84.65 Benefit: 75% = \$63.50
13881	AIRWAY ACCESS, ESTABLISHMENT OF AND INITIATION OF MECHANICAL VENTILATION, in an Intensive Care Unit, not in association with any anaesthetic service, by a specialist or consultant physician for the purpose of subsequent ventilatory support (H)	(See para TN.1.9 of explanatory notes to this Category)	Fee: \$161.15 Benefit: 75% = \$120.90
13882	VENTILATORY SUPPORT in an Intensive Care Unit, management of, by invasive means, or by non-invasive means where the only alternative to non-invasive ventilatory support would be invasive ventilatory support, by a specialist or consultant physician who is immediately available and exclusively rostered for intensive care, each day (H)	(See para TN.1.9, TN.1.11 of explanatory notes to this Category)	Fee: \$126.85 Benefit: 75% = \$95.15
13885	CONTINUOUS ARTERIO VENOUS OR VENO VENOUS HAEMOFILTRATION, in an intensive care unit, management by a specialist or consultant physician who is immediately available and exclusively rostered for intensive care - on the first day (H)	(See para TN.1.9, TN.1.11 of explanatory notes to this Category)	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		10. MANAGEMENT AND PROCEDURES UNDERTAKEN IN AN INTENSIVE CARE UNIT
	Fee: \$169.15 Benefit: 75% = \$126.90	
13888	<p>CONTINUOUS ARTERIO VENOUS OR VENO VENOUS HAEMOFILTRATION, in an intensive care unit, management by a specialist or consultant physician who is immediately available and exclusively rostered for intensive care - on each day subsequent to the first day (H)</p> <p>(See para TN.1.9, TN.1.11 of explanatory notes to this Category)</p> <p>Fee: \$84.65 Benefit: 75% = \$63.50</p>	
13899	<p>Preparation of Goals of Care is provided outside of an intensive care unit. Refer to explanatory note TN.1.11 for further information about Goals of Care attendance</p> <p>Professional attendance, outside an intensive care unit, for at least 60 minutes spent in preparation of goals of care for a gravely ill patient lacking current goals of care, by a specialist in the specialty of intensive care who takes overall responsibility for the preparation of the goals of care for the patient</p> <p>Item 13899 cannot be co-claimed with item 13870 or item 13873 on the same day</p> <p>(See para TN.1.11 of explanatory notes to this Category)</p> <p>Fee: \$294.85 Benefit: 75% = \$221.15 85% = \$250.65</p> <p>Extended Medicare Safety Net Cap: \$500.00</p>	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		11. CHEMOTHERAPEUTIC PROCEDURES
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 11. Chemotherapeutic Procedures	
13950	<p>Parenteral administration of one or more antineoplastic agents, including agents used in cytotoxic chemotherapy or monoclonal antibody therapy but not agents used in anti-resorptive bone therapy or hormonal therapy, by or on behalf of a specialist or consultant physician—attendance for one or more episodes of administration</p> <p>Note: The fee for item 13950 contains a component which covers the accessing of a long-term drug delivery device. TN.1.27 refers</p> <p>(See para TN.1.27, TN.1.12 of explanatory notes to this Category)</p> <p>Fee: \$118.90 Benefit: 75% = \$89.20 85% = \$101.10</p>	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		12. DERMATOLOGY
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 12. Dermatology	
14050	<p>UVA or UVB phototherapy administered in a whole body cabinet or hand and foot cabinet including associated consultations other than the initial consultation, if treatment is initiated and supervised by a specialist in the specialty of dermatology</p> <p>Applicable not more than 150 times in a 12 month period</p> <p>(See para TN.1.14 of explanatory notes to this Category)</p>	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES

12. DERMATOLOGY

	<p>Fee: \$58.10 Benefit: 75% = \$43.60 85% = \$49.40</p>
14100	<p>Laser photocoagulation using laser radiation in the treatment of vascular abnormalities of the head or neck, including any associated consultation, if:</p> <p>(a) the abnormality is visible from 3 metres; and</p> <p>(b) photographic evidence demonstrating the need for this service is documented in the patient notes;</p> <p>to a maximum of 4 sessions (including any sessions to which this item or any of items 14106 to 14118 apply) in any 12 month period (Anaes.)</p> <p>(See para TN.1.15 of explanatory notes to this Category)</p> <p>Fee: \$167.85 Benefit: 75% = \$125.90 85% = \$142.70</p> <p>Extended Medicare Safety Net Cap: \$134.30</p>
14106	<p>Laser photocoagulation using laser radiation in the treatment of vascular malformations, infantile haemangiomas, café au lait macules and naevi of Ota, other than melanocytic naevi (common moles), if the abnormality is visible from 3 metres, including any associated consultation, up to a maximum of 6 sessions (including any sessions to which this item or any of items 14100 to 14118 apply) in any 12 month period—area of treatment less than 150 cm² (Anaes.)</p> <p>(See para TN.1.15 of explanatory notes to this Category)</p> <p>Fee: \$176.30 Benefit: 75% = \$132.25 85% = \$149.90</p>
14115	<p>Laser photocoagulation using laser radiation in the treatment of vascular malformations, infantile haemangiomas, café au lait macules and naevi of Ota, other than melanocytic naevi (common moles), including any associated consultation, up to a maximum of 6 sessions (including any sessions to which this item or any of items 14100 to 14118 apply) in any 12 month period—area of treatment 150 cm² to 300 cm² (Anaes.)</p> <p>(See para TN.1.15 of explanatory notes to this Category)</p> <p>Fee: \$282.30 Benefit: 75% = \$211.75 85% = \$240.00</p>
14118	<p>Laser photocoagulation using laser radiation in the treatment of vascular malformations, infantile haemangiomas, café au lait macules and naevi of Ota, other than melanocytic naevi (common moles), including any associated consultation, up to a maximum of 6 sessions (including any sessions to which this item or any of items 14100 to 14115 apply) in any 12 month period—area of treatment more than 300 cm² (Anaes.)</p> <p>(See para TN.1.15 of explanatory notes to this Category)</p> <p>Fee: \$358.50 Benefit: 75% = \$268.90 85% = \$304.75</p>
14124	<p>Laser photocoagulation using laser radiation in the treatment of vascular malformations, infantile haemangiomas, café-au-lait macules and naevi of Ota, other than melanocytic naevi (common moles), including any associated consultation, if:</p> <p>(a) a seventh or subsequent session (including any sessions to which this item or any of items 14100 to 14118 apply) is indicated in a 12 month period commencing on the day of the first session; and</p> <p>(b) photographic evidence demonstrating the need for this service is documented in the patient notes (Anaes.)</p> <p>(See para TN.1.15 of explanatory notes to this Category)</p> <p>Fee: \$167.85 Benefit: 75% = \$125.90 85% = \$142.70</p>

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		13. OTHER THERAPEUTIC PROCEDURES
	Group T1. Miscellaneous Therapeutic Procedures	
	Subgroup 13. Other Therapeutic Procedures	
14201	<p>POLY-L-LACTIC ACID, one or more injections of, for the initial session only, for the treatment of severe facial lipoatrophy caused by antiretroviral therapy, when prescribed in accordance with the National Health Act 1953 - once per patient</p> <p>(See para TN.1.16 of explanatory notes to this Category) Fee: \$260.70 Benefit: 75% = \$195.55 85% = \$221.60 Extended Medicare Safety Net Cap: \$39.15</p>	
14202	<p>POLY-L-LACTIC ACID, one or more injections of (subsequent sessions), for the continuation of treatment of severe facial lipoatrophy caused by antiretroviral therapy, when prescribed in accordance with the National Health Act 1953</p> <p>(See para TN.1.16 of explanatory notes to this Category) Fee: \$131.95 Benefit: 75% = \$99.00 85% = \$112.20 Extended Medicare Safety Net Cap: \$19.80</p>	
14203	<p>HORMONE OR LIVING TISSUE IMPLANTATION, by direct implantation involving incision and suture (Anaes.)</p> <p>(See para TN.1.4, TN.1.17 of explanatory notes to this Category) Fee: \$56.30 Benefit: 75% = \$42.25 85% = \$47.90</p>	
14206	<p>HORMONE OR LIVING TISSUE IMPLANTATION by cannula</p> <p>(See para TN.1.4, TN.1.17 of explanatory notes to this Category) Fee: \$39.20 Benefit: 75% = \$29.40 85% = \$33.35</p>	
14212	<p>INTUSSUSCEPTION, management of fluid or gas reduction for (Anaes.)</p> <p>Fee: \$203.90 Benefit: 75% = \$152.95 85% = \$173.35</p>	
14216	<p>Professional attendance on a patient by a psychiatrist, who has undertaken training in Repetitive Transcranial Magnetic Stimulation (rTMS), for treatment mapping for rTMS, if the patient:</p> <ul style="list-style-type: none"> (a) has not previously received any prior transcranial magnetic stimulation therapy in a public or private setting; and (b) is at least 18 years old; and (c) is diagnosed with a major depressive episode; and (d) has failed to receive satisfactory improvement for the major depressive episode despite the adequate trialling of at least 2 different classes of antidepressant medications, unless contraindicated, and all of the following apply: <ul style="list-style-type: none"> (i) the patient's adherence to antidepressant treatment has been formally assessed; (ii) the trialling of each antidepressant medication has been at the recommended therapeutic dose for a minimum of 3 weeks; (iii) where clinically appropriate, the treatment has been titrated to the maximum tolerated therapeutic dose; and 	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES

13. OTHER THERAPEUTIC PROCEDURES

	<p>(e) has undertaken psychological therapy, if clinically appropriate</p> <p>(See para TN.1.28 of explanatory notes to this Category) Fee: \$197.20 Benefit: 75% = \$147.90 85% = \$167.65 Extended Medicare Safety Net Cap: \$582.30</p>
14217	<p>Repetitive Transcranial Magnetic Stimulation (rTMS) treatment of up to 35 services provided by, or on behalf of, a psychiatrist who has undertaken training in rTMS, if the patient has previously received a service under item 14216—each service up to 35 services</p> <p>(See para TN.1.28 of explanatory notes to this Category) Fee: \$169.25 Benefit: 75% = \$126.95 85% = \$143.90 Extended Medicare Safety Net Cap: \$368.70</p>
14218	<p>Implanted infusion pump, refilling of reservoir with a therapeutic agent or agents for infusion to the subarachnoid space or accessing the side port to assess catheter patency, with or without pump reprogramming, for the management of chronic pain, including cancer pain</p> <p>(See para TN.8.244 of explanatory notes to this Category) Fee: \$107.85 Benefit: 75% = \$80.90 85% = \$91.70</p>
14219	<p>Professional attendance on a patient by a psychiatrist, who has undertaken training in Repetitive Transcranial Magnetic Stimulation (rTMS), for treatment mapping for rTMS, if the patient:</p> <ul style="list-style-type: none"> (a) is at least 18 years old; and (b) is diagnosed with a major depressive episode; and (c) has failed to receive satisfactory improvement for the major depressive episode despite the adequate trialling of at least 2 different classes of antidepressant medications, unless contraindicated, and all of the following apply: <ul style="list-style-type: none"> (i) the patient’s adherence to antidepressant treatment has been formally assessed; (ii) the trialling of each antidepressant medication has been at the recommended therapeutic dose for a minimum of 3 weeks; (iii) where clinically appropriate, the treatment has been titrated to the maximum tolerated therapeutic dose; and (d) has undertaken psychological therapy, if clinically appropriate; and (e) has previously received an initial service under item 14217 and the patient: <ul style="list-style-type: none"> (i) has relapsed after a remission following the initial service; and (ii) has had a satisfactory clinical response to the service under item 14217 (which has been assessed by a validated major depressive disorder tool at least 4 months after receiving that service) <p>(See para TN.1.28 of explanatory notes to this Category) Fee: \$197.20 Benefit: 75% = \$147.90 85% = \$167.65 Extended Medicare Safety Net Cap: \$582.30</p>

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES

13. OTHER THERAPEUTIC PROCEDURES

14220	<p>Repetitive Transcranial Magnetic Stimulation (rTMS) treatment of up to 15 services provided by, or on behalf of, a psychiatrist who has undertaken training in rTMS, if the patient has previously received:</p> <p>(a) a service under item 14217 (which was not provided in the previous 4 months); and</p> <p>(b) a service under item 14219</p> <p>Each service up to 15 services</p> <p>(See para TN.1.28 of explanatory notes to this Category) Fee: \$169.25 Benefit: 75% = \$126.95 85% = \$143.90 Extended Medicare Safety Net Cap: \$368.70</p>
14221	<p>LONG-TERM IMPLANTED DEVICE FOR DELIVERY OF THERAPEUTIC AGENTS, accessing of, not being a service associated with a service to which item 13950 applies</p> <p>Fee: \$57.80 Benefit: 75% = \$43.35 85% = \$49.15</p>
<p>Amend Fee 14224</p>	<p>Electroconvulsive therapy, with or without the use of stimulus dosing techniques, including any electroencephalographic monitoring and associated consultation (H) (Anaes.)</p> <p>Fee: \$169.25 Benefit: 75% = \$126.95</p>
14227	<p>IMPLANTED INFUSION PUMP, REFILLING of reservoir, with baclofen, for infusion to the subarachnoid or epidural space, with or without re-programming of a programmable pump, for the management of severe chronic spasticity</p> <p>(See para TN.1.18 of explanatory notes to this Category) Fee: \$107.85 Benefit: 75% = \$80.90 85% = \$91.70</p>
14234	<p>Infusion pump or components of an infusion pump, removal or replacement of, and connection to intrathecal or epidural catheter, and loading of reservoir with baclofen, with or without programming of the pump, for the management of severe chronic spasticity (Anaes.)</p> <p>(See para TN.1.18 of explanatory notes to this Category) Fee: \$398.30 Benefit: 75% = \$298.75</p>
14237	<p>Infusion pump or components of an infusion pump, subcutaneous implantation of, and intrathecal or epidural spinal catheter insertion, and connection of pump to catheter, and loading of reservoir with baclofen, with or without programming of the pump, for the management of severe chronic spasticity (Anaes.)</p> <p>(See para TN.1.18 of explanatory notes to this Category) Fee: \$726.35 Benefit: 75% = \$544.80</p>
14245	<p>IMMUNOMODULATING AGENT, administration of, by intravenous infusion for at least 2 hours duration - payable once only on the same day and where the agent is provided under section 100 of the Pharmaceutical Benefits Scheme</p> <p>(See para TN.1.19 of explanatory notes to this Category) Fee: \$107.85 Benefit: 75% = \$80.90 85% = \$91.70</p>
14247	<p>Extracorporeal photopheresis for the treatment of erythrodermic stage III-IVa T4 M0 cutaneous T-cell lymphoma; if</p> <p>a. the service is provided in the initial six months of treatment; and</p> <p>b. the service is delivered using an integrated, closed extracorporeal photopheresis system; and</p> <p>c. the patient is 18 years old or over; and</p>

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES	13. OTHER THERAPEUTIC PROCEDURES
	<p>d. the patient has received prior systemic treatment for this condition and experienced either disease progression or unacceptable toxicity while on this treatment; and</p> <p>e. the service is provided in combination with the use of Pharmaceutical Benefits Scheme-subsidised methoxsalen; and</p> <p>f. the service is supervised by a specialist or consultant physician in the speciality of haematology.</p> <p>Applicable once per treatment cycle</p> <p>Fee: \$2,036.95 Benefit: 75% = \$1527.75 85% = \$1938.25</p>
14249	<p>Extracorporeal photopheresis for the continuing treatment of erythrodermic stage III-IVa T4 M0 cutaneous T-cell lymphoma; if</p> <p>a. in the preceding 6 months:</p> <p>(i) a service to which item 14247 applies has been provided; and</p> <p>(ii) the patient has demonstrated a response to this service; and</p> <p>(iii) the patient requires further treatment; and</p> <p>b. the service is delivered using an integrated, closed extracorporeal photopheresis system; and</p> <p>c. the patient is 18 years old or over; and</p> <p>d. the service is provided in combination with the use of Pharmaceutical Benefits Scheme-subsidised methoxsalen; and</p> <p>e. the service is supervised by a specialist or consultant physician in the speciality of haematology.</p> <p>Applicable once per treatment cycle</p> <p>(See para TN.1.25 of explanatory notes to this Category)</p> <p>Fee: \$2,036.95 Benefit: 75% = \$1527.75 85% = \$1938.25</p>

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES	14. MANAGEMENT AND PROCEDURES UNDERTAKEN IN AN EMERGENCY DEPARTMENT
	Group T1. Miscellaneous Therapeutic Procedures
	Subgroup 14. Management and Procedures Undertaken in an Emergency Department
14255	<p>Resuscitation of a patient provided for at least 30 minutes but less than 1 hour, by a specialist in the practice of the specialist's specialty of emergency medicine at a recognised emergency department of a private hospital, in conjunction with an attendance on the patient by the specialist described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017 or 5019 (Anaes.)</p> <p>(See para TN.1.24 of explanatory notes to this Category)</p> <p>Fee: \$163.30 Benefit: 75% = \$122.50 85% = \$138.85</p>

14265	<p>Minor procedure on a patient by a medical practitioner (except a specialist in the practice of the specialist's specialty of emergency medicine) at a recognised emergency department of a private</p>

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		14. MANAGEMENT AND PROCEDURES UNDERTAKEN IN AN EMERGENCY DEPARTMENT
	<p>hospital, in conjunction with an attendance on the patient by the practitioner described in item 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036 (Anaes.)</p> <p>(See para TN.1.24 of explanatory notes to this Category) Fee: \$43.10 Benefit: 75% = \$32.35 85% = \$36.65</p>	
14266	<p>Procedure (except a minor procedure) on a patient by a medical practitioner (except a specialist in the practice of the specialist's specialty of emergency medicine) at a recognised emergency department of a private hospital, in conjunction with an attendance on the patient by the practitioner described in item 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036 (Anaes.)</p> <p>(See para TN.1.24 of explanatory notes to this Category) Fee: \$97.05 Benefit: 75% = \$72.80 85% = \$82.50</p>	
14270	<p>Management, without aftercare, of all fractures and dislocations suffered by a patient that:</p> <p>(a) is provided by a specialist in the practice of the specialist's specialty of emergency medicine in conjunction with an attendance on the patient by the specialist described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017 or 5019; and</p> <p>(b) occurs at a recognised emergency department of a private hospital (Anaes.)</p> <p>(See para TN.1.24 of explanatory notes to this Category) Fee: \$145.05 Benefit: 75% = \$108.80 85% = \$123.30</p>	
14272	<p>Management, without aftercare, of all fractures and dislocations suffered by a patient that:</p> <p>(a) is provided by a medical practitioner (except a specialist in the practice of the specialist's specialty of emergency medicine) in conjunction with an attendance on the patient by the practitioner described in item 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036; and</p> <p>(b) occurs at a recognised emergency department of a private hospital (Anaes.)</p> <p>(See para TN.1.24 of explanatory notes to this Category) Fee: \$108.85 Benefit: 75% = \$81.65 85% = \$92.55</p>	
14277	<p>Application of chemical or physical restraint of a patient by a specialist in the practice of the specialist's specialty of emergency medicine at a recognised emergency department of a private hospital</p> <p>(See para TN.1.24 of explanatory notes to this Category) Fee: \$163.30 Benefit: 75% = \$122.50 85% = \$138.85</p>	
14278	<p>Application of chemical or physical restraint of a patient by a medical practitioner (except a specialist in the practice of the specialist's specialty of emergency medicine) at a recognised emergency department of a private hospital</p> <p>(See para TN.1.24 of explanatory notes to this Category) Fee: \$122.55 Benefit: 75% = \$91.95 85% = \$104.20</p>	
14280	<p>Anaesthesia (whether general anaesthesia or not) of a patient that:</p> <p>(a) is managed by a specialist in the practice of the specialist's specialty of emergency medicine at a recognised emergency department of a private hospital; and</p> <p>(b) occurs in conjunction with an attendance on the patient that is described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017, 5019, 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036; and</p> <p>(c) is not anaesthesia provided by a specialist anaesthetist to which an item in Group T7 or T10 applies</p> <p>(See para TN.1.24 of explanatory notes to this Category) Fee: \$163.30 Benefit: 75% = \$122.50 85% = \$138.85</p>	
14283	<p>Anaesthesia (whether general anaesthesia or not) of a patient that:</p> <p>(a) is managed by a medical practitioner (except a specialist in the practice of the specialist's specialty</p>	

T1. MISCELLANEOUS THERAPEUTIC PROCEDURES		14. MANAGEMENT AND PROCEDURES UNDERTAKEN IN AN EMERGENCY DEPARTMENT
	<p>of emergency medicine) at a recognised emergency department of a private hospital; and (b) occurs in conjunction with an attendance on the patient that is described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017, 5019, 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036; and (c) is not anaesthesia provided by a specialist anaesthetist to which an item in Group T7 or T10 applies</p> <p>(See para TN.1.24 of explanatory notes to this Category) Fee: \$122.55 Benefit: 75% = \$91.95 85% = \$104.20</p>	
14285	<p>Emergent intubation, airway management or both of a patient that: (a) is managed by a specialist in the practice of the specialist's specialty of emergency medicine at a recognised emergency department of a private hospital; and (b) occurs in conjunction with an attendance on the patient that is described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017, 5019, 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036; and (c) is not anaesthesia provided by a specialist anaesthetist to which an item in Group T7 or T10 applies</p> <p>(See para TN.1.24 of explanatory notes to this Category) Fee: \$163.30 Benefit: 75% = \$122.50 85% = \$138.85</p>	
14288	<p>Emergent intubation, airway management or both of a patient that: (a) is managed by a medical practitioner (except a specialist in the practice of the specialist's specialty of emergency medicine) at a recognised emergency department of a private hospital; and (b) occurs in conjunction with an attendance on the patient that is described in item 5001, 5004, 5011, 5012, 5013, 5014, 5016, 5017, 5019, 5021, 5022, 5027, 5030, 5031, 5032, 5033, 5035 or 5036; and (c) is not anaesthesia provided by a specialist anaesthetist to which an item in Group T7 or T10 applies</p> <p>(See para TN.1.24 of explanatory notes to this Category) Fee: \$122.55 Benefit: 75% = \$91.95 85% = \$104.20</p>	

T2. RADIATION ONCOLOGY		1. SUPERFICIAL
	Group T2. Radiation Oncology	
	Subgroup 1. Superficial	
	<i>(Benefits for administration of general anaesthetic for radiotherapy are payable under Group T10)</i>	
15000	<p>RADIOTHERAPY, SUPERFICIAL (including treatment with xrays, radium rays or other radioactive substances), not being a service to which another item in this Group applies each attendance at which fractionated treatment is given</p> <p>- 1 field</p> <p>Fee: \$46.85 Benefit: 75% = \$35.15 85% = \$39.85</p>	
15003	<p>Radiotherapy, superficial (including treatment with x-rays, radium rays or other radioactive substances), not being a service to which another item in this Group applies - each attendance at which fractionated treatment is given - 2 or more fields up to a maximum of 5 additional fields</p> <p>Derived Fee: The fee for item 15000 plus for each field in excess of 1, an amount of \$18.80</p>	

T2. RADIATION ONCOLOGY		1. SUPERFICIAL
15006	RADIOTHERAPY, SUPERFICIAL, attendance at which single dose technique is applied - 1 field Fee: \$103.85 Benefit: 75% = \$77.90 85% = \$88.30	
15009	Radiotherapy, superficial attendance at which a single dose technique is applied - 2 or more fields up to a maximum of 5 additional fields Derived Fee: The fee for item 15006 plus for each field in excess of 1, an amount of \$20.40	
15012	RADIOTHERAPY, SUPERFICIAL each attendance at which treatment is given to an eye Fee: \$58.85 Benefit: 75% = \$44.15 85% = \$50.05	

T2. RADIATION ONCOLOGY		2. ORTHOVOLTAGE
	Group T2. Radiation Oncology	
	Subgroup 2. Orthovoltage	
15100	RADIOTHERAPY, DEEP OR ORTHOVOLTAGE each attendance at which fractionated treatment is given at 3 or more treatments per week - 1 field (See para TN.2.1 of explanatory notes to this Category) Fee: \$52.50 Benefit: 75% = \$39.40 85% = \$44.65	
15103	Radiotherapy, deep or orthovoltage each attendance at which fractionated treatment is given at 3 or more treatments per week - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) (See para TN.2.1 of explanatory notes to this Category) Derived Fee: The fee for item 15100 plus for each field in excess of 1, an amount of \$20.65	
15106	RADIOTHERAPY, DEEP OR ORTHOVOLTAGE each attendance at which fractionated treatment is given at 2 treatments per week or less frequently - 1 field Fee: \$61.95 Benefit: 75% = \$46.50 85% = \$52.70	
15109	Radiotherapy, deep or orthovoltage each attendance at which fractionated treatment is given at 2 treatments per week or less frequently - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) Derived Fee: The fee for item 15106 plus for each field in excess of 1, an amount of \$24.95	

T2. RADIATION ONCOLOGY		2. ORTHOVOLTAGE
15112	RADIOTHERAPY, DEEP OR ORTHOVOLTAGE attendance at which single dose technique is applied 1 field Fee: \$132.35 Benefit: 75% = \$99.30 85% = \$112.50	
15115	Radiotherapy, deep or orthovoltage attendance at which a single dose technique is applied - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) Derived Fee: The fee for item 15112 plus for each field in excess of 1, an amount of \$52.05	

T2. RADIATION ONCOLOGY		3. MEGAVOLTAGE
	Group T2. Radiation Oncology	
	Subgroup 3. Megavoltage	
15211	RADIATION ONCOLOGY TREATMENT, using cobalt unit or caesium teletherapy unit each attendance at which treatment is given - 1 field Fee: \$60.25 Benefit: 75% = \$45.20 85% = \$51.25	
15214	Radiation oncology treatment, using cobalt unit or caesium teletherapy unit - each attendance at which treatment is given 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) Derived Fee: The fee for item 15211 plus for each field in excess of 1, an amount of \$35.10	
15215	RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to primary site (lung) Fee: \$65.65 Benefit: 75% = \$49.25 85% = \$55.85	
15218	RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to primary site (prostate) Fee: \$65.65 Benefit: 75% = \$49.25 85% = \$55.85	
15221	RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to primary site (breast) Fee: \$65.65 Benefit: 75% = \$49.25 85% = \$55.85	
15224	RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to primary site for diseases and conditions not covered by items 15215, 15218 and 15221 Fee: \$65.65 Benefit: 75% = \$49.25 85% = \$55.85	

T2. RADIATION ONCOLOGY		3. MEGAVOLTAGE
15227	<p>RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to secondary site</p> <p>Fee: \$65.65 Benefit: 75% = \$49.25 85% = \$55.85</p>	
15230	<p>RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site (lung)</p> <p>Derived Fee: The fee for item 15215 plus for each field in excess of 1, an amount of \$41.80</p>	
15233	<p>RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site (prostate)</p> <p>Derived Fee: The fee for item 15218 plus for each field in excess of 1, an amount of \$41.80</p>	
15236	<p>RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site (breast)</p> <p>Derived Fee: The fee for item 15221 plus for each field in excess of 1, an amount of \$41.80</p>	
15239	<p>RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site for diseases and conditions not covered by items 15230, 15233 or 15236</p> <p>Derived Fee: The fee for item 15224 plus for each field in excess of 1, an amount of \$41.80</p>	
15242	<p>RADIATION ONCOLOGY TREATMENT, using a single photon energy linear accelerator with or without electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to secondary site</p> <p>Derived Fee: The fee for item 15227 plus for each field in excess of 1, an amount of \$41.80</p>	
15245	<p>RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to primary site (lung)</p> <p>Fee: \$65.65 Benefit: 75% = \$49.25 85% = \$55.85</p>	
15248	<p>RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to primary site (prostate)</p> <p>Fee: \$65.65 Benefit: 75% = \$49.25 85% = \$55.85</p>	
15251	<p>RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to primary site (breast)</p> <p>Fee: \$65.65 Benefit: 75% = \$49.25 85% = \$55.85</p>	

T2. RADIATION ONCOLOGY		3. MEGAVOLTAGE
15254	<p>RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to primary site for diseases and conditions not covered by items 15245, 15248 or 15251</p> <p>Fee: \$65.65 Benefit: 75% = \$49.25 85% = \$55.85</p>	
15257	<p>RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 1 field - treatment delivered to secondary site</p> <p>Fee: \$65.65 Benefit: 75% = \$49.25 85% = \$55.85</p>	
15260	<p>RADIATION ORADIATION ONCOLOGY treatment, using a dual photon energy linear accelerator with a minimum higher energy of at least 10mv photons, with electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site (lung)</p> <p>Derived Fee: The fee for item 15245 plus for each field in excess of 1, an amount of \$41.80</p>	
15263	<p>RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site (prostate)</p> <p>Derived Fee: The fee for item 15248 plus for each field in excess of 1, an amount of \$41.80</p>	
15266	<p>RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site (breast)</p> <p>Derived Fee: The fee for item 15251 plus for each field in excess of 1, an amount of \$41.80</p>	
15269	<p>RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to primary site for diseases and conditions not covered by items 15260, 15263 or 15266</p> <p>Derived Fee: The fee for item 15254 plus for each field in excess of 1, an amount of \$41.80</p>	
15272	<p>RADIATION ONCOLOGY TREATMENT, using a dual photon energy linear accelerator with a minimum higher energy of at least 10MV photons, with electron facilities - each attendance at which treatment is given - 2 or more fields up to a maximum of 5 additional fields (rotational therapy being 3 fields) - treatment delivered to secondary site</p> <p>Derived Fee: The fee for item 15257 plus for each field in excess of 1, an amount of \$41.80</p>	
15275	<p>RADIATION ONCOLOGY TREATMENT with IGRT imaging facilities undertaken:</p> <p>(a) to implement an IMRT dosimetry plan prepared in accordance with item 15565; and</p> <p>(b) utilising an intensity modulated treatment delivery mode (delivered by a fixed or dynamic gantry linear accelerator or by a helical non C-arm based linear accelerator), once only at each attendance at which treatment is given.</p> <p>Fee: \$201.35 Benefit: 75% = \$151.05 85% = \$171.15</p>	

T2. RADIATION ONCOLOGY		4. BRACHYTHERAPY
	Group T2. Radiation Oncology	
	Subgroup 4. Brachytherapy	
15303	INTRAUTERINE TREATMENT ALONE using radioactive sealed sources having a half-life greater than 115 days using manual afterloading techniques (Anaes.) Fee: \$392.95 Benefit: 75% = \$294.75 85% = \$334.05	
15304	INTRAUTERINE TREATMENT ALONE using radioactive sealed sources having a half-life greater than 115 days using automatic afterloading techniques (Anaes.) Fee: \$392.95 Benefit: 75% = \$294.75 85% = \$334.05	
15307	INTRAUTERINE TREATMENT ALONE using radioactive sealed sources having a half-life of less than 115 days including iodine, gold, iridium or tantalum using manual afterloading techniques (Anaes.) Fee: \$744.95 Benefit: 75% = \$558.75 85% = \$646.25	
15308	INTRAUTERINE TREATMENT ALONE using radioactive sealed sources having a half-life of less than 115 days including iodine, gold, iridium or tantalum using automatic afterloading techniques (Anaes.) Fee: \$744.95 Benefit: 75% = \$558.75 85% = \$646.25	
15311	INTRAVAGINAL TREATMENT ALONE using radioactive sealed sources having a half-life greater than 115 days using manual afterloading techniques (Anaes.) Fee: \$366.80 Benefit: 75% = \$275.10 85% = \$311.80	
15312	INTRAVAGINAL TREATMENT ALONE using radioactive sealed sources having a half-life greater than 115 days using automatic afterloading techniques (Anaes.) Fee: \$364.10 Benefit: 75% = \$273.10 85% = \$309.50	
15315	INTRAVAGINAL TREATMENT ALONE using radioactive sealed sources having a half-life of less than 115 days including iodine, gold, iridium or tantalum using manual afterloading techniques (Anaes.) Fee: \$720.10 Benefit: 75% = \$540.10 85% = \$621.40	
15316	INTRAVAGINAL TREATMENT ALONE using radioactive sealed sources having a half-life of less than 115 days including iodine, gold, iridium or tantalum using automatic afterloading techniques (Anaes.) Fee: \$720.10 Benefit: 75% = \$540.10 85% = \$621.40	
15319	COMBINED INTRAUTERINE AND INTRAVAGINAL TREATMENT using radioactive sealed sources having a half-life greater than 115 days using manual afterloading techniques (Anaes.) Fee: \$446.90 Benefit: 75% = \$335.20 85% = \$379.90	
15320	COMBINED INTRAUTERINE AND INTRAVAGINAL TREATMENT using radioactive sealed sources having a half-life greater than 115 days using automatic afterloading techniques (Anaes.) Fee: \$446.90 Benefit: 75% = \$335.20 85% = \$379.90	

T2. RADIATION ONCOLOGY		4. BRACHYTHERAPY
15323	COMBINED INTRAUTERINE AND INTRAVAGINAL TREATMENT using radioactive sealed sources having a half-life of less than 115 days including iodine, gold, iridium or tantalum using manual afterloading techniques (Anaes.) Fee: \$794.70 Benefit: 75% = \$596.05 85% = \$696.00	
15324	COMBINED INTRAUTERINE AND INTRAVAGINAL TREATMENT using radioactive sealed sources having a half-life of less than 115 days including iodine, gold, iridium or tantalum using automatic afterloading techniques (Anaes.) Fee: \$794.70 Benefit: 75% = \$596.05 85% = \$696.00	
15327	IMPLANTATION OF A SEALED RADIOACTIVE SOURCE (having a half-life of less than 115 days including iodine, gold, iridium or tantalum) to a region, under general anaesthesia, or epidural or spinal (intrathecal) nerve block, requiring surgical exposure and using manual afterloading techniques (Anaes.) Fee: \$864.55 Benefit: 75% = \$648.45 85% = \$765.85	
15328	IMPLANTATION OF A SEALED RADIOACTIVE SOURCE (having a half-life of less than 115 days including iodine, gold, iridium or tantalum) to a region, under general anaesthesia, or epidural or spinal (intrathecal) nerve block, requiring surgical exposure and using automatic afterloading techniques (Anaes.) Fee: \$864.55 Benefit: 75% = \$648.45 85% = \$765.85	
15331	IMPLANTATION OF A SEALED RADIOACTIVE SOURCE (having a half-life of less than 115 days including iodine, gold, iridium or tantalum) to a site (including the tongue, mouth, salivary gland, axilla, subcutaneous sites), where the volume treated involves multiple planes but does not require surgical exposure and using manual afterloading techniques (Anaes.) Fee: \$820.90 Benefit: 75% = \$615.70 85% = \$722.20	
15332	IMPLANTATION OF A SEALED RADIOACTIVE SOURCE (having a half-life of less than 115 days including iodine, gold, iridium or tantalum) to a site (including the tongue, mouth, salivary gland, axilla, subcutaneous sites), where the volume treated involves multiple planes but does not require surgical exposure and using automatic afterloading techniques (Anaes.) Fee: \$820.90 Benefit: 75% = \$615.70 85% = \$722.20	
15335	IMPLANTATION OF A SEALED RADIOACTIVE SOURCE (having a half-life of less than 115 days including iodine, gold, iridium or tantalum) to a site where the volume treated involves only a single plane but does not require surgical exposure and using manual afterloading techniques (Anaes.) Fee: \$744.95 Benefit: 75% = \$558.75 85% = \$646.25	
15336	IMPLANTATION OF A SEALED RADIOACTIVE SOURCE (having a half-life of less than 115 days including iodine, gold, iridium or tantalum) to a site where the volume treated involves only a single plane but does not require surgical exposure and using automatic afterloading techniques (Anaes.) Fee: \$744.95 Benefit: 75% = \$558.75 85% = \$646.25	
15338	Prostate, radioactive seed implantation of, radiation oncology component, using transrectal ultrasound guidance: (a) for a patient with: (i) localised prostatic malignancy at clinical stages T1 (clinically inapparent tumour not palpable or visible by imaging) or T2 (tumour confined within prostate); and	

T2. RADIATION ONCOLOGY		4. BRACHYTHERAPY
	(ii) a Gleason score of less than or equal to 7 (Grade Group 1 to Grade Group 3); and (iii) a prostate specific antigen (PSA) of not more than 10ng/ml at the time of diagnosis; and (b) performed by an oncologist at an approved site in association with a urologist; and (c) being a service associated with: (i) services to which items 37220 and 55603 apply; and (ii) a service to which item 60506 or 60509 applies (See para TN.2.2 of explanatory notes to this Category) Fee: \$1,029.80 Benefit: 75% = \$772.35 85% = \$931.10	
15339	REMOVAL OF A SEALED RADIOACTIVE SOURCE under general anaesthesia, or under epidural or spinal nerve block (Anaes.) Fee: \$83.80 Benefit: 75% = \$62.85 85% = \$71.25	
15342	CONSTRUCTION AND APPLICATION OF A RADIOACTIVE MOULD using a sealed source having a half-life of greater than 115 days, to treat intracavity, intraoral or intranasal site Fee: \$209.45 Benefit: 75% = \$157.10 85% = \$178.05	
15345	CONSTRUCTION AND APPLICATION OF A RADIOACTIVE MOULD using a sealed source having a half-life of less than 115 days including iodine, gold, iridium or tantalum to treat intracavity, intraoral or intranasal sites Fee: \$558.90 Benefit: 75% = \$419.20 85% = \$475.10	
15348	SUBSEQUENT APPLICATIONS OF RADIOACTIVE MOULD referred to in item 15342 or 15345 each attendance Fee: \$64.25 Benefit: 75% = \$48.20 85% = \$54.65	
15351	CONSTRUCTION WITH OR WITHOUT INITIAL APPLICATION OF RADIOACTIVE MOULD not exceeding 5 cm. diameter to an external surface Fee: \$128.40 Benefit: 75% = \$96.30 85% = \$109.15	
15354	CONSTRUCTION AND INITIAL APPLICATION OF RADIOACTIVE MOULD 5 cm. or more in diameter to an external surface Fee: \$155.70 Benefit: 75% = \$116.80 85% = \$132.35	
15357	SUBSEQUENT APPLICATIONS OF RADIOACTIVE MOULD, attendance upon a patient to apply a radioactive mould constructed for application to an external surface of the patient other than an attendance which is the first attendance to apply the mould each attendance Fee: \$44.00 Benefit: 75% = \$33.00 85% = \$37.40

T4. OBSTETRICS**Extended Medicare Safety Net Cap: \$392.10**

Management of labour and birth, or birth alone, (including caesarean section), on or after 23 weeks gestation, if in the course of antenatal supervision or intrapartum management one or more of the following conditions is present, including postnatal care for 7 days:

- (a) fetal loss;
- (b) multiple pregnancy;
- (c) antepartum haemorrhage that is:
 - (i) of greater than 200 ml; or
 - (ii) associated with disseminated intravascular coagulation;
- (d) placenta praevia on ultrasound in the third trimester with the placenta within 2 cm of the internal cervical os;
- (e) baby with a birth weight less than or equal to 2,500 g;
- (f) trial of vaginal birth in a patient with uterine scar where there has been a planned vaginal birth after caesarean section;
- (g) trial of vaginal breech birth where there has been a planned vaginal breech birth;
- (h) prolonged labour greater than 12 hours with partogram evidence of abnormal cervimetric progress as evidenced by cervical dilatation at less than 1 cm/hr in the active phase of labour (after 3 cm cervical dilatation and effacement until full dilatation of the cervix);
- (i) acute fetal compromise evidenced by:
 - (i) scalp pH less than 7.15; or
 - (ii) scalp lactate greater than 4.0;
- (j) acute fetal compromise evidenced by at least one of the following significant cardiotocograph abnormalities:
 - (i) prolonged bradycardia (less than 100 bpm for more than 2 minutes);
 - (ii) absent baseline variability (less than 3 bpm);
 - (iii) sinusoidal pattern;
 - (iv) complicated variable decelerations with reduced (3 to 5 bpm) or absent baseline variability;
 - (v) late decelerations;
- (k) pregnancy induced hypertension of at least 140/90 mm Hg associated with:
 - (i) at least 2+ proteinuria on urinalysis; or
 - (ii) protein-creatinine ratio greater than 30 mg/mmol; or
 - (iii) platelet count less than $150 \times 10^9/L$; or

16522

T4. OBSTETRICS

- (iv) uric acid greater than 0.36 mmol/L;
- (l) gestational diabetes mellitus requiring at least daily blood glucose monitoring;
- (m) mental health disorder (whether arising prior to pregnancy, during pregnancy or postpartum) that is demonstrated by:
 - (i) the patient requiring hospitalisation; or
 - (ii) the patient receiving ongoing care by a psychologist or psychiatrist to treat the symptoms of a mental health disorder; or
 - (iii) the patient having a GP mental health treatment plan; or
 - (iv) the patient having a management plan prepared in accordance with item 291;
- (n) disclosure or evidence of domestic violence;
- (o) any of the following conditions either diagnosed pre-pregnancy or evident at the first antenatal visit before 20 weeks gestation:
 - (i) pre-existing hypertension requiring antihypertensive medication prior to pregnancy;
 - (ii) cardiac disease (co-managed with a specialist physician and with echocardiographic evidence of myocardial dysfunction);
 - (iii) previous renal or liver transplant;
 - (iv) renal dialysis;
 - (v) chronic liver disease with documented oesophageal varices;
 - (vi) renal insufficiency in early pregnancy (serum creatinine greater than 110 mmol/L);
 - (vii) neurological disorder that confines the patient to a wheelchair throughout pregnancy;
 - (viii) maternal height of less than 148 cm;
 - (ix) a body mass index greater than or equal to 40;
 - (x) pre-existing diabetes mellitus on medication prior to pregnancy;
 - (xi) thyrotoxicosis requiring medication;
 - (xii) previous thrombosis or thromboembolism requiring anticoagulant therapy through pregnancy and the early puerperium;
 - (xiii) thrombocytopenia with platelet count of less than 100,000 prior to 20 weeks gestation;
 - (xiv) HIV, hepatitis B or hepatitis C carrier status positive;
 - (xv) red cell or platelet iso-immunisation;
 - (xvi) cancer with metastatic disease;
 - (xvii) illicit drug misuse during pregnancy (Anaes.)

T4. OBSTETRICS	
	(See para TN.4.7 of explanatory notes to this Category) Fee: \$1,793.40 Benefit: 75% = \$1345.05
16527	Management of vaginal birth, if the patient's care has been transferred by a participating midwife for management of the birth, including all attendances related to the birth Applicable once for a pregnancy (Anaes.) (See para TN.4.8 of explanatory notes to this Category) Fee: \$694.35 Benefit: 75% = \$520.80 85% = \$595.65 Extended Medicare Safety Net Cap: \$209.20
16528	Caesarean section and post-operative care for 7 days, if the patient's care has been transferred by a participating midwife for management of the birth Applicable once for a pregnancy (Anaes.) (See para TN.4.8 of explanatory notes to this Category) Fee: \$694.35 Benefit: 75% = \$520.80 85% = \$595.65 Extended Medicare Safety Net Cap: \$392.10
16530	Management of pregnancy loss, from 14 weeks to 15 weeks and 6 days gestation, other than a service to which item 16531, 35640 or 35643 applies (Anaes.) (See para TN.4.5 of explanatory notes to this Category) Fee: \$423.05 Benefit: 75% = \$317.30 85% = \$359.60 Extended Medicare Safety Net Cap: \$275.00
16531	Management of pregnancy loss, from 16 weeks to 22 weeks and 6 days gestation, other than a service to which item 16530, 35640 or 35643 applies (Anaes.) (See para TN.4.14, TN.4.5 of explanatory notes to this Category) Fee: \$846.10 Benefit: 75% = \$634.60
16533	Pregnancy complicated by acute intercurrent infection, fetal growth restriction, threatened premature labour with ruptured membranes or threatened premature labour treated by intravenous therapy, requiring admission to hospital—each professional attendance lasting at least 40 minutes that is not a routine antenatal attendance, to a maximum of 3 services per pregnancy (See para TN.4.14, TN.4.3 of explanatory notes to this Category) Fee: \$116.20 Benefit: 75% = \$87.15
16534	Pre-eclampsia, eclampsia or antepartum haemorrhage, treatment of—each professional attendance lasting at least 40 minutes that is not a routine antenatal attendance, to a maximum of 3 services per pregnancy (See para TN.4.14, TN.4.3 of explanatory notes to this Category) Fee: \$116.20 Benefit: 75% = \$87.15
16564	Evacuation of retained products of conception (placenta, membranes or mole) as a complication of confinement, with or without curettage of the uterus, as an independent procedure (Anaes.) (See para TN.4.10 of explanatory notes to this Category) Fee: \$239.95 Benefit: 75% = \$180.00 85% = \$204.00 Extended Medicare Safety Net Cap: \$261.40
16567	Management of postpartum haemorrhage by special measures such as packing of uterus, as an independent procedure (Anaes.)

T4. OBSTETRICS	
	(See para TN.4.10 of explanatory notes to this Category) Fee: \$350.90 Benefit: 75% = \$263.20 85% = \$298.30 Extended Medicare Safety Net Cap: \$261.40
16570	Acute inversion of the uterus, vaginal correction of, as an independent procedure (Anaes.) (See para TN.4.10 of explanatory notes to this Category) Fee: \$458.00 Benefit: 75% = \$343.50 85% = \$389.30 Extended Medicare Safety Net Cap: \$261.40
16571	Cervix, repair of extensive laceration or lacerations (Anaes.) (See para TN.4.10 of explanatory notes to this Category) Fee: \$350.90 Benefit: 75% = \$263.20 85% = \$298.30 Extended Medicare Safety Net Cap: \$261.40
16573	Third degree tear, involving anal sphincter muscles and rectal mucosa, repair of, as an independent procedure (Anaes.) (See para TN.4.10 of explanatory notes to this Category) Fee: \$285.90 Benefit: 75% = \$214.45 85% = \$243.05 Extended Medicare Safety Net Cap: \$261.40
16590	Planning and management, by a practitioner, of a pregnancy if: (a) the practitioner intends to take primary responsibility for management of the pregnancy and any complications, and to be available for the birth; and (b) the patient intends to be privately admitted for the birth; and (c) the pregnancy has progressed beyond 28 weeks gestation; and (d) the practitioner has maternity privileges at a hospital or birth centre; and (e) the service includes a mental health assessment (including screening for drug and alcohol use and domestic violence) of the patient; and (f) a service to which item 16591 applies is not provided in relation to the same pregnancy Applicable once for a pregnancy (See para TN.4.13, TN.4.9 of explanatory notes to this Category) Fee: \$410.30 Benefit: 75% = \$307.75 85% = \$348.80 Extended Medicare Safety Net Cap: \$261.40
16591	Planning and management, by a practitioner, of a pregnancy if: (a) the pregnancy has progressed beyond 28 weeks gestation; and (b) the service includes a mental health assessment (including screening for drug and alcohol use and domestic violence) of the patient; and (c) a service to which item 16590 applies is not provided in relation to the same pregnancy Applicable once for a pregnancy (See para TN.4.13, TN.4.9 of explanatory notes to this Category) Fee: \$157.00 Benefit: 75% = \$117.75 85% = \$133.45 Extended Medicare Safety Net Cap: \$130.60

T4. OBSTETRICS	
	Amniocentesis, diagnostic
16600	(See para TN.4.3, TN.4.11 of explanatory notes to this Category) Fee: \$69.85 Benefit: 75% = \$52.40 85% = \$59.40 Extended Medicare Safety Net Cap: \$39.20
16603	Chorionic villus sampling, by any route (See para TN.4.3, TN.4.11 of explanatory notes to this Category) Fee: \$134.15 Benefit: 75% = \$100.65 85% = \$114.05 Extended Medicare Safety Net Cap: \$78.40
16606	Fetal blood sampling, using interventional techniques from umbilical cord or fetus, including fetal neuromuscular blockade and amniocentesis (Anaes.) (See para TN.4.3, TN.4.11 of explanatory notes to this Category) Fee: \$267.75 Benefit: 75% = \$200.85 85% = \$227.60 Extended Medicare Safety Net Cap: \$156.90
16609	Fetal intravascular blood transfusion, using blood already collected, including neuromuscular blockade, amniocentesis and fetal blood sampling (Anaes.) (See para TN.4.3, TN.4.11 of explanatory notes to this Category) Fee: \$545.95 Benefit: 75% = \$409.50 85% = \$464.10 Extended Medicare Safety Net Cap: \$300.80
16612	FOETAL INTRAPERITONEAL BLOOD TRANSFUSION, using blood already collected, including neuromuscular blockade, amniocentesis and foetal blood sampling - not performed in conjunction with a service described in item 16609 (Anaes.) (See para TN.4.3, TN.4.11 of explanatory notes to this Category) Fee: \$429.55 Benefit: 75% = \$322.20 85% = \$365.15
16615	FOETAL INTRAPERITONEAL BLOOD TRANSFUSION, using blood already collected, including neuromuscular blockade, amniocentesis and foetal blood sampling - performed in conjunction with a service described in item 16609 (Anaes.) (See para TN.4.3, TN.4.11 of explanatory notes to this Category) Fee: \$228.80 Benefit: 75% = \$171.60 85% = \$194.50
16618	Amniocentesis, therapeutic, when indicated because of polyhydramnios with at least 500 ml being aspirated (See para TN.4.3, TN.4.11 of explanatory notes to this Category) Fee: \$228.80 Benefit: 75% = \$171.60 85% = \$194.50 Extended Medicare Safety Net Cap: \$124.20
16621	AMNIOINFUSION, for diagnostic or therapeutic purposes in the presence of severe oligohydramnios (See para TN.4.3, TN.4.11 of explanatory notes to this Category) Fee: \$228.80 Benefit: 75% = \$171.60 85% = \$194.50
16624	Fetal fluid filled cavity, drainage of (See para TN.4.3, TN.4.11 of explanatory notes to this Category) Fee: \$329.30 Benefit: 75% = \$247.00 85% = \$279.95 Extended Medicare Safety Net Cap: \$170.00
16627	Feto-amniotic shunt, insertion of, into fetal fluid filled cavity, including neuromuscular blockade and amniocentesis (See para TN.4.3, TN.4.11 of explanatory notes to this Category)

T4. OBSTETRICS	
	Fee: \$670.35 Benefit: 75% = \$502.80 85% = \$571.65 Extended Medicare Safety Net Cap: \$366.10

T4. OBSTETRICS		1. OBSTETRIC TELEHEALTH SERVICES
	Group T4. Obstetrics	
	Subgroup 1. Obstetric telehealth services	
	Antenatal telehealth service provided by a practice midwife, nurse or an Aboriginal and Torres Strait Islander health practitioner, to a maximum of 10 services per pregnancy, if:	
	(a) the service is provided on behalf of, and under the supervision of, a medical practitioner; and	
	(b) the service is not performed in conjunction with another antenatal attendance item in Group T4 for the same patient on the same day by the same practitioner.	
91850	Fee: \$30.00 Benefit: 85% = \$25.50 Extended Medicare Safety Net Cap: \$13.10	
	Postnatal telehealth attendance by an obstetrician or general practitioner (other than a service to which any other item applies) if:	
	(a) is between 4 and 8 weeks after the birth; and	
	(b) lasts at least 20 minutes in duration; and	
	(c) includes a mental health assessment (including screening for drug and alcohol use and domestic violence) of the patient; and	
	(d) is for a pregnancy in relation to which a service to which item 82140 applies is not provided.	
	Applicable once for a pregnancy	
91851	Fee: \$78.95 Benefit: 85% = \$67.15 Extended Medicare Safety Net Cap: \$51.35	
	Postnatal telehealth attendance (other than a service to which any other item applies) if:	
	(a) the attendance is rendered by:	
	(i) a practice midwife (on behalf of and under the supervision of the medical practitioner who attended the birth); or	
	(ii) an obstetrician; or	
	(iii) a general practitioner; and	
91852	(b) is between 1 week and 4 weeks after the birth; and	

T4. OBSTETRICS		1. OBSTETRIC TELEHEALTH SERVICES
	<p>(c) lasts at least 20 minutes; and</p> <p>(d) is for a patient who was privately admitted for the birth; and</p> <p>(e) is for a pregnancy in relation to which a service to which item 82130, 82135 or 82140 of the <i>Health Insurance (Midwife and Nurse Practitioner) Determination 2015</i> or item 91214, 91215, 91221 or 91222 is not provided.</p> <p>Applicable once for a pregnancy</p> <p>Fee: \$58.80 Benefit: 85% = \$50.00 Extended Medicare Safety Net Cap: \$38.25</p>	
91853	<p>Antenatal telehealth attendance.</p> <p>Fee: \$51.90 Benefit: 85% = \$44.15 Extended Medicare Safety Net Cap: \$39.20</p>

T6. ANAESTHETICS		1. ANAESTHESIA CONSULTATIONS
	<p>- a consultation immediately prior to the institution of a major regional blockade in a patient in labour, where no previous anaesthesia consultation has occurred, not being a service associated with a service to which items 2801 - 3000 apply.</p> <p>(See para TN.6.3 of explanatory notes to this Category) Fee: \$95.60 Benefit: 75% = \$71.70 85% = \$81.30 Extended Medicare Safety Net Cap: \$286.80</p>	
17690	<p>- Where a pre-anaesthesia consultation covered by an item in the range 17615-17625 is performed in-rooms if:</p> <p>(a) the service is provided to a patient prior to an admitted patient episode of care involving anaesthesia; and</p> <p>(b) the service is not provided to an admitted patient of a hospital; and</p> <p>(c) the service is not provided on the day of admission to hospital for the subsequent episode of care involving anaesthesia services; and</p> <p>(d) the service is of more than 15 minutes duration</p> <p>not being a service associated with a service to which items 2801 - 3000 apply.</p> <p>(See para TN.6.3 of explanatory notes to this Category) Fee: \$44.15 Benefit: 75% = \$33.15 85% = \$37.55 Extended Medicare Safety Net Cap: \$132.45</p>	

T7. REGIONAL OR FIELD NERVE BLOCKS	
	Group T7. Regional Or Field Nerve Blocks
18213	<p>Intravenous regional anaesthesia of limb by retrograde perfusion of local anaesthetic agent</p> <p>Fee: \$97.55 Benefit: 75% = \$73.20 85% = \$82.95</p>
18216	<p>Intrathecal, combined spinal-epidural or epidural infusion of a therapeutic substance, initial injection or commencement of, including up to 1 hour of continuous attendance by the medical practitioner</p> <p>Applicable once per presentation, per medical practitioner, per complete new procedure (Anaes.)</p> <p>(See para TN.10.7 of explanatory notes to this Category) Fee: \$209.05 Benefit: 75% = \$156.80 85% = \$177.70</p>

T7. REGIONAL OR FIELD NERVE BLOCKS	
18219	<p>Intrathecal, combined spinal-epidural or epidural infusion of a therapeutic substance, initial injection or commencement of, if continuous attendance by the medical practitioner extends beyond the first hour (Anaes.)</p> <p>(See para TN.10.7 of explanatory notes to this Category)</p> <p>Derived Fee: The fee for item 18216 plus \$20.90 for each additional 15 minutes or part thereof beyond the first hour of attendance by the medical practitioner.</p>
18222	<p>Continuous infusion or injection by catheter of a therapeutic substance (not contrast agent) to maintain regional anaesthesia or analgesia, subsequent injection or revision of, if the period of continuous medical practitioner attendance is 15 minutes or less</p> <p>(See para TN.7.2, TN.10.7 of explanatory notes to this Category)</p> <p>Fee: \$41.45 Benefit: 75% = \$31.10 85% = \$35.25</p>
18225	<p>Continuous infusion or injection by catheter of a therapeutic substance (not contrast agent) to maintain regional anaesthesia or analgesia, subsequent injection or revision of, if the period of continuous medical practitioner attendance is more than 15 minutes</p> <p>(See para TN.7.2, TN.10.7 of explanatory notes to this Category)</p> <p>Fee: \$55.05 Benefit: 75% = \$41.30 85% = \$46.80</p>
18226	<p>Intrathecal, combined spinal-epidural or epidural infusion of a therapeutic substance, initial injection or commencement of, including up to 1 hour of continuous attendance by the medical practitioner, for a patient in labour, where the service is provided in the after hours period, being the period from 8pm to 8am on any weekday, or any time on a Saturday, a Sunday or a public holiday.</p> <p>Applicable once per presentation, per medical practitioner, per complete new procedure</p> <p>(See para TN.7.4, TN.10.7 of explanatory notes to this Category)</p> <p>Fee: \$313.50 Benefit: 75% = \$235.15 85% = \$266.50</p>
18227	<p>Intrathecal, combined spinal-epidural or epidural infusion of a therapeutic substance, initial injection or commencement of, where continuous attendance by a medical practitioner extends beyond the first hour, for a patient in labour, where the service is provided in the after hours period, being the period from 8pm to 8am on any weekday, or any time on a Saturday, a Sunday or a public holiday.</p> <p>(See para TN.7.4, TN.10.7 of explanatory notes to this Category)</p> <p>Derived Fee: The fee for item 18226 plus \$31.50 for each additional 15 minutes or part thereof beyond the first hour of attendance by the medical practitioner.</p>
18228	<p>Interpleural block, initial injection or commencement of infusion of a therapeutic substance, not in association with a service to which an item in Group T8 applies, unless the nerve block is performed using a targeted percutaneous approach</p> <p>(See para TN.7.1 of explanatory notes to this Category)</p> <p>Fee: \$68.85 Benefit: 75% = \$51.65 85% = \$58.55</p>
18230	<p>Intrathecal or epidural injection of neurolytic substance (not contrast agent) by any route, including transforaminal route (Anaes.)</p> <p>(See para TN.7.3 of explanatory notes to this Category)</p> <p>Fee: \$262.40 Benefit: 75% = \$196.80 85% = \$223.05</p>
18232	<p>Intrathecal or epidural injection (including translaminar and transforaminal approaches) of therapeutic substance or substances (anaesthetic, steroid or chemotherapeutic agents):</p> <p>(a) other than a service to which another item in this Group applies; and</p>

T7. REGIONAL OR FIELD NERVE BLOCKS	
	(b) not in association with a service to which an item in Group T8 applies, unless the nerve block is performed using a targeted percutaneous approach (Anaes.) (See para TN.7.3, TN.7.1 of explanatory notes to this Category) Fee: \$209.05 Benefit: 75% = \$156.80 85% = \$177.70
18233	EPIDURAL INJECTION of blood for blood patch (Anaes.) Fee: \$209.05 Benefit: 75% = \$156.80 85% = \$177.70
18234	Trigeminal nerve, primary branch (ophthalmic, maxillary or mandibular branches, excluding infraorbital nerve), injection of an anaesthetic agent or steroid, but not in association with a service to which an item in Group T8 applies, unless a targeted percutaneous technique is used (Anaes.) (See para TN.7.5, TN.7.1 of explanatory notes to this Category) Fee: \$137.45 Benefit: 75% = \$103.10 85% = \$116.85
18236	Trigeminal nerve, peripheral branch (including infraorbital nerve), injection of an anaesthetic agent, but not in association with a service to which an item in Group T8 applies, unless a targeted percutaneous technique is used (Anaes.) (See para TN.7.5, TN.7.1 of explanatory notes to this Category) Fee: \$68.85 Benefit: 75% = \$51.65 85% = \$58.55
18238	Facial nerve, injection of an anaesthetic agent, other than a service associated with a service to which item 18240 applies, not in association with a service to which an item in Group T8 applies, unless the nerve block is performed using a targeted percutaneous approach (See para TN.7.5, TN.7.1 of explanatory notes to this Category) Fee: \$41.45 Benefit: 75% = \$31.10 85% = \$35.25
18240	RETROBULBAR OR PERIBULBAR INJECTION of an anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$103.00 Benefit: 75% = \$77.25 85% = \$87.55
18242	GREATER OCCIPITAL NERVE, injection of an anaesthetic agent (Anaes.) (See para TN.7.5 of explanatory notes to this Category) Fee: \$41.45 Benefit: 75% = \$31.10 85% = \$35.25
18244	Vagus nerve, injection of an anaesthetic agent, not in association with a service to which an item in Group T8 applies, unless the nerve block is performed using a targeted percutaneous approach (See para TN.7.5, TN.7.1 of explanatory notes to this Category) Fee: \$111.00 Benefit: 75% = \$83.25 85% = \$94.35
18248	PHRENIC NERVE, injection of an anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$97.55 Benefit: 75% = \$73.20 85% = \$82.95
18250	SPINAL ACCESSORY NERVE, injection of an anaesthetic agent (See para TN.7.5 of explanatory notes to this Category) Fee: \$68.85 Benefit: 75% = \$51.65 85% = \$58.55

T7. REGIONAL OR FIELD NERVE BLOCKS	
18252	<p>Cervical plexus, injection of an anaesthetic agent, not in association with a service to which an item in Group T8 applies, unless the nerve block is performed using a targeted percutaneous approach</p> <p>(See para TN.7.5, TN.7.1 of explanatory notes to this Category) Fee: \$111.00 Benefit: 75% = \$83.25 85% = \$94.35</p>
18254	<p>Brachial plexus, injection of an anaesthetic agent, not in association with a service to which an item in Group T8 applies, unless the nerve block is performed using a targeted percutaneous approach</p> <p>(See para TN.7.5, TN.7.1 of explanatory notes to this Category) Fee: \$111.00 Benefit: 75% = \$83.25 85% = \$94.35</p>
18256	<p>SUPRASCAPULAR NERVE, injection of an anaesthetic agent</p> <p>(See para TN.7.5 of explanatory notes to this Category) Fee: \$68.85 Benefit: 75% = \$51.65 85% = \$58.55</p>
18258	<p>INTERCOSTAL NERVE (single), injection of an anaesthetic agent</p> <p>(See para TN.7.5 of explanatory notes to this Category) Fee: \$68.85 Benefit: 75% = \$51.65 85% = \$58.55</p>
18260	<p>INTERCOSTAL NERVES (multiple), injection of an anaesthetic agent</p> <p>(See para TN.7.5 of explanatory notes to this Category) Fee: \$97.55 Benefit: 75% = \$73.20 85% = \$82.95</p>
18262	<p>Ilio inguinal, iliohypogastric or genitofemoral nerves, one or more of, injections of an anaesthetic agent, not in association with a service to which an item in Group T8 applies, unless the nerve block is performed using a targeted percutaneous approach (Anaes.)</p> <p>(See para TN.7.5, TN.7.1 of explanatory notes to this Category) Fee: \$68.85 Benefit: 75% = \$51.65 85% = \$58.55</p>
18264	<p>Pudendal nerve or dorsal nerve (or both), injection of an anaesthetic agent, not in association with a service to which an item in Group T8 applies, unless the nerve block is performed using a targeted percutaneous approach</p> <p>(See para TN.7.5, TN.7.1 of explanatory notes to this Category) Fee: \$111.00 Benefit: 75% = \$83.25 85% = \$94.35</p>
18266	<p>Ulnar, radial or median nerve, main trunk of, one or more of, injections of an anaesthetic agent, not being associated with a brachial plexus block, not in association with a service to which an item in Group T8 applies, unless the nerve block is performed using a targeted percutaneous approach</p> <p>(See para TN.7.5, TN.7.1 of explanatory notes to this Category) Fee: \$68.85 Benefit: 75% = \$51.65 85% = \$58.55</p>
18268	<p>OBTURATOR NERVE, injection of an anaesthetic agent</p> <p>(See para TN.7.5 of explanatory notes to this Category) Fee: \$97.55 Benefit: 75% = \$73.20 85% = \$82.95</p>
18270	<p>FEMORAL NERVE, injection of an anaesthetic agent</p> <p>(See para TN.7.5 of explanatory notes to this Category) Fee: \$97.55 Benefit: 75% = \$73.20 85% = \$82.95</p>
18272	<p>SAPHENOUS, SURAL, POPLITEAL OR POSTERIOR TIBIAL NERVE, MAIN TRUNK OF, 1 or more of, injection of an anaesthetic agent</p> <p>(See para TN.7.5 of explanatory notes to this Category)</p>

T7. REGIONAL OR FIELD NERVE BLOCKS	
	Fee: \$68.85 Benefit: 75% = \$51.65 85% = \$58.55
18276	PARAVERTEBRAL NERVES, injection of an anaesthetic agent, (multiple levels) (See para TN.7.5 of explanatory notes to this Category) Fee: \$137.45 Benefit: 75% = \$103.10 85% = \$116.85
18278	Sciatic nerve, injection of an anaesthetic agent, not in association with a service to which an item in Group T8 applies, unless the nerve block is performed using a targeted percutaneous approach (See para TN.7.5, TN.7.1 of explanatory notes to this Category) Fee: \$97.55 Benefit: 75% = \$73.20 85% = \$82.95
18280	Sphenopalatine ganglion, injection of an anaesthetic agent, not in association with a service to which an item in Group T8 applies, unless the nerve block is performed using a targeted percutaneous approach (Anaes.) (See para TN.7.5, TN.7.1 of explanatory notes to this Category) Fee: \$137.45 Benefit: 75% = \$103.10 85% = \$116.85
18282	CAROTID SINUS, injection of an anaesthetic agent, as an independent percutaneous procedure (See para TN.7.5 of explanatory notes to this Category) Fee: \$111.00 Benefit: 75% = \$83.25 85% = \$94.35
18284	Cervical or thoracic sympathetic chain, injection of an anaesthetic agent (Anaes.) (See para TN.7.5 of explanatory notes to this Category) Fee: \$162.45 Benefit: 75% = \$121.85 85% = \$138.10
18286	Lumbar or pelvic sympathetic chain, injection of an anaesthetic agent (Anaes.) (See para TN.7.5 of explanatory notes to this Category) Fee: \$162.45 Benefit: 75% = \$121.85 85% = \$138.10
18288	Coeliac plexus or splanchnic nerves, injection of an anaesthetic agent, not in association with a service to which an item in Group T8 applies, unless the nerve block is performed using a targeted percutaneous approach (Anaes.) (See para TN.7.5 of explanatory notes to this Category) Fee: \$162.45 Benefit: 75% = \$121.85 85% = \$138.10
18290	Cranial nerve other than trigeminal, destruction by a neurolytic agent under image guidance, other than a service associated with the injection of botulinum toxin (Anaes.) (See para TN.7.6 of explanatory notes to this Category) Fee: \$274.85 Benefit: 75% = \$206.15 85% = \$233.65
18292	Nerve branch, destruction by a neurolytic agent under image guidance, other than a service to which another item in this Group applies or a service associated with the injection of botulinum toxin except a service to which item 18354 applies (Anaes.) (See para TN.7.5, TN.7.6 of explanatory notes to this Category) Fee: \$137.45 Benefit: 75% = \$103.10 85% = \$116.85
18294	Coeliac plexus or splanchnic nerves, destruction by a neurolytic agent under image guidance (Anaes.) (See para TN.7.6 of explanatory notes to this Category)

T7. REGIONAL OR FIELD NERVE BLOCKS	
	Fee: \$193.75 Benefit: 75% = \$145.35 85% = \$164.70
18296	Lumbar or pelvic sympathetic chain, destruction by a neurolytic agent under image guidance (Anaes.) (See para TN.7.6 of explanatory notes to this Category) Fee: \$165.70 Benefit: 75% = \$124.30 85% = \$140.85
18297	Assistance at the administration of an epidural blood patch (a service to which item 18233 applies) by another medical practitioner Fee: \$65.30 Benefit: 75% = \$49.00 85% = \$55.55
18298	CERVICAL OR THORACIC SYMPATHETIC CHAIN, destruction by a neurolytic agent (Anaes.) Fee: \$193.75 Benefit: 75% = \$145.35 85% = \$164.70

T8. SURGICAL OPERATIONS		1. GENERAL
	Group T8. Surgical Operations	
	Subgroup 1. General	
30001	OPERATIVE PROCEDURE, not being a service to which any other item in this Group applies, being a service to which an item in this Group would have applied had the procedure not been discontinued on medical grounds (See para TN.8.5 of explanatory notes to this Category) Derived Fee: 50% of the fee which would have applied had the procedure not been discontinued	
30003	Burns, involving 1% or more but less than 3% of total body surface, dressing of (including redressing of any related donor site, if required), without anaesthesia, if medical practitioner is present—each attendance at which the procedure is performed Not applicable for skin reactions secondary to radiotherapy Fee: \$40.00 Benefit: 75% = \$30.00 85% = \$34.00	
30006	Burns, involving 3% or more but less than 10% of total body surface, dressing of (including redressing of any related donor site, if required), without anaesthesia, if medical practitioner is present—each attendance at which the procedure is performed Not applicable for skin reactions secondary to radiotherapy Fee: \$51.15 Benefit: 75% = \$38.40 85% = \$43.50	
30007	Burns, involving 10% or more of total body surface, dressing of (including redressing of any related donor site, if required), without anaesthesia, if medical practitioner is present—each attendance at which the procedure is performed Not applicable for skin reactions secondary to radiotherapy Fee: \$171.05 Benefit: 75% = \$128.30 85% = \$145.40	
30010	Burns, involving not more than 3% of total body surface, dressing of (including redressing of any related donor site, if required), in an operating theatre under general anaesthesia or intravenous sedation, if medical practitioner is present (H) (Anaes.) Fee: \$81.40 Benefit: 75% = \$61.05	
30014	Burns, involving 3% or more but less than 20% of total body surface, dressing of (including redressing of any related donor site, if required), in an operating theatre under general anaesthesia or intravenous sedation, if medical practitioner is present (H) (Anaes.)	

T8. SURGICAL OPERATIONS		1. GENERAL
	Fee: \$171.05 Benefit: 75% = \$128.30	
30015	Burns, involving 20% or more but less than 50% of total body surface, or burns of less than 20% of total body surface involving 1% or more of total body surface within the hands or face, dressing of (including redressing of any related donor site, if required), in an operating theatre under general anaesthesia or intravenous sedation, if medical practitioner is present (H) (Anaes.) (Assist.) Fee: \$256.60 Benefit: 75% = \$192.45	
30016	Burns, involving 50% or more of total body surface, dressing of (including redressing of any related donor site, if required), in an operating theatre under general anaesthesia or intravenous sedation, if medical practitioner is present (H) (Anaes.) (Assist.) Fee: \$384.85 Benefit: 75% = \$288.65	
30023	WOUND OF SOFT TISSUE, traumatic, deep or extensively contaminated, debridement of, under general anaesthesia or regional or field nerve block, including suturing of that wound when performed (Anaes.) (Assist.) (See para TN.8.200, TN.8.6, TN.8.283 of explanatory notes to this Category) Fee: \$358.90 Benefit: 75% = \$269.20 85% = \$305.10	
30024	WOUND OF SOFT TISSUE, debridement of extensively infected post-surgical incision or Fournier's Gangrene, under general anaesthesia or regional or field nerve block, including suturing of that wound when performed (Anaes.) (Assist.) Fee: \$358.90 Benefit: 75% = \$269.20 85% = \$305.10	
30026	SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, not on face or neck, small (NOT MORE THAN 7 CM LONG), superficial, not being a service to which another item in Group T4 applies (Anaes.) (See para TN.8.6 of explanatory notes to this Category) Fee: \$57.50 Benefit: 75% = \$43.15 85% = \$48.90	
30029	SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, not on face or neck, small (NOT MORE THAN 7 CM LONG), involving deeper tissue, not being a service to which another item in Group T4 applies (Anaes.) (See para TN.8.6 of explanatory notes to this Category) Fee: \$99.10 Benefit: 75% = \$74.35 85% = \$84.25	
30032	SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, on face or neck, small (NOT MORE THAN 7 CM LONG), superficial (Anaes.) (See para TN.8.6 of explanatory notes to this Category) Fee: \$90.75 Benefit: 75% = \$68.10 85% = \$77.15	
30035	SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, on face or neck, small (NOT MORE THAN 7 CM LONG), involving deeper tissue (Anaes.) (See para TN.8.6 of explanatory notes to this Category) Fee: \$129.40 Benefit: 75% = \$97.05 85% = \$110.00	
30038	SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, not on face or neck, large (MORE THAN 7 CM LONG), superficial, not being a service to which another item in Group T4 applies (Anaes.)	

T8. SURGICAL OPERATIONS		1. GENERAL
	(See para TN.8.6 of explanatory notes to this Category) Fee: \$99.10 Benefit: 75% = \$74.35 85% = \$84.25	
30042	SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, other than on face or neck, large (MORE THAN 7 CM LONG), involving deeper tissue, other than a service to which another item in Group T4 applies (Anaes.) (See para TN.8.6 of explanatory notes to this Category) Fee: \$204.25 Benefit: 75% = \$153.20 85% = \$173.65	
30045	SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, on face or neck, large (MORE THAN 7 CM LONG), superficial (Anaes.) (See para TN.8.6 of explanatory notes to this Category) Fee: \$129.40 Benefit: 75% = \$97.05 85% = \$110.00	
30049	SKIN AND SUBCUTANEOUS TISSUE OR MUCOUS MEMBRANE, REPAIR OF WOUND OF, other than wound closure at time of surgery, on face or neck, large (MORE THAN 7 CM LONG), involving deeper tissue (Anaes.) (See para TN.8.6 of explanatory notes to this Category) Fee: \$204.25 Benefit: 75% = \$153.20 85% = \$173.65	
30052	FULL THICKNESS LACERATION OF EAR, EYELID, NOSE OR LIP, repair of, with accurate apposition of each layer of tissue (Anaes.) (Assist.) Fee: \$279.55 Benefit: 75% = \$209.70 85% = \$237.65	
30055	Wounds, dressing of, under general, regional or intravenous sedation, with or without removal of sutures, other than a service associated with a service to which another item in this Group applies (Anaes.) Fee: \$81.40 Benefit: 75% = \$61.05 85% = \$69.20	
30058	POSTOPERATIVE HAEMORRHAGE, control of, under general anaesthesia, as an independent procedure (Anaes.) Fee: \$158.90 Benefit: 75% = \$119.20 85% = \$135.10	
30061	SUPERFICIAL FOREIGN BODY, REMOVAL OF, (including from cornea or sclera), as an independent procedure (Anaes.) Fee: \$25.90 Benefit: 75% = \$19.45 85% = \$22.05	
30062	Etonogestrel subcutaneous implant, removal of, as an independent procedure (Anaes.) Fee: \$66.85 Benefit: 75% = \$50.15 85% = \$56.85	
30064	SUBCUTANEOUS FOREIGN BODY, removal of, requiring incision and exploration, including closure of wound if performed, as an independent procedure (Anaes.) Fee: \$120.95 Benefit: 75% = \$90.75 85% = \$102.85	
30068	FOREIGN BODY IN MUSCLE, TENDON OR OTHER DEEP TISSUE, removal of, as an independent procedure (Anaes.) (Assist.) Fee: \$304.65 Benefit: 75% = \$228.50 85% = \$259.00	

T8. SURGICAL OPERATIONS		1. GENERAL
30071	<p>Diagnostic biopsy of skin, as an independent procedure, if the biopsy specimen is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$57.50 Benefit: 75% = \$43.15 85% = \$48.90</p> <p>Extended Medicare Safety Net Cap: \$46.00</p>	
30072	<p>Diagnostic biopsy of mucous membrane, as an independent procedure, if the biopsy specimen is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$57.50 Benefit: 75% = \$43.15 85% = \$48.90</p>	
30075	<p>DIAGNOSTIC BIOPSY OF LYMPH NODE, MUSCLE OR OTHER DEEP TISSUE OR ORGAN, as an independent procedure, if the biopsy specimen is sent for pathological examination (Anaes.)</p> <p>Fee: \$164.85 Benefit: 75% = \$123.65 85% = \$140.15</p>	
30078	<p>DIAGNOSTIC DRILL BIOPSY OF LYMPH NODE, DEEP TISSUE OR ORGAN, as an independent procedure, where the biopsy specimen is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$53.35 Benefit: 75% = \$40.05 85% = \$45.35</p>	
30081	<p>DIAGNOSTIC BIOPSY OF BONE MARROW by trephine using open approach, where the biopsy specimen is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$120.95 Benefit: 75% = \$90.75 85% = \$102.85</p>	
30084	<p>DIAGNOSTIC BIOPSY OF BONE MARROW by trephine using percutaneous approach where the biopsy is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$64.75 Benefit: 75% = \$48.60 85% = \$55.05</p>	
30087	<p>DIAGNOSTIC BIOPSY OF BONE MARROW by aspiration or PUNCH BIOPSY OF SYNOVIAL MEMBRANE, where the biopsy is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$32.35 Benefit: 75% = \$24.30 85% = \$27.50</p>	
30090	<p>DIAGNOSTIC BIOPSY OF PLEURA, PERCUTANEOUS 1 or more biopsies on any 1 occasion, where the biopsy is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$141.50 Benefit: 75% = \$106.15 85% = \$120.30</p>	
30093	<p>DIAGNOSTIC NEEDLE BIOPSY OF VERTEBRA, where the biopsy is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$188.85 Benefit: 75% = \$141.65 85% = \$160.55</p>	
30094	<p>DIAGNOSTIC PERCUTANEOUS ASPIRATION BIOPSY of deep organ using interventional imaging techniques - but not including imaging, where the biopsy is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$208.50 Benefit: 75% = \$156.40 85% = \$177.25</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
30097	<p>Personal performance of a Synacthen Stimulation Test, including associated consultation; by a medical practitioner with resuscitation training and access to facilities where life support procedures can be implemented, if:</p> <ul style="list-style-type: none"> a. serum cortisol at 0830-0930 hours on any day in the preceding month has been measured at greater than 100 nmol/L but less than 400 nmol/L; or b. in a patient who is acutely unwell and adrenal insufficiency is suspected. <p>(See para TN.8.139 of explanatory notes to this Category)</p> <p>Fee: \$106.95 Benefit: 75% = \$80.25 85% = \$90.95</p>	
30099	<p>SINUS, excision of, involving superficial tissue only (Anaes.)</p> <p>Fee: \$99.10 Benefit: 75% = \$74.35 85% = \$84.25</p>	
30103	<p>SINUS, excision of, involving muscle and deep tissue (Anaes.)</p> <p>Fee: \$202.40 Benefit: 75% = \$151.80 85% = \$172.05</p>	
30104	<p>Pre-auricular sinus, excision of, on a patient 10 years of age or over (Anaes.)</p> <p>Fee: \$139.75 Benefit: 75% = \$104.85 85% = \$118.80</p>	
30105	<p>Pre-auricular sinus, excision of, on a patient under 10 years of age (Anaes.)</p> <p>Fee: \$181.60 Benefit: 75% = \$136.20 85% = \$154.40</p>	
30107	<p>Excision of ganglion, other than a service associated with a service to which another item in this Group applies (Anaes.)</p> <p>Fee: \$242.05 Benefit: 75% = \$181.55 85% = \$205.75</p>	
30166	<p>Removal of redundant abdominal skin and lipectomy, as a wedge excision, for functional problems following significant weight loss equivalent to at least 5 body mass index points and if there has been a stable weight for a period of at least 6 months prior to surgery, other than a service associated with a service to which item 30175, 30176, 30177, 45530, 45531, 45564, 45565, 45567, 46060, 46062, 46064, 46066, 46068, 46070, 46072, 46080, 46082, 46084, 46086, 46088 or 46090 applies (H) (Anaes.) (Assist.)</p> <p>(See para TN.8.97, TN.8.8 of explanatory notes to this Category)</p> <p>Fee: \$825.55 Benefit: 75% = \$619.20</p>	
30169	<p>Removal of redundant non-abdominal skin and lipectomy for functional problems following significant weight loss equivalent to at least 5 body mass index points and if there has been a stable weight for a period of at least 6 months prior to surgery, one or 2 non-abdominal areas, other than a service associated with a service to which item 30175, 30176, 45530, 45531, 45564, 45565, 45567, 46060, 46062, 46064, 46066, 46068, 46070, 46072, 46080, 46082, 46084, 46086, 46088 or 46090 applies (H) (Anaes.) (Assist.)</p> <p>(See para TN.8.97, TN.8.8 of explanatory notes to this Category)</p> <p>Fee: \$660.45 Benefit: 75% = \$495.35</p>	
30175	<p>Radical abdominoplasty, with repair of rectus diastasis, excision of skin and subcutaneous tissue, and transposition of umbilicus, not being a laparoscopic procedure, if:</p> <ul style="list-style-type: none"> (a) the patient has an abdominal wall defect as a consequence of pregnancy; and (b) the patient: <ul style="list-style-type: none"> (i) has a diastasis of at least 3cm measured by diagnostic imaging prior to this service; and (ii) has either or both of the following: 	

T8. SURGICAL OPERATIONS

1. GENERAL

	<p>(A) at least moderately severe pain or discomfort at the site of the diastasis in the abdominal wall during functional use and the pain or discomfort has been documented in the patient's records by the practitioner providing the service;</p> <p>(B) low back pain or urinary symptoms likely due to rectus diastasis and the pain or symptoms have been documented in the patient's records by the practitioner providing the service; and</p> <p>(iii) has failed to respond to non-surgical conservative treatment, that must have included physiotherapy; and</p> <p>(iv) has not been pregnant in the last 12 months; and</p> <p>(c) the service is not a service associated with a service to which item 30166, 30169, 30176, 30177, 30179, 30651, 30655, 45530, 45531, 45564, 45565, 45567, 46060, 46062, 46064, 46066, 46068, 46070, 46072, 46080, 46082, 46084, 46086, 46088 or 46090 applies</p> <p>Applicable once per lifetime (H) (Anaes.) (Assist.)</p> <p>(See para TN.8.97, TN.8.8, TN.8.276 of explanatory notes to this Category)</p> <p>Fee: \$1,067.80 Benefit: 75% = \$800.85</p>
30176	<p>Radical abdominoplasty, with excision of skin and subcutaneous tissue, repair of musculoaponeurotic layer and transposition of umbilicus, not being a service associated with a service to which item 30166, 30169, 30175, 30177, 30179, 45530, 45531, 45564, 45565, 45567, 46060, 46062, 46064, 46066, 46068, 46070 or 46072 applies, if the patient has previously had a massive intra-abdominal or pelvic tumour surgically removed (H) (Anaes.) (Assist.)</p> <p>(See para TN.8.97 of explanatory notes to this Category)</p> <p>Fee: \$1,084.90 Benefit: 75% = \$813.70</p>
30177	<p>Lipectomy, excision of skin and subcutaneous tissue associated with redundant abdominal skin and fat that is a direct consequence of significant weight loss, in conjunction with a radical abdominoplasty, with or without repair of musculoaponeurotic layer and transposition of umbilicus, not being a service associated with a service to which item 30166, 30175, 30176, 30179, 45530, 45531, 45564, 45565, 45567, 46060, 46062, 46064, 46066, 46068, 46070, 46072, 46080, 46082, 46084, 46086, 46088 or 46090 applies, if:</p> <p>(a) there is intertrigo or another skin condition that risks loss of skin integrity and has failed 3 months of conventional (or non-surgical) treatment; and</p> <p>(b) the redundant skin and fat interferes with the activities of daily living; and</p> <p>(c) the weight has been stable for at least 6 months following significant weight loss prior to the lipectomy</p> <p>(H) (Anaes.) (Assist.)</p> <p>(See para TN.8.97, TN.8.8 of explanatory notes to this Category)</p> <p>Fee: \$1,084.90 Benefit: 75% = \$813.70</p>
30179	<p>Circumferential lipectomy, as an independent procedure, to correct circumferential excess of redundant skin and fat that is a direct consequence of significant weight loss, with or without a radical abdominoplasty, not being a service associated with a service to which item 30175, 30176, 30177, 45530, 45531, 45564, 45565, 45567, 46060, 46062, 46064, 46066, 46068, 46070, 46072, 46080, 46082, 46084, 46086, 46088 or 46090 applies, if:</p>

T8. SURGICAL OPERATIONS

1. GENERAL

	<p>(a) the circumferential excess of redundant skin and fat is complicated by intertrigo or another skin condition that risks loss of skin integrity and has failed 3 months of conventional (or non-surgical) treatment; and</p> <p>(b) the circumferential excess of redundant skin and fat interferes with the activities of daily living; and</p> <p>(c) the weight has been stable for at least 6 months following significant weight loss prior to the lipectomy</p> <p>(H) (Anaes.) (Assist.)</p> <p>(See para TN.8.97, TN.8.8 of explanatory notes to this Category) Fee: \$1,335.30 Benefit: 75% = \$1001.50</p>
30180	<p>AXILLARY HYPERHIDROSIS, partial excision for (Anaes.)</p> <p>Fee: \$150.25 Benefit: 75% = \$112.70 85% = \$127.75</p>
30183	<p>AXILLARY HYPERHIDROSIS, total excision of sweat gland bearing area (Anaes.)</p> <p>Fee: \$271.35 Benefit: 75% = \$203.55 85% = \$230.65</p>
30187	<p>PALMAR OR PLANTAR WARTS, removal of, by carbon dioxide laser or erbium laser, requiring admission to a hospital, or when performed by a specialist in the practice of his/her specialty, (5 or more warts) (Anaes.)</p> <p>(See para TN.8.9 of explanatory notes to this Category) Fee: \$282.85 Benefit: 75% = \$212.15 85% = \$240.45</p>
30189	<p>WARTS or MOLLUSCUM CONTAGIOSUM (one or more), removal of, by any method (other than by chemical means), where undertaken in the operating theatre of a hospital, not being a service associated with a service to which another item in this Group applies (H) (Anaes.)</p> <p>(See para TN.8.9 of explanatory notes to this Category) Fee: \$162.10 Benefit: 75% = \$121.60</p>
30190	<p>Angiofibromas, trichoepitheliomas or other severely disfiguring tumours of the face or neck (excluding melanocytic naevi, sebaceous hyperplasia, dermatosis papulosa nigra, Campbell De Morgan angiomas and seborrheic or viral warts), suitable for laser ablation as confirmed by the opinion of a specialist in the specialty of dermatology—removal of, by carbon dioxide laser or erbium laser ablation, including associated resurfacing (10 or more tumours) (Anaes.)</p> <p>Fee: \$437.80 Benefit: 75% = \$328.35 85% = \$372.15</p>
30191	<p>Angiofibromas, trichoepithelioma, epidermal naevi, xanthelasma, pyogenic granuloma, genital angiokeratomas, hereditary haemorrhagic telangiectasia and other severely disfiguring or recurrently bleeding tumours (excluding melanocytic naevi, sebaceous hyperplasia, dermatosis papulosa nigra, Campbell De Morgan angiomas and seborrheic or viral warts), treatment of, with carbon dioxide/erbium or other appropriate laser (or curettage and fine point diathermy for pyogenic granuloma only), if confirmed by the opinion of a specialist in the specialty of dermatology, one or more lesions.</p> <p>Fee: \$69.85 Benefit: 75% = \$52.40 85% = \$59.40</p>
30192	<p>PREALIGNANT SKIN LESIONS (including solar keratoses), treatment of, by ablative technique (10 or more lesions) (Anaes.)</p> <p>(See para TN.8.9 of explanatory notes to this Category) Fee: \$43.50 Benefit: 75% = \$32.65 85% = \$37.00</p>

T8. SURGICAL OPERATIONS

1. GENERAL

30196	<p>Malignant neoplasm of skin or mucous membrane that has been:</p> <p>(a) proven by histopathology; or</p> <p>(b) confirmed by the opinion of a specialist in the specialty of dermatology or plastic surgery where a specimen has been submitted for histologic confirmation;</p> <p>removal of, by serial curettage, or carbon dioxide laser or erbium laser excision-ablation, including any associated cryotherapy or diathermy (Anaes.)</p> <p>(See para TN.8.10 of explanatory notes to this Category)</p> <p>Fee: \$138.95 Benefit: 75% = \$104.25 85% = \$118.15</p>
30202	<p>Malignant neoplasm of skin or mucous membrane proven by histopathology or confirmed by the opinion of a specialist in the specialty of dermatology or plastic surgery—removal of, by liquid nitrogen cryotherapy using repeat freeze thaw cycles</p> <p>(See para TN.8.10 of explanatory notes to this Category)</p> <p>Fee: \$53.20 Benefit: 75% = \$39.90 85% = \$45.25</p>
30207	<p>Skin lesions, multiple injections with glucocorticoid preparations (Anaes.)</p> <p>Fee: \$49.10 Benefit: 75% = \$36.85 85% = \$41.75</p>
30210	<p>Keloid and other skin lesions, extensive, multiple injections of glucocorticoid preparations, if undertaken in the operating theatre of a hospital (H) (Anaes.)</p> <p>Fee: \$179.35 Benefit: 75% = \$134.55</p>
30216	<p>HAEMATOMA, aspiration of (Anaes.)</p> <p>Fee: \$30.10 Benefit: 75% = \$22.60 85% = \$25.60</p>
30219	<p>HAEMATOMA, FURUNCLE, SMALL ABSCESS OR SIMILAR LESION not requiring admission to a hospital - INCISION WITH DRAINAGE OF (excluding aftercare)</p> <p>(See para TN.8.4 of explanatory notes to this Category)</p> <p>Fee: \$30.10 Benefit: 75% = \$22.60 85% = \$25.60</p>
30223	<p>LARGE HAEMATOMA, LARGE ABSCESS, CARBUNCLE, CELLULITIS or similar lesion, requiring admission to a hospital, INCISION WITH DRAINAGE OF (excluding aftercare) (Anaes.)</p> <p>(See para TN.8.4 of explanatory notes to this Category)</p> <p>Fee: \$179.35 Benefit: 75% = \$134.55</p>
30224	<p>PERCUTANEOUS DRAINAGE OF DEEP ABSCESS using interventional imaging techniques - but not including imaging (Anaes.)</p> <p>Fee: \$261.50 Benefit: 75% = \$196.15 85% = \$222.30</p>
30225	<p>ABSCESS DRAINAGE TUBE, exchange of using interventional imaging techniques - but not including imaging (Anaes.)</p> <p>Fee: \$294.65 Benefit: 75% = \$221.00 85% = \$250.50</p>
30226	<p>MUSCLE, excision of (LIMITED), or fasciotomy (Anaes.)</p> <p>Fee: \$164.85 Benefit: 75% = \$123.65 85% = \$140.15</p>
30229	<p>MUSCLE, excision of (EXTENSIVE) (Anaes.) (Assist.)</p> <p>Fee: \$300.45 Benefit: 75% = \$225.35 85% = \$255.40</p>

T8. SURGICAL OPERATIONS		1. GENERAL
30232	MUSCLE, RUPTURED, repair of (limited), not associated with external wound (Anaes.) Fee: \$246.10 Benefit: 75% = \$184.60 85% = \$209.20	
30235	MUSCLE, RUPTURED, repair of (extensive), not associated with external wound (Anaes.) (Assist.) Fee: \$325.45 Benefit: 75% = \$244.10 85% = \$276.65	
30238	FASCIA, DEEP, repair of, FOR HERNIATED MUSCLE (Anaes.) Fee: \$164.85 Benefit: 75% = \$123.65 85% = \$140.15	
30241	BONE TUMOUR, INNOCENT, excision of, not being a service to which another item in this Group applies (Anaes.) (Assist.) Fee: \$392.25 Benefit: 75% = \$294.20 85% = \$333.45	
30244	STYLOID PROCESS OF TEMPORAL BONE, removal of (Anaes.) (Assist.) Fee: \$392.25 Benefit: 75% = \$294.20	
30246	PAROTID DUCT, repair of, using micro-surgical techniques (Anaes.) (Assist.) Fee: \$759.30 Benefit: 75% = \$569.50	
30247	Parotid gland, total extirpation of, including removal of tumour, other than a service associated with a service to which item 39321, 39324, 39327 or 39330 applies (H) (Anaes.) (Assist.) (See para TN.8.254 of explanatory notes to this Category) Fee: \$813.80 Benefit: 75% = \$610.35	
30250	Parotid gland, total extirpation of, with preservation of facial nerve, including: (a) removal of tumour; and (b) exposure or mobilisation of facial nerve; other than a service associated with a service to which item 39321, 39324, 39327 or 39330 applies (H) (Anaes.) (Assist.) (See para TN.8.254 of explanatory notes to this Category) Fee: \$1,377.05 Benefit: 75% = \$1032.80	
30251	Recurrent parotid tumour, excision of, with preservation of facial nerve, including: (a) removal of tumour; and (b) exposure or mobilisation of facial nerve; other than a service associated with a service to which item 39321, 39324, 39327 or 39330 applies (H) (Anaes.) (Assist.) (See para TN.8.254 of explanatory notes to this Category) Fee: \$2,115.30 Benefit: 75% = \$1586.50	
30253	Parotid gland, superficial lobectomy of, with exposure of facial nerve, including: (a) removal of tumour; and (b) exposure or mobilisation of facial nerve;	

T8. SURGICAL OPERATIONS		1. GENERAL
	other than a service associated with a service to which item 39321, 39324, 39327 or 39330 applies (H) (Anaes.) (Assist.) (See para TN.8.254 of explanatory notes to this Category) Fee: \$918.05 Benefit: 75% = \$688.55	
30255	SUBMANDIBULAR DUCTS, relocation of, for surgical control of drooling (Anaes.) (Assist.) Fee: \$1,222.50 Benefit: 75% = \$916.90	
30256	Submandibular gland, extirpation of, other than a service associated with a service to which item 31423, 31426, 31429, 31432, 31435 or 31438 applies on the same side (H) (Anaes.) (Assist.) Fee: \$490.30 Benefit: 75% = \$367.75	
30257	Sialendoscopy, of submandibular or parotid duct, with or without removal of calculus or treatment of stricture (Anaes.) Fee: \$550.35 Benefit: 75% = \$412.80 85% = \$467.80	
30259	SUBLINGUAL GLAND, extirpation of (Anaes.) Fee: \$218.55 Benefit: 75% = \$163.95 85% = \$185.80	
30262	SALIVARY GLAND, DILATATION OR DIATHERMY of duct (Anaes.) Fee: \$64.75 Benefit: 75% = \$48.60 85% = \$55.05	
30266	Salivary gland, removal of calculus from duct or meatotomy or marsupialisation, 1 or more such procedures. (Anaes.) Fee: \$164.85 Benefit: 75% = \$123.65 85% = \$140.15	
30269	SALIVARY GLAND, repair of CUTANEOUS FISTULA OF (Anaes.) Fee: \$164.85 Benefit: 75% = \$123.65 85% = \$140.15	
30272	TONGUE, partial excision of (Anaes.) (Assist.) Fee: \$325.45 Benefit: 75% = \$244.10 85% = \$276.65	
30275	Radical excision of intra oral tumour, with or without resection of mandible, including dissection of lymph glands of neck, unilateral, other than a service associated with a service to which item 31423, 31426, 31429, 31432, 31435 or 31438 applies on the same side (H) (Anaes.) (Assist.) (See para TN.8.261 of explanatory notes to this Category) Fee: \$1,940.25 Benefit: 75% = \$1455.20	
30278	Tongue tie, repair of, other than: (a) a service to which another item in this Subgroup applies; or (b) a service associated with a service to which item 45009 applies (Anaes.) Fee: \$51.15 Benefit: 75% = \$38.40 85% = \$43.50	
30281	Tongue tie, mandibular frenulum or maxillary frenulum, repair of, in a person aged 2 years and over, under general anaesthesia, other than a service associated with a service to which item 45009 applies (Anaes.) Fee: \$131.50 Benefit: 75% = \$98.65 85% = \$111.80	

T8. SURGICAL OPERATIONS		1. GENERAL
30283	RANULA OR MUCOUS CYST OF MOUTH, removal of (Anaes.) Fee: \$225.30 Benefit: 75% = \$169.00 85% = \$191.55	
30286	Branchial cyst, removal of, on a patient 10 years of age or over (Anaes.) (Assist.) Fee: \$437.90 Benefit: 75% = \$328.45 85% = \$372.25	
30287	Branchial cyst, removal of, on a patient under 10 years of age (Anaes.) (Assist.) Fee: \$569.35 Benefit: 75% = \$427.05 85% = \$483.95	
30289	Branchial fistula, removal of, on a patient 10 years of age or over (Anaes.) (Assist.) Fee: \$552.80 Benefit: 75% = \$414.60	
30293	CERVICAL OESOPHAGOSTOMY or CLOSURE OF CERVICAL OESOPHAGOSTOMY with or without plastic repair (Anaes.) (Assist.) Fee: \$490.30 Benefit: 75% = \$367.75 85% = \$416.80	
30294	CERVICAL OESOPHAGECTOMY with tracheostomy and oesophagostomy, with or without plastic reconstruction; or LARYNGOPHARYNGECTOMY with tracheostomy and plastic reconstruction (Anaes.) (Assist.) Fee: \$1,940.25 Benefit: 75% = \$1455.20	
30296	THYROIDECTOMY, total (Anaes.) (Assist.) (See para TN.8.137 of explanatory notes to this Category) Fee: \$1,126.80 Benefit: 75% = \$845.10	
30297	THYROIDECTOMY following previous thyroid surgery (Anaes.) (Assist.) (See para TN.8.138 of explanatory notes to this Category) Fee: \$1,126.80 Benefit: 75% = \$845.10	
30299	Sentinel lymph node biopsy or biopsies for breast cancer, involving dissection in an axilla, using preoperative lymphoscintigraphy and/or lymphotropic dye injection (H) (Anaes.) (Assist.) Fee: \$781.75 Benefit: 75% = \$586.35	
30305	Sentinel lymph node biopsy or biopsies for breast cancer, involving dissection along internal mammary chain (H) (Anaes.) (Assist.) Fee: \$781.80 Benefit: 75% = \$586.35	
30306	TOTAL HEMITHYROIDECTOMY (Anaes.) (Assist.) (See para TN.8.137, TN.8.138 of explanatory notes to this Category) Fee: \$879.05 Benefit: 75% = \$659.30	
30310	Partial or subtotal thyroidectomy (Anaes.) (Assist.) (See para TN.8.137 of explanatory notes to this Category) Fee: \$879.05 Benefit: 75% = \$659.30	
30311	Sentinel lymph node biopsy or biopsies for cutaneous melanoma, using preoperative lymphoscintigraphy and/or lymphotropic dye injection, if: (a) the primary lesion is greater than 1.0 mm in depth (or at least 0.8 mm in depth in the presence of ulceration); and	

T8. SURGICAL OPERATIONS		1. GENERAL
	<p>(b) appropriate excision of the primary melanoma has occurred; and</p> <p>(c) the service is not associated with a service to which item 30075, 30078, 30299, 30305, 30329, 30332, 30618, 30820, 31423, 52025 or 52027 applies</p> <p>Applicable to only one lesion per occasion on which the service is provided (H) (Anaes.) (Assist.)</p> <p>Fee: \$685.10 Benefit: 75% = \$513.85</p>	
30314	<p>Thyroglossal cyst or fistula or both, radical removal of, including thyroglossal duct and portion of hyoid bone, on a patient 10 years of age or over (Anaes.) (Assist.)</p> <p>Fee: \$503.40 Benefit: 75% = \$377.55</p>	
30315	<p>Minimally invasive parathyroidectomy. Removal of 1 or more parathyroid adenoma through a small cervical incision for an image localised adenoma, including thymectomy.</p> <p>For any particular patient - applicable only once per occasion on which the service is provided.</p> <p>Not in association with a service to which item 30318, 30317 or 30320 applies. (Anaes.) (Assist.)</p> <p>Fee: \$1,254.75 Benefit: 75% = \$941.10</p>	
30317	<p>Redo parathyroidectomy. Cervical re-exploration for persistent or recurrent hyperparathyroidism, including thymectomy and cervical exploration of the mediastinum.</p> <p>For any particular patient - applicable only once per occasion on which the service is provided.</p> <p>Not in association with a service to which item 30315, 30318 or 30320 applies. (Anaes.) (Assist.)</p> <p>Fee: \$1,502.30 Benefit: 75% = \$1126.75</p>	
30318	<p>Open parathyroidectomy, exploration and removal of 1 or more adenoma or hyperplastic glands via a cervical incision including thymectomy and cervical exploration of the mediastinum when performed.</p> <p>For any particular patient - applicable only once per occasion on which the service is provided.</p> <p>Not in association with a service to which item 30315, 30317 or 30320 applies. (Anaes.) (Assist.)</p> <p>Fee: \$1,254.75 Benefit: 75% = \$941.10</p>	
30320	<p>Removal of a mediastinal parathyroid adenoma via sternotomy or mediastinal thorascopic approach.</p> <p>For any particular patient - applicable only once per occasion on which the service is provided.</p> <p>Not in association with a service to which item 30315, 30317 or 30318 applies. (Anaes.) (Assist.)</p> <p>Fee: \$1,502.30 Benefit: 75% = \$1126.75</p>	
30323	<p>Excision of pheochromocytoma or extraadrenal paraganglioma via endoscopic or open approach. (Anaes.) (Assist.)</p> <p>Fee: \$1,502.30 Benefit: 75% = \$1126.75</p>	
30324	<p>Excision of an adrenocortical tumour or hyperplasia via endoscopic or open approach. (Anaes.) (Assist.)</p> <p>Fee: \$1,502.30 Benefit: 75% = \$1126.75</p>	
30326	<p>Thyroglossal cyst or fistula or both, radical removal of, including thyroglossal duct and portion of hyoid bone, on a patient under 10 years of age (Anaes.) (Assist.)</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
	Fee: \$654.45 Benefit: 75% = \$490.85	
30329	LYMPH NODES of GROIN, limited excision of (Anaes.) Fee: \$271.80 Benefit: 75% = \$203.85 85% = \$231.05	
30330	LYMPH NODES of GROIN, radical excision of (Anaes.) (Assist.) Fee: \$791.10 Benefit: 75% = \$593.35	
30332	Lymph nodes of axilla, limited excision of (H) (Anaes.) (Assist.) Fee: \$381.65 Benefit: 75% = \$286.25	
30336	Lymph nodes of axilla, complete excision of (H) (Anaes.) (Assist.) Fee: \$1,145.00 Benefit: 75% = \$858.75	
30382	Enterocutaneous fistula, repair of, if dissection and resection of bowel is performed, with or without anastomosis or formation of a stoma (H) (Anaes.) (Assist.) Fee: \$1,438.50 Benefit: 75% = \$1078.90	
30384	Open or minimally invasive excision of a retroperitoneal mass, 4 cm or greater in largest dimension, lasting more than 3 hours, other than a service to which another item in this Group applies (H) (Anaes.) (Assist.) Fee: \$1,502.30 Benefit: 75% = \$1126.75	
30385	Unplanned return to theatre for laparotomy or laparoscopy for control or drainage of intra-abdominal haemorrhage following abdominal surgery (H) (Anaes.) (Assist.) Fee: \$620.10 Benefit: 75% = \$465.10	
30387	Laparoscopy or laparotomy when an operation is performed on abdominal, retroperitoneal or pelvic viscera, excluding lymph node biopsy, other than a service to which another item in this Group applies (H) (Anaes.) (Assist.) Fee: \$698.95 Benefit: 75% = \$524.25	
30388	Laparotomy for abdominal trauma, including control of haemorrhage (with or without packing) and containment of contamination (H) (Anaes.) (Assist.) Fee: \$1,172.35 Benefit: 75% = \$879.30	
30390	Laparoscopy, diagnostic, with or without aspiration of fluid, on a patient 10 years of age or over, if no other intra-abdominal procedure is performed (H) (Anaes.) (Assist.) (See para TN.8.15 of explanatory notes to this Category) Fee: \$242.05 Benefit: 75% = \$181.55	
30392	RADICAL OR DEBULKING OPERATION for advanced intra-abdominal malignancy, with or without omentectomy, as an independent procedure (Anaes.) (Assist.) Fee: \$742.45 Benefit: 75% = \$556.85	
30396	Laparotomy or laparoscopy for generalised intra-peritoneal sepsis (also known as peritonitis), with or without removal of foreign material or enteric contents, with lavage of the entire peritoneal cavity, with or without closure of the abdomen when performed by laparotomy (H) (Anaes.) (Assist.) Fee: \$1,118.90 Benefit: 75% = \$839.20	

T8. SURGICAL OPERATIONS		1. GENERAL
30397	Laparostomy, via wound previously made and left open or closed, including change of dressings or packs, with or without drainage of loculated collections (H) (Anaes.) Fee: \$255.70 Benefit: 75% = \$191.80	
30399	Laparostomy, final closure of wound made at previous operation, after removal of dressings or packs (Anaes.) (Assist.) Fee: \$351.70 Benefit: 75% = \$263.80	
30400	LAPAROTOMY WITH INSERTION OF PORTACATH for administration of cytotoxic therapy including placement of reservoir (Anaes.) (Assist.) Fee: \$696.15 Benefit: 75% = \$522.15	
30406	PARACENTESIS ABDOMINIS (Anaes.) Fee: \$57.50 Benefit: 75% = \$43.15 85% = \$48.90	
30408	PERITONEOVENOUS shunt, insertion of (Anaes.) (Assist.) Fee: \$431.60 Benefit: 75% = \$323.70	
30409	LIVER BIOPSY, percutaneous (Anaes.) Fee: \$192.00 Benefit: 75% = \$144.00 85% = \$163.20	
30411	LIVER BIOPSY by wedge excision when performed in conjunction with another intraabdominal procedure (Anaes.) Fee: \$97.75 Benefit: 75% = \$73.35	
30412	LIVER BIOPSY by core needle, when performed in conjunction with another intra-abdominal procedure (Anaes.) Fee: \$57.65 Benefit: 75% = \$43.25 85% = \$49.05	
30414	LIVER, subsegmental resection of, (local excision), other than for trauma (Anaes.) (Assist.) Fee: \$759.30 Benefit: 75% = \$569.50	
30415	LIVER, segmental resection of, other than for trauma (Anaes.) (Assist.) Fee: \$1,518.35 Benefit: 75% = \$1138.80	
30416	Liver cysts, greater than 5 cm in diameter, marsupialisation of 4 or less (Anaes.) (Assist.) Fee: \$824.35 Benefit: 75% = \$618.30	
30417	Liver cysts, greater than 5 cm in diameter, marsupialisation of 5 or more (Anaes.) (Assist.) Fee: \$1,236.50 Benefit: 75% = \$927.40	
30418	LIVER, lobectomy of, other than for trauma (Anaes.) (Assist.) Fee: \$1,758.45 Benefit: 75% = \$1318.85	
30419	Liver tumour, other than a hepatocellular carcinoma, destruction of one or more, by local ablation, other than a service associated with a service to which item 50950 or 50952 applies (Anaes.) (Assist.) Fee: \$899.35 Benefit: 75% = \$674.55 85% = \$800.65	

T8. SURGICAL OPERATIONS		1. GENERAL
30421	Liver, extended lobectomy of, or central resections of segments 4, 5 and 8, other than for trauma (Anaes.) (Assist.) Fee: \$2,197.70 Benefit: 75% = \$1648.30	
30422	LIVER, repair of superficial laceration of, for trauma (Anaes.) (Assist.) Fee: \$743.35 Benefit: 75% = \$557.55	
30425	LIVER, repair of deep multiple lacerations of, or debridement of, for trauma (Anaes.) (Assist.) Fee: \$1,438.50 Benefit: 75% = \$1078.90	
30427	LIVER, segmental resection of, for trauma (Anaes.) (Assist.) Fee: \$1,718.20 Benefit: 75% = \$1288.65	
30428	LIVER, lobectomy of, for trauma (Anaes.) (Assist.) Fee: \$1,838.15 Benefit: 75% = \$1378.65 85% = \$1739.45	
30430	Liver, extended lobectomy of, or central resections of segments 4, 5 and 8, for trauma (Anaes.) (Assist.) Fee: \$2,557.20 Benefit: 75% = \$1917.90 85% = \$2458.50	
30431	Liver abscess, single, open or minimally invasive abdominal drainage of, excluding aftercare (Anaes.) (Assist.) Fee: \$573.80 Benefit: 75% = \$430.35 85% = \$487.75	
30433	Liver abscess, multiple, open or minimally invasive abdominal drainage of, excluding aftercare (Anaes.) (Assist.) Fee: \$799.20 Benefit: 75% = \$599.40	
30439	Intraoperative ultrasound of biliary tract, or operative cholangiography, if the service: (a) is performed in association with an intra-abdominal procedure; and (b) is not associated with a service to which item 30442 or 30445 applies (Anaes.) (Assist.) (See para TN.8.208 of explanatory notes to this Category) Fee: \$204.25 Benefit: 75% = \$153.20	
30440	CHOLANGIOGRAM, percutaneous transhepatic, and insertion of biliary drainage tube, using interventional imaging techniques - but not including imaging, not being a service associated with a service to which item 30451 applies (Anaes.) (Assist.) Fee: \$579.40 Benefit: 75% = \$434.55 85% = \$492.50	
30441	Intraoperative ultrasound for staging of intra-abdominal tumours (Anaes.) Fee: \$150.00 Benefit: 75% = \$112.50	
30442	CHOLEDOCHOSCOPY in conjunction with another procedure (Anaes.) (See para TN.8.208 of explanatory notes to this Category) Fee: \$204.25 Benefit: 75% = \$153.20	
30443	Cholecystectomy, by any approach, without cholangiogram (Anaes.) (Assist.) Fee: \$707.10 Benefit: 75% = \$530.35	

T8. SURGICAL OPERATIONS		1. GENERAL
30445	<p>Cholecystectomy, by any approach, with attempted or completed cholangiogram or intraoperative ultrasound of the biliary system, when performed via laparoscopic or open approach or when conversion from laparoscopic to open approach is required (Anaes.) (Assist.)</p> <p>(See para TN.8.208 of explanatory notes to this Category)</p> <p>Fee: \$915.90 Benefit: 75% = \$686.95</p>	
30448	<p>Cholecystectomy, by any approach, involving removal of common duct calculi via the cystic duct, with or without stent insertion (Anaes.) (Assist.)</p> <p>(See para TN.8.208 of explanatory notes to this Category)</p> <p>Fee: \$1,070.95 Benefit: 75% = \$803.25</p>	
30449	<p>Cholecystectomy with removal of common duct calculi via choledochotomy, by any approach, with or without insertion of a stent (Anaes.) (Assist.)</p> <p>(See para TN.8.208 of explanatory notes to this Category)</p> <p>Fee: \$1,190.75 Benefit: 75% = \$893.10</p>	
30450	<p>Calculus of biliary tract, extraction of, using interventional imaging techniques (Anaes.) (Assist.)</p> <p>Fee: \$577.20 Benefit: 75% = \$432.90 85% = \$490.65</p>	
30451	<p>BILIARY DRAINAGE TUBE, exchange of, using interventional imaging techniques - but not including imaging, not being a service associated with a service to which item 30440 applies (Anaes.) (Assist.)</p> <p>Fee: \$294.65 Benefit: 75% = \$221.00 85% = \$250.50</p>	
30452	<p>CHOLEDOCHOSCOPY with balloon dilation of a stricture or passage of stent or extraction of calculi (Anaes.) (Assist.)</p> <p>Fee: \$415.50 Benefit: 75% = \$311.65</p>	
30454	<p>Choledochotomy without cholecystectomy, with or without removal of calculi (Anaes.) (Assist.)</p> <p>Fee: \$1,450.95 Benefit: 75% = \$1088.25</p>	
30455	<p>Choledochotomy with cholecystectomy, with removal of calculi, including biliary intestinal anastomosis (Anaes.) (Assist.)</p> <p>Fee: \$1,450.95 Benefit: 75% = \$1088.25</p>	
30457	<p>CHOLEDOCHOTOMY, intrahepatic, involving removal of intrahepatic bile duct calculi (Anaes.) (Assist.)</p> <p>Fee: \$1,518.35 Benefit: 75% = \$1138.80 85% = \$1419.65</p>	
30458	<p>TRANSDUODENAL OPERATION ON SPHINCTER OF ODDI, involving 1 or more of, removal of calculi, sphincterotomy, sphincteroplasty, biopsy, local excision of peri-ampullary or duodenal tumour, sphincteroplasty of the pancreatic duct, pancreatic duct septoplasty, with or without choledochotomy (Anaes.) (Assist.)</p> <p>Fee: \$1,116.15 Benefit: 75% = \$837.15</p>	
30460	<p>CHOLECYSTODUODENOSTOMY, CHOLECYSTOENTEROSTOMY, CHOLEDOCHOJEJUNOSTOMY or Roux-en-Y as a bypass procedure when no prior biliary surgery performed (Anaes.) (Assist.)</p> <p>Fee: \$949.30 Benefit: 75% = \$712.00</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
30461	<p>Radical resection of porta hepatis (including associated neuro-lymphatic tissue), for cancer, suspected cancer or choledochal cyst, including bile duct excision and biliary-enteric anastomoses, other than a service associated with a service to which item 30440, 30451 or 31454 applies (Anaes.) (Assist.)</p> <p>Fee: \$1,627.25 Benefit: 75% = \$1220.45</p>	
30463	<p>Radical resection of common hepatic duct and right and left hepatic ducts, with 2 duct anastomoses, for cancer, suspected cancer or choledochal cyst (Anaes.) (Assist.)</p> <p>Fee: \$1,998.00 Benefit: 75% = \$1498.50</p>	
30464	<p>Radical resection of common hepatic duct and right and left hepatic ducts, for cancer, suspected cancer or choledochal cyst, involving either or both of the following:</p> <p>(a) more than 2 anastomoses;</p> <p>(b) resection of segment (or major portion of segment) of liver; (Anaes.) (Assist.)</p> <p>Fee: \$2,397.60 Benefit: 75% = \$1798.20</p>	
30469	<p>BILIARY STRICTURE, repair of, after 1 or more operations on the biliary tree (Anaes.) (Assist.)</p> <p>Fee: \$1,894.20 Benefit: 75% = \$1420.65 85% = \$1795.50</p>	
30472	<p>Repair of bile duct injury, including immediate reconstruction, other than a service associated with a service to which item 30584 applies (Anaes.) (Assist.)</p> <p>Fee: \$1,467.15 Benefit: 75% = \$1100.40</p>	
30473	<p>Oesophagoscopy (not being a service associated with a service to which item 41822 applies), gastroscopy, duodenoscopy or panendoscopy (1 or more such procedures), with or without biopsy, not being a service associated with a service to which item 30478 or 30479 applies. (Anaes.)</p> <p>(See para TN.8.17 of explanatory notes to this Category)</p> <p>Fee: \$194.95 Benefit: 75% = \$146.25 85% = \$165.75</p>	
30475	<p>Endoscopic dilatation of stricture of upper gastrointestinal tract (including the use of imaging intensification where clinically indicated) (Anaes.)</p> <p>(See para TN.8.133, TN.8.17 of explanatory notes to this Category)</p> <p>Fee: \$384.10 Benefit: 75% = \$288.10 85% = \$326.50</p>	
30478	<p>Oesophagoscopy (other than a service associated with a service to which item 41822 or 41825 applies), gastroscopy, duodenoscopy, panendoscopy or push enteroscopy, one or more such procedures, if:</p> <p>(a) the procedures are performed using one or more of the following endoscopic procedures:</p> <p>(i) polypectomy;</p> <p>(ii) sclerosing or adrenalin injections;</p> <p>(iii) banding;</p> <p>(iv) endoscopic clips;</p> <p>(v) haemostatic powders;</p> <p>(vi) diathermy;</p> <p>(vii) argon plasma coagulation; and</p>	

T8. SURGICAL OPERATIONS

1. GENERAL

	<p>(b) the procedures are for the treatment of one or more of the following:</p> <ul style="list-style-type: none"> (i) upper gastrointestinal tract bleeding; (ii) polyps; (iii) removal of foreign body; (iv) oesophageal or gastric varices; (v) peptic ulcers; (vi) neoplasia; (vii) benign vascular lesions; (viii) strictures of the gastrointestinal tract; (ix) tumorous overgrowth through or over oesophageal stents; <p>other than a service associated with a service to which item 30473 or 30479 applies (Anaes.)</p> <p>(See para TN.8.17 of explanatory notes to this Category) Fee: \$270.35 Benefit: 75% = \$202.80 85% = \$229.80</p>
30479	<p>Endoscopy with laser therapy, for the treatment of one or more of the following:</p> <ul style="list-style-type: none"> (a) neoplasia; (b) benign vascular lesions; (c) strictures of the gastrointestinal tract; (d) tumorous overgrowth through or over oesophageal stents; (e) peptic ulcers; (f) angiodysplasia; (g) gastric antral vascular ectasia; (h) post-polypectomy bleeding; <p>other than a service associated with a service to which item 30473 or 30478 applies (Anaes.)</p> <p>(See para TN.8.17 of explanatory notes to this Category) Fee: \$524.00 Benefit: 75% = \$393.00 85% = \$445.40</p>
30481	<p>PERCUTANEOUS GASTROSTOMY (initial procedure):</p> <ul style="list-style-type: none"> (a) including any associated imaging services; and

T8. SURGICAL OPERATIONS		1. GENERAL
	(b) excluding the insertion of a device for the purpose of facilitating weight loss (Anaes.) (See para TN.8.17 of explanatory notes to this Category) Fee: \$392.95 Benefit: 75% = \$294.75 85% = \$334.05	
30482	PERCUTANEOUS GASTROSTOMY (repeat procedure): (a) including any associated imaging services; and (b) excluding the insertion of a device for the purpose of facilitating weight loss (Anaes.) Fee: \$279.40 Benefit: 75% = \$209.55 85% = \$237.50	
30483	Gastrostomy button, caecostomy antegrade enema device (chait etc.) or stomal indwelling device: (a) non-endoscopic insertion of; or (b) non-endoscopic replacement of; on a patient 10 years of age or over, excluding the insertion of a device for the purpose of facilitating weight loss (Anaes.) Fee: \$194.90 Benefit: 75% = \$146.20 85% = \$165.70	
Amend 30484	Endoscopic retrograde cholangiopancreatography, other than a service to which item 30664 or 30665 applies (Anaes.) (See para TN.8.17 of explanatory notes to this Category) Fee: \$401.70 Benefit: 75% = \$301.30 85% = \$341.45	
30485	ENDOSCOPIC SPHINCTEROTOMY with or without extraction of stones from common bile duct (Anaes.) (See para TN.8.17 of explanatory notes to this Category) Fee: \$620.10 Benefit: 75% = \$465.10 85% = \$527.10	
30488	SMALL BOWEL INTUBATION as an independent procedure (Anaes.) Fee: \$99.10 Benefit: 75% = \$74.35 85% = \$84.25	
30490	OESOPHAGEAL PROSTHESIS, insertion of, including endoscopy and dilatation (Anaes.) (See para TN.8.17 of explanatory notes to this Category) Fee: \$579.40 Benefit: 75% = \$434.55 85% = \$492.50	
30491	BILE DUCT, ENDOSCOPIC STENTING OF (including endoscopy and dilatation) (Anaes.) (See para TN.8.17 of explanatory notes to this Category) Fee: \$611.30 Benefit: 75% = \$458.50 85% = \$519.65	
30492	BILE DUCT, PERCUTANEOUS STENTING OF (including dilatation when performed), using interventional imaging techniques - but not including imaging (Anaes.) Fee: \$866.55 Benefit: 75% = \$649.95	
30494	ENDOSCOPIC BILIARY DILATATION (Anaes.) (See para TN.8.17 of explanatory notes to this Category) Fee: \$462.85 Benefit: 75% = \$347.15	
30495	PERCUTANEOUS BILIARY DILATATION for biliary stricture, using interventional imaging techniques - but not including imaging (Anaes.)	

T8. SURGICAL OPERATIONS		1. GENERAL
	Fee: \$866.55 Benefit: 75% = \$649.95	
30515	Gastroenterostomy (including gastroduodenostomy), enterocolostomy or enteroenterostomy, as an independent procedure or in combination with another procedure, only if required for irresectable obstruction, other than a service to which any of items 31569 to 31581 apply (Anaes.) (Assist.) Fee: \$775.30 Benefit: 75% = \$581.50	
30517	Revision of gastroenterostomy, pyloroplasty or gastroduodenostomy (Anaes.) (Assist.) Fee: \$1,015.05 Benefit: 75% = \$761.30	
30518	Partial gastrectomy, not being a service associated with a service to which any of items 31569 to 31581 apply (Anaes.) (Assist.) Fee: \$1,086.95 Benefit: 75% = \$815.25	
30520	Gastric tumour, 2 cm or greater in diameter, removal of, by local excision, by laparoscopic or open approach, including any associated anastomosis, excluding polypectomy, other than a service to which item 30518 applies (Anaes.) (Assist.) Fee: \$935.15 Benefit: 75% = \$701.40	
30521	GASTRECTOMY, TOTAL, for benign disease (Anaes.) (Assist.) Fee: \$1,590.35 Benefit: 75% = \$1192.80	
30526	Gastrectomy, total, and removal of lower oesophagus, performed by open or minimally invasive approach, with anastomosis in the mediastinum, including any of the following (if performed): (a) distal pancreatectomy; (b) nodal dissection; (c) splenectomy (Anaes.) (Assist.) Fee: \$2,373.45 Benefit: 75% = \$1780.10	
30529	ANTIREFLUX operation by fundoplasty, with OESOPHAGOPLASTY for stricture or short oesophagus (Anaes.) (Assist.) (See para TN.8.19 of explanatory notes to this Category) Fee: \$1,438.50 Benefit: 75% = \$1078.90	
30530	ANTIREFLUX operation by cardiopexy, with or without fundoplasty (Anaes.) (Assist.) (See para TN.8.19 of explanatory notes to this Category) Fee: \$863.20 Benefit: 75% = \$647.40	
30532	Oesophagogastric myotomy (Heller's operation) by endoscopic, abdominal or thoracic approach, whether performed by open or minimally invasive approach, including fundoplication when performed laparoscopically (Anaes.) (Assist.) (See para TN.8.19 of explanatory notes to this Category) Fee: \$991.10 Benefit: 75% = \$743.35	
30533	OESOPHAGOGASTRIC MYOTOMY (Heller's operation) via abdominal or thoracic approach, WITH FUNDOPLASTY, with or without closure of the diaphragmatic hiatus, by laparoscopy or open operation (Anaes.) (Assist.) (See para TN.8.19 of explanatory notes to this Category) Fee: \$1,178.85 Benefit: 75% = \$884.15	
30559	OESOPHAGUS, local excision for tumour of (Anaes.) (Assist.)	

T8. SURGICAL OPERATIONS		1. GENERAL
	Fee: \$935.15 Benefit: 75% = \$701.40 85% = \$836.45	
30560	Oesophageal perforation, repair of, by abdominal or thoracic approach, including thoracic drainage (Anaes.) (Assist.) Fee: \$1,038.80 Benefit: 75% = \$779.10	
30562	Enterostomy or colostomy, closure of (not involving resection of bowel), on a patient 10 years of age or over (Anaes.) (Assist.) Fee: \$654.85 Benefit: 75% = \$491.15	
30563	COLOSTOMY OR ILEOSTOMY, refashioning of, on a person 10 years of age or over (Anaes.) (Assist.) Fee: \$654.85 Benefit: 75% = \$491.15 85% = \$556.65	
30565	SMALL INTESTINE, resection of, without anastomosis (including formation of stoma) (Anaes.) (Assist.) Fee: \$959.05 Benefit: 75% = \$719.30	
30574	NOTE: <i>Multiple Operation and Multiple Anaesthetic rules apply to this item</i> Appendectomy, when performed in conjunction with another intra-abdominal procedure and during which a specimen is collected and sent for pathological testing (Anaes.) Fee: \$67.85 Benefit: 75% = \$50.90	
30577	Initial pancreatic necrosectomy by open, laparoscopic or endoscopic approach, excluding aftercare (Anaes.) (Assist.) Fee: \$1,198.85 Benefit: 75% = \$899.15	
30583	Distal pancreatectomy with splenic preservation, by open or minimally invasive approach (Anaes.) (Assist.) Fee: \$1,710.90 Benefit: 75% = \$1283.20	
30584	Pancreatico duodenectomy (Whipple's procedure), with or without preservation of pylorus, including any of the following (if performed): (a) cholecystectomy; (b) pancreatico-biliary anastomosis; (c) gastro-jejunal anastomosis (Anaes.) (Assist.) Fee: \$3,302.10 Benefit: 75% = \$2476.60	
30589	PANCREATICO-JEJUNOSTOMY for pancreatitis or trauma (Anaes.) (Assist.) Fee: \$1,377.05 Benefit: 75% = \$1032.80	
30590	PANCREATICO-JEJUNOSTOMY following previous pancreatic surgery (Anaes.) (Assist.) Fee: \$1,518.35 Benefit: 75% = \$1138.80	
30593	PANCREATECTOMY, near total or total (including duodenum), with or without splenectomy (Anaes.) (Assist.) Fee: \$2,077.85 Benefit: 75% = \$1558.40 85% = \$1979.15	
30594	PANCREATECTOMY for pancreatitis following previously attempted drainage procedure or partial resection (Anaes.) (Assist.)	

T8. SURGICAL OPERATIONS		1. GENERAL
	Fee: \$2,397.60 Benefit: 75% = \$1798.20	
30596	SPLENORRHAPHY OR PARTIAL SPLENECTOMY (Anaes.) (Assist.) Fee: \$987.65 Benefit: 75% = \$740.75	
30599	SPLENECTOMY, for massive spleen (weighing more than 1500 grams) or involving thoraco-abdominal incision (Anaes.) (Assist.) Fee: \$1,438.50 Benefit: 75% = \$1078.90	
30600	Emergency repair of diaphragmatic laceration or hernia, following recent trauma, by any approach, including when performed in conjunction with another procedure indicated as a result of abdominal or chest trauma (Anaes.) (Assist.) Fee: \$855.40 Benefit: 75% = \$641.55	
30601	Diaphragmatic hernia, congenital, or delayed presentation of traumatic rupture, repair of, by thoracic or abdominal approach, on a patient 10 years of age or over, other than a service to which any of items 31569 to 31581 apply (Anaes.) (Assist.) Fee: \$1,053.75 Benefit: 75% = \$790.35	
30606	PORTAL HYPERTENSION, oesophageal transection via stapler or oversew of gastric varices with or without devascularisation (Anaes.) (Assist.) Fee: \$1,222.65 Benefit: 75% = \$917.00	
30608	Small intestine, resection of, with anastomosis, on a patient under 10 years of age (Anaes.) (Assist.) Fee: \$1,385.00 Benefit: 75% = \$1038.75	
30611	Benign tumour of soft tissue (other than tumours of skin, cartilage and bone, simple lipomas covered by item 31345 and lipomata), removal of, by surgical excision, on a patient under 10 years of age, if the specimen excised is sent for histological confirmation of diagnosis, other than a service to which another item in this Group applies (Anaes.) (Assist.) Fee: \$620.15 Benefit: 75% = \$465.15 85% = \$527.15	
30615	Strangulated, incarcerated or obstructed hernia, repair of, without bowel resection, on a patient 10 years of age or over (Anaes.) (Assist.) Fee: \$573.80 Benefit: 75% = \$430.35	
30618	Lymph nodes of neck, selective dissection of one or 2 lymph node levels involving removal of soft tissue and lymph nodes from one side of the neck, on a patient under 10 years of age (Anaes.) (Assist.) (See para TN.8.24 of explanatory notes to this Category) Fee: \$574.85 Benefit: 75% = \$431.15 85% = \$488.65	
30619	Laparoscopic splenectomy, on a patient under 10 years of age (Anaes.) (Assist.) Fee: \$1,030.60 Benefit: 75% = \$772.95	
30621	Repair of symptomatic umbilical, epigastric or linea alba hernia requiring mesh or other repair, by open or minimally invasive approach, in a patient 10 years of age or over, other than a service to which item 30651 or 30655 applies (Anaes.) (Assist.) Fee: \$448.55 Benefit: 75% = \$336.45	
30622	Caecostomy, enterostomy, colostomy, enterotomy, colotomy, cholecystostomy, gastrostomy, gastrotomy, reduction of intussusception, removal of Meckel's diverticulum, suture of perforated peptic	

T8. SURGICAL OPERATIONS		1. GENERAL
	ulcer, simple repair of ruptured viscus, reduction of volvulus, pyloroplasty or drainage of pancreas, on a patient under 10 years of age (Anaes.) (Assist.) (See para TN.8.14 of explanatory notes to this Category) Fee: \$745.95 Benefit: 75% = \$559.50	
30623	Laparotomy involving division of peritoneal adhesions (if no other intra-abdominal procedure is performed), on a patient under 10 years of age (Anaes.) (Assist.) Fee: \$745.95 Benefit: 75% = \$559.50	
30626	Laparotomy involving division of adhesions in association with another intra-abdominal procedure if the time taken to divide the adhesions is between 45 minutes and 2 hours, on a patient under 10 years of age (Anaes.) (Assist.) Fee: \$749.40 Benefit: 75% = \$562.05	
30627	Laparoscopy, diagnostic, if no other intra-abdominal procedure is performed, on a patient under 10 years of age (H) (Anaes.) (See para TN.8.15 of explanatory notes to this Category) Fee: \$314.75 Benefit: 75% = \$236.10	
30628	HYDROCELE, tapping of Fee: \$39.20 Benefit: 75% = \$29.40 85% = \$33.35	
30629	Orchidectomy, radical, including spermatic cord, unilateral, for tumour, inguinal approach, without insertion of testicular prosthesis, other than a service associated with a service to which item 30631, 30635, 30641, 30643 or 30644 applies (Anaes.) (Assist.) Fee: \$573.80 Benefit: 75% = \$430.35	
30630	Insertion of testicular prosthesis, at least 6 months following orchidectomy (H) (Anaes.) (Assist.) Fee: \$521.50 Benefit: 75% = \$391.15	
30631	Hydrocele, removal of, other than a service associated with a service to which item 30641, 30642 or 30644 applies (Anaes.) Fee: \$260.50 Benefit: 75% = \$195.40 85% = \$221.45	
30635	Varicocele, surgical correction of, including microsurgical techniques, other than a service associated with a service to which item 30390, 30627, 30641, 30642 or 30644 applies—one procedure (Anaes.) (Assist.) Fee: \$321.15 Benefit: 75% = \$240.90	
30636	Gastrostomy button, caecostomy antegrade enema device (chait etc.) or stomal indwelling device, non-endoscopic insertion of, or non-endoscopic replacement of, on a patient under 10 years of age (Anaes.) Fee: \$256.65 Benefit: 75% = \$192.50 85% = \$218.20	
30637	Enterostomy or colostomy, closure of (not involving resection of bowel), on a patient under 10 years of age (Anaes.) (Assist.) Fee: \$851.50 Benefit: 75% = \$638.65	
30639	Colostomy or ileostomy, refashioning of, on a patient under 10 years of age (Anaes.) (Assist.)	

T8. SURGICAL OPERATIONS		1. GENERAL
	Fee: \$851.50 Benefit: 75% = \$638.65 85% = \$752.80	
30640	Repair of large and irreducible scrotal hernia, if surgery exceeds 2 hours, in a patient 10 years of age or over, other than a service to which item 30615, 30621, 30648, 30651 or 30655 applies (Anaes.) (Assist.) Fee: \$1,007.10 Benefit: 75% = \$755.35	
30641	Orchidectomy, simple or subcapsular, unilateral with or without insertion of testicular prosthesis (H) (Anaes.) (Assist.) Fee: \$448.55 Benefit: 75% = \$336.45	
30642	Orchidectomy, radical, including spermatic cord, unilateral, for tumour, inguinal approach, with insertion of testicular prosthesis, other than a service associated with a service to which item 30631, 30635, 30641, 30643, 30644 or 45051 applies (Anaes.) (Assist.) Fee: \$834.50 Benefit: 75% = \$625.90	
30643	Exploration of spermatic cord, inguinal approach, with or without testicular biopsy, with or without excision of spermatic cord lesion, for a patient under 10 years of age, other than a service associated with a service to which item 30629, 30630 or 30642 applies (Anaes.) (Assist.) Fee: \$745.95 Benefit: 75% = \$559.50	
30644	Exploration of spermatic cord, inguinal approach, with or without testicular biopsy, with or without excision of spermatic cord lesion, for a patient at least 10 years of age, other than a service associated with a service to which item 30629, 30630 or 30642 applies (Anaes.) (Assist.) Fee: \$573.80 Benefit: 75% = \$430.35	
30645	Appendicectomy, on a patient under 10 years of age, other than a service to which item 30574 applies (Anaes.) (Assist.) Fee: \$637.25 Benefit: 75% = \$477.95	
30646	Laparoscopic appendicectomy, on a patient under 10 years of age (Anaes.) (Assist.) Fee: \$637.25 Benefit: 75% = \$477.95	
30648	Femoral or inguinal hernia or infantile hydrocele, repair of, by open or minimally invasive approach, on a patient 10 years of age or over, other than a service to which item 30615 or 30651 applies (Anaes.) (Assist.) Fee: \$511.35 Benefit: 75% = \$383.55	
30649	Haemorrhage, arrest of, following circumcision requiring general anaesthesia, on a patient under 10 years of age (Anaes.) Fee: \$206.55 Benefit: 75% = \$154.95 85% = \$175.60	
30651	Ventral hernia repair involving primary fascial closure by suture, with or without onlay mesh or insertion of intraperitoneal onlay mesh repair, without closure of the defect or advancement of the rectus muscle toward the midline, by open or minimally invasive approach, in a patient 10 years of age or over, other than a service associated with a service to which item 30175, 30621, 30655 or 30657 applies (H) (Anaes.) (Assist.) Fee: \$573.80 Benefit: 75% = \$430.35	
30652	Recurrent groin hernia regardless of size of defect, repair of, with or without mesh, by open or minimally invasive approach, in a patient 10 years of age or over (Anaes.) (Assist.)	

T8. SURGICAL OPERATIONS		1. GENERAL
	Fee: \$573.80 Benefit: 75% = \$430.35	
30654	Circumcision of the penis, with topical or local analgesia, other than a service to which item 30658 applies Fee: \$51.15 Benefit: 75% = \$38.40 85% = \$43.50	
30655	Ventral hernia, repair of, with advancement of the rectus muscles to the midline using a retro-rectus, pre-peritoneal or sublay technique, by open or minimally invasive approach, in a patient 10 years of age or over, other than a service associated with a service to which item 30175, 30621 or 30651 applies (H) (Anaes.) (Assist.) Fee: \$1,007.10 Benefit: 75% = \$755.35	
30657	Unilateral abdominal wall reconstruction with component separation, including transversus abdominus release and external oblique release for abdominal wall closure by mobilising the rectus abdominis muscles to the midline, by open or minimally invasive approach (Anaes.) (Assist.) Fee: \$1,434.10 Benefit: 75% = \$1075.60	
30658	Circumcision of the penis, when performed under general or regional anaesthesia and in conjunction with a service to which an item in Group T7 or Group T10 applies (Anaes.) Fee: \$156.25 Benefit: 75% = \$117.20 85% = \$132.85	
30661	Minor surgical repair following a complication from the circumcision of a penis, when performed in conjunction with a service to which an item in Group T7 or Group T10 applies, other than a service associated with a service to which item 45206 applies (H) (Anaes.) (See para TN.8.252 of explanatory notes to this Category) Fee: \$422.20 Benefit: 75% = \$316.65	
30662	Complex surgical repair following a complication from the circumcision of a penis, including single stage local flap, if indicated, to repair one defect, on genitals (other than a service associated with a service to which item 37819, 37822, 45200, 45201, 45202, 45203 or 45206 applies) (H) (Anaes.) (Assist.) (See para TN.8.252 of explanatory notes to this Category) Fee: \$844.30 Benefit: 75% = \$633.25	
30663	Haemorrhage, arrest of, following circumcision requiring general anaesthesia, on a patient 10 years of age or over (Anaes.) Fee: \$158.90 Benefit: 75% = \$119.20 85% = \$135.10	
New 30664	Endoscopic retrograde cholangiopancreatography (ERCP), with single operator, single use peroral cholangiopancreatotomy (POCPS) and biopsy, for the diagnosis of biliary strictures for a patient for whom: (a) a previous ERCP service has been provided; and (b) results from guided brush cytology or intraductal biopsy (or both) are indeterminate Applicable not more than 2 times in a 12 month period, or not more than 3 times in a 12 month period if the patient has been diagnosed with primary sclerosing cholangitis (PSC) (H) (Anaes.) (Assist.) Fee: \$644.40 Benefit: 75% = \$483.30	

T8. SURGICAL OPERATIONS

1. GENERAL

<p>New 30665</p>	<p>Endoscopic retrograde cholangiopancreatography (ERCP), with single operator, single use peroral cholangiopancreatoscopy (POCPS) and electrohydraulic or laser lithotripsy for the removal of biliary stones that are:</p> <p>(a) greater than 10mm in diameter; or</p> <p>(b) proximal to a stricture;</p> <p>for a patient for whom there has been at least one failed attempt at removal via ERCP extraction techniques</p> <p>Applicable not more than 2 times per treatment cycle</p> <p>(H) (Anaes.) (Assist.)</p> <p>Fee: \$901.35 Benefit: 75% = \$676.05</p>
<p>30666</p>	<p>PARAPHIMOSIS or PHIMOSIS, reduction of, under general anaesthesia, with or without dorsal incision, not being a service associated with a service to which another item in this Group applies (Anaes.)</p> <p>Fee: \$52.20 Benefit: 75% = \$39.15 85% = \$44.40</p>
<p>30672</p>	<p>COCCYX, excision of (Anaes.) (Assist.)</p> <p>Fee: \$490.30 Benefit: 75% = \$367.75</p>
<p>30676</p>	<p>Pilonidal sinus or cyst, or sacral sinus or cyst, definitive excision of (Anaes.)</p> <p>(See para TN.8.207 of explanatory notes to this Category)</p> <p>Fee: \$417.25 Benefit: 75% = \$312.95 85% = \$354.70</p>
<p>30679</p>	<p>PILONIDAL SINUS, injection of sclerosant fluid under anaesthesia (Anaes.)</p> <p>Fee: \$106.00 Benefit: 75% = \$79.50 85% = \$90.10</p>
<p>30680</p>	<p>Balloon enteroscopy, examination of the small bowel (oral approach), with or without biopsy, WITHOUT intraprocedural therapy, for diagnosis of patients with obscure gastrointestinal bleeding, not in association with another item in this subgroup (with the exception of item 30682 or 30686)</p> <p>The patient to whom the service is provided must:</p> <p>(i) have recurrent or persistent bleeding; and</p> <p>(ii) be anaemic or have active bleeding; and</p> <p>(iii) have had an upper gastrointestinal endoscopy and a colonoscopy performed which did not identify the cause of the bleeding. (Anaes.)</p> <p>(See para TN.8.17 of explanatory notes to this Category)</p> <p>Fee: \$1,287.85 Benefit: 75% = \$965.90 85% = \$1189.15</p>
<p>30682</p>	<p>Balloon enteroscopy, examination of the small bowel (anal approach), with or without biopsy, WITHOUT intraprocedural therapy, for diagnosis of patients with obscure gastrointestinal bleeding, not in association with another item in this subgroup (with the exception of item 30680 or 30684)</p>

T8. SURGICAL OPERATIONS

1. GENERAL

	<p>The patient to whom the service is provided must:</p> <ul style="list-style-type: none"> (i) have recurrent or persistent bleeding; and (ii) be anaemic or have active bleeding; and (iii) have had an upper gastrointestinal endoscopy and a colonoscopy performed which did not identify the cause of the bleeding. <p>(Anaes.)</p> <p>(See para TN.8.17 of explanatory notes to this Category) Fee: \$1,287.85 Benefit: 75% = \$965.90 85% = \$1189.15</p>
30684	<p>Balloon enteroscopy, examination of the small bowel (oral approach), with or without biopsy, WITH 1 or more of the following procedures (snare polypectomy, removal of foreign body, diathermy, heater probe, laser coagulation or argon plasma coagulation), for diagnosis and management of patients with obscure gastrointestinal bleeding, not in association with another item in this subgroup (with the exception of item 30682 or 30686)</p> <p>The patient to whom the service is provided must:</p> <ul style="list-style-type: none"> (i) have recurrent or persistent bleeding; and (ii) be anaemic or have active bleeding; and (iii) have had an upper gastrointestinal endoscopy and a colonoscopy performed which did not identify the cause of the bleeding. <p>(Anaes.)</p> <p>(See para TN.8.17 of explanatory notes to this Category) Fee: \$1,584.85 Benefit: 75% = \$1188.65 85% = \$1486.15</p>

30720	<p>Appendicectomy, on a patient 10 years of age or over, whether performed by:</p> <p>(a) laparoscopy or right iliac fossa open incision; or</p> <p>(b) conversion of a laparoscopy to an open right iliac fossa incision;</p> <p>other than a service to which item 30574 applies (Anaes.) (Assist.)</p> <p>Fee: \$490.30 Benefit: 75% = \$367.75</p>
30721	<p>Laparotomy or laparoscopy, or laparoscopy converted to laparotomy, with or without associated biopsies, including the division of adhesions (if performed, but only if the time taken to divide adhesions is 45 minutes or less), if no other intra-abdominal procedure is performed (Anaes.) (Assist.)</p> <p>Fee: \$531.95 Benefit: 75% = \$399.00</p>
30722	<p>Laparotomy or laparoscopy, on a patient 10 years of age or over, including any of the following procedures (if performed, and including division of one or more adhesions, but only if the time taken to divide the adhesions is 45 minutes or less):</p> <p>(a) colostomy;</p> <p>(b) colotomy;</p> <p>(c) cholecystostomy;</p>

T8. SURGICAL OPERATIONS

1. GENERAL

	<p>(d) enterostomy; (e) enterotomy; (f) gastrostomy; (g) gastrotomy; (h) caecostomy; (i) gastric fixation by cardiopexy; (j) reduction of intussusception; (k) simple repair of ruptured viscus (including perforated peptic ulcer); (l) reduction of volvulus; (m) drainage of pancreas (Anaes.) (Assist.)</p> <p>(See para TN.8.14 of explanatory notes to this Category) Fee: \$573.80 Benefit: 75% = \$430.35</p>
30723	<p>Laparotomy, laparoscopy or extra-peritoneal approach, for drainage of an intra-abdominal, pancreatic or retroperitoneal collection or abscess (Anaes.) (Assist.)</p> <p>Fee: \$573.80 Benefit: 75% = \$430.35</p>
30724	<p>Laparotomy or laparoscopy with division of adhesions, lasting more than 45 minutes but less than 2 hours, performed either: (a) as a primary procedure; or (b) when the division of adhesions is performed in conjunction with another primary procedure—to provide access to a surgical field (but excluding mobilisation or normal anatomical dissection of the organ or structure for which the primary procedure is being carried out) (Anaes.) (Assist.)</p> <p>Fee: \$576.45 Benefit: 75% = \$432.35</p>
30725	<p>Laparotomy or laparoscopy for intestinal obstruction or division of extensive, complex adhesions, lasting 2 hours or more, performed either: a) as a primary procedure; or b) when the division of adhesions is performed in conjunction with another procedure—to provide access to a surgical field, but excluding mobilisation or normal anatomical dissection of the organ or structure for which the other procedure is being carried out (Anaes.) (Assist.)</p> <p>Fee: \$1,021.60 Benefit: 75% = \$766.20</p>
30730	<p>Small intestine, resection of, including either of the following: (a) a small bowel diverticulum (such as Meckel’s procedure) with anastomosis; (b) stricturoplasty (Anaes.) (Assist.)</p> <p>Fee: \$1,065.35 Benefit: 75% = \$799.05</p>
30731	<p>Intraoperative enterotomy for visualisation of the small intestine by endoscopy, including endoscopic examination using a flexible endoscope, with or without biopsies (Anaes.) (Assist.)</p> <p>Fee: \$799.20 Benefit: 75% = \$599.40</p>
30732	<p>Peritonectomy, lasting more than 5 hours, including hyperthermic intra-peritoneal chemotherapy (Anaes.) (Assist.)</p> <p>(See para TN.8.205 of explanatory notes to this Category) Fee: \$4,375.35 Benefit: 75% = \$3281.55</p>
30750	<p>Oesophagectomy with colon or jejunal interposition graft, by any approach, including: (a) any gastrointestinal anastomoses (except vascular anastomoses); and (b) anastomoses in the chest or neck (if appropriate) One surgeon (Anaes.) (Assist.)</p>

T8. SURGICAL OPERATIONS		1. GENERAL
	Fee: \$2,269.95 Benefit: 75% = \$1702.50	
30751	Oesophagectomy with colon or jejunal interposition graft, by any approach, including: (a) any gastrointestinal anastomoses (except vascular anastomoses); and (b) anastomoses in the chest or neck (if appropriate) Conjoint surgery, principal surgeon (Anaes.) (Assist.) Fee: \$2,269.95 Benefit: 75% = \$1702.50	
30752	Oesophagectomy with colon or jejunal interposition graft, by any approach, including: (a) any gastrointestinal anastomoses (except vascular anastomoses); and (b) anastomoses in the chest or neck (if appropriate) Conjoint surgery, co-surgeon (Anaes.) (Assist.) Fee: \$1,702.40 Benefit: 75% = \$1276.80	
30753	Oesophagectomy, by any approach, including: (a) gastric reconstruction by abdominal mobilisation, thoracotomy or thoracoscopy; and (b) anastomosis in the neck or chest One surgeon (Anaes.) (Assist.) Fee: \$1,894.20 Benefit: 75% = \$1420.65	
30754	Oesophagectomy, by any approach, including: (a) gastric reconstruction by abdominal mobilisation, thoracotomy or thoracoscopy; and (b) anastomosis in the neck or chest Conjoint surgery, principal surgeon (Anaes.) (Assist.) Fee: \$1,894.20 Benefit: 75% = \$1420.65	
30755	Oesophagectomy by any approach, including: (a) gastric reconstruction by abdominal mobilisation, thoracotomy or thoracoscopy; and (b) anastomosis in the neck or chest Conjoint surgery, co-surgeon (Anaes.) (Assist.) Fee: \$1,420.65 Benefit: 75% = \$1065.50	
30756	Antireflux operation by fundoplasty, with or without cardiopexy, by any approach, with or without closure of the diaphragmatic hiatus, other than a service to which item 30601 applies (Anaes.) (Assist.) (See para TN.8.19 of explanatory notes to this Category) Fee: \$959.05 Benefit: 75% = \$719.30	
30760	Vagotomy, with or without gastroenterostomy, pyloroplasty or other drainage procedure (Anaes.) (Assist.) Fee: \$647.35 Benefit: 75% = \$485.55	
30761	Bleeding peptic ulcer, control of, by laparoscopy or laparotomy, involving suture of bleeding point or wedge excision (with or without gastric resection), including either of the following (if performed): (a) vagotomy and pyloroplasty; (b) gastroenterostomy (Anaes.) (Assist.) Fee: \$835.15 Benefit: 75% = \$626.40	
30762	Gastrectomy, subtotal or total radical, for carcinoma, by open or minimally invasive approach, including all necessary anastomoses, including either or both of the following (if performed): (a) extended lymph node dissection; (b) splenectomy (Anaes.) (Assist.) Fee: \$1,830.15 Benefit: 75% = \$1372.65	

T8. SURGICAL OPERATIONS		1. GENERAL
30763	<p>Gastric tumour, 2cm or greater in diameter, removal of, by local excision, by endoscopic approach, including any required anastomosis, excluding polypectomy, other than a service to which item 30518 applies (Anaes.) (Assist.)</p> <p>Fee: \$743.35 Benefit: 75% = \$557.55</p>	
30770	<p>Hydatid cyst of liver, peritoneum or viscus, complete removal of contents of, with or without suture of biliary radicles, with omentoplasty or myeloplasty (Anaes.) (Assist.)</p> <p>Fee: \$920.60 Benefit: 75% = \$690.45</p>	
30771	<p>Portal hypertension, porto-caval, meso-caval or selective spleno-renal shunt for (Anaes.) (Assist.)</p> <p>Fee: \$1,856.75 Benefit: 75% = \$1392.60</p>	
30780	<p>Intrahepatic biliary bypass of left or right hepatic ductal system by Roux-en-Y loop to peripheral ductal system (Anaes.) (Assist.)</p> <p>Fee: \$1,546.40 Benefit: 75% = \$1159.80</p>	
30790	<p>Pancreatic cyst anastomosis to stomach, duodenum or small intestine, by endoscopic, open or minimally invasive approach, with or without the use of endoscopic or intraoperative ultrasound (Anaes.) (Assist.)</p> <p>Fee: \$771.95 Benefit: 75% = \$579.00</p>	
30791	<p>Pancreatic necrosectomy, by open, laparoscopic or endoscopic approach, excluding aftercare, subsequent procedure (Anaes.) (Assist.)</p> <p>Fee: \$479.60 Benefit: 75% = \$359.70</p>	
30792	<p>Distal pancreatectomy with splenectomy, by open or minimally invasive approach (Anaes.) (Assist.)</p> <p>Fee: \$1,314.55 Benefit: 75% = \$985.95</p>	
30800	<p>Splenectomy, by open or minimally invasive approach, other than a service to which item 30792 applies (Anaes.) (Assist.)</p> <p>Fee: \$792.75 Benefit: 75% = \$594.60</p>	
30810	<p>Exploration of pancreas or duodenum for endocrine tumour, including associated imaging, either: (a) followed by local excision of tumour; or (b) when, after extensive exploration, no tumour is found (Anaes.) (Assist.)</p> <p>(See para TN.8.206 of explanatory notes to this Category)</p> <p>Fee: \$1,262.75 Benefit: 75% = \$947.10</p>	
30820	<p>Lymph node of neck, biopsy of, by open procedure, if the specimen excised is sent for pathological examination (Anaes.)</p> <p>(See para TN.8.7 of explanatory notes to this Category)</p> <p>Fee: \$202.40 Benefit: 75% = \$151.80 85% = \$172.05</p>	
31000	<p>Mohs surgery of skin tumour located on the head, neck, genitalia, hand, digits, leg (below knee) or foot, utilising horizontal frozen sections with mapping of all excised tissue, and histological examination of all excised tissue by the specialist performing the procedure, if the specialist is recognised by the Australasian College of Dermatologists as an approved Mohs surgeon—6 or fewer sections (Anaes.)</p> <p>(See para TN.8.151 of explanatory notes to this Category)</p> <p>Fee: \$639.40 Benefit: 75% = \$479.55 85% = \$543.50</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
31001	<p>Mohs surgery of skin tumour located on the head, neck, genitalia, hand, digits, leg (below knee) or foot, utilising horizontal frozen sections with mapping of all excised tissue, and histological examination of all excised tissue by the specialist performing the procedure, if the specialist is recognised by the Australasian College of Dermatologists as an approved Mohs surgeon—7 to 12 sections (inclusive) (Anaes.)</p> <p>(See para TN.8.151 of explanatory notes to this Category)</p> <p>Fee: \$799.20 Benefit: 75% = \$599.40 85% = \$700.50</p>	
31002	<p>Mohs surgery of skin tumour located on the head, neck, genitalia, hand, digits, leg (below knee) or foot, utilising horizontal frozen sections with mapping of all excised tissue, and histological examination of all excised tissue by the specialist performing the procedure, if the specialist is recognised by the Australasian College of Dermatologists as an approved Mohs surgeon—13 or more sections (Anaes.)</p> <p>(See para TN.8.151 of explanatory notes to this Category)</p> <p>Fee: \$959.05 Benefit: 75% = \$719.30 85% = \$860.35</p>	
31003	<p>Mohs surgery of skin tumour utilising horizontal frozen sections with mapping of all excised tissue, and histological examination of all excised tissue by the specialist performing the procedure, if the specialist is recognised by the Australasian College of Dermatologists as an approved Mohs surgeon—6 or fewer sections</p> <p>Not applicable to a service performed in association with a service to which item 31000 applies (Anaes.)</p> <p>(See para TN.8.151 of explanatory notes to this Category)</p> <p>Fee: \$639.40 Benefit: 75% = \$479.55 85% = \$543.50</p>	
31004	<p>Mohs surgery of skin tumour utilising horizontal frozen sections with mapping of all excised tissue, and histological examination of all excised tissue by the specialist performing the procedure, if the specialist is recognised by the Australasian College of Dermatologists as an approved Mohs surgeon—7 to 12 sections (inclusive)</p> <p>Not applicable to a service performed in association with a service to which item 31001 applies (Anaes.)</p> <p>(See para TN.8.151 of explanatory notes to this Category)</p> <p>Fee: \$799.20 Benefit: 75% = \$599.40 85% = \$700.50</p>	
31005	<p>Mohs surgery of skin tumour utilising horizontal frozen sections with mapping of all excised tissue, and histological examination of all excised tissue by the specialist performing the procedure, if the specialist is recognised by the Australasian College of Dermatologists as an approved Mohs surgeon—13 or more sections</p> <p>Not applicable to a service performed in association with a service to which item 31002 applies (Anaes.)</p> <p>(See para TN.8.151 of explanatory notes to this Category)</p> <p>Fee: \$959.05 Benefit: 75% = \$719.30 85% = \$860.35</p>	
31206	<p>Tumour, cyst, ulcer or scar (other than a scar removed during the surgical approach at an operation), removal of and suture, if:</p> <ul style="list-style-type: none"> (a) the lesion size is not more than 10 mm in diameter; and (b) the removal is from a mucous membrane by surgical excision (other than by shave excision); and (c) the specimen excised is sent for histological examination (Anaes.) 	

T8. SURGICAL OPERATIONS		1. GENERAL
	Fee: \$105.10 Benefit: 75% = \$78.85 85% = \$89.35	
	Tumour, cyst, ulcer or scar (other than a scar removed during the surgical approach at an operation), removal of and suture, if:	
	(a) the lesion size is more than 10 mm, but not more than 20 mm, in diameter; and	
	(b) the removal is from a mucous membrane by surgical excision (other than by shave excision); and	
	(c) the specimen excised is sent for histological examination (Anaes.)	
31211	Fee: \$135.50 Benefit: 75% = \$101.65 85% = \$115.20	
	Tumour, cyst, ulcer or scar (other than a scar removed during the surgical approach at an operation), removal of and suture, if:	
	(a) the lesion size is more than 20 mm in diameter; and	
	(b) the removal is from a mucous membrane by surgical excision (other than by shave excision); and	
	(c) the specimen excised is sent for histological examination (Anaes.)	
31216	Fee: \$158.05 Benefit: 75% = \$118.55 85% = \$134.35	
	Tumours (other than viral verrucae (common warts) and seborrheic keratoses), lipomas, cysts, ulcers or scars (other than scars removed during the surgical approach at an operation), removal of 4 to 10 lesions and suture, if:	
	(a) the size of each lesion is not more than 10 mm in diameter; and	
	(b) each removal is from cutaneous or subcutaneous tissue by surgical excision (other than by shave excision); and	
	(c) all of the specimens excised are sent for histological examination (Anaes.)	
31220	Fee: \$236.10 Benefit: 75% = \$177.10 85% = \$200.70	
	Tumours, cysts, ulcers or scars (other than scars removed during the surgical approach at an operation), removal of 4 to 10 lesions, if:	
	(a) the size of each lesion is not more than 10 mm in diameter; and	
	(b) each removal is from a mucous membrane by surgical excision (other than by shave excision); and	
	(c) each site of excision is closed by suture; and	
	(d) all of the specimens excised are sent for histological examination (Anaes.)	
31221	Fee: \$236.10 Benefit: 75% = \$177.10 85% = \$200.70	
	Tumours (other than viral verrucae (common warts) and seborrheic keratoses), lipomas, cysts, ulcers or scars (other than scars removed during the surgical approach at an operation), removal of more than 10 lesions, if:	
	(a) the size of each lesion is not more than 10 mm in diameter; and	
31225		

T8. SURGICAL OPERATIONS		1. GENERAL
	<p>(b) each removal is from cutaneous or subcutaneous tissue or mucous membrane by surgical excision (other than by shave excision); and</p> <p>(c) each site of excision is closed by suture; and</p> <p>(d) all of the specimens excised are sent for histological examination</p> <p>(Anaes.)</p> <p>Fee: \$419.70 Benefit: 75% = \$314.80 85% = \$356.75</p>	
31227	<p>Tumour, lipoma or cyst, removal of single lesion by excision and suture, where removal is from subcutaneous tissue and the specimen excised is sent for histological examination (Anaes.)</p> <p>Fee: \$147.45 Benefit: 75% = \$110.60 85% = \$125.35</p>	
31245	<p>SKIN AND SUBCUTANEOUS TISSUE, extensive excision of, in the treatment of SUPPURATIVE HIDRADENITIS (excision from axilla, groin or natal cleft) or SYCOSIS BARBAE or NUCHAE (excision from face or neck) (Anaes.)</p> <p>(See para TN.8.23 of explanatory notes to this Category)</p> <p>Fee: \$406.10 Benefit: 75% = \$304.60 85% = \$345.20</p>	
31250	<p>GIANT HAIRY or COMPOUND NAEVUS, excision of an area at least 1 percent of body surface <i>where the specimen excised is sent for histological confirmation of diagnosis</i> (Anaes.)</p> <p>Fee: \$406.10 Benefit: 75% = \$304.60 85% = \$345.20</p>	
31340	<p>Muscle, bone or cartilage, excision of one or more of, if clinically indicated, and if:</p> <p>(a) the specimen excised is sent for histological confirmation; and</p> <p>(b) a malignant tumour of skin covered by item 31000, 31001, 31002, 31003, 31004, 31005, 31356, 31358, 31359, 31361, 31363, 31365, 31367, 31369, 31371, 31372, 31373, 31374, 31375, 31376, 31377, 31378, 31379, 31380, 31381, 31382 or 31383 is excised</p> <p>(Anaes.)</p> <p>Derived Fee: 75% of the fee for excision of malignant tumour</p>	
Amend 31344	<p>Lipoma, removal of, by surgical excision or liposuction, if:</p> <p>(a) the lesion:</p> <p>(i) is subcutaneous and 150mm or more in diameter; or</p> <p>(ii) is submuscular, intramuscular or involves dissection of a named nerve or vessel and is 50 mm or more in diameter; and</p> <p>(b) a specimen of the excised lipoma is sent for histological confirmation of diagnosis</p> <p>(H) (Anaes.) (Assist.)</p> <p>Fee: \$695.35 Benefit: 75% = \$521.55</p>	
31345	<p>Lipoma, removal of, by surgical excision or liposuction, if:</p> <p>(a) the lesion is:</p> <p>(i) subcutaneous and 50 mm or more in diameter but less than 150 mm in diameter; or</p> <p>(ii) sub fascial; and</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
	(b) the specimen excised is sent for histological confirmation of diagnosis (Anaes.) Fee: \$232.20 Benefit: 75% = \$174.15 85% = \$197.40	
31346	Liposuction (suction assisted lipolysis) to one regional area for contour problems of abdominal, upper arm or thigh fat because of repeated insulin injections, if: (a) the lesion is subcutaneous; and (b) the lesion is 50 mm or more in diameter; and (c) photographic and/or diagnostic imaging evidence demonstrating the need for this service is documented in the patient notes (Anaes.) (See para TN.8.101 of explanatory notes to this Category) Fee: \$232.20 Benefit: 75% = \$174.15 85% = \$197.40	
31350	Benign tumour of soft tissue (other than tumours of skin, cartilage and bone, simple lipomas covered by item 31345 and lipomata), removal of, by surgical excision, on a patient 10 years of age or over, if the specimen excised is sent for histological confirmation of diagnosis, other than a service to which another item in this Group applies (Anaes.) (Assist.) Fee: \$476.95 Benefit: 75% = \$357.75 85% = \$405.45	
31355	MALIGNANT TUMOUR of SOFT TISSUE, excluding tumours of skin, cartilage and bone, removal of by surgical excision, where <i>histological proof of malignancy has been obtained</i> , not being a service to which another item in this Group applies (Anaes.) (Assist.) Fee: \$786.45 Benefit: 75% = \$589.85 85% = \$687.75	
31356	Malignant skin lesion (other than a malignant skin lesion covered by item 31371, 31372, 31373, 31374, 31375, 31376, 31377, 31378, 31379, 31380, 31381, 31382 or 31383), surgical excision (other than by shave excision) and repair of, if: (a) the lesion is excised from nose, eyelid, eyebrow, lip, ear, digit or genitalia, or from a contiguous area; and (b) the necessary excision diameter is less than 6 mm; and (c) the excised specimen is sent for histological examination; and (d) malignancy is confirmed from the excised specimen or previous biopsy; not in association with item 45201 (Anaes.) (See para TN.8.22, TN.8.125 of explanatory notes to this Category) Fee: \$243.60 Benefit: 75% = \$182.70 85% = \$207.10	
31357	Non-malignant skin lesion (other than viral verrucae (common warts) and seborrheic keratoses), including a cyst, ulcer or scar (other than a scar removed during the surgical approach at an operation), surgical excision (other than by shave excision) and repair of, if: (a) the lesion is excised from nose, eyelid, eyebrow, lip, ear, digit or genitalia, or from a contiguous area; and	

T8. SURGICAL OPERATIONS

1. GENERAL

	<p>(b) the necessary excision diameter is less than 6 mm; and</p> <p>(c) the excised specimen is sent for histological examination;</p> <p>not in association with item 45201 (Anaes.)</p> <p>(See para TN.8.22, TN.8.125 of explanatory notes to this Category)</p> <p>Fee: \$120.70 Benefit: 75% = \$90.55 85% = \$102.60</p>
31358	<p>Malignant skin lesion (other than a malignant skin lesion covered by item 31371, 31372, 31373, 31374, 31375, 31376, 31377, 31378, 31379, 31380, 31381, 31382 or 31383), surgical excision (other than by shave excision) and repair of, if:</p> <p>(a) the lesion is excised from nose, eyelid, eyebrow, lip, ear, digit or genitalia, or from a contiguous area; and</p> <p>(b) the necessary excision diameter is 6 mm or more; and</p> <p>(c) the excised specimen is sent for histological examination; and</p> <p>(d) malignancy is confirmed from the excised specimen or previous biopsy</p> <p>(Anaes.)</p> <p>(See para TN.8.22, TN.8.125 of explanatory notes to this Category)</p> <p>Fee: \$298.15 Benefit: 75% = \$223.65 85% = \$253.45</p>

31438	<p>Lymph nodes of neck, comprehensive dissection of all 5 lymph node levels on one side of the neck with preservation of one or more of: internal jugular vein, sternocleido-mastoid muscle, or spinal accessory nerve, other than a service associated with a service to which item 30256 or 30275 applies on the same side (H) (Anaes.) (Assist.)</p> <p>(See para TN.8.24 of explanatory notes to this Category)</p> <p>Fee: \$1,717.30 Benefit: 75% = \$1288.00</p>	
31454	<p>Laparoscopy or laparotomy with drainage of bile, as an independent procedure (H) (Anaes.) (Assist.)</p> <p>Fee: \$620.10 Benefit: 75% = \$465.10</p>	
31456	<p>GASTROSCOPY and insertion of nasogastric or nasoenteral feeding tube, where blind insertion of the feeding tube has failed or is inappropriate due to the patient's medical condition (Anaes.)</p> <p>Fee: \$270.35 Benefit: 75% = \$202.80</p>	
31458	<p>GASTROSCOPY and insertion of nasogastric or nasoenteral feeding tube, where blind insertion of the feeding tube has failed or is inappropriate due to the patient's medical condition, and where the use of imaging intensification is clinically indicated (Anaes.)</p> <p>Fee: \$324.30 Benefit: 75% = \$243.25</p>	
31460	<p>PERCUTANEOUS GASTROSTOMY TUBE, jejunal extension to, including any associated imaging services (Anaes.) (Assist.)</p> <p>Fee: \$392.95 Benefit: 75% = \$294.75</p>	
31462	<p>OPERATIVE FEEDING JEJUNOSTOMY performed in conjunction with major upper gastro-intestinal resection (Anaes.) (Assist.)</p> <p>Fee: \$573.80 Benefit: 75% = \$430.35</p>	
31466	<p>ANTIREFLUX OPERATION BY FUNDOPLASTY, via abdominal or thoracic approach, with or without closure of the diaphragmatic hiatus, revision procedure, by laparoscopy or open operation (Anaes.) (Assist.)</p> <p>(See para TN.8.19 of explanatory notes to this Category)</p> <p>Fee: \$1,438.55 Benefit: 75% = \$1078.95</p>	
31468	<p>Para-oesophageal hiatus hernia, repair of, with complete reduction of hernia, resection of sac and repair of hiatus, with or without fundoplication, other than a service associated with a service to which item 30756 or 31466 applies (Anaes.) (Assist.)</p> <p>Fee: \$1,580.45 Benefit: 75% = \$1185.35</p>	
31472	<p>Cholecystoduodenostomy, cholecystoenterostomy, choledochojejunostomy or Roux-en-y loop to provide biliary drainage or bypass, other than a service associated with a service to which item 30584 applies (Anaes.) (Assist.)</p> <p>Fee: \$1,480.75 Benefit: 75% = \$1110.60</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
31500	<p>BREAST, BENIGN LESION up to and including 50mm in diameter, including simple cyst, fibroadenoma or fibrocystic disease, open surgical biopsy or excision of, with or without frozen section histology (Anaes.)</p> <p>(See para TN.8.25, TN.8.280 of explanatory notes to this Category)</p> <p>Fee: \$286.20 Benefit: 75% = \$214.65 85% = \$243.30</p>	
31503	<p>BREAST, BENIGN LESION more than 50mm in diameter, excision of (Anaes.) (Assist.)</p> <p>(See para TN.8.25, TN.8.280 of explanatory notes to this Category)</p> <p>Fee: \$381.65 Benefit: 75% = \$286.25 85% = \$324.45</p>	
31506	<p>BREAST, ABNORMALITY detected by mammography or ultrasound where guidewire or other localisation procedure is performed, excision biopsy of (Anaes.) (Assist.)</p> <p>(See para TN.8.25, TN.8.280 of explanatory notes to this Category)</p> <p>Fee: \$429.40 Benefit: 75% = \$322.05</p>	
31509	<p>BREAST, MALIGNANT TUMOUR, open surgical biopsy of, with or without frozen section histology (Anaes.)</p> <p>(See para TN.8.25, TN.8.280 of explanatory notes to this Category)</p> <p>Fee: \$381.65 Benefit: 75% = \$286.25 85% = \$324.45</p>	
31512	<p>Breast, malignant tumour, complete local excision of, with or without frozen section histology, other than a service associated with a service to which:</p> <p>(a) item 45523 or 45558 applies; and</p> <p>(b) item 31513, 31514, 45520, 45522 or 45556 applies on the same side (if performed by the same medical practitioner)</p> <p>(H) (Anaes.) (Assist.)</p> <p>Fee: \$715.60 Benefit: 75% = \$536.70</p>	
31513	<p>Breast, malignant tumour, complete local excision of, with simultaneous reshaping of the breast parenchyma using techniques such as round block or rotation flaps, other than a service associated with a service to which:</p> <p>(a) item 45523 or 45558 applies; and</p> <p>(b) item 31512, 31514, 45520, 45522 or 45556 applies on the same side</p> <p>(H) (Anaes.) (Assist.)</p> <p>(See para TN.8.265 of explanatory notes to this Category)</p> <p>Fee: \$935.60 Benefit: 75% = \$701.70</p>	
31514	<p>Breast, malignant tumour, complete local excision of, with simultaneous ipsilateral pedicled breast reduction, including repositioning of the nipple, other than a service associated with a service to which:</p> <p>(a) item 45523 or 45558 applies; and</p> <p>(b) item 31512, 31513, 45520, 45522 or 45556 applies on the same side</p> <p>(H) (Anaes.) (Assist.)</p> <p>(See para TN.8.265 of explanatory notes to this Category)</p> <p>Fee: \$1,348.90 Benefit: 75% = \$1011.70</p>	
31515	<p>BREAST, TUMOUR SITE, re-excision of following open biopsy or incomplete excision of malignant tumour (Anaes.) (Assist.)</p> <p>(See para TN.8.25, TN.8.280 of explanatory notes to this Category)</p> <p>Fee: \$480.10 Benefit: 75% = \$360.10</p>	
31516	<p>BREAST, MALIGNANT TUMOUR, complete local excision of, with or without frozen section histology when targeted intraoperative radiation therapy (using an Intrabeam® or Xofig® Axxent®)</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
	device) is performed concurrently, if the patient satisfies the requirements mentioned in paragraphs (a) to (g) of item 15900 Applicable only once per breast per lifetime (H) (Anaes.) (Assist.) Fee: \$954.30 Benefit: 75% = \$715.75	
31519	Total mastectomy (unilateral) (H) (Anaes.) (Assist.) Fee: \$810.20 Benefit: 75% = \$607.65	
31520	Total mastectomy (bilateral) (H) (Anaes.) (Assist.) Fee: \$1,417.80 Benefit: 75% = \$1063.35	
31522	Skin sparing mastectomy (unilateral) (H) (Anaes.) (Assist.) Fee: \$1,145.00 Benefit: 75% = \$858.75	
31523	Skin sparing mastectomy (bilateral) (H) (Anaes.) (Assist.) Fee: \$2,003.80 Benefit: 75% = \$1502.85	
31525	Mastectomy for gynaecomastia (unilateral), with or without liposuction (suction assisted lipolysis), if: (a) breast enlargement is not due to obesity and is not proportionate to body habitus; and (b) sufficient photographic evidence demonstrating the clinical need for the service is included in patient notes; not being a service associated with a service to which item 45585 applies (H) (Anaes.) (Assist.) Fee: \$572.35 Benefit: 75% = \$429.30	
31526	Mastectomy for gynaecomastia (bilateral), with or without liposuction (suction assisted lipolysis), if: (a) breast enlargement is not due to obesity and is not proportionate to body habitus; and (b) sufficient photographic evidence demonstrating the clinical need for the service is included in patient notes; not being a service associated with a service to which item 45585 applies (H) (Anaes.) (Assist.) Fee: \$1,001.65 Benefit: 75% = \$751.25	
31528	Nipple sparing mastectomy (unilateral) (H) (Anaes.) (Assist.) Fee: \$1,145.00 Benefit: 75% = \$858.75	
31529	Nipple sparing mastectomy (bilateral) (H) (Anaes.) (Assist.) Fee: \$2,003.80 Benefit: 75% = \$1502.85	
31530	Breast, biopsy of solid tumour or tissue of, using a vacuum-assisted breast biopsy device under imaging guidance, for histological examination, if imaging has demonstrated: (a) microcalcification of lesion; or (b) impalpable lesion less than one cm in diameter;	

T8. SURGICAL OPERATIONS		1. GENERAL
	including pre-operative localisation of lesion, if performed, other than a service associated with a service to which item 31548 applies Fee: \$655.65 Benefit: 75% = \$491.75 85% = \$557.35	
31533	FINE NEEDLE ASPIRATION of an impalpable breast lesion detected by mammography or ultrasound, imaging guided - but not including imaging (Anaes.) (See para TN.8.26 of explanatory notes to this Category) Fee: \$151.80 Benefit: 75% = \$113.85 85% = \$129.05	
31536	Breast, preoperative localisation of lesion of, by hookwire or similar device, using interventional imaging techniques, but not including imaging (Anaes.) (Anaes.) (See para TN.8.280 of explanatory notes to this Category) Fee: \$208.50 Benefit: 75% = \$156.40 85% = \$177.25	
New 31537	Insertion of a marker clip into a breast, including axilla, following a breast biopsy and using imaging (but not including the associated imaging), if additional surgery, neoadjuvant systemic therapy, follow up imaging or radiation may be required and the insertion is for any of the following reasons: (a) to mark the site of a lesion that has been totally or almost completely removed; (b) to confirm biopsy site if multiple lesions are present; (c) to confirm biopsy site of an ill-defined lesion; (d) future surgery or preoperative localisation is considered to be potentially difficult due to lesion conspicuity; (e) preoperative localisation is likely to be carried out using a modality different from the biopsy modality; (f) for correlation across modalities for diagnostic reasons (Anaes.) (See para TN.8.280 of explanatory notes to this Category) Fee: \$208.50 Benefit: 75% = \$156.40 85% = \$177.25	
31548	Breast, biopsy of solid tumour or tissue of, using mechanical biopsy device, for histological examination, other than a service associated with a service to which item 31530 applies (Anaes.) (Anaes.) (See para TN.8.26 of explanatory notes to this Category) Fee: \$220.15 Benefit: 75% = \$165.15 85% = \$187.15	
31551	BREAST, HAEMATOMA, SEROMA OR INFLAMMATORY CONDITION including abscess, granulomatous mastitis or similar, exploration and drainage of when undertaken in the operating theatre of a hospital, excluding aftercare (Anaes.) Fee: \$238.55 Benefit: 75% = \$178.95	
31554	BREAST, microdochotomy of, for benign or malignant condition (Anaes.) (Assist.) Fee: \$477.10 Benefit: 75% = \$357.85	
31557	BREAST CENTRAL DUCTS, excision of, for benign condition (Anaes.) (Assist.) Fee: \$381.65 Benefit: 75% = \$286.25 85% = \$324.45	

T8. SURGICAL OPERATIONS		1. GENERAL
31560	<p>ACCESSORY BREAST TISSUE, excision of (Anaes.) (Assist.)</p> <p>Fee: \$381.65 Benefit: 75% = \$286.25 85% = \$324.45 Extended Medicare Safety Net Cap: \$305.35</p>	
31563	<p>Inverted nipple, surgical eversion of, with or without flap repair, if the nipple cannot readily be everted manually (Anaes.)</p> <p>Fee: \$285.85 Benefit: 75% = \$214.40 85% = \$243.00</p>	
31566	<p>ACCESSORY NIPPLE, excision of (Anaes.)</p> <p>Fee: \$143.05 Benefit: 75% = \$107.30 85% = \$121.60</p>	
31585	<p>Removal of adjustable gastric band (Anaes.) (Assist.)</p> <p>Fee: \$915.90 Benefit: 75% = \$686.95</p>	
BARIATRIC		
31569	<p>Adjustable gastric band, placement of, with or without crural repair taking 45 minutes or less, for a patient with clinically severe obesity (Anaes.) (Assist.)</p> <p>(See para TN.8.29 of explanatory notes to this Category)</p> <p>Fee: \$935.15 Benefit: 75% = \$701.40</p>	
31572	<p>Gastric bypass by Roux-en-Y including associated anastomoses, with or without crural repair taking 45 minutes or less, for a patient with clinically severe obesity not being associated with a service to which item 30515 applies (Anaes.) (Assist.)</p> <p>(See para TN.8.29 of explanatory notes to this Category)</p> <p>Fee: \$1,150.70 Benefit: 75% = \$863.05</p>	
31575	<p>Sleeve gastrectomy, with or without crural repair taking 45 minutes or less, for a patient with clinically severe obesity (Anaes.) (Assist.)</p> <p>(See para TN.8.29 of explanatory notes to this Category)</p> <p>Fee: \$935.15 Benefit: 75% = \$701.40</p>	
31578	<p>Gastroplasty (excluding by gastric plication), with or without crural repair taking 45 minutes or less, for a patient with clinically severe obesity (Anaes.) (Assist.)</p> <p>(See para TN.8.29 of explanatory notes to this Category)</p> <p>Fee: \$935.15 Benefit: 75% = \$701.40</p>	
31581	<p>Gastric bypass by biliopancreatic diversion with or without duodenal switch including gastric resection and anastomoses, with or without crural repair taking 45 minutes or less, for a patient with clinically severe obesity (Anaes.) (Assist.)</p> <p>(See para TN.8.29 of explanatory notes to this Category)</p> <p>Fee: \$1,150.70 Benefit: 75% = \$863.05</p>	
31584	<p>Surgical reversal of previous bariatric procedure, including revision or conversion, if:</p> <p>a) the previous procedure involved any of the following:</p> <ul style="list-style-type: none"> (i) placement of adjustable gastric banding; (ii) gastric bypass; (iii) sleeve gastrectomy; (iv) gastroplasty (excluding gastric plication); (v) biliopancreatic diversion; and <p>(b) any of items 31569 to 31581 applied to the previous procedure other than a service associated with a service to which item 31585 applies (Anaes.) (Assist.)</p>	

T8. SURGICAL OPERATIONS		1. GENERAL
	(See para TN.8.30 of explanatory notes to this Category) Fee: \$1,694.15 Benefit: 75% = \$1270.65	
31587	Adjustment of gastric band as an independent procedure including any associated consultation Fee: \$107.85 Benefit: 75% = \$80.90 85% = \$91.70	
31590	Adjustment of gastric band reservoir, repair, revision or replacement of (Anaes.) (Assist.) Fee: \$277.15 Benefit: 75% = \$207.90 85% = \$235.60	

T8. SURGICAL OPERATIONS		2. COLORECTAL
	Group T8. Surgical Operations	
	Subgroup 2. Colorectal	
32000	LARGE INTESTINE, resection of, without anastomosis, including right hemicolectomy (including formation of stoma) (Anaes.) (Assist.) Fee: \$1,135.15 Benefit: 75% = \$851.40	
32003	LARGE INTESTINE, resection of, with anastomosis, including right hemicolectomy (Anaes.) (Assist.) Fee: \$1,187.40 Benefit: 75% = \$890.55	
32004	LARGE INTESTINE, subtotal colectomy (resection of right colon, transverse colon and splenic flexure) without anastomosis, not being a service associated with a service to which item 32000, 32003, 32005, 32006 or 32030 applies (H) (Anaes.) (Assist.) Fee: \$1,266.25 Benefit: 75% = \$949.70	
32005	LARGE INTESTINE, subtotal colectomy (resection of right colon, transverse colon and splenic flexure) with anastomosis, not being a service associated with a service to which item 32000, 32003, 32004, 32006 or 32030 applies (H) (Anaes.) (Assist.) Fee: \$1,430.40 Benefit: 75% = \$1072.80	
32006	Left hemicolectomy, including the descending and sigmoid colon (including formation of stoma), other than a service associated with a service to which item 32024, 32025, 32026 or 32028 applies (H) (Anaes.) (Assist.) Fee: \$1,266.25 Benefit: 75% = \$949.70	
32009	TOTAL COLECTOMY AND ILEOSTOMY (Anaes.) (Assist.) Fee: \$1,502.00 Benefit: 75% = \$1126.50	
32012	TOTAL COLECTOMY AND ILEORECTAL ANASTOMOSIS (Anaes.) (Assist.) Fee: \$1,659.15 Benefit: 75% = \$1244.40	
32015	TOTAL COLECTOMY WITH EXCISION OF RECTUM AND ILEOSTOMY 1 surgeon (Anaes.) (Assist.) Fee: \$2,039.10 Benefit: 75% = \$1529.35	
32018	TOTAL COLECTOMY WITH EXCISION OF RECTUM AND ILEOSTOMY, COMBINED SYNCHRONOUS OPERATION; ABDOMINAL RESECTION (including aftercare) (Anaes.) (Assist.) Fee: \$1,729.10 Benefit: 75% = \$1296.85	

T8. SURGICAL OPERATIONS		2. COLORECTAL
32021	<p>TOTAL COLECTOMY WITH EXCISION OF RECTUM AND ILEOSTOMY, COMBINED SYNCHRONOUS OPERATION; PERINEAL RESECTION (Assist.)</p> <p>Fee: \$620.10 Benefit: 75% = \$465.10</p>	
32023	<p>Endoscopic insertion of stent or stents for large bowel obstruction, stricture or stenosis, including colonoscopy and any image intensification, where the obstruction is due to:</p> <p style="padding-left: 40px;">a) a pre-diagnosed colorectal cancer, or cancer of an organ adjacent to the bowel; or</p> <p style="padding-left: 40px;">b) an unknown diagnosis (Anaes.)</p> <p>(See para TN.8.17 of explanatory notes to this Category)</p> <p>Fee: \$611.30 Benefit: 75% = \$458.50</p>	
32024	<p>RECTUM, HIGH RESTORATIVE ANTERIOR RESECTION WITH INTRAPERITONEAL ANASTOMOSIS (of the rectum) greater than 10 centimetres from the anal verge excluding resection of sigmoid colon alone not being a service associated with a service to which item 32000, 32030, 32106 or 32232 applies (H) (Anaes.) (Assist.)</p> <p>Fee: \$1,502.00 Benefit: 75% = \$1126.50</p>	
32025	<p>RECTUM, LOW RESTORATIVE ANTERIOR RESECTION WITH EXTRAPERITONEAL ANASTOMOSIS (of the rectum) less than 10 centimetres from the anal verge, with or without covering stoma not being a service associated with a service to which item 32000, 32030, 32106 or 32232 applies (H) (Anaes.) (Assist.)</p> <p>(See para TN.8.246 of explanatory notes to this Category)</p> <p>Fee: \$2,009.10 Benefit: 75% = \$1506.85</p>	
32026	<p>Rectum, ultra-low restorative resection, with or without covering stoma and with or without colonic reservoir, if the anastomosis is sited in the anorectal region and is 6 cm or less from the anal verge, not being a service associated with a service to which item 32000, 32030, 32106, 32117 or 32232 applies (H) (Anaes.) (Assist.)</p> <p>(See para TN.8.246 of explanatory notes to this Category)</p> <p>Fee: \$2,249.65 Benefit: 75% = \$1687.25</p>	
32028	<p>Rectum, low or ultra-low restorative resection, with per anal sutured coloanal anastomosis, with or without covering stoma and with or without colonic reservoir, not being a service associated with a service to which item 32000, 32030, 32106, 32117 or 32232 applies (H) (Anaes.) (Assist.)</p> <p>(See para TN.8.246 of explanatory notes to this Category)</p> <p>Fee: \$2,389.70 Benefit: 75% = \$1792.30</p>	
32030	<p>RECTOSIGMOIDECTOMY, including formation of stoma (H) (Anaes.) (Assist.)</p> <p>Fee: \$1,135.15 Benefit: 75% = \$851.40</p>	
32033	<p>RESTORATION OF BOWEL continuity following rectosigmoidectomy or similar operation, including dismantling of the stoma (H) (Anaes.) (Assist.)</p> <p>Fee: \$1,659.15 Benefit: 75% = \$1244.40</p>	
32036	<p>SACROCOCCYGEAL AND PRESACRAL TUMOUR excision of (Anaes.) (Assist.)</p> <p>Fee: \$2,104.35 Benefit: 75% = \$1578.30</p>	
32039	<p>RECTUM AND ANUS, ABDOMINOPERINEAL RESECTION OF 1 surgeon (Anaes.) (Assist.)</p> <p>Fee: \$1,689.60 Benefit: 75% = \$1267.20</p>	

T8. SURGICAL OPERATIONS		2. COLORECTAL
32042	RECTUM AND ANUS, ABDOMINOPERINEAL RESECTION OF, COMBINED SYNCHRONOUS OPERATION abdominal resection (Anaes.) (Assist.)	Fee: \$1,423.40 Benefit: 75% = \$1067.55
32045	RECTUM AND ANUS, ABDOMINOPERINEAL RESECTION OF, COMBINED SYNCHRONOUS OPERATION perineal resection (Assist.)	Fee: \$532.70 Benefit: 75% = \$399.55
32046	RECTUM and ANUS, abdomino-perineal resection of, combined synchronous operation - perineal resection where the perineal surgeon also provides assistance to the abdominal surgeon (Assist.)	Fee: \$823.20 Benefit: 75% = \$617.40
32047	PERINEAL PROCTECTOMY (Anaes.) (Assist.)	Fee: \$959.05 Benefit: 75% = \$719.30
32051	TOTAL COLECTOMY with excision of rectum and ileoanal anastomosis with formation of ileal reservoir, with or without creation of temporary ileostomy 1 surgeon (Anaes.) (Assist.)	Fee: \$2,549.85 Benefit: 75% = \$1912.40
32054	TOTAL COLECTOMY with excision of rectum and ileoanal anastomosis with formation of ileal reservoir, with or without creation of temporary ileostomy conjoint surgery, abdominal surgeon (including aftercare) (Anaes.) (Assist.)	Fee: \$2,340.30 Benefit: 75% = \$1755.25
32057	TOTAL COLECTOMY with excision of rectum and ileoanal anastomosis with formation of ileal reservoir conjoint surgery, perineal surgeon (Assist.)	Fee: \$620.10 Benefit: 75% = \$465.10
32060	Restorative proctectomy, involving rectal resection with formation of ileal reservoir and ileoanal anastomosis, including ileostomy mobilisation, with or without mucosectomy or temporary loop ileostomy, 1 surgeon (H) (Anaes.) (Assist.)	Fee: \$2,549.85 Benefit: 75% = \$1912.40
32063	ILEOSTOMY CLOSURE with rectal resection and mucosectomy and ileoanal anastomosis with formation of ileal reservoir, with or without temporary loop ileostomy conjoint surgery, abdominal surgeon (including aftercare) (Anaes.) (Assist.)	Fee: \$2,340.30 Benefit: 75% = \$1755.25
32066	ILEOSTOMY CLOSURE with rectal resection and mucosectomy and ileoanal anastomosis with formation of ileal reservoir, with or without temporary loop ileostomy conjoint surgery, perineal surgeon (Assist.)	Fee: \$620.10 Benefit: 75% = \$465.10
32069	ILEOSTOMY RESERVOIR, continent type, creation of, including conversion of existing ileostomy where appropriate (Anaes.)	Fee: \$1,886.20 Benefit: 75% = \$1414.65
32072	SIGMOIDOSCOPIC EXAMINATION (with rigid sigmoidoscope), with or without biopsy	Fee: \$52.65 Benefit: 75% = \$39.50 85% = \$44.80

T8. SURGICAL OPERATIONS		2. COLORECTAL
32075	<p>SIGMOIDOSCOPIC EXAMINATION (with rigid sigmoidoscope), UNDER GENERAL ANAESTHESIA, with or without biopsy, not being a service associated with a service to which another item in this Group applies (Anaes.)</p> <p>Fee: \$82.60 Benefit: 75% = \$61.95 85% = \$70.25</p>	
32084	<p>Sigmoidoscopy or colonoscopy up to the hepatic flexure, with or without biopsy, other than a service associated with a service to which any of items 32222 to 32228 applies.</p> <p>(Anaes.)</p> <p>(See para TN.8.134, TN.8.17 of explanatory notes to this Category)</p> <p>Fee: \$122.60 Benefit: 75% = \$91.95 85% = \$104.25</p>	
32087	<p>Endoscopic examination of the colon up to the hepatic flexure by sigmoidoscopy or colonoscopy for the removal of one or more polyps, other than a service associated with a service to which any of items 32222 to 32228 applies (Anaes.)</p> <p>(Anaes.)</p> <p>(See para TN.8.134, TN.8.17 of explanatory notes to this Category)</p> <p>Fee: \$225.30 Benefit: 75% = \$169.00 85% = \$191.55</p>	
32094	<p>ENDOSCOPIC DILATATION OF COLORECTAL STRICTURES including colonoscopy (Anaes.)</p> <p>(See para TN.8.17 of explanatory notes to this Category)</p> <p>Fee: \$607.40 Benefit: 75% = \$455.55</p>	
32095	<p>ENDOSCOPIC EXAMINATION of SMALL BOWEL with flexible endoscope passed by stoma, with or without biopsies (Anaes.)</p> <p>(See para TN.8.17 of explanatory notes to this Category)</p> <p>Fee: \$140.70 Benefit: 75% = \$105.55 85% = \$119.60</p>	
32096	<p>RECTAL BIOPSY, full thickness, to diagnose or exclude Hirschsprung's Disease, under general anaesthesia, or under epidural or spinal (intrathecal) nerve block where undertaken in a hospital (Anaes.) (Assist.)</p> <p>Fee: \$282.85 Benefit: 75% = \$212.15</p>	
32105	<p>ANORECTAL CARCINOMA per anal full thickness excision of (Anaes.) (Assist.)</p> <p>Fee: \$532.70 Benefit: 75% = \$399.55 85% = \$452.80</p>	
32106	<p>Anterolateral intraperitoneal rectal tumour, per anal excision of, using rectoscopy digital viewing system and pneumorectum, if:</p> <p>(a) clinically appropriate; and</p> <p>(b) removal requires dissection within the peritoneal cavity;</p> <p>excluding use of a colonoscope as the operating platform and not being a service associated with a service to which item 32024, 32025 or 32232 applies (Anaes.) (Assist.)</p> <p>(See para TN.8.17, TN.8.31 of explanatory notes to this Category)</p> <p>Fee: \$1,502.00 Benefit: 75% = \$1126.50 85% = \$1403.30</p>	
32108	<p>RECTAL TUMOUR, transsphincteric excision of (Kraske or similar operation) (Anaes.) (Assist.)</p> <p>Fee: \$1,100.35 Benefit: 75% = \$825.30</p>	

T8. SURGICAL OPERATIONS		2. COLORECTAL
32117	Rectal prolapse, abdominal rectopexy of, excluding ventral mesh rectopexy, not being a service associated with a service to which item 32025 or 32026 applies (H) (Anaes.) (Assist.) Fee: \$1,382.70 Benefit: 75% = \$1037.05	
Amend Fee 32118	Treatment of external rectal prolapse, or of symptomatic high grade rectal intussusception (the rectum descends to the level of or into the anal canal, confirmed by diagnostic imaging): (a) by minimally invasive surgery involving: (i) ventral dissection of the extra-peritoneal rectum; and (ii) suspension of the rectum from the sacral promontory by means of a prosthesis; and (b) including suspension of the vagina if performed, and any associated repair; other than a service associated with a service to which item 30390, 35595 or 35597 applies (H) (Anaes.) (Assist.) (See para TN.8.279 of explanatory notes to this Category) Fee: \$1,621.50 Benefit: 75% = \$1216.15	
32123	ANAL STRICTURE, anoplasty for (Anaes.) (Assist.) Fee: \$366.80 Benefit: 75% = \$275.10 85% = \$311.80	
32129	ANAL SPHINCTER, repair (H) (Anaes.) (Assist.) Fee: \$698.60 Benefit: 75% = \$523.95	
32131	RECTOCELE, transanal repair of rectocele (Anaes.) (Assist.) Fee: \$587.35 Benefit: 75% = \$440.55	
32135	Treatment of haemorrhoids or rectal prolapse, including rubber band ligation or sclerotherapy for, not being a service to which item 32139 applies (Anaes.) Fee: \$74.30 Benefit: 75% = \$55.75 85% = \$63.20	
32139	Operative treatment of haemorrhoids involving third-degree or fourth-degree haemorrhoids, including excision of anal skin tags when performed, not being a service associated with a service to which item 32135 or 32233 applies (H) (Anaes.) (Assist.) Fee: \$404.75 Benefit: 75% = \$303.60	
32147	PERIANAL THROMBOSIS, incision of (Anaes.) Fee: \$49.60 Benefit: 75% = \$37.20 85% = \$42.20	
32150	Operation for anal fissure, including excision, injection of Botulinum toxin or sphincterotomy, excluding dilatation (Anaes.) (Assist.) Fee: \$282.85 Benefit: 75% = \$212.15 85% = \$240.45	
32156	Anal fistula, subcutaneous, excision of (Anaes.) Fee: \$144.95 Benefit: 75% = \$108.75 85% = \$123.25	
32159	ANAL FISTULA, treatment of, by excision or by insertion of a Seton, or by a combination of both procedures, involving the lower half of the anal sphincter mechanism (Anaes.) (Assist.) Fee: \$366.80 Benefit: 75% = \$275.10	

T8. SURGICAL OPERATIONS		2. COLORECTAL
32162	ANAL FISTULA, treatment of, by excision or by insertion of a Seton, or by a combination of both procedures, involving the upper half of the anal sphincter mechanism (Anaes.) (Assist.) Fee: \$532.70 Benefit: 75% = \$399.55	
32165	Operative treatment of anal fistula, repair by mucosal advancement flap, including ligation of inter-sphincteric fistula tract (LIFT) or other complex sphincter sparing surgery (Anaes.) (Assist.) Fee: \$698.60 Benefit: 75% = \$523.95 85% = \$599.90	
32166	ANAL FISTULA - readjustment of Seton (Anaes.) Fee: \$227.00 Benefit: 75% = \$170.25 85% = \$192.95	
32171	Anorectal examination, with or without biopsy, under general anaesthetic, with or without faecal disimpaction, other than a service associated with a service to which another item in this Group applies (H) (Anaes.) Fee: \$97.75 Benefit: 75% = \$73.35	
32174	INTR-AANAL, perianal or ischio-rectal abscess, drainage of (excluding aftercare) (Anaes.) Fee: \$97.75 Benefit: 75% = \$73.35 85% = \$83.10	
32175	INTRA-ANAL, PERIANAL or ISCHIO-RECTAL ABSCESS, draining of, undertaken in the operating theatre of a hospital (excluding aftercare) (Anaes.) Fee: \$179.05 Benefit: 75% = \$134.30	
32183	INTESTINAL SLING PROCEDURE prior to radiotherapy (Anaes.) (Assist.) Fee: \$618.20 Benefit: 75% = \$463.65	
32186	COLONIC LAVAGE, total, intra operative (Anaes.) (Assist.) Fee: \$618.20 Benefit: 75% = \$463.65	
32212	ANO-RECTAL APPLICATION OF FORMALIN in the treatment of radiation proctitis, where performed in the operating theatre of a hospital, excluding aftercare (Anaes.) Fee: \$150.00 Benefit: 75% = \$112.50	
32213	Sacral nerve lead or leads, placement of, percutaneous or open, including intraoperative test stimulation and programming, for the management of faecal incontinence (H) (Anaes.) (See para TN.8.247 of explanatory notes to this Category) Fee: \$727.50 Benefit: 75% = \$545.65	
32215	Sacral nerve electrode or electrodes, management, adjustment and electronic programming of the neurostimulator by a medical practitioner, to manage faecal incontinence, not being a service associated with a service to which item 32213, 32216, 32218 or 32237 applies. Applicable once per day for the same patient by the same practitioner Fee: \$138.00 Benefit: 75% = \$103.50 85% = \$117.30	
32216	Sacral nerve lead or leads, inserted for the management of faecal incontinence in a patient with faecal incontinence refractory to conservative non-surgical treatment, either: (a) percutaneous surgical repositioning of the lead or leads, using fluoroscopic guidance; or (b) open surgical repositioning of the lead or leads;	

T8. SURGICAL OPERATIONS		2. COLORECTAL
	to correct displacement or unsatisfactory positioning (including intraoperative test stimulation), not being a service associated with a service to which item 32213 applies (H) (Anaes.) (See para TN.8.247 of explanatory notes to this Category) Fee: \$653.35 Benefit: 75% = \$490.05	
32218	Sacral nerve lead or leads, removal (H) (Anaes.) Fee: \$172.05 Benefit: 75% = \$129.05	
32221	Removal or revision of an artificial bowel sphincter (with or without replacement) for severe faecal incontinence in the treatment of a patient for whom conservative and other less invasive forms of treatment are contraindicated or have failed. (Anaes.) (Assist.) (See para TN.8.277 of explanatory notes to this Category) Fee: \$994.95 Benefit: 75% = \$746.25 85% = \$896.25	
32222	Endoscopic examination of the colon to the caecum by colonoscopy, for a patient: (a) following a positive faecal occult blood test; or (b) who has symptoms consistent with pathology of the colonic mucosa; or (c) with anaemia or iron deficiency; or (d) for whom diagnostic imaging has shown an abnormality of the colon; or (e) who is undergoing the first examination following surgery for colorectal cancer; or (f) who is undergoing pre-operative evaluation; or (g) for whom a repeat colonoscopy is required due to inadequate bowel preparation for the patient's previous colonoscopy; or (h) for the management of inflammatory bowel disease Applicable only once on a day under a single episode of anaesthesia or other sedation (Anaes.) (See para TN.8.152, TN.8.17, TN.8.2 of explanatory notes to this Category) Fee: \$368.00 Benefit: 75% = \$276.00 85% = \$312.80	
32223	Endoscopic examination of the colon to the caecum by colonoscopy, for a patient: (a) who has had a colonoscopy that revealed: (i) 1 to 4 adenomas, each of which was less than 10 mm in diameter, had no villous features and had no high grade dysplasia; or (ii) 1 or 2 sessile serrated lesions, each of which was less than 10 mm in diameter, and without dysplasia; or (b) with a moderate risk of colorectal cancer due to family history; or (c) with a history of colorectal cancer, who has had an initial post-operative colonoscopy that did not reveal any adenomas or colorectal cancer Applicable only once in any 5 year period (Anaes.) (See para TN.8.152, TN.8.17, TN.8.2 of explanatory notes to this Category)	

T8. SURGICAL OPERATIONS

2. COLORECTAL

	<p>Fee: \$368.00 Benefit: 75% = \$276.00 85% = \$312.80</p>
32224	<p>Endoscopic examination of the colon to the caecum by colonoscopy, for a patient with a moderate risk of colorectal cancer due to:</p> <p>(a) a history of adenomas, including an adenoma that:</p> <ul style="list-style-type: none"> (i) was 10 mm or greater in diameter; or (ii) had villous features; or (iii) had high grade dysplasia; or <p>(b) having had a previous colonoscopy that revealed:</p> <ul style="list-style-type: none"> (i) 5 to 9 adenomas, each of which was less than 10 mm in diameter, had no villous features and had no high grade dysplasia; or (ii) 1 or 2 sessile serrated lesions, each of which was 10 mm or greater in diameter or had dysplasia; or (iii) a hyperplastic polyp that was 10 mm or greater in diameter; or (iv) 3 or more sessile serrated lesions, each of which was less than 10 mm in diameter and had no dysplasia; or (v) 1 or 2 traditional serrated adenomas, of any size <p>Applicable only once in any 3 year period (Anaes.)</p> <p>(See para TN.8.152, TN.8.17, TN.8.2 of explanatory notes to this Category)</p> <p>Fee: \$368.00 Benefit: 75% = \$276.00 85% = \$312.80</p>
32225	<p>Endoscopic examination of the colon to the caecum by colonoscopy, for a patient with a high risk of colorectal cancer due to having had a previous colonoscopy that:</p> <p>(a) revealed 10 or more adenomas; or</p> <p>(b) included a piecemeal, or possibly incomplete, excision of a large, sessile polyp</p> <p>Applicable not more than 4 times in any 12 month period (Anaes.)</p> <p>(See para TN.8.152, TN.8.17, TN.8.2 of explanatory notes to this Category)</p> <p>Fee: \$368.00 Benefit: 75% = \$276.00 85% = \$312.80</p>
32226	<p>Endoscopic examination of the colon to the caecum by colonoscopy, for a patient who has a high risk of colorectal cancer due to:</p> <p>(a) having either:</p> <ul style="list-style-type: none"> (i) a known or suspected familial condition, such as familial adenomatous polyposis, Lynch syndrome or serrated polyposis syndrome; or (ii) a genetic mutation associated with hereditary colorectal cancer; or <p>(b) having had a previous colonoscopy that revealed:</p>

T8. SURGICAL OPERATIONS		2. COLORECTAL
	<p>(i) 5 or more sessile serrated lesions, each of which was less than 10 mm in diameter and had no dysplasia; or</p> <p>(ii) 3 or more sessile serrated lesions, 1 or more of which was 10 mm or greater in diameter or had dysplasia; or</p> <p>(iii) 3 or more traditional serrated adenomas, of any size</p> <p>Applicable only once in any 12 month period (Anaes.)</p> <p>(See para TN.8.152, TN.8.17, TN.8.2 of explanatory notes to this Category)</p> <p>Fee: \$368.00 Benefit: 75% = \$276.00 85% = \$312.80</p>
